DICTIONARY

OF

MUSIC AND MUSICIANS

F

F. The fourth note of the natural scale, with B♭ for its key-signature. In French and in solfaing, *Fa*. D is its relative minor.

The F clef is the bass clef, the sign of which is a corruption of that letter. (See BASS CLEF and CLEF.)

F minor has a signature of four flats, and A♭ is its relative major.

F is the final of the Lydian church mode, with C for its dominant.

F♯ is in German *Fis*, in French *Fa diése*.

Beethoven has very much favoured these keys, having left two Symphonies (Pastoral and No. 8), three String Quartets (the first and last, and Rasoumowsky, No. 1), two PF. Sonatas, op. 10, No. 2, and op. 54, etc., in F major; Overture to 'Egmont,' Sonata appassionata, Quartet, op. 95, in F minor. One of Beethoven's notes to Steiner is signed

F♯ is more rarely used; but we may mention Haydn's Farewell Symphony; a PF. Sonata (op. 78) by Beethoven, for which he had a peculiar affection; and a charming Romance of Schumann's (op. 28, No. 2); also Chopin's Impromptu, op. 36, and Barcarole, op. 60.

f is the usual abbreviation for *forte*.

The holes in the belly of the violin are called the *f* holes from their shape. G.

FA FICTUM. In the system of Guido d'Arezzo, B♮, the third sound in the *Hexachordum naturale*, was called B mi; and B♭, the fourth sound in the *Hexachordum molle*, B fa. And, because B fa could not be expressed without the accidental sign (*B rotundum*) it was called Fa fictum. [See HEXACHORD.] For this reason, the Polyphonic Composers applied the term Fa fictum to the note B♭, whenever it was introduced, by means of the accidental sign, into a mode sung at its natural pitch; and, by analogy, to the E♭ which represented the same interval in the transposed modes. The Fa fictum is introduced, with characteristic effect, in the 'Gloria Patri' of Tallis's five-part Responses, at the second syllable of the word 'with*out*'; and a fine example of its employment in the form of the transposed E♭ will be found in Giaches Archadelt's Madrigal, 'Il bianco e dolce cigno,' at the second and third syllables of the word 'piangendo,' as shown in the example in the article MADRIGAL. W. S. R.

FABRI, ANNIBALE PIO, DETTO BALINO, one of the most excellent tenors of the 18th century, was born at Bologna in 1697. Educated musically by the famous PISTOCCHI, he became the favourite of the Emperor Charles VI., and other Princes sought to engage him in their service. He was also a composer, and member of the Accademia Filarmonica of Bologna; received into that society in 1719, he was named its *Principe*, or president, in 1725, 1729, 1745, 1747, and 1750. In 1729 he came to England and sang, with Bernacchi, his fellow-pupil under Pistocchi, in Handel's 'Tolemeo,' taking the part of Araspe, formerly sung by Boschi. As the latter was a bass, the part was probably transposed for Fabri for want of a bass to sing it. In the same year he performed the tenor part in 'Lotario,' as also in 'Partenope' (1730), and in 'Poro' and a *reprise* of 'Rinaldo' (1731), all by the same master. Having been appointed to the Royal Chapel at Lisbon a few years later, he died there August 12, 1760. J. M.

FABRICIUS, WERNER (1633-1679), an organist and composer of note, was born April 10, 1633, at Itzehoe, Holstein. As a boy he studied music under his father, Albert Fabricius, organist in Flensburg, and Paul Moth, the Cantor there. He went to the Gymnasium in Hamburg, where Thomas Selle and Heinrich Scheidemann were his teachers in music. In 1650 he went to the Leipzig University, studying philosophy, theology, and law; in the latter he became a fully qualified 'Notar.' He was appointed Musik-Director of the Paulinerkirche, Leipzig, in 1656, and in 1658 was also appointed organist to the Nicolaikirche. Although he tried for the post of Cantor to the Thomaikirche in March 1658, he was not elected. He was married July 3, 1665, and one son survived him, Johann Albert Fabricius. He died Jan. 9, 1679, at Leipzig, forty-five years old, according to the contemporary account of him in *Musica Davidica, oder Davids Musik, bei der Leichbestattung des . . . Herrn Werneri Fabricii . . . durch Joh. Thilone, ad S. Nicolaum Ecclesiaste.* (See *Monatshefte für Musikgeschichte*, 1875, p. 180.) Eitner (*Quellen-Lexikon*) corrects the date of death, however, to April 9, 1679.

List of works :—

1. Deliciae Harmonicae oder musikalische Gemüths-Ergötzung, von allerhand Paduanen, Alemanden, Couranten, Balletten, Sarabanden, von 5 Stimmen nebenst ihrem Basso Continuo, auff Violen und andern Instrumenten füglichen zu gebrauchen. Leipzig. Joh. Bauern. 1656. 4to. 64 compositions. Four part-books (the Bassus missing) in Upsala Library.

2. Trauer-Trost- Nahmens Ode, dem . . . Herrn Joh. Bauern . . . ; über dem allzufrüzeitigen Abschiede Ihres . . . Söhnleins David welches . . . den 28 Feb. 1656, entschlafen . . . in folgende Melodey gesetzt von Wernero Fabricio. Text: 'Du Blut von unserem Blute,' for five voices, in score. Leipzig, folio sheet.

Gedoppelte Frülings Lust . . . bey erfreulichen Hochzeits-Feste des . . . Herrn Sigis. Emperti Saltzbergers . . . den 15 Ap. 1656. In einer Arie entworffen von Wernero Fabricio Holsato. Druckts, Quirin Bauch. Text: 'Schöner Frühling lass dich küssen,' in score, folio sheet. Both in the Zwickau Ratsschulbibl.

3. E. C. Homburgs geistlicher Lieder erster Theil, mit zweystimmigen Melodeyen geziehret von W. F., Jetziger Zeit Musik-Directoren in der Paulinerkirchen zu Leipzig. Jena. Georg Sengen walden. 1659. 8vo. pp. 526. Contains 100 melodies with figured bass; Zahn gives 23 of them which became part of the church song. In the Augsburg Stadtbibl. etc.

4. Werneri Fabricii Holsati N(otarius) P(ublicus) C(aesareus) Academiae & ad D. Nicolai Lipsiensium musici, Geistliche Arien, Dialogen und Concerten, so zu Heiligung hoher Fest-Tagen mit 4, 5, 6, und 8 Vocal-Stimmen sampt ihrem gedoppelten Basso continuo, auff unterschiedliche Arten, nebst allerhand Instrumenten füglich können gebraucht und musicirt werden. Leipzig. Joh. Bauern. 1662. 4to. Contains complimentary Latin verses addressed to him by the aged Heinrich Schütz. Six compositions. Nine part-books in the British Museum, etc.

5. Vier-stimmige Motette; 'Vater in deine Hände' . . . auf Herrn Wentzel Buhlens Namens-Tage. Leipzig. 1671. 4to.

6. Werneri Fabricii Manuductio zum General Bass bestehend aus lauter Exempeln. Leipzig. 1675. This work is mentioned in Mattheson's *Grosse General Bass Schule*, 1731, p. 13.

7. Werneri Fabricii, ehemaligen Organisten zu St. Nicolai in Leipzig, Unterricht, wie man ein neu Orgelwerk, obs gut und bestündig sey, nach allen Stücken, in- und auswendig examiniren, und so viel möglich, probiren soll. Frankfurt und Leipzig, 1756. 1 vol. 8vo. pp. 87. No preface or dedication. In British Museum, etc. It is curious that this work should have been published nearly 80 years after Fabricius's death, for no earlier edition is known. It has been suggested that the date is a misprint for 1656, but the title states 'formerly organist of S. Nicolas, Leipzig,' and he held that post until his death.

His music is also to be found in :—

1. Passionale Melicum . . . Martino Jano, Görlitz. 1663. Three melodies.

2. Johann Crügers . . . Praxis pietatis melica. Frankfort. 1676 and 1693 editions. Six melodies with figured bass.

3. Nürnbergisches Gesangbuch. 1676, 1677, and 1690 editions. Five melodies with figured bass, from the *Geistliche Lieder* of Homburg, 1659.

4. Geistlicher Harffen-Klang auf zehen seyten . . . Joh. Quirsfelden Leipzig. 1679. Five melodies.

5. Musikalischer Vorschmack . . . von Peter Sohren. Hamburg. 1683. One melody with figured bass.

6. Lüneburgisches Gesangbuch. 1686 and 1694 editions: one melody. 1695 and 1702 editions: two melodies.

7. Das grosse Cantional oder: Kirchen-Gesangbuch, Darmstadt, 1687. Three melodies.

8. Choral Gesangbuch . . . von Daniel Speeren, Stuttgart. 1692. Three melodies.

9. Meiningenisches Gesangbuch. Editio 3 and 4, 1693 and 1697. Two melodies with figured bass.

10. Darmstadtisches Gesangbuch. 1699. One melody.

11. Cantiques Spirituels. 5ème édition. Frankfort. 1702. One melody with figured bass.

12. König's Liederschatz. 1738. Eight melodies.

Winterfeld (*Der evang. Kirchengesang*. 11. Musikbeilage, Nos. 273-4) reprinted two of Fabricius's best-known chorales from the 1659 *Geistliche Lieder*: 'Lasst uns jauchzen' and 'Jesus du, du bleibst,' voice part with figured bass. In the Upsala Library, in Gustaf Düben's Collection of 'Motetti e Concerti, Libro 5,' 1665, are two compositions by W. Fabricius. Eitner (*Quellen-Lexikon*) gives the following MSS: in the Berlin Königl. Bibl. MS. Z. 40. No. 2 'Lieblich und schöne sein,' and No. 4 'Herr, wenn ich nur dich habe,' both for eight voices.

C. S.

FABRITIUS (Fabricius), Albinus (fl. 1580-1595), is said to have lived in Görlitz, Prussia. The one work known of his was published at Grätz, Styria (Steiermark), in Austria: 'Cantiones sacrae sex vocum iam primum lucem aspicientes. Authore Albino Fabritio. Graecii, quae est metropolis Styriae, excudebat Georgius Widmanstadius.' 1595. Obl. 4to. Twenty-five motets. Six part-books in Wolfenbüttel Herzogl. Bibliothek.

Contents: 1. Gaudent in coelis; 2. O sacrum convivium; 3. Quare tristis es anima; 4. Non vos relinquam; 5. Hodie rex coelorum; 6. Ave Regina; 7. Salve festa dies; 8. Christus resurgens; 9. Aures lux roseo; 10. Tu solis qui facis; 11. Scio quod redemptor; 12. Cantate Domino; 13. Hodie Christus natus; 14. Sis praesens Deus; 15. Ad te levavi; 16. Convertisti planctum; 17. Vulnerasti cor meum; 18. Exultet omnium; 19. Ascendit Deus; 20. Alma redemptoris; 21. Sancta Maria; 22. Levavi oculos meos; 23. Benedictus Deus; 24. Deus canticum novum; 25. Exaudiat te Dominus.

Five motets from this work, Nos. 1, 4, 14, 24, and 25, were included in the Bodenschatz Collection 'Florilegium select. cant.' Lipsiae, 1603, and again in 1618. A motet for four voices, 'Estote fortes in bello,' by 'Fabricius,' is in the 'Theatri musicae, selectissimae Orlandi de Lassus' etc. Lib. 2, 1580, No. 7 (Vogel. *Cat. Wolfenbüttel Herzogl. Bibliothek*).

MSS.—Eitner (*Quellen-Lexikon*) mentions six motets in the Proske Bibl. MS. 775, and one, 'O sacrum convivium' (No. 2 in A. F.'s *Cant. Sac.*), in the Dresden Königl. Bibl. MS. mus. q. 89 a-f. No. 37.

In the Breslau Stadtbibliothek (see Bohn's *Cat.*) the MSS. 15, 18 (dated on cover 1580), and 30 contain 'Haec est dies quam fecit Dominus' for six voices; and fourteen of the motets in A. F.'s *Cant. Sac.*, Nos. 1, 3, 4, 7, 8, 11, 12, 13 (two copies), 14, 15, 16, 23, 24, and 25. 'Non vos relinquam' (No. 4, *Cant. Sac.*) is also in the Zwickau Ratsschulbibl. MS. 53, No. 78 (see Vollhardt's *Cat.*) In the library at Freiberg, Saxony, are twenty-six motets for six voices, Nos. 1-25 the same as those published in A. F.'s *Cant. Sac.* 1595, and placed in the same order: No. 26, 'Quam pulchra es' (Cant. cantici), is also headed 'Albini Fabricii *a* 6 vocib.' (see Kade's *Aeltere Musikalien*). C. S.

FACCIO, Franco, born March 8, 1840,[1] at Verona, of parents in humble circumstances, who deprived themselves almost of the necessaries of life in order to give their son a musical education. In Nov. 1855 he entered the Conservatorio of Milan, where he made remarkable progress in composition under Ronchetti. An overture by him was played at one of the students' concerts in 1860. In the following year he left the institution, and on Nov. 10, 1863, he had the good fortune to have a three-act opera, 'I Profughi Fiamminghi,' performed at La Scala. Before this a remarkable work, written in collaboration with his friend Boito, and entitled 'Le Sorelle d' Italia,' had been performed at the Conservatorio. [See vol. i. p. 354 *a*.] The same friend, for whom he had formed a warm attachment during the time of their studentship, wrote him the libretto of 'Amleto,' which was given with success at the Teatro Carlo Fenice, at Genoa, on May 30, 1865 (not at Florence, as Pougin states), but which was unfavourably received at the Scala in Feb. 1871. In 1866 he fought, together with Boito, in the Garibaldian army, and in 1867-68 undertook a tour in Scandinavia. A symphony in F dates from about this time. In July 1868 he succeeded Croff as professor of harmony in the Conservatorio, and after acquiring great experience as a conductor at the Teatro Carcano, was made conductor at La Scala. A Cantata d' inaugurazione was performed in 1884, and two sets of songs by him have been published by

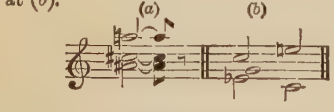
[1] Paloschi and Riemann. Pougin gives the date as 1841. Various articles in the *Gazzetta musicale di Milano* support either date indifferently

Ricordi. Faccio held an important position among the advanced musicians of Italy, and as a composer his works command attention by their originality. It was, however, as a conductor that he made his greatest success, and he was rightly considered as the greatest Italian conductor of his time. He directed the first European performance of Verdi's 'Aïda' in 1872, and the production of his 'Otello' in 1887, both at Milan. He visited England and conducted the performances of 'Otello' at the Lyceum Theatre in July 1889; and died at the Biffi Sanatorium, Monza, July 23, 1891. M.

FACKELTANZ, or *Marche aux flambeaux*, a torchlight procession—a survival from the mediæval tournaments—which takes place at some of the German Courts on occasion of the marriage of members of the royal family. The procession has to march round the court or hall, with various intricate ceremonies (*Times*, Feb. 19, 1878). The music—for military band—is a Polonaise, usually with a loud first and last part, and a soft trio. Meyerbeer wrote four—one for the marriage of the Princess Royal (the Empress Frederick), (Jan. 25, 1858). Spontini, Flotow, and others, have also written them. See also TATTOO. G.

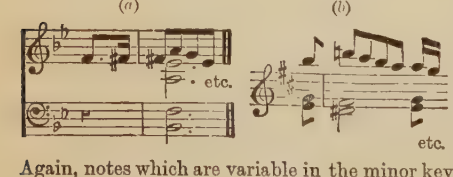
FAGOTTO. The Italian name for the Bassoon, obviously arising from its resemblance to a faggot or bundle of sticks. The Germans have adopted it as *Fagott*. [See BASSOON.] W. H. S.

FAIGNIENT, NOÉ, a Belgian composer of the 16th century, concerning whose life nothing is known. His first book of *Chansons, Madrigales & Motetz a Quatre, Cincq & Six Parties, Nouuellement composees par Noe Faignient*, was published at Antwerp in five part-books in 1568; Yonge's *Musica Transalpina* (1588) contains two madrigals, and thirty-two other compositions are noted in Eitner's *Bibl. d. Musiksammelwerke.* (*Quellen-Lexikon.*)



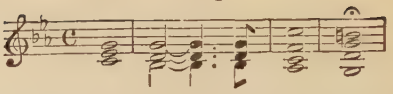
FAISST, IMMANUEL GOTTLOB FRIEDRICH, born Oct. 13, 1823, at Esslingen in Würtemberg, was sent to the seminary at Schönthal in 1836, and in 1840 to Tübingen, in order to study theology; but his musical talents, which had previously shown themselves in the direction of great proficiency on the organ, were too strong, and, although he received no direct musical instruction worth mentioning, he had made such progress in composition by 1844 that when he went to Berlin and showed his productions to Mendelssohn, that master advised him to work by himself rather than attach himself to any teacher. In 1846 he appeared in public as an organ player in many German towns, and finally took up his abode in Stuttgart. Here in 1847 he founded an organ school and a society for the study of church music. He undertook the direction of several choral societies, and in 1857 took a prominent part in the foundation of the Conservatorium, to the management of which he was appointed two years later. Some time before this the University of Tübingen bestowed upon him the degree of Doctor of Philosophy, in recognition of the value of his 'Beiträge zum Geschichte der Claviersonate,' an important contribution to the musical periodical *Cäcilia* (1846), and the title of Professor was given him a few years afterwards. In 1865 he was appointed organist of the Stiftskirche, and received a prize for his choral work 'Gesang im Grünen' at the choral festival in Dresden. His setting of Schiller's 'Macht des Gesanges' was equally successful in the following year with the Schlesische Sängerbund, and a cantata 'Des Sängers Wiederkehr' has been frequently performed. His compositions are almost entirely confined to church music and choral compositions. Several quartets for male voices, and organ pieces were published collectively, and the Lebert and Stark 'Pianoforteschule' contains a double fugue by him. With the latter he published in 1880 an 'Elementar- und Chorgesangschule,' which has considerable value. He undertook the editing of the great edition of Beethoven's pianoforte sonatas with Lebert, for the firm of Cotta, for which edition Von Bülow edited the sonatas from op. 53 onwards. Faisst died at Stuttgart, June 5, 1894. M.

FA-LA. A piece of vocal music for three or more voices, originally set wholly or in part to these two *sol-fa* syllables. Fa-las belong essentially to the madrigalian era, most of the composers of which have left specimens of them. They are said to be the invention of Gastoldi di Caravaggio—if the utterance of musical sounds on unmeaning syllables can be called an invention. Many of his 'balletti,' like many of the Ballets of Morley—such as 'Now is the month of Maying'—end with a lengthened Fa-la. A 4-part song known as 'The Waitts,' by an English composer Jeremiah Savile, set wholly on those syllables, is probably the most popular Fa-la in existence. J. H.



FALCON, MARIE CORNÉLIE, born Jan. 28, 1812, either at Paris or at Monestier near Le Puy, received vocal instruction at the Conservatoire from Henri, Pellegrini, and Bordogni, and learnt dramatic action from Nourrit; she gained in 1830-31 first prizes for vocalisation and singing. On July 20, 1832, she made her début at the Opéra as Alice in 'Robert,' with brilliant success. 'Her acting, intelligence, and self-possession give us promise of an excellent actress. In stature tall enough to suit all the operatic heroines, a pretty face, great play of feature. . . . Her voice is a well-defined soprano, more than two octaves in compass, and resounding equally with the same power' (Castil-Blaze). She remained there until 1838, when ill-health and loss of voice compelled her to leave for Italy. Her parts included Donna Anna on the production of 'Don Juan,' March 10, 1834; Julie in 'La Vestale' at Nourrit's benefit May 3, 1834; the heroines in 'Moïse' and 'Siège de Corinthe.'

She also created the parts of Mrs. Ankarstroem ('Gustave III.'), Morgiana in Cherubini's 'Ali Baba,' Rachel ('La Juive'), Valentine ('Huguenots'), the last two her best parts, the heroine in Louise Bertin's 'Esmeralda,' and Léonor in Niedermeyer's 'Stradella.' 'Richly endowed by nature, beautiful, possessing a splendid voice, great intelligence, and profound dramatic feeling, she made every year remarkable by her progress and by the development of her talent.' (Fétis.) After an absence of two years, and under the impression that her voice was restored, on March 14, 1840, she reappeared at a benefit given on her behalf in the first two acts of 'La Juive,' and in the fourth act of the 'Huguenots.' But her voice had completely gone, and it was with difficulty she could get through the first part—indeed she fainted in the arms of Duprez. (Clément, *Histoire de Musique*, p. 749.) After this she retired altogether from the Opera, where her name still survives to designate dramatic soprano parts. Mme. Falcon afterwards married M. Malançon. She made a single appearance as late as 1891, and died Feb. 26, 1897. A. C.



FALSE RELATION is the occurrence of chromatic contradiction in different parts or voices, either simultaneously, as at (*a*), or in chords which are so near together that the effect of one has not passed from the mind before the other comes to contradict it with a new accidental, as at (*b*).

The disagreeable effect is produced by the contradictory accidentals belonging to different keys, or unequivocally to major or minor of the same key; and it follows that when the contradiction is between notes which can coexist in the same key the effect is not disagreeable. Thus chromatic passing notes and appoggiaturas do not affect the key, and are used without consideration of their apparent contradictions. Schumann uses the sharp and natural of the same note in the same chord in his 'Andante und Variationen' for two pianofortes, op. 46 (*a*), and Haydn the same in his Quartet in D, op. 71 (*b*).

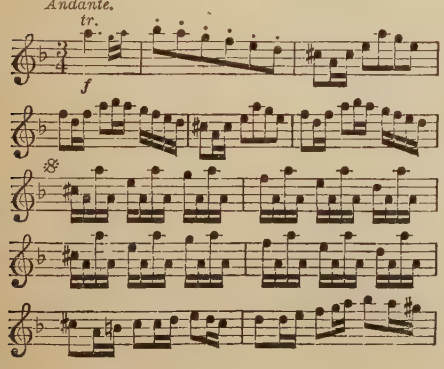
Again, notes which are variable in the minor key do not produce any objectionable effect by their juxtaposition, as the minor 7th descending and the major 7th ascending or stationary; thus Mendelssohn in the Overture to 'Ruy Blas' has B♭ and B♮ in alternate chords.

And the treatment of notes which are interchangeable in chromatic and diatonic chords in the same key is equally free, as between a chromatic note of the chord of the augmented sixth and a succeeding diatonic discord.

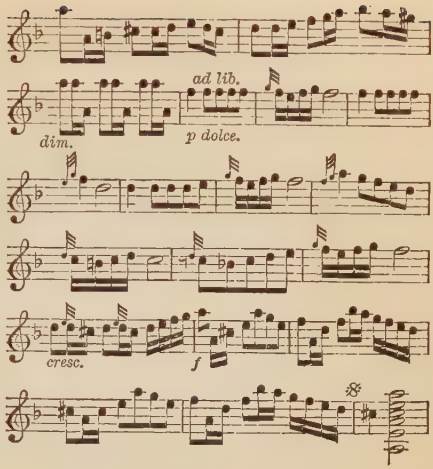
The rule is further modified by so many exceptions that it is almost doubtful if the cases in which the effect is objectionable are not fewer than those in which it is not. C. H. H. P.

FALSETTO. The voices of both men and women contain two—or, as defined in the *Méthode du Chant du Conservatoire de Musique*, three—registers, viz. chest voice (*voce di petto*); head voice (*v. di testa*); and a third which, as being forced or non-natural, is called by Italians and French *falsetto* or *fausset*, or 'false' voice. The limits of these are by no means fixed. In every voice identical notes can be produced in more ways than one, and thus each register can be extended many degrees beyond its normal limits. But it is all but impossible for a singer to keep both first and third registers in working order at the same time. The male counter-tenor, or alto voice, is almost entirely falsetto, and is generally accompanied by an imperfect pronunciation, the vowels usually partaking more or less of the quality of the Italian *u* or English *oo*, on which the falsetto seems to be most easily producible.

The earliest mention of the falsetto in musical Europe is in reference to the Sistine Chapel, where Spaniards exceptionally gifted with this voice preceded that artificial class to whom from the 16th century until the 19th alto and even soprano parts have been assigned. [The falsetto voice has more recently been restored to its old place in the Sistine and other Roman choirs.] J. H.



FALSTAFF. 1. A comic Italian opera in two acts; words by Maggioni, music by Balfe. Produced at Her Majesty's Theatre, July 19, 1838. 2. Verdi's last opera is in three acts, is set to a libretto by Boito, and was produced at the Scala, Milan, on Feb. 9, 1893; at Covent Garden, May 19, 1894. See MERRY WIVES.



FAMITSIN (FAMINTSIN), ALEXANDER SERGEIVICH, of aristocratic descent, was born at Kalouga, Oct. 24 (O.S.), 1841. He was educated in St. Petersburg, and on leaving the University spent two years in Leipzig, where he studied theory under Hauptmann, Richter, and Moscheles. On his return to Russia he was appointed professor of musical history and æsthetics at the newly-opened Conservatoire. He resigned in 1872, in order to devote himself to composition. As a critic he made himself notorious by his

attacks upon the new national school of music. Famitsin composed two weak but pretentious operas: 'Sardanapalus,' given in St. Petersburg in 1875, but with so little success that he made no effort to produce his second opera, 'Uriel Acosta.' His instrumental works include three quartets, a pianoforte quintet, and a 'Russian Rhapsody' for violin and orchestra. Two books of 'Songs for Russian Children' have outlived his more ambitious attempts. As a musical antiquary he did his best work in the following publications: *Russian Mummers and Gleemen* (1889); *The Ancient Indo-Chinese Scale in Europe and Asia, and its appearance in the Russian Folk-Songs* (1890); *The Gusslee: a Russian National Instrument* (1890); and *The Dombra and Kindred Instruments* (1891). Famitsin died at St. Petersburg, July 6, 1896. R. N.

FANCIES, or FANTASIES, the old English name for FANTASIA, which see. In the various collections catalogued under the head of VIRGINAL MUSIC all three words occur. The name seems to have been confined to original compositions as opposed to those which were written upon a given subject or upon a ground. Sir Hubert Parry made the Fancy the subject of one of his lectures—'Neglected By-ways in Music'—at the Royal Institution in 1900; reported in the *Musical Times* for 1900, p. 247. M.

FANDANGO. An Andalusian dance, a variety of the SEGUIDILLA, accompanied by the guitar and castanets. In its original form the fandango was in 6–8 time, of slow tempo, mostly in the minor, with a trio in the major; sometimes, however, the whole was in a major key. Later it took the 3–4 tempo, and the characteristic Spanish rhythm  . In this shape it closely resembles the seguidilla and bolero. One Fandango tune is given by Hawkins (Appendix, No. 33). Another has been rendered famous through its partial adoption by both Gluck and Mozart—the former in his Ballet of 'Don Juan,' the latter in 'Figaro' (end of Act 3). It is given in its Spanish form by Dohrn in the *Neue Zeitschrift f. Musik* (xi. 163, 7) as follows:—

The rhythm of the castanets was

Mozart's version is known and accessible; Gluck's will be found in the Appendix to Jahn's *Mozart*.

There is a curious piece of history said to be connected with this dance. Soon after its first introduction, in the 17th century, it was condemned by the ecclesiastical authorities in Spain as a 'godless dance.' Just as the Consistory were about to prohibit it, one of the judges remarked that it was not fair to condemn any one unheard. Two celebrated dancers were accordingly introduced to perform the fandango before the Consistory. This they did with such effect, that, according to the old chronicler, 'every one joined in, and the hall of the consistorium was turned into a dancing saloon.' No more was heard of the condemnation of the fandango.

Similar dances to the fandango are the TIRANA, the POLO, and the JOTA ARAGONESA. E. P.

FANFARE. A French term of unknown origin—perhaps Moorish, perhaps onomatopœic—denotes in strictness a short passage for trumpets, such as is performed at coronations and other state ceremonies. 1. In England they are known as 'Flourishes,' and are played by the Trumpeters of His Majesty's Household Cavalry to the number of eight, all playing in unison on E♭ trumpets without valves. The following, believed to date from the reign of Charles II., is the Flourish regularly used at the opening of Parliament, and was also performed at the announcement of the close of the Crimean War, the visit of Queen Victoria and the Prince of Wales to St. Paul's after the Prince's recovery, and on other occasions:—

2. So picturesque and effective a feature as the Fanfare has not been neglected by Opera composers. No one who has heard it can forget the effect of the two flourishes announcing the arrival of the Governor in 'Fidelio,' both in the opera and in the two earlier overtures. True to the fact, Beethoven has written it in unison (in the opera and the later overture in B♭, in the earlier overture in E♭, with triplets). Other composers, not so conscientious as he, have given them in harmony, sometimes with the addition of horns and trombones. See Spontini's 'Olympie'; Meyerbeer's 'Struensee,' Act 2; Ambroise Thomas's 'Hamlet,' and many more. A good example is that in 'Tannhäuser,' which forms the basis of the march. It is for three Trumpets in B.

Weber has left a short one—'*kleiner Tusch*'—for twenty Trumpets in C (Jähns's Thematic Cat. No. 47 A). [TUSCH.]

3. The word is also employed in a general sense for any short prominent passage of the brass, such as that of the Trumpets and Trombones (with the wood wind also) near the end of the fourth movement in Schumann's E♭ Symphony; or of the whole wind band in the opening *Andante* of the Reformation Symphony. G.

FANING, EATON, the son of a professor of music, was born at Helston in Cornwall, May 20, 1850. He received his first instruction on the pianoforte and violin from his parents, and performed at local concerts before he was five years old. In April 1870, he entered the Royal Academy of Music, where he studied under Sir W. Sterndale Bennett, Dr. Steggall, Signor Ciabatta, and Messrs. Sullivan, Jewson, Aylward, and Pettit, and carried off successively the bronze medal (1871), silver medal for the Pianoforte (1872), Mendelssohn Scholarship (1873), bronze medal for Harmony (1874), and the Lucas silver medal for Composition (1876). In 1874 Mr. Faning was appointed Sub-Professor of Harmony, in 1877 Assistant-Professor of the Pianoforte, and Associate, and in 1878 Professor of the Pianoforte. He also played the violoncello and drums in the orchestra. On July 18, 1877, Mr. Faning's operetta, 'The Two Majors,' was performed at the Royal Academy, which event led to the establishment of the Operatic Class at the institution. A comic operetta, 'Mock Turtles,' was produced at the Savoy Theatre in 1881, and another, 'The Head of the Poll,' at the German Reed Entertainment in 1882. At the same date Mr. Faning occupied the posts of Professor and Conductor of the Choral Class at the National Training School, and Professor of the Pianoforte at the Guildhall School of Music; the latter post he resigned in July 1885, when he was appointed Director of the Music at Harrow School. [He filled this post with much credit, and important musical results, until 1901, when he retired. He examined for the Associated Board of the R.A.M. and the R.C.M. in South Africa in 1901.] From the opening of the Royal College of Music until July 1885 he taught the Pianoforte and Harmony, and until Easter 1887 also conducted the Choral Class at that institution. For a good many seasons he conducted a 'Select Choir' at Messrs. Boosey's Ballad Concerts. Mr. Faning was for some time conductor of the London Male Voice Club, and of the Madrigal Society. [He took the degree of Mus.B. at Cambridge in 1894, and of Mus.D. in 1900. For this last his exercise was a mass in B minor.] His compositions include two operettas, a symphony in C minor, two quartets, an overture, a Magnificat and Nunc Dimittis for full orchestra (performed at St. Paul's at the Festival of the Sons of the Clergy), besides anthems, songs, duets, and part-songs, among which the 'Song of the Vikings,' for four-part chorus with pianoforte duet accompaniment, has attained wide popularity. [An interesting article on Faning appeared in the *Musical Times* for 1901, p. 513.] W. B. S.

FANISKA. Cherubini's twenty-first opera; in three acts; words by Sonnleithner from the French. Produced at the Kärnthnerthor Theatre, Vienna, Feb. 25, 1806.

FANTASIA is a term of very respectable antiquity as applied to music, for it seems to be sufficiently established by both Burney and Hawkins in their Histories that it was the immediate predecessor of the term Sonata, and shares with the term RICERCAR the honour of having been the first title given to compositions expressly for instruments alone. It seems itself to have been a descendant of the madrigal; for when madrigals, accompanied as they commonly were by instruments playing the same parts with the voices, had to a certain extent run their course as the most popular form of chamber compositions, the possibility of the instruments playing the same kind of music without the voices was not far to seek. Hawkins remarks that the early Fantasias 'abounded in fugues and little responsive passages and all those other elegances observable in the structure and contrivance of the madrigal.' They were written for combinations of various instruments, such as a 'Chest of Viols,' and even for five 'Cornets' (Zinken). There are examples of this kind by very ancient English composers, and some also

for the Virginals by Byrd and Gibbons in *Parthenia*. Numerous examples by these and other composers of the time, notably Giles Farnaby and Peter Phillips, occur in the *Fitzwilliam Virginal Book*. Dr. Burney quotes Simpson's *Compendium* to the intent that in the year 1667 'this style of music was much neglected because of the scarcity of auditors that understand it, their ears being more delighted with light and airy music.'

In the works of Bach there are a great number of Fantasias both as separate works and as the first movement to a Suite, or conjoined with a Fugue. In the latter capacity are two of the finest Fantasias in existence, namely that in A minor called 'Grosse Fantasie und Fuga' (*B.-G.* xxxvi. p. 81), and that in D minor, commonly known as the 'Fantasia cromatica' (*B.-G.* xxxvi. p. 71). Among his organ works also there are some splendid specimens, such as Fantasia et Fuga in G minor (*B.-G.* xv. p. 177), and a Fantasia of considerable length in G major, constituting a complete work in itself (*B.-G.* xxxviii. p. 75). Among the works of his sons and other contemporaneous German masters are also many specimens of Fantasias. Some of them are very curious, as the last movement of a Sonata in F minor by Philip Emanuel Bach, published in Roitzsch's 'Alte Klavier Musik,' in the greater part of which the division by bars is entirely dispensed with; and the same peculiarity distinguishes a Fantasia by Johann Ernst Bach which is published in the same collection. Mozart produced some fine examples of Fantasias, Beethoven apparently only two distinctly so called, namely opus 77 and the Choral Fantasia; and two of the Sonatas (op. 27) are entitled 'quasi una Fantasia,' which implies some irregularity of form. In more modern times, apart from Schumann's fine example dedicated to Liszt (op. 17), the name has been applied to various vulgar effusions which have little in common with real music; but the name has been restored to its former dignity by Brahms, who uses it as the collective name for his short piano pieces, op. 116. The name has also been commonly applied to those nondescript pieces of orchestral music which are not long enough to be called symphonic poems, and not formal enough to be called overtures. C. H. H. P.

FANTASIESTÜCK. A name adopted by Schumann from Hoffmann to characterise various fancy pieces for pianoforte, alone and with other instruments (PF. solo, op. 12, 111; with clarinet, op. 73; with violin and violoncello, op. 88). They are on a small scale, but several of them of considerable beauty.

FARANDOLE. A national Provençal dance. No satisfactory derivation has been given of the name. Diez (*Etymologisches Wörterbuch der Romanischen Sprachen*) connects it with the Spanish Farandula, a company of strolling players, which he derives from the German *fahrende*. A still more unlikely derivation has been suggested from the Greek φάλαγξ and δοῦλος, because the dancers in the Farandole are linked together in a long chain. The dance is very probably of Greek origin, and seems to be a direct descendant of the Cranes' Dance, the invention of which was ascribed to Theseus, who instituted it to celebrate his escape from the Labyrinth. This dance is alluded to at the end of the hymn to Delos of Callimachus: it is still danced in Greece and the islands of the Ægean, and may well have been introduced into the South of France from Marseilles. The Farandole consists of a long string of young men and women, sometimes as many as a hundred in number, holding one another by the hands, or by ribbons or handkerchiefs. The leader is always a bachelor, and he is preceded by one or more musicians playing the *galoubet*, *i.e.* a small wooden flûte-à-bec, and the *tambourin*. [See TAMBOURIN.] With his left hand the leader holds the hand of his partner, in his right he waves a flag, handkerchief, or ribbon, which serves as a signal for his followers. As the Farandole proceeds through the streets of the town the string of dancers is constantly recruited by fresh additions. The leader (to quote the poet Mistral) 'makes it come and go, turn backwards and forwards . . . sometimes he forms it into a ring, sometimes winds it in a spiral, then he breaks off from his followers and dances in front, then he joins on again, and makes it pass rapidly under the uplifted arms of the last couple.'[1] The Farandole is usually danced at all the great feasts in the towns of Provence, such as the feast of Corpus Domini, or the 'Coursos de la Tarasquo,' which were founded by King René on April 14, 1474, and take place at Tarascon annually on July 29. In the latter the Farandole is preceded by the huge effigy of a legendary monster—the Tarasque—borne by several men and attended by the gaily dressed 'chevaliers de la Tarasque.' The music of the Farandole is in 6–8 time, with a strongly accentuated rhythm. The following is the traditional 'Farandoulo dei Tarascaire of Tarascon:—

The Farandole has occasionally been used for

[1] Anséume Mathieû, *La Farandoulo*, published with a translation and notes by F. Mistral. Avignon, 1862.

less innocent purposes than that of a mere dance: in 1815 General Ramel was murdered at Toulouse by the infuriated populace, who made use of their national dance to surround and butcher him.

The Farandole has been introduced on the stage in Gounod's 'Mireille,' and in Daudet's 'L'Arlésienne' (with Bizet's music), but the dance is not suited for the purposes of a ballet. Further information concerning it will be found *sub voce* in Larousse's *Dictionary*, in Vidal's *Lou Tambourin*, Désanat's *Coursos de la Tarasquo*, Mistral's *Mireille*, *Fêtes de la Tarasque*, and introduction to Mathieu's *La Farandoulo*, and in the works of Hyacinthe Morel. A good description of the dance occurs in Daudet's *Numa Roumestan*. W. B. S.

FARCE (Ital. *Farsia*, probably from the Latin *farcio*, to stuff—Plautus has *centones farcire*, to insert falsehoods or tricks). A *farsia* was a canticle in the vulgar tongue intermixed with Latin, originating in the French church at the time when Latin began to be a tongue not 'understanded of the people.' The *farsia* was sung in many churches at the principal festivals, almost universally at Christmas. It became a vehicle for satire and fun, and thus led to the modern Farsa or Farce, a piece in one act, of which the subject is extravagant and the action ludicrous. J. H.

FARINELLI. A serio-comic opera in two acts; words by C. Z. Barnett, music by John Barnett; produced at Drury Lane, Feb. 8, 1839, Balfe acting Farinelli, and being forced by hoarseness to leave off at the end of the first act.

FARINELLI, Cristiano, a violin player and composer, was an uncle of the celebrated singer Farinelli (Carlo Broschi). Date and place of his birth and death are unknown. After living for some time in France we find him from 1680 to 1685 at Hanover, side by side with Handel, as leader of the band. [According to Chrysander (*Händel*, i. 418) he was in the Elector's service in 1714, and, on the latter's accession to the English throne, composed a cantata on the words, 'Lord, remember me when thou comest in Thy kingdom.' (See *Quellen-Lexikon.*)] He appears to have enjoyed a great reputation as a performer, and considerable popularity as a composer of instrumental music in a light and pleasing style. He excelled especially in the performance of Lulli's airs and his own so-called 'Follia,' which was known in England during the 18th century as 'Farinell's[1] ground.' [See Follia and the *Musical Times* for 1888, p. 717.] Farinelli was ennobled by the King of Denmark, and, according to Hawkins, was appointed by George I. his resident at Venice. P. D.

FARINELLI, Carlo Broschi, detto, was born Jan. 24, 1705, at Naples, according to his own statement made to Dr. Burney, who saw him at Bologna in 1770, though Padre G. Sacchi, his biographer, fixes his birthplace at Andria. Some say that he derived his sobriquet from the occupation of his father, who was either a miller or a seller of flour (*farina*); others contend that he was so named after three brothers *Farina*, very distinguished amateurs at Naples, and his patrons. It is, however, more probable that he simply took the name of his uncle Farinelli, the composer. Sacchi declares that he saw in Farinelli's possession the letters of nobility which he was required to produce when admitted, by the favour of the King of Spain, into the orders of Calatrava and St. Iago. It seems scarcely credible that noble parents should have destined their son for the musical stage, or consented to the peculiar preparation necessary to make him a *soprano*; but this, as usual, is explained by the story of an accident having happened to the boy while riding, which rendered necessary the operation by which he retained his treble. The voice, thus manufactured, became the most beautiful ever heard. He soon left the care of his father, who taught him the rudiments, to enter the school of Porpora, of whom he was the first and most distinguished pupil. In spite of his explicit statement to Dr. Burney, it is not possible that Farinelli could have made his début at Naples in 1720, at the age of fifteen, in Metastasio's 'Angelica e Medoro'; for the latter did not leave Rome till 1721, and 'Angelica e Medoro' was not written before 1722. (Fétis.) In that year Farinelli, already famous in southern Italy under the name of *il ragazzo* (the boy), accompanied Porpora to Rome, and made his first appearance there in 'Eumene,' composed by his master for the Teatro Aliberti. There was a German trumpet player at that time in the capital, who excited the admiration of the Romans by his marvellous powers. For this artist Porpora wrote an obbligato part to a song, in which his pupil vied with the instrument in holding and swelling a note of extraordinary length, purity, and volume. Although the virtuoso performed this in a wonderful manner, Farinelli excelled him in the duration, brilliance, and gradual crescendo and diminuendo of the note, while he carried the enthusiasm of the audience to the highest pitch by the novelty and spontaneity of the shakes and difficult variations which he introduced into the air. It is probable that these were previously arranged by Porpora, and not due to the impromptu inspiration of the singer. Having remained under the instruction of his master until 1724, Farinelli made his first journey to Vienna in that year. A year later he sang for the first time at Venice in Albinoni's 'Didone abbandonata,' the libretto by Metastasio; and subsequently returned to Naples, where he achieved a triumph in a Dramatic Serenade by Hasse, in which he sang with the celebrated *cantatrice*, Tesi. In 1726 he appeared in Fr. Ciampi's 'Ciro' at Milan; and then made his

[1] D'Urfey wrote his song 'Joy to great Cæsar' in honour of Charles II. to 'divisions' on this bass; it must, therefore, have been composed before 1685.

second visit to Rome, where he was anxiously expected. In 1727 he went to Bologna, where he was to meet the famous Bernacchi, the 'King of Singers,' for the first time. Meeting this rival in a grand duo, Farinelli poured forth all the beauties of his voice and style without reserve, and executed a number of most difficult passages, which were rewarded with tumultuous applause. Nothing daunted, Bernacchi replied in the same air, repeating every trill, roulade, or cadenza which had been sung by Farinelli. The latter, owning his defeat, entreated his conqueror to give him some instruction, which Bernacchi, with equal generosity, willingly consented to bestow; and thus was perfected the talent of the most remarkable singer, perhaps, who has ever lived.

After a second visit to Vienna in 1728, Farinelli went several times to Venice, Rome, Naples, Piacenza, and Parma, meeting and vanquishing such formidable rivals as Nicolini, Faustina, and Cuzzoni, and being everywhere loaded with riches and honours. In 1731 he visited Vienna for the third time. It was at this point that he modified his style, from one of mere brilliance and *bravura*, which, like a true pupil of Porpora, he had hitherto practised, to one of pathos and simplicity. This change is said to have been suggested by the Emperor Charles VI. 'You have,' he said, 'hitherto excited only astonishment and admiration, but you have never touched the heart; it would be easy to you to create emotion, if you would but be more simple and more expressive!' Farinelli adopted this admirable counsel, and became the most pathetic, as he was still the most brilliant, of singers.

Returning once more to Italy, he revisited, with ever-increasing renown, Venice, Rome, Ferrara, Lucca, and Turin. In 1734 he made his first journey to England. Here he arrived at the moment when the opposition to Handel, supported by the nobles, had established a rival Opera, with Porpora for composer, and Senesino, who had quarrelled with the great German, for principal singer. The enterprise, however, did not succeed, but made debts to the amount of £19,000. At this juncture Porpora naturally thought of his illustrious pupil, who obeyed the summons, and saved the house. He made his first appearance at the Theatre, Lincoln's Inn, in 'Artaserse,' the music of which was chiefly by Riccardo Broschi, his own brother, and Hasse. The most favourite airs were 'Pallido il sole,' set by Hasse and sung by Senesino; 'Per questo dolce amplesso,' by the same, and 'Son qual nave,' by Broschi, both the latter being sung by Farinelli. In the last, composed specially for him, the first note (as in the song in 'Eumene') was taken with such delicacy, swelled by minute degrees to such an amazing volume, and afterwards diminished in the same manner to a mere point, that it was applauded for full five minutes. After this, he set off with such brilliance and rapidity of execution that it was difficult for the violins of those days to accompany him. He sang also in 'Onorio,' 'Polifemo,' and other operas by Porpora; and excited an enthusiastic admiration among the dilettanti, which finally culminated in the famous ejaculation of a lady in one of the boxes (perpetuated by Hogarth in the *Rake's Progress*)—'One God and one Farinelli!' In his first performance at Court he was accompanied by the Princess Royal, who insisted on his singing two of Handel's songs at sight, printed in a different clef, and composed in a different style, from any to which he had ever been accustomed. He also confirmed the truth of the story, that Senesino and himself meeting for the first time on the same stage, 'Senesino had the part of a furious tyrant to represent, and Farinelli that of an unfortunate hero in chains; but, in the course of the first song, he so softened the obdurate heart of the enraged tyrant that Senesino, forgetting his stage character, ran to Farinelli and embraced him in his arms. The Prince of Wales gave Farinelli a 'fine wrought-gold snuff-box, richly set with diamonds and rubies, in which was enclosed a pair of diamond knee-buckles, as also a purse of one hundred guineas.' This example was followed by most of the courtiers, and the presents were duly advertised in the Court Journal. His salary was only £1500, yet during the three years 1734, 1735, and 1736, which he spent in London, his income was not less than £5000 per annum. On his return to Italy, he built, out of a small part of the sums acquired here, 'a very superb mansion, in which he dwelt, choosing to dignify it with the significant appellation of the *English Folly*.'

Towards the end of 1736, Farinelli set out for Spain, staying a few months in France by the way; where, in spite of the ignorance and prejudice against foreign singers which then distinguished the French, he achieved a great success. Louis XV. heard him in the Queen's apartments, and applauded him to an extent which astonished the Court (Riccoboni). The King gave him his portrait set in diamonds, and 500 louis d'or. Though the singer, who had made engagements in London, intended only a flying visit to Spain, his fortune kept him there nearly twenty-five years. He arrived in Madrid, as he had done in London, at a critical moment. Philip V., a prey to melancholy depression, neglected the affairs of the State, and refused even to preside at the Council. The Queen, hearing of the arrival of Farinelli, determined to try the effect of his voice upon the King. She arranged a concert in the next room to that which the King occupied, and invited the singer to perform there a few tender and pathetic airs. The success of the plan was instantaneous and complete: Philip was first struck, then moved, and finally overcome with pleasure. He sent for the artist, thanked him with effusion, and bade him

name his reward. Farinelli, duly prepared, answered that his best reward would be to see the monarch return to the society of his Court and to the cares of the State. Philip consented, allowed himself to be shaved for the first time for many weeks, and owed his cure to the powers of the great singer. The Queen, alive to this, succeeded in persuading the latter to remain at a salary of 50,000 francs, and Farinelli thus separated himself from the world of art for ever. He related to Burney that during ten years, until the death of Philip V., he sang four songs to the King every night without change of any kind. Two of these were the 'Pallido il sole' and 'Per questo dolce amplesso' of Hasse; and the third, a minuet on which he improvised variations. He thus repeated about 3600 times the same things, and never anything else: he acquired, indeed, enormous power, but the price paid for it was too high. It is not true that Farinelli was appointed prime minister by Philip; this post he never had; but under Ferdinand VI., the successor of Philip, he enjoyed the position of first favourite, superior to that of any minister. This King was subject to the same infirmity as his father, and was similarly cured by Farinelli, as Saul was by David. His reward this time was the cross of Calatrava (1750), one of the highest orders in Spain. From this moment his power was unbounded, and exceeded that ever obtained by any singer. Seeing the effect produced on the King by music, he easily persuaded him to establish an Italian opera at Buen-retiro, to which he invited some of the first artists of Italy. He himself was appointed the chief manager. He was also employed frequently in political affairs, was consulted constantly by the minister La Enseñada, and was especially considered as the agent of the ministers of those European Courts which were opposed to the family treaty proposed by France. (Bocous.) In all his prosperity Farinelli ever showed the greatest prudence, modesty, and moderation: he made no enemies, strange as it may seem, but conciliated those who would naturally have envied him his favour with the King. Hearing one day an officer in the ante-chamber complain of the King's neglect of his thirty years' service, while riches were heaped on 'a miserable actor,' Farinelli begged a commission for the grumbler, and gave it to him, to his great surprise, observing mildly that he was wrong to tax the King with ingratitude. According to another anecdote, he once requested an embassy for a courtier, when the King asked him if he was not aware that this grandee was a particular enemy of his. 'True,' replied Farinelli; 'but this is how I desire to take my revenge upon him.' He was as generous also as he was prudent. A story is told of a tailor who brought him a handsome gala-costume, and refused any payment, but humbly begged to hear one song from the incomparable artist. After trying in vain to change his resolution, Farinelli good-humouredly complied, and sang to the delighted tailor, not one, but several songs. Having concluded, he said: 'I too am rather proud; and that is the reason, perhaps, of my having some advantage over other singers. I have yielded to you; it is but just that you should yield in turn to me.' He then insisted on paying the man nearly double the value of the clothes.

While still at Madrid he heard of the death of his former rival, teacher, and friend, Bernacchi. In a letter (in the possession of the present writer), dated April 13, 1756, he speaks with deep regret of the loss of one 'for whom he had always felt esteem and affection,' and condoles with his correspondent, Padre Martini.

Shortly after the ascent of Charles III. to the throne (1759), Farinelli received orders to leave the kingdom, owing probably to Charles's intention to sign the family pact with France and Naples, to which the singer had ever been opposed. He preserved his salary, but on condition that he should live at Bologna and not at Naples. Once more in Italy, after twenty-five years of exile, Farinelli found none of his friends remaining. Some were dead; others had quitted the country. New friends are not easily made after middle age; and Farinelli was now fifty-seven years old. He had wealth, but his grandeur was gone. Yet he was more addicted to talking of his political career than of his triumphs as a singer. He passed the twenty remaining years of his life in a splendid *palazzo*, a mile from Bologna, contemplating for hours the portraits of Philip V., Elisabeth, and Ferdinand, in silence, interrupted only by tears of regret. He received the visits of strangers courteously, and showed pleasure in conversing with them about the Spanish Court. He made only one journey during this period, to Rome, where he expatiated to the Pope on the riches and honours he had enjoyed at Madrid. The Holy Father answered, 'Avete fatta tanta fortuna costà, perche vi avete trovato le gioie, che avete perdute in quà.'

When Burney saw him at Bologna in 1771, though he no longer sang, he played on the viol d'amour and harpsichord, and composed for those instruments. He had also a collection of keyed instruments in which he took great delight, especially a piano made at Florence in 1730, which he called *Rafael d'Urbino*. Next to that, he preferred a harpsichord which had been given to him by the Queen of Spain; this he called *Correggio*, while he named others *Titian*, *Guido*, etc. He had a fine gallery of pictures by Murillo and Ximenes, among which were portraits of his royal patrons, and several of himself, one by his friend Amiconi, representing him with Faustina and Metastasio. The latter was engraved by I. Wagner at London (fol.), and is uncommon; the head of Farinelli was copied from it again by the same engraver, but reversed, in an oval (4to), and the first state of this is rare: it

supplied Sir J. Hawkins with the portrait for his *History of Music*. C. Lucy also painted Farinelli; the picture was engraved (fol.) in mezzotint, 1735, by Alex. Van Haecken, and this print is also scarce.

Fétis falls into an error in contradicting the story of Farinelli's suggesting to Padre Martini to write his *History of Music*, on the ground that he only returned to Italy in 1761, four years after the appearance of the first volume, and had no previous relations with the learned author. The letter quoted above shows that he was in correspondence with him certainly as early as April 1756, when he writes in answer to a letter of Martini, and, after adverting to the death of Bernacchi, orders twenty-four copies of his work, bound in red morocco, for presents to the Queen and other notabilities of the Court. It is therefore quite possible that their correspondence originated even long before this. They remained in the closest intimacy until death separated them by the decease of Farinelli, July 15, 1782, in the seventy-eighth year of his age.

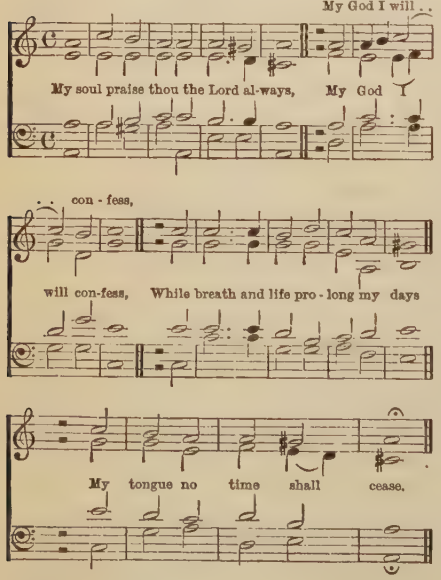
Martinelli speaks in glowing terms of this great artist, saying that he had seven or eight notes more than ordinary singers, and these perfectly sonorous, equal, and clear; that he had also much knowledge of music, and was a worthy pupil of Porpora. Mancini, a great master of singing, and a fellow-pupil of Bernacchi with Farinelli, speaks of him with yet more enthusiasm. 'His voice,' he says, 'was thought a marvel, because it was so perfect, so powerful, so sonorous, and so rich in its extent, both in the high and the low parts of the register, that its equal has never been heard in our times. He was, moreover, endowed with a creative genius which inspired him with embellishments so new and so astonishing that no one was able to imitate them. The art of taking and keeping the breath so softly and easily that no one could perceive it began and died with him. The qualities in which he excelled were the evenness of his voice, the art of swelling its sound, the *portamento*, the union of the registers, a surprising agility, a graceful and pathetic style, and a shake as admirable as it was rare. There was no branch of the art which he did not carry to the highest pitch of perfection . . . . The successes which he obtained in his youth did not prevent him from continuing to study; and this great artist applied himself with so much perseverance that he contrived to change in some measure his style and to acquire another and superior method, when his name was already famous and his fortune brilliant.' Such was Farinelli, as superior to the great singers of his own period as they were to those of more recent times. J. M.

FARINELLI, Giuseppe, composer, born at Este, May 7, 1769; in 1785 entered the Conservatorio de' Turchini at Naples, where he studied accompaniment under Fago, and composition under Sala and Tritto. In 1808 he was in Venice, and 1810-17 at Turin. In 1819 he was appointed chapel-master at Trieste, where he died Dec. 12, 1836. He composed an immense number of operas (Fétis enumerates forty, and Riemann gives the number as fifty-eight) in avowed imitation of Cimarosa, which, however, were more successful than the majority of imitations. A duet he introduced into the 'Matrimonio Segreto' has been mistaken for Cimarosa's own composition. He also wrote a mass, a five-part 'Christe eleison,' a 'Stabat' in two parts, and other church music. M. C. C.

FARMER, John (fl. 1591-1601), an important madrigalian composer of the Elizabethan period, and also known to us by his skilful settings for four voices of the old church psalm tunes. He was the author of a little treatise entitled—

'Divers and sundry waies of two parts in one, to the number of fortie, upon one playn Song; sometimes placing the ground above and two parts benethe, and otherwhile the ground benethe and two parts above, or againe, otherwise the ground sometimes in the middest betweene both, and likewise other Conceites, which are plainlie set downe for the Profite of those which would attaine unto Knowledge. Performed and published by John Farmer in favoure of such as love Musicke, with the ready way to Perfect Knowledge. *Imprinted at London by Thomas Este the Assigne of William Byrd, and are to be sould in Broad Streete neere the Royal Exchaunge at the Author's house.* 1591.'

The only known copy now extant of this tract, which is dedicated to 'Edward de Vere, Earle of Oxenford,' is in the Bodleian Library. It consists of a series of examples of three-part counterpoint in different orders, and seems to have attained considerable success. Hawkins (*Hist.* iii. 373) says, 'Before Bevin's time the precepts for the composition of Canon were known to few. Tallis, Bird, Waterhouse, and Farmer were eminently skilled in this more abstruse part of musical practice.'



In 1599 was published 'The first set of English Madrigals to Foure Voyces. Newly composed by John Farmer, Practicioner in the Arte of Musicque. 4to. *Printed at London in Little Saint Helen's by William Barley the Assigne of Thomas Morley, and are to be sold at his shoppe in Gratious-streete, Anno Dom.* 1599.' This work also is dedicated to the 'Earle of Oxenford,' whom Farmer calls his 'very good Lord and Master.' In the address to the reader he claims to have 'fitly linkt Musicke to Number, as each give to other their true effect, which is to make delight, a virtue so singular in the Italians, as under that ensign only they hazard their honour.' The collection consists of seventeen madrigals, sixteen of which are for four, and the seventeenth for eight voices.

No further madrigals of Farmer's appear to have been printed except the fine one for six voices, 'Fair Nymphs I heard one telling,' which he contributed to the 'Triumphs of Oriana' (1601). This and his delightful 'To take the air a bonny lass was walking' are the only two of his madrigals familiar to the present generation, for the simple but much to be regretted reason that no others are now published.

Hawkins gives a four-part madrigal of Farmer's, 'You pretty flowers' (the first of the seventeen mentioned above), in the Appendix to his *History of Music*. The Library of Christ Church, Oxford, and the Music School contain some MS. music of his, and there are a few of his hymn tunes in MS. at the British Museum.

Farmer was one of the most important contributors to Thomas Este's 'Whole Booke of Psalmes,' 1592. (See ESTE.) He not only set all the canticles, hymns, etc. (twelve in number) which are there prefixed to the Psalms proper, but also five of the psalm tunes themselves. Burney, speaking of these settings (*Hist.* iii. 54), says, 'The counterpoint is constantly simple, of note against note, but in such correct and excellent harmony as manifests the art to have been very successfully cultivated in England at that time.' The following interesting example will show that Farmer was not unworthy of Burney's encomium. It may be mentioned that in all these settings the melody or 'playn-song' is invariably given to the voice immediately above the bass; generally the tenor, but in this example the counter-tenor, as this tune is set for two trebles, counter-tenor, and bass. The rule by which the old writers introduced the major third into the final chord of all compositions in the minor mode (see TIERCE DE PICARDIE) is rigidly observed by Farmer and the other contributors to Este's collection, not only at the end of each psalm tune, but also at the end of every line in each tune.

Chesshire Tune—Psalm 146.

Nothing is known as to either the dates or places of Farmer's birth and death; and until recently nothing has been known of his life, except that he was living in London at the date of the publication of his madrigals in 1599. From an inspection, however, of the Chapter Acts of Christ Church Cathedral, Dublin (kindly afforded to the writer by the Dean), it appears that Farmer preceded Thomas Bateson as organist of that Cathedral. The following are the only Chapter Acts which refer to him:—

1595. Feb. 16.—Yt is ordered ye said daie by the Deane and Chapter that Mr. John Fermer shall have as Mr. of the children & organist for this yeare fifteene pounds Currant money of England from Candelmas daie last (vizt.) of the Vicars 10s. and of Mr. Deane 20s. and of every Dignitie 10s. ster. and the rest the Proctor of the Church is to make upp.

1596. Aug. 10.—The said daie Robert Jordan resigned his Viccars Rowme in the Chapter house, and the same daie John Farmer was sworn Vicar Corrall in his place.

1597. July 18.—It is ordered that if Mr. John Fermer doe not return by the first of August 1597 that then all Excuses sett a-part;—His place to bee voyd in this Church for depting the land without lycence.

Although there are no subsequent references in the Chapter Acts to any other organist until the appointment of Bateson in 1608-9, it seems most probable that Farmer went straight from Dublin to London in 1597, as we find him residing in Broad Street in 1599. L. M'C. L. D.

FARMER, JOHN, born August 16, 1836, at Nottingham, received his musical education at the Leipzig Conservatorium, and subsequently under Andrae Spaeth at Saxe-Coburg. He was a teacher of music at Zürich, and subsequently music master at Harrow School from 1862 to 1885, where he obtained great popularity. He became organist in Balliol College in 1885, where he instituted in the College Hall a series of Sunday and Monday evening concerts for the performance of glees, part-songs, etc., as well as the 'Balliol College Musical Society.' His compositions include 'Christ and his Soldiers,' oratorio, 1878; a 'Requiem in memory of departed Harrow friends'; 'Cinderella,' a fairy opera, 1882; 'Nursery Rhymes Quadrilles,' for chorus and orchestra, four sets; 'Hunting Songs Quadrilles,' for same; songs, etc. He edited 'Hymns and Tunes for High Schools'; the 'Harrow Glee Book,' 'Harrow School Marches,' 'Harrow School Songs,' etc., as well as two volumes of Bach for the use of High Schools. [For some years before his death, which took place at Oxford, July 17, 1901, he had been examiner for the Society of Arts. In a warmly appreciative article on him in the *Musical Gazette* for Dec. 1901, his successor at Balliol, Dr. Ernst Walker, wrote, 'He struck out a line for himself, and spent himself royally and with absolute self-sacrifice in the popularisation of good, and only good, music among the naturally more or less unmusical.'] A. C.

FARMER, THOMAS, Mus. Bac., was originally one of the Waits of London, and graduated at Cambridge in 1684. He composed instrumental music for the theatre, and contributed some songs to the second edition of Playford's *Choice*

Ayres, 1675, to *The Theater of Music*, 1685-87, and to D'Urfey's Third Collection of Songs, 1685. In 1686 he published 'A Consort of Musick in four parts, containing thirty-three Lessons beginning with an Overture,' and in 1690 'A Second Consort of Musick in four parts, containing eleven Lessons, beginning with a Ground.' [In *Apollo's Banquet* is 'Mr. Farmer's Magot for violins'; Farmer also wrote music for 'The Princess of Cleve' in 1682 (Brit. Mus. Add. MSS. 29,283-5).] Purcell composed an elegy, written by Nahum Tate, upon his death (printed in *Orpheus Britannicus*, ii. 35), from which it is certain that he died before 1695. W. H. H.

FARNABY, GILES, Mus.Bac., was of the family of Farnaby of Truro. He commenced the study of music about 1580 [was living in London in 1589 (Churchwardens' accounts of St. Helen's, Bishopsgate)], and on July 7, 1592, graduated at Oxford as Bachelor of Music; stating in his *supplicat* that he had studied music for twelve years (Wood's *Fasti*, ed. Bliss, i. 257). He was one of the ten composers employed by Thomas Este to harmonise the tunes for his 'Whole Booke of Psalmes' published in 1592. In 1598 he published 'Canzonets to foure voyces, with a song of eight parts,' with commendatory verses prefixed by Antony Holborne, John Dowland, Richard Alison, and Hugh Holland. A madrigal by Farnaby, 'Come, Charon, come,' is in the Royal College of Music, and another, 'Construe my meaning,' has been edited by W. B. Squire. W. H. H.

There are a number of pieces by him in the *Fitzwilliam Virginal Book* (see VIRGINAL MUSIC), among which is a curious composition for two virginals, and a transcription for virginals of his own madrigal 'Daphne on the Rainebowe.' The same volume contains four pieces by his son, Richard Farnaby, of whom nothing is known. Giles Farnaby contributed harmonies to some of the tunes in Ravenscroft's Psalter (1621). Wood's statement that he was a native of Truro is probably correct, though the name does not occur in the Visitation of Cornwall of 1620. Thomas Farnaby's wife came from Launceston. He lived most of his life in London and Sevenoaks, and his descendants remained in Kent; but the early history of the family is obscure, and the connection between Giles and Thomas Farnaby the Kentish schoolmaster cannot be traced. [Additions by W. B. S., and from the *Dict. of Nat. Biog.*]

FARRANT, JOHN. According to Hawkins there were two musicians of this name, who both flourished about the year 1600. It is quite probable that there was only one, who was organist of Ely in 1567-72; of Hereford, 1592-93;[1] Christ Church, Newgate Street, London, and Salisbury Cathedral, 1598-1602. A service attributed to Richard Farrant is the work of John Farrant (West's *Cathedral Organists*, pp. 29, 41, 78). M.

FARRANT, RICHARD, was one of the Gentlemen of the Chapel Royal in the 16th century. The date of his first appointment is not known, [he was a member of the chapel in the reign of Edward VI.] but he resigned in April 1564, on becoming Master of the Children of St. George's Chapel, Windsor, of which he is said to have been also a lay vicar and organist. During his tenure of office at Windsor he occupied 'a dwelling house within the Castle, called the Old Commons.' On Nov. 5, 1569, he was reappointed a Gentleman of the Chapel Royal, and remained such until his death, which occurred on Nov. 30, 1580. Farrant's church music merits all the eulogy which has been bestowed upon it for solemnity and pathos. The service printed by Boyce in G minor and given by Tudway (Brit. Mus., Harl. MSS. 7337 and 7338) in A minor [is almost certainly by John Farrant, who was possibly his son]. His two anthems, 'Call to remembrance' and 'Hide not Thou Thy face' were for many years performed on Maundy Thursday during the distribution of the royal bounty. The beautiful anthem, 'Lord, for Thy tender mercies' sake' (the words from Lydley's Prayers), was long assigned to Farrant, although it is attributed by earlier writers to John Hilton. Tudway (Harl. MSS. 7340) gives another anthem —'O Lord, Almighty,' full, four voices—as his, but this is questionable. [Various payments for the plays produced at Court by Farrant's boys are entered in the Acts of the Privy Council, under dates between 1566 and 1579.]

His son, DANIEL, was one of the first authors who set lessons 'lyra way' for the viol, after the manner of the old English lute or bandora, in the time of Charles I. [He was violist in the King's band between 1606 or 1607 and 1625 (Nagel, *Annalen der englischen Hofmusik* in the *Monatshefte f. Musikgesch.* 1894-95). A book of organ pieces by him is in the Cathedral library of Durham.] W. H. H. Additions from Mr. G. E. P. Arkwright, the *Quellen-Lexikon*, etc.

FARRENC, JACQUES HIPPOLYTE ARISTIDE, born at Marseilles, April 9, 1794, died in Paris, Jan. 31, 1865, composed some pieces for the flute, but is best known as a writer on music. He took an important part in the second edition of Fétis's *Biographie universelle*, and wrote the biographical notices in Madame Farrenc's *Trésor des Pianistes*. He also contributed critiques to *La France musicale*, and *La Revue de Musique ancienne et moderne* (Rennes, 1858). Some of his valuable notes and unpublished articles are among the MSS. in the library of the Paris Conservatoire.

His wife LOUISE—born in Paris, May 31, 1804; died there, Sept. 15, 1875—was a sister of the sculptor Auguste Dumont, and aunt of Ernest Reyer. She studied under REICHA, and at an early age could compose both for the orchestra

[1] He 'was sconced for railing and contumelious speeches to Mr. Custos in the hall at supper-time' (Havergal's *Fasti Herefordenses*).

and piano. She married in 1821, and made several professional tours in France with her husband, both performing in public with great success. Madame Farrenc was not only a clever woman, but an able and conscientious teacher, as is shown by the many excellent female pupils she trained during the thirty years she was professor of the piano at the Conservatoire (Nov. 1842–Jan. 1873). Besides some remarkable études, sonatas, and pieces for the pianoforte, she composed sonatas for piano and violin or violoncello, trios, two quintets, a sestet, and a nonet, for which works she obtained in 1869 the prize of the Académie des Beaux Arts for chamber-music. She also wrote two symphonies and three overtures for full orchestra, and several of her more important compositions were performed at the Conservatoire concerts. More than by all these, however, her name will be perpetuated by the *Trésor des Pianistes*, a real anthology of music, containing chefs-d'œuvre of all the classical masters of the harpsichord and pianoforte from the 16th century down to Weber and Chopin, as well as more modern works of the highest value. [Her *Traité des abbréviations* was published in 1897. See also Trésor des Pianistes.] G. C.

FASCH, Johann Friedrich, born at Buttelstedt (Weimar), April 15, 1688, was a chorister at Weissenfels in 1699, a scholar of the Thomasschule in Leipzig from 1701 to 1707, where he studied law as well as music, the latter under Kuhnau. He founded a 'Collegium musicum,' which seems to have been the ancestor of the 'Grosses Concert' and so of the Gewandhaus concerts; he wrote overtures for the society in the style of Telemann, and composed three operas for the Naumburg fair and elsewhere. In 1714, after leading a wandering life for some years, he was an official secretary at Gera, and in 1719 went to Zeitz as organist and 'Rathschreiber,' where he remained for two years. In 1721 he took service with Count Morzini at Lucaveč in Bohemia, and in 1722 was appointed court capellmeister at Zerbst, where he died, Dec. 5, 1768. He was invited to compete for the post of cantor at the Thomasschule against Bach, but apparently refused to do so. (Spitta, *J. S. Bach* (Engl. transl.), ii. 181.) Bach held Fasch's music in high esteem, and copied out five orchestral suites of his. In the collection of music left by Philipp Emanuel Bach was a whole set of church cantatas by Fasch. Several masses, a requiem, eleven church cantatas and motets, one Passion-setting, various overtures, trios, sonatas, etc., are preserved in MS. at Leipzig, Dresden, Berlin, and Brussels (see *Quellen-Lexikon*, from which, with Riemann's *Lexikon*, the above particulars are taken). Fasch's son,

Carl Friedrich Christian Fasch, founder of the 'Singakademie' at Berlin, was born Nov. 18, 1736, at Zerbst. As a child he was delicate, and much indulged. He made rapid progress on the violin and clavier, and in the rudiments of harmony. After a short stay at Coethen, where he made his first attempts at composition in church music, he was sent to Strelitz. Here he continued his studies under Hertel, in all branches of music, but especially in accompaniment, at that time a difficult art, as the accompanist had only the figured bass to guide him. In 1751 Linicke, the court clavierist, having declined to accompany Franz Benda, Fasch offered to supply his place at the harpsichord, and Benda's praises incited him to still greater efforts. After his return to Zerbst he was sent to complete his education at Klosterbergen near Magdeburg. Benda had not forgotten their meeting, and in 1756, when just twenty, Fasch was appointed on his recommendation accompanist to Frederick the Great. His coadjutor was no less a person than Emanuel Bach; they took it in turns to accompany the King's flute-concertos, and as soon as Fasch had become accustomed to the royal amateur's impetuous style of execution, his accompaniments gave every satisfaction. The Seven Years' War put an end to Frederick's flute-playing, and as Fasch received his salary (300 thalers) in paper, worth only a fifth part of its nominal value,—a misfortune in which he anticipated Beethoven—he was compelled to maintain himself by giving lessons. For his lessons in composition he made a collection of several thousand examples. About the same time he wrote several most ingenious canons, particularly one for twenty-five voices containing five canons put together, one being in seven parts, one in six, and three in four parts. After the battle of Torgau the King granted him an addition of 100 thalers to his salary, but the increase covered the direction of the opera, which was put into his hands from 1774 to 1776. After the war of the Bavarian succession Frederick gave up his practice, and Fasch was free to follow his natural inclination for church music. In 1783, incited by a 16-part Mass of Benevoli's, which Reichardt had brought from Italy, he wrote one for the same number of voices, which, however, proved too difficult for the court-singers. He retained his post after Frederick's death, but occupied himself chiefly with composition and teaching. In the summer of 1790, as he himself tells us, he began choral-meetings in the summer-house of Geheimrath Milow, which resulted in the 'Singakademie,' an institution which under his pupil and successor Zelter became very popular, and exercised an important influence on musical taste in Berlin for many years. Before his death Fasch was twice visited by Beethoven, who spent some time in Berlin in the summer of 1796. On the first occasion, June 21, he heard a chorale, the three first numbers of Fasch's mass, and several movements from his 119th Psalm, and he himself extemporised on one of the subjects of the latter. On the 28th he reappeared and again extemporised, to the delight

of Fasch's scholars, who, as Beethoven used to say, pressed round him and could not applaud for tears (Thayer's *Beethoven*, ii. 13). The Academy at that date was about ninety strong, but at the time of Fasch's death, August 3, 1800, it had increased to 147. In accordance with a wish expressed in his will, the Academy performed Mozart's Requiem to his memory—for the first time in Berlin. The receipts amounted to 1200 thalers, an extraordinary sum in those days, and were applied to founding a Fund for the perpetual maintenance of a poor family. In 1801 Zelter published his Life—a brochure of sixty-two pages 4to, with a portrait. In 1839 the Academy published Fasch's best sacred works in six volumes. A seventh, issued by the representatives of Zelter, contains the mass and the canon above alluded to. Of his oratorio 'Giuseppe riconosciuto,' performed in 1774, one terzetto alone remains, Fasch having destroyed the rest, together with several other works composed before the 16-part mass. As a master of composition in many parts, Fasch is the last representative of the great school of sacred composers which lasted so long in Italy, and his works are worth studying. They combine the severity of ancient forms with modern harmony and a fine vein of melody, and constitute a mine which would well repay investigation. [For list of extant works, see the *Quellen-Lexikon.*] F. G.

FAURÉ, Gabriel Urbain, born May 13, 1845, at Pamiers (Ariège), studied at Paris with Niedermeyer, the founder of the École de Musique religieuse; also under Dietsch and Saint-Saëns. His first appointment on leaving the school in 1866 was that of organist at St. Sauveur, Rennes; in 1870 he returned to Paris, and after holding the posts of accompanying organist at St. Sulpice and principal organist at St. Honoré, became maître de chapelle at the Madeleine, [where he became organist in 1896; in the same year he was appointed a professor of composition in the Conservatoire]. He became known as a composer by his touching and original songs, of which a selection of twenty was published by Hamelle, and 'Le Poème d'Amour' by Durand and Schoenewerk, but his compositions in this class are very numerous. [Among the most remarkable of his later lyrics may be mentioned 'Après un rêve,' 'En Prière,' and 'Les Roses d'Ispahan.'] He has also published many pianoforte pieces; at the Société Nationale de Musique he produced a Cantique de Racine, duets for female voices, and a violin sonata, afterwards played at the Trocadéro, on July 5, 1878, which last has become popular in Germany. Among his most remarkable works, besides a Berceuse and Romance for violin and orchestra, a beautiful Élégie for violoncello, two Quartets for piano and strings (1882 and 1887), two for strings alone, and a Violin Concerto, we may mention an Orchestral Suite (Salle Herz, Feb. 13, 1874), a pretty 'Chœur des Djinns' (Trocadéro, June 27, 1878), a symphony in D minor (Châtelet, March 15, 1885), a one-act operetta, 'L'Organiste,' at the Salle Duprez, 1885, a Requiem (Madeleine, Jan. 16, 1888), and a choral work, 'La Naissance de Vénus' (Colonne Concerts, 1895, Leeds Festival, 1898). ['Madrigal,' op. 35, for vocal quartet and orchestra; 'Pavane,' op. 50, for orchestra and chorus *ad lib.*; five Mélodies, op. 58, to Verlaine's poems; a piano quintet, op. 60; 'La Bonne Chanson,' op. 61; nine songs to Verlaine's words, are among the most important of his recent works.] Music to various plays has been written from time to time, such as that to Dumas's 'Caligula' (Odéon, 1888), Ed. Harancourt's 'Shylock' (adapted from Shakespeare, Odéon, 1889), Maeterlinck's 'Pelléas et Mélisande' (English version produced at the Prince of Wales's Theatre, June 21, 1898), and Lorrain and Hérold's 'Prométhée' (Béziers, 1900). In 1885 and 1893 the Prix Chartier was awarded to him. In 1892 he succeeded Guiraud as Inspecteur des Beaux-Arts, and in June 1905 succeeded Théodore Dubois as Director of the Paris Conservatoire. A. J.

FAURE, Jean-Baptiste, son of a singer in the church at Moulins, where he was born, Jan. 15, 1830. When he was three the family removed to Paris, and when he was seven his father died. In 1843 he entered the solfeggio class in the Conservatoire, and soon after the *maîtrise* of the Madeleine, where he was under Trévaux, an excellent teacher, to whom he owes his sound knowledge of music. After the breaking of his voice he took up the piano and double bass, and was for some time a member of the band at the Odéon theatre. When his voice had recovered he joined the chorus of the Théâtre Italien, and in Nov. 1850 again entered the Conservatoire, and in 1852 obtained the first prizes for singing and for opéra-comique. He made his début Oct. 20, 1852, at the Opéra Comique, in Massé's 'Galathée,' after which he advanced steadily through various rôles until his creation of the parts of Justin in Grisar's 'Chien du Jardinier'; the Duke of Greenwich in Auber's 'Jenny Bell,' in 1855; the Marquis d'Hérigny in Auber's 'Manon Lescaut'; the Marquis de Valbreuse in Clapisson's 'Sylphe'[1] in 1856; Crèvecœur in Gevaert's 'Quentin Durward' in 1858; Hoël in Meyerbeer's 'Pardon du Ploermel' in 1859 placed him in the front rank. [Among his greatest successes were the parts of Malipieri in 'Haydée'; Peter the Great in 'L'Étoile du Nord'; and the title rôle in Nicolo's 'Joconde.' On Sept. 28, 1861, he made his first appearance at the Opéra as Julien de Medicis in Poniatowski's 'Pierre de Medicis,' and remained there as principal baritone for nearly seventeen years. His new parts were in Massé's 'La Mule de Pedro,' in 1863; Nelusko in 'L'Africaine,'

[1] First produced at Baden Baden. Faure achieved a notable *tour de force* therein, singing baritone on the stage and tenor behind the scenes.

April 26, 1865, chosen for this part by Meyerbeer himself; the Marquis de Posa in Verdi's 'Don Carlos,' in 1867; the title part in Thomas's 'Hamlet,' 1868; Mephistopheles on the first performance of 'Faust'[1] at the Opéra, March 3, 1869; Paddock in Diaz's 'Coupe du Roi de Thulé,' and Charles VII. in Mermet's 'Jeanne d'Arc,' in 1873. He made his final appearance there on May 13, 1876, in his great part Hamlet, in which his acting was founded on his boyish recollections of Macready in that part in Paris. (*Musical World.*)

In London he first appeared at Covent Garden, April 10, 1860, as Hoël, and returned there every season until 1866, excepting 1865. His parts included Don Juan, Figaro in 'Le Nozze,' Tell, Assur, Fernando in 'La Gazza Ladra,' Alfonso XI., Pietro in 'Masaniello,' Rudolph in 'Sonnambula,' St. Bris, Peter the Great, and, on July 2, 1863, Mephistopheles on production of 'Faust,' in which he has never been surpassed.

In 1870 he played, at Drury Lane, Iago in the revival of Rossini's 'Otello'; Lotario on the production in England of 'Mignon,' etc. From 1871 to 1875 inclusive he was again at Covent Garden, for the first time there as Hamlet, Caspar, and the Cacique on the production of Gomez's 'Guarany.' In 1876 he sang at Drury Lane; and in 1877 at Her Majesty's for the first time in England as De Nevers, and Alfonso in 'Lucrezia,' which part he played, May 19, 1877, on the occasion of the last appearance on the stage of Therèse Titiens. In 1857 he was for a short time Professor of singing at the Paris Conservatoire. In 1870-72 he sang with great success in opera at Brussels, and on Jan. 27, 1872, was appointed Inspector of the singing classes at the Conservatoire there.[2] In 1861 he appeared at Berlin at Meyerbeer's request, but the tremolo in his voice did not please the Germans. In 1878, however, he sang in Italian at Vienna with the greatest success in two of his best parts, Don Juan and Mephistopheles, etc., and was appointed by the Emperor of Austria 'Imperial Chamber Singer.' He also sang in concert tour of the French provinces, but for a long time past he has lived in retirement.]

Faure is a good musician and a fine actor. He is also a collector of pictures and a man of great culture. His voice is a baritone of great extent and of very fine quality. In 1859 he married Mademoiselle Lefebvre (1828-1905), the chief actress of Dugazon rôles at the Opéra Comique. He has published two books of songs (Heugel), and a *Traité* in 1886. G.; additions by A. C.

FAUST. Music to Goethe's 'Faust' was composed by Lindpaintner, and appears to have been produced at Stuttgart in June 1832; also by Prince Radziwill, the score of which was published in 1836. Spohr's 'Faust' (words by Bernhard), a romantic opera in two acts, is in no respect connected with Goethe's play. It was composed at Vienna in 1813 for the Theater an der Wien, but was first performed at Frankfort in March 1818, and was for many years a great favourite. It was produced in London by a German company at the Prince's Theatre, May 21, 1840; and in Italian at Covent Garden under Spohr's baton, July 15, 1852. G.

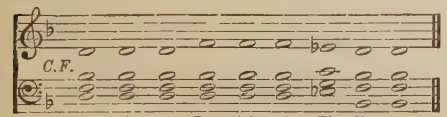
The musical settings that are now best known are the following:—(i.) FAUST, opera in five acts; words after Goethe, by Barbier and Carré; music by Gounod. Produced at the Théâtre Lyrique, March 19, 1859; at the Grand Opéra, March 3, 1869; Her Majesty's Theatre, as 'Faust,' June 11, 1863 (selections had previously been sung at the Canterbury Music Hall, Westminster); at the Royal Italian Opera, Covent Garden, as 'Faust e Margherita,' July 2, 1863; in English (by Chorley), as 'Faust,' at Her Majesty's, Jan. 23, 1864. In Germany sometimes known as 'Margarethe.'

(ii.) LA DAMNATION DE FAUST, dramatic legend in four parts; the words partly adapted from Gérard de Nerval's version of Goethe, partly written by M. Gandonnière, and partly by Berlioz himself. Composed by Berlioz (op. 24). Performed (as a concert) at the Opéra Comique, Paris, Dec. 6, 1846; two parts given under Berlioz at Drury Lane, London, Feb. 7, 1848, selections at the same place, June 29 of the same year, and at the New Philharmonic Concert of June 9, 1852 (in Chorley's translation). First complete performance in England under Hallé at the Free Trade Hall, Manchester, Feb. 5, 1880. In 1903 it was put upon the stage at Monte Carlo, but the experiment, though tried in various theatres, has happily not been permanently adopted. F. G. E.

(iii.) MEFISTOFELE. Grand opera in a prologue and five acts, words (after Goethe) and music by Arrigo Boito. Produced at Milan, March 5, 1868. Remodelled and brought out again, in a condensed form (prologue and four acts), at Bologna, Oct. 4, 1875; at Her Majesty's Theatre, July 6, 1880. [See also LISZT, PIERSON, and WAGNER.] M.

FAUX-BOURDON, or *Falsobordone*, a simple kind of Counterpoint to the Church plain-song; in other words, a harmony to the ancient chant. The first kind of variation from strictly unisonous singing in the Middle Ages was the 'Organum,' or the addition of octaves above and below the plain-song or melody. Other parallel concords were also (as in the 'mixture' organ-stops) blended with the octaves—as the fifth, and even the fourth. These appear to have been used as early as the 8th century. After the Organum the next improvement was the Diaphonum and Discant, and by the 14th century there are historical intimations that these had led, by a natural development, to the use of 'Faux bourdon,' at Avignon, whence it was

[1] He had previously played this part in London, during four seasons, 1863-66.
[2] Isnardon's *Théâtre de la Monnaie.*



taken to Rome on the return of the Papal Court after its seventy years' absence from that city. Hawkins (*History*, ch. 56) mentions an English MS. tract, by one Chilston, preserved in the 'Manuscript of Waltham Holy Cross,' most likely of the 14th century, giving rules and directions 'for the sight of descant . . . and of *Faburdon*.' Gaforius (1451-1522), who is justly considered the father of the artistic music of the great school which culminated in Counterpoint à la Palestrina, as also Adam da Fulda, about the same period, are among the earliest writers who speak of this kind of harmony. M. Danjou discovered, in the library of S. Mark, Venice, treatises by Gulielmus Monachus, from which it is plain that in the 15th century the faux-bourdon was held in equal honour in England and in France.

The English term Fa-burden is evidently a corruption from the French and Italian. Burden, or Burthen, is used both for the refrain of a part-song or chorus, and for a vocal accompaniment to dancing—

> Foot it featly here and there,
> And let the rest the *burden* bear.

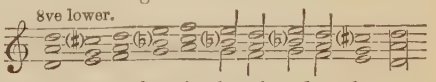
The word *Bordone*, and *Bourdon*, in its primary sense, is (in both languages) a pilgrim's staff; hence, from similarity in form, the bass-pipe, or drone, of the bagpipe; and thence again simply a deep bass note. As the earliest *Falsi bordoni* of which we have specimens are principally formed, except at their cadences, by successions of fourths and sixths below the plain-song melody, such an accompanying bass, to those who had hitherto been accustomed to use the low octaves of the organum, and to consider thirds and sixths inadmissible in the harmonised accompaniment of the Gregorian chant, would sound *false*; and this application of the meaning of the *falso* and *faux* seems a more rational derivation than that sometimes given from *falsetto* and *falsette*, as implying the combination of the high voices with the low in Falso Bordone harmony.

The following example, from a MS.[1] copied from authentic sources at Rome,[2] will give a better idea of the nature of this kind of Counterpoint than any verbal description. It is a Faux-bourdon, of the 15th century, on the second tone (transposed from D to G); originally written for three voices with the canto fermo in the alto part; and with a soprano part, *ad libitum*, added by Baini :—

[1] 'Octo Melódiae octo Modorum harmonice factae ut modulabantur saeculo VII., ad praeceptum Adami de Fulda, et Franchini Gaforii.'

[2] For this and similar specimens of harmonies to other tunes, see 'Accompanying Harmonies of Plain-Song,' by Rev. T. Helmore, *Brief Directory*, p. v.

The same harmony (in four parts) is given by Alfieri (1840) a fifth higher. A Faux-bourdon on the same tone (transposed into F♯) is given by M. C. Frank, Paris, 1857 :—



Falsi bordoni by Vittoria, Bernabei, de Zachariis, and Viadana will be found in Proske's *Musica Sacra*, tom. iii., Liber Vesperarum. T. H.

The treatises by Gulielmus Monachus referred to in the above article are printed in the third volume of Coussemaker's *Scriptores*, at pp. 273, 290, and 299. He speaks of Faux-bourdon as a peculiarly English form of counterpoint (288*b*, 292*a*), sung by three voices, treble, alto, and tenor. The following is his example :—

Here the open notes on the lower stave represent the plain-song melody, *which was not sung*. The open notes above represent the tenor part, the *upper* row of black notes are the alto part, and the *lower* row of black notes the treble, which was of course sung an octave higher. The actual notes to be sung are therefore :—

Thus we see that in faux-bourdon the canto fermo, or an embellished form of it with syncopations and cadences introduced, is to be found in the *treble* part: the alto sings at the fourth below, and the tenor sings at the sixth below, taking the octave on the first and last notes and at any intermediate cadences. The unadorned plain-song melody was usually set out at the beginning of the composition. The alto part was not, as a rule, written, but was left to the extempore skill of the singer. If this be borne in mind, the apparently involved language of Gulielmus Monachus and of Chilston

(if he be the author of the second short treatise on discant in MS. Lansdowne 763 : see CHILSTON) becomes at once intelligible. Chilston writes thus :—'Faburden (*i.e.* the tenor part) hath but two sights (*i.e.* sites or positions), a third above the plain-song in sight, the which is a sixth from the treble in voice : and an even with the plain-song in sight, the which is an eighth from the treble in voice. These two accords (*i.e.* the sixth and eighth below the treble) the faburdener must rule by the mean (*i.e.* the alto) of the plain-song, for when he shall begin his faburden, he must attend to the plain-song and set his sight even with the plain-song and his voice in a fifth below the mean [1] and after that set his sight always above the plain-song in a third : and, as oft as he will, he may touch the plain-song (*i.e.* descend to the octave below the treble) and void therefrom, except twice together, for that may not be, inasmuch as the plain-song sight is an eighth to the treble and a fifth to the mean (alto), and so to every degree he is a perfect accord, and two perfect accords of one nature may not be sung together in no degree of discant.'

In the Trent Codices are numerous examples of faux-bourdons by Dufay, Binchois, and other composers of the 15th century. An example by Dufay, printed at p. 163 of Dr. Adler's first volume of transcripts from these MSS., illustrates very clearly the method employed, the introduction of embellishments and cadences in the plain-song of the treble part, the movement of the tenor from the octave below to the sixth and *vice versâ*, and the manner in which the alto supplied the inner harmony extempore. J. F. R. S.

FAVORITE, LA. Opera in four acts ; words by Royer and Waëtz, music by Donizetti. Produced at the Académie Royale, Dec. 2, 1840 ; in London, as 'La Favorita,' at Her Majesty's, Feb. 16, 1847.

FAWCETT, JOHN, born at Wennington, Lancashire, Dec. 8, 1789, was originally a shoemaker, but abandoned that calling to follow the profession of music, at Bolton-le-moors. He composed three sets of Psalm and Hymn Tunes, published at various periods under the titles of *The Voice of Devotion, The Harp of Zion, The Cherub Lute*, and *Miriam's Timbrel* (1862), which are still very popular in Lancashire. In 1840 he edited and arranged the accompaniments to a collection of psalm and hymn tunes and other pieces selected by Joseph Hart, the music publisher, entitled 'Melodia Divina.' An oratorio of his composition, called 'Paradise,' was published in 1853. He died at Bolton, Oct. 26, 1867. His third son,

JOHN FAWCETT, jun., Mus.Bac., was born about 1824, and when only eleven years old obtained the appointment of organist at St. John's Church, Farnworth. Seven years later he succeeded an elder brother as organist of the parish church, Bolton. In 1845, leaving a sister to discharge his duties at Bolton, he came to London and entered the Royal Academy of Music, where he studied under Sterndale Bennett. During his stay in London (about twelve months) he officiated as organist of Curzon Chapel. On Nov. 4, 1852, he was admitted to the degree of Bachelor of Music at Oxford, his exercise, a cantata, entitled 'Supplication and Thanksgiving,' performed on the previous day, being highly commended by the Professor of Music, Sir H. R. Bishop. Fawcett died, after a short illness, at his residence in Manchester, July 1, 1857. W. H. H.

[1] The MS. reads 'plain-song,' an obvious slip.

FAY. See DUFAY.

FAYOLLE, FRANÇOIS JOSEPH MARIE, born in Paris, August 15, 1774 ; after a brilliant career at the Collège de Juilly, entered the corps des ponts et chaussées in 1792, and became 'chef de brigade' of the École polytechnique on its foundation in 1794. Here, under the instruction of Prony, Lagrange, and Monge, he studied the higher mathematics, but without neglecting literature, and with Fontanes' assistance translated a great part of the *Æneid*. Of his verses the following line has alone survived :—

Le temps n'épargne pas ce qu'on a fait sans lui.

Though forgotten as a mathematician and a poet, Fayolle has acquired a solid reputation for his services to musical literature. He studied harmony under Perne, and the violoncello under Barni, but abstained from printing his compositions ; and contented himself with publishing *Les quatre Saisons du Parnasse* (Paris, 1805-9), a literary collection in sixteen vols. 12mo, for which he wrote many articles on music and musicians. He also furnished the greater part of the biographical notices in the *Dictionnaire historique des Musiciens*, published under the names of Choron and himself (two vols. Paris, 1810-11), a work to which Fétis is much indebted. In 1813 he published *Sur les drames lyriques et leur exécution*. He collected materials for a History of the Violin, of which, however, only fragments appeared, under the title *Notices sur Corelli, Tartini, Gaviniés, Pugnani, et Viotti, extraites d'une histoire du violon* (Paris, 1810). After the fall of Napoleon, Fayolle came to England, where he taught French, and wrote for the *Harmonicon*. On the eve of the Revolution of 1830 he returned to Paris, and resumed his old occupation as a musical critic. Among his later works may be mentioned a pamphlet called *Paganini et Bériot* (Paris, 1830), and the articles on musicians in the supplement to Michaud's *Biographie Universelle*. He died Dec. 2, 1852, at Ste. Perrine, a house of refuge in Paris. G. C.

FAYRFAX, ROBERT, Mus.Doc., is believed to have been descended from the ancient Yorkshire family of that name. He is said to have

been of Bayford in Hertfordshire, and was probably born in the last half of the 15th century, but nothing is known of his early life. Anthony Wood is no doubt correct in saying that he was Organist or Informator Chori at the Abbey of St. Albans, with which place he was evidently closely connected. He was at St. Albans on March 28, 1502, when he received 20s. from Queen Elizabeth of York, 'for setting an Anthem of oure lady and Saint Elizabeth.' At the beginning of this year (1501-2) he took his degree of Doctor of Music at Cambridge. The words of the Grace for the degree, 'conceditur Magistro Fayerfax erudito in musica quod post gradum bacallariatus sua erudicione possit stare,' etc., may imply that he was already a member of the University; they certainly show that he had made his reputation as a musician at that date [Abdy Williams, *Degrees in Music*]. The exercise 'for his forme in proceadinge to bee Doctor' was a five-part Mass, 'O quam glorifica,' which is still in existence [Lambeth, Cod. 1]. He was incorporated at Oxford in 1511, being the first recorded Doctor of Music there.

Fayrfax seems to have enjoyed the favour of Henry VIII., after whose accession he was granted an annuity of £9 : 2 : 6 (June 22, 1509), being described as 'gentleman of the Chapel.' At Christmas, 1510, and the two following years, he was paid for the board and instruction of two choir-boys, 'the King's scholars.' On March 6, 1512-13, John Fyssher, gentleman of the Chapel, received a Corrody in the Monastery of Stanley, on its surrender by Robert Fayrfax. In Nov. 1513, Fayrfax resigned his annuity of £9 : 2 : 6, which was granted afresh 'in survivorship' to Robert Fayrfax and Robert Bythesee. On Sept. 10, 1514, he was appointed one of the Poor Knights of Windsor, with 12d. a day. Other entries in the State Papers between 1516 and 1519 relate to sums paid to Fayrfax 'for a book' (£13 : 6 : 8); 'for a book of anthems' (£20); 'for a prick songe book' (£20); 'for a balet boke limned' (£20); showing that he found employment as a writer and illuminator of MSS.: the celebrated Fayrfax MS. (Brit. Mus. Add. MS. 5465) may well have been one of these (see *Dict. Nat. Biog.* for reference to State Papers). In 1520 Fayrfax, with the rest of the Chapel, attended the King to the Field of the Cloth of Gold, being named at the head of the singing men. His death probably took place before Jan. 1, 1525-26, as his name does not then appear in the list of gentlemen of the King's Chapel; he was certainly dead before Feb. 12, 1528-29, when Bythesee surrendered the annuity granted in 1513. He was buried in St. Albans Abbey, his tombstone being afterwards covered by the Mayoress's seat, according to the Fayrfax MS.

Fayrfax was in his day (as Anthony Wood says) 'in great renowne and accounted the prime musitian of the nation.' He is the chief representative of the school of music which prevailed in England from the time of Edward IV., and which may be said to have culminated in him. His music was soon superseded by that of the succeeding generation of composers headed by Tye, and is now for the most part of purely antiquarian interest.

The following is a list of his chief compositions, mostly in MS.:—

Masses *a* 5: (1) 'Regalis'; (2) 'Albanus'; (3) 'Tecum principium'; (4) 'O bone Jhesu'; all in the Oxford Music School Collection and elsewhere. (5) 'O quam glorifica,' Lambeth and Cambridge. (6) 'Sponsus amat sponsam,' lute arrangement in Brit. Mus. Add. MS. 29,246. An unnamed Mass at Peterhouse, Cambridge, may be identical with one of these.

Motets: (1) 'Ave Dei Patris,' *a* 5; Bodleian, etc. (2) 'Maria plena virtute,' *a* 5; Bodleian, etc. (3) 'Salve Regina,' *a* 5; Eton MS. (4) 'Lauda vivi Alpha et O,' Peterhouse, etc. (5) 'Eternae laudis lilium,' *a* 5; Peterhouse, etc. (6) 'O Maria Deo Grata,' Peterhouse. (7) 'Ave lumen gratiae,' *a* 4; Brit. Mus. Addl. MS. 5054. (8) 'In Deo,' R. Coll. Music. 'Ave summe eternitatis,' printed by Hawkins (*Hist.* ii. 516), is an extract from No. (1) 'Ave Dei Patris.'

A Magnificat *a* 5, called 'Regalis,' is at Peterhouse, and (without composer's name) at Lambeth; a second Magnificat is at Lambeth. Magnificats at Caius Coll. and St. Michael's Coll., Tenbury, may be identical with one or other of these. In the Eton MS. were formerly 'Quid cantemus Innocentes,' 'Stabat Mater,' 'Ave lumen gracie,' and 'Ave cujus concepcio.' Lute versions of three of the abovenamed compositions are in Brit. Mus. Add. MS. 29,246. An instrumental piece *a* 3, apparently a Canon, is in Add. MS. 31,922.

Two songs by Fayrfax were printed in Wynkyn de Worde's *Song book*, 1530: 'Ut re mi fa sol la,' *a* 4, and 'My heartes lust,' *a* 3. A fragment of a song, 'Welcome fortune,' is preserved at Ely Cathedral. In the Fayrfax MS., Brit. Mus. Add. MS. 5465, are (1) 'That was my woo,' *a* 2; (2) 'Most clere of colour,' *a* 3; (3) 'I love, loved and loved wolde I be,' *a* 3; (4) 'Alas for lak of her presens,' *a* 3; (5) 'Sumwhat musyng,' *a* 3. The title-page also indicates two other songs as being by Fayrfax, though his name is not written against them. (6) 'Benedicite, what dremyd I,' *a* 3; (7) 'To complayne me, alas,' *a* 3.

Burney printed 'That was my woo,' which he thought (for no good reason) may have been addressed to Henry VII. after the battle of Bosworth (*Hist.* ii. 547); also extracts from some of the Masses. The songs numbered 2, 3, 4, 5, and 7 were printed by Stafford Smith in *A Collection of English Songs.* No. 3 is also printed by the Plain-song and Mediæval Music Society in *Songs and Madrigals of the 15th Century.*

G. E. P. A.

FEEN, DIE. Opera in three acts: words and music by Wagner. Written at Würzburg in 1833 (the plot adapted from Gozzi's 'Donna Serpente'), excerpts tried in the following year, but never performed complete until it was produced at Munich in 1888.

FEIS CEOIL, THE (Irish Musical Festival), was inaugurated in Dublin on May 17-22, 1897. The event takes place annually in May, and occupies a week. It consists of concerts (orchestral and ballad), and public competitions in choral and solo singing, and in ensemble and solo instrumental playing in all branches, which are adjudicated upon by prominent musicians living out of Ireland. Competitions also in various classes of musical composition are held, previous to the actual festival, the works which obtain prizes being performed at the concerts. The objects of the Association are, briefly: (1) To promote the study and cultivation of Irish music. (2) To promote the general cultivation of music in Ireland. (3) To hold an annual Musical Festival, or Feis Ceoil. (4) To collect and preserve by publication the ancient music of Ireland. The Association has its headquarters in Dublin. The second and fourth festivals (1898 and

1900) were held at Belfast; all the others in Dublin. E. O.

FELDLAGER IN SCHLESIEN, EIN. Opera in three acts, words by Rellstab, music by Meyerbeer; written and composed in memory of Frederick the Great for the reopening of the Berlin Opera-house — burnt August 18, 1843; reopened Dec. 7, 1844. It was performed with extraordinary applause at Vienna, Feb. 17, 1847, with Jenny Lind as Vielka; eighty florins were given for places, and Meyerbeer was called on ten times. The 'Feldlager' appears never to have been played either in France or England, but some of the music was afterwards used up in the 'Étoile du Nord.' G.

FELIX MERITIS, an institution in Amsterdam that included with the performance of music the cultivation of letters, art, and science. It occupied a building architecturally important, with a large concert-room, library, and observatory, situated on the Keizersgracht, one of the larger canals. Orchestral concerts took place in the winter, similar to those of the London Philharmonic and the Crystal Palace. The usual number was ten, and the subscription was equivalent to £5. The early history of Felix Meritis has been narrated by Professor Jorisson on the occasion of the Centenary, Nov. 2, 1877. It was founded in 1777, beginning its existence on the Leliegracht of Amsterdam. The founders intended it to be 'for the furtherance of laudable and useful arts and sciences; the augmentation of reason and virtue; the increase and prosperity of trade, navigation, agriculture, and fishery,' etc. etc. But Felix began at once with music and fine art, adding literature to the scheme two years later. The original locale soon proved to be too small, and in May 1782 the members removed to the Vorburgwal. In 1785 continued increase determined the erection of the present building on the Keizersgracht, completed three years after, and with 400 members, instead of, as at first, 40. (On May 1, 1876, the number of members of all classes was 324.) The wave of disturbance caused by the French Revolution washed over Felix Meritis, and in 1792, through want of funds, the concerts ceased. However, the leaders of the institution would not allow it to sink in the vortex of political speculation; and, in the abolition of societies throughout Holland this one was exempted. During the clatter of weapons the Muses were silent, but in 1800 the complement of members was again full, and in 1806 the reading-room, long closed during the prohibition of newspapers, opened again. In that year Louis Bonaparte, made King of Holland, offered his protection, which was declined, as was also the proposal that the public business of the country should be carried on in the building. Napoleon I. and Marie Louise, were, however, later received in it. In these troubled times the music of Felix Meritis tended to soften the feelings of distress and almost despair of the Amsterdam patriots; yet that solace ceased once more towards the close of 1813, the country being in a state of insurrection against the French. After 1815 came peace and the gentle arts again, and during a great part of the 19th century great was the spiritual harvest of the 'happy through their deserts'! The society ceased to exist in 1888.

The name Felix Meritis was more than once applied by Robert Schumann to Felix Mendelssohn; see *Gesammelte Schriften* (Leipzig, 1854), i. 219; also i. 191, 192, and 193. A. J. H.

FELTON, Rev. William, born 1713, [B.A. Cambridge, 1738, M.A. 1745, vicar-choral and sub-chanter of Hereford Cathedral in 1741, custos of the vicars-choral in 1769, and chaplain to the Princess-Dowager of Wales]. He was distinguished in his day as a composer for, and performer on, the organ and harpsichord. He published three sets of concertos for those instruments in imitation of those of Handel. Burney, in the life of Handel prefixed to his account of the Commemoration, relates (p. 32), on the authority of Abraham Brown, the violinist, a droll anecdote of Felton's unsuccessful attempt, through Brown, to procure the name of Handel as a subscriber to the second set of these concertos. Felton also published two or three sets of lessons for the same instruments. He was one of the stewards of the Meeting of the Three Choirs at Hereford 1744, and at Gloucester 1745. He was vicar of Norton Canon, 1751-69. 'Felton's Gavot' was long highly popular; it was introduced into Ciampi's 'Bertoldo' in 1762. He died suddenly, Dec. 6, 1769, and was buried in the vestibule of the Lady Chapel in Hereford Cathedral. W. H. H.; additions from *Dict. of Nat. Biog.*

FENELL (name also written *ffinell*), Thomas, was an Irish musician, and was Vicar-Choral of St. Patrick's Cathedral, Dublin, in 1677, of which he was organist from 1689 to 1694, with the exception of the year 1691-92, when William Isaac took his place. Dr. Cummings says that there are some MS. works by Thomas Fenell of Dublin, dated 1689, in the music library of Chester Cathedral. From 1694 to 1698 he was organist and vicar-choral of Christ Church Cathedral. In 1698 he resigned, and died about the year 1708-9. He was constantly in difficulties owing to his temper. W. H. G. F.

FENTON, Lavinia, born in London, 1708, whose real name was Beswick, was an actress and singer who first appeared in 1726 at the Haymarket Theatre as Monimia in Otway's 'Orphan,' and afterwards at Lincoln's Inn Fields Theatre, July 15, 1726, as Lucilla in Sir W. Davenant's comedy, 'The Man's the Master.' She attracted no particular attention until she appeared as Polly Peachum in 'The Beggar's Opera,' on the first night of its

performance, Jan. 29, 1728, when she 'became all at once the idol of the town; her pictures were engraven and sold in great numbers; her life written; books of letters and verses to her published; and pamphlets made of even her very sayings and jests.' This success led to her being entrusted with more important parts than had before been assigned to her. At the end of the season, after she had played Polly upwards of sixty times, she withdrew from the stage and went to live with Charles, third Duke of Bolton. On Oct. 21, 1751, his wife, from whom he had been separated many years, having died, the Duke married Lavinia Beswick at Aix, in Provence. She became a widow in 1754; died Jan. 24, 1760, at West Combe Park, Greenwich, and was buried in Greenwich Church, Feb. 3, 1760. W. H. H.

FEO, Francesco, one of the masters of the Neapolitan school, was born at Naples about 1685. The traditions of Greco and Scarlatti were still fresh there, and it was at the suggestion of the last named that Domenico Gizzi had opened the private school at which Feo learnt the art of singing and the principles of composition. His bent was essentially dramatic, as indeed was that of nearly all the Neapolitans of his epoch, with the exception of Durante, whose colder and gloomier temperament predisposed him towards the ecclesiastical severities of the Roman style. Feo, like Durante and Leo, passed some time at the Vatican as the pupil of Pitoni, but the influence of his master was not sufficient to divert him from Opera. His 'Ipermestra,' 'Ariana,' and 'Andromache' were all published at Rome itself, and apparently during his residence there. [The MSS. in the Real Collegio di Musica at Naples include two other operas, 'L' Amor tirannico' (1713), and 'Siface' (1723). Various oratorios, masses, etc., are mentioned in the *Quellen-Lexikon.*] In 1730 he was director of the Conservatorio de' Poveri di Gesù Cristo at Naples, and did much to establish the school as a nursery of great singers. Though addicted to the stage, Feo did not altogether neglect Church music, and his work is distinguished by elevation of style and profound scientific knowledge. But a certain sensuousness, even in his sacred pieces, is suggested by the fact that Gluck borrowed the subject of a Kyrie by him for a chorus in one of his operas. [According to Florimo he was living in 1740.] E. H. P.

FERIAL and FESTAL. In the Christian Church from very early times the term *Feria secunda* was used to denote Monday, *Feria tertia* Tuesday, and so on. Hence the word *Feria*, or *Ferial day*, came to denote a day marked by no special observance, either of a festal or a penitential character. So far as music is concerned, the chief difference is that on the ferial days the music is less elaborate and ornate than on festal days, when it is more florid, for more voices, accompanied by the organ, etc. The two kinds are known respectively as the ferial use and festal use. G.

FERLENDIS, Signora, daughter of an architect named Barberi, born at Rome about 1778. Her voice was a strong contralto, but somewhat hard and inflexible. Having studied with a teacher called Moscheri, she made her début at Lisbon. Here she had the advantage of some lessons from Crescentini, and here also (1802) she married Alessandro Ferlendis, the oboist, member of a very distinguished Italian family of players on the oboe and English horn. She appeared at Madrid in the next year, at Milan in 1804, and in 1805 at Paris (Théâtre Louvois) in Fioravanti's 'Capricciosa pentita.' She achieved there, however, no success in any other rôle but that one. Soon after this, she made her first appearance in London with Catalani in Cimarosa's 'Orazi e Curiazzi.' She was 'a pretty good actress, and at that time first buffa; she was less liked than she deserved, for she had a very good contralto voice, and was far from a bad buffa. She would have been thought, too, to have acted the part of Orazia well, had it not been for the comparison with Grassini, and for Catalani's then eclipsing everybody.' (Lord Mount-Edgcumbe.) She accompanied her husband to Italy in 1810; her later career is not known. J. M.

FERMATA is the Italian name for the sign 𝄐, which in English is commonly called a Pause, and signifies that the note over which it is placed should be held on beyond its natural duration. It is sometimes put over a bar or double bar, in which case it intimates a short interval of silence. Schumann, in the first movement of his 'Faschingsschwank in Wien' for the pianoforte, has the sign over the double bar in this manner, where the key changes from two flats to six sharps, and has also written 'Kurze Pause.' [In the older music the sign for the fermata is used, as frequently by Bach, merely as indicating the end of the piece, after a Da Capo, when modern composers usually write the word 'fine.' It does not then imply any pause in the music between the first and second part of the number.] C. H. H. P.

FERNAND CORTEZ, OU LA CONQUÊTE DU MEXIQUE. Opera in three acts; words by Esménard and De Jouy, after Piron; music by Spontini. Produced at the Académie Impériale, Nov. 28, 1809; at Dresden, March 1812; after revision by the composer, at Paris, May 28, 1817; Berlin, April 20, 1818.

FERRABOSCO, Alfonso (I), generally known in England as Master Alfonso, was one of the sons of Domenico Maria Ferabosco, maestro di cappella to the church of St. Petronio at Bologna. He was already settled in England in 1562, at which date he was in receipt of a pension of 100 marks a year, payable during the Queen's

pleasure. It is possible that he had arrived some years earlier, for in 1564 he speaks of 'his long service' and of 'his youth and health spent in the Queen's service,' but it would probably be a mistake to attach much importance to phrases of this kind. In a letter to the Earl of Leicester he states that he had left Bologna without the necessary licence from the Inquisition, which had consequently confiscated the property which his father had left him. His father, however, was alive for some years afterwards, and it is probable that his letters (of which many exist written to Leicester, Sussex, and Sir William Cecil) were rather intended to excite the interest and generosity of his patrons than to contain an exact narrative of facts. These letters (dating from Oct. 1564), besides excuses for non-attendance at Court on account of ill-health, etc., are chiefly taken up with reasons why the Queen's bounty should be further extended to him. On Sept. 10, 1567, he heard that the Queen had granted him a pension for his life so long as he remained in her service, and wrote to ask that this might be secured to him in case of her death by the insertion into the Patent of the words 'heredibus et successoribus nostris.' Perhaps partly on this account, but also on account of the unfriendly construction which his enemies put upon a visit paid by him to the French Ambassador, on Sept. 23 he was in disgrace, and the Queen refused to see him. To add to his troubles, a young foreign musician of Sir Philip Sidney's household was murdered as he was going to Court to exhibit his skill, and Court gossip accused Ferrabosco of killing him out of jealousy. He indignantly wrote to Sussex to protest his innocence (Oct. 13, 1567), saying that the young man was a friend of his, and that he was in the country when the affair happened. In a later letter (Dec. 28) he complains that until the Queen consented to receive him, it was generally supposed abroad, as well as in England, that he was guilty of the murder. After some delay the matter was settled, and in March 1568-69, Ferrabosco, in writing, bound himself to the Queen's service for life, and received a pension of £100 a year. The Patent dated March 26, 1569, contains the words 'heredibus et successoribus nostris.' At the same time Alfonso obtained leave (after pledging himself to return) to visit Italy in order to settle his affairs. Accordingly, on June 25, he writes from Paris where he was delayed, partly by business which he was arranging with a brother who was to accompany him to Italy, and partly through having been robbed of all his property by his English servant. He writes from Bologna on Oct. 30 of this year, promising to return with as little delay as possible, but in September of the following year he is still making excuses from Bologna; besides ill-health and business, he is delayed by the difficulty in obtaining the Pope's licence, without which he did not dare to travel in prohibited places, for fear of leaving his family at the mercy of the Inquisition. He did, however, eventually return to England, and in June 1572, was concerned in a Masque presented before the Queen and the French Ambassador. He appears to have remained in England (probably living at Greenwich, where his son Alfonso was born) till the year 1578, when he finally quitted the country, and (in spite of having bound himself never to enter any other service than that of the Queen) entered the service of the Duke of Savoy, at whose Court he was given some appointment, for he describes himself as 'Gentil'huomo dell' Altezza di Savoia.' He left his two children in England, where they remained in the charge of Gomer van Austerwyke, one of the Queen's Musicians. Six years later he sent for them, but the Queen refused to let them go (perhaps regarding them as hostages for the return of their father), and Austerwyke was still unpaid for their keep at the date of Ferrabosco's death, which took place at Turin in 1588.

The eldest Alfonso Ferrabosco was the most important of the Italian musicians who lived in England in the 16th century, and was held in high estimation among his contemporaries. 'For judgment and depth of skill,' says Peacham in 1622, 'he was inferior to none: what he did was most elaborate and profound, and pleasing enough in Aire, though Master *Thomas Morley* censureth him otherwise. That of his *I saw my Ladie weeping*, and the *Nightingale* (upon which Dittie Master Bird and he in a friendly aemulation exercised their invention) cannot be bettered for sweetnesse of Aire or depth of judgement.' Morley tells us of another 'vertuous contention' between him and Byrd 'made upon the plaine song *Miserere*, which contention of theirs (specially without envie) caused them both to become excellent in that kinde, and winne such a name, and gaine such credit, as will never perish so long as Musick endureth.' The results of this contention, in which each composer set the plain-song in forty different ways, were printed by East in 1603, under the title of 'Medulla Musicke'; no copy of it, however, is now known to exist.

His other printed works are: a five-part madrigal 'Tu dolc' anima,' contributed to Pevernage's 'Harmonia Celeste' (Antwerp, 1583).

Two Sets of five-part madrigals by him appeared at Venice in 1587; the first set containing twenty madrigals is dedicated to the Duke of Savoy; the second set containing nineteen madrigals is dedicated to the Duchess of Savoy.

Many of his madrigals found their way into English collections: 'Musica Transalpina' (1588) contains fourteen by him; 'Musica Transalpina' (1597) contains six; five are in Morley's collection of 1598. Many of these are taken from the two Sets of 1587.

Two pieces for the lute 'by the most Artificiall

and famous Alfonso Ferrabosco of Bologna' were printed by Robert Dowland in his 'Varietie of Lute-lessons,' 1610.

A large number of MS. works by him, chiefly Motets, are in the British Museum; Bodleian and Music School, Oxford; St. Michael's College, Tenbury; Buckingham Palace; and Royal College of Music Libraries. G. E. P. A.

FERRABOSCO, Alfonso (II), son of the first Alfonso, was born at Greenwich, and no doubt was one of the children left behind in England when their father returned to Italy in 1578. 'He was trained up to Musick,' says Anthony Wood, apparently at the Queen's expense; at any rate, after Oct. 11, 1592, he was in receipt of an annuity of £26 : 13 : 4, which was paid up to Midsummer 1601. After James I.'s accession he appears as one of the King's Musicians for the Violins, a year's salary of £7 being paid him at Michaelmas 1603. He held his place as one of the violins until his death, by which time his salary had been raised to £40. [*Audit Office, Declared Accounts.*]

'At man's estate he became an excellent composer for instrumental musick,' says Anthony Wood, 'he was most excellent at the Lyra Viol, and was one of the first that set lessons Lyra-way to the Viol, in imitation of the old English Lute and Bandora. The most famous man in all the world for Fantazias of 5 or 6 parts.' 'The lyre is in high favour with them,' writes André Maugars from Rome in 1639, 'but I have heard none who could be compared with Farabosco in England.' But it is chiefly as composer of the music to some of Ben Jonson's Masques that he is now remembered. Those for which he is known to have written music were 'The Masque of Blackness' (*Twelfth Night*, 1604-5), 'Hymenæi' (1605-6), 'The Masque of Beauty' (1607-8), 'The Masque for Lord Haddington's Marriage' (1607-8) and 'The Masque of Queens' (1608-9). The printed description of the 'Hymenæi' (in which Ferrabosco appeared as singer as well as composer) contains a testimony to the friendship existing at that date between him and Jonson, in a warm eulogy of the composer, which, however, was omitted in the folio edition of 1616. In 1604 (Nov. 27) he was entrusted with £20 to buy two viols for Henry, Prince of Wales, to whom he was appointed music-master, with a pension of £50 a year for life (dating from Christmas, 1604); on the death of Henry in 1612 his services were transferred to Charles, the new Prince of Wales. To these sources of income was added in 1619 a share in a valuable property, a grant for twenty-one years to him, Innocent Lanier and Hugh Lydiard 'for cleansing the Thames of flats and shelves' with power to sell the sand and gravel; with, in addition, 'an allowance to them of one penny per ton of strangers' goods and merchandises imported or exported into or out of the Port of London.' Ferrabosco is said to have sold his share 'for a great sum of money.'

On the accession of Charles I. Ferrabosco retained his former appointments, and was also made Composer of Music in Ordinary to the King, with a salary of £40, from the death of John Coperario in 1626. He was also Composer of the King's Music, with an additional salary of £40. He died before March 11, 1627-28, when he was buried at Greenwich, where he seems to have lived at any rate after 1619. Entries relating to members of his family are to be found in the Greenwich parish registers (printed in the *Musician*, Sept. 20, 1897). Ferrabosco published two volumes of music in 1609. The first, a book of 'Ayres,' dedicated to Prince Henry, contains twenty-eight songs with accompaniment for lute and bass viol, of which a large proportion are from Jonson's Masques. The other is a book of 'Lessons for 1. 2. and 3. Viols,' dedicated to the Earl of Southampton. They consist of short pieces, dances, etc., for the lyra viol, and are printed in lute tablature. Each of these volumes contains (amongst others) commendatory verses by Ben Jonson; the first has also some verses by Campion, addressing Ferrabosco as 'Musick's maister and the offspring | Of rich Musick's Father | Old Alfonso's Image living.' He also contributed three compositions to Leighton's 'Teares or Lamentacions' in 1614. Compositions in MS. (chiefly Fancies for the viols) are in the libraries of the Royal Coll. of Music; the Music School, and Christ Church, Oxford; and the British Museum. G. E. P. A.

FERRABOSCO, Alfonso (III), son of Alfonso (II), succeeded on his father's death to the pension of £50, which he had enjoyed as former music-master to the Prince of Wales; and also to his place as Musician for the Viols and Wind Instruments. The latter double appointment entitled the holder to two liveries of £16 : 2 : 6 each, which were secured to Ferrabosco by a deed dated Feb. 7, 1627-1628. His name occurs as one of the musicians in 1635, and again in 1641. He must have died before the re-establishment of the King's Musicians in 1660, when Child succeeded to 'Ferabosco's place — Alphonsus composer of Wind M.,' and Hingeston 'for a viol place of Alphonso Ferabosco.' G. E. P. A.

FERRABOSCO, Henry, son of Alfonso (II), and brother of Alfonso (III), succeeded his father as Composer of the King's Music, and as one of the King's Musicians, receiving a salary of £40 for each place. On Feb. 7, 1627-28, he secured his double livery as Musician for the Voices and for the Wind Instruments. His name appears as one of the Musicians at different dates up to 1645, when he signed receipts on behalf of the Musicians, the Court being then at Oxford. His daughter Elizabeth, baptized at Greenwich, Dec. 3, 1640, may possibly have

been the Mrs. Ferrabosco whom Pepys thought of engaging as gentlewoman for his wife, who 'sings most admirably' (*Diary*, Sept. 4, 1664). She was afterwards in the suite of the Duchess of Newcastle (*Diary*, May 30, 1667). Henry Ferrabosco may be identified with the Captain Henry Ferribosco who took part in the expedition to Jamaica where he was killed. The committee appointed to report on arrears of pay, etc., due to relatives of those who fought there recommend (June 10, 1658) that a sum of £240 should be paid 'for five small children of Capt. Henry Ferribosco, lately slayne by the Enemy in Jamaica, his wife being also dead since his departure from England.' His place as Musician was filled by Thomas Bates at the Restoration. G. E. P. A.

FERRABOSCO, JOHN, was probably the son of Alfonso (II), who was baptized at Greenwich, Oct. 9, 1626. There is a warrant dated Jan. 17, 1631, for delivery of Chamlett and other necessaries yearly to John Ferrabosco, one of His Majesty's Musicians for the wind instruments, in the room of Henry Ferrabosco, during His Majesty's pleasure. As Henry was still holding his place as Musician for the Wind Instruments in 1634, this must have been a temporary arrangement, made solely with a view to providing for the child of a favourite musician; it is possible, however, that there were two musicians of this name. John Ferrabosco was appointed organist of Ely Cathedral in 1662; many anthems and services by him still exist there in MS. In 1671 he took the degree of Mus.B. at Cambridge 'per literas regias' (Dickson's *Catalogue of Music at Ely*). The registers of Trinity Church, Ely, show that he married Anne Burton on June 28, 1679; their child John was baptized in the following August, and was buried May 8, 1682; John Ferrabosco himself was buried Oct. 15, 1682. G. E. P. A.

FERRARA. The earliest and best-known musical academy in Ferrara was that of the 'Intrepidi,' founded in 1600 by Giambattista Aleotti d'Argenta for dramatic musical representations. The magistrates of the city allowed the academicians 100 scudi a year for public celebrations in their theatre. Previous to the founding of this academy, Ferrara could boast one of the most magnificent theatres of Italy, opened in 1484 by Ercole I., Duke of Ferrara, in which were celebrated the 'Feste Musicali,' those earliest forms of the musical drama universal in Italy in the 15th century. While the 'Orfeo' of Poliziano was represented at Mantua, the theatre of Ferrara witnessed the 'Cefalo' of Niccolò da Correggio, the 'Feast of Anfitrione and Sosia,' and others. The 'Intrepidi' in 1607 represented with great pomp the Pastorale called 'La Filla di Sciro' by Guidubaldo Bonarelli.

Frescobaldi was a native of Ferrara, and made his studies there. C. M. P.

FERRARESE DEL BENE, the sobriquet of Francesca Gabrielli, an Italian singer, native of Ferrara. When Burney was in Venice, in August 1770, he heard at the Ospedaletto an orphan girl *la Ferrarese* with an 'extraordinary compass' and a 'fair natural voice.' She sang in London from 1784 to 1787 in Cherubini's 'Giulio Sabino' and other parts, but without much success. In 1789 she was prima donna in Vienna. Mozart wrote for her the Rondo 'Al desio,' introduced into the part of the Countess in 'Figaro' on its revival August 1789, and she played Fiordiligi in 'Così fan tutte' at its production, Jan. 26, 1790. Mozart did not think much of her, for in speaking of Allegrandi he says, 'she is much better than the Ferrarese, though that is not saying a great deal.' She probably owed her good fortune to her pretty eyes and mouth, and to her intrigue with da Ponte, with whom she lived as his mistress for three years. In the end she quarrelled with the other singers, and was sent from Vienna by the Emperor. G.

FERRARI, BENEDETTO, called 'dalla Tiorba,' an Italian musician, and composer of words and music for the species of Italian dramas called 'dramme per musica,' was born at Reggio about 1597; [as according to a portrait prefixed to his 'Andromeda' (printed 1637) he was forty years old at that time.] From a letter, now in the archives of Modena, written by him to the Duke of Modena in 1623, we learn that his reputation as a musician, and especially as a player on the theorbo, was by that time considerable. It was largely owing to him that the 'dramma musicale' took such deep root in Italy and Germany, and herein lies his chief interest for us. His opera 'Andromeda,' set to music by Manelli and brought out at the Teatro San Cassiano at Venice in 1637, was the first opera performed before a mixed audience. In 1639 followed his 'Adone,' set by Monteverde, and 'Armida,' of which he wrote both words and music. Its success induced Ferrari to devote himself more to composition than before. He remained in Venice till 1645, when he [was in the Court band at Modena: in 1651 he] was invited to Vienna by the Emperor Ferdinand, and remained in his service till 1653. A ballet by him was performed at the Diet of Ratisbon in 1653. In the same year he was appointed maestro di cappella to Duke Alfonso of Modena, on whose death in 1662 he was dismissed, but he was reappointed in 1674, and died in possession of the post Oct. 22, 1681. His librettos were collected and printed at Milan and Piacenza, and passed through several editions; none of these collections, however, are complete. The library at Modena contains several of his MSS., including the ballet 'Dafne in alloro' (Vienna, 1651). [This is not mentioned in the *Quellen-Lexikon* as still extant, but an oratorio 'Sansone' is noted as at Modena.] We have not sufficient materials to form any opinion on the style of his music. He published at Venice in 1633,

1637, and 1641, three books of 'Musiche varie a voce sola,' in which, according to Burney, the term 'Cantata' occurs for the first time, although the invention of this kind of piece was claimed by Barbara Strozzi twenty years later. F. G.

FERRARI, Domenico, an eminent Italian violin player, born at Piacenza at the beginning of the 18th century. He was a pupil of Tartini, and lived for a number of years at Cremona. About the year 1749 he began to travel, and met with great success at Vienna, where he was considered the greatest living violin player. In 1753 he became a member of the band of the Duke of Würtemberg at Stuttgart, of which Nardini was at that time leader. If Ferrari was a pupil of Tartini, he certainly, according to contemporary critics, did not retain the style of that great master in after life. He had an astonishing ability in the execution of octave-runs and harmonics, and appears altogether to have been more a player than a musician. He twice visited Paris, at first in 1754, and played there with great success. He died at Paris in 1780, according to report, by the hand of a murderer. Ferrari published sets of six Violin-Sonatas (Paris and London), and some for two violins and bass which, however, are now forgotten. P. D.

FERRARI, Giacomo Gotifredo, a cultivated and versatile musician, son of a merchant at Roveredo, born there 1759. He learned the pianoforte at Verona, and the flute, violin, oboe, and double-bass at Roveredo, and studied theory under Pater Marianus Stecher at the convent of Mariaberg near Chur. After his father's death he accompanied Prince Lichtenstein to Rome and Naples, and studied for two years and a half under Latilla on Paisiello's recommendation. Here also he made the acquaintance of M. Campan, Marie Antoinette's master of the household, and went with him to Paris, where he was appointed accompanist to the new Théâtre Feydeau. In 1793 the company was dispersed, and Ferrari shortly afterwards left France. Having travelled for some time he finally settled in London, where he composed a very large number of works, including four operas and two ballets. In 1804 he married Miss Henry, a well-known pianist. From 1809 to 1812 he suffered from loss of sight. In 1814 he went to Italy with Broadwood the pianoforte-maker, and visited Naples, Venice, etc., returning in 1816. He died in London, Dec. 1842. He was an active teacher of singing, and published a *Treatise on Singing* in 2 vols., of which a French translation appeared in 1827. His *Studio di musica prattica e teorica* (London) is a useful treatise. Two of his French songs, 'Qu'il faudrait de philosophie' and 'Quand l'amour nacquit à Cythère,' were extremely popular in their day. His acquaintance with almost every contemporary musician of importance gives a historical value to his book *Aneddotti . . . occorsi nella vita di G. G. Ferrari*, 2 vols. London, 1830. Besides the operas, ballets, and songs already named, Ferrari composed an extraordinary quantity of music for the voice, pianoforte, flute, and harp. [See *Quellen-Lexikon.*] F. G.

FERREL, Jean François, musician in Paris about the middle of the 17th century, wrote a small pamphlet, *A savoir que les maistres de dance, qui sont de vrays maistres larrons à l'endroit des violons de France, n'ont pas royale commission d'incorporrer ès leur compagnie les organistes et austres musiciens, comme aussy de leur faire païer redevance, démonstré par J. F. Ferrel, praticien de musique à Paris, natif de l'Anjou* (Paris, 1659). This was the signal for a contest lasting for 100 years, between the French musicians and the dancing-masters, whose chief, the 'roi des ménétriers,' claimed jurisdiction over all musicians. Hard words were exchanged on both sides, and after several law-suits, a decree of the Paris Parliament in 1750 settled the question in favour of the musicians. Some of the pamphlets had curious titles; for example, *La cloche felée, ou le bruit faict par un musicien qui ne veult être maistre de dance parce qu'il ne sait sur quel pied se tenir*, and *Discours pour prouver que la danse dans sa plus noble partie n'a pas besoin des instrumens de musique, et qu'elle est en toute indépendante du violon.* [See Fétis.] M. C. C.

FERRETTI, Giovanni, born at Venice about 1540 [lived in Ancona from 1569, where he was maestro di cappella at the cathedral from 1575 to 1585], composed five books of 'Canzoni' in five parts (Venice, 1567-91), two books in six parts (Venice, 1573-86), and another of five-part madrigals (Venice, 1588), all excellent examples of their kind. A madrigal of his, 'Siat' avertiti,' for five voices, is included in Webb's madrigals, and in vol. iii. of Novello's *Glee Hive.* M. C. C.

FERRI, Baldassare, one of the most extraordinary singers who ever lived, was born at Perugia, Dec. 9, 1610. He owed to an accident in his boyhood the operation by which he became a sopranist. At the age of eleven he entered the service of the Bishop of Orvieto as a chorister, and remained there until 1625, when Prince Vladislas of Poland, then on a visit at Rome, carried him off to his father's Court. In 1665 he was transferred to Ferdinand III., Emperor of Germany, whose successor, Leopold I., loaded him with riches and honours. This prince had a portrait of Ferri, crowned with laurels, hanging in his bed-chamber, and inscribed, 'Baldassare Perugino, Re dei Musici.' At the age of sixty-five he received permission to retire to his native country, with a passport, the terms of which indicated sufficiently the consideration in which he was held. He reached Italy in 1675, and died at Perugia, Sept. 8, 1680.

Ferri was made a knight of S. Mark of Venice in 1643; and, therefore, probably visited

Italy at that time. He aroused the greatest enthusiasm wherever he appeared; hundreds of sonnets were written in his honour, he was covered with roses in his carriage after simply singing a cantata, and at Florence a number of distinguished persons went three miles out of the town, to escort him into it. (Ginguené.) He is said also to have visited London, and to have sung here the part of Zephyr: but this must be a fable, as Italian opera did not begin in England till 1692,—twelve years after his death. It is true that in M. Locke's 'Psyche' (1671) there is a character called Zephyr; but he has only four lines to speak, and none to sing. Ferri had, nevertheless, made one journey (before 1654) to Sweden, to gratify Queen Christina's wish to hear him. Ginguené says that his portrait was engraved with the inscription 'Qui fecit mirabilia multa'; but such a portrait (as far as the present writer knows) has never been seen. A medal was struck, bearing on one side his head crowned with bays, and on the other the device of a swan dying by the banks of Meander. Ferri was tall and handsome, with refined manners; and he expressed himself with distinction. He died very rich, leaving 600,000 crowns for a pious foundation.

His voice, a beautiful soprano, had an indescribable limpidity, combined with the greatest agility and facility, a perfect intonation, a brilliant shake, and inexhaustible length of breath. Although he seems to have surpassed all the evirati in brilliance and endurance, he was quite as remarkable for pathos as for those qualities. (Bontempi, *Historia Musica.*) J. M.

FERTÉ, Papillon de la, born in Feb. 1727 at Chalons; became in 1777, by purchase, 'Intendant des Menus-plaisirs' to Louis XVI., and as such had the direction of the 'École Royale de Chant' founded by the Baron de Breteuil, and of the opera after the municipality had given up the administration of it. In 1790 he published a reply to a pamphlet by the artists of the opera—'Mémoire justificatif des sujets de l'Académie royale de musique'—in which they demanded a reform of the administration. He died in Paris, July 19, 1794. His son occupied the same post after the Restoration. M. C. C.

FERVAAL. Opera in three acts, words and music by Vincent d'Indy. Produced at the Théâtre de la Monnaie, Brussels, March 12, 1897; at the Opéra Comique in Paris, May 10, 1898.

FESCA, Friedrich Ernst, composer, born at Magdeburg, Feb. 15, 1789. His father was an amateur, and his mother a singer, pupil of J. A. Hiller, so he heard good music in his youth, and as soon as he could play the violin had taste enough to choose the quartets and quintets of Haydn and Mozart in preference to Pleyel's music, for which there was then a perfect rage in Germany. Having completed his elementary studies, he went through a course of counterpoint with Pitterlin, conductor of the Magdeburg theatre. On Pitterlin's death in 1804 he became a pupil of August Eberhardt Müller at Leipzig. Here he played a violin concerto of his own with brilliant success. In 1806 he accepted a place in the Duke of Oldenburg's band, but in the following year became solo violinist under Reichardt at Cassel, where he passed six happy years and composed his first seven quartets and first two symphonies, interesting works, especially when he himself played the first violin. In 1814, after a visit to Vienna, he was appointed solo violin, and in the following year concert-meister, to the Duke of Baden at Carlsruhe. During the next eleven years he wrote two operas, 'Cantemir' and 'Leila,' overtures, quartets, quintets, chorales, psalms and other sacred music. He died at Carlsruhe, May 24, 1826, of consumption, after many years' suffering, which, however, had not impaired his powers, as his last works contain some of his best writing. His 'De Profundis,' arranged in four parts by Strauss, was sung at his funeral. Fesca was thoughtful, earnest, and warm-hearted, with occasional traits of humour in striking contrast to his keen sensibility and lofty enthusiasm for art. He appreciated success, but steadfastly declined to sacrifice his own perceptions of the good and beautiful for popularity. Fesca's rank as a composer has been much disputed. There is a want of depth in his ideas, but his melodies are taking and his combinations effective. His quartets and quintets, without possessing the qualities of the great masters, have a grace and elegance peculiar to himself, and are eminently attractive. His symphonies are feebly instrumented, but his sacred works are of real merit. In richness of modulation he approaches Spohr. A complete edition of his quartets and quintets (twenty and five in number) has been published in Paris (Rimbault). His son, Alexander Ernst, born at Carlsruhe, May 22, 1820, died at Brunswick, Feb. 22, 1849, was a pupil of Rungenhagen, Wilhelm Bach, and Taubert, and composer of trios for pianoforte, violin, and violoncello, and other chamber-music popular in their day. The best of his four operas was 'Der Troubadour' (Brunswick, 1854). M. C. C.

FESTA, Costanzo, one of the earliest composers of the Roman School, was born somewhere towards the close of the 15th century. He was elected a member of the Pontifical choir in 1517, and died April 10, 1545. He eventually became maestro at the Vatican, and his nomination was so far singular that he was at that time the only Italian in a similar position throughout the Peninsula. His genius cannot be doubted, and Dr. Burney, who had been at the trouble of scoring a great number of his Madrigals, was astonished at the rhythm, grace, and facility of them. He calls one of Festa's Motetti, 'Quam pulchra es, anima mea,' a model of elegance,

simplicity, and pure harmony, and says that 'the subjects of imitation in it are as modern, and that the parts sing as well, as if it were a production of the 18th century.' Festa, according to Baini, fell in his motets into a fashion too prevalent in his day, of setting distinct words to each voice. The Abbé (*Life of Palestrina*, vol. i. pp. 95-103) explains in great detail the lengths to which this absurd and undignified affectation was carried, and quotes with obvious and well-merited approval a rebuke administered by the Cardinal Capranica, in the pontificate of Niccolo V., to some singer who had asked him to admire the caprice. 'Mi pare,' said the Cardinal, 'di udir una mandra di porcelli, che grugniscono a tutta forza senza profferire però un suono articolato, non che una parola.'

The principal repertories for Festa's music are the collections which flowed from the presses of Gardano and of Scotto at Venice in the middle of the 16th century, and for which the curious inquirer must be referred to the *Bibliographie* of Eitner, or the *Quellen-Lexikon*. [His first book of madrigals for three voices was published in 1537, and various editions appeared down to 1568. Two masses are in the Sistine Chapel, a four-part Magnificat was published in 1554, and a book of Litanies for double choir in 1583.] The archives of the Pontifical chapel are rich in his MSS., and a celebrated Te Deum of his (published 1596) is still sung by the Pontifical choir at the election of a new Pope. Burney, in his *History* (iii. 245, 6), prints a motet and a madrigal of Festa's; and a Te Deum and motet are given in Bock's collection (vi. 31, 40). His madrigal 'Down in a flow'ry vale' ('Quando ritrovo la mia pastorella') long enjoyed the distinction of being the most popular piece of this description in England. E. H. P.

FESTING, Michael Christian, an eminent performer on, and composer for the violin, was the son of a flautist of the same names, who was a member of the orchestra of the King's Theatre, in the Haymarket about 1727. Festing was at first a pupil of Richard Jones, leader of the band at Drury Lane, but subsequently studied under Geminiani. He first appeared in public about 1724. He became a member of the king's private band in 1735 and first violin at an amateur association which met at the Crown and Anchor Tavern in the Strand, under the name of the Philharmonic Society. [In 1737 he was appointed director of the Italian Opera.] On the opening of Ranelagh Gardens in 1742 he was appointed director of the music as well as leader of the band.

Festing was one of the originators of the Society of Musicians. Being seated one day at the window of the Orange Coffee-house in the Haymarket in company with Weidemann, the flautist, and Vincent, the oboist, they observed two very intelligent-looking boys driving milch asses. On inquiry they found them to be the orphans of Kytch, an eminent but imprudent German oboist, who had settled in London and then recently died, literally in the streets, from sheer want. Shocked by this discovery Festing consulted with Dr. Greene, his intimate friend, and other eminent musicians, and the result was the establishment of the Society of Musicians for the support and maintenance of decayed musicians and their families. [See Royal Society of Musicians.] Festing for many years performed gratuitously the duties of secretary to this institution. He died July 24, 1752. In September of that year his goods, books, and instruments were sold at his house in Warwick Street, Golden Square. He left an only son, the Rev. Michael Festing, rector of Wyke Regis, Dorset, who married the only child of his father's friend, Dr. Greene. From this union sprang many descendants to perpetuate the name of Festing, and not many years since an Hertfordshire innkeeper, bearing the names of Maurice Greene Festing, was living. Festing's compositions consist of several sets of solos for the violin; sonatas, concertos, and symphonies for stringed and other instruments; part of the third chapter of Habakkuk, paraphrased; Addison's Ode for St. Cecilia's day; Milton's Song on May morning; an Ode on the return of the Duke of Cumberland from Scotland in 1745; an Ode 'For thee how I do mourn'; and many cantatas and songs for Ranelagh. Sir John Hawkins says that 'as a performer on the violin Festing was inferior to many of his time, but as a composer, particularly of solos for that instrument, the nature and genius whereof he perfectly understood, he had but few equals.' Festing had a brother of the name of John, an oboist and teacher of the flute, whose success in his profession was such that he died in 1772 worth £8000, acquired chiefly by teaching. W. H. H.

FESTIVALS, MUSICAL. The earliest musical festivals of which any trustworthy record exists were held in Italy. At an interview between Francis I., King of France, and Pope Leo X. at Bologna in 1515, the musicians attached to their respective courts combined and gave a performance, but no details of the programme have been preserved. In the early part of the 17th century there was a thanksgiving festival at St. Peter's at Rome on the cessation of the Plague, when a mass by Benevoli for six choirs was sung by more than 200 voices with organ accompaniment, the sixth choir occupying the highest part of the cupola. In France the first festival recorded is that which took place as a thanksgiving, for the recovery of the eldest son of Louis XIV., when Lulli's 'Te Deum' (written to celebrate a similar happy event in His Majesty's own life in 1686) was performed by 300 musicians. In Bohemia the earliest festival was held at Prague in honour of the coronation of the Emperor Charles VI. as King

of Bohemia, when the opera of 'Costanza e Fortezza' by Fux was performed in the open air by a band of 200 and a chorus of 100 voices — a somewhat singular proportion of orchestral to vocal resources — and of this an account is given by Burney in his *German Tour*, vol. ii. p. 178. French musicians united at Paris in 1764 in a solemn service at the funeral of Rameau; and at Naples in 1774, at the burial of Jommelli, the service was performed by 300 musicians. In Austria the earliest festivals were given by the Musical Institution at Vienna (Tonkünstler-Societät), by whose members, to the number of 400, oratorios were performed twice annually, in Advent and Lent, for charitable purposes, beginning with 1772.[1] In the same city there was a festival in honour of Haydn in 1808, at which the 'Creation' was performed, and at which the composer bade farewell to the world. More important, and in its dimensions approaching more nearly to the modern festival, was a performance given at Vienna in 1811, also in Haydn's honour, when the numbers are said to have been upwards of 700. [See also BEAULIEU, CINCINNATI, and NIEDERRHEINISCHE, for important festivals other than British.] C. M.

BRITISH FESTIVALS

The following musical festivals are described under their own headings: BIRMINGHAM, BRISTOL, CECILIA, St., CHARITY CHILDREN, CHESTER, EISTEDDFOD, FEIS CEOIL, FOUNDLING HOSPITAL, HANDEL FESTIVAL, LEEDS, LIVERPOOL, MANCHESTER, NORWICH, SONS OF THE CLERGY, THREE CHOIRS, and YORK.

BRADFORD. — In connection with the opening of St. George's Hall, a festival was held in 1853, when a MS. Credo by Mendelssohn was performed for the first time. In 1856, J. L. Hatton's 'Robin Hood,' and G. A. Macfarren's 'May Day,' were produced on August 26 and 28 respectively; and in 1859, on August 26, Jackson's 'The Year,' received its first performance. All three festivals were conducted by Costa.

BRIDLINGTON. — This festival, inaugurated, financed, and conducted by Mr. A. W. M. Bosville, D. L., of Thorpe Hall, near Bridlington, was first held in 1895; with one exception (1902) it has been continued annually until 1903. Works have been specially composed for the Bridlington festival by the following local musicians — Mr. John Camidge, Mr. Arthur C. Edwards, and Mr. G. T. Patman. Further details will be found in the *Musical Times* of June 1903, p. 383.

CARDIFF. — In spite of the fact that Wales is credited with a true love for music, no festival on an adequate scale took place in the Principality until 1892. Since then and up to the present time (1905) four meetings have been held (all at Cardiff) as hereunder set forth, with the principal works performed: —

1892. 'Messiah,' 'Elijah,' 'Hymn of Praise,' 'Golden Legend' (Sullivan), 'Dream of Jubal' (Mackenzie), 'Faust' (Berlioz), 'Stabat Mater' (Dvořák), 'Blest Pair of Sirens' (Hubert Parry), 'Revenge' (Stanford), in addition to an oratorio, 'Saul of Tarsus,' composed for the festival by Dr. Joseph Parry. Conductor, Sir Joseph Barnby.

1895. 'Messiah,' 'St. Paul,' 'Last Judgment,' 'Requiem' (Verdi), 'The Light of the World' (Sullivan), 'Faust' (Berlioz), 'Choral Symphony,' 'St. Francis' (Edgar Tinel), first performance in England; and for the first time, 'The Bard' (Stanford), and 'A Psalm of Life' (David Jenkins). Conductor, Sir Joseph Barnby. (An interval of seven years elapsed before the next festival was held.)

1902. 'Orpheus' (Gluck), 'Elijah,' 'Song of Destiny' (Brahms), 'Faust' (Berlioz), 'Stabat Mater' (Rossini), 'Samson and Delilah' (Saint-Saëns), 'Ruth' (Cowen), 'Flying Dutchman' (Acts 1 and 2), 'The Beatitudes' (César Franck), for the first time in England; and, for the first time, two orchestral pieces 'On the Heights,' and 'On the March,' by Arthur Hervey. Conductor, Dr. F. H. Cowen.

1904. 'Elijah,' 'Hymn of Praise,' 'Eve' (Massenet), 'Faust' (Schumann), 'Samson and Delilah' (Saint-Saëns), 'Requiem' (Verdi), 'Dream of Gerontius' (Elgar), 'The Desert' (David), 'Lohengrin' (Act 3), 'Midsummer Night's Dream' music (Mendelssohn); and, for the first time, 'John Gilpin' (Cowen), 'The Victory of St. Garmon' (Harry Evans), 'Welsh Rhapsody' (German), and overture 'In the East,' Hervey, the two last named being orchestral works. Conductor, Dr. F. H. Cowen.

DIOCESAN CHORAL FESTIVALS. See below.

DUBLIN. — A festival comprising seven concerts was held in 1831, when Sir George Smart and Ferdinand Ries conducted, the latter being represented by his oratorio 'The Triumph of Faith.' Mendelssohn's 'Midsummer Night's Dream' overture was played from MS. parts, and Paganini appeared. (See also FEIS CEOIL, *ante*, p. 19.)

EDINBURGH. — The first festival in the Scottish capital was held in 1815 (seven concerts), of which a full account (published) was written by George Farquhar Graham (Edinburgh, 1816). The two succeeding meetings, in 1819 and 1824, were conducted by Sir George Smart. In 1843, on the occasion of the opening of the new Music Hall in George Street, a festival was held (Oct. 9-14), conducted by the Reid Professor of Music, Sir Henry R. Bishop. No new works were produced on any of these four occasions, nor have any subsequent festivals been held. (See *Music for the People*, by Robert A. Marr, Edinburgh, 1889, for further information.)

GLASGOW. — In 1860 the first festival took place in Glasgow, when the four concerts included performances of 'Messiah,' 'Elijah,' and the production of a new oratorio by Charles Edward Horsley, entitled 'Gideon.' The next music-meeting (six concerts) was held in 1873, at which were given 'Messiah,' 'Elijah,' 'Eli' (Costa); and, for the first time, an oratorio, 'Jacob,' composed by Henry Smart, and a psalm, 'Bow down thine ear,' by H. A. Lambeth, who, with Costa, shared the duties of conductor. No other festival has since been held in Glasgow. The opening of St. Andrew's Halls, however, in Nov. 1877, partook of the nature of a musical festival. For that occasion Sir G. A. Macfarren composed his cantata 'The Lady of the Lake.' (See Mr. Marr's book mentioned above, under 'Edinburgh.')

HANLEY. See NORTH STAFFORDSHIRE, below.

HOVINGHAM. — The festival (not quite an annual one) in this remote Yorkshire village

[1] Hanslick's *Concert-Wesen in Wien*, p. 18.

was founded in 1887 by Canon T. P. Pemberton (formerly Hudson), and has always been conducted by him, the twelfth meeting taking place in 1903. A list of the works that have been performed is given in the *Musical Times* of December 1903 (p. 792). Those produced at Hovingham have been composed by Dr. Alan Gray, Dr. E. W. Naylor, Mr. T. Tertius Noble, Miss Alexandra Thompson, and Dr. Charles Wood. Dr. Joachim has taken part in nearly all the festivals.

PETERBOROUGH and LINCOLN. — Originating at Peterborough in 1882 as an oratorio service, this festival assumed its twin-cathedral form in 1889, when Lincoln became joint participator in the scheme. The meetings have been held as follows: Peterborough in 1882, 1885, 1888, 1891, 1894, 1898, and 1901: Lincoln in 1889, 1892, 1896, 1899, and 1902, while one is announced to be held at Lincoln in 1905. Thus it will be seen that since 1901 the festivals have been exclusively at Lincoln. The performances have been conducted (with the exception of that in 1882) by the respective organists of the two cathedrals — Dr. Haydn Keeton, of Peterborough; (the late) J. M. W. Young and Dr. George J. Bennett, both of Lincoln.

NORTH STAFFORDSHIRE. — These festivals take rank for at least two new works produced thereat, and for the excellence of the chorus singing for which the Potteries are noted. Since their foundation (in 1888) five meetings have been held, all taking place at Hanley. The dates are 1888, 1890 (first performance of Swinnerton Heap's 'Fair Rosamond'), 1893, 1896 (first performance of Elgar's 'King Olaf'), and 1899 (first performance of Coleridge-Taylor's 'Death of Minnehaha,' the second section of the 'Hiawatha' triology). The late Dr. Swinnerton Heap conducted all these five festivals.

SCARBOROUGH. — Two festivals have hitherto (1905) been held — in 1899 and 1902, both conducted by Dr. F. H. Cowen. The works performed at the first meeting included 'St. Paul,' 'The Golden Legend,' and 'Ode to the Passions' (Cowen); and at the second (in 1902), 'Messiah,' 'Elijah,' 'Faust' (Berlioz), and 'Revenge' (Stanford).

SHEFFIELD. — Although one of the youngest of British festivals, Sheffield has rapidly come into the first rank, by reason of its magnificent chorus-singing, due to the exceptional choir-training skill of Dr. Henry Coward. This notable Yorkshire music-meeting originated in a very modest way, nothing more than a performance of Mendelssohn's 'Elijah,' in 1895, conducted by Dr. Coward. In the following year (1896) the first festival proper, lasting two days, was held, when the works performed included 'Elijah,' 'The Golden Legend,' 'Faust' (Berlioz), and 'Job' (Hubert Parry).

It was not, however, until the meeting of 1899 (three days) that the singing of the chorus made the fame of the Sheffield Festival. On that occasion the programme included the 'Messiah,' 'King Olaf' (Elgar), 'Samson and Delilah' (Saint-Saëns), 'The Golden Legend,' 'The Choral Symphony,' 'King Saul' (Parry), and the 'Hymn of Praise.' Sir (then Mr.) August Manns conducted on both occasions.

At the festival of 1902 the following works were performed, under the conductorship of Mr. Henry J. Wood: 'Elijah,' 'Gareth and Lynette' (a cantata composed for the occasion by Dr. Coward), 'Triumphlied' (Brahms), 'The Dream of Gerontius' and 'Coronation Ode' (Elgar), 'Wanderer's Sturmlied' (Richard Strauss), 'Israel in Egypt' (Selection), 'Stabat Mater' (Dvořák), 'Jesu, priceless Treasure' (Bach), 'Meg Blane' (Coleridge-Taylor), 'Easter,' symphonic poem for organ and orchestra (Fritz Volbach), 'Blest Pair of Sirens' (Parry), and 'The Hymn of Praise.' Ever since the inception of the Sheffield Musical Festival Dr. Coward has held the post of chorus-master. For the festival of 1905, Herr F. Weingartner is appointed conductor.

WOLVERHAMPTON. — Started in 1868, this festival was held triennially until 1886, when, owing to lack of financial support, it ceased to exist. The first meeting (1868) was conducted by Mr. Alberto Randegger, the following four festivals being under the direction of Mr. W. C. Stockley, of Birmingham. In 1883, with the appointment of Dr. Swinnerton Heap as conductor, the concerts occupied two days, instead of one as formerly. The most important productive feature of the Wolverhampton Festivals is associated with that last held (in 1886), when two cantatas, 'The Maid of Astolat,' by Dr. Heap, and 'The Bridal of Triermain,' by Mr. Frederick Corder, were performed for the first time, both works having been written for the occasion and conducted by their respective composers.

DIOCESAN CHORAL FESTIVALS

These widely spread festivals, known not only all over Great Britain, but in Britain beyond the seas and also in America, originated in the diocese of Lichfield, in, or about, the year 1856, when the Lichfield Diocesan Choral Association was formed. The first festival was held, upon the invitation of the Dean and Chapter, in Lichfield Cathedral, on Oct. 14, 1856, and was attended by twenty-six church choirs coming from various parishes in Staffordshire. But the germ of these important and beneficial choral gatherings can be traced to the parish of Cheadle, in Staffordshire, where, in (or about) 1849, was founded 'The Cheadle Association for the promotion of Church Music' — a society, which not only organised festivals of church choirs in the district, but published its own music. 'One of the first acts of this Association was to gather together several neighbouring choirs in the

parish church of Cheadle, for the purpose of practising chanting and singing' (*The Organist and Choirmaster* of Nov. 15, 1896, in an article on 'Choral Festivals'). In the following year (August 29, 1850) a similar festival service was held in Leigh church, nine choirs, comprising 100 voices, taking part. Such gatherings came to be known, and they were speedily recognised and encouraged by the Lichfield Cathedral authorities. Thereupon the movement rapidly spread and became firmly rooted in the various dioceses and rural deaneries, not only here, but in the Colonies and in America. These Choral Associations hold their annual festivals either in the Cathedrals of their several dioceses, or in some large Parish Church. On such occasions the singing of the combined choirs, numbering hundreds of voices, is always of an imposing and soul-stirring nature. F. G. E.

FÉTIS, François Joseph, born March 25, 1784, at Mons, died March 26, 1871, at Brussels, the most learned, laborious, and prolific musical littérateur of his time. He was the son of an organist at Mons, and early learned to play the violin, piano, and organ, completing his studies at the Paris Conservatoire. Boieldieu and Pradher were his masters for the piano, but he only succeeded in gaining the harmony prize in 1803, and the second 'second prix' for composition in 1807, scarcely as much as might have been expected from one who delighted to style himself the pupil of Beethoven. He married in 1806, and in 1811 pecuniary difficulties, caused by the loss of his wife's fortune, compelled him to retire to the Ardennes, where he remained till his appointment as organist and professor of music at Douai in Dec. 1813. In 1818 he returned to Paris, and in 1821 he succeeded Eler as professor of counterpoint and fugue at the Paris Conservatoire, becoming librarian of that institution in 1827. For an account of the historical concerts he inaugurated in Paris, see vol. i. pp. 575-76. [In 1828 he was for three months in England. (See the *Harmonicon* for July 1829.) He came to England in 1829 for the purpose of giving a course of lectures on musical history. The season was too far advanced to allow of his doing so, and the plan was abandoned, a single lecture being given at Sir George Warrender's, on May 29, when illustrations were given by Camporese, Malibran, Mme. Stockhausen, Donzelli, Begrez, Labarre, De Bériot, etc.] In March 1833 he was appointed director of the Brussels Conservatoire and maître de chapelle to the King of the Belgians, two important posts, which, besides ensuring him many gratifying distinctions, obliged him to take part in the labours of the Belgian Académie Royale, for which he wrote several interesting memoirs.

Fétis must be considered separately in his various capacities of composer, author of theoretical works, historian, and critic. As a composer he wrote much pianoforte music for two and four hands, chamber-music, duos, a quartet, quintets, and a sestet for piano (four hands) with string quartet, overtures and symphonies for orchestra, operas and sacred music. His operas 'L'Amant et le Mari' (1820), 'Marie Stuart en Écosse' (1823), 'La Vieille' (1826), and 'Le Mannequin de Bergame' (1832) were produced at the Opéra Comique with some success, though they now seem feeble and antiquated. Among his sacred compositions we will only specify his 'Messes faciles pour l'orgue,' and his 'Messe de Requiem' composed for the funeral of the Queen of the Belgians (1850). The greater part of his church music is unpublished. Fétis's fame, however, rests not upon his compositions, but upon his writings on the theory, history, and literature of music. His *Méthode élémentaire . . . d'harmonie et d'accompagnement* (1824, 1836, 1841), which has been translated into English (Cocks & Co.) and Italian; his *Solfèges progressifs* (1827); *Manuel des principes de musique* (1837); *Traité élémentaire de musique* (Brussels, 1831–32); *Traité du chant en chœur* (1837) — translated by Helmore (Novello); *Manuel des jeunes compositeurs* (1837); *Méthode des méthodes de piano* (1837); *Méthode des méthodes du chant* (1840); and *Méthode élémentaire de Plain Chant* (1843), have been of great service to teachers, though some of them bear traces of having been written in haste for the publishers. Far above these must be ranked his *Traité de l'accompagnement de la partition* (1829); his *Traité complet de la théorie et de la pratique de l'harmonie* (1844), which has passed through many editions and been translated into several languages; and his *Traité du contrepoint et de la fugue* (1824), a really classical work. These two last Fétis considered his best original productions, and looked to them for his permanent reputation. They were the more important in his eyes because he believed in the infallibility of his doctrines. Outside his own peculiar system of harmonic generation — the 'omnitonic' system, whose main principle is that harmonic combinations exist by which any given sound may be resolved into any key and any mode — he saw nothing but error and confusion. As a historian he was equally systematic and equally impatient of contradiction. Nevertheless, in his *Biographie universelle des Musiciens*, and in his *Histoire générale de la Musique*, errors of detail and mistakes in chronology abound, while many of the opinions he advances are open to question. Easy as it may be, however, to find fault with these two standard works, it is impossible to do without them. The first edition of the *Biographie* (Paris, 1835-44) is especially defective, but it contains a remarkable introduction founded on the writings of Forkel, Gerber, Kiesewetter, Hawkins, and others. Fétis intended to use this introduction as material for

a *Philosophie de la Musique*, but had not time to accomplish it. The second edition of the *Biographie* (Paris, 1860-65), though more complete and more satisfactory than its predecessor, should still be consulted with discretion; its dates are still often wrong, and there are mistakes, especially in the articles on English musicians, which are almost ludicrous, and might have been avoided. The two supplementary volumes edited by Arthur Pougin in 1878 and 1880, added much to the value of the book. Fétis unfortunately allows his judgment to be biassed by passion or interest. It is a pity that in his *Histoire générale de la Musique* (Didot, 5 vols. 1869-76) he is not more just to some of his predecessors, such as Villoteau and Adrien de la Fage, whom he quotes freely but never without some depreciatory remark, thus forgetting the poet's words: —

'Ah! doit-on hériter de ceux qu'on assassine?'

In spite of this defect, and of a strong tendency to dogmatism, the *Histoire générale de la Musique*, although a fragment — for it ceases at the 15th century — exhibits Fétis at his best. Another useful work is *La Musique mise à la portée de tout le monde* (Paris, 1830, 1834, 1847), which has been translated into German, English, Spanish, and Russian. The same elevation and clearness appear in his innumerable articles and reviews, which were all incorporated in the *Biographie*, the *Curiosités historiques de la Musique* (Paris, 1830), the *Esquisse de l'histoire de l'harmonie* (Paris, 1840, now very scarce), and other works already named. The *Revue musicale* which he started in 1827, and continued till 1833, was the foundation of the musical press of France. [Among his other works may be mentioned biographies of Paganini (1851), and Stradivari (1856), *Mémoires sur l'harmonie simultanée chez les Grecs et les Romains* (1858); catalogues of the musical exhibits in the Paris Exhibitions of 1855 and 1867.] This short résumé of Fétis's labours will suffice to show the immense services he rendered to musical instruction and literature. Had he been a little less one-sided, and a little more disinterested and fair, he would have been a model critic and littérateur. [After his death his library was bought by the Belgian Government, and is now in the Brussels Conservatoire.]

His eldest son, Édouard Louis François, born at Bouvignes near Dinant, May 16, 1812, at an early age assisted his father, and edited the *Revue musicale* from 1833 to 1835. He was art critic of the *Indépendance Belge*, edited the 5th vol. of *Histoire générale de la Musique*, and published *Légende de Saint Hubert* (Brussels, 1847), *Les Musiciens belges* (Brussels, 1849), a useful work, *Les Artistes belges à l'étranger* (1857-1865), and a *Catalogue raisonné* (1877) of his father's valuable library purchased by the Government. He was also professor of æsthetics to the Brussels Académie des Beaux-Arts and is a member of the Académie Royale in Brussels. [He is still (1904) active as Conservateur en chef de la Bibliothèque Royale. A younger son of the historian, Adolphe Louis Eugène, born in Paris, August 20, 1820, died there March 20, 1873, was a clever and successful pianist and teacher, and composed a good deal of music of little value.] G. C.

FEUILLET, Raoul Auger, a dancing-master of Paris, was the author of an ingenious system by which dance steps could be noted down in diagrams showing the position and movement of the feet corresponding to each bar of the music. Something of the sort had been previously attempted by a M. Beauchamp, but Feuillet carries out the idea with a degree of elaboration which tends to defeat itself owing to the bewildering complexity of the diagrams which result. His book was first published in 1701, and is entitled *Chorégraphie, ou L'Art de décrire La Dance par caractères figures et signes démonstratifs*. It was translated into English by John Weaver in 1706, but was not found to be of much assistance in practice. Signor Gallini, who wrote on the Art of Dancing in 1772, speaks of *chorégraphie* as 'an inextricable puzzle or maze of lines and characters, hardly possible for the imagination to seize or for the memory to retain,' and concludes that diagrams such as those of Feuillet can only be intelligible to dancing-masters, who are just the persons who have no need of them.

Feuillet published several collections of dances in this curious notation, and notably a 'Recueil de Contredances mises en Chorégraphie' (1706), which is of the highest value as establishing the English origin of the French contredanse. Such well-known English tunes as 'Green Sleeves' and 'Christchurch Bells' appear here as 'Les Manches Vertes' and 'Le Carillon d'Oxfort': see an article in the *Musical Times* of Feb. 1901. J. F. R. S.

FEVIN, Antoine de, composer of the 16th century, whose works entitle him to a position amongst his contemporaries second alone to that of Josquin Després. We have only a few vague conjectures as to the actual circumstances of his life. He was born at Orleans, for he is styled 'Aurelianensis.' The existence of Fevin's compositions in MS. in the cathedral at Toledo, and the opinion of Spanish musicians, have caused him to be considered a Spaniard, by such authorities as Gevaert and Eslava. There are some books of Masses in the Vienna library containing three by 'Anthonius Fevin, pie memorie.' Ambros, in his *History of Music* (iii. 274), shows that the date of these books lies between 1514 and 1516, and assuming that Fevin died about this time, and moreover (as Glarean leads us to infer) that he died quite young, places his birth about 1490. We may, at any rate, accept these dates as approximately true, and at once see that it is scarcely correct to

call Fevin a contemporary of Josquin. Although he died a few years before the great master, he was probably born forty years after the date of Josquin's birth. Had it not been for his premature death, might not the 'Felix Jodoci æmulator,' as Glarean calls him, have lived on to work by the side of Lassus and share with him the glory of a brighter period? Surely there was in 'that noble youth, whose modesty was equal to his genius' (again we quote Glarean), every element of greatness, except perhaps physical strength, requisite for making his name stand with those of Clement and Gombert in the gap between Josquin and Lassus. But although Fevin can never be the hero of any chapter in musical history, there is little doubt that when the compositions of his time become once more generally known, the few works which he has left behind him will find favour as soon as any, on account of the peculiar charm which veils his most elaborate workmanship, and the simplicity of effect which seems to come so naturally to him, and so well agrees with the personal character for which Glarean admired him. We give the following list of his works, and the various collections in which they appear: — (1) Three masses, 'Sancta Trinitas,' 'Mente tota,' and 'Ave Maria,' from a book of five masses (Petrucci, Fossombrone, 1515). The only known copy of this work, with all the parts, is in the British Museum. Burney has given two beautiful extracts from the first mass in his *History*. (2) Three masses, 'Ave Maria,' 'Mente Tota,' and 'De Feria,' in 'Liber quindecim Missarum' (Andreas Antiquis, Rom. 1516), a copy of which is in the Mazarin Library at Paris. (3) Six motets from the first book of the 'Motetti della corona' (Petrucci, Fossombrone, 1514). (4) A motet, 'Descende in hortum meum,' and a fugue, 'Quae es ista,' from the 'Cantiones selectae ultra centum' (Kriesstein, Augsburg, 1540). (5) Two lamentations, 'Migravit Juda' and 'Recordare est,' from the collection by Le Roy and Ballard, Paris, 1557. (6) Detached movements from masses in Eslava's 'Lira-sacro-Hispana.' (7) One magnificat from Attaignant's fifth book for four voices, and two motets from his eleventh book (Paris, 1534). (8) One piece in the 'Bicinia Gallica,' etc. (Rhau, Wittenberg, 1545). (9) Three masses, 'O quam glorifica luce,' 'Requiem,' and 'Mente tota,' in the 'Ambraser Messen' at Vienna, and three MS. motets in same library. (10) A mass, 'Salve sancta parens,' the only copy of which is in the Royal Library at Munich. There is a three-part song of his, 'Je le l'airray,' in Brit. Mus. Harleian MS. 5242; and fragments of two masses in Burney's musical extracts, Add. MSS. 11,581-2. For other MSS. see *Quellen-Lexikon*. J. R. S.-B.

FEVIN, Robert de, born at Cambrai, was maestro di cappella to the Duke of Savoy at the beginning of the 16th century. A mass, on 'Le vilayn jaloys' was printed among those of Antoine de Fevin's, by Petrucci in 1515; this and other masses are in the Sistine Chapel in MS. and a mass on 'La sol fa mi' in the Munich library. The composer was probably a relation of Antoine de Fevin. (*Quellen-Lexikon* and Riemann's *Lexikon*.)

FIALA, Joseph, eminent oboist, born 1751 at Lobkowitz in Bohemia. He taught himself the oboe, for which he had a perfect passion, but being a serf was compelled to menial labour in the Schloss. He ran away and was recaptured, upon which his mistress the Countess Lobkowitz, ordered his front teeth to be pulled out that he might be incapable of playing: but some of the nobility of Prague interceded for him with the Emperor, who commanded him to be set free. He first entered Prince Wallerstein's band, and in 1777 that of the Elector at Munich. He was afterwards in that of the Archbishop of Salzburg where he made the intimate acquaintance of the Mozarts. In 1785 he was suddenly discharged by the Archbishop, with a loss of 200 florins, on which Mozart not only urged him to come to Vienna, but offered him a good engagement. After a residence of some years in Russia he became in 1792 capellmeister to Prince Fürstenberg at Donaueschingen, where he died in 1816. He published [two symphonies (MS. in the Royal Library at Berlin)] two sets of quartets (Frankfort and Vienna, about 1780-86), 'Six duos pour violon et violoncelle' (Augsburg, 1799), and two sets of trios for flute, oboe, and bassoon (Ratisbon, 1806), besides MS. concertos for flute, oboe, bassoon, and violoncello. He played several other instruments well, especially the violoncello and double bass, and was evidently a man of mark. M. C. C.

FIASCO (a flask). 'Faire fiasco,' 'to make a fiasco,' *i.e.* a complete failure — a phrase of somewhat recent introduction. The term, though Italian, is not used by the Italians in this sense, but first by the French and then by ourselves. The date and origin of the expression are unknown to Littré; but it is tempting to believe the image to be that of a flask falling and breaking - or, as our own slang has it, 'coming to utter smash.' G.

FIBICH, Zdenko, son of the chief forester at Všeboric near Czáslau in Bohemia, was born there on Dec. 21, 1850. After pursuing general studies in Vienna and Prague (where his natural inclination for music showed itself so emphatically that at fourteen he had not only composed a symphony in E flat but actually conducted a first performance of part of it), Fibich entered the Leipzig Conservatorium in 1865. There he remained until 1867, studying under Moscheles, Richter, and Jadassohn, and there he produced a G minor symphony among a great number of compositions. But of more importance to him than the composition of such works at this time was the immense influence upon him of Schu-

mann. A year in Paris (1868-69) was followed by a stay at Mannheim, where Vincenz Lachner was his teacher. In 1870 he returned home, and shortly afterwards (1874) his first opera 'Bukovin,' a melodramatic work, influenced by Weber and Mozart, was produced. From 1873 to 1874 he was a music teacher at Wilna, and on returning to Prague in the latter year he became in 1875 second conductor of the Bohemian Theatre. This post he occupied till 1878, when he was conductor of the choir in the Russian Church at Prague till 1881. After this Fibich retired into private life in order to devote himself entirely to composition. He died at Prague, Oct. 10, 1900.

That Fibich was a very prolific composer the list of his compositions testifies. His works amount to about 700, written in some thirty-five years. Of these the most important, quantitatively, are his six melodramas, six operas, and three 'scenische melodramen' (the latter quite distinct from the other melodramas); the melodramatic trilogy 'Hippodamia' ('Pelops Brautwerbung,' Vienna, 1892; 'Die Sühne des Tantalus': 'Hippodamia's Tod,' 1892); the operas 'Der Sturm' (after Shakespeare, 1895); 'Hady' (1896); 'Sarka' (1897); and 'Helga,' the first part of the opera 'Der Fall Arkunas.' A string quartet in G, op. 8; a pianoforte quartet in E minor, op. 11; and a quintet, with clarinet, horn, pianoforte, and strings, op. 42, represent the best of his chamber music, while his orchestral works include the overture 'Eine Nacht auf Karlstein' (1886), probably his most familiar work, the 'Komensky-Festouvertüre' (1892); symphonies in F (op. 17, 1883); and E flat (op. 38, 1892); and seven symphonic poems, some 352 pianoforte pieces for two hands, and four sets of duets, besides a host of songs and vocal duets, and three compositions for chorus and orchestra.

Fibich's fame has been largely overshadowed by that of Smetana and Dvořák, but in some of his pianoforte music especially there is much that is full of charm if not great originality; and a good deal of his music deserves to be better known, though it would appear that none is destined to survive for any great length of time. R. H. L.

FIDDLE. The old English word, before 'viol' came in, and still more idiomatic than VIOLIN (*q.v.*). Both are possibly derived from the same root—*vitula*, a calf, from the springing motion of dancers (Murray, *Oxford Dictionary*, and Littré; and compare the connection of Geige and jig). FIDDLESTICK is the violin-bow, as in the Epigram on a Bad Fiddler:—

> Old Orpheus play'd so well he mov'd Old Nick,
> Whilst thou mov'st nothing—but thy fiddlestick.

The Germans have three terms for the instrument—*Fiedel*, *Geige*, and *Violine*. G.

FIDELIO, ODER DIE EHELICHE LIEBE. Beethoven's single opera (op. 72); the words adapted by Joseph Sonnleithner from Bouilly's 'Léonore, ou l'Amour conjugal.' He received the text in the winter of 1804, and composed the opera at Hetzendorf in the summer. It was produced (1) at the Theatre 'an der Wien,' Vienna, on Wednesday, Nov. 20, 1805, in three acts; the overture was probably that known as 'Leonora No. 2.' Cherubini was in the house. (2) It was played again on the 21st and 22nd, and then withdrawn. (See vol. i. pp. 241-242.) The libretto was then reduced by Breuning to two acts; three pieces of music—said to have been an air for Pizarro with chorus; a duet, Leonore and Marzelline; and a terzet, Marzelline, Jaquino, and Rocco—were sacrificed, and the overture 'Leonora No. 3' composed. It was played again at the Imperial private theatre on Saturday, March 29, 1806, and April 10, and again withdrawn. (3) After the death of Guardasoni, the Italian Director of the Prague opera, in 1806, the appointment of Liebich, and the adoption of the German opera there, Beethoven, with the view to a probable performance of 'Fidelio,' wrote the overture known as 'Leonora, No. 1,' as an 'easier work' than either of the two preceding. The performance, however, did not come off, and the overture remained in MS. and unknown till after Beethoven's death, when it was sold in the sale of his effects and published in 1832 (Haslinger) as 'Overture in C, op. 138' (*Aut.* 'Characteristische Ouverture'). See Seyfried, p. 9; Thayer, iii. 25. (4) Early in 1814 the opera, as again revised by Treitschke, was submitted to Beethoven; he at once set to work, and it was produced a third time, in two acts, at the Kärnthnerthor Theatre, Vienna, on May 23, 1814, as 'Fidelio.' The overture was that of the 'Ruins of Athens,' but on the 26th the overture in E, known as the 'Overture to Fidelio,' was first played. Nottebohm's researches in the sketch-books have made it clear that for the revival of the opera in 1814, Beethoven's first intention was to recast the Prague Overture No. 3 (op. 138), changing the key to E. Of this various drafts exist, and some are given in *Beethoveniana*, p. 74. Had this intention been carried out the overture would have borne the same relation to op. 138 that 'Leonora No. 3' does to 'Leonora No. 2,' and we might then have possessed five overtures to the opera! It was Beethoven's wish that the opera should be called 'Leonora,' but it was never performed under that name. (5) It was produced in Paris, at the Théâtre Lyrique, translated by Barbier and Carré, and in three acts, May 5, 1860. In London by Chelard's German company (Schröder, etc.) at the King's Theatre, May 18, 1832. In English (Malibran) at Covent Garden, June 12, 1835. In Italian (Cruvelli and Sims Reeves, Recitatives by Balfe) at Her Majesty's, May 20, 1851. (6) The chief editions are—a PF. score of the second arrangement (by Moscheles under B.'s direction) without Overture or Finale,

1810; with them, 1815; both entitled 'Leonore.' A ditto of the third arrangement, entitled 'Fidelio,' August 1814. A critical edition by Otto Jahn of the complete work as 'Leonora,' in PF. score, showing the variations and changes (Breitkopf & Härtel, 1851). An English translation by Oliphant (Addison & Hollier), and another by Soane, with Preface (Boosey). The four overtures are given in the Royal Edition (Boosey). For the whole evidence as to the name of the opera see 'Leonore oder Fidelio?' in Otto Jahn's *Gesamm. Schriften*, p. 236, and Thayer's *Chron. Verzeichniss*, p. 61.

It may be well here to give a list of the overtures to the opera in the order of their composition.

Title.	Date and Occasion.	Date of publication of Score.
Leonore No. 2, in C.	For production of opera, Nov. 20, 1805.	Breitkopf, 1842 and 1854.
Leonore No. 3, in C.	For production of modified opera, Mar. 29, 1806.	Breitkopf, 1828.
Leonore No. 1, in C (op. 138).	For a performance of the opera at Prague in May 1807, which never came off.	Haslinger, 1832.
Fidelio, in E.	For the second and final revision of the opera; first played May 26, 1814.	Breitkopf, 1864.

G.

FIELD, Henry Ibbot, called 'Field of Bath,' was born Dec. 6, 1797, and died May 19, 1848. Pupil of Coombs of Chippenham. Beyond these facts, and that he was a careful pianist and greatly esteemed as a teacher, there is nothing to explain why he should require to be distinguished from his greater namesake, unless his appearance at the Philharmonic Concerts in 1822 and 1840, both times in concertos by Hummel, be accepted as a reason. G.

FIELD, John, known as 'Russian Field' to distinguish him from Henry Field. Born at Dublin, July 26, 1782; died Jan. 11, 1837, at Moscow. To a modern pianist who is aware of Chopin and Liszt, the name of John Field recalls little or nothing beyond 'Field's Nocturnes,'—not the seven concertos so much admired in their day, nor the three sonatas dedicated to his master Clementi, nor the pianoforte quintet with strings, nor the 'Airs variés,' or 'Polonaise en rondeau,' or similar more or less sentimental inanities, — but Field's Nocturnes pure and simple. And here again, not the entire lot of twenty little sentimental effusions bound up into a nocturnal sheaf, but about half-a-dozen delicate little lyrics—the nocturnes in A, E♭, C minor, A♭, and B♭ (Nos. 4, 7, 2, 3, and 5, in Liszt's edition), the very essence of all idylls and eclogues, 'Poésies intimes' of simple charm and inimitable grace, such as no undue popularity can render stale, no sham imitation nauseous. Both as a player and as a composer Chopin, and with him all modern pianists, are much indebted to Field. The form of Chopin's weird nocturnes, the kind of emotion embodied therein, the type of melody and its graceful embellishments, the peculiar waving accompaniments in widespread chords, with their vaguely prolonged sound resting on the pedals, all this and more we owe to Field.

Field's method of playing, as was to be expected from Clementi's best pupil, was distinguished by the most smooth and equable touch, the most perfect legato, with supple wrists and quiet position of the hands, a suave and singing tone, capable of endless modifications and delicate shades of expression. He is reported to have played his nocturnes with an inexhaustible variety of embellishments, and, like Chopin after him, is said to have preferred the smaller square and upright pianofortes to grands. Schuberth & Co.'s edition of his Nocturnes is prefaced by a charming essay in French on Field and his musical ways, by Franz Liszt, well worth reading.

Field came of a family of musicians. He was the son of a violinist engaged at a theatre in Dublin, who again was the son of an organist. His grandfather taught him the rudiments of music and grounded him on the piano. He told Fétis that both his father and grandfather forced him to practise so unmercifully, that he attempted to run away from home—to which, however, abject misery soon brought him back. The elder Field, who was subsequently engaged as violinist at Bath, and afterwards at the Haymarket Theatre, brought young John to London and apprenticed him (for a premium of 100 guineas) to Clementi, with whom he became a sort of musical salesman in the pianoforte shop of Clementi & Co., and from whom, up to his twenty-second year, he received regular instruction in pianoforte playing. [He made his début in London in 1794. W. H. G. F.] In 1802 Clementi took Field to Paris, where his admirable rendering of Bach's and Handel's fugues astonished musicians; thence to Germany, and thereafter to Russia. Here he was encountered by Spohr, who gives a graphic account of him. Clementi kept him to his old trade of showing off the pianos in the warehouse, and there he was to be found, a pale melancholy youth, awkward and shy, speaking no language but his own, and in clothes which he had far outgrown; but who had only to place his hands on the keys for all such drawbacks to be at once forgotten (Spohr, *Selbstbiographie*, i. 43).

On Clementi's departure in 1804 Field settled at St. Petersburg as a teacher, where his lessons were much sought after and extraordinarily well paid. In 1823 he went to Moscow, and gave concerts with even greater success than in Petersburg. After further travelling in Russia he returned to London and played at the Philharmonic—a concerto of his own in E♭—Feb. 27,

1832. From thence he went to Paris, and in 1833 through Belgium and Switzerland to Italy, where at Milan, Venice, and Naples his playing did not please the aristocratic mob, and his concerts did not pay. Habits of intemperance had grown upon him; he suffered from fistula, and his situation at Naples became worse and worse. He lay in a hospital for nine months in the most deplorable condition, from which at last a Russian family named Raemanow rescued him, on condition that he should consent to return with them to Moscow. On their way back Field was heard at Vienna, and elicited transports of admiration by the exquisite playing of his Nocturnes. But his health was gone. Hardly arrived at Moscow he succumbed, and was buried there in Jan. 1837.

Field's printed compositions for the piano are as follows:—Seven Concertos (No. 1, E♭; No. 2, A♭; No. 3, E♭; No. 4, E♭; No. 5, C, 'L'incendie par l'orage'; No. 6, C; No. 7, C minor); two Divertimenti, with accompaniment of two violins, flute, viola, and bass; a Quintet and a Rondo for piano and strings; Variations on a Russian air for four hands; a grand Valse, four Sonatas, three of which are dedicated to Clementi; two 'Airs en Rondeau'; Fantaisie sur le motif de la Polonaise, 'Ah, quel dommage'; Rondeau Écossais; Polonaise en forme de Rondo; deux airs Anglais, and 'Vive Henry IV.' variés; and twenty pieces to which in recent editions the name of Nocturnes is applied, though it properly belongs to not more than a dozen of them. E. D.

FIELITZ, Alexander Von, born in Leipzig, Dec. 28, 1860, his father being half Polish, and his mother a Russian. He studied in Dresden under Edmund Kretschmer for composition, and Julius Schulhoff for pianoforte. In 1886 and 1887 he conducted under Nikisch, and then went to Italy for ten years, owing to delicate health, where he composed most of the music by which he is known, consisting of several piano pieces, songs, two suites for orchestra, and two operas, one of which, 'Das stille Dorf,' was produced at Hamburg, March 13, 1900, and has been played in Bremen, Lübeck, Ulm, etc. Von Fielitz is at present a Professor in the Stern Conservatorium at Berlin, and was appointed conductor at the Theater des Westens in 1904. He is chiefly known in England by his songs, of which the most important is a cycle called 'Eliland.' W. R. C.

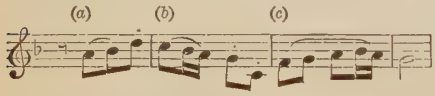
FIERRABRAS. An opera in three acts by Schubert, words by Kupelwieser. It was commissioned by Barbaja, but owing to his failure was never performed, and remains in MS. in the Library of the Gesellschaft der Musikfreunde at Vienna. Act 1, 304 pages, is dated at beginning and end 25th and 31st May (1823); Act 2, 31st May and 5th June. The overture is occasionally played at concerts. The full score forms the sixth volume of series xv. of Breitkopf & Härtel's complete edition of Schubert. G.

FIFE. The name commonly given to the chief instrument, or B♭ Flute, in the Drum and Fife Band. More particularly considered, the designation signifies an early and simple form of small transverse flute (see Flute), the bore of which was cylindrical throughout, and the intonation in consequence very faulty, but which was in some cases used in Drum and Fife Bands until the last fifteen or twenty years. This form of the instrument is practically obsolete, and the name now signifies a flute of the 'conical' type, intermediate in pitch between the 'concert' flute and piccolo. This modern instrument has, in addition to the usual six finger-holes, four, five, or six keys. It is pitched in B♭ (but occasionally in C), and in the Drum and Fife Band gives the mass of the tone, being assisted in the harmonies by piccolos and flutes in F or E♭ of similar construction. It is interesting to note, as relating to the subject of Musical Pitch, that the pitch of Drum and Fife Bands until some time between 1880 and 1890 remained the same as Sir Geo. Smart's pitch of 1828, practically identical with the present low orchestral pitch (Philharmonic, 1896), although from about the middle of last century Military Bands, in accordance with the Queen's regulation, used, and still use the high orchestral, or 'old' Philharmonic pitch. This remains the official army pitch, as recognised by the Royal Military School of Music, Kneller Hall, and to it both the Military and the Drum and Fife Bands now conform. D. J. B.

FIFTEENTH is a stop or set of pipes in an organ sounding two octaves, or fifteen notes, above the Open diapason. Thus when the Fifteenth and Open diapason stops are drawn out at the same time, and the finger is placed on the key of middle C, two notes are sounded —c' and c'''.

FIFTH. A Fifth is the perfect consonance, the ratio of the vibrational numbers of the limiting sounds of which is 2 : 3. It is called fifth because five diatonic notes are passed through in arriving from one extreme of the interval to the other, whence the Greeks called it διὰ πέντε, Diapente. The interval consists of three whole tones and a semitone. C. H. H. P.

FIGARO. See Nozze di Figaro.



FIGURANTE. A ballet-dancer who takes an independent part in the piece; also, in France, a subordinate character in a play, who comes on but has nothing to say.

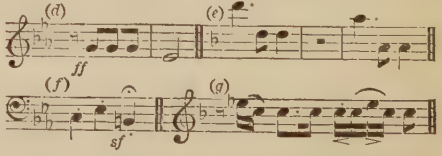
FIGURE is any short succession of notes, either as melody or a group of chords, which produces a single, complete, and distinct impression. The term is the exact counterpart of the German *Motiv*, which is thus defined in Reissmann's continuation of Mendel's *Lexikon*:—'Motiv, Gedanke, in der Musik, das kleinere Glied eines solchen, aus dem dieser sich organisch entwickelt.'

It is in fact the shortest complete idea in music; and in subdividing musical works into their constituent portions, as separate movements, sections, periods, phrases, the units are the figures, and any subdivision below them will leave only expressionless single notes, as unmeaning as the separate letters of a word.

Figures play a most important part in instrumental music, in which it is necessary that a strong and definite impression should be produced to answer the purpose of words, and convey the sense of vitality to the otherwise incoherent succession of sounds. In pure vocal music this is not the case, as on the one hand the words assist the audience to follow and understand what they hear, and on the other the quality of voices in combination is such as to render strong characteristic features somewhat inappropriate. But without strongly marked figures the very reason of existence of instrumental movements can hardly be perceived, and the success of a movement of any dimensions must ultimately depend, to a very large extent, on the appropriate development of the figures which are contained in the chief subjects. The common expression that a subject is very 'workable,' merely means that it contains well-marked figures; though it must be observed, on the other hand, that there are not a few instances in which masterly treatment has invested with powerful interest a figure which at first sight would seem altogether deficient in character.

As clear an instance as could be given of the breaking up of a subject into its constituent figures for the purpose of development, is the treatment of the first subject of Beethoven's Pastoral Symphony, which he breaks up into

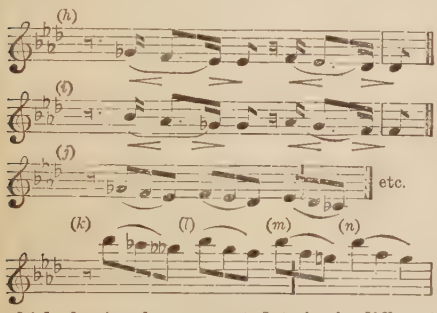
three figures corresponding to the first three bars. As an example of his treatment of (*a*) may be taken—



(*b*) is twice repeated no less than thirty-six times successively in the development of the movement; and (*c*) appears at the close as follows:—

Examples of this kind of treatment of the figures contained in subjects are very numerous in classical instrumental music, in various degrees of refinement and ingenuity; as in the first movement of Mozart's G minor Symphony; in the same movement of Beethoven's Eighth Symphony; and in a large number of Bach's fugues, as for instance, Nos. 2, 7, 16 of the *Wohltemperirtes Clavier*. The beautiful little musical poem, the eighteenth fugue of that series, contains as happy a specimen of this device as could be cited.

In music of an ideally high order, everything should be recognisable as having a meaning; or, in other words, every part of the music should be capable of being analysed into figures, so that even the most insignificant instrument in the orchestra should not be merely making sounds to fill up the mass of the harmony, but should be playing something which is worth playing in itself. It is of course impossible for any but the highest genius to carry this out consistently, but in proportion as music approaches to this ideal, it is of a high order as a work of art, and in the measure in which it recedes from it, it approaches more nearly to the mass of base, slovenly, or false contrivances which lie at the other extreme, and are not works of art at all. This will be very well recognised by a comparison of Schubert's method of treating the accompaniment of his songs and the method adopted in the large proportion of the thousands of 'popular' songs which annually make their appearance in this country. For even when the figure is as simple as in 'Wohin,' 'Mein,' or 'Ave Maria,' the figure is there, and is clearly recognised, and is as different from mere sound or stuffing to support the voice as a living creature is from dead and inert clay.



Bach and Beethoven were the great masters in the use of figures, and both were content at times to make a short figure of three or four notes the basis of a whole movement. As examples of this may be quoted the truly famous rhythmic figure of the C minor Symphony (*d*), the figure of the Scherzo of the Ninth Symphony (*e*), and the figure of the first movement of the last Sonata, in C minor (*f*). As a beautiful example from Bach may be quoted the Adagio from the harpsichord Toccata in D minor (*g*), but it must be said that examples in his works are

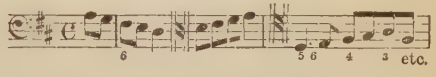
almost innumerable, and will meet the student at every turn.

A very peculiar use which Bach occasionally makes of figures, is to use one as the bond of connection running through a whole movement by constant repetition, as in Prelude No. 10 of the *Wohltemperirtes Clavier*, and in the slow movement of the Italian Concerto, where it serves as accompaniment to an impassioned recitative. In this case the figure is not identical on each repetition, but is freely modified, in such a way however that it is always recognised as the

same, partly by the rhythm and partly by the relative positions of the successive notes. This manner of modifying a given figure shows a tendency in the direction of a mode of treatment which has become a feature in modern music: namely, the practice of transforming figures in order to show different aspects of the same thought, or to establish a connection between one thought and another by bringing out the characteristics they possess in common. As a simple specimen of this kind of transformation, may be quoted a passage from the first movement of Brahms's PF. Quintet in F minor. The figure stands at first as at (*h*), then by transposition as at (*i*). Its first stage of transformation is (*j*); further (*k*) (*l*) (*m*) are progressive modifications towards the stage (*n*),

which, having been repeated twice in different positions, appears finally as the figure immediately attached to the Cadence in D♭, thus—

A similar very fine example—too familiar to need quotation here—is at the close of Beethoven's Overture to 'Coriolan.'



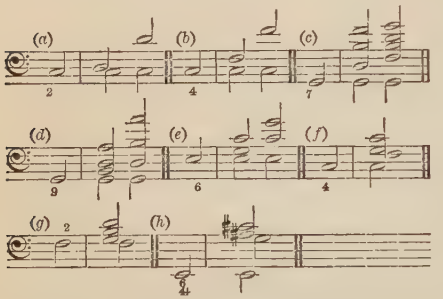
The use which Wagner makes of strongly marked figures is very important, as he establishes a consistent connection between the characters and situations and the music by using appropriate figures (*Leitmotiven*), which appear whenever the ideas or characters to which they belong come prominently forward.

That figures vary in intensity to an immense degree hardly requires to be pointed out; and it will also be obvious that figures of accompaniment do not require to be so marked as figures which occupy positions of individual importance. With regard to the latter it may be remarked that there is hardly any department in music in which true feeling and inspiration are more absolutely indispensable, since no amount of ingenuity or perseverance can produce such figures as that which opens the C minor Symphony, or such soul-moving figures as those in the death march of Siegfried in Wagner's 'Götterdämmerung.'

As the common notion that music chiefly consists of pleasant tunes grows weaker, the importance of figures becomes proportionately greater. A succession of isolated tunes is always more or less inconsequent, however deftly they may be connected together, but by the appropriate use of figures and groups of figures, such as real musicians only can invent, and the gradual unfolding of all their latent possibilities, continuous and logical works of art may be constructed; such as will not merely tickle the hearer's fancy, but arouse profound interest, and raise him mentally and morally to a higher standard. C. H. H. P.

FIGURED. A translation of *Figurato*, another word for FLORID. Figured Counterpoint is where several notes of various lengths, with syncopations and other ornamental devices, are set against the single notes of the Canto fermo; and Figured melody, or *Canto figurato*, was the breaking up of the long notes of the church melodies into larger or more rapid figures or passages. The *figurirter Choral*, or Figured chorale, of the German school was a similar treatment of their church tunes, in which either the melody itself or its accompaniments are broken up into 'figures' or groups of smaller notes than the original. Of this numberless examples may be found in the works of J. S. Bach. See CHORALE-ARRANGEMENTS.

FIGURED BASS is a species of musical shorthand by which the harmony only of a piece is indicated. It consists of the bass notes alone, with figures to represent the chords. It seems to have been first employed by Peri, Caccini, Viadana, and Monteverde, about 1600, in the accompaniments of their Recitatives and Songs, and was afterwards for some time in universal use for accompaniment; songs such as the collection of the *Orpheus Britannicus*, and anthems such as Boyce's collection, and great works like Bach's 'Passion' and Handel's 'Messiah,' having accompaniments indicated in this manner. The bass line consisted of the lowest part of whatever was going on at the time, whether treble, or tenor, or bass, and in choral works it often leapt about promiscuously in a manner that would be very harassing to a player unaccustomed to the process, as for example



from the last chorus of the 'Messiah.'

The figures represented the diatonic intervals counting upwards, without reference to the nature of the chord; thus 2 always meant the next diatonic note above—D above C, as in (*a*), and 4 the next note but two, as (*b*), and so on up to the 9th, above which the figures of the lower octave were repeated; and the choice of the particular octave in which a note represented by a figure should be placed, as well as the progression of the parts, was generally left to the discretion of the player.

It was not customary to insert all the figures,

as some intervals were looked upon as too familiar to require indication, such as the octave and the fifth and the third, or any of them in combination with other intervals; thus a 7 by itself would admit of any or all of them being taken without being indicated, as (*c*); and a 9 would admit of a fifth and a third, as (*d*); and a 6 of a third, but not of a fifth, as (*e*); and a 4 of a fifth and an octave, as (*f*). When a 2 was written alone over a note it admitted also of a sixth and a fourth, as (*g*); but more commonly the 4 was written with the 2, and the sixth only was understood; and this seems to be the only case in which notes other than the octave or fifth or third are left to be understood.

When notes were chromatically altered the accidental was added by the side of the figure representing that note (7♭), or for sharpening a note a line was drawn through the figure or by its side, as at (*h*), and as it was not customary to write the 3, when the third was to be chromatically altered the accidental was placed by itself with the bass note—thus a simple ♯, ♭, or ♮, implied a ♯, ♭, or ♮, 3rd. When the bass moved and any or all of the notes of the harmony above it stood still, it was common to indicate this by a line drawn from the figures indicating the notes which remained stationary to the place where they moved again, and if the notes happened to be such as were usually left to be understood by the player, the lines were drawn over the bass from the point in which it began to move under the implied chord. Whenever the bass was to be unaccompanied by harmony, the words 'Tasto Solo' were written.

The figures were usually written in their numerical order, though for special purposes they might be reversed when the composer required a particular disposition of the notes, and similar emergencies often caused the 8 or the 5 or the 3 to be inserted if it was indispensable that the notes represented by those figures should not be missed out. See THOROUGHBASS. C. H. H. P.

FILIPPI, FILIPPO, born at Vicenza, Jan. 13, 1830, studied law at Padua, and took his degree there in 1853. He had already taken up the cudgels on behalf of Verdi's 'Rigoletto,' and soon afterwards devoted himself entirely to music and musical criticism. He was editor of the *Gazzetta Musicale* of Milan, and critic of the *Perseveranza*, from 1859. His influence was strongly exerted on behalf of Wagner, and the early acceptance of Wagner in Italy must be ascribed in part to his writings; his pamphlet, *Riccardo Wagner*, was translated into German and published in 1876; a series of musical essays, as *Musica e Musicisti*, appeared in 1879, and a monograph on the life and works of Fumagalli is of some value. He composed chamber-music, pianoforte pieces, and songs. He died at Milan, June 25, 1887. (Riemann and Baker's Dictionaries.) M.

FILLE DU RÉGIMENT, LA. Opera in two acts; words by Bayard and St. Georges; music by Donizetti. Produced at the Opéra Comique, Feb. 11, 1840. In London, as 'La Figlia di Reggimento,' at Her Majesty's (Jenny Lind), May 27, 1847; and as 'The Daughter of the Regiment' (Fitzball) at Surrey Theatre, Dec. 21, 1847.

FILLUNGER, MARIE, born in Vienna, Jan. 27, 1850, studied in the Vienna Conservatorium from 1869 to 1873 under Mme. Marchesi. On the advice of Brahms she went to the Hochschule in Berlin in 1874, remaining there until 1879, when she went to Frankfort, following Mme. Schumann. While still a student of the Hochschule, she appeared with great success in public, singing mainly in oratorio, in North Germany, Holland, and Switzerland. Early in 1889 she made her first appearance in London at a Popular Concert, where her singing of Schubert's songs stamped her at once as a great interpretative artist, while the exquisitely beautiful quality of her soprano voice gave peculiar charm to all she sang. Soon after her début, she sang Beethoven's 'Ah, perfido!' and Schubert's 'Die Allmacht,' at the Crystal Palace (Feb. 25), and at the same place undertook the soprano solo in the Choral Symphony (March 4, 1889), for which engagements she had in the first instance come to England. Her success both in orchestral music and in songs was so marked that she made London her home, and since that time has been recognised as one of the most highly accomplished singers of the best music. It is characteristic of her that she has never sung anything unworthy of the high artistic position she has won for herself, and her name will always be identified with music of the noblest class. She phrases with the delicacy and musicianship that are generally associated with the great violinists, and whether in Schubert, in which her first successes were made; in Brahms, whose songs she sings with deep expression and beauty of style; or in Bach, some of whose solo cantatas she has made her own, her singing is marked by the highest qualities. In 1891 she went with Sir Charles and Lady Hallé to Australia and took part with them in forty-eight concerts; in 1895 she accompanied these artists to South Africa, singing in twenty-four concerts. In 1904 she accepted

a position as teacher in the Royal College of Music, Manchester. M.

FILTSCH, CHARLES, born July 8, 1830, at Hermannstadt, Siebenbürgen, Hungary. He appears to have received his earliest regular instruction on the piano from Mittag at Vienna. In 1842 he was in Paris, studying under Chopin and Liszt. In the summer of 1843 he came to London, and appeared twice in public, once on June 14, at St. James's Theatre, between two of the plays, and again on July 4, at a matinée of his own at the Hanover Square Rooms. On the latter occasion, besides the Scherzo in B minor and other pieces of Chopin, he played a Prelude and Fugue of Bach's and a piece in A from the 'Temperaments' of Mendelssohn. In the last of these he was peculiarly happy. 'Presto de Mendelssohn,' said Spohr, the moment he saw Filtsch seated at the piano at Sir G. Smart's a few nights after. He also played at Buckingham Palace before the Queen and Prince Albert. He was then thirteen years old, and his playing is described as most remarkable both for execution and expression—full at once of vigour and feeling, poetry and passion. (See the *Musical Examiner* for June 17 and July 8, 1843.) Every one who met him seems to have loved him. He was 'le petit' in Paris, and 'little Filtsch' in London. According to the enthusiastic von Lenz, Chopin said that he played his music better than he himself, while Liszt on one occasion exclaimed 'Quand ce petit voyagera je fermerai boutique.' (Lenz, *Grosse PF. Virtuosen*, p. 36; *Beethoven et ses trois Styles*, i. 229.) But he was not destined to fulfil the promise of so brilliant a childhood—the blade was too keen for the scabbard; and, as Moscheles warned him, he practised too much for his strength; consumption showed itself, and he died at Venice on May 11, 1845. G.

FILTZ (also spelt FILS, FILZ, FILSL, and FIELTZ), ANTON, born (possibly in Bohemia, as is suggested by the various spellings of his name), about 1725, entered the court band at Mannheim in 1754, and died in 1760. He was a violoncellist of great renown, and as a composer ranks with the best of the Mannheim symphonists. A collection of his symphonies, together with some by Stamitz, was published in Paris soon after his death, another set was published at the Hague, 'The Periodical Overture' in London, and two books of trios in Amsterdam. A mass for four voices and orchestra is in MS. in the Royal Library at Berlin, and other MS. compositions exist in various libraries (see *Quellen-Lexikon*). The themes of thirty-nine symphonies are given in the volume of the *Denkmäler der deutscher Tonkunst* (*Bayern*), iii. 1, which also contains three of the symphonies—one called 'symphonie périodique'—in score. M.

FINAL. The equivalent, in the ecclesiastical modes, to the tonic or keynote of the later scale. See MODES.

FINALE. (1) The last movement of a symphony, sonata, concerto, or other instrumental composition. (2) The piece of music with which any of the acts of an opera are brought to a close.

(1) The finales of the first great master of the symphony, Haydn, though developed with extraordinary skill and inexhaustible invention, are mostly of a somewhat playful character. Though their treatment is learned, their subjects are often trite. They are almost uniformly cast in the 'rondo,' as distinguished from the 'sonata' form. The finales of more recent masters exhibit a somewhat severer purpose, and are cast in forms for which, seeing their variety, no name has been, or seems likely to be, devised. In the finale to Mozart's so-called 'Jupiter Symphony' every conceivable contrapuntal resource is employed, with a freedom unsurpassed by the greatest masters of fugue, to give effect to ideas such as have been vouchsafed to few other composers. In those of Beethoven the great musical poet goes 'from strength to strength,' and having, as he would seem to have thought, exhausted all the capabilities for effect of the instrumental orchestra, brings the chorus to bear on his latest symphony—a colossal monument of the invention, and command of invention, of its composer; surpassing in scale, variety, and effect all former and indeed subsequent efforts of the kind. [In Brahms's fourth symphony in E minor, he adopts the form of the old 'Passacaglia,' using the ground-bass with the utmost freedom, and making various modifications in its treatment.]

(2) In the earlier operas, of whatever nation, each act was commonly terminated by an aria or, at the most, a duet, constructed rather to exhibit the powers of the singer or singers employed in it, than to carry on or even emphasise the action. The last act was sometimes brought to a close with a chorus, generally brief and always of the simplest character. The finale proper—the great concerted piece in the course of which the interest of each act culminates—is a modern addition to the musical drama, having its origin in the earlier Italian *opera buffa* of the 18th century. The principal masters of this delightful variety of musical composition were Leo, Pergolesi, the Italianised German Hasse, and Logroscino; and it is in the operas of the last of these, otherwise greatly distinguished for their inventiveness and spirit, that the finale first appears, though in a somewhat primitive form. To Piccinni its development, if not its perfectionment, is subsequently due. His opera 'La Cecchina, ossia la Buona Figliuola' owed much of its extraordinary popularity to the introduction of finales in which the action was carried on, and which were first enlivened to the ear by the varieties of key and of rhythm given to the successive movements, and to the eye by the entrances and exits of the different persons of the drama.

Two of the finest specimens of this class form large portions of Mozart's 'Nozze di Figaro.' One of them—that to the second act—consists of no fewer than eight movements, as various in character as are the nine personages who are concerned in it, and whose several accusations, defences, protests, recriminations, and alternations of success and failure are wrought into a work of musical art which, as has been well said, 'begins on an eminence and rises to the last note.'

The great concerted piece, whether introduced at the end of an act or elsewhere, was not made an essential feature of modern opera without strong protest; and this by the same writer whose amusing designation of barytones and basses has already been quoted. [BASS.] Lord Mount-Edgcumbe (*Musical Reminiscences*, Sect. vii.) attributes its introduction to no other cause than the decline of the art of singing, and the consequent necessity for making compensation to the musical hearer for a deficiency of individual excellence by a superfluity of aggregate mediocrity. 'Composers,' he says, 'having (now) few good voices, and few good singers to write for, have been obliged to adapt their compositions to the abilities of those who were to perform in them; and as four, five, or six moderate performers produce a better effect jointly than they could by their single efforts, songs have disappeared, and interminable quartettos, quintettos, sestettos, etc., usurp their place.' And again, 'It is evident that in such compositions each individual singer has little room for displaying either a fine voice or good singing. and that power of lungs is more essential than either; very good singers therefore are scarcely necessary, and it must be confessed that though there are now none so good, neither are there many so bad as I remember in the inferior characters. In these levelling days, equalisation has extended itself to the stage and musical profession; and a kind of mediocrity of talent prevails, which, if it did not occasion the invention of these melodramatic pieces is at least very favourable to their execution.' The most extraordinary thing connected with this passage is that it was written half a century after the production of Mozart's 'Nozze di Figaro,' with which the venerable critic was certainly well acquainted. From the most recent form of opera, that of Wagner, the finale, like the air, the duet, the trio or other self-contained movement, has entirely disappeared. Each act may be described as one movement, from the beginning to the end of which no natural pause is to be found, and from which it would be impossible to make a connected, or in itself complete extract. It is difficult to conceive that this 'system' should in its integrity maintain, or attain, extensive popularity; but it will no doubt more or less affect all future musical dramas. [As a bright example of the set finale in modern times, may be cited the infinitely humorous fugue at the end of Verdi's 'Falstaff.'] J. H.

FINCH, HON. and REV. EDWARD [fifth son of the first Earl of Nottingham, was born 1664, took the degree of M.A. in 1679, became a Fellow of Christ College, Cambridge, represented the university in Parliament in 1689-90, was ordained deacon in 1700, and became rector of Wigan. He was appointed prebendary of York in 1704, and of Canterbury 1710]. He composed several pieces of church music. Of these a 'Te Deum' and an anthem, 'Grant, we beseech Thee,' are included in Tudway's collection of church music in the British Museum (Harl. MSS. 1237-42). [A MS. *Grammar of Thorough-Bass* is in the Euing Library, Glasgow. *Brit. Mus. Biog.*] He died Feb. 14, 1738, aged seventy-four. W. H. H.

FINCK, HEINRICH (1482-1519), passed the earlier years of his life in Poland, and received his education as one of the choristers of the Warsaw Hofcapelle. Later on the King's liberality enabled him to continue his studies at a university. There is a strong probability of his being the 'Henricus Finck de Bamberga,' a 'bonus cantor,' who is entered as a student at Leipzig, in the Universitäts-Matrikelbuch (f. 146) in 1482 (*Monatshefte*, 1890, p. 139). He must have returned to Poland, for he held the position of Musicus, perhaps also of Director in the Hofcapelle under Johann Albert (1492), Alexander (1501), and Sigismund (1506). Soon after he went to Würtemberg, as the records of Duke Ulrich's Capelle at Stuttgart for the years 1510-11 state that Capellmeister Henricus Finck, called the 'Singermeister,' received a yearly salary of sixty gulden, etc. His name appears only until 1513, but he probably remained there until 1519, when Joh. Siess was appointed Capellmeister (Sittard, *Zur Gesch. der Musik am Württemb. Hofe*, 1890, p. 8). He died June 9, 1527, at the Benedictine Schottenkloster, Vienna (E. Bienenfeld, *Sammelband* of the *Int. Mus. Ges.* vi. 96).

In Hermann Finck's *Practica Musica*, 1556, there are the following references to his great-uncle, Heinrich: 'Extant melodiae, in quibus magna artis perfectio est, compositae ab Henrico Finckio, cuius ingenium in adolescentia in Polonia excultum est, et postea Regia liberalitate ornatum est. Hic cum fuerit patruus meus magnus, gravissimam causam habeo, cur gentem Polonicam praecipue venerer, quia excellentissimi Regis Polonici Alberti, et fratrum liberalitate hic meus patruus magnus ad tantum artis fastigium pervenit' (p. 4 of dedication: 'There are melodies composed by Heinrich Finck which show great skill. As a youth he received his education in Poland, and by royal liberality was afterwards enabled to continue it. Since Heinrich Finck was my great-uncle, I have very great cause to venerate the Polish nation, for the height to which he attained in his art was owing to the liberality of the most excellent Polish King Albert and his brothers.')

'Circa annum 1480 et aliquanto post alii exstiterunt praecedentibus (musicis) longe praestantiores. Illi enim in docenda arte non ita immorati sunt, sed erudite Theoricam cum Practica conjunxerunt. Inter hos sunt Henricus Finck, qui non solum ingenio, sed praestanti etiam eruditione excelluit, durus vero in stylo.' (Ch. i. p. 3: 'About and soon after 1480 musicians appeared far superior to their predecessors, who did not give so much time to teaching the art, but skilfully combined theory with practice. Among these were [others and] Heinrich Finck, who excelled not only in talent, but in learning. He was, however, hard in style.')

Heinrich Finck's compositions were printed only twenty years before *Practica Musica*, with the title: Schöne ausserlesne lieder, des hochberümpten Heinrici Finckens, sampt andern newen liedern, von den fürnemsten diser kunst gesetzt lustig zu singen, und auff die Instrument dienstlich. Vor nie im druck aussgangen. 1536. (In the Tenor part-book only) Gedruckt zu Nürenberg durch Hieronymum Formschneyder. Four part-books, obl. 4to, in the Munich Hofbibl. and in Zwickau Ratsschulbibl. Of the fifty-five compositions, the first thirty are by Heinrich Finck; only six are to sacred words. No. 1, 'Christ ist erstanden' is for five, the others for four voices. In vol. 8 of the *Publ. älterer prak. u. theoret. Musikwerke*, 1879, Eitner reprints these compositions in score, with the exception of No. 2, 'In Gottes Namen faren wir' (publ. in score by R. Schlecht, *Gesch. der Kirchenmusik*, 1871, Musikbeilage, No. 44); No. 11, 'Freu dich du werte Christenheit' (publ. in score by C. v. Winterfeld, *Der evang. Kirchengesang*, 1843, I. Musikbeilage, No. 12); and No. 18, 'Ich stund an einem morgen' (publ. in score by R. v. Liliencron, *Die historischen Volkslieder*, 1865, IV. Beilage 7). Eitner notes that there is no Cantus firmus in Finck's secular songs, he composed his own Tenor, only in 'Ich stund an einem morgen' and 'Greiner, zanner,' does he use the melodies of folk-songs. The German songs, of which 'Ach hertzigs hertz' is a characteristic example, are marked by great freedom of expression, sympathy, and feeling. The motets are more fettered by their century; although the 'Christ ist erstanden' for five voices is one of Finck's finest pieces of work, as a rule in his sacred music, ingenious handling of the counterpoint outweighs harmonious beauty. This perhaps accounts for Hermann Finck's stricture in *Practica Musica* 'durus vero in stylo.'

Compositions in printed works:—

1. Ein new geordnet künstlich Lautenbuch. In zwen Theyl getheylt. Nürnberg. Hansen Newsidler. 1536. H. F.'s music in the second part includes 'Ich stund an einem morgen.' (Vogel, Eitner.)

2. Secundus tomus novi operis musici, 6, 5, & 4 vocum. 1538. (Johannes Otto civis Noribergensis). No. 40, (i.) Magnus es tu Domine, (ii.) Tu pauperum refugium, for four voices. Although the music is here attributed to Finck, it is printed in Glarean's *Dodecachordon*, 1547, p. 221, as the work of Josquin des Prés. It was also published by Petrucci in 1504, p. 25, but without the composer's name. Eitner includes it in vol. 8 of the *Publikation*, etc. 1879, but says the authorship is doubtful.

3 Trium vocum carmina a diversis musicis composita. Nürenberg. Hieron. Formschneider. 1538. No. 22, for three voices, without words.

4. Ein ausszug guter alter und newer Teutscher Liedlein (G. Forster). Nürnberg. Johan Petreio. 1539. No. 7, 'Ach hertzigs hertz' (no composer's name) and No. 87, 'Kuntschaft mit dir' (with composer's name P. Hoffheymer). They are Nos. 8 & 29 in Finck's Schöne ausserlesne Lieder for four voices.

Der ander Theil, kurtzweiliger guter frischer Teutscher Liedlein. Nürnberg. Johan Petreium. 1540. No. 63 'Der Ludel und der Heusel' (with composer's name L. Heidenhamer) is No. 10 in Schöne ausserlesne Lieder.

5. Sacrorum hymnorum. Liber primus. Vitebergae. Georg Rhaw. 1542. Twenty-two motets, in which ancient church melodies form the Cantus firmus. Eitner reprinted five of them in *Publikation*, etc. 1879, vol. 8.

6. Concentus 3, 6, 5, & 4 vocum omnium jucundissimi. (Sigis. Salblinger) Augustae Vindelicorum. Ph. Ulhardus. 1545. No. 23 'O Domine Jesu Christe,' in seven movements, for four voices. Ambros describes this as an exceptionally beautiful work, the 'seven greetings of the suffering Redeemer' are in fact seven short motets full of deep devotion and feeling; in the last part two more voices join in a canon in 'Epidiapason post duo tempora.'

7. Officiorum (ut vocant) de nativitate, etc. Tomus primus. Vitebergae. G. Rhaw. 1545. f. 51 'Puer natus est nobis'—'Cantate Domino'—'Grates nunc omnes reddamus'—'Huic oportet ut canamus,' for four voices.

8. Eroterata musices practicae . . . collecta ab Ambrosio Wilphlingsedero. Noribergae. Chr. Heussler. 1563, p. 160. One musical example from the mass 'Sub tuum praesidium' for two voices.

9. Suavissimae et jucundissimae harmoniae: 8, 5, & 4 vocum, ex duabus vocibus. . . Clemente Stephani Buchavense. Noribergae. Th. Gerlatzenum. 1567. No. 12, 'Dies est laetitiae' for four voices. Reprinted by Eitner in *Publikation*, etc. 1879, vol. 8.

In MS.: Augsburg Bibl. Codex 142a, one motet for four voices. (Schletterer's *Cat.* p. 3.)

Basle Bibl. 'Ich stund an einem morgen' for four voices.

Berlin königl. Bibl. Codex Z 21, motets for four voices: 1. Miscreatur Dominus, 2. Ave Jesu Christe, 3. Deo dicamus, 4. Gloria laus, 5. Lieber her santh peter. (Eitner.)

Breslau Stadtbibl. *MS. 93*, Introit in four movements: Puer natus est nobis, etc. for four voices (Bohn's *Cat.*). See above, No. 7.

Königsberg Bibl. *MS. 4. 24.* Four motets, Nos. 43, 53, 89, and 90, for four voices. (Eitner.)

Leipzig Universitätsbibl. Codex MS. 1494. Der Mensuralcodex des Magister Nikolaus Apel von Königshofen. 1504. Described by Dr. Hugo Riemann, *Kirchenmusikalisches Jahrbuch*. 1897. Music by Heinricus Finck:—two copies of 'Et adhuc tecum sum' (2nd part), 'Domine probasti me' for four voices; and 'Wer ych ayn falck' for four voices, identical with music in the Berlin MS. Z 21, No. 95, without name of composer, to the Latin words 'Invicto regi jubilo.' Also five songs for four voices, without text, all initialled H. F.

Lübeck Stadtbibl. *Hymni*: No. 91, Fit porta Christi, for four voices, tenor part missing (Stiehl's *Cat.* p. 9). In *Sac. Hym.* 1542. No. 30.

Munich Hofbibl. *MSS. 42 and 66*, two copies of a Missa Dominicalis for four voices; in MS. 42 a motet for four voices. (Eitner.)

Pirna Stadtkirche Bibl. MS. Chorbuch, Codex IV., 'Puer natus est: Cantate Domino,' and 'Te maneat semper' (initialled H. F.): Codex vi., 'Ecce devenit' (initialled H. F.), and 'Rorate coeli'; all for four voices. (Eitner.)

Proske bischöfl. Bibl. 'Missa de beata virgine,' for three voices (publ. in score in Ambros's *Geschichte der Musik*, v. 247, No. 35). Motets—for four voices: 1. O Domine Jesu Christe, in seven movements (printed in *Concentus*, 1545, No. 23); 2. Nisi Dominus, in two movements. For five voices: 1. Christus resurgens, 2. Et valde mane, 3. Illuminare Hierusalem, 4. Ite in orbem, 5. Petre amas me, 6. Verbum caro. For five and six voices: Beati estis sancti, in four movements. For seven voices: Repie tuorum corda. (Eitner.)

Vienna Hofbibl. *MS. 19,242*, No. 56 'O Domine Jesu Christe,' motet for four voices; *MS. 18,810*, No. 24 'Greiner, zanner' for five voices. (Mantuani's *Cat.*)

Zwickau Ratsschulbibl. *MS. 4.* Motets for five voices: 1. Apparuerunt apostolis, in two movements; 2. Felix namque, in three movements; 3. Illuminare Hierusalem, in three movements; 4. Verbum caro, in three movements. *MS. 16.* For four voices (altus part missing) 'De Evangelistis' (an Alleluia and Prose in ten sections); 2. Apparuit gratia dei, in two movements; 3. Ave praeclara maris stella, in six movements; 4. Discubuit Jesus, in three movements; 5. Salve rex misericordie, in nine movements; 6. Veni creator spiritus. For four and six voices: O Domine Jesu Christe, in seven movements (see above). For five voices: Ecce Maria genuit, in two movements. For six voices: Grates nunc omnes reddamus, Huic oportet ut canamus. (Vollhardt's *Cat.*)

C. S.

FINCK, HERMANN (1527-58), was born March 21, 1527, at Pirna, Saxony, and probably received his early education as a member of the Hofcapelle of King Ferdinand of Bohemia. He is entered as a student at Wittenberg University, September 1545, in the Album Academiae Vitebergensis, 1502-60, edited by Förstemann, 1841 (see extract in *Monatshefte für Musikgeschichte*, 1878, p. 54). On June 1, 1554, the Rector of the University formally announced that Hermann was at liberty to give instruction in music to the University students (Fürstenau, *Monatshefte*, 1879, p. 11). That he remained there and was appointed organist in 1557, may be gathered from a statement made by Nicolas

Selneccer in a work published in 1581 (Erk, *Monatshefte*, 1879, p. 63). Selneccer explains that in 1557, the organistship being vacant, at the request of the Praeceptores, he filled it for a month. Then through Court influence Hermann Finck was appointed to the post, 'der bald hernach elendiglich und jemmerlich zu Wittenberg gestorben' (who soon after miserably died in Wittenberg). He may have stated this on the authority of Johannes Garcaeus, *Astrologiae methodus Basiliae*, 1570, 'Hermannus Finckius Pirnensis. Insignis hic fuit Musicus et Organista, miserrime subitanea morte extinctus est. Nascitur 21 mart. 1527, etc.' But the suggestion is negatived by the discovery of the date of Hermann's death made by M. Fürstenau, in the Wittenberg University records (*Scriptorum publice*. Witebergae. 1559-62. See *Monatshefte*, 1879, p. 63), where it states that he died peacefully on Dec. 28, 1558, 'auf fromme Weise aus diesem Leben geschieden ist.'

The important theoretical work by which Hermann Finck's name is best known is entitled: 'Practica musica Hermanni Finckii, exempla variorum signorum, proportionum et canonum, judicium de tonis, ac quaedam de arte suaviter et artificiose cantandi continens. Vitebergae excudebant Haeredes Georgii Rhaw. 1556.' In one volume, 4to. In British Museum, etc. The dedication is to the Count Gorca, and shows that Hermann must have visited Poland and been hospitably received by the Gorca family, to whom he expresses a warm sense of gratitude: 'Itaque in editione huius operis, praecipue ad Celsitudinem vestram scripsi, ut ostenderem me beneficiorum memoriam, quae in meam familiam a Regibus et Principibus Polonicis collata sunt, perpetua gratitudine et retinere et celebrare. Fuit eximia erga me quoque liberalitas Celsitudinis tuae Illustris Domine Stanislae. Quare et fratrum et tui nominis mentionem hic feci, et vobis hoc opus dedico, ut gratitudinem meam et observantiam erga vos perpetuam, ostendam.' The work is divided into five books. The first book 'De musicae inventoribus' is of some historical interest owing to its mention of contemporary musicians (see Heinrich Finck) and to the light it throws on the musical taste of that time. A long quotation from pp. 2, 3, 4, is given in the *Dict. Hist.* (Choron et Fayolle) with a French translation. In the third book 'de canonibus' are numerous examples of canons: 'Clama ne cesses,' four voices: 'Misericordia & Veritas,' Bassus & Tenor; 'Justicia et pax,' Discant & Altus; 'Gaude cum gaudentibus,' four voices; 'Qui se humiliat, exaltabitur'—'Languir me fais,' four voices; and 'Le désir croist quant et quant l'espérance'—'Amour parfaict m'a donné hardiesse,' four voices, with the French words. A German translation of the fifth book 'De arte eleganter et suaviter cantandi,' with music, was published in *Monatshefte*, 1879, p. 129, etc. Finck was a composer of some note. Few of his works are in existence, but they show that he was distinctly in advance of his time, both in form and in expression. Eitner included three compositions in the *Publikation älterer prakt. und theoret. Musikwerke*, 1879, vol. 8: 'Pectus ut in sponso' in three sections for four voices; 'Semper honorabile' in two sections, for five voices, both wedding hymns; and the motet for five voices 'Christ ist erstanden,' part 1, which it is interesting to compare with that composed by Heinrich Finck at a much earlier date. The score was carefully reconstructed by Otto Kade from a very defective MS. Chorbuch in the Pirna Stadtkirche Bibl. Codex VII. (date, 1556); the last two movements of the motet were almost entirely destroyed.

Compositions:—

1. Melodia epithalamii . . . Johanno Friderico II Duci Saxoniae . . . composita ab Hermanno Finck Pyrnensi. Quinque vocum. Vitebergae excuss typis haeredum Georgii Rhaw. 1555. Five part-books, obl. 4to Text: 'Amore flagrantissimo sponsam,' and—Melodia epithalamii . . . Henrico Paxmanno . . . composita ab Herm. Finck Pirnensi. Quatuor vocum. Vitebergae. 1555. Four part-books obl. 4to. Text: 'Pectus ut in sponso' by Philip Melancthon. In the Liegnitz königl. Ritter-Academie Bibl. (Pfudel's *Cat.*).
2. Melodia epithalamii . . . Johannis Schrammii . . . composita ab Herm. Finck. Quinque vocum. Vittembergae. Haeredes G. Rhaw. 1557. Text: 'Semper honorabile.' Five part-books, obl. 4to. in the Brieg Gymnasialbibl. (Kuhn's *Cat.*).
3. Ein schöner geistlicher Text: 'Was mein Gott wil: das geschicht allzeit,' etc. von . . . Albrechten Marggraven zu Brandenburg . . . selber gemacht. Und, wie folget, auff viererley Art componiret durch Herm. Finck Musicum. Discantus primus, anno 1558. 4to. This is, so far as is known, the only voice part in existence; it is in a miscellaneous volume in the Weimar grossherzogl. Bibl. The Dedication is signed by Finck, Musicus, 'Wittenberg, den 25 Dec. anno 1557.' (Eitner, *Publikation.*)

Eitner mentions that in the Proske bischöfl. Bibl. *MS.* 940 (1557), four part-books, obl. 4to, there is a student's drinking-song for four voices by Herm. Finck, No. 169, 'Sauff aus und machs nit lang,' etc. C. S.

FINE (Ital. 'end') is generally placed above the stave at the point where the movement ceases after a 'Da Capo' repetition. Its place is occasionally taken by a pause (see FERMATA). It is often found, too, at the end of works which finish on the right-hand page (*recto*), and is placed there, apparently, in order to warn imperfectly trained musicians that it is not worth while to turn over the last page.

FINGER, GOTTFRIED or GODFREY, a native of Olmütz in Moravia, came to England about 1685, and enjoyed the patronage of James II. In 1688 he published 'Sonatae XII. pro Diversis Instrumentis. Opus Primum,' and in 1690 'Six Sonatas or Solos, three for a violin and three for a flute.' In 1691, in conjunction with John Banister, he published 'Ayres, Chacones, Divisions and Sonatas for Violins and Flutes,' and shortly after joined Godfrey Keller in producing 'A Set of Sonatas in five parts for flutes and hautboys.' He subsequently published other sonatas for violins and flutes. In 1693 Finger composed the music for Theophilus Parsons' Ode for the annual celebration of St. Cecilia's Day. In 1696, in conjunction with John Eccles, he composed the music for Motteux's masque, 'The Loves of Mars and Venus,' and in the next year that for Ravenscroft's comedy,

The Anatomist, or, The Sham Doctor,' and (with D. Purcell) that for N. Lee's 'Rival Queens.' In 1701 he set to music Elkanah Settle's opera, 'The Virgin Prophetess, or, The Siege of Troy.' In the previous year he was awarded the fourth prize for the composition of Congreve's masque, 'The Judgment of Paris,' the others being given to John Weldon, John Eccles, and Daniel Purcell. Finger was so displeased at the ill reception of his composition that he quitted England and returned to Germany, where in 1702 he obtained the appointment of chamber musician to Sophia Charlotte, Queen of Prussia, and lived for some years at Breslau. Whilst at Berlin he composed two German operas, 'Sieg der Schönheit über die Helden' and 'Roxane,' both performed in 1706. [This latter is very possibly by Telemann. See *Dict. of Nat. Biog.*] In 1717 he became chapel-master at the court of Gotha, [and in March 1718 is mentioned by Walter as part-composer of the opera 'L' amicizia in terzo.' His name occurs in a list of 1723]. Nothing is known of his subsequent career. Besides the above-mentioned compositions Finger wrote instrumental music for the following plays—'The Wives' Excuse,' 1692 ; 'Love for Love,' 1695 ; 'The Mourning Bride,' 1697 ; 'Love at a Loss,' 'Love makes a Man,' 'The Humours of the Age,' and 'Sir Harry Wildair,' 1701. Some concertos and sonatas are mentioned in the *Quellen-Lexikon.* W. H. H.

FINGER-BOARD. The finger-board is that part of the violin and other stringed instruments over which the strings are stretched, and against which the fingers of the left hand of the player press the strings in order to produce sounds not given by the open string.

The finger-board of the violin is best made of ebony, as harder and less easily worn out than any other wood. Its surface is somewhat curved—corresponding to the top line of the bridge, but not quite so much—in order to allow the bow to touch each string separately, which would be impossible if bridge and finger-board were flat. On an average-sized violin it measures 10½ inches in length, while its width is about 1 inch nearest to the head of the violin and 1⅜ inch at the bridge-end. It is glued on to the neck, and extends from the head to about three-fourths of the distance between the neck and the bridge. At the head-end it has a slight rim, called the 'nut,' which supports the strings and keeps them at a distance sufficient to allow them to vibrate without touching the finger-board. This distance varies considerably according to the style of the player. A broad tone and an energetic treatment of the instrument require much room for the greater vibration of the strings, and consequently a high nut. Amateur players, as a rule, prefer a low nut, which makes it easier to press the strings down, but does not allow of the production of a powerful tone.

The finger-board, getting worn by the constant action of the fingers, must be renewed from time to time. The modern technique of violin-playing requires the neck, and in consequence the finger-board, to be considerably longer than they were at the time of the great Cremona makers. For these reasons we hardly ever find an old instrument with either the original finger-board, bridge, sound-post, or bass-bar, all of which, however, can be made just as well by any good violin maker now living as by the ancient masters.

The finger-boards of the Violoncello and Double-bass are made on the same principle as that of the violin, except that the side of the finger-board over which the lowest string is stretched is flattened in order to give sufficient room for its vibration. Spohr adopted a somewhat similar plan on his violin by having a little scooping-out underneath the fourth string, which grew flatter and narrower towards the nut.

In the instruments of the older viola-, gamba-, and lyra-tribe, the finger-board was provided with frets. P. D.

FINGERING (Ger. *Fingersatz, Applicatur* ; Fr. *Doigté*), the method which governs the application of the fingers to the keys of any keyed instrument, to the various positions upon stringed instruments, or to the holes and keys of wind instruments, the object of the rules being in all cases to facilitate execution. The word is also applied to the numerals placed above or beneath the notes, by which the particular fingers to be used are indicated.

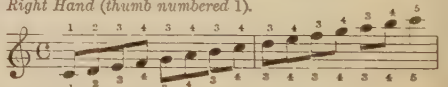
(i.) Fingering of the Pianoforte (that of the organ, though different in detail, is founded on the same principles, and will not require separate consideration).

In order to understand the principles upon which the rules of modern fingering are based, it will be well to glance briefly at the history of those rules, and in so doing it must be borne in mind that two causes have operated to influence their development—the construction of the key-board, and the nature of the music to be performed. It is only in comparatively modern times, in fact since the rise of modern music, that the second of these two causes can have had much influence, for the earliest use of the organ was merely to accompany the simple melodies or plain-songs of the Church, and when in later years instrumental music proper came into existence, which was not until the middle of the 16th century, its style and character closely resembled that of the vocal music of the time. The form and construction of the key-board, on the other hand, must have affected the development of any system of fingering from the very beginning, and the various changes which took place from time to time are in fact sufficient to account for certain remarkable differences which exist between the earliest rules of fingering and those in force at the present time. Until the latter half of the 16th century there

would appear to have been no idea of establishing rules for fingering; nor could this have been otherwise, for from the time of the earliest organs, the keys of which were from three to six inches wide, and were struck with the closed fist, down to about the year 1480, when, although narrower, the octave still measured about two inches more than on the modern keyboard, any attempt at fingering in the modern sense must have been out of the question. The earliest marked fingering of which we have any knowledge is that given by Ammerbach in his *Orgel oder Instrument Tabulatur* (Leipzig, 1571). This, like all the fingering in use then and for long afterwards, is characterised by the almost complete avoidance of the use of the thumb and little finger, the former being only occasionally marked in the left hand, and the latter never employed except in playing intervals of not less than a fourth in the same hand. Ammerbach's fingering for the scale is as follows, the thumbs being marked 0 and the fingers with the first three numerals:—

Right Hand.

Left Hand.

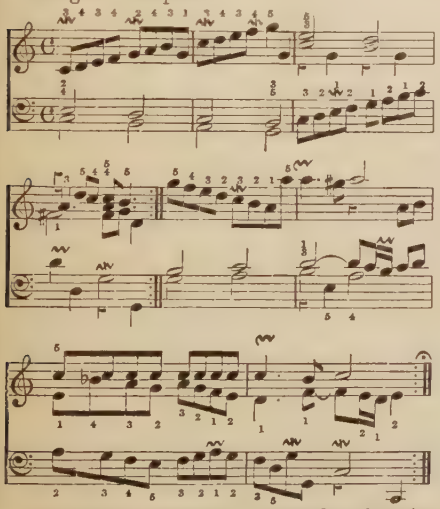


This kind of fingering, stiff and awkward as it appears to us, remained in use for upwards of a century, and is even found as late as 1718, in the third edition of an anonymous work entitled *Kurzer jedoch gründlicher Wegweiser*, etc. Two causes probably contributed to retard the introduction of a more complete system. In the first place, the organ and clavichord not being tuned upon the system of equal temperament, music for these instruments was only written in the simplest keys, with the black keys but rarely used; and in the second place the keyboards of the earlier organs were usually placed so high above the seat of the player that the elbows were of necessity considerably lower than the fingers. The consequence of the hands being held in this position, and of the black keys being but seldom required, would be that the three long fingers, stretched out horizontally, would be chiefly used, while the thumb and little finger, being too short to reach the keys without difficulty, would simply hang down below the level of the keyboard.

But although this was the usual method of the time, it is highly probable that various experiments, tending in the direction of the use of the thumb, were made from time to time by different players. Thus Praetorius says (*Syntagma Musicum*, 1619), 'Many think it a matter of great importance, and despise such organists as do not use this or that particular fingering, which in my opinion is not worth the talk; for let a player run up or down with either first, middle, or third finger, aye, even with his nose if that could help him, provided everything is done clearly, correctly, and gracefully, it does not much matter how or in what manner it is accomplished.' One of the boldest of these experimenters was Couperin, who in his work, *L'art de toucher le clavecin* (Paris, 1717), gives numerous examples of the employment of the thumb. He uses it, however, in a very unmethodical way; for instance, he would use it on the first note of an ascending scale, but not again throughout the octave; he employs it for a change of fingers on a single note, and for extensions, but in passing it under the fingers he only makes use of the first finger, except in two cases, in one of which the second finger of the left hand is passed over the thumb, and in the other the thumb is passed under the third finger, in the very unpractical fashion shown in the last bar of the following example, which is an extract from a composition of his entitled 'Le Moucheron,' and will serve to give a general idea of his fingering.

About this time also the thumb first came into use in England. Purcell gives a rule for it in the instructions for fingering in his *Choice Collection of Lessons for the Harpsichord*, published about 1700, but he employs it in a very tentative manner, using it only once throughout a scale of two octaves. His scale is as follows:—

Right Hand (*thumb numbered* 1).



Left Hand (*thumb numbered* 5).

Contemporary with Couperin we find Sebastian Bach, to whose genius fingering owes its most striking development, since in his hands it became transformed from a chaos of unpractical rules to a perfect system, which has endured in its essential parts to the present day. Bach adopted the then newly invented system of equal temperament for the tuning of the clavichord, and was therefore enabled to write in every key; thus the black keys were in continual use, and this fact, together with the great complexity of his music, rendered the adoption of an entirely new system of fingering inevitable,

all existing methods being totally inadequate. Accordingly, he fixed the place of the thumb in the scale, and made free use of both that and the little finger in every possible position. In consequence of this the hands were held in a more forward position on the keyboard, the wrists were raised, the long fingers became bent, and therefore gained greatly in flexibility, and thus Bach acquired such a prodigious power of execution as compared with his contemporaries, that it is said that nothing which was at all possible was for him in the smallest degree difficult.

Our knowledge of Bach's method is derived from the writings of his son, Emanuel, who taught it in his *Versuch über die wahre Art das Clavier zu spielen.* But it would not be safe to conclude that he gave it literally and without omissions. At any rate there are two small pieces extant, the marked fingering in which is undoubtedly by Sebastian Bach himself, and yet differs in several respects from his own rules as given by his son. These pieces are to be found in the 'Clavierbüchlein,' and one of them is also published as No. 11 of 'Douze petits Préludes,' but without Bach's fingering. The other is here given complete :—

In the above example it is worthy of notice that although Bach himself had laid down the rule, that the thumb in scale-playing was to be used twice in the octave, he does not abide by it, the scales in this instance being fingered according to the older plan of passing the second finger over the third, or the first over the thumb. In the fifth bar again the second finger passes over the first—a progression which is disallowed by Emanuel Bach.

The discrepancies between Bach's fingering and his son's rules, shown in the other piece mentioned, occur between bars 22 and 23, 34 and 35, and 38 and 39, and consist in passing the second finger over the first, the little finger under the third (left hand), and the third over the little finger (left hand also).

From these discrepancies it would appear that Bach's own fingering was more varied than the description of it which has come down to us, and that it was free in the sense not only of employing every possible new combination of fingers, but also of making use of all the old ones, such as the passing of one long finger over another. Emanuel Bach restricts this freedom to some extent, allowing for instance the passage of the second finger over the third, but of no other long finger. Thus only so much of Bach's method has remained in practical use to the present day as Emanuel Bach retained, and as is absolutely essential for the performance of his works.

Emanuel Bach's fingering has been practically that of all his successors until almost recent times ; Clementi, Hummel, and Czerny adopted it almost without change, excepting only the limitation caused by the introduction of the pianoforte, the touch of which requires a much sharper blow from the finger than that of the clavichord or harpsichord, in consequence of which the gentle gliding of the second finger over the third, which was allowed by Emanuel Bach, has become unsuitable, and is now rarely used.

In the teaching of all the above-named masters, one principle is particularly observed, — the thumb is not used on a black key except (as Emanuel Bach puts it) 'in cases of necessity,' and it is the abolition of this restriction which forms the latest development of fingering. Modern composers, and in particular Chopin and Liszt, have by their invention of novel passages and difficulties done once more for the thumb what Bach did for it, and just as he redeemed

it from a condition of uselessness, so have they freed its employment from all rules and restrictions whatsoever. Hummel, in his *Art of Playing the Pianoforte*, says, 'We must employ the same succession of fingers when a passage consists of a progression of similar groups of notes . . . . The intervention of the black key changes the symmetrical progression so far only as the rule forbids the use of the thumb on the black keys.' But the modern system of fingering would employ absolutely the same order of fingers throughout such a progression without considering whether black keys intervene or no. Many examples of the application of this principle may be found in Tausig's edition of Clementi's *Gradus ad Parnassum*, especially in the first study, a comparison of which with the original edition (where it is No. 16) will at once show its distinctive characteristics. That the method has immense advantages and tends greatly to facilitate the execution of modern difficulties cannot be doubted, even if it but rarely produces the striking results ascribed to it by Von Bülow, who says in the preface to his edition of Cramer's Studies, that in his view (which he admits may be somewhat chimerical), a modern pianist of the first rank ought to be able by its help to execute Beethoven's 'Sonata Appassionata' as readily in the key of F♯ minor as in that of F minor, and with the same fingering!

There are two methods of marking fingering, one now used in England alone (though not by any means exclusively), and the other in all other countries. Both consist of figures placed above the notes, but in the 'English' system the thumb is represented by a ×, and the four fingers by 1, 2, 3, and 4, while everywhere else, the first five numerals are employed, the thumb being numbered 1, and the four fingers 2, 3, 4, and 5. This plan was probably introduced into Germany —where its adoption only dates from the time of Bach—from Italy, since the earliest German fingering (as in the example from Ammerbach quoted above) was precisely the same as the present 'English' system, except that the thumb was indicated by a cypher instead of a cross. The same method came into partial use in England for a short time, and may be found spoken of as the 'Italian manner of fingering' in a treatise entitled 'The Harpsichord Illustrated and Improv'd,' published about 1740. Purcell also adopted it in his 'Choice Collection' quoted above, but with the bewildering modification, that whereas in the right hand the thumb was numbered 1, and so on to the little finger, in the left hand the little finger was called the first, and the thumb the fifth. [The rational system (1, 2, 3, 4, 5) which is, rightly or wrongly, known as the 'continental,' has, for many excellent reasons, been widely adopted by the better English publishers, so that there is more unanimity in the present day than there was twenty years ago.] F. T.

(ii.) Fingering of Stringed Instruments. —Fingering, the exact placing of the fingers upon the strings in the order that musical notes are to be made. This order first suggests a scale as the fingers follow from first to second, second to third, third to fourth, and so on. Fingering also means the figures placed over notes to indicate the finger required to stop or press the string. The basis of sound technique is the scales and the arpeggi of the various chords fingered according to rule. The practice of these perfectly in tune, each note a true musical sound, is a sure means of technical advancement. Technique may be regarded as the handicraft of every practical artist, but it is only a means to an end, the highest technical education must go hand in hand with artistic cultivation, or the result at maturity is unsatisfactory.

In violin fingering, the position and carriage of the hand are of the greatest importance; the thumb should be underneath the violin neck below the first and second fingers, the tip bent outwards, the neck resting on the thumb near its first joint, the thumb will then give the necessary counterpressure to the force of the fingers. The violin should be held by the chin and shoulder, firmly, but not stiffly. In changing position, the whole hand should go in one movement.

It is necessary from the first to study an economy of finger movement. Taking the scale of A in three octaves as example beginning in the first position, first finger on the fourth string, the first, second, third, and fourth fingers should be played in succession, and held down until the first finger is used on the third string, when they should be raised and the same order followed on the third string and the second, second and first. The shift from first position to third goes between G♯ and A, first finger under second, the whole hand going forward in one movement, keeping exactly the same form in the third as it had in the first position. The next shift is from third to fifth position, and goes between B and C♯; this is a more difficult shift, as the hand has to pass the shoulder of the violin, the advantage given by the thumb under the neck will be at once seen, as it enables the player to move forward to the fifth position maintaining the same shape of the hand as in the first and third positions. The next shift lies between D and E, and brings the hand to the seventh position. The first finger is kept on the first string through all the shifting upward. In this case it begins at F♯, and remains on the string up to E in the seventh position. The first finger must not smear the notes at the shift. The forward movement must be both swift and quiet; it should *not* be heard. This is one of the points of excellence in scale playing: there are three—intonation, equality of tone, one note after another, absolutely silent shifting. The movements descending are the reverse of those

ascending, second finger going over first; the first is not held down. The movement described in the foregoing is a whole shift of the hand, first position to third, third to fifth, fifth to seventh. Whole shifts go also from second position to fourth, fourth to sixth, and so on. A half shift is from a position to its neighbouring one, viz., first to second, second to third, etc.

This studied economy of finger and hand movement should be followed through all violin technical practice.

A Position is the space on the finger-board which can be covered without moving the hand. A full command of the finger-board can only be attained by being well grounded in the different positions, which are eleven in number. In the first position, the first finger stands on F on the first string, and takes the corresponding notes on the other strings, B, E, A; really in each position there are two half positions easily shown by playing in the first position the scales of B flat and B natural. The hand stands half a tone higher in the one than in the other. This occurs in all positions. In the second position the first finger stands on G on the first string, and takes also C, F, and B on the other strings. In the third position the first finger stands on A on the first string, and takes D, G, and C on the other strings. In the fourth position, the first finger stands on B on the first string, and takes E, A, D on the others. In the fifth position C on the first string, etc., and so on up to the eleventh position, in which it stops B, E, A, and D. The distance between notes gets gradually closer as the hand moves forward to the higher positions (the same interval measured an octave apart will show a considerable difference. F♯ to B♮ on the first string, in the first position, measures 3 inches, the same interval in the eighth position measures $1\frac{1}{2}$ inches). The appreciation of this gradually lessening distance has to become instinctive by practice; it is too subtle to be thought out at the moment, and only careful practice will bring the instinct of true intonation.

It will be found that the scales of G, G minor, A♭, A♭ minor, A major, A minor, B♭, B♭ minor, B♮, B minor, and (with an extension of the fourth finger) C, lie in the first position. C, C minor, C♯, C♯ minor lie in the second position. D♭, D♭ minor, D, and D minor, in the third position. E♭, E♭ minor, E, E minor in the fourth position. F, F minor, F♯, F♯ minor, in the fifth position. Scales of two octaves through the twenty-four keys major and minor are therefore included in the first five positions. It will be well at this point to show the principle of fingering scales of two octaves, going through the keys in chromatic order, beginning on G. The fingering of scales of two octaves in the first position needs no explanation, as one finger follows the other, arriving at the scale of B, the fingering for that will carry the player through the rest of the keys by moving the hand forward a semitone for each major and minor scale, and following the order of positions until he arrives at F♯, and F♯ minor, and so completes the cycle. The fingering for the minor scale is the same as the major in each case. The melodic form of the minor scale is of much greater musical importance than the harmonic; both are necessary in modern music.

Arpeggi in two octaves formed of common chords, major and minor, subdominant major and minor, diminished and dominant sevenths.

Formula for Arpeggi working through the Keys.

—Scales and arpeggi practised in this manner with a strict economy of finger movement give firmness to the stop, strengthen the hand, enabling it to keep a true position, and form the first step in training the fingers to feel the closer stops as the hand moves forward to the higher positions.

Intermediate scales between two and three octaves in compass, may follow the same order as those of two octaves, viz., chromatic progression of keys. The fingering for the scale of B will complete the round of keys as before, the fingering for those below B will be obvious.

Intermediate Scale of B.

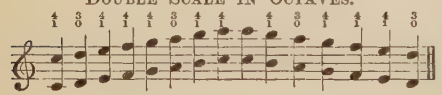
INTERMEDIATE ARPEGGIO FORMULA.

Chromatic scales of two octaves in one position.—The fingering for the scale beginning on B will suit all the rest. Below B the fingering varies somewhat. It is not claimed that this is the only way of fingering chromatic scales, but it is very direct, and is easily understood. There is no standard fingering. In actual playing it is usual to take the fingering that best suits the difficulty.

CHROMATIC SCALE BEGINNING ON B.

The *Double Note Scales* which properly belong to the foregoing scale technique, should be one octave in compass and progress through the keys from major to relative minor. Beginning at C major and A minor, through the flat keys to C♭—enharmonic B♯, then through the sharp keys to complete the round.

DOUBLE SCALE IN THIRDS.



All the scales on the same principle of fingering.

DOUBLE SCALE IN SIXTHS.

All on the same principle.

DOUBLE SCALE IN OCTAVES.

The scales and arpeggi indicated above cover the compass required for the performance of works by the great masters of the violin from Corelli to Viotti, excepting the six solo sonatas of Bach, which must await a more advanced technique able to grapple with difficult chords of three and four notes, and the power to play in two, three, and four parts.

The famous opera quinta of Corelli—twelve sonatas for violin, the model for the solo sonatas of his contemporaries and followers, do not in any case go higher than E in the third position; a few double notes in the first allegro of the sixth sonata must be taken in the fourth position, but in all other cases the third position is the limit. Corelli's brilliant passages, both in the opera quinta and other works, are invariably made up of broken chords, broken thirds and sixths, thirds and sixths in double notes. Arpeggi are numerous, but always in the first position.

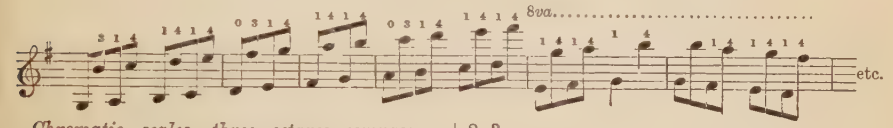
From the point of view of the modern player, fingering became a difficulty when the compass of the violin was augmented to three and four octaves. Paganini was the inventor of the modern violin technique, his genius opened out entirely new avenues for the violin, as Liszt did for the pianoforte. He added enormously to the resources of the instrument, as is fully shown in his masterpiece, twenty-four Caprices, op. 1, a real treasure of technical material.

It will be interesting to give, as fully as may be in an article of this kind, the technical equipment of a violinist of the present day. In bulk it will seem enormous, its difficulty will dismay; but worked at item by item these disappear, one step upward brings the next step within reach, and so on to the goal—a sound and masterly technique able to meet all the requirements of a great concerto, a light salon piece, or the intricate and beautiful work of the string quartet, and other ensemble pieces for the various combinations.

Principles of fingering for scales and arpeggi of three octaves, etc.—Diatonic scales of three octaves compass in chromatic order of keys. Again the fingering for the scale of B will go through the rest of the keys. Below B the fingering needs no special mention.

Three-octave scales in progression from major to relative minor, through the keys, each scale beginning in the first position.—The fingering falls into groups of C's, D's, E's, F's, G's, A's, B's. All the scales of C and E, and that of G flat, require exceptional fingering; it includes a half-shift in ascending the scale, and in descending a shift on to the third finger in the third position. Each group has some slight difference of fingering, but the main principle is the same through all, viz. shifting forward on the first finger under second, with the reverse action downward. Arpeggi of common chords, three octaves compass:—these also fall into groups. The downward shift is a difficult one; it is effected on the first finger, the hand has to descend generally two whole shifts in the one movement, a little sound of the glide of the first finger is admissible. Arpeggi of dominant sevenths belong equally to the major or minor keys, there-

fore there are but twelve of them. Arpeggi of diminished sevenths belong more properly to the minor keys ; there are twelve of these.



Scales of broken thirds in three octaves.—The principle of fingering is the same through the twenty-four keys ; the shift is always made on the second finger both ascending and descending. All scales of B, F, and D must start in the second position.

Scales of broken sixths in two octaves.—Several scales require an extension of both the third and fourth fingers.

Scales of broken octaves through all keys.

Scales of broken tenths through all keys.

Broken Tenths.

Chromatic scales, three octaves compass.—These need only be worked as high as D, in chromatic order of keys from G. Add the third octave to those already given in two octaves.

Extension.—This subject is an important one, as the extension simplifies many passages that otherwise require much shifting, for instance, those that lie between first and third positions.

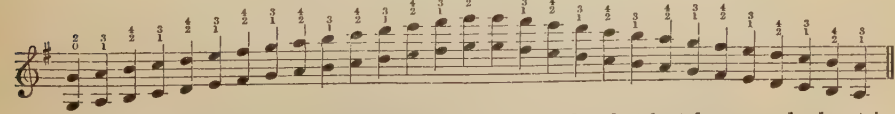
Extension Forward.

The extension of the fourth finger is indispensable in the high scales ; the fourth finger thus employed easily takes the minor second at the top perfectly in tune, otherwise it is almost an impossible interval, even for the smallest finger-tips, owing to the closeness of the notes. The extension is needed in nearly all the three-octave arpeggi. Backward extensions of the first finger are also frequently used.

Extensions Backward and Forward.

Extension Backward.

Double scales in thirds, two octaves compass.—The fingering follows the same principle through the keys $\frac{1\ 2}{3\ 4}$, shift, $\frac{1\ 2}{3\ 4}$, shift, and so on to the top. Reverse the order for the descent. Some scales require an extension. A few chromatic scales of thirds should be worked.



Double scales in sixths, two octaves compass.—The same principle of fingering throughout, $\frac{2\ 3}{1\ 2}$, shift, and so on to the top, where, in most cases, the third and fourth finish the scales. Reverse the order for the descent. Some scales require an extension of both third and fourth fingers. An awkward cross movement of the second finger prevents sixths being played very rapidly, especially in the lower octave, but in the second half of the second octave they may be played quite rapidly by keeping the second and third fingers on the string and moving the whole hand in short jerks forward ; the fingers then merely adjust themselves to make the sixths major or minor. A few chromatic scales in sixths should be worked out entirely on the first and second strings in one octave. Two fingers are placed upon the strings stopping a sixth, the hand goes forward in little jerks, making this small, strong movement for every semitone perfectly in tune. The same thing can be done on any two strings. It should be worked in thirds, sixths, and octaves. An extraordinary rapidity can be attained on chromatic scales from the highest note downwards, and is much used in compositions by Vieuxtemps and Wieniawski, and composers of the brilliant school. It may appropriately be called left-hand staccato.

Chromatic octaves, two octaves compass, should be worked through all keys ; and in one octave compass up and down each pair of strings.

Double tenths, two octaves, in chromatic progression of keys, beginning on G and working up to F with the same fingering as broken tenths, the lower ones are the more difficult owing to the wider stretch.

Double scales in fingered octaves are used rarely, and only for rapid ascending scales ; they require long fingers and a strong hand.

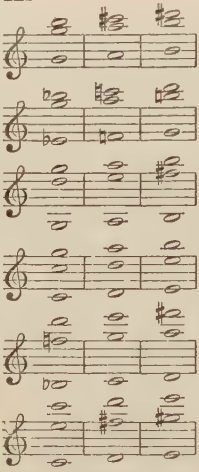
Double Scale in Fingered Octaves.

Double note scales are an important feature in modern violin technique, as their practice strengthens the fingers and shapes the hand. They should at first be taken very slowly, striving always for an ideal intonation, giving each double stop a whole bow, with very even pressure

on both strings, and listening attentively for the resultant tone. It has to be remembered that any two notes played together, whether in or out of tune, will produce a resultant tone; the point is to produce the correct resultant and to hold it steady; this is the most severe test of absolutely true intonation. The following simple tests will show the point clearly:—

EXAMPLES

IN MAJOR THIRDS. { Double stops. / Resultant.



IN MINOR THIRDS. { Double stops. / Resultant.

IN PERFECT FOURTHS. { Double stops. / Resultant.

IN PERFECT FIFTHS. { Double stops. / Resultant.

IN MAJOR SIXTHS. { Double stops. / Resultant.

IN MINOR SIXTHS. { Double stops. / Resultant.

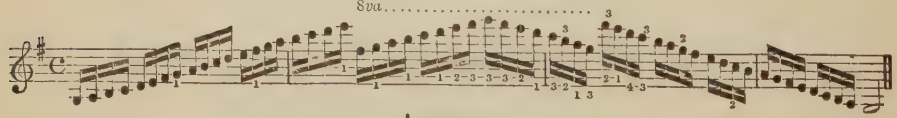
The shifting in double stop playing is extremely difficult, especially where a shift and a change of strings have to be made together. The stops must be firm and true, the shift made swiftly without smearing.

The shake is undoubtedly the most beautiful of all the ornaments. A fine shake, brilliant, pearly, or limpid, as occasion may require, is a crowning glory to an artist. This command of the trill is not easily obtained, indeed it may be said to be most difficult, and requires long and patient study. Before Beethoven's time shakes were generally short, but in the first movement of his violin concerto long shakes and chains of shakes are given, producing a lovely effect; this example has been followed by Spohr, Mendelssohn, Bruch, Saint-Saëns, Brahms, and others.

The shake must be practised with each finger, the beat should be firm but with not too much force. The finger should not be raised too high. The intonation should be true, a major shake or a minor shake as required. In chains of shakes it is a rule to attach a turn only to the last note, and any exception to this would be indicated by the composer.

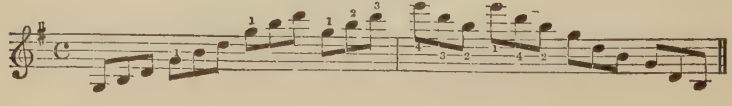
The double shake does not admit of the same rapidity as the simple shake; a moderate pace with clearness of utterance should be attained by careful practice. The beat of the two shake fingers must be exact.

Accompanied trills are very difficult. The accompaniment must not interfere with the regular beat of the trill, or the effect is spoiled. Considerable independence in both hands is required to be fully successful; it is so easy to spoil with the bow what the left hand does well.



Tremolo of the left hand is not exactly a trill, though it is of the same family. The Andante of the Concerto by Mendelssohn furnishes a beautiful example, and the Sixth Caprice by Paganini a difficult one requiring great regularity and rapidity of beat.

The vibrato is one of the most important embellishments used by the player. It is a tremulous wavering of the tone obtained by a vibratory motion of the left hand, the finger rolling forward and backward on its tip, the centre of this roll an absolutely true note. The vibrato used slowly gives tender expression to long notes. Where a crescendo from *p* to *f* has to be made on a long note, it should begin with a slow wave and gradually quicken in movement, so increasing the intensity of the sound to the highest point; the reverse for a diminuendo. Used very rapidly, it intensifies passionate expression. The player should have at his command, the quick, the slow, and the gradational.



Scales and arpeggi of common chords in four octaves.—The compass of the violin in modern times is from 

; it is therefore possible to play scales and arpeggi of G and G minor, A♭, A♭ minor, A, A minor, B♭, B♭ minor, B, B minor. The fingering given in the examples will suit all the scales and arpeggi mentioned.

SCALE OF G IN FOUR OCTAVES.

ARPEGGIO.

Scale of A.

Arpeggio.

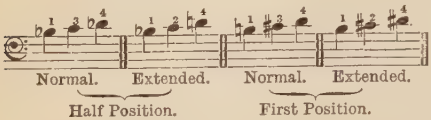
Scale of B.

Arpeggio.

Harmonics. See article under that heading.

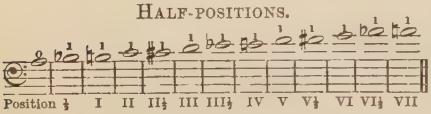
This system of fingering applies equally to the Viola, but as its compass is limited, the scales and arpeggi must be only of two octaves, and between two and three octaves. Scales of C, D, and E, with their arpeggi can be played in three octaves. The chief point of difference between the two instruments is the production of tone.

The scales and arpeggi, the chief subject of this article, form the systematic fingering of the violin, and with some well-chosen exercises to develop the percussion of the fingers should be sufficient for their purpose. The great classical studies should go hand in hand with them, Kreutzer, Fiorillo, Rode, Gavinies, the Solo Sonatas of Bach, and the Caprices of Paganini. The first requirement of interpretation is mechanical skill; there is a time of life for working out difficult technical problems and playing compositions of extraordinary brilliancy and daring, but as the artist comes to maturity, if the true spirit animates him, these things having served their purpose in training him to overcome difficulties will no longer interest him, the great classical works will attract him more and more, and his artistic sensibility will be trained to the highest point of pure refined taste. A. G.



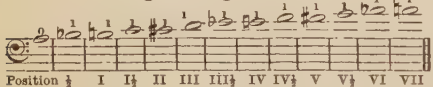
Fingering of the Violoncello.—Besides the differences in size and length of hands and fingers, there are some other influences which modify the fingering in general use, such as: the strength of the fingers; their stretching capacity, as gained by practice; the example of the teacher; the course adopted as to the kind of studies; and the inevitable tendency towards what gives the least trouble. All complicated fingering, therefore, will be more or less individual, and will vary according to the ability, the experience, and taste of the player. The fingering of the violoncello was originally taken from that of the violin, as that of the Viol da Gamba was obviously not suitable, owing to the smaller intervals between the pitch of its seven strings. The principle of the present system is the normal distance of a semitone between two adjacent fingers. The interval of a whole tone is taken, either by leaving out one finger, which is kept in reserve for the semitone, or by the first and second fingers only (as in the A flat and E major scales, see page 52), very seldom by the second and third, or third and fourth fingers. The first and fourth fingers, therefore, take the interval of either a minor or a major third, in the 'normal' and 'extended' positions of the hand respectively. Large hands may even take a fourth.

According to the oldest school, Corrette, 1741, the fingering for the diatonic scale was:—



1st position	.	.	1	2	4
2nd ,,	.	.	1	2	4
3rd ,,	.	.	1	2	3 4
4th ,,	.	.	1	2	3

The thumb acts as a moveable saddle in the higher positions, being placed across two strings. It was early in use for this purpose, but up to the end of the 18th century the fourth finger was not employed in the thumb-positions, being considered too weak. With the help of the thumb, thirds and octaves, fifths, sixths, and even tenths can be easily played, as the thumb affords a firm hold on the strings. It could be as easily used in the lower positions.

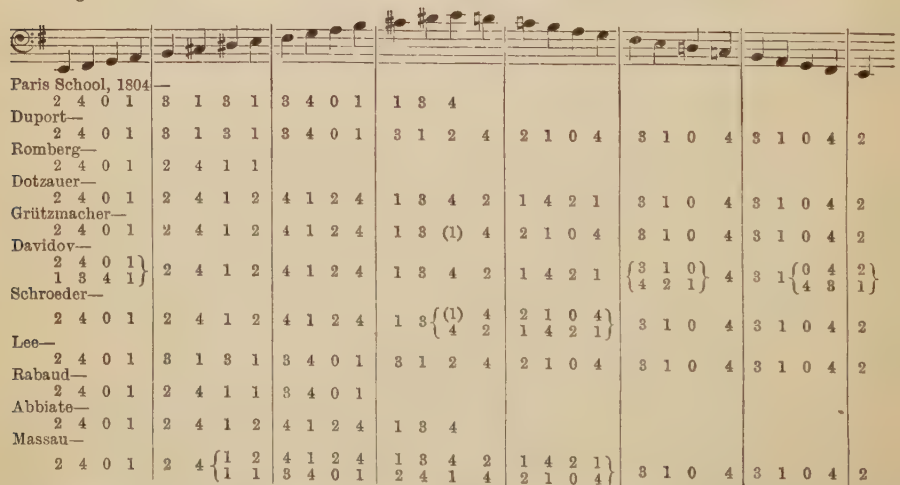


The positions, as shown in the following table, contain of course in each case either a normal position of the hand or an extended position, as referred to above.

THE SEVEN POSITIONS WITH THE HALF-POSITIONS.

This generally-recognised table of the positions is based on the principle that each step of the C major scale on the first string, beginning with A, is a full position, and each accidental a half position. Davidov and Schroeder place the positions in accordance with the major scale of each string, the principle being uniformity of all positions on all four strings, the positions of the C major scale on the lowest string forming the basis.

The fingering of the scale of C is as follows:—



The higher positions are taken with the thumb.

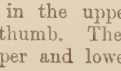
Higher up, in some scales (G, D, A, F, B♭) from the fourth position upwards, the first and second fingers are used alternately, each scale of three or four octaves closing with 1 2 3. This system applies to all scales starting from the first position. Scales starting from another position have their fingering based on the three-finger system.

It took a very long time—nearly a century—before the fingering became fixed in a correct and methodical way, and the improvement was started by the French (Tillière, Cupis, Müntzberger). The best methods were: J. L. Duport's *Essay on Fingering*, an excellent work of lasting value; and the *Méthode de Violoncelle*, by Baillot, Levasseur, Catel, and Baudiot (Paris, 1804), the first method in use in the Paris Conservatoire. With the development of technique in the 19th century by well-known masters the fingering was more and more definitely fixed. Absolute uniformity is even now lacking, as may be seen from a comparison of the different methods in one scale, as shown below. The reason for this lies in the fact that the instruments as well as the hand and fingers of the players will always vary, not to speak of other causes mentioned above.

A comparison of the above shows that for the more complicated scales in modern times the system of three fingers used in succession prevails. The sliding from the half into the first position by the first finger may still occur in certain scale-passages. Also the leaving-out of the fourth finger at times, and using instead of it the stronger first and third fingers more often.

The chromatic scale was played formerly by

sliding from one to the other semitone with the nearest finger. Here also the change took place in favour of the first, second, and third fingers in succession.



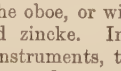
In the higher positions the fingering of the chromatic scale may be alternately—

1 and 2 going up and coming down.

1, 2, 3, successively going up, and 3, 2, 1, coming down;

3 and 2 alternately coming down, as recommended by Servais.

Thirds are comparatively easy in the upper positions, with the aid of the thumb. They are fingered thus, in both upper and lower positions:—



In the lower positions only, 1 and 4 are available, or 2 and 3 with open strings (without the thumb).

For sixths in the lower positions the fingers change more frequently—

In the thumb-positions 

In the higher positions without thumb 

Octaves in the thumb-positions are fingered either 

consecutively, or 

alternately. In the lower positions by the first and fourth fingers only.

The fingering of arpeggios sometimes shows interesting combinations over four strings; and the practice of sliding with one finger, or from one finger to another forward, backward, or crossing over a neighbouring finger, is an indispensable device of the violoncello player. Space will not permit the detailed explanation of these points in a dictionary. E. K.

(iii.) Fingering of Wind Instruments.—The fact that the natural harmonic scale, or series of notes (referred to below as H.S.), although utilised in different ways, must be regarded as the basis of the intonation of all wind instruments, is briefly dealt with under Wind Instruments, but a slightly more extended, although necessarily limited view of the scale fingering of all such instruments as have side-holes is here given. (For the scale schemes of brass instruments generally, see Horn, Trombone, and Valve.)

The simplest basis for consideration is an instrument bored with six finger-holes as the common fife or flute without keys. Since the prevalence of the modern major diatonic scale, the holes have been placed in such positions as to give the six degrees of this scale which lie between the tonic and its octave, or second note in H.S. by the successive raising of the six fingers, the fourth fingers not being used. The tonic sounds from the full length of the tube, but with exceptions to be subsequently noticed. By over-blowing on the flute, all these notes are repeated an octave higher, and the production of the octave of the tonic can be facilitated by lifting the finger from the sixth hole.

These six holes, therefore, supply all that is required for the production of a diatonic scale of two octaves in instruments of the flute class, and also in conical instruments played either with a reed, as the oboe, or with a cup mouthpiece, as the old zincke. In the oboe, and similar conical instruments, the production of the notes of the second octave is greatly facilitated by the opening of one or more small tubular holes or 'pipes' in the upper part of the instrument.

On an instrument with six finger-holes, scales other than that in which it is set, and therefore requiring semitones foreign to the original scale, can be rendered only with a rough approximation to accuracy by partly closing, and so flattening the speaking hole, or by closing one or more holes below it. For a complete chromatic scale, or the cycle of twelve diatonic scales, five extra holes controlled by keys have been introduced; these, with the six finger-holes, giving the eleven different lengths of tube required in addition to the total length, for the twelve degrees of the chromatic scale. On instruments which cannot be overblown, however, whether conical, as the chaunters of the various bagpipes, or cylindrical, as the rudimentary chalumeaux, a seventh hole is required for the completion of the scale of one octave, and this hole is usually controlled by the thumb of the left hand.

In the ordinary flute-scale, as described above, the fundamental note of the tube is used; and as the next note to this in the H.S. is the octave, the whole of the intermediate notes have to be obtained by means of variations in the length of tube. If, however, the fundamental note were not required, the original length with three variations would give the diatonic scale, as the second, third, and fourth notes of the H.S. are the octave, twelfth, and double octave of the prime. A diatonic scale in the second harmonic octave requires, therefore, only three finger-holes, giving the supertonic, mediant, and subdominant, the dominant or third note in H.S. being derived from the full length of the tube, and this was the usual arrangement in the tabor pipe and galoubet.

Returning to the bagpipe chaunter, the six normal holes of the flute are supplemented not only by the seventh, or thumb-hole, to give the

octave, but by an eighth hole closed by the fourth finger of the right hand. This is required by a prolongation of the tube sufficient to give a note one tone lower than its keynote, the keynote itself now sounding from this eighth hole, instead of from the full length of tube. This simple case of extension of the scale downwards is typical of many; the point to be observed is that such extension does not affect the general scheme of fingering, and the natural, or characteristic scale established by the six finger-holes. In the same sense that the natural scale of the pianoforte is C, and is not altered by the extension of the compass downwards from CC to AAA, so the natural scale of a wind instrument is that determined by the six finger-holes, and is not altered by the extension of its compass. From this point of view the key or scale of the modern concert flute is D, although having downward extension to *c′*, and in some cases to *b*♮ or even *b*♭; the oboe is also in D, with extension to *b*♮ or *b*♭. The bassoon with its six finger-holes closed, sounds G a twelfth lower than the oboe, but its natural scale is C major, the highest finger-hole sounding *f* and not *f*♯ as required in the scale of G. The holes for the left hand only being closed, the instrument gives *c*; *d*, *e*, and *f* sound as the fingers are successively raised, and on the closing of the holes for the three fingers of the right hand, *g* is obtained, followed, on raising the fingers, by *a*, *b*, and *c′* all as octaves of their respective primes G, A, B, and C. The extension downwards from G to BB♭ is obtained chiefly by key-work.

As the octave harmonic has no existence on instruments with cylindrical bore, no repetition of the scale in the octave, on such instruments, can be obtained. Therefore extra holes beyond the normal six or seven are imperatively called for if the scale is to comprise more than eight notes. On some of such instruments, as the racket, much ingenuity was displayed in the doubling of the tube, so as to bring more than one hole under the control of a single finger or thumb. On others, as the sourdine and krummhorn, key-work was used long before the evolution of the modern clarinet. The distinctive feature of this instrument is not so much the addition of keys to extend the fundamental compass from an octave to a twelfth, as the peculiar use of the thumb or pipe-key, as a means of ensuring the production of notes, speaking as the fundamental notes do from the different lengths of the instrument as determined by side-holes, but in each case a twelfth higher than the fundamental.

The foregoing remarks give a general indication of the fundamental principles and development of fingering from a diatonic basis; but as the free use of all scales necessitates working from a chromatic basis, modern improvements have been influenced by this principle. The most important of these is that known as the Boehm system (see BOEHM, THEOBALD), the basis of which is that every speaking hole is vented by the hole giving the semitone immediately below it. To attain this result key-work of a somewhat elaborate description is required, but is justified by the equality of tone and power obtainable in all keys. The system is seen at its best and simplest on the flute, but the use of it on the clarinet is increasing.

This general summary of the scheme of fingering common to all instruments with side-holes, is given here rather than under the name of any one instrument, but certain details peculiar to each are, when possible, noticed under their respective articles. D. J. B.

FINK, CHRISTIAN, born August 9, 1831, at Dettingen in Würtemberg, studied music until his fifteenth year with his father, who combined the offices of schoolmaster and organist. In 1846 he was sent to the Waisenhaus-Seminar at Stuttgart, where he remained for three years, his musical education being in the hands of Dr. Kocher. Appointed in 1849 assistant music teacher in the seminary at Esslingen, he pursued his studies with such success that he was able in 1853 to pass the examination for the upper class of the Leipzig Conservatorium. After a year and a half he went to Dresden to study the organ under Schneider. From 1856 to 1860 he appeared as organist at many concerts and oratorio performances in Leipzig, and in 1863 was appointed head of the seminary at Esslingen and organist of the principal church of that place. Two years afterwards he was given the title of Professor. He has published many excellent works for the organ, some of which have appeared in the *Organist's Quarterly Journal* (Novello), besides psalms for chorus and orchestra, songs, choruses, etc. (Mendel's *Lexikon.*) M.

FINK, GOTTFRIED WILHELM, theologian and musical critic, born March 7, 1783, at Sulza in Thuringia, was educated at Naumburg, where he was chorister, and Leipzig (1804-9). He began writing for the *Allg. Mus. Zeitung* in 1808, and in 1827 succeeded Rochlitz as editor, a post he held till 1841. In 1842 he became for a short time professor of music to the University of Leipzig. He died at Halle, August 27, 1846. Fink's only musical works of value were the 'Musikalischer Hausschatz,' a collection of Lieder, etc. (Leipzig, 1843), and 'Die deutsche Liedertafel' (*ibid.* 1846). As an author he published various volumes and pamphlets, but none of which the names are worth preserving. Besides the *A.M.Z.*, he was a prolific contributor to the *Conversations-Lexicons* of Ersch and Gruber, and of Brockhaus, and to Schilling's *Lexicon der Tonkunst.* He left in MS. a history of music, upon which he had been engaged for twenty years. Fink was at once narrow and superficial, and a

strong conservative; and the *Zeitung* did not maintain under his editorship the position it held in the musical world under Rochlitz. M. C. C.

FINTA GIARDINIERA, LA. Opera buffa in three acts, author of libretto unknown; music by Mozart; produced at Munich, Jan. 13, 1775.

FINTA SEMPLICE, LA. Opera buffa in three acts; libretto by Coltellini, music by Mozart; composed at Vienna in 1768, when he was only twelve, but apparently never put on the stage.

FIOCCO, the name of a family of some distinction who flourished in Brussels in the 18th century. They may have been related to a Domenico Fiocco, a mass of whose composition, for four voices (with added parts by Brossard), is in the Bibl. Nationale in Paris; the head of the Brussels family was PIETRO ANTONIO FIOCCO, a Venetian, who was in the court band at Brussels about 1696, and conductor of it from 1706. Van der Straeten states that he was the first director of the musico-dramatic 'Accademie' in 1704. A volume of Sacri concerti, op. 1, was printed at Antwerp in 1691, a cantata, 'Le Retour de Printemps,' is dated Brussels, 1699, and various masses and motets are mentioned in the *Quellen-Lexikon*. He died in Brussels, Nov. 3, 1714. His elder son, JEAN JOSEPH (or GIOVANNI GIOSEFFO) FIOCCO, succeeded his father as conductor at Brussels in 1714, but the younger son, GIOSEFFO HECTORE FIOCCO, the third in succession in the conductor's place, seems to have been the most important of the three. He was sub-conductor at Brussels in 1729, from 1731 master of the choristers at Antwerp Cathedral, and master of the music at Ste. Gudule, in Brussels, in 1737. He was a distinguished harpsichord player, and in his first book of 'Pièces de Clavecin' are many things of value, some of which were reprinted by Van der Straeten and in Elewyck's selections from the Netherlandish masters. (*Quellen-Lexikon.*)

FIORAVANTI, VALENTINO, composer, born in Rome in 1764, studied under Sala at the 'Pietà de' Turchini' at Naples. His first opera 'Le avventure di Bertoldino,' produced in Rome, 1784, was followed by at least fifty others, all comic, the last of which, 'Ogni eccesso è vizioso,' was produced at Naples in 1823. He was invited to Paris in consequence of the success of 'Le Cantatrici Villane' (1806), and there wrote 'I virtuosi ambulanti' (1807). These two were on the whole his best operas, though all possessed a genuine vein of comedy, a freshness, and an ease in the part-writing, which concealed their triviality and want of originality, and made them very popular in their day. He was again in Naples in 1807, and in June 1816 he succeeded Jannaconi as maestro di cappella to St. Peter's at Rome, and while in that post wrote a quantity of church music very inferior to his operas. His character was gentle and retiring; and the last few years of his life were spent very quietly. He died at Capua, on his way to Naples, June 16, 1837. Like Paisiello and other considerable Italian composers of that date, Fioravanti was extinguished by Rossini.

His son VINCENZO, born April 5, 1799, died March 28, 1877, also composed operas with ephemeral success. M. C. C.

FIORILLO, FEDERIGO, violin player and composer, was born in 1753 at Brunswick, where his father Ignazio, a Neapolitan by birth, lived as conductor of the opera. He appears to have been originally a player of the mandoline, and only afterwards to have taken up the violin. In 1780 he went to Poland, and about the year 1783 we find him conductor of the band at Riga, where he stayed for two years. In 1785 he played with much success at the Concert Spirituel at Paris, and published some of his compositions, which were very favourably received. In 1788 he went to London, where he appears to have been less successful as a violinist, as we conclude from the fact that he played the viola part in Salomon's quartet-party. His last appearance in public in London took place in the year 1794, when he performed a concerto on the viola at the Antient Concert. Of the rest of his life but little is known, except that he went from London to Amsterdam, and in 1823 was in Paris. The place and date of his death are not known. His numerous compositions are Duos for violins, for piano and violin, and violin and violoncello; Trios for flute, violin, and tenor, for two violins and bass; Quartets and Quintets for stringed instruments; Concertos for the violin; Concertantes for two violins, etc. (see *Quellen-Lexikon* for fuller list). They were very favourably received in his time, and, although somewhat dry and old-fashioned, show him to have been a sound and earnest musician. There is, however, one particular work which has brought his name down to our time, and will probably long remain a standard. His thirty-six Caprices or Études are known and valued by every violin player. They rank with the classical studies of Kreutzer and Rode, and, apart from their usefulness, are not without merit as compositions. They have been edited over and over again—most recently by Ferdinand David (Leipzig, Senff). Spohr wrote and published an accompanying violin-part to them. P. D.

FIORITURE. The Italian term for ornaments—scales, arpeggios, turns, shakes, etc.—introduced by singers into airs. In the 18th century airs were often written plain, and were embroidered by the singers according to their taste and ability. Such songs as 'O dolce concento' and 'Nel cor più' were seldom sung alike by two different singers. Rossini's early airs were written for the same treatment—witness

'Non più mesta.' A remnant of it some will still remember in the long, tasteless cadenzas indulged in at the close of Handel's airs. This was all very well as long as singers were also good musicians, and as long as the singing was more thought of than what was sung. But now these things are changed, and the composer writes exactly what he intends to be sung—notes, *nuances*, and expression.

The practice of 'fioriture' was not unknown to players in the orchestra as well as to singers. Spohr gives some amusing and almost incredible instances of such freaks of Horns and Clarinets in the *Tutti* of his 'Scena Cantante' Concerto, at Rome in 1816 (*Selbstbiog.* i. 330). G.

FIPPLE FLUTE. The designation Flute, as applied to modern European instruments, includes broadly all in which the tone is produced by the breath without the use of either a reed or a cup-shaped mouthpiece. In the more limited modern use, the term is applied to those instruments only in which the current of air proceeds directly from the lips across the mouth-hole, or embouchure. In a large class of flutes, however, now rapidly disappearing, the wind was blown through a tube into a cavity from which it issued in a flat stream against a sharp lip opposite. This flat form was given to the air-reed or stream by a block in the chamber or cavity, and this block was called the fipple. Hence the instruments variously called recorders, flûtes-à-bec, and flûtes douces are all fipple flutes, as are also flageolets, ocarinas, and whistles generally. For derivation of the word fipple, and many interesting details, see Mr. Welch's paper 'Literature relating to the Recorder' in *Proc. Mus. Assoc.* 1897-98. (See FLAGEOLET, FLUTE, RECORDER.) D. J. B.

FIREWORK MUSIC. A series of pieces—Overture, Allegro, Lentement, Bourrée, Largo alla siciliana, Allegro, and two Minuets, all in the key of D—written by Handel and performed at the Fireworks given in the Green Park, April 27, 1749, on the occasion of the Peace of Aix-la-Chapelle. The band—100 in all—contained twenty-four oboes, twelve bassoons, nine trumpets, nine horns, three drums, besides strings. G.

FIRING is pulling all the bells in a tower at once, so as to make them strike together. It is practised in England on specially joyful or mournful occasions—on the latter with the bells muffled. C. A. W. T.

FIS and FISIS, the German terms for F♯ and F×, respectively. The equivalent French terms are *Fa dièse* and *Fa double dièse*.

FISCHER. A family of singers of the 18th and 19th centuries. The founder was Ludwig, a bass, of whom Otto Jahn (*Mozart*, 2nd ed. i. 661, 630) speaks as 'an artist of extraordinary gift, for compass, power, and beauty of voice, and artistic perfection both in singing and playing, probably the greatest German bass-singer.' He was born at Mayence, August 18, 1745, and well known at the theatres of Munich (1778), Vienna (1779), Paris (1783), Italy (1784), Berlin (1788), etc. He died at Berlin, July 10, 1825. He was the original Osmin in the 'Entführung,' and had a compass of two octaves and a half 'all round, even, and in tune' (Reichardt).

Fischer was a great ally of Mozart's, who wrote for him 'Non sò d' onde viene,' and often mentions him with affection—'A truly splendid voice, though the Archbishop told me he sang too low for a bass, and I assured him he should sing higher next time' (Sept. 26, 1781); 'A man whose loss is irretrievable' (Feb. 5, 1783); 'I went to see the Fischers; I cannot describe their joy, the whole family desire to be remembered to you' (March 17, 1781). The others of the family were his wife Barbara, a more than respectable singer and actress; his son Joseph (1780-1862), also a bass of renown, but more known as an impresario than a singer; his daughters Fischer-Vernier—who in 1835 founded a singing school of great repute for girls in Vienna—and Wilhelmine, and Joseph's adopted daughter, Fischer-Maraffa, all good, efficient, intelligent artists. M. C. C.

FISCHER, JOHANN, violinist and composer, was born in Swabia in the middle of the 17th century, probably about 1650. He was a musician whose career presents features not a little remarkable, the (musically) remote period in which he lived being taken into consideration. A thorough Cosmopolitan, a writer and performer of what is known to-day as Virtuoso music, and composer of at least one example of 'programme music,' he possessed a combination of qualities we are accustomed to look upon as essentially modern. His instructor in violin playing is unknown, but it is recorded that he was taught harmony by Capricornus at Stuttgart, and sent in early youth to Paris, where he became copyist to Lully, whose music he is said to have subsequently introduced into Germany. In any case, traces of that composer's influence are to be found in his compositions.

After leaving Paris, he led a wandering life, remaining for a time at Augsburg (in the Barfüsser Kirche) and at Schwerin, where he held an appointment as Capellmeister. He also visited Denmark and Sweden, finally settling down in Schwedt in Pomerania as Markgräflicher Capellmeister. Here he died at the age of seventy years.

He composed Tafelmusik, Overtures, Dances, Madrigals, Minuets, and Solos for violin and viola. In a list of his compositions given by Fétis are also to be found various vocal pieces, and the primitive example of programme music, already alluded to, entitled, 'Feld und

Helden Musik, über die 1704 bei Hochstadt geschehener Schlacht, worin die Violine der Marlborough, und die Hoboe der Tallard verstellen.' It is interesting to note that Fischer wrote and performed Violin pieces in which the device of special tunings (Scordatura), found in latter days in the works of Paganini and others, was occasionally employed. These *Umstimmungen*, as the Germans call them, are even found in pieces written by him for the viola, an instrument for which he had a marked predilection. W. W. C.

FISCHER, JOHANN CASPAR FERDINAND, an almost totally forgotten predecessor and immediate forerunner of Handel and Bach in clavier and organ music, was born some time between 1660 and 1670, and died about 1738 (according to Ernst v. Werra, see below). Of his life nothing further is known but that he was capellmeister to the Markgraf Ludwig of Baden at the Schloss Schlackenwerth in Bohemia. Markgraf Ludwig had been obliged to take up his residence at this Bohemian Schloss in consequence of the destruction of the Residenz at Baden by the French in 1688. Fischer's op. 1 appeared at Augsburg in 1695 with the title *Le Journal du Printemps consistant en Airs et Balets à 5 Parties et les Trompettes à plaisir.* In 1696, op. 2, 'Les Pièces de Clavessin,' appeared at Schlackenwerth, but was republished at Augsburg in 1698 with the title *Musicalisches Blumen-Büschlein*, etc. This work consists of eight short suites for clavier, each introduced by a prelude. Fischer, however, does not adhere to the regular order of dance-forms in the suite as established by Froberger, viz., Allemande, Courante, Sarabande, Gigue, but follows the newer French fashion in substituting, *ad libitum*, Gavottes, Menuets, Bourrées, Passepieds, etc. Suite v. consists only of a prelude and aria with eight variations. Suite viii. consists of prelude with chaconne only. In 1701 appeared op. 3, Vesper Psalms *a* 8 with *ad libitum* accompaniment of two violins and basso continuo for organ and violone. In 1702 appeared Fischer's op. 4 (republished in 1715 without opus number) entitled 'Ariadne Musica Neo-Organoedum,' etc. This work is a direct foreshadowing of *Das wohltemperirte Clavier*. Its title points it out as intended to be a clue to budding organists to guide them through the mazes of all the newer modern keys, major and minor. It consists of twenty preludes and fugues in as many different keys, only the key of E minor occurs twice, once without signature, as if in the Phrygian mode, and then with two sharps as if in the Dorian. Of the twenty-four modern keys only five are unrepresented, C sharp and F sharp major, E flat minor, B flat minor, and G sharp minor. C sharp minor and F sharp minor are both written with four sharps signature, B minor with three sharps, A flat with three flats, etc. Both preludes and fugues are very short, and the pedals are only required for the Preludes. Many of the themes have a remarkable resemblance to those afterwards made use of by Bach. The E major fugue for example begins with precisely the same theme *alla breve* as that in the second part of *Das wohltemperirte Clavier*. See also the beginning of the F major fugue. Max Seiffert points out many other striking resemblances (*Geschichte der Klavier-Musik*, Bd. 1). To these preludes and fugues the composer has subjoined five ricercari on the church melodies: 'Ave Maria klare,' 'Der Tag der ist so Freudenreich,' 'Da Jesus an dem Kreuze stund,' 'Christ ist Erstanden,' and 'Komm Heiliger Geist.' Two other works of Fischer appeared later without date, one entitled 'Musicalischer Parnassus,' consisting of a series of nine suites for clavier named after the Nine Muses. These suites are of a more solid German character, with fewer concessions to French taste in the use of *agrémens*. The remaining work is entitled *Blumenstrauss*, and would seem to have been published after Fischer's death. It is arranged according to the eight Church Tones, each tone having a prelude followed by eight very short fugues, concluding with a finale. Although no mention is made of the fact, it would seem as if these pieces were intended to accompany the plain-song singing of the Magnificat in the fashion which became common in the 17th century; that is to say, while in the 16th century it was usual to sing alternate verses of the Magnificat in vocal harmony, with the other verses sung to the simple plain-song, in the 17th century the custom grew up for the organist to substitute his own playing in place of the vocal harmony of the alternate verses. Very dignified examples of this kind of work may be seen in Frescobaldi's *Fiori Musicali*, 1635, also in Scheidt's *Tabulatura Nova*, 1624. Pachelbel also left some very florid and less ecclesiastical specimens of these Organ Magnificats. The short movements of Fischer hold a right mean between the earlier simplicity and the later more florid style, and although they have so little development, the themes themselves and the modulations have much of the spirit of Bach in them. It only remains to mention that the clavier and organ works of Fischer have been recently republished in one volume by Ernst von Werra, and the orchestral work *Le Journal des Printemps* in Band x. of the *Denkmäler der deutschen Tonkunst*, 1902. J. R. M.

FISCHER, JOHANN CHRISTIAN, distinguished oboist, born 1733 at Freiburg (Breisgau), was for some years in the court band at Dresden from 1764 to about 1771, then in the service of Frederick the Great, and after a successful concert tour by Mannheim, Holland, and Paris, came to London, and made his first appearance at the Thatched House, June 2, 1768; J. C. Bach playing the 'pianoforte' for the first time at the same concert. Fischer was for many

years a great attraction at the Bach-Abel and Vauxhall concerts, and as a member of the Queen's band played frequently before the Court. His playing of Handel's fourth oboe concerto at the Handel Commemoration in 1784 so delighted the King that he expressed his satisfaction in a note on his book of the words. (*Memoir of Dr. Burney* by Mme. D'Arblay, ii. 385.) His tone must have been very powerful, since Giardini the violinist characterised it as 'such an *impudence* of tone as no other instrument could contend with'; and according to the *ABCDario* 'it was very fine and inexpressibly well-managed.' On the death of Stanley, Master of the King's band (1786), Fischer competed with Burney and others for the vacant post, but Parsons was appointed, and Fischer soon after went abroad, probably in disgust at his failure. Mozart in 1766 as a boy had been enchanted with his playing in Holland, but on hearing him again in Vienna, severely criticises him (letter to his father, April 4,[1] 1787), and condemns alike his tone, his execution, and his compositions. From 1790 he remained in London. While playing at Court he was struck with paralysis, and died April 29, 1800 (see *Times* of May 1). Kelly, in his *Reminiscences* (vol. i. 9), gives an anecdote of Fischer's pride as an artist. A certain nobleman having invited him to supper much against his will, said when he arrived, 'I hope, Mr. Fischer, you have brought your oboe in your pocket'; to which he replied, 'No, my lord; my oboe never sups,' and instantly left the house. He was very intimate with Gainsborough, who was a great lover of music, and whose pretty daughter Mary he married, though the father gave a very unwilling consent, foreseeing the short duration of the marriage. (Fulcher's *Life of Gainsborough.*) There is a fine portrait of Fischer by Gainsborough at Hampton Court (private dining-room, No. 747). Thicknesse mentions a second in full uniform — 'scarlet and gold like a colonel of the Foot Guards.'

Zuck and Kellner were his best-known pupils in London. J. C. Bach wrote for him a quartet for two oboes, viola, and violoncello, which he often played. His own compositions (of which Fétis and Gerber give a partial list) consist of solos, duets, concertos, quartets, etc. On this point the *ABCDario* says, 'As a composer his desire to be original often makes him introduce whimsical and outré passages, which nothing but his playing could cover.' Mozart, in spite of his unfavourable opinion of him, immortalised his minuet by writing variations for it (1773), which he often played to display his bravura (Köchel, No. 179). 'This minuet was then all the rage,' as Kelly writes, after hearing Fischer play it in Dublin (*Rem.* i. 9), and it continued to be the rage for many years. C. F. P.

FISH, William, born in Norwich in 1775, became, early in life, a violinist in the theatre there. He was next a teacher of music, then principal oboist at the theatre, etc., and eventually leader of the band at the concerts. He numbered among his pupils Edward Taylor, afterwards Gresham professor of music, and George Perry, afterwards leader of the band of the Sacred Harmonic Society. He died in Norwich, March 15, 1866. He composed numerous songs, and other vocal pieces, a pianoforte sonata, op. 1, and concertos for various instruments. W. H. H.

[1] See Otto Jahn's *Mozart* (German edition), iii. 309.

FISHER, John Abraham, Mus.Doc., was born at Dunstable (or London) in 1744. He became a student of the violin under Pinto, and made his first appearance in public in July 1765 at the King's Theatre, in a concert for the benefit of the Musical Fund. About 1770 he married a daughter of Powell the actor, and became, in her right, proprietor of a sixteenth share in Covent Garden Theatre. He composed for that and other theatres the music for the following pantomimes, viz., 'Zobeide,' 1771; 'The Monster of the Wood,' 1772; 'The Sylphs,' 1774; 'Prometheus,' 1776; and 'The Norwood Gipsies,' 1777; and also music for the opening of 'Macbeth.' On July 2, 1777, an oratorio by Fisher, entitled 'Providence,' was performed in the Sheldonian Theatre at Oxford, and on the 5th of the same month the composer (as a member of Magdalen College) accumulated the degrees of Bachelor and Doctor of Music. His oratorio was performed in Freemasons' Hall, London, on May 28, 1778, for the benefit of the Middlesex Hospital, and again in 1780. On the death of his wife Fisher disposed of his interest in Covent Garden Theatre, and started on a professional tour through Russia and Germany. In 1784 he reached Vienna, where he induced the youthful Anna Selina Storace to become his second wife—contrary to the advice of all her friends. The union proved an unhappy one, and in a short time the parties separated and the wife never after used her husband's name. The Emperor, incensed at Storace's having had to submit to blows from her husband, ordered Fisher to quit his dominions. He then went to Dublin and gave a few successful concerts in the Rotunda. [He was in Ireland from 1786 to 1788 (see Lady Morgan's *Memoirs*). He left Ireland before 1798 and died, probably in London, in May 1806.—W. H. G. F.] Besides the above-named compositions Fisher published some symphonies for orchestra, and other works, for which see the *Quellen-Lexikon.* W. H. H.

FITZWILLIAM, Edward Francis, son of Edward and Frances Fitzwilliam—both actors and singers—born at Deal, August 1, 1824. He was educated for the musical profession, and devoted himself especially to the study of composition. In 1853 he published a set of twelve songs which were much admired, and in the same year was appointed director of the

music at the Haymarket Theatre, where he produced an operetta called 'Love's Alarms' (1854) and music for some minor pieces. About 1855 he married Miss Ellen Chaplin, a member of the Haymarket Company, well known as Mrs. E. Fitzwilliam. His compositions were distinguished by an intelligence which gave promise of great excellence when he should have fully mastered the technicalities of his art—a hope disappointed by his early death, after a lingering illness, on Jan. 20, 1857. Besides the songs above mentioned, he wrote music for 'The Green Bushes,' 1845; 'Anything for a Change,' 1846, 'Queen of a Day,' comic opera; and published a Te Deum, and a hymn, 'O incomprehensible Creator.' A quartet from the former is given by Mr. Hullah in his 'Sacred Music for Family Use.' W. H. H.

FITZWILLIAM COLLECTION, THE. In the year 1816 Viscount Fitzwilliam died, leaving to the University of Cambridge, of which he was a member, the annual interest on £100,000 in money, and a large number of valuable paintings, books, engravings, and other works of art. Of these a collection of music, MS. and printed, forms a portion. Its most prominent features are the Virginal Book formerly called 'Queen Elizabeth's'; a volume of anthems in the handwriting of Henry Purcell, and another in that of Dr. Blow, containing various pieces not yet printed; and a miscellaneous collection embracing the works of more than 250 composers, mostly of the 17th and 18th centuries, and chiefly of the Italian school; as for instance Clari, 3 masses, 3 Dixit Dominus, a Stabat, a Confitebor, etc.; Leo, a Mass, 2 Miserere, 3 Dixit —*a* 5, *a* 8 (in autograph) and *a* 10; an Oratorio etc.; Colonna, a Magnificat, a Confitebor, a Domine ad adjuvandum, a Beatus vir, a Dixit, etc.; Jommelli, a Miserere, a Dixit (*a* 8), 2 Operas, an Oratorio, etc.; Bononcini, a Mass (*a* 8), an Opera, a Psalm, Cantatas, etc.; Pergolesi, a Mass, a Kyrie, and Gloria (*a* 10), portions of a Dixit, etc.; Durante, a Messa de' Morti (*a* 8), a Litany and Motets. In addition to these there is the autograph of a Symphony in F, 'di me Giuseppe Haydn 787,' and some interesting MSS. in Handel's autograph. Kelway is said to have been employed by Lord Fitzwilliam to collect for him in Italy. The Catalogue, by J. A. Fuller Maitland and Dr. A. H. Mann (the latter of whom contributed a valuable analysis of the Handel sketches) was published in 1893. By the generosity of the late J. Pendlebury, M.A., of St. John's College, a large collection of important musical compositions, mainly modern works, was given and bequeathed to the Museum.

The contents of the Virginal Book were published by permission of the authorities, edited by J. A. Fuller Maitland and W. Barclay Squire (finished 1899). See Virginal Music.

A portion of the above music was published by the late Vincent Novello in 1825 as

Fitzwilliam Music.—The list is as follows ('Orch.' implies orchestral accompaniment):—

Bonno, Cum Sancto.
Bononcini, Eterna fac.
Do. In te Domine. Orch.
Do. Sanctus. Orch.
Do. Te ergo quaesumus.
Cafaro, Amen.
Carissimi, Dulce te.
Do. Et sic laudabimus.
Do. Gaudeamus omnes.
Do. O felix anima.
Do. Surgamus, eamus.
Clari, Amen. Orch.
Do. Cujus animam. Orch.
Do. Cum Sancto. Orch.
Do. Cum Sancto. Orch.
Do. Cum Sancto.
Do. De profundis. Orch.
Do. Domine Deus. Orch.
Do. Gloria Patri, Alto Solo. Orch.
Do. Gloria Patri. Orch.
Do. Gratias agimus.
Do. Kyrie eleison. Orch.
Do. Kyrie eleison. Orch.
Do. Laetatus sum. *a* 8.
Do. O quam tristis. Orch.
Do. Quae moerebat. Orch.
Do. Quando corpus. Orch.
Do. Quando corpus.
Do. Qui tollis.
Do. Sancta Mater.
Do. Sicut erat. Orch.
Do. Sicut erat. Orch.
Do. Stabat Mater. Orch.
Do. Tecum principium.
Conti, Amen.
Colonna, Domine ad adjuvandum. Orch.
Colonna, Gloria Patri.
Do. Paratum cor.
Do. Sicut erat.
Durante, Cantate Domino.
Do. Protexisti me Deus.
Feroce, Adoramus Te.
Jommelli, Confirma hoc Deus.
Leo, Amen, *a* 10. Orch.
Do. Christus factus est.
Do. Cum Sancto Spiritu. Orch.
Do. Dixit Dominus, *a* 8. Orch.
Do. Kyrie eleison.
Do. Qui tollis. Orch.
Do. Qui tollis.
Do. Sicut erat. Orch. (Dixit in A).
Do. Sicut erat, *a* 10. Orch. (Dixit in D).
Do. Tu es Sacerdos (Dixit in A).
Do. Tu es Sacerdos. Orch. (Dixit in D).
Do. Tu es Sacerdos. Orch. (Dixit in C).
Lupi, Audivi vocem, *a* 6.
Vittoria, Regina Coeli.
Martini, Sicut erat. Orch.
Do. Sicut erat, *a* 6. Orch.
O. Lasso, Sicut ablactatus.
Palestrina, Et incarnatus.
Pergolesi, Dominus a dextris *a* 6. Orch.
Do. Gloria Patri. Orch.
Do. Juravit Dominus.
Do. Sicut erat.
Perti, Adoramus Te.
Stradella, Dove Battista.

G.

FLADT, Anton, eminent oboist, born 1775 at Mannheim, studied under Ramm, succeeded Lebrun in the orchestra at Munich (1790). He travelled much, visiting Vienna (1793), Italy, the Tyrol, the Rhine, Saxony, Prussia, England (1798), Bohemia, Hungary, and France. When in London the Prince of Wales made him liberal offers to remain in England. After 1810 he resided entirely at Munich. He composed three concertinos for oboe and orchestra, and some pieces for two flageolets. M. C. C.

FLAGEOLET (Old Fr. *flajol*). The modern form of the old *Flûte-à-bec*, straight flute or Fipple Flute. The upper part consists of a plain tubular mouthpiece, leading to a cavity, in which is a sounding-lip exactly resembling that of an open pipe in the organ. The air is shaped by a thin groove into a flat sheet, which strikes against the feather-edge of an aperture formed in the intermediate part of the instrument. The vibrations thus originated pass into a conical tube, which, unlike the organ-pipe, is furnished with lateral holes, and sometimes with keys. The fundamental note of the speaking throat, being coerced by different lengths of consonant tube, gives a simple scale; which can be extended by forcing wind in more strongly, and thus producing the first two or three harmonics of the ground tone.

The simplest form of the Flageolet is the ordinary tin whistle with six holes. This consists of a conical tube of metal stopped at the top by a square block of wood, except in a narrow anterior fissure. Below the fissure is a gap, the lower edge of which is flattened so as to cut and intercept the stream of air. In more elaborate instruments a chamber is added above containing a moist sponge intended to hold back the condensed moisture of the breath.

In the whistle, and in the English Flageolet, the scale is simply that of the Flute; indeed, flutes are made from which the usual head can be removed and that of the Flageolet substituted. The French Flageolet is similar in its upper part, but possesses a more complicated scale, and an abundance of auxiliary keys.

The invention of the Flageolet is ascribed by Burney (*Hist.* iii. 278 *note*) to the Sieur Juvigny, who played it in the famous 'Ballet comique de la Royne,' 1581. In the time of Mersennus (1588-1648) the principal teacher and player was Le Vacher (Hawkins, chap. 126). It appears to have superseded the more ancient Recorder, much as the Violin did the Viol. The two were obviously for a time in use together in this country; for the 'Genteel Companion, being exact directions for the Recorder, carefully composed and gathered by Humphrey Salter,' is dated from the 'Lute in St. Paul's churchyard' in 1683, whereas the 'Pleasant companion, or new lessons and instructions for the Flagelet by Thomas Greeting, Gent,' was 'printed for J. Playford, and sold at his shop near the Temple Church' in 1682. The former work gives a plate of a long bulky Recorder, reaching half-way down to the player's knee, whereas the latter represents him sitting over a table on which lies his book, holding in his mouth and hands the 'Flagelet,' a pipe not more than nine inches long; on the table lies one somewhat larger, apparently about twelve inches in length. 'It may be carried in the pocket, and so without any trouble be a companion by land and by water.' In the same way the early Violins were termed *piccoli Violini alla Francese* in opposition to the more bulky Viol. Both the flageolet and the recorder read from a staff of six lines, each of which represents a hole to be stopped. In the Recorder music the tune, with proper notes and time, is placed on a staff above, whereas in the Flageolet a single symbol above the staff shows the time, but not the intervals of the melody. [See RECORDER.] The flageolet has only six holes, stopped by a different arrangement; their closure being appropriated successively to the thumb, first, and second fingers of the left, followed in order by the first finger, thumb, and second fingers of the right hand. This fingering seems to be unique of its kind, and persists in the French Flageolet.

The Double Flageolet was invented by a person named Bainbridge about 1800, and his Method for the instrument is supplemented after about twenty years by his son-in-law. It consists of two 'patent Flageolets, the sides close to each other; the one has seven holes in front and one behind; the other only four in front. The seven-holed Flageolet is played with the left hand, the four-holed Flageolet is played with the right hand; and in playing duets you will in general have the same number of holes covered on the second Flageolet as on the first.' From the examples it appears that in this case the two instruments play in thirds; intervals larger than this being possible in a few cases. The two tubes are set in a single block and blown by one mouthpiece. Contrivances were added for silencing one of the two pipes when required, but they seem to have been often blown in unison to a single note. Triple flageolets have also been made. These instruments, though still within the memory of some, have entirely and most deservedly gone out of use. No music of importance seems to have been composed for them.

The single English and French flageolets are still to be met with, chiefly in dance music. The former has been described as a simple form of Flûte-à-bec. The latter is a far more complicated instrument, possessing two holes for the thumbs at the back and four in front for the two first fingers of the two hands. Indeed it is distinctly a descendant of the old Flageolet given above. The half-stopping of the left hand thumb-hole by means of a grooved plate for the thumb-nail, and the introduction of the tip of the right little finger into the small everted bell at the bottom of the instrument, are devices peculiar to this difficult but rather ineffective instrument. Its compass is two octaves and three semitones, from g' to b''' flat. A full Method is published by Bousquet.

The Flageolet is never found in orchestral scores, but there is a tradition of some authority that the solo part in 'O ruddier than the cherry,' marked in the score as 'Flauto,' was played in Handel's time on the flageolet; and Sullivan introduced it with excellent effect in the part of Dr. Daly in his 'Sorcerer.' W. H. S.

FLAGEOLET. The French and Italian term for the harmonic notes in the violin and other instruments of that tribe; doubtless so called because in quality they resemble the flageolet, [HARMONICS.] M. C. C.

FLAT. A term employed in the sense of lowering; an artist sings or plays flat when his notes are below the right pitch. B flat is a semitone lower than B, E flat than E, and so on; to 'flatten' (*baisser*) a sound or an instrument is to make it lower than before, just as to 'sharpen' it is to raise it. The sign used to denote this flattening in music is ♭, called a flat—Fr. *bémol*; Ital. *Bemolle*; Germ. *Be*. It has been already shown under ACCIDENTALS and B (vol. i. pp. 19 and 141) how the signs of the flat (♭) and natural (♮) were derived from two forms of the letter b. A double flat is a descent of two semitones, and is marked by 𝄫. (See also DOUBLE FLAT.)

In German musical nomenclature the notes are flattened by adding *s* (or *es*) to the letter, as Es, Des, Ges, etc.; A flat is As, and B flat B, though Hes has been used. Double flats are Deses, etc. The ♭ and ♯ in German literature were formerly used to express minor and major, as G♭ for G minor, D♯ for D major, and even

E♭ for E minor, and A♯ for A flat major. (See the earlier Indexes of the *Allgemeine musikalische Zeitung* for frequent instances of this strange usage.) Such ambiguities are now avoided by the use of the words *dur* and *moll* for major and minor. G.

FLAUTO MAGICO. See ZAUBERFLÖTE.

FLAUTO TRAVERSO (Ital.; Fr. *Flûte traversière*). The distinguishing name of the Flute with a lateral mouthpiece, held *across* the performer, as opposed to the *Flûte-à-bec* or Flageolet, held straight in front. [FLUTE.] W. H. S.

FLEMMING, FRIEDRICH FERDINAND, born Feb. 28, 1778, at Neuhausen in Saxony; studied medicine at Wittenberg from 1796 to 1800, and subsequently at Jena, Vienna, and Trieste. He practised in Berlin, where he took a keen interest in all musical matters, composing many part-songs, especially for male voices, for the society founded by Zelter. He died in Berlin, May 27, 1813. His claim to notice in this Dictionary is based upon his excellent setting of Horace's ode beginning 'Integer vitae,' which is still universally popular in English schools and universities, as well as in Germany. The curious resemblance in style and structure between this and Webbe's 'Glorious Apollo' is certainly fortuitous, since the latter was written in 1787, and Flemming can hardly have become acquainted with the Englishman's work. M.

FLIEGENDE HOLLÄNDER, DER. Opera in three acts, words and music by Richard Wagner; produced at Dresden, Jan. 2, 1843. In London at Drury Lane, as 'L'Olandese dannato,' July 23, 1870; and by Carl Rosa, as the 'Flying Dutchman,' at the Lyceum, Oct. 1876; at Covent Garden as 'Il Vascello fantasma,' June 16, 1877.

The words were sold by Wagner to the manager of the Grand Opéra in 1841, set by Dietsch as 'Le Vaisseau fantôme,' and brought out there, Nov. 9, 1842. G.

FLIGHT, BENJAMIN, an eminent organ-builder, born about 1767, was the son of Benjamin Flight, who, in the latter part of the 18th century, carried on, in partnership with John Kelly, under the style of 'Flight & Kelly,' the business of organ-building at Exeter Change. Young Flight learned the art of constructing organs from his father. About the year 1800 he commenced business, in partnership with Joseph Robson, in Lisle Street, Leicester Square, under the style of 'Flight & Robson.' They afterwards removed to St. Martin's Lane, where they constructed and for many years publicly exhibited the APOLLONICON (*q.v.*). The partnership was dissolved in 1832, after which Messrs. Gray and Davison bought Robson's share of the business, while Flight, in conjunction with his son, J. Flight, who had long actively assisted him, carried on business in St. Martin's Lane as 'Flight & Son.' Flight invented many improvements in organ-building which prepared the way for still superior mechanism. Amongst them was an apparatus for steadying the wind, added to the bellows during a reparation of Father Schmidt's organ at Trinity College, Cambridge, which preceded, and possibly suggested, the concussion bellows. B. Flight died in 1847, aged eighty, and Robson in 1876. W. H. H.

FLINTOFT, REV. LUKE, a native of Worcester, took the degree of B.A. at Queen's College, Cambridge, in 1700, and was appointed Gentleman of the Chapel Royal in 1715, having been Priest-Vicar of Lincoln Cathedral from 1704 to 1714. In July 1719 he was appointed Reader in Whitehall Chapel. He was also a minor canon of Westminster Abbey from 1719. He died Nov. 3, 1727, and was buried in the South Cloister of Westminster Abbey. He is presumed to have invented the double chant, his beautiful chant in G minor being the earliest known. (But see *Notes and Queries*, 3rd ser. x. 206, xi. 267, 391, and 445.) W. H. H.

FLORENCE (*Firenze*), although in point of great masters inferior to the other schools of music in Italy, can still claim her place among the earliest institutions for instruction in that science. Casella, the friend of Dante, was a native of Florence, and as early as 1310 there existed a philharmonic society there, which Burney, writing in 1789, speaks of as 'still in existence,' and which invented the LAUDI SPIRITUALI. Under the famous Lorenzo de' Medici, the streets of Florence resounded with the 'Canti Carnascialeschi,'[1] the gay and frivolous songs of the Carnival, against which Savonarola protested, and the music of which was often sacrificed on the pile of 'Vanità.' To the history of Florentine music during that epoch may be added the name of Antonio Squarcialupi, organist of the Duomo; but passing over the other masters of this first epoch of the Florentine school we come to the dawn of the opera music, which had a fitting birthplace in festive Florence. For the purpose of promoting this kind of music, a private musical academy called 'Degli Alterati' (the thirsters) was founded in 1568 at Florence by seven Florentine noblemen who assembled at the house of Giambattista Strozzi. They chose as their device a cask of grapes filled to overflowing, and the motto 'Quid non designat ebrietas?' Giovanni Bardi, Conte di Varnio, belonged to this academy, and, after the death of Strozzi, his house became the rendezvous of the academicians. Bardi had for many years studied the theory and practice of music till he became a correct and good composer; and he was often solicited to prepare for the stage those mythological representations which under the name of 'Feste musicali' were among the earliest forms taken by the musical drama. These entertainments were first represented at

[1] Published by Grazzini, Florence, 1559.

Florence on a scale of magnificence in keeping with the gorgeous character of the Medici feasts.

Vincenzo Galilei—father of the great Galileo—was another member of the academy 'Degli Alterati.' He wrote a clever treatise, *Dialogo della Musica antica e moderna* (Florence, 1581), upon the abuse of modern music, in which he places in the mouth of Bardi an attack upon the madrigalists and the researches after counterpoint. He was also a composer, and is supposed to be the first who composed melodies for a single voice. He set to music the speech of Ugolino (*Inf.* xxxiii.) beginning 'La bocca sollevò dal fero pasto'; also a portion of the Lamentations of Jeremiah.

Girolamo Mei was another member of this academy, and Emilio del Cavaliere, a composer of the Roman School, who, previous to the composition of the first entire musical drama by Rinuccini, had divided into scenes and set to music two Pastorales—'La disperazione di Sileno' and 'Il Satiro'—the latter to words by Laura Guidiccini, a lady of Lucca.

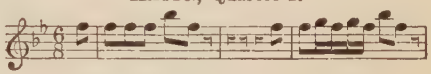
When Bardi was summoned to Rome by Clementi VIII., the society of the 'Alterati' assembled in the house of Jacopo Corsi, a Florentine nobleman, an enlightened lover of the fine arts, and passionately devoted to dramatic music. They soon added to their number the names of Ottavio Rinuccini the poet, Jacopo Peri the composer, and Giulio Caccini, who, besides his talent for composition, had the gift of a beautiful voice. These three occupied themselves in developing the first attempts at musical drama into the finished performance called the opera. They invented the recitative by which the Italian opera and the oratorio are distinguished from the opera of other countries and from other species of theatrical musical exhibition. 'Dafne' was the first result of their united efforts. Rinuccini composed the poetry, Caccini and Peri the music, and the whole was represented in the house of Jacopo Corsi, 1597. 'This,' says Burney (*Hist.* iv. p. 18), 'seems the true era whence the opera or drama wholly set to music, and in which the dialogue was neither sung in measure nor declaimed without music, but recited in simple musical tones which amounted not to singing, and yet was different from speech,—should be dated.' 'Dafne' was succeeded by 'Euridice,' represented with gorgeous splendour in 1600 at the feasts given in Florence in honour of the marriage of Henry IV. of France with Maria de' Medici. None of the subsequent compositions of the great masters of operatic music produced anything like the effect of these first representations, which introduced Italy as it were to a new art—that of *musica parlante*. The poet Angelo Grillo (the friend of Tasso), writing to Caccini, observed: 'You are the father of a new kind of music, or rather singing, which is not a song, but a recitative song of a nobler and higher order than the popular song; which does not sever or maim the words, nor deprive them of life, but gives new force and vigour to both. It is then a new and wonderful invention, or rather a revival of the ancient Greek musical drama which has been lost to us for so many centuries' (Tiraboschi, vii. 1321). Rinuccini's next opera, 'Arianna,' composed by Monteverde, was represented at the nuptials of Francesco Gonzaga of Mantua with the Infanta Margaret of Savoy (Doni, *Opere*, ii. 25).

This first academy for theatrical music was succeeded by many others, as the passion for musical representation became universal in Italy. Quadrio (i. 71) mentions three in Florence, 'degl' Infocati,' 'degl' Immobili,' 'de' Sorgenti,' founded between 1550 and 1560 especially for promoting this kind of music. Each of these had its own theatre and vied with the others in the splendour and magnificence of its representations. Indeed, in the middle of the 16th century, the theatres of Italy, constructed in many cases by no less an architect than Palladio, and where the most melodious of all modern languages first appeared married to sweet harmony, were the wonder and admiration of the world.

The Florentine school of music differs from the other great schools of Italy in that the composers of dramatic music just enumerated were only amateurs, and had been for the most part trained in the great schools of Rome and Bologna. Nor did Florence ever produce any great composers of church music, although composer succeeded composer in that brilliant operatic music of which we have traced the first beginnings, until we arrive at the great Cherubini, who was a master in both the church and the theatre.

The present 'Royal Musical Institute' of Florence is of modern foundation, and was opened for public instruction in 1862. Its objects are, To teach the science, history, and practice of music; to maintain a public library of music; to grant rewards to deserving artists; to perform the best works of modern and ancient masters. It is an establishment for public and gratuitous instruction, and comprises three sections—that of administration; that of instruction; and the Academy. The administration is directed by a President, assisted by three Professors, who form the Council of Management. The department of instruction contains schools for the rudiments of music and musical reading; for solfeggio; for solo and part singing; for keyed, stringed, and wind instruments; for thorough-bass, counterpoint, and composition; and for æsthetics and musical history. The Academy is composed of resident, corresponding, and honorary members. The Examiners are chosen from the resident members of the Academy, as are also the three members of the council of management. The number of pupils averages 220, and is regulated by the applications for admission,

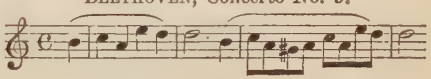
the result of the examinations, and the means available for imparting instruction. C. M. P.



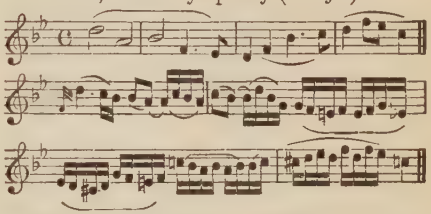
FLORENCE, Evangeline, the Christian names of Miss E. F. Houghton,[1] born at Cambridge, Mass., U.S.A., Dec. 12, 1873. She was first taught singing at Boston by the late Mme. Edna Hall (well known at London concerts in the early seventies), and made her début in public at Boston at the age of eighteen as the heroine in Flotow's 'Martha.' She caused considerable sensation by singing, by way of encore, the last verse of 'The Last Rose of Summer' an octave higher than originally written, having a phenomenal compass from *g* to double high C in alt, *c'''*. In London she received further instruction from Henschel, Blume, Randegger, and the late Mrs. Rudolph Lehmann, the well-known amateur, who gave her gratuitous instruction, and became her life-long friend until her lamented death in 1903. On May 11, 1892, as Miss E. Florence, she made her début at St. James's Hall at a concert given by herself in conjunction with Miss Marguerite Hall, the daughter of her first teacher. She was 'remarkably successful,' having 'a light soprano of phenomenal compass and of exceedingly beautiful quality, absolutely pure throughout its large extent. . . . In Alabiev's "Nightingale" the A flat *in altiss* was reached with apparent ease' (*Times*). On Dec. 1 she sang 'Elsa's Dream' at Henschel's Symphony Concerts; on Jan. 16, 1893, she sang in the first production in London of Parry's 'Job' by the Highbury Society; on March 6 she sang at the Popular Concerts; the London Ballad Concerts; Feb. 17, 1894, at the Crystal Palace—at all which concerts she frequently sang subsequently. In 1894 she sang at the Hereford Festival; in 1897 and 1900 at Birmingham. She sang at the Philharmonic, May 18, 1899, in the Choral Symphony; on Feb. 25, 1903, in 'The Light of the World,' and on April 1, 1904, in the 'Messiah' with the Royal Choral Society. She has also appeared with the Queen's Hall Choral Society, in various provincial towns, etc. For a good many years she has been the principal soprano at Messrs. Boosey's Ballad Concerts. In 1895 she sang on tour in Australia, in 1898 on the continent, and in 1899 in her native country. The phenomenal high notes she rarely uses now, on the advice of musicians, but relies for her popularity on the many modern songs she has introduced, such as those of Mrs. Lehmann ('A. L.'), Mrs. Bedford (Liza Lehmann), Mrs. Needham, and others. She was married to Mr. Alexander Crerar, at Boston, U.S.A., on Oct. 17, 1894. A. C.

FLORID. Music in rapid figures, divisions, or passages, the stem of the simple melody, bursting forth, as it were, into leaves and flowers. The image is the same as that in Fioriture. The Italian term is *Figurato*. Examples are hardly necessary; but the genesis of florid passages is highly interesting, and an instance or two, from the simplest form to the very highest art, may be forgiven.

Bach, Christmas Oratorio.



Haydn, Quartet 1.



Mozart, G minor Symphony.

Beethoven, Concerto No. 5.

Do., Ninth Symphony (*Adagio*).

Such florid passages are essential to Variations, and the last of these examples is taken from the finest set of variations existing.

For Florid Counterpoint see Counterpoint and Strict Counterpoint. G.

FLORILEGIUM PORTENSE. A collection of sacred vocal music of the 16th century, in separate parts, published in 2 vols. by Bodenschatz in 1618 and 1621, and containing in all 265 pieces. [See Bodenschatz, vol. i. pp. 346, 347, where a full catalogue is given.]

FLORIMO, Francesco, born Oct. 12, 1800, at San Giorgio Morgeto, Calabria, was taught music at the Real Collegio di Musica at Naples, where he learnt counterpoint and composition from Zingarelli, Furno, Elia, and Tritto. He was appointed in 1826 Librarian of the College of Music (afterwards incorporated with that of San Pietro di Majella), where, finding the archives in a state of chaos and disorder, by his energy and perseverance he gradually made the Library one of the most interesting and valuable in Europe. He added a number of important works, besides a collection of autographs and manuscripts, of all the masters of the Neapolitan School. Florimo's compositions include a Cantata, op. 1, in honour of the Duke of Noja, Director of the College of San Sebastiano; a Dixit; a Credo; a Te Deum; a Funeral Symphony composed on the death of Bellini,

[1] She dropped the surname of Houghton to prevent confusion with another singer of that name in London.

afterwards performed at Zingarelli's funeral; a Chorus and Fugal Overture on the unveiling of Zingarelli's portrait at the College; 'Ore musicali,' a setting of ten songs, vocal duet and quartet (Girard, Naples) 1835; twelve songs published under the same title by Boosey (London, 1845), six of which were included in the first collection; three popular Neapolitan songs in a collection published by Lonsdale, 1846; twenty-four Songs (Ricordi, Milan), etc. He was Bellini's dearest friend, and in 1876 took that composer's remains from Père-la-Chaise, Paris, to Catania; he wrote a pamphlet, *Trasporto delle ceneri*, etc., on the event. He also founded the 'Bellini' prize at the College, a competition only open to Italian composers not over thirty (Baker's *Dictionary*). He wrote a Method of Singing (Ricordi), 3rd edition 1866; *Cenno storico sulla scuola musicale di Napoli*, Naples, 2 vols., 1869-71, enlarged into 4 vols. and republished 1880-84; a *History of the College San Pietro*, Naples, 1873; *Riccardo Wagner ed i Wagneristi*, 1876, 2nd edition, Ancona, 1883, with a supplement containing letters from Verdi and Bülow, from Frau Wagner 'to the most amiable of librarians, and the juvenile octogenarian,' expressing the satisfaction of herself and her husband at a performance of a Miserere of Leo by the students of the College on the occasion of their visit there in 1880; also a lithograph copy of a letter from Wagner himself to the Duke of Bagnara the President, from the Villa d'Angri, Naples, dated April 22, 1880. Florimo also wrote a memoir of Bellini (1885), and died at Naples, Dec. 18, 1888. A. C.

FLOTOW, Friedrich, Freiherr von, German opera composer, born April 27, 1812, son of a landed nobleman of the arch-duchy of Mecklenburg; was educated with a view to the diplomatic service. In 1827 he went to Paris, when music was at its best. The brilliant artistic life into which he was thrown aroused him to a consciousness of his own talent for music, and he devoted himself to a course of study under Reicha. The Revolution of 1830 drove him away for a time, but feeling that the atmosphere of Paris was necessary to his success, he soon returned, and produced his first dramatic attempts at the private houses of some of the aristocracy. 'Stradella' was brought out at the Palais Royal as a short pièce lyrique in 1837 [and Flotow wrote many numbers for the operas 'Lady Melvill' and 'L'eau merveilleuse,' performed in 1838 and 1839 respectively as the work of A. Grisar.] His first public success was at the Théâtre de la Renaissance, where he produced, May 31, 1839, 'Le Naufrage de la Méduse,' which was given fifty-three times in twelve months, and at once established his position. He afterwards rewrote the piece, and produced it at Hamburg in 1845 as 'Die Matrosen,' whence it spread to the other theatres of Germany. Meantime he had composed for the Paris theatres several other operas, such as 'L'esclave de Camoëns' (1843), and 'L'âme en peine' (1846) known in London as 'Leoline' (Princess's Theatre, Oct. 16, 1848). 'Stradella' was rewritten as an opera, and brought out at Hamburg, Dec. 30, 1844, and has had extraordinary success throughout Germany. In Paris, though published, it has never been produced. In London it was brought out in English at Drury Lane, June 6, 1846—a dead failure—and in Italian in 1864 at Covent Garden, when it lasted two nights only, killed by a joke of Ronconi's. It was followed by 'Martha' (Vienna, Nov. 25, 1847), which was remodelled from a ballet written in conjunction with Burgmüller and Deldevez in 1844, and in its new form quickly spread all over the world (London, Covent Garden, 1858). These two works Flotow has never surpassed, and of his later operas 'Die Grossfürstin' (1850), 'Indra' (1853), 'Rübezahl' (1854), 'Hilda' (1855), 'Albin,' or 'Der Müller von Meran' (1856), 'La Veuve Grapin' (1859), 'Pianella' (1860), 'Zilda' (1866), 'L'Ombre' (1870), 'Naïda' (Milan, 1873), 'Il Fior d'Harlem' (Turin, 1876), the only ones which have attained any general popularity were 'Indra,' 'La Veuve Grapin,' and 'L'Ombre,' the last of which was enormously successful not only in Paris, but in Italy and Spain, and has been produced in London (Her Majesty's) Jan. 12, 1878, as 'The Phantom.' His ballets are as follows:—'Die Libelle' (Vienna, 1866), 'Tannkönig' (Darmstadt, 1867), 'Am Runenstein' (Prague, 1868). His 'Enchanteresse,' known in England as 'Alma l'incantatrice,' a revised version of 'Indra,' was produced in Paris, 1878, and his 'Rosellana' was left unfinished at his death.

In 1856 he was appointed Intendant of the court theatre at Schwerin, a post which he retained till 1863. The most important works he produced during this period, when he had so many inducements to compose, were a 'Fackeltanz' and some charming music to Shakespeare's 'Winter's Tale' (1862). After giving up the management of the theatre in 1863 he returned to Paris, and in 1868 removed to the neighbourhood of Vienna. He died at Darmstadt, Jan. 24, 1883. His remaining compositions, overtures, songs, and chamber music, are little known, and call for no remark. In 1864 Flotow was elected corresponding member of the Institut de France.

The great success of 'Stradella' and 'Martha' must be mainly ascribed to the melody which pervades them, and to their light and attractive character. Flotow's comic talent is considerable, and he has great natural instinct for the stage. His early French experience taught him the virtue of lively and well-accentuated rhythm, and gave him dexterity in the construction of extended pieces, to which he writes pleasing harmony and piquant orchestration. On the

other hand, his music has rarely anything below the surface, his rhythm frequently degenerates into that of mere dance-tunes, his modulations are poor, and he is prone to sentimentality. In the scientific part of composition he too often betrays the amateur. On the whole the conclusion is forced upon us that, in spite of his popularity, Flotow will not live in the history of dramatic music. A. M.

FLOWER, El'za, born at Harlow, Essex, April 19, 1803, was the elder daughter of Benjamin Flower, the political writer. She published a set of 'Fourteen Musical Illustrations of the Waverley Novels,' in 1831; a once popular chorus, 'Now pray we for our country,' in 1842; and a set of Hymns and Anthems, the publication of which began in 1841; a selection from them was reissued in 1888. Among them is the original musical setting of 'Nearer, my God, to Thee,' the words of which were written by the composer's sister, Mrs. Sarah Flower Adams. Her music shows marked originality and traces of decided talent, if not actual genius. She died Dec. 12, 1846, and was buried at Harlow. (*Dict. of Nat. Biog.*)

FLOWERS, George French, Mus.D., son of Rev. Field Flowers, Rector of Partney, Lincolnshire, born at Boston, June 28, 1811, studied music in Germany under C. H. Rinck and Schnyder von Wartensee, and was organist of the English Chapel in Paris in 1836-37. Returning home he became organist of St. Mark's Church, Myddelton Square, and St. John's, Paddington. He was afterwards organist of Beverly Minster, and St. Marie (R.C.), High Barnet. In 1839 he graduated as Bachelor of Music at Oxford. He founded a 'Contrapuntists' Society' in 1843, and about the same time was the music critic of the *Literary Gazette*. In 1848 he was an unsuccessful candidate for the Professorship of Music at Oxford, as he was in 1863 for that in Gresham College. In 1851 he established 'The British School of Vocalisation' for teaching singing on new principles, and in the two years following gave concerts for the purpose of exhibiting the progress made by his pupils, the most notable of whom was Miss Featherstone, afterwards Mrs. Howard Paul. In 1865 Flowers proceeded Doctor of Music. He wrote an 'Essay on the construction of Fugue, with an Introduction containing new Rules of Harmony' (1846), and a 'Pictorial Representation of the Science of Harmony' (translated from Basler, 1850). He composed Fugues in the style of Sebastian Bach, and other organ music, a mass (about 1860), Tennyson's Ode on the death of the Duke of Wellington, and other vocal pieces. He was also a copious contributor to the musical periodicals. He died of cholera, June 14, 1872, in London, and was buried at Kensal Green. W. H. H.

FLUD, or FLUDD, Robert, the son of Sir Thomas Flud, Treasurer of War to Queen Elizabeth in France and the Low Countries, born at Milgate, in the parish of Bearsted in Kent, 1574. At the age of seventeen he became a student of St. John's College, Oxford, where he studied physics. After a short time of residence he went abroad for a few years, at the end of which he returned and took the degree of Bachelor of Arts in 1596, and of M.A. in 1598. In 1605 he received the M.B. and M.D. degrees, and in 1609 was made a Fellow of the College of Physicians. From 1616 until his death he was engaged in the composition of various philosophical treatises, in which he refuted the theories of Kepler and Mersennus, and advocated those of the Rosicrucian and other mystics. In the history of philosophy his name is of some importance, since his writing exercised a powerful influence over Jacob Behmen. In musical literature he holds a far less prominent position, his chief connection with the art being found in a treatise printed at Oppenheim in 1617-24, entitled 'Utriusque cosmi majoris, scilicet et minoris metaphysica, physica atque technica historia.' The following sections treat of musical phenomena: Tract I. Book iii. and Tract II. Part i. Book vi. and Part ii. Book iv. His 'Monochordon mundi symphoniacum,' written in reply to Kepler (Frankfort, 1622), contains a curious diagram of the universe, based on the divisions of a string. He died at his house in Coleman Street, Sept. 8, 1637, and was buried at Bearsted. M.

FLÜGEL (a wing). The German appellation of a grand pianoforte or a harpsichord, from the wing shape common to both. See Goethe's pun on *geflügelte Geister* in *Goethe and Mendelssohn*, p. 24. Stutz Flügel is a short grand pianoforte. [See Harpsichord, Pianoforte.] A. J. H.

FLÜGEL HORN. The German name for instruments of the Bugle family. Originally, say the dictionaries, a hunting-horn (*Waldhorn, Jagdhorn*), used by the huntsman whose duty it was to watch in the *Flügeln*, or paths cut through the wood, and give a signal on the approach of the game. [The Flügel horn now used in the English and German armies is of the B♭ cornet pitch and compass, but its tone is more mellow than that of the cornet, and has something of the character of the contralto voice. It is furnished with valves, either of the piston or cylinder kind, which have superseded a clumsy kind of keys, from which it used to be called *Klappenhorn*.] The name is also applied to several instruments in the Alto, Tenor, and Bass clefs. W. H. S.

FLUE-WORK. Organ-stops, in regard to the manner in which their sound is generated, are grouped in two great classes—Reed-work and Flue-work. All organ-stops in which the sound is produced by the wind passing through a fissure, *flue*, or wind-way, and striking against an edge above, belong to the Flue-work, whatever may be the shape, make, or tone of their pipes. The peculiarities of shape or proportion, make,

and tone, lead, however, to a subsequent division into PRINCIPAL-WORK, GEDACT-WORK, and FLUTE-WORK. E. J. H.

FLUTE (Germ. *Flöte, Querflöte* ; Ital. *Flauto, Flauto traverso* ; Fr. *Flûte, Flûte traversière*). [The Greek name Aulos was much more comprehensive that our word Flute, by which it is generally translated. It usually signified an instrument with a reed, either single or double, these varieties being respectively represented, in their modern developments, by the clarinet and oboe, rather than by any instrument that would now be classed with flutes. In the same way, the ancient Egyptian instruments discovered by Professor Flinders Petrie in 1890, though commonly referred to as flutes, were in all probability played with reeds. The ancient Egyptian Náy, however, of which two interesting specimens were found by Mr. John Garstang in 1903, was a rudimentary flute, the tone of which was excited by blowing directly across the cut end of a reed. One example of the Náy is here figured.[1] Hence there is clear evidence that, after eliminating, from the many instruments called flutes in translations, all those which are strictly reed instruments, there remain, of very ancient date, certain kinds which with strictness may be called flutes. Whether a lip-blown instrument, such as the Náy, or a flute with whistle mouth-piece (see FIPPLE FLUTE) is really the older, it is impossible to say.

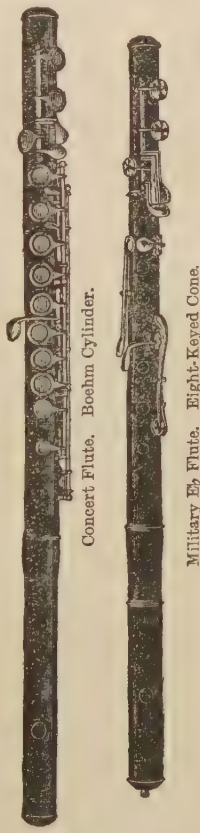
The modern instrument, known as the Transverse Flute, has not been traced back for more than four centuries. It has a compass of three octaves from middle C (c') upwards, but in a few instruments the lowest note is b, or even $b\flat$. It sounds as an open tube, that is to say its length is approximately that of the half-wave of its lowest note, and it is capable of giving the natural harmonics in full sequence in the same way as other 'open' tubes. The tube is plugged with a cork or stopper at one end, and the 'open' condition at this end is restored by the cutting of the embouchure or mouth-hole through the wall of the tube, at a distance from the cork of about one diameter of the tube. The lower lip of the player partly covers the embouchure and the stream of air is directed so as to strike the opposite edge. The exact action of this stream or air-reed has not been fully investigated, but it is tolerably certain that it vibrates, and so maintains the alternate condensations and rarefactions of the air column. The area of the mouth-hole being less than the cross-section of the tube, causes a departure from the correctness of the harmonics of the theoretical open tube (see FIFE), and in the history of the flute two modifications of form have been introduced with a view to restoring the desired correctness. The older of these resulted in the 'cone' flute, in which the head-joint is cylindrical, and the lower three-fourths of the instrument is slightly conical in bore, the diameter decreasing towards the foot. In this way the necessary correction was obtained. The second modification was introduced by THEOBALD BOEHM (*q.v.*) about the middle of last century, and consisted in a modification of the bore of the head-joint, by a coning on approximately the lines of the parabola, the main body of the flute being restored by him to its cylindrical form. Thus designed, we have the 'cylinder' flute of the present day, which for solo and orchestral purposes is now generally preferred, although in military bands the 'cone' flute is chiefly used.

The peculiar characteristics of the flute are the beautiful mellowness of its tone, and the facility it offers for the rapid and 'vocal' execution of runs and shakes. Its tone-quality at its best is well described by Mr. R. S. Rockstro in his work, *The Flute*, as lying between the somewhat nasal tone of the oboe and the hollow sound of the cooing of a dove. This latter quality is due to a deficiency in the number or strength of harmonic partials, and is characteristic of a tube freely open at both ends. The diminishing of one open end by the mouth-hole, already noticed, and the presence of the small chamber or extension of length between the mouth-hole and the cork, are largely influential in giving the true flute quality, and the exact position of the cork has a very distinct influence. Helmholtz (Ellis's Trans. 2nd ed. p. 205) appears to have considered that the octave and twelfth were the only upper partials heard, but the present writer found that when d'' on the flute was sounded, the seventh partial was discernible, but with a' no partial higher than the fifth was detected. (*Proceedings Mus. Assoc.* 1879-80, p. 84.) In any case, it is tolerably certain that the high partials which give the peculiarly brilliant or even cutting tone to some instruments are absent, or at least indistinguishable. The cylinder flute is more powerful than the cone instrument, and has a somewhat bolder tone-quality, approaching a little towards the reedy character of the clarinet.

The representative cone flute is the eight-keyed instrument, with six finger-holes, six closed keys, and two open-standing keys, one to close the normally open d' hole, on which the true scale of the flute begins, and so give $c\sharp'$, and the other to close this $c\sharp'$ hole and give c', which is the lowest note on this, the usual instrument. (For the general scheme of fingering, see FINGERING, *ante*, pp. 53, 54.) The five closed keys (the sixth or long F key being merely an alternative) give the five semitones necessary to convert the diatonic scale of d', in which the flute is set, into

[1] This curious instrument is still used by the peasants about the Nile. The original of the figure was brought from Egypt by F. Girdlestone, Esq., of the Charterhouse. See an admirable cut in Lane's *Modern Egyptians*.

a chromatic scale. The flute being held to the right from the lips, and slightly sloping downwards, the first, second, and third fingers of the left hand close the three upper holes, and the similar fingers of the right hand the three lower ones. The fingers being successively raised, the scale of D is produced, and by slight modification of the embouchure to increase the pressure of the lips, is repeated in its second octave. For the third octave, cross fingerings, sometimes of a complicated nature, are used, the general principle in these being the opening of holes in such positions as facilitate the subdivision of the primary sound-waves. The chief defects of the eight-keyed cone flute are the inequality in the power and in the quality of the notes. These defects are due to the necessity of placing the holes in positions which suit the natural action of the fingers, and can only be lessened, and not altogether eliminated by the addition of extra key-work. Many players and makers worked in this direction, among them being Siccama, Clinton, Carte, and Pratten.]



The principles of the Flute originally invented by Captain Gordon of Charles the Tenth's Swiss Guards and introduced by Theobald Boehm[1] in his new flute, constructed in 1832, were principally (1) that each note should speak independently out of a single hole, as though the remainder of the bore were entirely cut off; (2) that all keys in their position of rest should be permanently open. He also aimed at equalising the difficulty of the different keys, some of which, on the older flute, were notoriously inconvenient and all but impracticable. For the left hand, which occupies the upper part of the instrument next to the head, are four open keys to be closed by the first finger, thumb (situated at the back of the instrument), second, and third fingers successively. For the little finger of this hand is an open key producing the G♯ or A♭. On the right hand joint are three open keys, for the first, second, and ring fingers respectively, with accessory or 'shake keys' (which are normally closed) interposed. For the right little finger are the closed key of D♯ and the two open keys of C♯ and C. In many flutes mechanism, still worked by the right little finger, is added to produce B♮ and even B♭. But from the D♮ downwards all the work is accessory, and not directly used in the production of the natural scale. For this reason the instrument is said to stand in the key of D. For the purpose of obtaining each sound by the closure of a single orifice, a somewhat new arrangement of the scale is necessary on certain notes. The G, for instance, in either octave is produced by closing the five holes of the left hand. For the F a whole tone below, the forefinger of the right hand is added. The intermediate F♯ is obtained by depressing the pad of the middle or ring fingers, that of the index being left open.

[1] See his pamphlet *Über den Flötenbau und die neuesten Verbesserungen*, Mainz, 1847.

In the Clarinet, Oboe, Bassoon, and other octave-scaled instruments, the B♭ a whole tone below C, which in a D instrument like the flute is represented by the F♮ below the middle G, has to be produced by closing the B♮ and A♮ holes and lifting an intermediate B♭ key, thus lowering the pitch a minor third and raising it a semitone. The same method as that for the F♯ is employed for the B♭ or A♯, which is produced by lowering the B♮ a semitone through the intervention of a lever actuated by the fingers of the right hand, those of the left, middle, and ring fingers being left open. The whole compass of the flute is shown in the accompanying illustration.

[Although the cylinder flute is now usually fitted with key-work on Boehm's system, as described above, this is not universal, for some players, desiring to have the advantage of the cylinder bore and large holes adopted by Boehm without departing widely from the eight-key fingering, have introduced extra key-work to secure the result.

Although the flute is usually in D, it is occasionally made in G, as the Alto Flute, and was also formerly made in A as the FLÛTE D'AMOUR (*q.v.*). In military bands the F and E♭ flutes are used, and the F instrument is also sometimes used in the orchestra, as by Spohr in his symphony, 'The Power of Sound.'

The Piccolo is pitched one octave higher than the Concert Flute, and its highest notes are the sharpest ordinarily used in music.

The illustrations show the eight-keyed cone and the Boehm cylinder flutes.]

The literature of the Flute is so extensive as hardly to admit of illustration within moderate limits. Bach uses it freely both as an obbligato instrument and in concerted passages, and ever since his time it has held a prominent place in the band. In the scores of his works it is sometimes marked *Traversière* to distinguish it from the Flûte-à-bec.

Haydn, both in his Symphonies and in his

Oratorios, awards it the same prominence. The Trio for three Flutes in the 'Creation' may be named as an illustration.

Handel usually specifies the 'German' Flute, and often indicates its importance by the words 'with the accompaniment of a German Flute.' It is difficult to understand how the players of his day were able to make themselves heard with the few flutes then allotted to the Orchestra against the large numbers of Oboes and Bassoons. In the Handel Commemoration in Westminster Abbey in 1784, there were six Flutes against twenty-six Oboes and twenty-six Bassoons, besides twelve Trumpets and the same number of Horns. Handel produces, however, a magnificent effect in the Dead March in 'Saul' by the simple employment of two Flutes moving in thirds against the reiterated bass of the kettle-drum.

Mozart, except in some of his Symphonies, which were obviously written for a small band, freely scores for this instrument. The opera of the 'Zauberflöte' derives its name from it. There are also two Concertos for solo Flute and Orchestra in G and D, and one for Flute and Harp among his works (Köchel, 313, 314, 299).

Beethoven, Mendelssohn, and all later writers, give it the leading part of the wind in all their compositions. The solo shortly after the trumpet flourishes in the Overture to 'Leonora No. 3' will not be forgotten, or the lovely part for two flutes in the second movement of the Italian Symphony. Schumann also has introduced a prominent cadenza for it in the Finale to his B flat Symphony. The difficult accompaniment to the Ranz des Vaches, played by the Oboe, in Rossini's Overture to 'William Tell' affords a good illustration of the mechanical complexities which this flexible and agile instrument is competent, and consequently is expected, to surmount. In a dramatic sense it is used by Mendelssohn in the sacrificial chorus 'O be gracious' in 'St. Paul,' and by Grétry in 'Andromaque,' in which the part of Andromache is always accompanied by three flutes.

The most voluminous writer for the Flute was probably Quantz, who composed 200 solos and 300 concertos for Frederick the Great alone. But the instrument had a distinguished writer, Kuhlau, as the special exponent of its powers and beauty. This eminent contrapuntist devoted nearly the whole of his short life to Flute compositions. This singular fact has been accounted for by the statement that an amateur flute player of position employed him constantly and liberally in writing them. Kuhlau has been termed the 'Beethoven of the Flute.' It will be seen from the list given below that Solos, Duets, Trios, and even Quartets for Flutes, are among his voluminous works. Indeed, but for a fire which destroyed the composer's manuscripts, their number would be at least threefold. Such as are extant afford inestimable models of construction and originality.

Flute Music.

Mozart.—Grand duo in G, op. 76; Andante in C, Concerto in G, Rondo in D, op. 86.

Spohr.—Concerto in modo di Scena Cantante, op. 47.

Weber.—Romanza Siciliana in G minor, with Orchestra; Trio for Flute, Violoncello, and Pianoforte, op. 63.

Beethoven.—Serenade for Flute, Violin, and Alto, op. 25.

Haydn.—Two Trios for two Flutes and Violoncello.

Kuhlau.—Three grand Trios for three Flutes, op. 13; Do. do., op. 86; One do., op. 90; Three Quintets for Flute and String Quartet in D, E, A, op. 51; Grand Quartet for four Flutes in E, op. 103; Six sets of three Duets for two Flutes, ops. 10, 39, 80, 81, 87; Solos, with Pianoforte, op. 57; Three Fantasies, Do. do., op. 95.

Reicha.—Quartet for four Flutes in D, op. 12; twenty-four Quintets for wind instruments.

Schubert.—Introduction and Variations on 'Trockne Blumen,' for Flute and Piano, op. 160. W. H. S. [Additions in square brackets by D. J. B.]

FLÛTE D'AMOUR (Germ. *Liebesflöte*). An old form of flute, standing in the key of A, and corresponding in pitch with the Oboe d'amore. Both were supposed to possess a smooth and fascinating quality of tone, whence the name is derived. W. H. S.

[The bore of this variety of the flute was but very slightly larger than that of the 'concert instrument,' and therefore narrow in proportion to its length, and to this its peculiar quality was in some measure due. Although commonly said to stand in key of A, its pitch was a minor third below the concert flute in D. The key of the instrument was therefore B, and could only be said to be in A in the same sense that the concert flute is sometimes said to be in C, from the fact that its notes sound as written. Strictly speaking, the key in which an instrument stands has no connection with notation, or with the custom of treating it as in the transposing or non-transposing class. D. J. B.]

FLUTE-WORK. Under this head are grouped all the flue-stops on the organ, of whatever kind, shape, or tone, that are not classed as Principal-work, or Gedact-work, and it also includes various modifications of these two classes of stops. [Flue-work.] Thus when the 'scale' of the pipes of a cylindrical stop is reduced *below* the proportion essential to secure the broad and full Diapason tone, and the sound becomes delicate as in a Dulciana, or crisp as in a Gamba; or when it is increased *beyond* the Diapason scale, and the tone becomes *thick* or less resonant as in the Block-flöte, the stop becomes a member

of the 'flute-work.' Also, if the covers of the pipes of a closed metal-stop be punctured, and a narrow tube—in Germany called a reed, in France a chimney—be inserted, the stop then becomes a member of the flute-work under the name *Rohr-flöte*, *Flûte à cheminée*, or 'Metal stopped-Diapason (or Flute) with chimneys.' A unison cylindrical stop will be occasionally met with labelled as a member of the flute-work. All stops the pipes of which taper upwards, as the Spitz-flöte and Gemshorn ; all three- or four-sided open wood pipes, as the Hohl-flöte, Clarabella, Wald-flute, Oboe-flute, and Suabe-flute ; and most string-toned stops, as Salicional and Viol d'Amore,—are members of the Flute-work.

The invention of the conical, the string-toned, and the other stops classified as flute-work, dates back no farther than the beginning of the 16th century. E. J. H.

FLYING DUTCHMAN, THE. See Fliegende Holländer.

FODOR, Joseph, violin player, born in 1752 at Venloo. In 1766 he studied under Franz Benda at Berlin, and having acquired great proficiency, travelled for a number of years in Germany, the Netherlands, and France, establishing his reputation as an eminent violinist. In 1794 he went to St. Petersburg, and remained there up to his death, Oct. 3, 1828. Spohr, who heard him in 1803, considered him wanting in feeling and taste, and objects to his unsteady manner of bowing, but acknowledges his great technical skill. His numerous compositions—nine Concertos and Solos for the Violin, Duos for Violins, and many Quartets for Strings, are well written and met with much success in their time. [List in the *Quellen-Lexikon.*] The famous singer, Mme. Fodor-Mainvielle, was his daughter, and his two younger brothers, Charles and Anton, were clever pianists and composers. P. D.

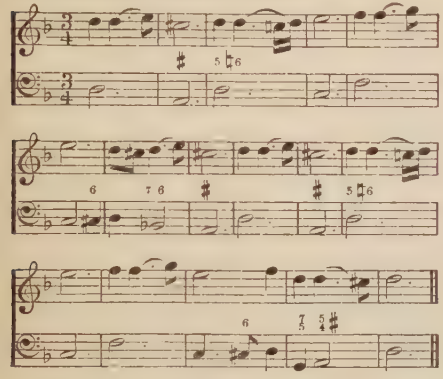
FODOR-MAINVIELLE, Josephine, celebrated singer, born 1793 in Paris, where her father, Joseph Fodor the violinist, had settled in 1787. In 1794 her parents removed to St. Petersburg, where she played both pianoforte and harp when only eleven. Three years after she became known as a singer, and in 1810 made her first appearance at the court theatre in Fioravanti's 'Cantatrici villanelle,' which was repeated sixty times, so successful was her performance. In 1812 she married the actor Mainvielle, and travelled with him to Stockholm, Copenhagen, returning to Paris, where she was engaged for the Opéra Comique. Her first appearance, August 9, 1814, was a comparative failure ; it was evident that French opera was not her province, and she was transferred in Nov. of the same year to the Théâtre Italien, then under Mme. Catalani's management. Here she remained till the beginning of 1816, when she left for London. In London she sang for three seasons as *prima donna*, and was listened to with respect, though she was never a warm favourite. 'Don Giovanni' was brought out at the King's Theatre in 1817, and Zerlina was her best character. In July 1818 she went to Italy, returning to Paris early in the following year, after Catalani had given up the opera. Rossini's 'Barbiere' was then given for the first time in Paris (Oct. 26, 1819), and she played Rosina, as well as Ninetta, Agnese, and other first-rate parts. In 1822, suffering severely from dyspepsia, she was advised to try the milder climate of Naples, which so completely restored her that she appeared at San Carlo as Desdemona, Semiramide, and Zelmira, creating in all twenty new parts. In the following year she sang for a whole season in Vienna, but returned to Naples and remained there till 1825, when she again went to Paris. On Dec. 9 she appeared in 'Semiramide,' but her voice failed and she was compelled to leave the stage. This misfortune was followed by a hoarseness which prevented her singing again in Paris. The management having declined to fulfil their contract, she brought a succession of actions against them, and finally accepted a compromise in 1828. After her return to Naples her voice so far improved that she sang again at San Carlo, but its peculiar charm was gone, though her style was as fine as ever, and served as a model for no less a singer than Henrietta Sontag. Mendelssohn saw a great deal of her at Naples in 1831, and his very favourable impression may be learned from his letters (April 27, 1831). Her last appearance was at Bordeaux in 1833, after which she retired into private life.

When at her prime, Fodor's voice was not only powerful but extremely sweet and round, with a peculiarly charming accent, and a faultless intonation. She was very painstaking, and acquired by practice a flexibility with which she was not naturally gifted. Her daughter Enrichetta, also a singer of merit, was very successful at the Königstadt Theatre (not the Friedrich-Wilhelmstadt Theatre) in Berlin, between the years 1846 and 1849. F. G.

FÖRSTER, Emanuel Aloys, composer of good chamber-music, born at Niederstein, Glatz, Silesia, Jan. 26, 1748. In his youth he studied music by himself, and composed industriously, while obeying his father by attending the Latin school, and working under him as an accountant at a tavern. He afterwards served in the Prussian army, and in 1776 resolved to go to Vienna in order to cultivate music thoroughly. There he soon became one of the most valued teachers of thorough-bass and composition, and his works were universally respected as the products of sound thought and earnest study. In 1802 he published his 'Anleitung zum Generalbass' (Traeg) with 146 examples, a clear practical work still of value. In 1805 it was republished by Breitkopf & Härtel, and a new edition by Artaria in 1823. Förster added three

supplementary numbers of practical examples. His compositions consist of forty-eight violin quartets, numerous pianoforte sonatas, preludes and fugues for organ, Lieder, etc. [See the list in the *Quellen-Lexikon.*] He composed the variations in A on an air from Sarti's opera 'I finti Eredi,' which were long attributed to Mozart, and extremely popular; and which appeared in many editions of Mozart's works. (Köchel, p. 530, No. 289; Jahn's *Mozart*, ed. 1, iv. 11; ed. 2, ii. 137.) Förster was held in high estimation by all the composers of his own time, particularly by Beethoven, who implies he had learnt much from him. He died at Vienna, Nov. 12, 1823. His place and date of birth and death, much disputed points, are given here from the Transactions of the 'Tonkünstler-Societät,' of which he was a member. [See the *Sammelbände* of the *Int. Mus. Ges.* vi. 274.] C. F. P.

FOGGIA, Francesco, the last Italian church-composer who remained faithful to the traditions of Palestrina; born in Rome 1604, studied under Cifra, Nanini, and Agostini. He then entered the service of the Elector of Cologne, the Elector of Bavaria, and the Archduke Leopold of Austria in turn. After his return to Italy he was appointed maestro di cappella successively at Narni, Montefiascone, and the following churches in Rome,—Santa Maria in Aquiro, Santa Maria in Trastevere, St. John Lateran (1636-61), San Lorenzo in Damaso, and Santa Maria Maggiore (1677), which last post he retained till his death, Jan. 8, 1688, when he was succeeded by his son Antonio. He is buried in the church of S. Prassede. He published much church music for from two to nine voices [see the list in the *Quellen-Lexikon*], and most of the churches in Rome possess some works by him in MS. Martini has analysed some of his motets in the 'Saggio di contrappunto.' Liberati calls him 'il sostegno e il padre della musica e della vera armonica ecclesiastica.' He was one of the first musicians to write tonal fugues, while he was the last Italian capable of composing genuine church music in the polyphonic style. Hullah printed a fine motet by him in his 'Vocal Scores.' F. G.



FOLI, Signor, whose real name was Allan James Foley, was born at Cahir, Tipperary, Aug. 7, 1835, and in early life went to America. He was taught singing at Naples by the elder Bisaccia, and in Dec. 1862 he made his début at Catania as Elmiro in 'Otello.' He played successively at Turin, Modena, Milan, and in 1864 at the Italiens, Paris. On June 17, 1865, Signor Foli made a successful début at Her Majesty's as St. Bris ('Huguenots'); on July 6 as the Second Priest on the revival of 'Zauberflöte,' and on Oct. 28 as the Hermit in 'Der Freischütz.' From that time he sang frequently in Italian at the three 'patent' theatres in upwards of sixty operas, viz. as Sarastro, Commendatore, Marcel, Caspar, Mephistopheles, Sparafucile, Basilio, Assur and Oroe ('Semiramide'), Rodolfo ('Sonnambula'), Bide the Bent ('Lucia'), Bertram, and Daland on the production of 'Der Fliegende Holländer,' at Drury Lane, July 23, 1870, etc., in addition to the parts previously named, in which his fine voice—a rich powerful bass of more than two octaves from E below the line to F—was heard to full advantage.

Signor Foli was equally well known as an oratorio and concert singer at all the important festivals. He made his first appearance in the former on April 25, 1866, in 'Israel' at the National Choral Society, but his first success was on Feb. 22, 1867, in 'The Creation' at the Sacred Harmonic. His new parts in this class included Jacob, on the production of Macfarren's 'Joseph' at the Leeds Festival, Sept. 21, 1877, and Herod, on production of Berlioz's 'L'Enfance du Christ' under Hallé at Manchester, Dec. 30, 1880, and in London, Feb. 26, 1881. He played in America, at St. Petersburg, Moscow, Vienna, etc. In Russia he made a conspicuous success as Caspar, Moses (which part he sang with success at the Sacred Harmonic), and as Pietro in 'Masaniello.' He died at Southport, Oct. 20, 1899. A. C.

FOLK-SONG SOCIETY. This society was definitely established in London on June 16, 1898, for the preservation and publication of folk-songs and melodies. The first President was the late Lord Herschell, and the late Sir John Stainer, with Sir Alexander C. Mackenzie, Sir Hubert Parry, and Professor (now Sir C. V.) Stanford, were Vice-Presidents. The original committee consisted of Mrs. Frederick Beer, Miss Lucy E. Broadwood, Sir Ernest Clarke, Mr. W. H. Gill, Mrs. L. Gomme, Messrs. A. P. Graves, E. F. Jacques, Frank Kidson, J. A. Fuller Maitland, J. P. Rogers, W. Barclay Squire, and Dr. Todhunter. Mrs. Kate Lee was Hon. Secretary, and Mr. A. Kalisch Hon. Treasurer. During the first year 110 members were enrolled. There have been five publications issued (up to June 1904), and much useful work done in attracting attention to the necessity of noting down our folk-songs before they are entirely lost. In 1904 Miss Lucy E. Broadwood became Hon. Secretary, and Lord Tennyson, President. F. K.

FOLLIA. Said to be an old Spanish dance for a single dancer—'ces belles chaconnes, ces Folies d'Espagne,' which the son of the seneschal of Rennes danced to such perfection (Mme. de Sevigné, July 24, 1689). But really all that is known of it is that the twenty-two variations, or the theme of them, which close Corelli's twelve solos (op. 5) are entitled Follia; that the same bass and air, but with different variations, are given in the 'Division Violin' as 'Faronell's division on a ground'; that Vivaldi's op. 1, no. 12, is a set of variations on the same; and that Hawkins (chap. 141) cites it

as 'a favourite air known in England by the name of Farinelli's[1] Ground,' composed by Farinelli, the uncle of the singer, who was court musician at Hanover in 1684. It seems to follow from this that the ground, and not the treble part, was the theme, just as it is in the chaconnes of Bach and Handel. The ground is one on which a skilful violin player and a skilful dancer might go on fiddling and dancing *ad infinitum*. The following is Corelli's theme :—

Cherubini has introduced eight bars of it in the opening of the Overture to the 'Hôtellerie Portugaise.' G.

FOOTE, ARTHUR, amongst American musicians of eminence, enjoys the distinction of being the only one whose education is wholly native. He was born in Salem, Mass., on March 5, 1853. As a lad he studied the pianoforte, and at fifteen was taken to B. J. Lang, on whose advice he was entered as a student of harmony in the class of Stephen A. Emery at the New England Conservatory of Music. These and all other musical studies were interrupted when he entered Harvard University. Though John K. Paine was a musical instructor and chapel organist at the time, music had not yet been raised to the dignity of an elective study, nor was there a musical chair. After graduation in 1874 Foote resumed his musical studies with zeal, going to Lang for lessons on the pianoforte and organ, and to Paine for counterpoint, canon, fugue, and free composition. His examination for the degree of A.M. conferred on him by Harvard University in 1875 included music.

Entering upon the practice of his profession Foote became a church organist and teacher of the pianoforte in Boston, to which city his activities in that direction have since been confined. As a composer, however, his influence has spread throughout the States. His orchestral compositions, including an overture, 'In the Mountains,' two Suites, in D minor and E major, a Serenade for strings, and a symphonic poem, 'Francesca da Rimini,' have been played repeatedly by the orchestras of Boston, New York, and Chicago, under the direction of such men as Wilhelm Gericke, Theodore Thomas, Emil Paur, and Frank Van der Stucken ; while his cantatas, 'The Farewell of Hiawatha,' 'The Wreck of the Hesperus,' and 'The Skeleton in Armour' have found places on the programmes of many other concert institutions. Mr. Foote has also made large excursions into the fields of chamber and church music and song. H. E. K.

FORBES, HENRY, born in London in 1804, studied music under Sir George Smart, Hummel, Moscheles, and Herz. He was an excellent pianist and organist, and conductor of the Società Armonica. He for some years held the appointment of organist of the parish church of St. Luke, Chelsea. He gave concerts with his brother GEORGE (1813-83), organist of St. Mary's, Bayswater Square, and author of many pianoforte pieces, etc. His published compositions comprise several songs and a collection of psalm tunes for four voices called 'National Psalmody' (1843). He also composed 'The Fairy Oak,' an opera produced at Drury Lane Theatre in 1845, and 'Ruth,' an oratorio, performed at Hanover Square Rooms in 1847. He died in London, Nov. 24, 1859. W. H. H.

FORD, ERNEST, conductor and composer, born at Warminster, Wilts, Feb. 17, 1858 ; was the son of the Vestry Clerk and organist of the Minster there. From 1868 to 1873 he was a chorister in Salisbury Cathedral, but owing to indifferent health was sent for educational purposes to Weston-super-Mare. In 1875 he won the first Sir John Goss scholarship at the Royal Academy of Music, London, where he studied under Sullivan, Harold Thomas (pianoforte), and Dr. Steggall (organ). In that year also he became a F.(R.)C.O. On quitting the Royal Academy Ford spent some time in Paris studying under Lalo, whence he went to America, where, in celebration of the 250th anniversary of the foundation of Harvard University, a motet by him, a setting of the Psalm 'Domine Deus,' was the chief musical work performed. At one time Ford was official accompanist at the Saturday Popular Concerts, and on the opening of the Royal English Opera House (now the Palace Theatre of Varieties) Ford was selected with F. Cellier to conduct Sullivan's 'Ivanhoe,' the opera with which the ill-fated opera-house opened. Later he became conductor of the Trafalgar (now the Duke of York's) Theatre, where the comic opera 'The Wedding Eve' was produced in London with music revised and mainly composed (as regards the second and third acts) by Ford ; and of the Empire Theatre, where much of the music to the ballets produced there between 1894 and 1897 was composed by him. In 1897 the Royal Amateur Orchestral Society elected him conductor, a post he still holds (1905). For some time he was also director

[1] The common English name was 'Fardinell's,' as Madame de Querouaille was called 'Madam Carvell.'

of the operatic class at the Guildhall School of Music. Ford's compositions are in nearly all styles. His church services are in constant use at St. Paul's Cathedral, Westminster Abbey, and other principal churches; for the Empire he composed the ballets 'La Frolique,' 'Brighton Pier,' 'Faust,' and 'La Danse'; there exists a volume of beautiful settings of poems by Shelley; while his operas and operettas include 'Daniel O'Rourke' (1884); 'Nydia' (a duologue by Justin H. McCarthy, 1889); 'Joan' (Robert Martin, 1890); 'Mr. Jericho' (operetta by H. Greenbank, 1893); 'Jane Annie' (libretto by J. M. Barrie and Sir A. Conan Doyle), produced at the Savoy, May 13, 1893); a cantata, 'The Eve of the Festa.' On March 29, 1899, he was elected a Fellow of the R.A.M. R. H. L.

FORD, THOMAS, born about 1580, was one of the musicians of Prince Henry, son of James I. In 1607 he published a work entitled 'Musicke of Sundrie Kindes. Set forth in two Bookes. The first whereof are Aries [*sic*] for four Voices to the Lute, Orpharion, or Basse-Viol, with a Dialogue for two Voyces and two Basse-Viols in parts tunde the Lute way. The Second are Pavens, Galiards, Almaines, Toies, Iigges, Thumpes and such like, for two Basse-Viols, the Liera way, so made as the greatest number may serve to play alone, very easie to be performde.' This work contains the beautiful four-part songs 'Since first I saw your face,' and 'There is a ladie sweet and kind.' [In 1611 he was one of the musicians of Henry, Prince of Wales, at a salary of £30 a year, soon afterwards increased to £40. In 1626 it was doubled, on his becoming a member of the King's band.] Ford contributed two anthems to Leighton's 'Teares or Lamentacions of a Sorrowfull Soule,' 1614. He composed some canons and rounds printed in Hilton's 'Catch that Catch can,' and an anthem 'Let God arise,' printed in the Anthems by Madrigal Composers of the Mus. Antiq. Society. He was buried at S. Margaret's, Nov. 17, 1648. W. H. H.: corrections and additions from *Dict. of Nat. Biog.*

FORKEL, JOHANN NICOLAUS, a meritorious though overrated writer on the history and theory of music, son of a shoemaker, born Feb. 22, 1749, at Meeder near Coburg; educated himself by the study of Mattheson's *Vollkommener Capellmeister*. Having a fine voice he was appointed chorister at Lüneburg in 1762, and four years later 'Chorpräfect' at Schwerin. In 1769 he entered the university of Göttingen to study law, but soon occupied himself exclusively with music, and became organist of the university church. In 1778 he was appointed director of music to the University and graduated as doctor of philosophy in 1780. [He conducted the weekly concerts of the Akademie from 1779 to 1815.] On the death of Emanuel Bach he hoped to have been appointed his successor at Hamburg, but Schwenke obtained the post, and Forkel remained at Göttingen till his death, March 17, 1818. He is best known as a musical critic and historian. His first work, *Ueber die Theorie der Musik*, etc. (Cramer, Göttingen, 1774, republished in 1777), a pamphlet urging the foundation of lectures on music at Göttingen, was followed by many others, especially *Musikalisch kritische Bibliothek*, 3 vols. (Gotha, 1778), containing violent attacks on Gluck's 'Iphigénie in Aulide'; *Über die beste Einrichtung öffentlicher Konzerte*, 1779; *Genauere Bestimmung*, etc., 1780; the *Mus. Almanach für Deutschland* for 1782, 1783, 1784, and 1789, containing particulars (not always trustworthy) as to novelties in music; his *Allgemeine Geschichte der Musik*, 2 vols. (Leipzig, 1788 and 1801), founded on Hawkins, Burney, and Marpurg, now superseded, but interesting as a literary[1] curiosity; *Geschichte der Italienischen Oper*, 2 vols. (Leipzig, 1789), a translation of Arteaga's book; and *Allgemeine Literatur der Musik* (Leipzig, 1792), his most important work. This book, which shows the amount of his knowledge and reading, is the foundation of Becker's *Systematisch-chronologische Darstellung der musikalischen Literatur*. Forkel was the first to attempt a biography of Bach (*Ueber J. S. B.'s Leben, Kunst, und Kunstwerke*. Leipzig, 1802), translated into English under the title *Life of J. S. Bach, with a critical review of his compositions* (London, 1820). As he knew little of Bach's great sacred vocal works, he treats him mainly from the point of view of the organ and clavier, but the book will always remain as the foundation of all subsequent Lives of the great musician. [Among his musical compositions may be mentioned the oratorios 'Hiskias,' 1789, and 'Die Hirten bey der Krippe,' four cantatas for chorus and orchestra, clavier concertos, and many sonatas and variations for harpsichord. *Quellen-Lexikon.*]

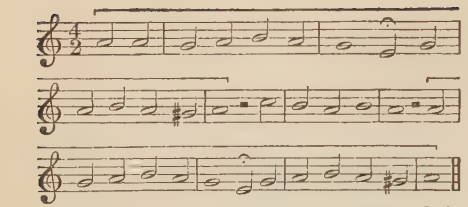
The royal library at Berlin contains an interesting specimen of Forkel's labours. This is a large volume of church music of the 16th century, scored by himself, and, though printed, unique. It was intended to form the first volume of a series of examples illustrating the history of music, and was undertaken at the instance of Sonnleithner of Vienna. The plates were engraved in Leipzig, and the proofs were already in Forkel's hands, when the French took the city in 1806, and seized everything in the shape of metal to be converted into bullets. His plates having been thus destroyed Forkel had the proof-sheets bound, and this is the copy now at Berlin. The masses it contains are taken from 'Missae tredecim . . . Norinbergae . . . arte Hieronymi Graphei, 1539,' and 'Liber quindecim Missarum . . . Norimbergae apud Joh. Petreium, 1539.' F. G.

FORLANA. An Italian dance, a favourite with the Venetian gondoliers. It is in 6–8 or

[1] After Forkel's death, Schwickert, the publisher, offered the materials for completing the third volume to Fétis and Choron, but they declined the task.

6–4 time, but possesses no special characteristics. An example of this dance may be found in J. S. Bach's suite for orchestra in C major. The following quotation of the opening bars of a forlana of the 17th century is from F. L. Schubert's *Die Tanzmusik*.

E. P.

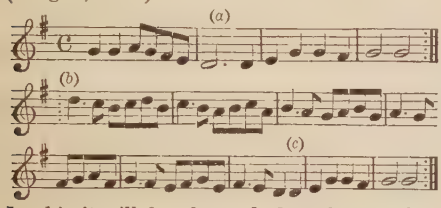


FORM. The means by which unity and proportion are arrived at in musical works are the relative distribution of keys and harmonic bases on the one hand, and of 'subjects' or figures or melodies on the other; and this distribution is called the FORM of the work. The order of distribution varies greatly with the conditions. Music set to poetry with a 'burden' to each verse would naturally adopt the form of repeating the same melody to each recurrence of the burden; and when the words implied similar circumstances and feelings would adopt repetition of similar or allied phrases. In dramatic works the order of distribution must vary with the development of the emotional crises, and in such cases will be rather a distribution of culminations and gradations of intensity of passion and emotion, than the more obvious one of key and figure; though, if the relation between important figures of melody and the special circumstances to which they are appended be observed, the notion of form as defined by subjects will still continue to be perceptible. Analogously, in music which is supposed to represent some story or idea, such as is now known by the name of Programme Music, the form must be developed with the view of interpreting that programme truly and consistently. Such music may be compared in this to the work of a painter who trusts rather to the stirring nature of his subject than to the perfection of its composition to engage and delight the beholders, while in a portrait or picture of less vivid interest the element of composition, following generally and easily recognised principles, would be of vital importance. Similarly in programme music the composer may choose to follow the established so-called classical models, but it can hardly be doubted that a genius deeply impregnated with the spirit of his subject would seek to create a form of his own which should be more in consonance with the spirit of his programme—even as Beethoven did without programme, expressing some marvellous inner workings of his emotions, in the first movement of the Sonata in E, op. 109. But even with Beethoven, in the case of music without either programme or words to explain its purpose, such irregularity is rare. It is here especially that the nature and capacity of the minds of the auditors play an important part. Their attention has to be retained for a space of time, sometimes by no means insignificant; and connection has to be established for them without the aid of words or other accessories between parts of the movement which appear at considerable distance from each other, and the whole must be so contrived that the impression upon the most cultivated hearer shall be one of unity and consistency. In such a case Form will inevitably play an important part, becoming more and more complex and interesting in proportion to the development of readiness of comprehension in the auditors. The adoption of a form which is quite beyond the intellectual standard of those for whom it is intended is a waste of valuable work; but a perfect adaptation of it to their highest standard is both the only means of leading them on to still higher things, and the only starting-point for further progress. From this it will be seen that in musical works which are connected with words or programme—whether choruses, songs, arias, or ballads, etc.—Form is dependent on the words; and such works, as far as they are reducible to any definable system, are reducible only to the simplest, and such as admits of infinite latitude of variation within its limits. But in instrumental music there has been a steady and perceptible growth of certain fundamental principles by a process that is wonderfully like evolution, from the simplest couplings of repeated ideas by a short link of some sort, up to the complex but consistent completeness of the great instrumental works of Beethoven.

There can hardly be any doubt that the first attempts at Form in music were essentially unconscious and unpremeditated. Therefore if any conformity be observed in the forms of early music derived from various sources, it would seem to indicate a sort of consensus of instinct on the part of the composers which will be the true starting-point of its posterior development. It must be remarked by way of parenthesis that in the early days of modern music—apart from the ecclesiastical music of the Roman Church—the instrumental and vocal orders were not nearly so distinct as they are[1] now, for the tendency to strongly and clearly marked distinction in kind is notoriously a matter of slow growth. Hence examples may be drawn with perfect safety from both kinds wherever they can be found.

The first basis of true Form, apart from the balance of groups of rhythms, is essentially repetition of some sort, and what is most vital to the question is the manner of the repetition. The simplest and most elementary kind is the repetition of a phrase or bit of melody with a short passage in the middle to connect the two statements. As an early example of this form may be taken an ancient German chorale, 'Jesus Christus unser Heiland, Der den Tod überwand' (1535), which is as follows:—

[1] For instance, the old English madrigals were published as 'apt for Viols and Voices.'



f

In this the bars bracketed are the same, and the phrase which connects them is very short; and the whole presents about as simple and unsophisticated a specimen of Form as could well be conceived. The simple basis of which this is a type is the origin of the Rondo-form, which has survived with great variety and modification of treatment till the present day. The first advances upon the above example which offer any points of interest seem to be in cases where we find either a contrast aimed at in the passage which forms the link, or a number of repetitions succeeding one another, with differences in the passages connecting them. These two constitute the two great branches through which this primitive idea diverged into thousands of Arias, Lieder, Nocturnes, Romances, Scherzos, and other lyrical pieces on the one hand, and the movement which still retains its name of Rondo on the other. As an early example of the first we may take the song 'Roland courez aux armes' from Lully's opera 'Roland,' which is too long for insertion here, but will be found in the 136th chapter of Hawkins's *History of Music*. In this there are twelve bars of melody in C, concluding in that key; followed by twelve more bars, in which there is modulation first to the relative minor A, and then to the dominant key G major, in which key this portion concludes; after which the first twelve bars are resumed precisely as at first, and so the whole concludes. Here the employment of modulation in the connecting passage is a strong element of contrast, and indicates a considerable advance in musical ideas on the obscure tonality of the preceding example. On the other hand, almost contemporary with Lully, there are, in the works of Couperin, numerous specimens of the Rondo, consisting of a number of repetitions, with differences in the connecting passages. In these the passage with which the movement commences is repeated over and over again bodily and without disguise, and separate short passages, of similar length but varying character, are put in between. Couperin was particularly fond of the Rondo-form, and examples may be found in profusion in his works. The one which is perhaps best known and most available for reference is the 'Passacaille en Rondeau,' published in the complete edition of Brahms and Chrysander, vol. i. p. 152. A point specially observable in them is the rigidity and absence of any attempt at sophistication in the process. The sections are like crude squares and circles fitted together into a design, and no attempt, or very little at best, is made to soften off the outlines by making the sections pass into one another. The chief subject is distinct and the episodes are distinct, and the number of repetitions seems to depend solely on the capacity of the composer to put something in between. Still it is clear that the virtue of contrasts both of style and of key is appreciated, though the range of modulation is extremely limited. It is noticeable, moreover, as illustrating the point of view from which Form at that time was regarded, when recognised as such, that the divisions of the Rondo are marked with extra emphasis by a *Fermata* or pause. From this to such a Rondo as we find in the Partita in C minor of Bach is a great step. Here there are no strongly marked divisions to stiffen the movement into formality, but it flows on almost uninterruptedly from first to last. The episodes modulate more freely, and there is not such rigid regularity in the reappearance of the main subject. It appears once outside of the principal key, and (which is yet more important) is brought in at the end in an extremely happy variation; which is prophetic of Beethoven's favourite practice of putting identical ideas in different lights. The next stage of development of this form—and that probably rather a change than an improvement on the above beautiful little specimen of Bach—is the Rondo of Haydn and Mozart. Their treatment of it is practically the same as Couperin's, but in many cases is strongly modified by the more important and elaborate 'First-movement-form,' which by their time had grown into clearness of system and definition. The Rondo-form, pure and simple, has remained till now much as it was in Couperin's time, gaining more in expansion than in change of outline. Even the great Rondo of Beethoven's 'Waldstein' Sonata (op. 53) consists of the repetition of a subject of some length interspersed with episodes; with modifications in the length of the episodes and the repetition of one of them, and a great Coda founded on the principal subject to conclude with. The further consideration of the Rondo as affected by the 'first movement' form must be postponed till after the examination of the latter.

By the side of the primitive Rondo above quoted a form more complex in principle is found. In this form the relations of harmonic roots come largely into play, but its most striking and singular feature is the manner of the repetition by which it is characterised. And in this case examples drawn from various early sources which agree in the peculiar manner of the repetition will be of value, as above indicated. In this form the movement is divided into two halves, and these again into two sections. The first half, or complete period, comprises a sort of rough balance between the amount which tends to the Tonic and the amount which tends to the Domi-

nant, thereby indicating the division into two sections ; and the second half begins with passages which have more freedom in the distribution of their roots, which constitutes its first section, and ends with a quotation of the last bars or figures of the first half, which constitutes its second section. This will be best understood from an example. The following is a very early specimen of the dance tune called a 'Branle' or 'Brawl,' from the 'Orchésographie' of Thoinot Arbeau (Langres, 1589) :—

In this it will be observed that the first half of the little tune is divided at (*a*) by the strong emphasis on the Dominant, from which point it returns to the Tonic, and so closes the first half. The second half, commencing at (*b*), can easily be perceived to have a freer harmonic basis than either of the first sections, and so leads the mind away from the Tonic and Dominant centres in order that they may come in fresh again for the conclusion ; and having carried the figure on to an apparently disproportionate length (which serves the excellent purpose of breaking the monotony of constant pairs of bars), finally, at (*c*), resumes the little tailpiece of the first half and thereby clenches the whole into completeness. The manner in which this answers the requirements of artistic construction is very remarkable, and it will be found hereafter that it does so throughout on a precisely similar scheme, in miniature, to that of a 19th century Symphony movement. It would be natural to suppose that this was pure accident if there were not other ancient examples of the same form coming from the most opposite sources. The above Branle is a French dance tune ; if we turn from it and take the most famous German Chorale, 'Ein' feste Burg' (1529), the principles of its construction will be found to be identical. It is so well known that it is needless to quote it.[1] It will be sufficient to point out that the first half of the tune ends at the conclusion of the second line ; and of this half the first line ends on the Dominant and the second on the Tonic, precisely as in the Branle ; and it is then repeated for the third and fourth lines. The music to the fifth, sixth, seventh, and eighth lines answers to the passage between (*b*) and (*c*) in the Branle, and like it presents a variety of harmonic bases ; and to clench it all together the music of the second line is quoted to conclude with, precisely as is the little tailpiece of the first half in the Branle. It is impossible not to feel the force of this as a point of musical form when it is once realised ; it has the effect of completeness for a short tune which is unrivalled. If we turn to far other sources we shall find an early English specimen in the well-known 'Since first I saw your face' (1607), in which the second and last line will again be found to be identical, and the other points of the scheme to conform in like manner. Even in Italy, where the value of form does not seem to have been so readily appreciated as by Teutons, we find a little Sinfonia for flutes in Giacomo Peri's 'Euridice' (1600)—the first musical drama performed in modern Europe—which at least has the one important feature of repeating a little characteristic figure of the cadence of the first half to conclude the whole. It must not be supposed that this form was by any means universal so early as the middle of the 16th century—a time when notions of harmony proper, as apart from polyphony, were but dawning, and the musical scales and keys as we now know them were quite vague and unsettled. It is wonderful enough that there should be any examples of Form at all in such a state of musical language ; for Form as now recognised depends greatly upon those two very elements of harmonic bases and relation of keys ; so that what was then done in those departments must have been done by instinct. But by the middle of the 17th century musical knowledge in these respects was much more nearly complete, and the scope of composers proportionately widened. Accordingly we find a greater freedom in the treatment of forms ; but the outline of the same form on a larger scale is found to predominate in the instrumental works of the time, especially such as pass under the names of dances ; though it is probable that those sets of them which were called 'Suites,' or 'Sonatas,' or 'Ordres,' were rather purely musical than terpsichorean. In the ecclesiastical Sonatas (Sonate da Chiesa) the style still continues fugal and polyphonic.

It would be impossible to give even a faint idea of the number of examples of this form which are to be found in these dance-tune suites, but it will be well to take some typical specimens and indicate the points in which they show development. In Corelli's Chamber Sonatas there are many clear instances. Thus, in the Giga of Sonata IV. of the 'Opera Quarta,' there is the usual division into two halves. Of these the first is again divided into two phrases, the first phrase all in the Tonic key, D ; the second then modulating to the key of the Dominant and closing in it. The second half begins with a sort of development of the figures of the first part, then modulates to nearly related keys, and after passing back to the original key concludes with a quotation of the last few bars of the first half. In this scheme there are two points of advance on the previous examples ; the first part concludes in what we will henceforward

[1] It is given in vol. i. p. 771.

call the complementary key, or key of the Dominant, instead of merely passing to it and back and closing in the principal key—by that means establishing more clearly the balance between it and the principal key ; and secondly, the first part of the second half of the movement presents some attempt at a development of the features of the subjects of the first part, and real free modulation. The Corrente and Giga of the seventh Sonata of the 'Opera Seconda' are also remarkably clear specimens of repetition of the end of the first part as a conclusion to the whole, since full six bars in each are repeated. Both examples are, however, inferior to the above-quoted Giga in respect of the conclusion of the first part being in the principal key—like the older examples first quoted as typical—though like that Giga they are superior to the older examples in the free modulations and reference to the conspicuous figures of the subjects in the first section of the second half of the movements.

Domenico Scarlatti (1683-1757) was a contemporary of Handel and Bach, being but two years their senior ; nevertheless he must be considered as historically prior to them, inasmuch as the very power of their genius would make them rather the prophets of what was to come than representatives of prevalent contemporary ideas. Domenico Scarlatti left many examples of Studies or Sonatas which are essentially expansions of the plan of the original Branle. In some the first part concludes in the principal, and in some in the complementary key, either Dominant or relative major. A very extended example is found in a Study in D minor, Allegro (No. 7 of a set of 'Pièces pour le Clavecin' published by Cramer). In this there is first a section chiefly in D minor, which modulates to F, the relative major, and concludes in that key —altogether twenty-two bars ; and then another section, of twenty-one bars, all in F major, and closing in that key. This concludes the first half, which corresponds with the first half of a modern Sonata movement. The second half sets out with a reference to the first subject in F, and then modulates freely to various keys, ultimately closing in the original key of D minor, and there taking up the thread of the latter section of the first half of the movement, and giving the whole twenty-one bars almost identically, transposed from the original key of F into the principal key of D. The descent of this movement from the dance type is sufficiently clear without again going over the ground. Its most conspicuous advance is in its relative extension, twenty-two bars corresponding to two in the original example, and the other divisions being in proportion. The free modulation of the second half of the movement is the strict counterpart on a large scale of the changing harmonic basis in the Branle, and this is an advance due to the great increase of musical knowledge and resources. In other respects the similarity between the typical progenitor and its descendant is sufficiently clear. D. Scarlatti's works are almost universally a great advance on Corelli in the clear definition of the subjects and the variety of the rhythms, which enables him to approach much more nearly to modern ideas in what is called the 'development' of the subjects ; though it is true that a mere patchwork of short subjects stated one after another often serves the purpose with him of the more continuous and artistic modern development. It will also be noticed that Scarlatti generally abandons the names of the dance tunes while retaining their forms.

There were other contemporaries of Bach and Handel who must be noticed before them for the same reasons as Scarlatti. Their works generally present the feature of extensive repetition of the last section of the first part as a conclusion to the whole, in a very marked manner. Thus in a Corrente from a Suite by Domenico Zipoli (born 1685) precisely the same system is observable as in the example by Scarlatti. And in a Sonata by Wagenseil (born 1715) in F, op. 1, the first movement is a very extended specimen of the same kind ; and the last movement, a Minuetto, is remarkable for the great length of the phrase repeated. The first half of the movement is but sixteen bars, of which the latter twelve are all in the Dominant key ; and the whole of these twelve bars are repeated at the conclusion, the first four having been disposed of at the commencement of the preceding 'development,' as in the Study of Scarlatti.

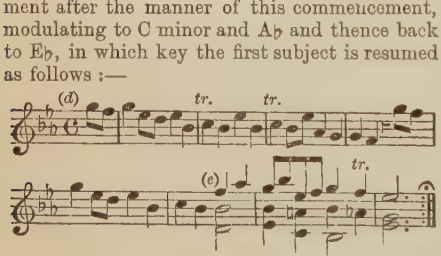
Bach and Handel present an extraordinary variety of forms in their works. Some are identical with the form of the Branle and 'Ein' feste Burg' ; others are like the primitive Rondo on a very extended scale ; and many exhibit various stages of progressive development up to the perfect types of the complete modern forms as used by Mozart.

A very large number of the movements in the Suites of both Bach and Handel are in the same form as the previous examples. The first half is divided, not very strongly, into two sections, in which the principal key and the complementary key alternately predominate. The second half sets out with development and free modulation and concludes with a quotation of the concluding bars or features of the first half. To take Bach's 'Suites Françaises' as examples, the following, among others, will be found to conform to this simple scheme :—Gigue of No. 1, in D minor ; Courante of No. 2, in C minor ; Gigue of No. 3, in B minor ; Courante of No. 4, in E♭ ; the Allemande and the Courante of No. 5, in G ; and the Courante and the Bourrée of No. 6, in E. As examples of the same from Handel's Suites the following may be taken :—the Courante in No. 1, in A ; the Allegro in No. 2, in F ; the Courante in No. 4, in E minor ; the Allemande in No. 5, in E major ; and the Gigues in the 5th, 7th, 8th, and 10th Suites. In many of these there is a

systematic development of the figures of the subject in the first section of the second half of the movement; but a tendency is also observable to commence the second half of the movement with a quotation of the commencement of the whole, which answers practically to the first subject. This was also noticed in the example quoted from Scarlatti. Bach not unfrequently begins the second half with an inversion of the characteristic figure of the commencement, or treats it in a free kind of double counterpoint, as he sometimes does in repeating the conclusion of the first half at the conclusion of the whole. (See the last four bars of the Allemande in the Partita No. 2, in C minor.) How the subject reappears is, however, a matter of subsidiary importance. What is chiefly important is the fact that the first subject gradually begins to make its appearance clearly and definitely in the second part as a repetition from the first part; and it is very interesting and curious to note that there was a long hesitation as to the position in the second half which this repetition should occupy. The balance for a long time was certainly in favour of its appearing at the beginning of the second half, and in the complementary key of the movement. A very clear and easily recognisable instance of this is the opening 'pomposo' movement of the Overture to Handel's 'Samson,' which differs in form from the first movement of a modern Sonata or Symphony in this one particular only. But there are specimens of form in both Bach and Handel which are prophetic of the complete modern system of Mozart. The fact is so interesting and instructive that it will be worth while to give an analysis of the shortest example of Bach, in order that it may be compared with the scheme of Mozart form, which will be given later. A little Air in the Suite Française No. 4, in E♭ major, sets out with a clearly defined figure which may be called the 'first subject,' and modulates in the fourth bar to the key of the Dominant, in which the figure which may also be called by analogy the 'second subject' appears, and with this the first half of the movement concludes. The second half sets out with modulations and hints at the figures of the first half, after ten bars comes to a pause on the Dominant of the original key and from thence recommences the first subject; and the latter part of the section being deftly altered by a device of modulation—of which Mozart made great use in the same position in the movement—enables the whole of the last four bars of the first half of the movement to follow also in E♭, so concluding the Air.

There is no need to give a like detailed analysis of the Allegro in Handel's Suite No. 14, in G. It will suffice to point out that its form is identical with the preceding on a large scale; and that it is clearer and easier to recognise, inasmuch as the sections do not flow so closely into one another, and the subjects are more definite. These two examples are, however, exceptional as regards both Bach and Handel and their immediate successors. The tendency was still for a time to adopt the form of reproducing the first subject at the commencement of the second half of the movement;[1] and in point of fact it is not difficult to see why it was preferred, since if nothing else could be said for it, it certainly seemed to keep the balance of the keys more equal. For by this system the subject which appeared in the principal key in the first half came in in the complementary key in the second half, and the second subject *vice versâ*, whereas in the later system the first subject always appears in the principal key. Moreover the still older system of merely repeating the ending of the first half still lingers on the scene after the time of Bach and Handel, for in a Sonata by Galuppi (1706-85) in D (published in Pauer's *Alte Clavier Musik*) there is a charming little opening Adagio which seems to look both forwards and backwards at once; for its form is a clear specimen of the mere repetition of the concluding phrase of the first part at the conclusion of the whole, while its soft melodious manner and characteristic definition of sections by cadences and semi-cadences (tending to cut it up into so many little tunes) make it in spirit a very near relation of Mozart's. And one might take this little movement, without much stretch of imagination, as the final connecting link between the movements which look back towards the primitive form as displayed in the original Branle, and those which look on towards the Mozart and Haydn epoch. The other movements of Galuppi's Sonata are in the more developed form, in which the first subject is quoted at the commencement of the second half of the movement.

In Galuppi's contemporary, P. D. Paradies, we find even a closer relationship to Mozart in many respects. The first movement of his Sonata in A, for instance, is on an extended scale. His subjects are clearly defined, and the growing tendency to cut the movement up into sections is still clearer than in Galuppi. The subjects are definitely restated, but after the earlier manner, with the first subject reproduced at the beginning of the second half. It is, however, noticeable that in the lively Finale of this Sonata the subjects both reappear at the end of the whole.



If we turn to the distinguished German composers of this epoch we find ourselves as it were among the immediate exemplars of Haydn. In them both the manner and form of their great successors are prefigured, and there is no longer any doubt about the basis of construction of the movement; the first part being as it were the thesis of the subjects, and the second part their

[1] The slow movement of Beethoven's Quartet in D major, op. 18, No. 3, is an example of this form.

discussion and re-statement; but there is still an uncertainty with regard to the respective positions of the re-statements. If, for instance, we examine a Sonata of Johann Christian Bach, op. 17 (Pauer's *Alte Clavier Musik*), we find a very clear and extended specimen of the older system. The first half has a very long section in the principal key (B♭), and another section, also long, in the Dominant key (F)—all of which is as usual repeated. The second half commences with a clear statement of the first section in the Dominant key, followed by development and modulation, and pausing on the Dominant of the original key of B♭, in which all the second section of the first part is reproduced with an exactness which is almost tiresome. It is worthy of remark that the last movement is in the Gigue time and style without being so named, and is a happy instance of the gradual complete mergence of the old dance Suite in the Sonata. As a reverse to this picture there is a Bourrée in a Suite by Johann Ludwig Krebs—a contemporary of Johann Christian Bach, and one of the most distinguished of his father's pupils—which, though called by the old dance name, is in perfect modern form, and shows so aptly the transition of the repeated ending of the first part into a second subject that it is worth quoting in outline.

This is followed by seven more bars of development after the manner of this commencement, modulating to C minor and A♭ and thence back to E♭, in which key the first subject is resumed as follows :—

In this the passage from (*a*) to (*b*) constitutes the first subject and section; and that from (*b*) to (*c*) the second, in the Dominant key, corresponding to a 'second subject'; then follow the development and modulation, from (*c*) to (*d*); and then the repeat of the first section in the principal key, with the little cadence figure (*e*), which is treated in precisely the manner that a second subject would be treated in a more extended movement, being given complete, transposed from the Dominant key to the original Tonic. That Krebs had well defined his own objects in these matters is clear from the fact that the Polonaise from the same suite, and an Allemande from another in B♭, are constructed after precisely the same system.

There remains yet the most important predecessor of Haydn, namely Emanuel Bach, in whose Sonatas Form reached a very remarkable pitch of perfection. Many of them stand in a very peculiar relation both to the old order and to the new which was destined to supplant it on the principle of the survival of the fittest; for they present examples of the reappearance of the first subject at the commencement of the second half of the movement, *as well as* after the section devoted to development and modulation—in other words, both in its older position and in its recognised place in modern instrumental works. This is the case in the Sonata in G in the first collection published at Leipzig in 1779, and in Bülow's little selection of Six. The same also in the last movement of the Sonata in A (which is both in Bülow's collection and in Pauer's 'Alte Meister'), and in the first movement of the Sonata in F minor from the third set of Clavier Sonatas, also edited by Bülow. The sonata in D minor approaches more nearly to modern ways in the position of the repetition of the first subject in the second part; but offers a marked instance of independent thought in reproducing the second subject in the key of the third below the Tonic (that is, in B♭ relative to D) and afterwards passing back to the principal key, and reproducing the rest of the materials of the section after the usual manner—thus in some respects anticipating Beethoven.

A great deal more might be said on the individual and thoughtful use of Form which is observable in the works of Emanuel Bach; but it will be merely necessary to point out that the study of them as works of art, by those who are as yet unacquainted with them will throw quite a new light on Haydn and Mozart. He has been called[1] their forerunner, and he thoroughly justifies the title not only by the clearness and distinctness of his form, but by certain indefinable qualities of style and sentiment. Something of this may be due to his view that music should be interpreted as *vocally* as possible (see Burney, *Hist.* vol. iv. chap. x.), which is also a very distinguishing trait of the Mozart school. It must also be noted that in him the continuous fugal manner seems finally to have yielded before the growing predominance of the essentially distinct modern harmonic style. The forms of the fugal style, such as they were, were rather relative than positive, and depended upon certain laws—not very clearly defined or consistently observed—as to the modes of recurrence of the

[1] Von Bülow, Preface to his selection of pieces.

subjects ; whereas the forms of the modern harmonic style are positive and systematic. The forms of the fugal style may be compared to the composition of lines and curves in a drawing, in which they are not preconceived, but grow into completeness by the attention which is bestowed by the artist on their relations to one another. Whereas the forms of the harmonic style are architectural, and are governed by certain necessary prior considerations as vital as that of roof and walls to the architect, whereby the movement comes to be divided into sections chiefly based upon the succession of keys, in which the various subjects are rather indicators of outline than positive elements of construction. In Emanuel Bach we find a number of figures and subjects characteristic of each of the primary sections, as we do in Beethoven ; and the spirit of his great father, though attenuated enough, is yet perceptible in his manner of treating short and pregnant figures, and in some peculiarities of phraseology. These are probably the chief points of connection between the spirit of the great giant and the graces of the less austere style of Haydn and Mozart.

It can hardly be doubted that the realisation of this practically new discovery of the element of positive harmonic or Tonal form in music must have acted like many other fresh discoveries in the realms of art, and tended to swamp the other elements of effect ; making composers look to form rather as ultimate and pre-eminent than as inevitable but subsidiary. It seems not improbable that the vapid and meaningless commonplace which often offends the sensitive musician in the works of Haydn and Mozart, and appears like just so much rubbish shot in to fill up a hole, was the result of this strong new feeling for form as paramount, and that it remained for Beethoven to re-establish definitely the principle of giving equal intensity to every part of the piece in proportion to its importance. With Haydn and Mozart it is common to find very sweet tunes, and sometimes very serious and pregnant tunes, in each of the primary sections, and then a lot of scurrying about—'brilliant passages' as they are often called—the only purpose of which is to mark the cadence, or point out that the tune which is just finished is in such or such a key. Haydn's early Quartets are sometimes very little more than jingle in one key and more jingle in another, to fill up his recognised system of form, without ever rising to the dignity of a tune, and much less to a figure with any intensity of meaning: and some of Mozart's instrumental productions are but little better.

That Haydn studied the works of Emanuel Bach is well known, for he himself confessed it ; and the immediate connection between him and his predecessors is nowhere more clear than in the similarity of occasional irregularities of construction in the second half of his movements. There is more than one instance of his first subject reappearing clearly at the beginning of the second half of a movement instead of in its latter portion (Quartet in F major, op. 2, No. 4 ; No. 67 in Trautwein) ; and further than this, and corroborative of the continuous descent, is the fact that when the first subject reappears in what we should call its right place, there are conspicuous irregularities in the procedure, just as if Haydn were half apologising for a liberty. For the section is often prolonged and followed by irregular modulations before the second subject reappears, and is then far more closely followed than the first subject and the materials of the first section. Another point illustrating a lingering feeling for the old practice of repeating the conclusion or cadence-figures of the first part at the conclusion of the whole, is that a sort of premature coda is occasionally inserted after the earlier figures of the second section on its repetition in this place, *after* which the concluding bars of the first part are exactly resumed for the finish. Of this even Mozart gives a singular and very clear instance in the first movement of his G minor Symphony.

Of the minor incidental facts which are conspicuous in Haydn's works the most prominent is his distribution of the subjects in the first part. He conforms to the key-element of Form in this part with persistent regularity, but one subject frequently suffices for both sections. With this principal subject (occasionally after a short independent introduction in slow time) he commences operations ; and after concluding the first section and passing to his complementary key for the second, he reproduces it in that key, sometimes varied and sometimes quite simply—as in the well-known Symphony in D, No. 7 of Salomon's set (first movement), or in that in E♭, No. 9 of the same series (also first movement), or in the Quartet in F minor, op. 55, or the Finale of the Quartet in C, op. 75 (No. 1 in Trautwein). And even where the second section has several new features in it the first subject is often still the centre of attraction, as in the first movement of the Quartet in C (No. 16, Trautwein), and the same movement of the Quartet in F (No. 11, Trautwein). On the other hand Haydn is sometimes profuse with his subjects, and like Beethoven gives several in each section ; and again it is not uncommon with him to modulate into his complementary key and go on with the same materials for some time before producing his second subject, an analogous practice to which is also to be met with in Beethoven.

A far more important item in Haydn's development of Form is the use of a feature which has latterly become very conspicuous in instrumental compositions, namely the Coda, and its analogue, the independent episode which usually concludes the first half of the movement.

Every musician is aware that in the early period of purely formal music it was common to mark all the divisions of the movements

clearly by closes and half closes ; and the more vital the division the stronger the cadence. Both Haydn and Mozart repeat their cadences in a manner which to modern ears often sounds excessive ; and, as already pointed out, they are both at times content to make mere 'business' of it by brilliant passages, or bald chords ; but in movements which were more earnestly carried out the virtue of making the cadence also part of the music proper, and not a mere rigid meaningless line to mark the divisions of the pattern, was soon recognised. There were two ways of effecting this ; either by allusion to the figures of the subjects adapted to the form of the cadence, or by an entirely new figure standing harmonically on the same basis. From this practice the final episode to the first part of the movement was developed, and attained at times no insignificant dimensions. But the Coda proper had a somewhat different origin. In the days before Haydn it was almost invariable to repeat the second half of the movement as well as the first, and Haydn usually conformed to the practice. So long as the movements were of no great length this would seem sufficient without any addition, but when they attained to any considerable dimensions the poverty and want of finish in ending twice over in precisely the same way would soon become apparent ; and consequently a passage was sometimes added after the repeat to make the conclusion more full, as in Haydn's well-known Quartet in D minor, op. 76, the first movement of the Quartet in C (Trautwein, No. 56), the last movement of the Quartet in E, No. 17, and many others. It seems almost superfluous to point out that the same doctrine really applies to the conclusion of the movement, even when the latter half is not repeated ; since unless an addition of some sort is made the whole concludes with no greater force than the half ; the conclusion being merely a repetition of the cadence figure of the first half of the movement. This case, however, is less obvious than the former, and it is probable that the virtue of the Coda was first observed in connection with movements in which the second half was repeated, and that it was afterwards found to apply to all indiscriminately. A Coda in both cases is to be defined as the passage in the latter part of a movement which commences at the point where the substance of the repeated first part comes to an end. In Haydn codas are tolerably plentiful, both in movements in which the latter half is repeated and in movements in which it is not. They are generally constructed out of materials taken from the movement, which are usually presented in some new light, or associated together in a fresh manner ; and the form is absolutely independent. Modulation is rarely to be found, for the intention of the Coda was to strengthen the impression of the principal key at the conclusion, and musicians had to be taught by Beethoven how to do this without incessantly reiterating the same series of chords in the same key. As an instance of the consideration and acuteness which characterise Haydn's very varied treatment of forms may be taken the Coda of the first movement of the Symphony in C, No. 1 of the Salomon set. In this movement he misses out certain prominent figures of the first section on its repetition in the second half, and after passing on duly through the recapitulation of the second section he takes these same omitted figures as a basis whereon to build his Coda. Many similar instances of well-devised manipulation of the details of form are scattered throughout his works, which show his remarkable sagacity and tact. They cannot be brought under any system, but are well worth careful study to see how the old forms can be constantly renewed by logically conceived devices, without being positively relinquished.

Haydn represents the last stage of progress towards clear and complete definition of abstract Form, which appears in its final technical perfection in Mozart. In Mozart Form may be studied in its greatest simplicity and clearness. His marvellous gift of melody enabled him to dispense with much elaboration of the accepted outlines, and to use devices of such extreme simplicity in transition from one section to another that the difficulty of realising his scheme of construction is reduced to a minimum. Not that he was incapable of elaborating his forms, for there are many fine examples to prove the contrary ; but it is evident that he considered obviousness of outline to be a virtue, because it enabled the ordinary hearer as well as the cultivated musician to appreciate the symmetrical beauty of his compositions. Apart from these points of systematic definition Mozart was not an innovator, and consequently it will not be necessary to point out his advances on Haydn. But inasmuch as he is generally recognised as the perfect master of the formal element in music it will be advisable to give an outline of his system.

The first section, which tends to mark clearly the principal key of the movement, sets out with the principal subject, generally a tune of simple form, such as eight bars divided into corresponding groups of four (see the popular Sonata in C minor). This is either repeated at once or else gives place to a continuation of less-marked character of figure, generally commencing on the Dominant bass ; the order of succession of this repetition and continuation is uncertain, but whichever comes last (unless the section is further extended) usually passes to the Dominant key, and pauses on *its* Dominant ; or pauses without modulation on the last chord of a half close in the original key ; or, if the key of the whole movement be minor, a little more modulation will take place in order to pass to the key of the relative major and pause on *its* Dominant. The second section—which tends to define clearly the

complementary key of the movement, whether Dominant or Relative major to the original—usually starts with a new subject somewhat contrasted with the features of the first section, and may be followed by a further accessory subject, or derivative continuation, or other form of prolongation, and so passes to the frequent repetition of the cadence of the complementary key, with either brilliant passages, or occasionally a definite fresh feature or subject which constitutes the Cadence episode of the first part. These two sections—constituting the first half of the movement—are usually repeated entire.

The second half of the movement commences with a section which is frequently the longest of all; it sometimes opens with a quotation of the first subject, analogous to the old practice common before Haydn, and proceeds to develop freely the features of the subjects of the first part, like a discussion on theses. Here cadences are avoided, as also the complete statement of any idea, or any obvious grouping of bars into fixed successions; modulations are constant, and so irregular that it would be no virtue to find the succession alike in any two movements; the whole object being obviously to produce a strong formal contrast to the regularity of the first half of the movement; to lead the hearer through a maze of various keys, and by a certain artistic confusion of subject-matter and rhythm to induce a fresh appetite for regularity which the final return of the original subjects and sections will definitely satisfy. This section Mozart generally concludes by distinctly modulating back to his principal key, and either pausing on its dominant, or passing (perhaps with a little artistically devised hesitation), into the first subject of the movement, which betokens the commencement of the fourth section. This section is usually given without much disguise or change,[1] and if it concludes with a pause on the Dominant chord of the original key (*i.e.* the final chord of a half close), will need no further manipulation, since the second subject can follow as well in the original key as in that of the Dominant, as it did in the first part. If, however, the section concludes on the Dominant of that Dominant key in the first half of the movement, a little more manipulation will be necessary. Mozart's device is commonly to make some slight change in the order of things at the latter part of the section, whereby the course of the stream is turned aside into a Sub-dominant channel, which key standing in the same relation to the principal key that the principal key stands to the Dominant, it will only be necessary to repeat the latter part of the section in that key and pause again on the Dominant of the original key, in which the second section of the first half then follows simply in the same order as at the first. If the principal key of the movement happens to be minor, and the second section of the first part to be in the relative major, its reappearance in either the major or minor of the principal key depends chiefly on its character; and the passage that led to it by modulation would be either omitted altogether or so manipulated as not to conclude out of the principal key.

With this simple order of reproduction of the first two sections Mozart is generally contented, and the little alterations which he does occasionally make are of a straightforward nature, such as producing the second subject before the first (as in a Sonata in D major composed in 1778), or producing the second subject in the Dominant key first and repeating it in the principal key (as in a Sonata in C composed in 1779). The whole of the latter half of the movement is frequently repeated, and in that case generally followed by a Coda—as in the last movements of Quartets in G minor No. 1, and A, No. 5, and D, No. 10; first movements of Quartets in B♭, No. 2, and D, No. 10; slow movement of Quartet in F, No. 8; first movement of Sonata in C minor; and of Quintets in G minor, D, and E♭; and last movement of the 'Jupiter' Symphony. The Coda is generally constructed out of prominent features of the movement, presented in some new light by fresh associations and fresh contrasts. It is seldom of any great length, and contains no conspicuous modulation, as that would have been held to weaken the impression of the principal key, which at the conclusion of the movement should be as strong as possible. In a few instances there are codas without the latter half of the movement having been repeated. Of this there is at least one very beautiful instance in the short Coda of the slow movement of the Quartet in B♭, which is constructed out of ejaculatory fragments of the first subject, never touching its first phrase, but passing like a sweet broken reminiscence. It must be borne in mind that this scheme is but a rough outline, since to deal with the subject completely would necessitate so much detail as to preclude all possibility of clearness.

It is commonly held that the influence of Mozart upon Beethoven was paramount in his first period; but strong though the influence of so great a star must inevitably have been upon the unfolding genius, his giant spirit soon asserted itself; especially in that which seems the very marrow of his works, and makes Form appear in an entirely new phase, namely the element of universally distributed intensity. To him that byword 'brilliant passages' was as hateful as 'Cant' to Carlyle. To him bombast and gesticulation at a particular spot in a movement—just because certain supposed laws of form point to that spot as requiring bustle and noise—were impossible. If there is excitement to be got up at any particular point there must be something real in the bustle and vehemence; something

[1] In the first movement of the 'Jupiter' Symphony so exact is the repetition, that in one of the editions a passage of twenty-one bars is not reprinted, but a reference 'Da Capo' is made to its occurrence at the beginning of the Allegro.

intense enough to justify it, or else it will be mere vanity; the cleverness of the fingers disguising the emptiness of the soul,—a fit accompaniment to 'the clatter of dishes at a princely table,' as Wagner says, but not Music. Such is the vital germ from which spring the real peculiarities and individualities of Beethoven's instrumental compositions. It must now be a Form of spirit as well as a Form in the framework; it is to become internal as well as external. The day for stringing certain tunes together after a certain plan is past, and Form by itself ceases to be a final and absolute good. A musical movement in Beethoven becomes a continuous and complete poem; or, as Mr. Dannreuther[1] says, 'an organism' which is gradually unfolded before us, marred by none of the ugly gaps of dead stuffing which were part of the '*form*' of his predecessors. Moreover Form itself must drop into the background and become a hidden presence rather than an obvious and pressing feature. As a basis Beethoven accepted the forms of Mozart, and continued to employ them as the outline of his scheme. 'He retained,' as the same writer has admirably said, 'the triune symmetry of exposition, illustration, and repetition,' which as far as we know at present is the most perfect system arrived at, either theoretically or empirically; but he treated the details with the independence and force of his essentially individual nature. He absorbed the principle in such a fashion that it became natural for him to speak after that manner; and greatly as the form varies it is essentially the same in principle, whether in the Trio in E♭, opus 1, No. 1, or the Quartet in F, opus 135.

In estimating the great difference between Mozart and Beethoven in their manner of treating forms it must not be forgotten that Mozart, as has been before observed, wrote at a time when the idea of harmonic form was comparatively new to the world of music, and to conform to it was in itself a good, and to say the merest trifles according to its system a source of satisfaction to the hearer. It has been happily suggested that Mozart lived in an era and in the very atmosphere of court etiquette, and that this shows itself in the formality of his works; but it is probable that this is but half the cause of the effect. For it must not be forgotten that the very basis of the system was clear definition of tonality; that is to say, the key must be strongly marked at the beginning and end of a movement, and each section in a different key must be clearly pointed out by the use of cadences to define the whereabouts. It is in the very nature of things that when the system was new the hearers of the music should be but little apt at seizing quickly what the key was at any given moment of the highest importance; and equally in the nature of things that this faculty should have been capable of development, and that the auditors of Beethoven's later days should have been better able to tell their whereabouts with much less indication than were the auditors of Mozart. Hence there were two causes acting on the development of form. On the one hand, as the system grew familiar, it was inevitable that people should lose much of the satisfaction which was derived from the form itself as such; and on the other hand their capacity for realising their whereabouts at any time being developed by practice, gave more scope to the composer to unify his composition by omitting those hard lines of definition which had been previously necessary to assist the undeveloped musical faculty of the auditors. Thus Mozart prepared the way for Beethoven in those very things which at first sight seem most opposed to his practice. Without such education the musical poems of Beethoven must have fallen upon deaf ears.

Beethoven then very soon abandoned the formal definition of the sections by cadences, and by degrees seems rather to have aimed at obscuring the obviousness of the system than at pointing it out. The division of the movements becomes more subtle, and the sections pass into one another without stopping ostentatiously to indicate the whereabouts; and, last but not least, he soon breaks away from the old recognised system, which ordained the Dominant or relative major as the only admissible key for the complementary section of the first part. Thus as early as his second and third Sonatas the second sections begin in the Dominant *minor* key, and in the slow movement of the Sonata in E♭ (op. 7) the Dominant is discarded in favour of the key of the third below the tonic—A♭ relative to the principal key C. In the first movement of the Sonata in G (op. 31, No. 1) he begins his second subject in the key of the major third, and that major—*i.e.* B, relative to G; and the same key (relatively) is adopted in the Waldstein Sonata and the Leonora Overture. The effect of such fresh and unexpected transitions must have been immense on minds accustomed only to the formal regularity of Mozart. Moreover, Beethoven early began the practice of taking one principal key as central and surrounding it with a posse of other keys both related and remote. Every one is familiar with the opening passages of the Waldstein and Appassionata Sonatas, in both of which a new key is introduced in less than half-a-dozen bars, and then passes back to the principal key; and this practice is not done in the vague way so often met with in Mozart and Haydn, where their excessive use of rapid transitions in the third section of the movement has the effect of men beating about in the dark. True it is that there are instances of this in Beethoven's early works while he wrote under the same order of influences as they did; but in his maturer works these subsidiary modulations are conceived with large breadth of purpose founded on certain peculiari-

[1] In *Macmillan's Magazine* for July 1876.

ties in the affinities of the keys employed, which makes the music that is heard in them produce the most varied feelings in the mind of the auditor. It is most important for a young student to avoid the hasty conclusion from insufficient observation that to modulate much is to be free and bold, for it is nothing of the sort. Irregular purposeless modulation is sheer weakness and vapidity. Strength is shown in nothing more conspicuously than in the capacity to continue long in one key without ceasing to be interesting; and when that is effected a bold stroke of well-defined modulation comes with its proper force. For when keys are rapidly interlaced the force of their mutual contrasts is weakened and even destroyed; their vital energy is frittered away to gratify an unwholesome taste for variety, and is no longer of any use for steady action. In Beethoven action is always steady, and the effects of the changing keys come with their full force. A new key is sought because it gives additional vitality to a subject or episode, or throws a new light upon an idea from a strange and unexpected quarter, as in the wonderful stroke of genius at the outset of the 'Appassionata.' As other instances may be quoted the first movement of the Sonata in G, op. 31, No. 1; Scherzo of Quartet in F, op. 59, No. 1; first movement of Quartet in F minor, op. 95.

The Episode which concludes the first part of the movement is almost invariably of some importance in Beethoven's works. Very generally he reproduces figures of his first subject, as in the Prometheus and Leonora Overtures, the first movements of the Quartets in F major (op. 59, No. 1) and E♭ (op. 127), the Symphonies in D, Eroica, C minor, and A, the Sonata in E (op. 14, No. 1), and the last movement of the Appassionata. But more frequently he produces a new subject, often of quite equal importance and beauty to either the first or the second—to quote but one instance out of many take the first movement of the Sonata in G (op. 14, No. 2)—and very often does so besides referring to his first subject. The chief thing to notice from this is that the Episode in question has grown into important dimensions in his hands, and is so clear, and its distinction as a separate section from what precedes it so marked, that it is not uncommon to hear it spoken of as the Coda of the first part.

In the part devoted to the development of the features of the subjects, which commonly commences the second half of the movement, Beethoven is especially great. No musician ever had such a capacity for throwing an infinite variety of lights upon one central idea; it is no 'business' or pedantry, but an extraordinary genius for transforming rhythms and melodies so that though they be recognised by the hearer as the same which he has heard before, they seem to tell a totally different story; just as the same ideas working in the minds of men of different circumstances or habits of thought may give them the most opposite feelings. As was pointed out with reference to Mozart, no system is deducible from the order of this division of the movement, than which none shows more infallibly the calibre of the composer. As a rule Beethoven avoids the complete statement of any of his subjects, but breaks them up into their constituent figures, and mixes them up in new situations, avoiding cadences and uniformity of groups of bars and rhythms. As far as possible the return to the original key is marked in some more refined way than the matter-of-fact plan of baldly passing to its Dominant, pausing, and re-commencing operations. The *reprise* of the first subject is sufficient indication to the hearer as to what part of the movement he has arrived at, and the approaches to it require to be so fined off, that it may burst upon him with the extra force of a surprise. Sometimes a similar effect is obtained by the totally opposite course of raising expectation by hints of what is to come, and then deferring it in such a manner that the suspended anticipation of the mind may heighten the sense of pleasure in its gratification, as in the last movement of the Waldstein Sonata. Again the return is not unfrequently made the climax of a grand culmination of increasing force and fury, such as that in the first movement of the Waldstein Sonata (where the return is *pp*) and the Fourth and Eighth Symphonies, a device which is as moving to the hearer as either of the former ones, and equally intense and original.

In the recapitulation of his subjects, as might be anticipated from his intensity in all things, there is a growing tendency to avoid the apparent platitude of repeating them exactly as at first. Sometimes they appear with new features, or new orders of modulation, and sometimes altogether as variations of the originals. As instances of this may be taken the recapitulation of the first subjects in the first movements of the Eroica Symphony, D minor Sonata (op. 31, No. 2), the Waldstein, the Appassionata, and the B♭ Sonata, op. 106, the first movement of the Quartet in E♭, op. 127, and of the Kreutzer Sonata, the slow movements of the Violin Sonata in C minor, op. 30, No. 2, and of the great B♭ Sonata just named, all which present the various features above enumerated in great perfection. No system can be defined of the way in which Beethoven connects his first and second subject in this part of the movement, as he particularly avoids sameness of procedure in such matters. As a rule the second subject is given more simply than the first; no doubt because of its being generally of less vital importance, and less prominent in the mind of the hearer, and therefore requiring to be more easily recognisable. With regard to the key in which it appears, he occasionally varies, particularly when it has not appeared in the first part in the orthodox

Dominant key. Thus in the first movement of the great Quartet in B♭, op. 130, the second subject, which had appeared in the first part in the key of the third below (G♭ relative to B♭), appears in the recapitulation in the key of the minor third above—D♭. And in the Sonata in G major, op. 31, No. 1, the second subject, which appeared in the key of the major third in the first part, appears in the *reprise* in that of the minor third below. These and other analogous instances seem to indicate that in the statement and restatement of his subjects, when they did not follow the established order, he held the balance to be between the third above and the third below, major and minor. The reason for his not doing so in the B♭ Sonata (op. 106) is no doubt because in the very elaborate repeat of the first section he had modulated so far away from the principal key.

The last point to which we come in Beethoven's treatment of the Sonata-forms is his use of the Coda, which is, no doubt, the most remarkable and individual of all. It has been before pointed out that Mozart confines himself chiefly to Codas after repetition of the second half of his movements, and these are sometimes interesting and forcible; but Codas added for less obvious reasons are rare; and as a rule both his Codas and Haydn's remain steadily in the principal key of the movement, and strengthen the Cadence by repetition rather than by leading the mind away to another key, and then back again up to a fresh climax of key-definition. That is to say, they were added for formal purposes and not for the sake of fresh points of interest. Beethoven, on the other hand, seemed to look upon the conclusion of the movement as a point where interest should be concentrated, and some most moving effects produced. It must have seemed to him a pure absurdity to end the whole precisely as the half, and to conclude with matter which had lost part of its zest from having been all heard before. Hence from quite an early period (*e.g.* slow movement of D major Sonata, op. 10, No. 3) he began to reproduce his subjects in new and interesting phases in this part of the movement, indulging in free and forcible modulation, which seems even from the point of pure form to endow the final Cadence with fresh force when the original key is regained. The form of the Coda is evidently quite independent. He either commences it from an interrupted Cadence at the end of the preceding section, or passes on from the final chord without stopping—in the latter case generally with decisive modulation. In other cases he does not conclude the preceding section, but as it were grafts the Coda on to the old stock, from which it springs with wonderful and altogether renewed vigour. As conspicuous instances may be quoted the Coda of the Sonata in E♭, op. 81*a* ('Les Adieux, l'Absence, et le Retour'), which is quite the culminating point of interest in the movement; the vehement and impetuous Coda of the last movement of the Appassionata Sonata, which introduces quite a new feature, and the Coda to the last movement of the Waldstein Sonata. The two climacteric Codas of all, however, are those to the first movements of the Eroica and the Ninth Symphony, which are sublime. The former chiefly by reason of its outset, for there is hardly anything more amazing in music than the drop from the *piano* Tonic E♭ which concludes the preceding section, to a *forte* D♭, and then to the chord of C major *fortissimo*. But the whole Coda of the first movement of the Ninth Symphony is a perpetual climax and a type of Beethoven's grandest conceptions, full of varied modulation, and constant representation of the features of the subjects in various new lights, and ending with a surging, giant-striding specimen of 'Tonic and Dominant,' by way of enforcing the key which is quite without rival in the whole domain of music.

There can be no object in following the development of the system of Form farther than Beethoven, for it can hardly be said that there is anything further to trace. His works present it in its greatest variety and on the grandest scale; and his successors, great as many of them have been, have not even approached him, far less added to his final culmination. The main tendency observable in later instrumental works is to develop still further the system above discussed of taking one key as central in a group comprising many subsidiary transitions. Schumann's works present remarkable instances of this; Mendelssohn adopts the same practice, but with more moderation; Brahms again is extremely free in the same direction; as may be observed, for instance, in the first section of the first movement of the pianoforte Quartet, op. 25, which is nominally in G minor. This is apparently a recognition of the hypothesis above proposed, that the mind is capable of being more and more educated to recognise the principal key in a chain of transitions which to the audiences of Mozart's day would have been quite unintelligible.

It is now time to return to the consideration of the Rondo-form as found in the works of Haydn and Mozart, in which it was frequently affected by the more important and interesting First-movement-form. It will be obvious that its combination with that form does not offer much difficulty. For that alternation of subject and episode which is the very basis of the Rondo opens the way to the adoption of a second subject in the complementary key as the fittest antithesis to the first statement of the principal subject; and the main point of distinction of the Rondo-form from the First-movement-form pure and simple, is that the first subject reappears after the second in the original key, instead of bringing the first half of the movement to a conclusion in the complementary key. After this deviation the form again follows the system of

the first movement; for—as we have already sufficiently pointed out—no fitter place is found to develop the figures and features of the subjects and to modulate freely. In the simpler system of the Rondo this again takes the place of an episode; in both systems the first subject would here recur, and nothing could more fitly follow it than the recapitulation of that subject which occupied the place of the first episode. It is worthy of remark that in the Rondo of the Waldstein Sonata, Beethoven has in this place reproduced the subject which opens the first episode, though the movement is not cast on the system of a first movement. Finally, the subject may reappear yet again in the original key without deviating strongly from that system; so that, as just mentioned, the only marked point of deviation is the return to the principal key after the appearance of the second subject. This complete adaptation is more commonly abbreviated by replacing the 'Development' by a short episode (as in Beethoven's Sonata in E minor, op. 90); and even further (as in the Finale of Mozart's Quartet in E♭, No. 4), by passing immediately from the second subject to the recapitulation of both subjects in the principal key, and ending with one further final quotation of the real Rondo-subject. This latter in point of fact is to be explained rather as a simple method of establishing the balance of keys by giving an episode in a complementary key, than as based on any preconceived notion of amalgamation with the First-movement-form.

One of the most prominent features in the Rondos of Haydn and Mozart is the frequent rigidity of the subject. It is common to meet with a complete dance-tune divided into two halves, each repeated after the accepted system, and closing formally in the principal key. So that it is in fact a complete piece in itself, and stands out as markedly as Couperin's subjects do with *fermatas* over the concluding chords. In these cases the tune is not given *in extenso* at each repetition, but is generally fined and rounded off so as not to affect the continuity of the movement so conspicuously as in its first statement.

The angularity and obviousness of outline which often mark the Rondo form in works prior to Beethoven, were to a certain extent alleviated by the use of ingenious playful treatment of the figures of the chief subject by way of episode; but nevertheless the formality remains, and marks the Rondo of Haydn and Mozart as a thing of the past, and not to be revived in their particular manner in the present day without perpetrating an artistic anachronism. Beethoven's treatment of the Rondo offers great differences, but they are chiefly in point of sentiment, and difficult to define. Prior to his day there had evidently been a persistent tradition that final Rondos were bound to be gay, jaunty, light, or even flippant. With Beethoven such a dogma was impossible; and he therefore took the line of developing the opportunities it offered, either for humorous purposes, in the persistent repetition of a quaint phrase (Sonata in D, op. 10, No. 3), or in the natural and desirable recurrence of a melody of great beauty (Sonata in E minor, op. 90, and Waldstein). In every case the system is taken out of the domain of mere observance of formula, and its basis vitalised afresh by making it the vehicle of thoughts which can appear in such an order without losing their true significance. In point of fact the Rondo form is elastic enough notwithstanding its simplicity, and if the above sketch has not sufficiently indicated that fact, the study of the movements mentioned, and those in Beethoven's E♭ and G concertos and B♭ Trio, will lead to the perception of the opportunities it offers to the composer better than any attempt at reducing the various features to a formula.

The Minuet and Trio survive as pure and undeveloped examples of the original source of the larger movements, in immediate contact with their wonderfully transformed descendants. They offer no systematic difference whatever from the dances in the Suites which preceded the perfected Sonata. The main points of form in the two are similar. The first half of each generally establishes some sort of balance between the principal key and its complementary key, and is then repeated. The second half begins with a passage in which harmonic roots vary on a more extended scale than they do in the first half, proceeding not unfrequently, if the dance be on a large scale, as far as transient modulations; and the last and clenching section is a repetition of some notable feature of the first part. Short as the form is, it admits of a great amount of variety, and it is one of Haydn's triumphs to have endowed his innumerable specimens with ever-changing freshness. The alternation of Minuet and Trio (which are in fact two minuets) is obviously in itself an element of Form, and derives some force from the contrast of the keys in which the two are written, as well as from the contrast of their styles. In Haydn's early Quartets—in which he still closely followed the order of the Suites—the two are frequently in the same key, or in major and minor of the same key; but in his later works he takes advantage of contrasts of key and puts his Trio in the Subdominant, or even in the third below, as in the Quartet in G, op. 77. The system of alternating dances after this manner, probably with a view to formal completeness, is evidently of old standing, being found even in Lully's works, and later, as will be more generally remembered by musicians, in Gluck's 'Iphigénie en Aulide,' and in Handel's Overture to 'Samson.' It is chiefly in this respect that we can still trace the relation of the Minuet and Trio to the modern Scherzo, which is its legitimate successor, though in other respects it

has not only changed its characteristic rhythms and time, but even its style and form.

The Scherzo is in fact the most free and independent of all the movements of a modern instrumental work, being characterised rather by its sportive and playful style than by any fixed and systematic distribution of subjects and keys. Occasionally it falls into the same order of distribution as a first movement, but there is no necessity whatever that it should do so, and its whole character,—happiest when based upon the incessant repetition in varying lights and circumstances of a strongly rhythmic figure,—is headlong *abandon* rather than the premeditated design of the serious First movement. Beethoven was the real creator of the modern Scherzo, for all that a few examples exist prior to him; for these are essentially in unsophisticated dance form, and belong to the old order of things, but Beethoven's infinitely various Scherzi are all marked by a certain intimate quality of style, which has been the real starting-point of his successors, rather than any definite formal basis. Mendelssohn created quite a new order of Scherzi of a light, happy, fairylike character, in which his bright genial nature spontaneously expressed itself. But to him the like remark applies, for they are essentially characterised rather by spirit than form. Schumann was fond of putting two Trios in his Scherzi; as in two of his Symphonies, and in the very popular pianoforte Quintet in E♭. This was prefigured in Beethoven by the repetition of the Trio in the Symphonies in A and B♭.

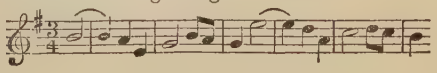
The form of the Slow movement in Sonatas and Symphonies is decidedly variable. It is more commonly based on the same system as a first movement, but owing to the length of time necessary to go through the whole series of sections in the slow tempo, it is common to abbreviate it in some way, as by omitting the portion usually devoted to 'development' and modulation, and passing by a short link only from the presentation of the subjects to their recapitulation—as in the slow movement of Beethoven's Sonata in B♭, op. 106, and that of Mozart's Quartet in B♭, No. 3. There are a few instances of Slow movements in Rondo form—as in Mozart's Sonatas in C minor, C major (1778), and D (1777); Beethoven's Sonate pathétique, and that in G (op. 31, No. 1)—and several in the form of a set of Variations. Another happy form of this movement is a species of aria or melody, cast in the old Rondo form, like the example of Lully quoted at the commencement of this article. Of this the beautiful Cavatina in Beethoven's B♭ Quartet (op. 130) is a very fine example, its form being simply a section consisting of the aria or melody continuously developed, followed by a section consisting of impassioned recitative, and concluding with a return to the original section somewhat abbreviated. This form resolves itself practically into the same formal basis as the Minuet and Trio or Scherzo, though so different in character; for it depends almost entirely on the repetition of a long complete section with a contrasting section in the middle. And the same simple basis will be found to predominate very largely in music,[1] even in such widely different classes as modern Nocturnes, like those of Field and Chopin, and Arias of the time of Handel, of which his 'Waft her, Angels' is a very clear example.

The idea of Variations was very early arrived at by musicians; for Dr. Burney points out that in the age of Queen Elizabeth there was a perfect rage for this kind of music, which consisted 'in multiplying notes, and disguising the melody of an easy, and, generally, well-known air, by every means that a *spacca nota*, or note-splitter, saw possible.' This primitive kind of variation was still a form of some sort, and is based upon the same principle as that of ground basses, such as are found in Purcell's 'Dido and Æneas,' and were very popular in those days; and of such forms again as Bach's Passacaglia, or Chopin's Berceuse in D♭, or even the wonderful continuous recitative on a constant repetition of a short rhythmic figure in the bass, in Bach's Italian Concerto. In all these cases the principle is that of constant and continuous repetition as a basis for superimposed variety. Into Variations as Variations the question of Form does not enter, or at least only in such a special way that its consideration must be left to that particular head. But as a form in itself it has been employed largely and to a degree of great importance by all the greatest masters in the department of Instrumental Music; as by Handel, Bach, Beethoven, Schubert, Mendelssohn, Schumann, and Brahms. In most cases sets of Variations are not continuous, but each Variation is detached from its fellow, making a series of little movements like the Theme, each in the same key. But this is not invariable; for on the one hand, Beethoven produced a very remarkable set of Variations on a Theme in F (op. 34), in which the key changes for each variation; and on the other hand there are many examples of Variations which are continuous, that is, run into one another consecutively, without pause, as in the last movement of Beethoven's Sonata in C minor, op. 111, and (on a smaller scale) the slow movement of Haydn's Quartet in B minor, op. 64.[2] It is very common for sets of Variations to have a grand Coda—frequently an independent movement, such as a Fugue or free Fantasia based upon some conspicuous figure of the Theme; as in Beethoven's Prometheus Variations, op. 35, and Schumann's Études Symphoniques. There can be no possible reason for

[1] This form is often called the *Lied-form*, a term originated by Dr. Marx; but being clearly a misnomer it has not been adopted by the present writer.

[2] [It is impossible to refrain from mentioning Sir Hubert Parry's noble set of variations for pianoforte solo in D minor, and his 'Characteristic Variations' for orchestra, in both which the variations run on continuously.—Ed.]

tying down composers by any rigid dogmas as to key or order of succession in the construction of a work in the form of Variations. Change of key is eminently desirable, for the succession of a number of short clauses of any sort with a cadence to each, runs sufficient risk of monotony without the additional incubus of unvarying tonality. Moreover it is impossible to resist the conclusion, based on the development of the great variations in the finale of Beethoven's Sonata in C minor, op. 111, those in the Sonata in G (op. 14, No. 2), and those on an original theme in F (op. 34), that the occasional introduction of an episode or continuation between two variations is perfectly legitimate, provided it be clearly connected with the series by its figures. For if the basis of form which underlies the Variations as a complete whole be kept in mind, it will be obvious that the system of incessant repetition, when thoroughly established, would rather gain than lose by a slight deviation, more especially if that which follows the deviation is a clearer and more obvious version of the theme than has appeared in the variations immediately preceding it.



It will be best to refer the consideration of the general construction of Symphonies, Overtures, Concertos, Sonatas, etc., to their respective heads, merely pointing out here such things as really belong to the general question.

The practice of prefacing the whole by an Introduction probably originated in a few preliminary chords to call the attention of the audience, as is typified in the single *forte* chord which opens Haydn's Quartet in E♭ (No. 33 in Trautwein). Many examples of more extensive and purely musical introductions are to be found in Haydn's and Mozart's works, and these not unfrequently contain a tune or figure of some importance ; but they seldom have any closer connection with the movement that follows than that of being introductory, and whenever there is any modulation it is confined within very small limits, generally to a simple alternation of Tonic and Dominant. Beethoven has occasionally made very important use of the introduction, employing free modulation in some instances, and producing very beautiful tunes in it, as in the Symphony in A. The most important feature in his use of it is his practice of incorporating it with the succeeding movement ; either by the use of a conspicuous figure taken from it as a motto or central idea, as in the Sonata in E♭, op. 81*a* ; or by interrupting the course of the succeeding movement to reintroduce fragments of it, as in the Quartet in B♭, op. 130 ; or by making it altogether part of the movement, as in the Ninth Symphony, where it has an immediate and very remarkable connection with the first subject.

The order of succession, and the relation of the keys of the different movements of which each complete work is composed, passed through various stages of change similar to those which characterised the development of the form of the several movements, and arrived at a certain consistency of principle in Mozart's time ; but contrast of style and time is and has been, since the early Suites, the guiding principle in their distribution. In the Suites and early examples of instrumental music, such as some of Haydn's early Quartets, all the movements were in the same key ; [a practice which apparently had its origin in the days when the lute was in vogue, and when, as a consequence of having to retune the lute at every change of key, books of songs with lute accompaniments were arranged so that all those in the same key were printed continuously]. Later it became customary to cast at least one movement in another key, the key of the Subdominant predominating. No rigid rule can be given, except that the key of the Dominant of the principal key seems undesirable, except in works in which that key is minor ; and the use of very extraneous keys should be avoided. In Sonatas prior to Beethoven the interest generally seems to centre in the earlier movements passing to the lighter refection at the conclusion. Beethoven changed this, in view of making the whole of uniform interest and equal and coherent importance. Prior to him the movements were merely a succession of detached pieces, hitched together chiefly with consideration of their mutual contrasts under the name of Sonata or Symphony—such as is typified even in Weber's A♭ Sonata, of which the last two movements were written full two years before the first two, and in the similar history of some of Mozart's works. With Beethoven what was a whole in name must be also a whole in fact. The movements might be chapters, and distinct from one another, but still consecutive chapters, and in the same story. Helmholtz points out the scientific aspect of a connection of this kind in the Sonata in E minor, op. 90, of which he says, 'The first movement is an example of the peculiar depression caused by repeated "Doric" cadences, whence the second (major) movement acquires a still softer expression.' In some cases Beethoven connected the movements by such subtle devices as making disguised versions of an identical figure reappear in the different movements, as in the Sonatas in B♭, op. 106, and in A♭, op. 109, and the Quartet in B♭. Such a device as this was not altogether unknown to Mozart, who connects the Minuet and Trio of the Quintet in G minor, by making a little figure which appears at the finale cadence of the Minuet serve as the basis of the Trio—the Minuet ending

and the Trio beginning

In a little Symphony of Haydn's in B major part of the Minuet reappears in the Finale; and the same thing is done by Beethoven in the C minor Symphony. In his Sonata called 'Les Adieux, l'Absence, et le Retour' (which is an instance of programme music), the last two movements, slow and fast, pass into one another; as is also the case in the Sonata Appassionata. In his Quartet in C♯ minor all the movements are continuous. The same device is adopted by Mendelssohn in his Scotch Symphony and Concertos, by Schumann in the D minor Symphony—the title of which expressly states the fact—and by Liszt in Concertos. Schumann also in his Symphonies in C and D minor connects his movements by the recurrence of figures or phrases. [The practice of building successive sections of a work on transformations of the same theme—a practice which the admirers of Liszt are fond of ascribing to his invention—is at least as old as the days of Elizabeth. Many examples of pavans and galliards on the same succession of notes are to be found in the *Fitzwilliam Virginal Book* (see GALLIARD), and there are instances in the 18th century, such as Handel's suite in G minor, where the subject of the first two movements is the same, and a 'sonata' in C minor by Pergolesi, where the giga is a variation of the gavotta.] C. H. H. P.

FORMES, KARL JOHANN, bass singer, son of the sexton at Mühlheim on the Rhine, born August 7, 1816. What musical instruction he had he seems to have obtained in the church choir; but he first attracted attention at the concerts for the benefit of the cathedral fund at Cologne in 1841. So obvious was his talent that he was urged to go on the stage, and made his début at Cologne as Sarastro in the 'Zauberflöte,' Jan. 6, 1842, with the most marked success. He sang at Mannheim from 1843 to 1848: his next appearance was at Vienna. In 1849 he came to London, and sang first at Drury Lane in a German company as Sarastro on May 30. He made his appearance on the Italian stage at Covent Garden, March 16, 1850, as Caspar in 'Il Franco Arciero' ('Der Freischütz'). At the Philharmonic he sang first on the following Monday, March 18. From that time for some years he was a regular visitor to London, and filled the parts of Bertram, Marcel, Rocco, Leporello, etc. In 1857 he went to America, since which he led a wandering life here and there. He obtained great success at Berlin in 1874 and in London in 1888, when he sang at Manns's Benefit Concert, and elsewhere. He died at San Francisco, Dec. 15, 1889.

For volume, compass, and quality, his voice was one of the most magnificent ever heard. He had a handsome presence and excellent dispositions for the stage, and with self-restraint and industry might have taken an almost unique position.

His brother THEODORE, sixteen years his junior, born at Mühlheim, June 24, 1826, the possessor of a fine tenor voice and great intelligence, made his début at Ofen in 1846, and in 1851-66 was engaged at the Berlin Opera. He went to America with his brother, and afterwards sang second-rate parts at small German theatres. He died insane, at Endenich near Bonn, Oct. 15, 1874. G.

FORNASARI, LUCIANO, a bass singer, who made his appearance about 1828 on second and third-rate stages in Italy. In 1831 he was singing at Milan; the next three years he passed at New York. He sang at the Havana in 1835, and in 1836 in Mexico. Returning to Europe he obtained an engagement at Lisbon in 1840, and remained there two years. After this he made a tour in his native country, singing with success at Rome, Modena, Palermo, Turin, and Trieste. In 1843 (Fétis is wrong in fixing it in 1845) Fornasari appeared in London. Fétis says he had a good voice and sang with method. Mr. Chorley writes: 'The new baritone—as substitute for Tamburini—was a tall, dashing man:—he possessed a very handsome face, a sufficient voice, though its quality was not pleasant—and pretension enough and to spare. He sang with bad method and confidence.' He continued to sing in London until 1846, after which he did not again appear. J. M.

FORSTER & ANDREWS have been established at Hull as organ-builders since 1843. Amongst many instruments from their factory may be quoted the organs in the Kinnaird Hall, Dundee; St. Mary's, Leicester; Holy Trinity, Hull; and the City Temple, London. V. DE P.

FORSTER, GEORG, born at Amberg about 1514, died at Nürnberg, 1568, a physician by profession, but also a musician of considerable attainments, deserves notice here chiefly as being the editor of a comprehensive collection of German secular songs for four voices, which appeared in five Books published at Nürnberg from 1539 to 1556. The best composers of the time are represented, including Isaac and Senfl, and of the 380 numbers contained in it Forster himself contributes 37. Many of the songs are Volkslieder, contrapuntally treated in the earlier German and Flemish manner. In the first Book, 1539, Forster has handed down to us Isaac's beautiful setting of 'Inspruck, ich muss dich lassen,' the melody of which has become the Chorale-tune first to the words 'O Welt, ich muss dich lassen,' and afterwards to Paul Gerhard's 'O Welt, sich hier dem Leben,' and 'Nun ruhen alle Wälder,' and which later Bach so expressively harmonised in the 'St. Matthew Passion' to the verse 'Wer hat dich so geschlagen?' Forster also edited two volumes of sacred works, 1540 and 1542. The second is a collection of Psalms, which opens with Josquin's 'Qui habitat' for twenty-four voices, and concludes with a 'Deo Gratias' for thirty-six, which Eitner conjectured to be the piece by Okeghem referred to

by Ornithoparcus and Glarean. A few other sacred works by Forster himself are contained in other collections. Winterfeld gives Forster's setting of 'Vom Himmel hoch' for five voices. The second part of Forster's collection of *Weltliche Lieder* was reprinted in score by Eitner in 1904. J. R. M.

FORSTER, William (I), eminent violin maker, born May 4, 1739, at Brampton, Cumberland, was son of William, and grandson of John Forster, makers of spinning-wheels and violins. He was taught both trades by his father, and also learned to play on the violin. He came, as a cattle-drover, to London in 1759, took up his abode in Prescott Street, Goodman's Fields, and for a time endured much privation from inability to obtain suitable employment. Ultimately he was engaged by a music seller on Tower Hill named Beck, and the violins made by him being much improved and quickly sold, he started in business on his own account in Duke's Court, St. Martin's Lane, whence he shortly removed into St. Martin's Lane, and speedily attained great reputation. Forster afterwards added to his business that of a music-seller and publisher, and in that capacity in 1781 entered into an agreement with Haydn for the purchase and publication in England of that master's compositions, and between that date and 1787 published eighty-three symphonies, twenty-four quartets, twenty-four solos, duets and trios and the 'Passione,' or 'Seven Last Words.' About 1785 he removed into the Strand (No. 348), where the business was carried on until the pulling down of Exeter Change. In 1795 he issued a copper medal or token, halfpenny size, bearing—*Obverse*, 'Wm. Forster, Violin, Tenor and Violoncello Maker, No. 348, Strand, London.' Prince of Wales's feathers in the field. *Reverse*, the melody of 'God save the King' in the key of G. A crown in the field, above it 'God save the King,' beneath it '1795.' William Forster died at the house of his son, 22 York Street, Westminster, Dec. 14, 1808. W. H. H.

Forster, William (II), son of the above-mentioned, and generally known as 'Royal' Forster, from his title 'Music Seller to the Prince of Wales and the Duke of Cumberland.' Born 1764, died 1824. Like his father, he made large numbers of violins which once enjoyed a high reputation. By making the bellies of their instruments thin, and increasing the weight of the blocks and linings, the Forsters obtained, while the instrument was still new, a strong and penetrating tone, which found high favour with Lindley and his school. Being well made and finished, and covered with excellent varnish, their instruments have much that commends them to the eye. The Forsters copied both Stainer and Amati. 'Royal' Forster had two sons: William Forster (III) (1788-1824), the eldest, devoted himself to other pursuits, and made but few instruments; but the second, Simon Andrew Forster (born 1801), carried on the business, first in Frith Street, afterwards in Macclesfield Street, Soho. Simon Andrew Forster made instruments of high model and no great merit. He is best known as the author (jointly with W. Sandys, F.S.A.) of *The History of the Violin and other Instruments played with the Bow*, 1864. He died Feb. 2, 1870. E. J. P.

FORSYTH BROTHERS, a firm founded at Manchester for the sale of pianos, by the brothers Henry and James Forsyth in 1857. They had been brought up, and represented the third generation of the name, in the establishment of John Broadwood & Sons. Forsyth Brothers began engraving music in 1872, with Hallé's 'Practical Pianoforte School,' the first numbers of which were published by them in Jan. 1873, and at the same time they opened a London publishing business in Oxford Circus. An appendix to the 'School,' entitled the 'Musical Library,' was commenced some time after, and a catalogue was formed which includes several compositions by Stephen Heller as well as important works by other composers. They have also added to the instrumental part of their business an agency for American organs, from the manufactory of the Dominion Organ Company, Ontario, Canada. Mr. Henry Forsyth died in July 1885. Mr. James Forsyth has, in connection with the business in Manchester, maintained an important share in the management of the leading concerts of that city. Since 1901 the firm has been a limited company under his presidency. A. J. H.

FORTE, loud: an Italian word, usually abbreviated into *f*. A lesser degree of loudness is expressed by *mf—mezzoforte*; a greater one by *più f* and *ff*, *fortissimo*, and the greatest of all by *fff*, *fortississimo* as in Beethoven's Seventh Symphony (Finale), Eighth ditto (1st movement), Overture, op. 115 (at end), Leonore, No. 2 (beginning of the Presto), or at the grand climax near the close of the Finale of Schubert's Symphony in C, at the end of the extraordinary crescendo. *ffff* has been occasionally used by later composers, as in the Overture to 'Charlotte Corday,' by Benoit.

Fortepiano—afterwards changed to *Pianoforte*—was the natural Italian name for the new instrument which could give both loud and soft sounds without mechanical aid.

fp. is a characteristic sign in Beethoven, and one which he often uses; it denotes a sudden *forte* and an equally sudden *piano*. He will require it in the space of a single crotchet or even quaver, as in the Overture to Leonore, No. 2 (bars 82 *et seq.* of the Allegro, and bar 222—*fpp*). Again, he was very fond of a *forte* passage succeeded suddenly, without any *diminuendo*, by a *p*, as in bars 64 to 72 of the Allegro of the same work, where the sudden *p* on the F♯ is miraculous; or in the *reprise* of the subject after the trumpet fanfares, where if the *p* is not

observed the flute solo is overwhelmed. In a fine performance of his works half the battle lies in the exact observance of these nuances. No one before him used them as subtly as he, and no one has excelled them since. G.

FORTI, ANTON, distinguished baritone singer, born at Vienna, June 8, 1790. He made his début at Presburg with so much success that towards the end of 1807 Prince Esterhazy engaged him almost at the same time as the tenor Wild for his celebrated band. Forti soon forfeited the favour of the Prince, who suddenly enrolled him as a soldier, and only released him at the intercession of several of the nobility. He next appeared (June 29, 1811) at the Theatre 'an der Wien' as Don Juan, a part for which his very sonorous voice, commanding presence, and elevated refined style of acting eminently fitted him. In April 1813 he was engaged at the court theatre, and speedily became a favourite. Besides Don Juan he specially excelled in Figaro (Mozart and Rossini), Telasco ('Ferdinand Cortez'), etc., and in French dialogue-operas. He sang Pizarro at the revival of 'Fidelio' in 1814; and Lysiart at the first performance of 'Euryanthe' (1823). When Count Gallenberg undertook the direction of the court theatre in 1829 Forti was pensioned, and made starring tours to Prague, Hamburg, and Berlin, where he also took a short engagement. On his return to Vienna his voice had lost its charm, and his increasing corpulence spoiled his acting. He retired finally from the stage after winning the first prize in one of the public lotteries, and died July 16, 1859. C. F. P.

FORZA DEL DESTINO, LA. Tragic Opera by Verdi, libretto by Piave; in four acts. Produced at St. Petersburg, Oct. 30 (Nov. 11), 1862, and at Her Majesty's Theatre, London, June 22, 1867.

FOSTER, MURIEL, born at Sunderland, Nov. 22, 1877. From 1896 to 1900 she received instruction in singing from Miss Anna Williams at the Royal College of Music, gaining a Council Exhibition in 1896 and a scholarship in 1897. On Nov. 6, 1896, she made her début in oratorio at Bradford in Parry's 'King Saul.' On Dec. 11, 1896, she played Mrs. Quickly on the production in English of Verdi's 'Falstaff' at the Lyceum Theatre by the College students; and on March 19, 1897, sang at St. James's Hall 'My heart is weary' from Thomas's 'Nadeshda' at a students' concert there. The Chester Festival followed next in July of the same year. On March 25, 1899, she first appeared at the Popular Concerts in duets by Brahms, Cornelius, and German, in conjunction with her twin-sister and fellow-student Miss Hilda Foster (who retired from public life in July 1900 on her marriage with Mr. F. C. Bramwell). On March 15, 1900, she sang some of Elgar's 'Sea Pictures' with great success at a students' concert in the same hall. From 1899 to 1903 Miss Foster has sung at all the Three Choir Festivals; in 1902 at Sheffield and Cardiff, and 1903 at Birmingham, on the production of Elgar's 'Apostles.' She has sung in London at the Bach Choir, the Royal Choral Society, the London Symphony, and Ballad Concerts (Chappell's), the Philharmonic, etc. On June 20, 1903, she sang the Angel's music with great effect on the production of Elgar's 'Gerontius' at the Roman Catholic Cathedral, Westminster, having undertaken the part in the previous year at the Lower Rhine Festival, Düsseldorf. She has also sung in other parts of Germany, in Holland, in Russia, and the United States. Miss Foster, who is the possessor of a beautiful contralto or low mezzo-soprano of over two octaves from *g* to *b″* flat, also excels in lieder and ballads, and has rapidly attained the highest rank among the singers of her generation. A. C.

FOSTER, MYLES BIRKET, eldest son of the late Birket Foster, the artist, was born in London, Nov. 29, 1851. Upon leaving school he was articled to Mr. Hamilton Clarke for two years. He subsequently entered the Royal Academy of Music, where he studied under Sullivan and Prout (composition), Westlake (pianoforte). Pettitt (violoncello), and Horton (oboe). Mr. Foster has held organistships at St. James's Church, Marylebone, and St. George's, Campden Hill; from 1880 to 1892 he was organist of the Foundling Hospital, during which period he was also organist at Her Majesty's Theatre, and choirmaster of St. Alban's, Holborn. He is a Fellow of the Royal Academy of Music and of the Royal College of Organists, and a Licentiate of Trinity College, London, for which he has examined since 1888, being the first English examiner to visit Australasia (1895). He acted as editor to Messrs. Boosey until 1900.

Mr. Foster has composed a symphony in F sharp minor ('Isle of Arran'), overtures, a string quartet, a pianoforte trio, etc.; cantatas for children, 'Cinderella,' 'Lampblack,' 'Beauty and the Beast,' 'The Angels of the Bells,' 'The Bonnie Fishwife,' 'The Snow Fairies,' and 'The Coming of the King'; in addition to songs and part-songs, and two cantatas for male voices, 'Eudora' and 'Ode to Music,' written for Queen's College, Oxford. His church music includes two cantatas, 'The Seven Last Words' and 'Seed-Time and Harvest,' an evening service in C (men's voices), a festival service in A (Sons of the Clergy, 1883), and a communion service in B flat. He has also composed some forty anthems, of which his melodious and devotional setting of Cowper's words, 'Oh for a closer walk with God,' has justly met with wide acceptance. Mr. Foster has contributed articles on musical subjects to various magazines, and he is the author of *Anthems and Anthem Composers* (Novello, 1901). F. G. E.

FOSTER, STEPHEN COLLINS, an American

composer, of Irish descent, born near Pittsburg, Pennsylvania, July 4, 1826, entered, in 1840, the Academy at Athens, Pennsylvania, and, in 1841, Jefferson College near Pittsburg. Though not noted for studious qualities he taught himself French and German, painted fairly well, and exhibited a pronounced liking for the works of Mozart, Beethoven, and Weber. Before this he had shown his musical inclinations by teaching himself the flageolet when seven years old. His first composition, produced while at Athens, was a waltz for four flutes. His first published song, 'Open thy lattice, love,' appeared in 1842. This song is one of the very few set by him, the words of which are not his own. In 1845-46 there were published 'The Louisiana Belle,' 'Old Uncle Ned,' and O, Susanna.' The following are the titles of his ballads: 'My old Kentucky Home,' 'Old Dog Tray,' 'Massa's in de cold ground,' 'Gentle Annie,' 'Willie, we have missed you,' 'I would not die in springtime,' 'Come where my Love lies dreaming,' 'I see her still in my dreams,' 'Old Black Joe,' 'Ellen Bayne' (which, it has been claimed, provided the theme of 'John Brown's Body,' the war-song of the Federal troops 1861-65), 'Laura Lee,' and 'Swanee Riber' (more generally known as 'The Old Folks at Home' and sung all the world over).

Altogether some 175 songs are credited to him. It will be seen that some of the titles betray the influence of the African race in the country near Foster's home, and it has even been said that he was indebted for some of his themes to the untutored plantation-negroes. But it is more probable that the negro dialect was adopted in order to meet the demands of the market which happened to be open to him—the entertainments by minstrel companies of the Christy type. The appearance of the name Christy as author of 'Swanee Riber' on some publications of that song is explained by the fact that Foster consented thereto for a stipulated sum—not the first time that genius has had to sacrifice principle—though for the first edition only. Foster died in New York on Jan. 13, 1864, at the American Hotel, where he had been attacked with fever and ague.

The greater part of the material for this sketch was taken from *Music in America*, F. L. Ritter, New York, 1883. F. H. J.

FOUGHT, Henry, a printer and publisher of sheet and other music from metal type in which he claimed to have made improvements. A patent for these was obtained in 1767, in or about which year Fought set up shop at the sign of the 'Lyre and Owl' in St. Martin's Lane. He submitted specimens of his work to the Society for the Encouragement of Arts, and obtained a resolution from that body to the effect that 'his method of printing was superior to any that had been before in use in Great Britain, and that it could be performed much cheaper.' He was the pioneer of cheap music, for he sold his sheet music at 'one penny per page or eighteen for a shilling.' The typography is excellent, and undoubtedly was a great advance in the art. He appears to have aroused some ill feeling among the rest of the trade. Hawkins states that Fought was a native of Lapland, and that the 'music sellers of London copied his publications on pewter plates, and by underselling drove him out of the kingdom.' This is of course obviously wrong, for while sheet music was on an average sixpence per page, Fought sold his sheets at a penny.

Besides sheet song-music he issued collections of Sonatas by Croce, Sarti, Uttini, and Sabatini. On most of these he prints an artistic and boldly engraved woodcut design—an owl sitting over a rocky cave, with a torch and pair of scales forming part of the subject. About 1770 he sold his plant and type to R. Falkener, who, at 3 Peterborough Court and afterwards at 45 Salisbury Court, both in Fleet Street, issued sheet songs in similar style, and at the same low price. F. K.

FOUNDLING HOSPITAL. The connection of Handel with this charitable institution (founded by Captain Coram in 1739) forms a pleasant episode in the composer's life in England, and gives a signal illustration of his benevolence. Following the example of the masters of the sister art of Painting, who organised an exhibition on its behalf, and of Hogarth and others who presented paintings for its decoration, Handel on May 4, 1749, attended a committee at the Hospital, and offered a performance of vocal and instrumental music in aid of the fund for finishing the chapel. The *Gentleman's Magazine* records that 'Saturday 27th [May] the Prince and Princess of Wales, with a great number of persons of quality and distinction, were at the chapel of the *Foundling's* Hospital to hear several pieces of vocal and instrumental musick, compos'd by *George* Frederick Handel, Esq., for the benefit of the foundation: 1st, the musick for the late Fire Works and the anthem on the Peace; 2nd, select pieces from the oratorio of *Solomon* relating to the dedication of the Temple; and 3rd, several pieces composed for the occasion, the words taken from Scripture, applicable to the charity and its benefactors. There was no collection, but the tickets were at half-a-guinea, and the audience above a thousand.' [The music specially written was the anthem 'Blessed are they that consider the poor.'] The governors, under a misapprehension, imagined that he intended to present them with the copyright of the oratorio, and prepared a petition to Parliament praying that a bill might be passed to secure to them the right in perpetuity; but Handel indignantly repudiated any such intention, and the petition never reached the House. On the completion of the chapel Handel presented it with an organ, [built by a Dr. Morse of Barnet

(for specification and other interesting particulars see *Mus. Times*, for May 1902, p. 308)], which he opened on May 1, 1750, when the attendance was so large that he was compelled to repeat the performance. For his generosity Handel was in 1750 enrolled as one of the governors and guardians of the Hospital, and during every subsequent year, while his health permitted, he directed the performance of the 'Messiah' in the chapel, which yielded to the charity a net result of £7000 in all. The composer by his will bequeathed 'a fair copy of the score and all the parts of the Messiah' to the Hospital, and on his death a dirge and funeral were performed in the chapel on May 26, 1759, under the direction of his amanuensis, John Christopher Smith, who, with his full concurrence, had been appointed the first organist, [and who had conducted the performance of the 'Messiah' on May 3, three weeks after the composer's death. The artistic value of the bequest was not quite fully realised until the parts were examined by Mr. H. Davan Wetton, the present organist, and proved to be of great importance]. In July 1774 Dr. Burney proposed to the governors a scheme for forming a Public Music School at the Hospital for the training of the children; but strong opposition was raised to it, and it was never proceeded with. The chapel services were for many years noteworthy for their music, in which the professional choir was assisted by the children. [The present organist has revived the musical interest of the special services. See the *Mus. Times* for May and June, 1902.] C. M.

FOURNEAUX, NAPOLÉON, born May 21, 1808, at Léard (Ardennes), originally a watchmaker, improved the Accordion. In 1830 he settled in Paris; in 1836 bought Chameroy's organ factory, and introduced great improvements in the manufacture of all reed instruments blown by wind. At the exhibition of 1844 he received a silver medal for his 'orgues expressives.' He originated the idea of the percussion action in harmoniums. He died at Aubanton (Aisne), July 19, 1846. M. C. C.

FOURNIER, PIERRE SIMON, engraver and type-founder, born in Paris, Sept. 15, 1712, died there, Oct. 8, 1768. He greatly improved the engraving of music in France, which up to his day was still effected by punches on the model of those cut by Hautin in 1525. He replaced the lozenge-shaped notes by round ones, and made music altogether easier to read, although his notes were still thin and poor compared to those of later times. He published *Essai d'un nouveau caractère de fonte pour l'impression de la musique*, etc. (Paris, 1756), and a *Traité historique et critique sur l'origine et les progrès des caractères de fonte pour l'impression de la musique* (Paris, 1765); which, though incomplete and occasionally incorrect, contains interesting information on music printing in France. Giacomo Falconi of Venice seems to have attained a similar result almost simultaneously with Fournier. Falconi published at Venice in 1765 *Manifesto d' uno nuova impresa di stampare la musica*, etc.; and Paolucci's *Arte prattica di contrapunto* (1765), was printed in the new characters. M. C. C.

FOURTH is an interval comprising two whole tones and a semitone. It is called a fourth because four notes are passed through in going from one extreme of the interval to the other, for which reason the Greeks called it *διὰ τεσσαρῶν*—Diatessaron. The ratio of the vibrational numbers of its limiting sounds is 3 : 4. It is in fact a perfect consonance, though regarded as a discord in the old Diatonic style. C. H. H. P.

FRA DIAVOLO, OU L'HÔTELLERIE DE TERRACINE. Opéra comique in three acts; words by Scribe, music by Auber. Produced at the Opéra Comique, Jan. 28, 1830; in London —in English, adapted by Rophino Lacy—at Drury Lane, Nov. 3, 1831; in Italian, at the Lyceum by the Royal Italian Opera, July 4-11, 1857.

FRÄNZL, FERDINAND, eminent violinist and composer, born May 24, 1770, at Schwetzingen in the Palatinate. He was a pupil of his father, Ignaz Fränzl (1736–*c.* 1812) [See *Denkmäler der Tonkunst, Bayern*, vol. iii. 1], and performed, when only seven years of age, a concerto at a court-concert in Mannheim, where he entered the band of the Elector in 1782. From 1785 he began to travel with his father. During a prolonged stay at Strasburg he studied composition under Richter and Pleyel, and later under Mattei at Bologna. He appears to have been less successful at Paris than at Rome, Naples, and Palermo. [He went with the court of Mannheim to Munich in 1778, was made concert-meister in 1789, and was a conductor in the Frankfort Theatre in 1792, in which year he returned to Munich]; he took C. Cannabich's place as leader of the band, but in 1802 again started for a tour to Russia. At this period Fränzl was generally acknowledged to be one of the best of living violin players, and his compositions enjoyed great popularity. Spohr heard him in 1802 at St. Petersburg, and gives an interesting account of him:—'Fränzl was at that time the foremost of violin players in St. Petersburg. He still follows the old method of holding the violin on the right side of the tail-piece, and is therefore obliged to play with his head bent down. [VIOLIN.] He also lifts the right arm very high, and has a bad habit of raising his eyebrows whenever he plays something expressive. His execution is neat and clear. In the slow movements he performs a great many runs, shakes, and cadenzas, with rare precision and distinctness; but as soon as he plays *forte* his tone is rough and unpleasant, owing to his drawing the bow too slowly and too close to the bridge, and pressing it too much on the string. Quick passages he executes with

good intonation and very clearly, but invariably in the middle of the bow, and consequently without light and shade.' On a later occasion Spohr comments less favourably on him, and describes both his style and his compositions as old fashioned; but this only shows that Fränzl had not kept pace with the progress made in violin playing towards the end of the 18th and beginning of the 19th century, and could not stand comparison with the great masters of the Paris school, still less with Spohr himself.

In 1806 Fränzl returned to Munich, and was appointed conductor of the opera. He did not, however, give up travelling, and played at various times in Paris, Amsterdam, Vienna, and Leipzig. In 1823 he made a second journey to Italy. He retired in 1826, and went to live at Geneva, but finally settled at Mannheim, and died there in Nov. 1833. Fränzl was a fertile composer. He published nine concertos and four concertinos for the violin, one concertante and three duos for two violins, nine quartets for strings, three trios for two violins and bass, several overtures, a symphony, and a number of songs. He also wrote operas, which were performed with much success at Munich and elsewhere. [See list in *Quellen-Lexikon.*] All these works are written in an easy and correct style, but, being without higher artistic value, are now entirely forgotten. P. D.

FRAMERY, Nicolas Étienne, author and musician, born March 25, 1745; when quite young was appointed 'Surintendant de la musique' to the Comte d'Artois. He wrote both words and music of 'La Sorcière par hasard' (1783), a comic opera, and of 'Médée,' a prize libretto, which was to have been set by Sacchini, had not his death intervened. It was never performed. Framery was a skilful adapter of French words to Italian music in various 'parodies' of operas by Paisiello and Sacchini. As an author he published—A criticism on Gluck in the *Mercure* for Sept. 1776; *Le Musicien pratique* (Paris, 1786), a poor translation of Azopardi's *Il Musico prattico*, rearranged by Choron in 1824; a 'discours' on *Les rapports . . . entre la musique et la déclamation* (1802); articles on Della-Maria (1800) and Haydn (1810). He edited, from 1771 to 1778, the *Journal de Musique*, founded by Mathon-de-la-Cour in 1764; the *Calendrier musical*, 1788-89, a continuation of Mathon-de-la-Cour's *Almanach musical* (1775); and took part with Ginguené and Feytou in the musical dictionary of *l'Encyclopédie méthodique* (1791), completed in 1811 by Momigny; and in the *Dictionnaire des beaux-arts* of the Académie. He was a Correspondant of the Institut. After copyrights had been recognised by law, Framery established an agency for enforcing the rights of authors throughout France. He died in Paris, Nov. 26, 1810, leaving MS. notices of Gaviniès and various other musicians. M. C. C.

FRANC, or LE FRANC, Guillaume, the son of Pierre Franc of Rouen, was probably one of the French Protestants who fled to Geneva as an asylum from the persecution to which those who embraced the doctrines of the Reformation were then exposed. He settled in that city in 1541, shortly before the return of Calvin from Strasburg, and obtained a licence to establish a school of music. In 1542 he became master of the children and a singer at St. Peter's at a salary of 10 florins. In 1543 the Council of Geneva resolved that 'whereas the Psalms of David are being completed,[1] and whereas it is very necessary to compose a pleasing melody to them, and Master Guillaume the singer is very fit to teach the children, he shall give them instruction for an hour daily.' His pay was increased from 10 to 50 florins, and afterwards raised to 100, with the use of part of a house, but on the refusal of the Council to grant a further addition to his salary Franc left Geneva in 1545 and joined the choir of the Cathedral of Lausanne, where he remained until his death about the beginning of June 1570.

Franc's name is chiefly known in connection with the Psalter published at Geneva by Calvin for the use of the Reformed Churches. The first edition of this celebrated work appeared in 1542, containing thirty-five psalms, and was enlarged from time to time until its completion in 1562. Of this Psalter Franc has been generally believed to be the musical editor; but recent researches, especially those of M. O. Douen, show the claim set up for him to be devoid of foundation. [See Bourgeois, vol. i. p. 372.] He certainly had nothing to do with the Psalter after leaving Geneva in 1545, and although the resolution of the Council quoted above may appear to indicate an intention of employing him to adapt melodies to some of the psalms then newly translated by Marot, there is no evidence that this intention was ever carried into effect.

Franc, however, did edit a Psalter. The church of Lausanne had on several occasions shown a spirit of independence of that of Geneva, and at the time of Franc's arrival sang the psalms to melodies by Gindron, a canon of the cathedral, which differed from those in use at Geneva. As early as 1552 Franc appears to have been engaged on a new Psalter, for in that year he obtained a licence to print one at Geneva, there being then no press at Lausanne. No copy of this book, if it was ever published, is known to exist, but the terms of the licence[2]

[1] This refers to the additional versions then being written by Marot.

[2] This important document, which has only lately been discovered in the registers of the Council of Geneva, deserves to be quoted in full:—

Jeudi 28 iuillet 1552.

. . . Sur ce qui le dit maistre Jacques, ministre de Lausanne, a proposé que à Lausanne ilz ne se sont peult estre d'accord de chanter les pseaulmes changés icy par maistre Loys Bourgois, ny ceulx qu'il a myst en chans du sieur de Beze, ilz sont en propos de faire imprimer les pseaulmes translatez par Marot en leur premier chant, et aussy ceulx qu'a translaté le sieur de Beze en vng chant que y a mis le chantre de Lausanne pour les chanter, ce qu'ilz n'hont ausé faire sans licence. Pourquoy il a requis permettre les imprimer icy. Arreté que, attendu que c'est chose raissonable, il leur soit permys.

show that it consisted of the psalms of Marot with their original melodies, and the thirty-four psalms translated by Beza the year before, to which Franc, probably in rivalry with Bourgeois, had adapted melodies of his own. At any rate, in 1565, three years after the completion of the Genevan Psalter, that of Lausanne appeared, under the following title:—'Les Pseaumes mis en rime françoise par Clement Marot et Theodore de Bèze, auec le chant de l'eglise de Lausane [*sic*] 1565. Auec priuilege, tant du Roy, que de Messieurs de Geneue.'

In the preface Franc disclaims any idea of competition with those 'who had executed their work with great fidelity,' or even of correcting 'what had been so well done by them.' He gives no intimation that he had himself taken any part in that work, and states, with respect to his own book, that in addition to a selection of the best tunes then in use in the church of Lausanne as well as in other Reformed Churches, he had supplied new ones to such of the psalms, then recently translated, as had not yet been set to music, and were consequently sung to the melodies of psalms in the older editions of the Psalter. He adds that his object was that each psalm should have its proper tune, and confusion be thereby avoided.

Stress has been laid by some writers who attributed the Genevan melodies to Franc, on a letter written to Bayle by David Constant, professor of theology at Lausanne at the end of the 17th century, in which he states that he had seen a certificate bearing date Nov. 2, 1552, and given by Beza to Franc, in which Beza testifies that it was Franc who had first set the psalms to music. Constant adds that he himself possessed a copy of the psalms in which the name of Franc appeared and which was printed at Geneva under the licence of the magistrates of that city. Baulacre, however, writing in 1745 in the *Journal Helvétique*, after investigating the accuracy of Constant's statement, shows that the account he sent to Bayle of Beza's letter was erroneous, as that letter contained no reference to the authorship of the melodies. Even had it done so, we have seen above that in that very year Franc had obtained a licence to print a collection of psalms for Lausanne, and the Psalter to which Constant refers is that of 1565, also compiled for local use.

In this latter collection twenty-seven melodies are composed or adapted by Franc to the psalms left without them in the Geneva Psalter of 1562, (51,[1] 53, 62, 63, 64, 65, 66, 67, 68, 70, 71, 76, 77, 78, 82, 95, 98, 100, 108, 109, 111, 116, 127,[1] 139, 140, 142, and 144), nineteen are selected from the tunes previously in use at Lausanne, and the rest are taken from the Genevan Psalter.

[1] Psalms 51 and 127 had proper tunes in the Genevan Psalter, to which Beza's versions of 69 and 117 were respectively sung. Franc retained the Genevan melodies for the later psalms, and adapted distinct tunes to the older ones. Of these tunes, that which Franc set to 51 was its original melody, to which Bourgeois adapted it in 1542, but which he had replaced by another in 1551.

Before long, however, Lausanne followed the example of the other Reformed Churches, and the Psalter of Franc was superseded by that of Bourgeois.

Franc's tunes are of small merit. Some specimens of them are given by Douen in his *Clement Marot et le Psautier Huguenot*, 2 vols. Paris, 1878-79, from which the materials for this article are chiefly derived. See also Bovet, *Histoire du Psautier des églises reformées*, Neuchatel et Paris, 1872; G. Becker, *La Musique en Suisse*, Genève et Paris, 1874; Riggenbach, *Der Kirchengesang in Basel;* and six articles by the present writer in the *Musical Times*, June-November 1881. [See PSALTER, and *Riv. Mus. Ital.* vol. vi. p. 496.] G. A. C.

FRANCESCA DA RIMINI. (i.) Tragic opera in three acts, by Hermann Goetz; the first two acts finished, and the third sketched, by the composer; completed by Ernst Frank, and produced at Mannheim, Sept. 30, 1877. (ii.) Grand opera in four acts, by MM. Barbier and Carré, music by Ambroise Thomas; produced at the Grand Opéra, Paris, April 14, 1882. (iii.) A symphonic poem by Tchaikovsky, called 'Orchestral fantasia' and numbered op. 32; written and first performed in 1876; first played in England at the Cambridge University Musical Society's concert, June 12, 1893, when the degree of Mus.D. was conferred on the composer. M.

FRANCESINA, LA, ELISABETH DUPARC, DETTA, a French singer, who sang for some years in Italy, where she acquired her sobriquet. In the autumn of 1736 she came to London, and 'had the honour to sing (with Merighi and Chimenti) before her majesty, the duke, the princesses at Kensington, and met with a most gracious reception; after which the *Francesina* performed several dances to the entire satisfaction of the court.' (*London Daily Post*, Nov. 18.) The accomplishment of dancing, however, she does not seem to have kept up. Her name as a public singer is not found until Jan. 7, 1738, when she played Clotilda in Handel's 'Faramondo' on its first representation, the first part ever written for her by the great German. She seems to have had an easy, warbling style of execution, which Burney calls 'lark-like,' and pleased both composer and public. La Francesina appeared again in Pescetti's 'Conquista del Vello d'Oro' and in Handel's 'Serse' that same year; and in 1739 she took part in 'Acis,' 'Saul,' 'Israel,' and 'Dryden's Ode.' In 1740 she reappeared in 'L'Allegro,' and in 'Imeneo' by the same composer; the latter 'advertised for Nov. 29, but deferred for near a fortnight, on account of the indisposition of Francesina' (Burney). On January 10, 1741, she sang in Handel's last opera 'Deidamia,' in which, according to Burney, '*Nascondi l'usignol*, which finishes the first act, is a light, airy, pleasing movement, suited to the active throat of the Francesina.' In 1744

and 1745 she took part in Handel's 'Joseph,' 'Belshazzar,' and 'Hercules'; she had quitted the stage, 'but constantly attached herself to Handel, and was first woman in his oratorios for many years' (Burney). She enjoys the doubtful honour of having sung the four Italian songs which Handel was compelled to 'intermix' in 'Israel in Egypt' in 1739, to carry it over a third performance. In 1737 her portrait was engraved by J. Faber in mezzotint from a painting by George Knapton. It is a half-length, and represents a pleasant, intelligent woman; she holds a book, on a page of which are the words, 'Ua sei amabile sparanza,' the beginning, probably, of one of her favourite songs. J. M.

FRANCHETTI, Alberto, born of wealthy parents at Turin, Sept. 18, 1860; studied at first under Nicolò Coccon and Fortunato Magi, subsequently under Draeseke at Dresden and at the Munich Conservatorium. From his German teachers he seems to have learnt very great skill in the manipulation of masses of sound, such as are required for operas on a large scale; yet the thoroughness of his training has not secured him a very high position in the estimation of the best Italian critics, although his private means have enabled him to command the attention of the public, and to have his works produced under the most favourable conditions. His operas are five in number; 'Asrael,' in four acts, was produced at Brescia in 1888, and afterwards at the Scala, and elsewhere, with great success. His 'Cristoforo Colombo,' in four acts, produced at Genoa in October 1892, contains an admirably worked ensemble in the first act, but appeals to the public rather by its scenic panorama of the voyage than by anything else; the three-act 'Fior d'Alpe' (Milan, 1894) and the three-act 'Signor di Pourceaugnac' (Milan, 1897), were less successful than 'Germania,' (Milan, 1902). See a detailed analysis in the *Riv. Mus. Ital.* ix. 377. A symphony in E minor completes the number of his works.

Some critics have called Franchetti the Meyerbeer of modern Italy, and there are certain points of resemblance between the two, besides the accident of their outward circumstances, circumstances, it may be hinted, that are not always entirely advantageous in the long run. It is true that Franchetti is at his best when there are many characters on the stage, or when inspired by some spectacular effect on the scene. His music is not profoundly emotional, not very often distinguished, but it is not generally realised that his workmanship is sound and scholarly, and the fact that he owes little or nothing to Wagner, and stands entirely apart from the hysterical school of Young Italy, should not be reckoned against him. M.

FRANCHOMME, Auguste Joseph, born at Lille, April 10, 1808, learned the rudiments of the violoncello from a player named Mas, entered the Paris Conservatoire in March 1825, at once attracted the notice of Levasseur and Norblin the Professors, and in his first year took the first prize for his instrument. He then joined the orchestra of the Ambigu-comique, in 1827 that of the Opéra, and in 1828 fixed himself at the Théâtre des Italiens. In conjunction with Alard and Hallé he formed an annual series of classical quartets, which attained the highest rank. Franchomme was in Paris at the time of Mendelssohn's visit, in the winter of 1831, and is mentioned by Hiller (*Mendelssohn*, 1819) as one of the artists who most warmly appreciated him. They were just of an age, and knowing Mendelssohn's predilection for the violoncello it is not difficult to believe that they often played together. He was very intimate with Chopin, and was one of those who witnessed his last sufferings and received his latest words. Franchomme travelled very little, and a visit to England in 1856, when he played at the Musical Union, appears to be almost his only journey. He was Professor at the Conservatoire from Jan. 1, 1846. He died in Paris, Jan. 22, 1884. Franchomme's playing was remarkable for a command over technical difficulties of all kinds, very pure intonation, and a beautiful and expressive singing tone. He was the possessor of the violoncello of Duport, said to be the finest Stradivarius in existence, for which he gave £1000. His compositions consist chiefly of potpourris and variations, with one concerto. He also published with Chopin a Duo on airs from 'Robert le Diable,' another with Bertini, and a third with Osborne. His Adagios are much esteemed. [A comparison of the two versions of Chopin's Polonaise for pianoforte and violoncello, in C, op. 3, will show how great were the improvements in the violoncello part, which were due to Franchomme.] G.

FRANCISCELLO, a great violoncellist of the early part of the 18th century, but of whom neither the date nor place of birth or death are known, and who in fact would have left no trace of his existence but for the fact that he was heard by Quantz, Benda, and Geminiani. He seems to have first appeared in Rome shortly after the death of Corelli (1713). He was at Naples in 1725; Quantz heard him there, and Geminiani, there or in Rome, was witness to the rapture with which the great Alessandro Scarlatti accompanied him on the harpsichord. In 1730 he was at Vienna, where F. Benda, then a young man, was so struck by his style as to say that it influenced him for ever after. He is heard of afterwards at Genoa, where he may have died about 1750, but nothing is known. G.

FRANCK, César, born Dec. 10, 1822, at Liège, studied music at first at the Conservatoire of that place. Coming to Paris at the age of fifteen, he entered the Paris Conservatoire (then directed by Cherubini) in Oct. 1837, where he was in Leborne's class for counterpoint and fugue, and

that of Zimmerman for piano. In 1838 he gained an *accessit* in the former subjects, and subsequently the first prize in the latter. He obtained this last by a feat rare in the annals of the institution; having played Hummel's concerto in A minor to perfection, he was set to read a passage for the first time, when he transposed it to a third below the original pitch, without hesitation. The jury made him *hors concours* and awarded him a first *prix d'honneur*. Having entered the composition class of Berton in 1838, he carried off the second prize in the following year, and, in 1840, the first prize for counterpoint and fugue. In October 1840 he entered the organ class of Benoist, and obtained the second prize in 1841. The registers of the institution show that he left it voluntarily in April 1842, his father unfortunately exercising his parental authority by forbidding him to enter for the *prix de Rome*. As Franck junior had no taste for the musical acrobatics of the typical young prodigy, he threw himself ardently into the work of composition and of teaching. At first he was for two years in his native Belgium, but returned to Paris, where he established himself with his family in 1844. From that time he led a busy and laborious life, his strong constitution, courage, and tenacity of purpose enabling him to give as many as ten lessons of an hour every day in piano, accompaniment, and harmony, as well as to lay the foundations of the gigantic amount of composition he left behind him. Amidst all this work, his life was regular and tranquil. In 1858 the post of organist at Ste. Clotilde was offered him, and he filled it for thirty-two years, until his death. It is easy to picture him seated at his organ, giving to a circle of faithful admirers a foretaste of some great work, perhaps one of his motets, remarkable for the wealth and variety of their polyphonic combinations. A portrait painted from life by Mlle. Jeanne Rongier[1] shows him at the organ, leaning a little forward, with his left hand on the keys, and his right on one of the stops. It is a three-quarter face, with the eyes half-closed, as though the master were listening to mystic chants whispered in his ear from above. His peculiar charm was not merely the masterly authority of his teaching, but goodness of heart, and a kindly manner that never grew less during the long years of his professional career.

Naturalised a Frenchman in 1870, César Franck took charge of the first organ class of the Paris Conservatoire on Feb. 12, 1872, about thirty years after his retirement from the famous school. From that time his life was devoted exclusively to teaching and composition. The long hours of his professional work were never allowed to interfere with the creative side of his labours, and the extent of his compositions is a sufficient proof of his incessant activity. If a musical idea occurred to him in the course of teaching, he would rise quietly and write a few lines, then resuming the interrupted lesson. He became the centre of a group of young composers who were anxious to study orchestral composition without passing through the Conservatoire, where no attention was paid to the symphonic style, care being only given to operatic composition.

Though the earlier masters were his especial favourites, yet he was a great admirer of the symphonic composers, of Haydn, Mozart, Beethoven, Schubert, and Schumann. Equally keen was his enthusiasm for the masterpieces of dramatic art, whether those of Gluck, Weber, Wagner, and Berlioz, or of the old French operatic writers, Grétry, Monsigny, and, above all, Méhul, from whose 'Euphrosine et Coradin' he was fond of singing the fine duet of jealousy. His mind, accessible to all kinds of beauty, open to every innovation, free from all jealousy, welcomed with the utmost warmth the compositions of his contemporaries who, more fortunate than himself, reached worldly success. Another characteristic trait was a kind of indifference to the plaudits of the multitude. The few came to him, understood and admired him; those performances of his works which came up to his ideal delighted him, and that sufficed. Apparently he was not even conscious of the indifference for his work displayed by the public; he lived in a world of his own, too remote for such things to touch him. Art for Art's sake was his heaven.

Thanks to his robust health, César Franck passed through life untouched by physical trouble. He lived to a green old age, and when attacked by the pleurisy from which he died, on Nov. 8, 1890, he was still in full vigour. In the dusk of a rainy day a few faithful friends followed his body to the tomb. There was no ceremonious funeral, no official discourse of eulogy, merely a few touching words spoken by a friend and a disciple. Such a funeral befitted the modesty of his whole life.

César Franck, whose work reminds us not a little of that of Sebastian Bach—due proportion being kept between the two—was like an artist of another age, traversing the ordinary paths of life like a dreamer, unconscious of what might be passing around him, and living for his art alone, and for the few disciples who were destined to be the apostles of a new religion. In the present day it is clear that the work of this single-minded follower of truth, this 'primitif' born out of due time, has borne worthy fruit, and is destined to grow and spread still farther. His artist-soul, though full of gentleness and goodness, was never appealed to by worldly grandeur; he lived apart from mortals in a super-terrestrial world. Thus he could bear the disdain or in-

[1] Reproduced in Daniel Gregory Mason's *From Grieg to Brahms*, New York, 1902.

CÉSAR FRANCK

difference with which his early work was received by the crowd ; and in general he seemed absolutely unconscious of their indifference. His daily work, too, occupied his time so fully that he was in a manner a stranger in the world in which he lived. Like all great geniuses he had a lofty ideal, together with a naïve satisfaction in what he had accomplished. 'You will see,' he would say, 'I have just finished something that is very beautiful.' The author of 'Les Béatitudes' might well say that. Such a revolt as that which Berlioz made against the judgment of his contemporaries was foreign to Franck's nature, which was amply satisfied with the appreciation of the faithful few. His nature was of a rare and fine type, wholly devoted to what was good and beautiful.

What was it that was so new and penetrating in Franck's actual teaching? He introduced his pupils at once to a prodigious wealth of novel harmonies, and allowed them to apply their harmonic originality to the composition of oratories, symphonies, and chamber music, with a happy audacity in combinations of tone, a broad amplitude of development, and very characteristic tone-colouring. He was not merely a pioneer of high musical culture, but he appeared at a time when the need of a much more profound as well as a more detailed study of the symphonic and polyphonic arts was beginning to make itself felt. The knowledge of the masterpieces of the symphonic composers, which were just then beginning to be heard at the larger concerts, opened a new path for the younger French writers, and consequently imposed upon them a special kind of study. César Franck, with his natural bent towards the richness and amplitude of the symphonic form, came at the psychological moment to be the master of what might be called the higher study of musical rhetoric. With characteristic graciousness he welcomed the generation that was seeking, in the intimate union of instruments with voices, in a more elaborate orchestration, for the rejuvenation, if not the complete abandonment, of the ancient formulæ, and for a form in closer accord with modern tendencies. Among those who received instruction or counsel from him, who were his disciples and friends, and who gained from his teaching a marvellous skill of technique as well as a rare ease and certainty in handling the orchestra, may be mentioned Alexis de Castillon, Vincent d'Indy, Henri Duparc, Ernest Chausson, Arthur Coquard, Samuel Rousseau, G. Pierné, Augusta Holmès, Charles Bordes, Guy Ropartz, and Camille Benoit.

The central character of his music may be described by the single word 'mysticism.' This was a region unexplored in music before his time, and all his works bear strong traces of the quality. Before him, music was scholastic, naïve, graceful, dramatic, emotional, passionate, descriptive, or picturesque, but this new quality had been unrevealed. Even the mysticism of 'Parsifal' has little in common with that of 'Les Béatitudes.' The nature of César Franck, who passed so much of his time in divine contemplation, under whose fingers the organ of Ste. Clotilde conversed rather with angels than with men, led him towards this new development of his beloved art ; well was he called the 'Angelic Doctor' or the 'Pater Seraphicus' of music, for his life and his art were closely allied. In seeking for an analogy from the history of painting, the names of Fra Angelico among the ancients, and of Puvis de Chavannes among moderns, occur to the mind.

A close study of his music reveals certain especially characteristic marks of his musical personality, such as his revival and enrichment of the ancient form of canon, his frequent employment of chromaticism, his fondness for successions of the smallest intervals, his habit of modulating by thirds, his use of unison in chamber-music, of conflicting rhythms and syncopations ; and lastly, the suggestion of mystery resulting from the introduction of silences. On the other hand, adverse criticism might point to the length which disfigures many of his compositions, and to the monochrome tints of his orchestration. In spite of these defects the work of Franck reveals a beauty which, at first perceived by a few minds during the master's life, became, and will become, as time goes on, ever more and more clear to the world in general. As Franck's outward aspect was full of character and nobility, so his music was full of individuality, and is of great importance in the history of the art in the 19th century. The master employed every form of the art: oratorios, cantatas, Biblical scenes, symphonies, symphonic poems, operas, chamber music, music for organ and for piano, and vocal works. On the one hand, his sacred music, such as his oratorios and organ pieces, has, as it were, put new life into the older forms of music, notably that of Bach ; and on the other he gave a vigorous impulse to chamber music, enlarging its scope as well as that of piano music and song. Lastly, he left two operas (in addition to 'Le Valet de Ferme,' written in 1848 for the Opéra National, under Adolphe Adam), 'Hulda' and 'Ghisèle,' both of which contain beauties quite worthy of the author of 'Les Béatitudes.' As has already been said, all are united by the common bond of mysticism.

His first compositions, it is true, do not give any definite signs of the tendencies that afterwards distinguished him. The three trios for piano and strings (op. 1) written in 1842, the fourth trio in B minor (1843), the pianoforte duet on 'God save the King' (1843), the 'Grandes Fantaisies' for piano on themes from Dalayrac's 'Gulistan' (opp. 11 and 12, 1844) do not in any way foreshadow the glories of

the quintet for piano and strings (1880), the string quartet (1889), or the sonata for piano and violin (1886). But in 'Ruth,' notwithstanding the fact that it was written as early as 1846, the genius and personality of the composer begins to assert itself. The adorable naïveté and limpid clearness of this 'Églogue biblique' procured it the approval of Spontini and Meyerbeer when, on Jan. 4, 1846, it was performed for the first time at the Conservatoire. Its instrumentation is sober and graceful, and its melodies tender and simple. The finest passages are the picturesque prelude, the chorus of Moabites, the march in G minor, Ruth's air in the first part, the brilliant and original chorus of reapers, and the charming duet between Ruth and Boaz in the second, and the whole of the final scene. Franck's other works for solos, chorus, and orchestra, are 'Rédemption,' a 'poème symphonique'; and 'Les Béatitudes,' an oratorio; 'Rebecca,' a Biblical idyll; and 'Psyché,' a 'poème symphonique.' The first of these was finished Nov. 7, 1872, and first performed at the Concert National (Théâtre de l'Odéon), on April 10, 1873, under the direction of Colonne. The publisher, Georges Hartmann, who had discerned the composer's genius and had brought out 'Ruth,' was the chief promoter of 'Rédemption,' the words of which, by M. Édouard Blau, had originally been offered to M. Massenet. If 'Rédemption' does not reach the height of 'Les Béatitudes' (and certain choruses are not free from banality), all the mystic portion of the work is absolutely delicious. For the choruses of angels, the airs of the archangel, and the admirable number in which is painted the joy of the world at the advent of Christ, César Franck found an inspiration full of purity and simple grace.

'Les Béatitudes,' written in 1870, and published in 1880, is a splendid oratorio of solid architectural design, and infinitely superior to a good many works which at the time of their appearance enjoyed a rapid but ephemeral success. The scheme is a poetic paraphrase on the Gospel by Mme. Colomb, and the work opens with a prologue in which the various elements in the composition are musically combined with masterly skill. Satan, a figure of Miltonic grandeur, vanquished by Christ; humanity, assailed by every terrestrial misery, regenerated by the Redeemer,—such is the main thread of the poem which Franck has enhanced by the happiest effects of contrast, by a style of orchestration that is wonderfully skilful, although rather concise, by an astonishing truthfulness of dramatic expression, by melodic richness, and by the clever union of voices and instruments. What accents of tenderness and of divine compassion in the voice of Christ preaching the glad tidings! What bitterness in that of Satan struggling until he is finally overcome! and what dramatic force in his attack, notably in the eighth beatitude! How happy are the effects due to orchestral and vocal polyphony! Especially admirable is the careful gradation between the sad and vehement choruses. In the famous vocal quintet, 'Les Pacifiques' in the seventh beatitude, how the expression of the voices is intensified in the orchestra! The third beatitude is a masterpiece, in which a mother weeps over an empty cradle, an orphan mourns its misery, wedded pairs lament their separation, and slaves sigh for liberty. Throughout, the voice of Christ soars through the serene air; finally, the crown is placed upon the work in the grand hosanna with which the eighth beatitude closes.

In 'Rébecca,' a Biblical idyll for solo, chorus, and orchestra (on a poem by Paul Collin), dating from 1881, César Franck returned to the style of 'Ruth,' his first work of this kind. It is a short scene in which the composer, while choosing the tonality of oriental scales, has invented delicate modulations, delicious effects of colour, and graceful themes. The introductory chorus, 'À l'ombre fraîche des palmiers,' and the chorus of camel-drivers, are highly picturesque.

'Psyché,' set to words by MM. Sicard and Fourcaud in 1887-88, was first performed at the Concerts du Châtelet, under M. Colonne's direction, Feb. 23, 1890. From the first pages the hearer is impressed by the mastery of the writing and the nobility of the ideas. He will admire the 'Sommeil de Psyché,' a prelude full of a mysterious language, and a piece that will remind him of Wagner, not in actual material, but in the theories and style. He will recognise the composer's talent in translating the strange sounds that precede the scene in which Psyche is carried by the zephyrs into the gardens of Eros; he will find an exquisite tenderness in the third theme of Psyche reposing amongst the flowers, and saluted as sovereign by the powers of nature; he will detect a certain relationship between the phrase sung to Psyche to the words, 'Souviens-toi que tu ne dois jamais de ton mystique époux connaître le visage,' and the phrase uttered by Lohengrin to Elsa in a situation exactly parallel; and he will welcome and retain many other pages of the score. But he will regret the lack of variety and the length which robs the work of part of its charm.

Franck's symphonic and chamber music, though of no great extent, yet contains things that are very remarkable; with the exception of the four trios already mentioned, it was composed between 1875 and 1890. Like the vocal works, these compositions are full of mystic character, and the employment of the canonic and chromatic style is perhaps almost too constant. There are 'Les Éolides,' a symphonic poem (1876), with its thrilling aerial sounds; 'Le Chasseur maudit' (1883), with its striking appeal to the feeling of terror; 'Les Djinns,' symphonic poem for piano and orchestra (1884),

a charming fantasia with most ingenious developments; the 'Variations symphoniques' for piano and orchestra (1885), an example of splendid climax, and lastly the symphony in D minor (1889). If the last work is separated from the classical models by its introduction of the employment of the principal theme in all the movements, and by the freer development of the material, it has a breadth of style in the orchestration that carries us back to Beethoven. There is also a remarkable attempt to treat the families of the instruments in separate groups. An ecstatic sentiment is reflected throughout the symphony, but particularly in the *lento* that precedes the *allegro non troppo*. The opening theme of this *allegro* is of a free and flowing beauty. Interrupted by the recurrence of the *lento*, it is definitely established in order to lead to a vigorous conclusion. It is open to criticism on account of a too frequent use of chromatic writing, and of tremolo effects in the string parts. The second movement, *allegretto*, has a charming theme for cor anglais, supported by harps and strings, *pizzicato*; the following theme, with its rapid motion given out at first by the muted strings, has some likeness to a dance of sylphs; then the melancholy phrase of the cor anglais returns, and the two are heard in combination. The finale is in D major, and amongst various themes, some of them taken from previous movements, there is one that has the character of a carol (or 'Noël'), which gains special prominence at the close.

Franck's three great productions in chamber music are the quintet for piano and strings, the sonata for piano and violin, and the quartet for strings. The style of all is very modern, and their character full of originality. The composer's mastery of resource is shown in the first, in which, after a first movement built more or less regularly on two themes, an andante follows, the theme of which is given out successively by the violin, the quartet of strings, and lastly the piano; the finale is of surpassing brilliance. The well-known violin sonata begins with a passage of the most dreamy ecstasy, followed by a dashing *allegro* the passionate vehemence of which reminds the hearer of passages in Schumann's sonatas; a noble recitative leads to the youthful gaiety of the finale, which might be paraphrased from some old carol. The quartet is the master's swan-song, and was composed only a few months before his death.

It was natural that an artist who had passed so many years of his life as an organist, should leave fine compositions for that instrument. In a set of pieces written in 1863-65, we must place in the first rank a 'Prélude, Fugue et Variations,' and a Fantasia in C major. In these two Franck displays the rarest qualities of genius, such as the freedom and admirable development of his themes, with due regard to a conciseness which is not always his. He is as completely master of the resources of the organ as of those of the orchestra. When he avoids giving too free a rein to his inspiration and does not allow himself to develop his ideas at too great length, we find, as in op. 18, the 'Prélude, Fugue et Variations,' a justice of design, a perfect proportion, and the charm of ideas skilfully presented. An infinitely tender, mystic, and graceful character breathes from the *andantino*, which returns at the close in the variations. In the Fantasia in C the composer proves his descent from Sebastian Bach. In the *poco lento*, a theme of most reposeful character enshrines a canon upon which is superimposed a very expressive subject. Both themes in the *allegretto cantando* in F minor are of exquisite delicacy. The *adagio* in C minor, beginning with a powerfully dramatic crescendo, has a theme that is absolutely seraphic, and is made still more emotional by the use of the 'vox humana' stop. The 'Prière' in C sharp minor (op. 20) and the 'Grande Pièce symphonique' in F sharp (op. 17) must be spoken of with some reserve, though they, too, present striking analogies with the work of Bach, pages of eloquent beauty and of wonderful power, notably in the fugue and chorale which terminates the latter work. The composer has not always succeeded in restraining his imagination; he talks, as it were, too long with his beloved instrument, forgetting that he wrote for a public which demands conciseness in organ pieces as much as in symphonic works. They are indeed symphonies, and are divided into distinct sections, like the work in F sharp.

To the pieces for organ or harmonium may be added the sacred works, such as the beautiful mass for three voices composed in 1861, to which the composer added the famous 'Panis angelicus' in 1872, the motets for the office of the 'Salut,' the offertorium and the hymn.

The pianoforte works are not numerous, but the 'Prélude, Choral et Fugue,' dating from 1884, and the 'Prélude, Aria et Finale' (1889), are both important. The secular works, whether for solo or chorus, are even more noteworthy. There are some charming things, some of which have enjoyed great success, especially since the master's death. Suffice it to mention the 'Mariage des Roses,' 'Les Cloches du Soir,' and 'La Procession,' among the songs; and 'La Vierge à la Crêche,' 'L'Ange gardien,' 'Les Danses de Lormont,' 'Soleil,' 'Premier sourire de Mai,' among the part-songs for female voices.

In the last period of his life, Franck wrote two operas: 'Hulda,' in four acts, on a poem by Grandmougin, after B. Björnson, written in 1879-85, and 'Ghisèle,' also in four acts, to a poem by G. A. Thierry, composed in 1888-89. The orchestration of the last was only finished as far as the end of the first act; the others were orchestrated by MM. P. de Bréville, E. Chausson, Vincent d'Indy, Samuel Rousseau, and Arthur Coquard. Both operas were first produced at

the theatre of Monte Carlo ; the first on March 4, 1894, and the second on April 6, 1896. There are a few unpublished compositions.

In his capacity for work, his prodigious facility, his profound harmonic science, in the loftiness of his ideals, and in his steadfast faith in his art, César Franck is a singularly fascinating figure among musicians. His characteristic creations, a rich treasury whence his successors will draw inspiration for many a year, ensure him a high place among the composers of the 19th century.

The list of his works is as follows :—

Op.
1. Three trios for piano and strings (F sharp, B flat, B minor). 1842.
2. Fourth trio for piano and strings, in B major. 1843.
3. Églogue for pf. 1843.
4. First duet for pf. on 'God save the King.' 1843.
5. First Caprice for pf.
6. Andantino quietoso for pf. and vln.
7. Souvenir d'Aix la Chapelle, for pf.
8. Four songs of Schubert, transcribed for pf.
9. Ballad for pf. 1844.
10. Solo for pf. with quintet accompt.
11. First Grande Fantaisie for pf. on Dalayrac's 'Gulistan.' 1844.
12. Second ditto ditto. 1844.
13. Fantaisie for pf.
14. Duet for piano and vln. on Dalayrac's 'Gulistan.'
15. Fantaisie for pf. on two Polish airs. 1845.
16. Fantaisie for organ.
17. Grande Pièce symphonique for organ.
18. Prélude, Fugue et Variations, for organ.
19. Pastorale for organ.
20. Prière for organ.
21. Finale for organ.
22. Quasi Marcia for harmonium.

WORKS DATED, BUT WITHOUT OPUS NUMBERS.

Ruth, 'églogue biblique,' in three parts, for soli, choir, and orch. 1846.
Le Valet de Ferme, opera. 1848.
Les Béatitudes (words by Mme. Colomb), oratorio for soli, choir, and orch. 1870-80.
Rédemption, 'poème-symphonique,' in two parts (Ed. Blau), for soli, choir, and orch. 1872.
Les Éolides, 'poème-symphonique.' 1876.
Hulda, 'drame lyrique,' in four parts and a prologue (words by Grandmougin, after Björnson). 1879-85.
Quintet in F minor, for pf. and strings. 1880.
Rébecca, 'scène biblique,' for soli, choir, and orch. 1881.
Le Chasseur Maudit, 'poème-symphonique,' after Bürger's ballad, for orch. 1884.
Les Djinns, 'poème-symphonique,' pf. and orch. 1884.
Morceau symphonique de 'Rédemption,' new version. 1885.
Variations symphoniques, pf. and orch. 1885.
Sonata in A for pf. and vln. 1886.
Psyché, 'poème-symphonique,' for choir and orch. 1887-88.
Ghisèle, opera in four acts (words by Gilbert Augustin Thierry). 1888-89.
Symphony in D. 1889.
Quartet for strings in D. 1889.

WORKS PUBLISHED WITHOUT DATE.

Andantino for vln. with pf. accompt.
Mass for three solo voices, choir, and orch.
Hymne, to words of Racine, for four-part male chorus.
Five pieces for harmonium.
Fifty-nine Motets for harmonium.
Nine Grandes Pièces for organ.
Three Offertoires for soli and choir.
Four motets.
Salut, comprising three Motets with organ accompt.
Veni Creator, duo for tenor and bass.
Ave Maria.
O Salutaris (extr. from the Mass, for bass solo).
Chants d'Église, harmonised in three and four parts, with organ accompt.
Prélude, Choral et Fugue, for pf.
Prélude, Aria et Finale, for pf.
Transcriptions for organ (from ancient compositions).
Second duet for piano on 'Lucile.'
Sonata for pf.
Les Trois Exilés, 'chant national,' for bass and baritone voices.
Le Garde d'Honneur, 'Cantique sacré.'
Six Duos for equal voices (solo or choral), with pf. accompt. ; L'Ange gardien, Aux petites enfants, La Vierge à la Crèche, Les danses de Lormont, Soleil, La chanson du Vannier.

SONGS.

La Procession (words by Brizeux), with orch.
Les Cloches du Soir (Mme. Desbordes-Valmore).
Le Mariage des Roses (E. David).
L'ange et l'enfant (J. Reboul).
Robin Gray (Florian).
Souvenance (Chateaubriand).
Ninon (A. de Musset), for tenor and soprano.
Passez, passez toujours (V. Hugo).
Aimez (Méry).
Roses et Papillons (V. Hugo).
Lied (Lucien Pâté).
Le Sylphe (A. Dumas), with violoncello accompt.
Nocturne (L. de Fourcaud).
Premier Sourire de Mai (V. Wilder), for three female voices. Paris (1870).

H. I.

FRANCK, Melchior, prolific composer of church music and lieder, born, according to Wetzler's *Lieder-Historie*, at Zittau on the borders of Saxony and Silesia about 1573, lived at Augsburg in 1601 and Nuremberg in 1602, and was capellmeister to the Duke of Coburg from 1603 until his death, June 1, 1639. [The *Quellen-Lexikon* contains a list of over seventy works by him, now become very scarce.] He did much to improve the instrumental accompaniment of songs, a point to which little attention was paid before his day. Döring (*Choralkunde*, p. 84) gives a list of thirteen of his Chorales which survived him, among which 'Jerusalem, du hochgebaute Stadt' and 'Wenn ich in Todesnöthen bin' are still sung. He is also said to have written the words of several hymns, 'O Jesu, wie ist deine Gestalt,' 'Der Bräutigam wird bald rufen,' etc. [A four-part madrigal, 'Kein Lieb' ohn Leid,' is given in the first volume of *Arion*, from his *Musicalischer Bergkreyen*, 1602, and a selection of instrumental works in the *Denkmäler Deutscher Tonkunst*, vol. xvi. F. G.

FRANCO, Magister (Franco de Colonia ; Franco Leodiensis ; Franco Parisiensis ; Franco of Cologne ; Franco of Liège ; Franco of Paris).

Though the claim of Magister Franco to the honour of having written the earliest known dissertation upon Measured Music has been very generally admitted, the confusion which prevails with regard to his personal identity has been increased rather than diminished by the endeavours of successive historians to set the question at rest. If we are to accept the contradictory theories that have been handed down to us, since the times of Burney and Hawkins, we shall find it impossible to avoid the conclusion—either, that three distinct Francos flourished at different epochs, in Cologne, Liège, and Paris ; or, that a certain Magister Franco held scholastic appointments in those three cities, at impossibly distant dates.

The chief source of uncertainty is, the very grave doubt as to whether the writer of the famous musical tracts is, or is not, identical with a certain philosopher, named Franco, who was equally celebrated, in the 11th century, for his knowledge of Mathematics, Alchemy, Judicial Astrology, and Magic.

Sigebertus Gemblacensis,[1] who died in 1113, tells us that this learned writer dedicated a tract, 'De Quadratura Circuli,' to Herimanus, Archbishop of Cologne ; and, as this Prelate died in February, 1055, the work must have been completed before that date. Trithemius[2] attributes this same tract, 'De Quadratura Circuli,' together with another, 'De Computo Ecclesiastico, et alia plura,'[3] to Franco, Scholasticus Leodiensis Eccle-

[1] Chron. ad ann. 1047. [2] De Script. Eccles. (Lut. Par. 1512.)
[3] Among these was one 'De Motu perpetuo.'

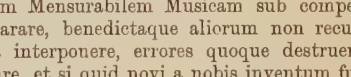
siae; who, he says, flourished under the Emperor, Henry III., about the year 1060, though there is evidence, of another kind, to prove that Franco continued in office at Liège, at least until the year of 1083.

The authors of the *Histoire Littéraire de la France*[1] assure us that this Scholastic of Liège was the author of the tract 'De Musica Mensurabili.'

But, in direct opposition to this, Kiesewetter[2] brings forward evidence enough to satisfy himself, at least, that the tracts on Measured Music were written neither by the Alchemist and Magician of Cologne, nor by the Scholastic of Liège, but by some other Franco, who flourished not less than 130 or 150 years later—*i.e.* towards the close of the 12th century. This opinion—in which it is only fair to say that he is followed by De Coussemaker, Von Winterfeld, and Perne—rests, however, upon no stronger ground than the supposition that the period interposed between the writings of Guido d'Arezzo and Franco was insufficient for the development of the improved system described by the last-named master. Fétis, reasonably enough, protests against a conclusion unsupported by any sort of historical, or even traditional evidence. Kiesewetter first stated his views in the Leipzig *Allgem. mus. Zeitung* for 1828, Nos. 48, 49, 50. Fétis, in his Dictionary, opposed the new theory. Kiesewetter replied to the objections of Fétis in the *Allgem. mus. Zeitung* for 1838, Nos. 24, 25. And, in the meantime, De Coussemaker, in his *Histoire de l'Harmonie au moyen âge* (pp. 144-147), suggests, somewhat confidently, that the real author of the disputed tracts was another Franco, who is known to have flourished at Dortmund, in Westphalia, about the year 1190. But, since not a particle of trustworthy evidence has ever been adduced in favour of these fanciful theories, we shall do well, until more light can be thrown upon the subject, to believe, with Fétis, and our own Burney and Hawkins, that the tracts attributed to Franco were really written by the philosopher of Cologne, about the year 1060.

The musical tracts attributed to Franco are—

1. Ars Magistri Franconis de Musica Mensurabili.
2. Magistri Franconis Musica.
3. Compendium de Discantu, tribus capitibus.



The earliest known copy of the first of these MSS. is said to be preserved at Vire, in Normandy. The second tract—in the Bodleian Library, at Oxford[3]—is an exact transcript of the first, under a different title; though the authors of the *Hist. Litt. de la France* do not appear to have been aware of the fact. The third tract—also in the Bodleian Library[4]—contains the best account of Discant, immediately after the time of Guido, that we possess. Copies of the *Ars Cantus mensurabilis* are also to be found in the Ambrosian Library at Milan, in the Paris Library, and in the British Museum (Add. MS. 8866, a fine MS. of the 15th century, unknown to Burney). Fétis discovered a copy of the *Compendium de Discantu* in the Paris Library; and another MS. copy was presented to the Vatican Library by Queen Christina of Sweden. The Compendium begins with the words, 'Ego Franco de Colonia,' the genuineness of which Kiesewetter disputes.

Franco's claim to the honour of having invented the Time-Table rests, partly, on the contents of the treatise *De Musica Mensurabili*, and, partly, on the authority of MSS. of later date than his own.

Marchetto di Padova, in his *Pomerium de Musica Mensurata*, written about 1283, mentions him as the inventor of the first four musical characters—*i.e.* the Long, the Double-Long, the Breve, and the Semibreve. Joannes de Muris, in a MS. written about 1330, and bequeathed by Christina, Queen of Sweden, to the Vatican Library,[5] speaks of 'Magister Franco, qui invenit in Cantu Mensuram figurarum,' and his testimony is particularly valuable, since he himself was, for a long time, very generally regarded as the inventor of Measured Music. Franchinus Gafurius[6] twice mentions Franco as the inventor of the Time-Table. Morley[7] says, 'This Francho is the most antient of al those whose works of practical Musicke haue come to my handes'; after which, he proceeds to describe Franco's treatment of the Long, and the Breve. And Ravenscroft[8] also tells us that Franchinus (*sic*) de Colonia was the inventor of the 'four first simple notes of Mensurable Musicke.'

On the other hand, it is certain that Franco cannot lay claim to *all* the inventions mentioned in his *Ars Cantus Mensurabilis*, since he himself says, in that very tract, 'Proponimus igitur ipsam Mensurabilem Musicam sub compendio declarare, benedictaque aliorum non recusabimus interponere, errores quoque destruere et fugare, et si quid novi a nobis inventum fuerit, bonis rationibus sustinere et probare.'

The four primary characters are described in the Second Chapter of the MS., where they are figured thus—

The Perfect Long, he tells us, is equal to three Breves, 'quia a summa Trinitate, quae vera est et pura perfectio, nomen sumpsit.' The Imperfect Long, represented by the same figure, is equal to two Breves only. The Breve was also Perfect, or Imperfect, under the same conditions. Two consecutive Longs, or Breves, were always

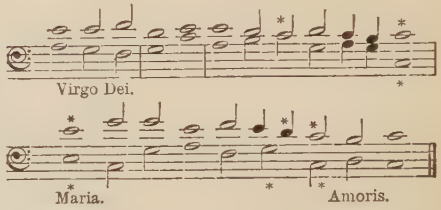
[7] *Plaine and Easie Introd.,* in the Annotations at the end of the volume.
[8] *Briefe Discourse of the true Use of charactering the Degrees in Mensurable Musicke,* p. 3. (London, 1614.)



Perfect; but, when a longer note was preceded or followed by a shorter one, the longer note was Imperfect, the time of the shorter one being needed to complete its Perfection. Nevertheless, an Imperfect Long, or Breve, could be rendered Perfect, by means of the sign called a Tractulus, the effect of which, when used in this way, was precisely similar to that of the comparatively modern Point of Augmentation.

Longs, Breves, and Semibreves, were grouped together in certain combinations called Moods,[1] of which Franco admits five only, though he says that other Musicians used six, or even seven —a clear sign that he did not invent them. Of these Moods, the First consisted of Longs only, or of a Long followed by a Breve; the Second, of a Breve followed by a Long; the Third, of a Long and two Breves; the Fourth, of two Breves and a Long; and the Fifth, of Breves and Semibreves. From which it follows, that the First Mood expressed the rhythm of the Spondee, or Trochee; the Second, that of the Iambus; the Third, that of the Dactyl; and the Fourth, that of the Anapæst; the entire series performing the functions allotted to the Mood, Time, and Prolation of a later period.[2]

The Third Chapter of the MS. treats of Ligatures;[3] and the Fourth Chapter, of Rests, of which he gives some complicated examples, all reducible, however, to the simple form shown in the article NOTATION. In connection with these, Franco also describes the Finis Punctorum, drawn across all the lines, and serving to divide the phrases of a melody, precisely after the manner of the bar, or double-bar, of modern music, of which it is the evident homologue.

It is interesting to observe—though we believe no one has hitherto called attention to the fact—that the system of notation here described is precisely that employed in the Reading Rota, 'Sumer is icumen in,' in which the melody, in Mode XIII. transposed, is phrased in Franco's First Mood, each Long being Perfect when followed by another Long, and Imperfect when followed by a Breve. Moreover, the Reading Rota is written upon a stave precisely similar in principle to that employed by Franco, who always uses the exact number of lines and spaces needed to include the entire range of his vocal parts.[4]

The *Compendium de Discantu*, second only in interest to the *Ars Cantus Mensurabilis*, describes a form of Discant immeasurably superior to the Diaphonia taught, less than half a century earlier, by Guido d'Arezzo, in his Micrologus.[5] Unhappily, in the Oxford MS.—first described by Burney—the examples are lamentably incomplete; the staves, in every case, being duly prepared for their reception, while the notes themselves are wanting. Dr. Burney, after long and patient study of the text, was able to restore the following passage, in a form which he believed to be 'nearly' complete.

Making every allowance for the jaunty modern air communicated to this little composition by Dr. Burney's employment of ordinary 18th century notation, it must be admitted, that, with the sole exception of the unison on the eighth note, and the hidden octaves between the last crotchet in the tenor and the last note but two in the bass, as indicated by the asterisks, the rules of Strict Counterpoint, as practised in the 16th century, are observed in the disposition of every note, even to the formation of the Clausula vera at the end. The apparently gross consecutive octaves between the last two phrases offer no exception to the rule; since the interposition of the Finis Punctorum between them invests the first note of the concluding phrase with the importance of a new beginning. If, therefore, the learned historian's penetration should ever be justified by the discovery of a more perfect copy of the MS., we shall be furnished with a clear proof that Magister Franco was on the high road towards the discovery of Strict Counterpoint, in its present form. It is, however, only fair to say that Kiesewetter disputes both the correctness of Burney's example, and the existence of the rules upon which he bases it. W. S. R.

[A passage from an anonymous treatise printed in Coussemaker's *Scriptores*, i. 342, has often been quoted as evidence of the existence of two Francos. The writer is describing the choral-books of Perotin, and says that the style of notation in which they were written was generally followed 'usque in tempus Magistri Franconis Primi et alterius Magistri Franconis de Colonia, qui inceperunt in suis libris aliter pro parte notare; qua de causa alias regulas proprias suis libris apropriatas tradiderunt' ('down to the time of Master Franco the First and the second Master Franco of Cologne, who began in their books to use a somewhat different notation, and for that reason handed down different rules suited to their own books'). This, however, may refer to oral tradition only. It is possible that the Franconian system was for many years handed down orally from teacher to teacher, each of whom incorporated the improvements of his day, and that it was not committed to

1 We have here followed, for the sake of clearness, the plan adopted by our early English writers, of translating the word *Modus* as Mood, when it relates to rhythm, and Mode when it refers to the Ecclesiastical Scales.

writing in the form of a treatise till the 13th century. The language of Johannes de Muris when introducing the *Ars Cantus Mensurabilis* into his treatise (Coussemaker, i. 117) lends some support to this view. He speaks of it as the doctrine of John of Burgundy 'as we have heard it from his own lips, or, according to the common opinion, of Franco of Cologne.' The theorists of the 14th and 15th centuries only know one 'Magister Franco,' and the quotations that they make from his works are, with few exceptions, always to be found in the writings attributed to Franco of Cologne. It is worthy of note that one manuscript of the *Ars Cantus Mensurabilis* describes Franco as chaplain to the Pope and preceptor of the Hospital of St. John of Jerusalem at Cologne (Coussemaker, i. 135, note). The Vatican records do not go back to this early date, but it is known that the Hospital of St. John at Cologne was not founded till 1263 (Coussemaker, *Notice sur un Manuscrit Musical de la Bibliothèque de Saint-Dié*, p. 9). J. F. R. S.]

FRANCŒUR, François, violinist and composer, born at Paris, Sept. 28, 1698. He entered the band of the Opéra in 1710, was for many years a member of the king's private band, was composer to the king in 1733, and from 1736 was manager of the Opéra conjointly with Rebel [from 1760 to 1778 he was 'surintendant de la musique du roi']. He died at Paris, August 6, 1787. He published two sets of sonatas, which, according to Wasielewsky, show considerable progress in form and in treatment of the instrument, when compared with similar works by Rebel and other French composers of the period. It is worth mentioning as a peculiarity of his, that he occasionally employs the thumb of the left hand on the finger-board for taking the bass note of a chord—a proceeding hardly in accordance with legitimate treatment. He also composed a number of operas conjointly with Rebel (the names of three, together with those of several ballets, etc., are given in the *Quellen-Lexikon*), which, however, do not rise above the level of the period.

His nephew, Louis Joseph, an eminent violinist and clever conductor, was born at Paris, Oct. 8, 1738, and died there March 10, 1804. He was first leader and afterwards conductor and manager of the Opéra (from 1792) and of the royal band, and composed a number of operas. He also published a treatise on instrumentation, which Fétis considers a meritorious work. [See *Quellen-Lexikon.*] P. D.

FRANK, Ernst, a highly distinguished conductor and a meritorious composer, was born at Munich, Feb. 7, 1847, and was educated at the Munich University; he studied the piano under Mortier de Fontaine, and composition under Franz Lachner, and obtained a position at the Court Opera as 'Chorrepetitor.' In 1868 he was capellmeister at Würzburg; in 1869, chor-director of the Court Opera at Vienna, acting at the same time as conductor of two choral societies. From 1872 to 1877 he was Court capellmeister at Mannheim, where he earned the lasting gratitude of musicians by befriending Hermann Goetz, and bringing out his 'Widerspänstigen Zähmung' in 1874. The story of Goetz's visit to the kind-hearted conductor, with his score under his arm, and an apologetic manner for having dared to write an opera at all, is one of the most touching in musical history. The seeds of consumption were already sown, but Frank's encouragement gave the composer a new lease of life, and without it the world would undoubtedly have been the poorer by many beautiful compositions, in the preparation and publication of which Frank's knowledge of the world and practical acquaintance with music stood Goetz in good stead. The latter's second opera, 'Francesca da Rimini,' was finished by Frank and produced at Mannheim in 1877, after the composer's death. In 1877 Frank went to Frankfort, where Otto Devrient had just been appointed Intendant; the two worked together with the best results, and when Devrient was dismissed in 1879, Frank also retired from his post, but was appointed in the same year to succeed Von Bülow at Hanover as capellmeister of the Court Opera there. He remained there until 1887, when his mental condition compelled him to retire; he died in the asylum of Oberdöbling, near Vienna, August 17, 1889. The period of his conductorship at Hanover was one of ceaseless activity, and he kept up the fine traditions of the place, producing and reviving many operas of importance, both German and foreign. As a composer he failed to attain very high rank, although his works were scholarly in design, skilful in execution, and thoroughly sound in artistic principle. He wrote three operas: 'Adam de la Halle' (produced at Carlsruhe in 1880), 'Hero' (Berlin, 1884), and 'Der Sturm,' after Shakespeare's *Tempest* (Hanover, 1887). He also wrote many songs of great merit, and part-songs, etc., as well as a set of very pretty duets to words from Kate Greenaway's *At the Window*. He made excellent German translations of Stanford's 'Veiled Prophet' (brought out under his direction in 1881), 'Savonarola,' and Mackenzie's 'Colomba.' An interesting article on Frank was written by Stanford in *Murray's Magazine* for May 1890. M.

FRANKLIN, Benjamin, born 1706 at Boston, U.S.A., died at Philadelphia 1790, claims mention here for his connection with the Harmonica, or musical glasses, which he so far improved as to make the instrument practically available. [Harmonica.] The invention is described by him in a letter to Beccaria dated London, July 13, 1762, and printed in Sparks's edition of his works (vi. 245). That Franklin had considerable musical faculty is evident from

his letters on Scotch music and on the defects of modern music (vi. 263, 269), which are also full of his happy mother-wit. M. C. C.

FRANZ, KARL, player on the French horn (Waldhorn) and the baryton; born in 1738 at Langenbielau in Silesia. His first post was under the Archbishop of Olmütz in 1758; his next under Prince Nicholas Esterhazy at Eisenstadt, where he remained from 1763 to the end of 1776. He was afterwards in the band of Cardinal Bathiany at Presburg until 1784. His adoption of so difficult an instrument as the baryton probably arose from the fact that the Prince himself played it, and that Haydn composed much for it for his use. At any rate Franz played it very finely, and on leaving the Presburg band made several tours, in which his performance on it excited the greatest enthusiasm. Like Abel with the gamba, Franz was accustomed to call the baryton the king of instruments. In 1787 we find him established in Munich as 'Kammermusikus,' and he died there in 1802. That he was greatly esteemed by Haydn is proved by a cantata for voice and baryton, composed by that master for him; he performed it on his tours, singing and accompanying himself. The cantata was written àpropos of the death of Frederick the Great, and begins 'Er ist nicht mehr! Tön' trauernd, Baryton!' C. F. P.

FRANZ, ROBERT, the son of Cristoph Franz Knauth, who in 1847 adopted his second name as surname, born June 28, 1815, at Halle, Handel's birthplace, was one of the most important representatives of the German Lied. His reputation was of tardy growth, and has apparently not yet reached its height. It can, however, be asserted, without fear of dissent from any competent judge, that his best songs will stand their ground by the side of those of Schubert and Schumann, to which they are closely related. Over and above their uniform and elaborate perfection of workmanship, in which it is difficult to equal and impossible to surpass them, they have a peculiar physiognomy and subtle charm of their own that are sure to endear them to singers and players able to deal with them at all. It is true that they have hitherto been 'caviare to the general,' and are likely to remain so for some time, and that 'the general,' as Franz has found to his cost, includes the majority of professed vocalists and pianists.

Nearer akin to the warm but contemplative enthusiasm of Schumann than to the passionate spontaneity of Schubert, Franz's songs are anything but cold, nor do they in any case smell of the lamp; they are reticent rather than outspoken, timid rather than bold, pathetic without conscious pathos, eloquent without studied rhetoric; always true, giving more than they seem to give, saying more than they seem to say; frequently naïf yet far from trivial, here and there profound, rarely ecstatic or voluptuous, not once perverse or dry or commonplace. All forms and phases of lyrical speech, as far as the German language, peculiarly rich in songs, has been able to furnish the groundwork—from Luther's sturdy hymns to the love-ditties of Heine, from the primitive weal and woe of huntsman and soldier, the simple sounds of forest and field, to the classic finish and spring-like grace of Goethe and the nocturnal melancholy of Lenau—Robert Franz has set and sung. Without touching the highest heavens or deepest depths, he has illustrated with his music the entire world of German lyrical poetry.

If Schubert at his best grasps a poem with the intense grip of a dramatist, and sings as though he struck up from the centre of some dramatic situation; if Schumann declaims his verse like a perfect reader, or illuminates it as an imaginative draughtsman might grace the margin of some precious book, or dreams over it as a tender and profound musician is prone to dream over some inexpressible sentiment,—Franz pursues a path of his own; he *translates* the poem into music, that is to say, he depicts in musical outlines the exact emotional state from which it appears to have sprung; and contrives to reproduce closely, with photographic truth, the very essence of the poem, following strictly in the wake of the poet's form and diction. Franz never repeats a word or a line, never garbles the sense of a sentence, never muddles a phrase or mars any rhythmical emphasis. Without Schubert's dramatic passion, or Schumann's concentrated heat or ecstatic sentiment, with far less specifically musical invention—melodic, harmonic, or rhythmic—than Schubert, or even than Schumann, Franz impresses one nevertheless as a rare master—a marked individuality, complete and perfect in its way.

The son of a respectable citizen of Halle, Robert Franz had fair opportunities of getting a good schooling, and might have gone through the regular university curriculum if it had not been for his strong musical predilections. He had to gratify his taste for music on the sly, and it was only after years of delay, and much against the grain, that his parents could be brought to see that he was destined to be a musician. As a lad he had contrived to play the pianoforte and organ enough to be able to act as accompanist in the choral works of Handel, Haydn, and Mozart. In 1835 he obtained the consent of his parents to make a trial of his musical gifts as pupil of Schneider at Dessau. There he continued for two years, playing, studying harmony and counterpoint, and making ambitious attempts at composition, all of which he afterwards destroyed.

On his return to Halle, in 1837, as the black sheep of the family, with whom his mother alone had any sympathy, Franz vegetated in a dreary manner for some six years, unable to get any sort of musical employment, yet obstinately unfit for anything else. But he made good use of his

ROBERT FRANZ

time, studying Bach, Beethoven, and Schubert. In 1843 he published his first set of twelve songs, which at once attracted the attention of Schumann (*Neue Zeitschrift*, July 31), whose frankly expressed admiration was soon shared by Mendelssohn, Gade, Liszt, and other eminent masters. At length the authorities at Halle thought fit to appoint Franz organist at the Ulrichskirche, and conductor of the 'Sing-academie'; and in due course of time he obtained the titles of 'Königlicher Musikdirector' and doctor of music, which latter title was offered by the University of Halle, on his lecturing to its students on musical subjects. Unfortunately as early as 1841 his sense of hearing began to decline, his troubles were aggravated by serious nervous disorders in 1853, and became so grave that in 1868 he had to relinquish his employments, and give up writing altogether. The distressing pecuniary difficulties which arose in consequence were, however, effectually overcome by the generous exertions of Liszt, Joachim, Frau Helene Magnus, and others, who in 1872 got up concerts for Franz's benefit, and realised a sum of £5000.

In his latter years Franz devoted much time to editing and arranging the works of Bach and Handel, by furnishing proper polyphonic accompaniments in cases where the composer's intentions are only indicated by a figured bass, rewriting the part sketched for the organ for a group of wind instruments, so as to facilitate performance in concert-rooms, supplying proper substitutes for parts written for obsolete instruments, etc. Detailed critical essays upon and about Robert Franz's songs and arrangements, have been published by Saran, Schäffer, Ambros, Hueffer and Liszt, of which the first and last are the most important. See also vol. i. pp. 43 *ff.*

Franz's own contributions to the literature of music are:—*Mittheilungen über J. S. Bach's Magnificat* (Halle, 1863); and *Offener Brief an Eduard Hanslick über Bearbeitungen älterer Tonwerke, namentlich Bach'scher* and *Händel'scher Vocalmusik* (Leipzig, 1871). His compositions and arrangements consist of 257 songs for a single voice with pianoforte accompaniment, in 45 sets; a Kyrie, *a cappella*, for four-part chorus and solo voices; the 117th Psalm, *a cappella*, for double choir in 8 parts, and a liturgy for the evangelical service; 6 chorales; four-part songs for mixed voices, and 6 ditto for male chorus. His arrangements are as follows:—Of Sebastian Bach—the 'Passion according to St. Matthew'; 'Magnificat in D'; 'Trauerode'; 10 cantatas; 6 duets and numerous arias. Of Handel—the 'Jubilate'; 'L'Allegro, il Penseroso ed il Moderato'; 24 operatic arias and 12 duets; Astorga's 'Stabat Mater'; and Durante's 'Magnificat.' Of Mendelssohn—a Hebrew melody for piano and violin; 6 two- and four-part songs arranged for one voice with piano; Mozart's quintets in C minor and major, and Schubert's quartet in D minor, transcribed for piano duet (1878). Franz died at Halle, Oct. 24, 1892. E. D.

FRASCHINI, Gaetano, was born at Pavia in 1815. Originally intended for the study of medicine, he soon found himself possessed of a most powerful tenor voice, and devoted himself to its cultivation. Having received some instruction from a master named Moretti, he made his first attempt (1837) in the cathedral of his native city, and was immediately engaged to sing the second tenor rôle in 'Belisario' at Pavia, and Rodrigo in 'Otello' at the fair at Bergamo. In 1840 he sang at Milan; and from thence went to Naples, where he remained several years attached to the Opera. Fétis heard him there in 1841, and admired his voice, and the bold style in which he attacked the most difficult notes; nine years later he heard him again at Bergamo, and found to his surprise not only that his energy and purity of tone were undiminished, in spite of the violence of the music which he had been executing during that period, but that he had learned to sing better than before. Fraschini visited Bologna, Venice, Turin, Padua, Vicenza, London, and Vienna; and sang frequently at the latter place down to 1852 with constant success. In 1847 he made his début at Her Majesty's Theatre. 'Though originally gifted with greater vocal power' than another singer, says Mr. Chorley, 'Signor Fraschini was less fortunate . . . The newcomer, naturally anxious to recommend himself by the arts which had delighted his own people, seemed to become more and more violent in proportion as the "sensation" failed to be excited. But he "piled up the agony," *forte* on *forte*, in vain.' He continued to appear for many years more, and afterwards retired and lived at Pavia, where the theatre is called after him, Teatro Fraschini. He died at Naples, May 24, 1887. J. M.

FRASI, Giulia, appeared in London in 1743 with Galli, and remained in public favour for many years. 'She was young and interesting in person, with a sweet, clear voice and a smooth and chaste style of singing, which, though cold and unimpassioned, pleased natural ears and escaped the censure of critics' (Burney). She took part that year in the revival of Handel's 'Alessandro,' and in the first performance of Galuppi's 'Enrico.' Her instructor was a musician named Brivio; but she doubtless owed much more of the formation of her taste and style to Handel and his singers, than to her first master. In 1746 she was still in an inferior position, but in 1748 played a more important part in the pasticcio 'Lucio Vero,' in operas by Hasse, and in the comic operas instituted by Croza. Frasi, however, now entered on a career which will do more to render her memory lasting than any small successes she ever achieved in opera. In 1749 she sang in Handel's Oratorios for the first time, taking part in 'Solomon' and

'Susanna'; she sang in 'Theodora' in 1750, in 'Jephtha' in 1752, in 'Joshua' at Oxford in 1756, and in the 'Triumph of Time and Truth' in 1757. She did not, meanwhile, sever her connection with the stage, but appeared in 1750 in Ciampi's 'Adriano in Siria' and Pergolesi's 'Serva Padrona.' In 1755 Frasi was called upon, in consequence of the indisposition of Mingotti, to perform her part in Jommelli's 'Andromaca,' as she had been twice in 'Riccimero,' the preceding season. Smith's 'Fairies' in this year owed its success principally to Guadagni and Frasi. At her house Dr. Burney at that time 'attended her as her master.' In 1758 she appeared in 'Issipile' by G. Cocchi. She sang also in the City at both the Swan and Castle concerts.

Dr. Burney relates that 'when Frasi told him [Handel], that she should study hard, and was going to learn Thorough-Base, in order to accompany herself: Handel, who well knew how little this pleasing singer was addicted to application and diligence, said, "Oh—vaat may ve not expect!"' There is a portrait of Frasi, in mezzotint (folio), in which she is turned to the left, singing from a sheet of music held in both hands, on which is engraved a song beginning with the words 'Voi amante che vedete.' It has neither name nor date, and is very rare. J. M.

FREDERICK THE GREAT (Friedrich II.), King of Prussia, a distinguished amateur, born at Berlin, Jan. 24, 1712, died at Sans-Souci near Potsdam, Aug. 17, 1786. He passionately admired German music while detesting that of Italy and especially of France, which was the more remarkable from his well-known love of French literature. He said on one occasion, 'la musique française ne vaut rien.' His first musical instructor when Crown Prince was Gottlob Hayn, the Cathedral organist, for whom he always retained a regard, and who presented him with a composition every year on his birthday. In 1728 he began to learn the flute from Quantz, who was a strict master, while Frederick was a docile pupil. [QUANTZ.] He was afterwards, however, compelled to study in secret, as his father, Frederick William I., considered music an effeminate pastime, and declined to allow him instructors or musicians of any kind. He was therefore driven to engage musical servants, and often played duets with his valet Fredersdorf, until he was able in 1734 to have a private band at his own castle of Reinsburg. On his accession to the throne in 1740 he established a court band at Berlin, and sent Graun to Italy to engage singers. [GRAUN.] He also had designs made for a new opera-house, which was opened Dec. 7, 1742. An amusing account of his difficulties with Barberina the ballet dancer will be found in Carlyle (Bk. xiv. chap. 8). His expenditure on music was lavish, though it has been exaggerated. Quantz's salary amounted to 2000 thalers, besides 25 ducats for each of his compositions for flute solo, and 100 ducats for every flute he made for the king. According to Reichardt, Frederick practised perseveringly, playing the flute four times a day. It is in one of these eager practisings that Gérome has represented him in an admirable picture. Quantz died in 1773 while composing his 300th concerto for the king, who completed the work. Frederick's execution of an Adagio is said by Fasch [see Zelter's biography of Fasch] to have been masterly, but in quick movements he betrayed a want of practice, and in matter of time his playing was so impulsive and irregular, that to accompany him was an art in itself. In later years he again took up the clavier, not having sufficient breath, it is stated, for the flute. He invited Sebastian Bach to Potsdam, and the visit, of which Forkel gives an account, and the result of which was Bach's *Musikalisches Opfer*, took place on May[1] 7, 1747. He particularly admired Silbermann's pianofortes, and bought all he could hear of. He was also a composer. The Hohenfriedberg March was nominally by him, as well as a march inserted in Lessing's play, 'Minna von Barnhelm.' He also composed a 'Sinfonia' for 'Galatea ed Acide' and portions of an opera 'Il Rè pastore'; an Aria for 'Il trionfo della fedeltà'; another for Graun's 'Coriolano' (of which he wrote the libretto); and added fioriture for Hubert the singer to an air in Hasse's 'Cleofile.' In 1835 a search was instituted by King Frederick William III., and 120 pieces composed by Frederick the Great were found; these were edited by Spitta, and published in 1889 by Breitkopf und Härtel. He had an eye to the improvement of the singing in the public schools, and an official decree of his, dated Oct. 18, 1746, contains the following passage: 'Having received many complaints of the decline in the art of singing, and the neglect of it in our gymnasiums and schools, His Majesty commands that the young people in all public schools and gymnasiums shall be exercised more diligently therein, and to that end shall have singing-lessons three times a week'—a command which has doubtless materially contributed to the prevalence of music in Germany. (See *Friedrich d. G. als Kenner und Dilettant . . .* by C. F. Müller, Potsdam, 1847. [W. Kothe's *Friedrich der Grosse als Musiker*, etc. (Leipzig, 1869), Spitta's essay on the edited works, and G. Thouret's *Friedrichs des Grossen Verhältniss zur Musik* (1895). See list of compositions in the *Quellen-Lexikon.*)] F. G.

FREE REED. Organ stops of the Free-reed class are more frequently made by continental than by English artists. The sound-producing part of a pipe of this species is formed thus:—A surface of metal or wood has a vertical opening made through it as a passage for the wind: in front of this a strip or tongue of metal—in some

[1] [See Spitta's *J. S. Bach*, Engl. tr., iii. 231, as correcting the date April, given in the first edition of the Dictionary on the authority of Thomas Carlyle; and as correcting the footnote on p. 151 of vol. i. of the present edition.]

large examples wood — is adjusted, fastened at the upper end and left at liberty at the lower, which is so slightly smaller than the opening as almost exactly to fit into it. This tongue is by the current of air carried a short distance through the opening, when it springs back by reason of its own elasticity ; and the sound results from the periodical and regular beats which the tongue, vibrating to and fro, imparts to the passing air. The 'vibrators' of a harmonium are really free reeds ; but in the case of an organ-pipe the tongue is furnished with a tube, which, upon the principle of a speaking-trumpet, greatly augments and amplifies the sound produced. There are some free reed 16- and 32-feet posaunes in the pedal organ of Schulze's fine instrument at Doncaster parish church. E. J. H.

FREGE, Madame (*née* Livia Gerhard), was born at Gera, June 13, 1818, received her musical education at Leipzig, and was taught to sing by Pohlenz. She made her first appearance in public on July 9, 1832, when just entering her fifteenth year, at a concert given at the Gewandhaus by the still more juvenile Clara Wieck, then only thirteen. She had at that time a cultivated voice of lovely quality, especially in the upper register, perfect intonation, and good style. She was engaged for the next series of Gewandhaus Concerts, and began with a very large repertory, as is evident from the pieces ascribed to her in the reports of the concerts. She first appeared on the stage at Leipzig, in 'Jessonda,' in March 1833. A residence in Dresden enabled her to profit by the example and advice of Schröder Devrient. In 1835 she entered the regular company of the Theatre Royal at Berlin. After delighting the public by a large range of characters, in which her acting was equal to her singing, she made her last appearance on June 25, 1836 (as Elvira), and left the boards to be married to Dr. Frege of Leipzig. After that time she sang only at concerts. Her house was always a centre of the best music. She had a singing society there of fifty voices, with a select band, led by David, and conducted by Lange, at which the best and least known music, old and new, was performed in perfection. Mendelssohn was her intimate friend, often consulted her on his music, and took her his songs to try before making them public. 'You don't know my songs,' said he to a friend in London ; 'come to Leipzig and hear Mme. Frege, and you will understand what I intended them to be.' A letter to the 'Frau Doctorin Frege,' dated London, August 31, 1846, and describing the first performance of 'Elijah,' is printed in the second volume of his Letters. It was at her house, on Oct. 9, 1847, in trying over the songs which form op. 71, that he was struck with the first of the attacks which ended in his death on Nov. 4.

Mme. Frege's characteristics were delicacy and refinement—not a large voice, but a great power of expression in singing her words, a perfect style, and the highest musical intelligence. She died at Leipzig, Sept. 22, 1891. G.

FREISCHÜTZ,[1] DER. Romantic opera in three acts, words by Kind, music by Weber (his eighth opera) ; completed, as 'Die Jägersbraut,' May 13, 1820. (See Jähns's Catalogue.) Produced at Berlin, June 18, 1821 ; in Paris as 'Robin des Bois,' with new libretto by Castile Blaze and Sauvage, and many changes,[2] at the Odéon, Dec. 7, 1824, but with accurate translation by Pacini, and recitatives by Berlioz, at the Académie royale, June 7, 1841, as 'Le Franc Archer.' In London, as 'Der Freischütz, or the seventh bullet,' by Hawes, at English Opera-house, with many ballads inserted, July 23, 1824 ; in Italian as 'Il Franco arciero,' at Covent Garden, March 16, 1850 (recitatives by Costa, not by Berlioz) ; in German, at King's Theatre, May 9, 1832. It was revived at Astley's Theatre with a new libretto by Oxenford, April 2, 1866.

FRENCH HORN. The designation of 'French' is commonly added to the name of the orchestral Horn, from the fact that a circular instrument of this nature, without crooks or other appliances, was, and still is, used in France for hunting. It is carried over one shoulder, and beneath the arm of the other side, usually on horseback. The great length of tube enables a long series of harmonic sounds to be obtained ; and these, organised into 'calls' or signals, serve to direct the order of the chase. At the first introduction of the Horn into the Orchestra it was much objected to on this account ; and its tones were considered coarse and boisterous, only fit for the open air and for woodland pastimes. [Horn.] W. H. S.

FRENCH SIXTH. See Sixth.

FRESCOBALDI, Girolamo, the most distinguished organist of the 17th century, born at Ferrara [in 1583 (register of his baptism in cathedral of Ferrara, Sept. 9, 1583). He studied under the cathedral organist, Luzzasco Luzzaschi]. Quadrio tells us that he possessed a singularly beautiful voice ; and it is certain that while still a youth he enjoyed a great reputation both as singer and organist. In 1608 he was at Antwerp, as he dates from there the preface to his first book of five-part Madrigals (Antwerp, Phalesio) dedicated to Guido Bentivoglio, Archbishop of Rhodes ; but in the same year he returned to Italy, as his second book of 'Fantasie a 4' was published at Milan in that year ; and he was appointed organist at St. Peter's in Rome. His first performance there attracted, according to Baini, an audience of 30,000 persons. In 1628, dissatisfied apparently with his scanty pay at Rome, he sought leave of absence, and accepted an invitation to Florence from Ferdinand II.,

[1] Frei-schütz, say the dictionaries, = free-marksman, one who shoots with charmed bullets. There is no equivalent English term.

[2] 'Assassiné' is Berlioz's word for this outrageous proceeding (no singularity in France, nor indeed in London, eighty years ago), by which he states that Castile Blaze made more than 100,000 francs (*Mémoires de Berlioz*, 57, 61). There were Divertissements made up of the dance music in 'Preciosa' and 'Oberon,' and of the Invitation to the Waltz scored by Berlioz for the purpose.

Grand Duke of Tuscany, who named him his organist. Social and political troubles in Tuscany obliged him to leave Florence in 1633; and, returning to Rome, he was re-installed in his former post as organist of St. Peter's, which he continued to hold till 1643. Froberger was his pupil from Sept. 30, 1637, to April 1641, and thus the noble style of his organ playing was handed on to other schools. He died March 2, 1644.

Frescobaldi's compositions are important, and give us a high idea of his powers. His works comprise, besides the two named above—'Ricercari e canzoni francesi' (Rome, Borboni, 1615); 'Toccate . . . e partite d'intavolatura' (1614-15-27-37); 'Secondo libro di toccate, etc.' (Rome, 1627-28-37); 'Primo libro delle canzoni a 1, 2, 3, 4 voci' (Rome, 1623-1628); 'Primo libro, Arie musicali' (Florence, 1630); 'Fiori musicali,' op. 12 (Rome, 1635); and 'Capricci sopra diversi soggetti' (Rome, 1624, Venice, 1626). An extract book of Dr. Burney's in the British Museum (Add. MS. 11,588) contains a copy of the first of these works. A Canzona for the organ will be found in Hawkins (chap. 130), and many other pieces in Commer's *Musica sacra*, and *Collection des compositions*, etc. and F. Riegl's *Praxis Organœdi* (1869). [Five organ pieces are in the *Trésor des Pianistes*, and Torchi's *L'Arte Musicale in Italia* contains twenty-three compositions; twelve of the toccatas were published in Pauer's *Alte Meister*. An article by F. X. Haberl in the *Kirchenmusikalisches Jahrb. für 1887* (Regensburg) contains a careful bibliography, and the list in the *Quellen-Lexikon* is even more complete.] F. G.; with corrections and additions from authorities quoted.

FRETS (Fr. *Les tons*; Ital. *Tasto*; Ger. *Bunde, Bünde, Tonbunde, Bänder, Griffe, Bundsteg*). On stringed instruments that have finger-boards, like the lute or guitar, the small pieces of wood or other material fixed transversely on the finger-board at regular intervals are called frets. The object they serve is to mark off the length of string required to produce a given note. Pressure upon a string immediately above a fret makes at the point of contact of string and fret a temporary 'nut,' and the string, set in motion as far as the bridge on the sound-board by plucking with plectrum or finger, or bowing, gives a higher note in proportion to the shortening of the string. Frets therefore correspond in their use with the holes in the tube of a wind instrument.

The use of frets to give certainty to the fingers in stopping the notes required is of great antiquity, the Chinese in a remote age having had movable frets for the strings of their Chê. For the Hindu Vina, a finger-board instrument with nineteen frets, a divine origin is claimed, thus implying a remote origin. And the Egyptians, as may be seen in the British Museum, depicted by themselves about the time of Moses, had either frets or coloured lines serving a like purpose on the finger-boards of their lutes. In the present day the Balalaika of the Russian country people has coloured lines that serve for frets. It is most likely that the use of frets came into Europe through Spain and Southern France from the Arabs. In the Middle Ages bow instruments had them, as well as those played with plectrum or finger. The Rebec, the Viols da gamba, da braccio, d'amore, the Italian Lire, Lirone, all had them. But the French Gique of the 12th-14th centuries, like our modern fiddles, had none. In the modern highly-developed technique they would be an impediment, and the feeling for temperament has only been satisfied by their rejection. In lutes, guitars, and zithers, however, they are retained. In performance the end of the finger must be placed immediately above the fret, and not upon it, as vibration would be interfered with; while if too much above, the string would jar upon the fret.

The finger-board has been differently divided in different epochs and countries according to the scale-system prevailing. It has been generally accepted since the researches of Villoteau, a member of the expedition sent to Egypt by Napoleon Bonaparte (*Description de l'Égypte*, tomes xiii. et xiv., Paris, 1823), that the octave on the finger-board of the Arabic lute or tamboura was divided into eighteen, or it may be seventeen intervals; but as the collection of instruments formed by Villoteau is not now in existence, we are unable to endorse his statement that they were equal intervals of three to the major tone, nor can we, on the other hand, give entire credit to the late Dr. Land's contention (*La Gamme Arabe*, Leyden, 1884) that Al-Farabi's obviously Greek division of seventeen limmas and commas was the practical musician's Arab scale. In Persia and Arabia there would be smaller division than our chromatic, third tones as well as half. Although the third of a tone is almost a chromatic semitone, it does not appear that either Persian or Arab lutenists have used equal thirds of a tone. The Arabic (and Egyptian) division has been proved to be a succession of three intervals, smaller than an equal semitone, which are known as 'limmas,' or 'commas.' To mark off the hemitonic division, the eighteenth part of the length of the string to the bridge must be measured off from the nut or ledge at the top of the finger-board over which the strings pass—in Italian *capo tasto*, 'head fret.' [Capo Tasto.] This gives the place to fix the first fret. Another eighteenth from this fret to the bridge gives the place of the second, and so on until the division is complete. The method implies a nearly equal temperament and uniform tension, but in practice there is room for some modification by the finger. High frets demand a greater finger pressure, and slightly sharpen the pitch

of the notes. To correct this the frets must be shifted towards the nut. The Hindu uses finger pressure, or in other words, greater tension, to get his half-tones from a diatonic fret system, and in the Japanese koto the finger of the left hand is pressed upon the string on the opposite side of the movable fret to the side plucked by the finger of the right hand; thus semitones are produced in certain ornaments. To the instrument maker the disposition of the frets is a difficult task, requiring nice adjustment. On the side that the strings are thicker the frets should be higher, and the finger-board must be concave in the direction of its length to allow the thicker strings to vibrate. The frets are gradually lowered as they descend towards the bridge, the chanterelle, or melody-string, having often a longer series extending only partly across the finger-board. The personal peculiarity of the hand or touch finally modifies the adaptation of the frets.

Narrow slips of wood are generally glued up the sides of the finger-board to prevent the frets projecting. The convex finger-boards of bow instruments requiring convex frets, fretted viols had catgut bound round the finger-board and neck at the stopping distances. Hence the German 'Bunde'—binds. (See the cut of GAMBA.) The French 'ton' indicates the note produced; the Italian 'tasto' the touch producing it. The English 'fret' perhaps implies the rubbing or friction of the string at the point of contact, but the derivation of the word is doubtful. Some take the original meaning of 'fret' to have been a note, and thence the stop by which the note was produced. Shakespeare puns upon the word in Hamlet, 'though you can fret me you cannot play upon me.' The writer has been much assisted by the exhaustive article of Herr Max Albert on 'Bunde' in Mendel's *Lexikon*. A. J. H.

FREZZOLINI, ERMINIA, was born at Orvieto in 1818; received her first lessons in singing from her father, a *buffo cantante*; and afterwards from Nuncini at Florence. She had further instruction from the elder Ronconi at Milan, and from Manuel Garcia; and completed her musical education under Tacchinardi at Florence. In this town she made her débuts in 1838, in 'Beatrice di Tenda' and in the 'Marco Visconti' of Vaccaj. She sang also in that year at Siena and Ferrara, and in 1839 at Pisa, Reggio, Perugia, and Bologna. She played 'Lucrezia Borgia' at Milan in 1840 with brilliant éclat, and then went to Vienna. Returning to Turin, she married the tenor, Poggi; but continued to be known on the stage as Frezzolini. In 1842 (not 1841, as stated by Fétis) she came with her husband to London, during Grisi's temporary absence, but did not succeed in seizing the popular sympathy. 'She was an elegant, tall woman, born with a lovely voice, and bred into great vocal skill (of a certain order); but she was the first who arrived of the "young Italians"—of those who fancy that driving the voice to its extremities can stand in the stead of passion. But she was, nevertheless, a real singer; and her art stood her in stead for some years after nature broke down. When she had left her scarce a note of her rich and real *soprano* voice to scream with, Madame Frezzolini was still charming' (Chorley). In London, however, she never took root. She returned to Italy, and in 1848 was engaged for St. Petersburg. But the climate drove her back to Italy in two years. In 1850 she reappeared in London at Her Majesty's Theatre, and in 1853 was at Madrid. In November of that year she made her first appearance in Paris, in the 'Puritani'; but notwithstanding her stage-beauty, and her nobility of style and action, she could not achieve any success; her voice had suffered too much from wear and tear, and showed signs of fatigue. She subsequently met with the usual enthusiastic reception in America; but her career was over, and she was not heard again in Europe. She died in Paris, Nov. 5, 1884. J. M.

FRIBERTH, KARL, born June 7, 1736, at Wullersdorf in Lower Austria, where his father was schoolmaster; came early to Vienna, and studied singing under Bonno and composition under Gassmann. He had a fine tenor voice, and sang at St. Stephen's, at Prince Hildburghausen's concerts, and in Italian operas at court. In 1759 he was engaged by Prince Esterhazy, and while in his service formed an intimate friendship with Haydn, in whose operas he sang. He himself wrote several librettos. In 1768 he married Maria Magdalena Spangler, a singer in the Prince's company, and removed with her in 1776 to Vienna, where he was appointed capellmeister to the Jesuits and to the Minorites. During a visit to Italy in 1796 Pope Pius VI., 'on account of his services to music,' made him a knight of the Golden Spur—the order to which Gluck and Mozart also belonged. Friberth was an active member of the 'Tonkünstler-Societät,' and took Haydn's part warmly in the discussions there. As a composer he restricted himself almost entirely to church music [but see *Quellen-Lexikon*]. He died August 6, 1816, universally respected both as a man and an artist. In the museum of the 'Gesellschaft der Musikfreunde' at Vienna, there is a portrait of him in oils, showing a fine head and expressive countenance. C. F. P.

FRICHOT, a Frenchman, who claimed to have invented the bass-horn or ophicleide, settled in London about 1790, published there in 1800 'A complete Scale and Gamut of the Bass-horn . . . invented by Mr. Frichot.' This instrument supplied a new and powerful bass for wind instruments in aid of the bassoon, which was too weak, and the serpent, which was very imperfect. It is now generally superseded by the Bombardon and Euphonium. [OPHICLEIDE.] M. C. C.

FRICK, or FRIKE, PHILIPP JOSEPH, born near Würzburg, May 27, 1740, originally organist to the Margrave of Baden, remarkable performer on the harmonica; travelled much from 1769, spending some years in Russia. He came to London about 1780, and played in public with brilliant success both on the pianoforte and harmonica. His health obliged him to give up the latter instrument in 1786, and he then maintained himself by teaching until his death, June 15, 1798. He published various treatises and some music, none of which is of any permanent value (see *Quellen-Lexikon*). The harmonica he used was one on Franklin's system. He tried in vain to adjust a keyboard to the instrument, an attempt in which Röllig succeeded. M. C. C.

FRICKENHAUS, FANNY, was born June 7, 1849, at Cheltenham. Her maiden name was Evans, and she married Mr. Augustus Frickenhaus. She received instruction in music from George Mount, afterwards at Brussels from Auguste Dupont, and later from William Bohrer. Her first important engagement was on Jan. 11, 1879, at one of the Saturday Evening Concerts, where she played with such success that she was engaged for the remainder of the series. She was next heard at the London Ballad and Promenade Concerts. Since then she has played at all the principal London concerts, viz. at the Philharmonic, March 4, 1886; at the Crystal Palace, where she first appeared Nov. 27, 1880, in Mendelssohn's 'Serenade and Allegro giojoso,' and where she has been since heard in concertos of Mozart, Schütt, and Dupont, the last two for the first time in England; at Cowen's Concerts, Nov. 27, 1880, where she played the Pianoforte Concerto of Goetz for the first time in London; at the Brinsmead Concerts, Dec. 19, 1886, in the Prize Concerto of Oliver King, and at the Popular Concerts, where she first appeared Jan. 27, 1883, and has since played with success.

From 1884 to 1887 Mme. Frickenhaus gave, in conjunction with Mr. Joseph Ludwig, several series of chamber concerts. They introduced several important novelties—Dvořák's 'Bagatellen' for piano and strings, June 11, 1886; Fritz Steinbach's septet for piano, strings, and wind, June 17, 1886; a sonata for piano and violin by Oliver King; and on May 21, 1887, a work entitled 'The Strolling Musicians,' for piano duet, violin, and violoncello, by Arnold Krug. Brahms's second piano and violin sonata (op. 100) was announced for first performance in London at one of these concerts, but it was actually played the day before at one of Hallé's recitals. Since 1888 she has introduced at her annual recitals many modern works of interest, by Smetana, Dvořák, Sinding, Richard Strauss, Arensky, etc. On April 19, 1893, she brought forward, with M. René Ortmans, the sonata for piano and violin of César Franck. The most remarkable characteristics of Mme. Frickenhaus's playing are her extraordinary perfection and ease of technique, combined with great intelligence. A. C.

FRIDERICI (FRIDERICH), DANIEL, was born at or near Eisleben, sometime before 1600, but afterwards settled at Rostock in Mecklenburg, where from 1617 to at least 1654 he was cantor at the St. Marien-Kirche. He was a prolific composer, chiefly of German secular songs for three to eight voices, of which various collections appeared with fanciful titles. In 1624 he edited, with adaptation to German words, Thomas Morley's madrigals for three voices. One of Friderici's own madrigals for four voices ('Einstmals das Kind Cupido') has been edited with English words by Mr. Lionel Benson in the publication ARION, vol. i. J. R. M.

FRIEDHEIM, ARTHUR, an eminent pupil of Liszt, was born of German parents at St. Petersburg, Oct. 26, 1859. He lost his father at a very early age, and was educated by some wealthy relatives. After passing through the usual school curriculum at the Gymnasium, and absorbing as much of musical instruction as happened to come his way, he began the serious study of music at the age of eight, and appeared as a pianist at nine in Field's A major concerto. After passing through the university, he became successively conductor of various small theatre orchestras in Germany, whereby he obtained much beneficial experience. For some years Friedheim was a pupil and fast personal friend of Liszt, who, however, for some years would have nothing to do with him as a pupil; he lived with him and studied in Rome in 1880-81 and 1881-82, and subsequently at Weimar. Later he lived in Leipzig; next, for some years as teacher and concert player in North America (1894), where he was appointed Seidl's successor, but was unable to accept the post. He then came to London, where he appeared publicly on occasions from 1889 onwards, and subsequently was appointed pianoforte professor in the Royal College of Music, at Manchester. This latter post he has recently (1904) resigned. Friedheim was regarded for years as one of the foremost exponents of Liszt's music. He has toured in Russia, Austria, Germany, Italy, Scandinavia, America, Egypt, and England. He is a pianist of immense technical ability, and of real temperament, and a musician of wide knowledge and genuine gifts. An opera, written and composed by him, 'Die Tänzerin,' was tentatively accepted at the Grand Ducal Opera House, Carlsruhe, in 1897, but seems never to have been produced, since in the autumn of 1904 the report gained ground that its first appearance was due about that time at Cologne. R. H. L.

FRIEDLÄNDER, MAX, was born at Brieg in Silesia, Oct. 12, 1852, and studied singing under Manuel Garcia in London and Julius Stockhausen in Frankfort. He travelled much

and was widely known as a baritone singer. He sang at the Crystal Palace on April 19, 1884, and elsewhere in London. He took the degree of Dr. in Philosophy at Rostock in 1887, and since 1894 has been a teacher of music at the University of Berlin. He has taken up musical investigation, especially in connection with Schubert; and has edited the new edition of Peters' collection of Schubert's songs with a supplement of variants; Schubert's duets; Schubert's quintet, 'Nur wer die Sehnsucht'; Gluck's Odes; revised edition of the text to Schumann's songs; 100 Deutsche Volkslieder (not before published); Stockhausen's Gesangstechnik (with the author). For many years he has devoted himself to the collection of materials for an exhaustive biography of Schubert, for which he is well qualified. He made an interesting collection of the original setting of Goethe's poems. G.

FRIEDLÄNDER, Thekla, a distinguished soprano singer, whose fame was principally established in London; according to the *Monthly Musical Record* (June 1, 1875), she was a pupil of Ferdinand Hiller, and Schneider of Cologne. On Dec. 11, 1873, she made a most successful first appearance in the soprano part on the production of Bruch's 'Odysseus' at the Gewandhaus, Leipzig. She made her débuts in England, May 8, 1875, at the New Philharmonic Concert, and sang on June 7 at the Philharmonic, Nov. 13, at the Popular Concerts, March 18, 1876, at the Crystal Palace, and at all the Hallé recitals of the same year. On May 27, 1876, she sang with Frl. Redeker (Lady Semon) in duets of Rubinstein at the New Philharmonic on the latter's début in this country, and was frequently engaged with her in singing duets at the Popular Concerts and elsewhere before the marriage of the last named. Miss Friedländer sang also at the Richter and Henschel Concerts, and on March 25, 1886, at the Bach Choir in the third part of Schumann's 'Faust,' and in the provinces, etc. About this time she returned permanently to Germany. The possessor of a sympathetic soprano voice of great delicacy and refinement, she excelled in old Italian airs, and the lieder of her own country, viz., Schubert, Schumann, and Brahms. A. C.

FRITZ, Barthold, celebrated mechanician and maker of instruments, son of a miller, born near Brunswick, 1697. He had no education, but found out for himself the principles of organ-building, and made in all nearly 500 organs, clavecins, and clavichords, beginning in 1721 with a clavichord of 4 octaves. The tone of all his instruments was good, especially in the bass. He died at Brunswick, July 17, 1766. He published 'Anweisung, wie man Claviere . . . in allen zwölf Tönen gleich rein stimmen könne, etc.' (Leipzig, 1756-57-80), a new system of tuning keyed instruments by means of fifths and octaves, which, though erroneous, had much success, having gone through three editions, and being translated into Dutch by no less a person than Hummel. M. C. C.

FROBERGER,[1] Johann Jacob, eminent organist, born, according to Mattheson, at Halle in Saxony, where his father was Cantor, but at what date is unknown. On the accession of the Emperor Ferdinand III. (Feb. 15, 1637) he was appointed court organist at Vienna. There are entries of his salary in the accounts of the Hofcapelle, from Jan. 1 to Sept. 30, 1637,[2] from April 1, 1641, to Oct. 1645, and from April 1, 1653, to Oct. 30, 1657. The interval from 1637 to 1641 was occupied by his stay in Italy as Frescobaldi's pupil, and a grant of 200 florins for his journey is entered in the accounts under June 22, 1637. [In 1649 he was in Vienna again (see Huygens' *Correspondence*, 1882, p. cxcix.)]. In 1657 he left the Emperor's service. In 1662 he journeyed to London, where he was twice robbed on the way, and arrived in so destitute a condition that he thankfully accepted the post of organ-blower at Westminster Abbey, offered him by Christopher Gibbons, then organist of the Chapel Royal and the Abbey. Gibbons was playing before the Court on the occasion of Charles II.'s marriage, when Froberger overblew the bellows, and thus interrupted the performance, on which the enraged organist overwhelmed him with abuse and even blows. Froberger seized the opportunity a few minutes after to sit down to the instrument, and improvised in a style which was at once recognised by a foreign lady who had formerly been his pupil and knew his style. She presented him to the King, who received him graciously, and made him play on the harpsichord to the astonishment of all. This curious anecdote is not mentioned by English writers, but is given by Mattheson (*Ehrenpforte*) from Froberger's own MS. notes. Mattheson states that he became a Roman Catholic during his visit to Rome, but it is almost certain that he was already one when he entered the Emperor's service in 1637. The late Anton Schmidt, Custos of the Imperial Library, maintained that he again became a Lutheran after his visit to London, and was dismissed from his post of Court organist on that account. The contradiction has never been explained, but that he died a Catholic we know, from an autograph letter of Sibylla, Duchess Dowager of Würtemberg, who was his pupil, and who offered him an asylum in her house at Héricourt, near Montbelliard, where he died, May 7, 1667. See *Zwei Briefe über J. J. Froberger* . . . by Dr. Edmund Schebek (Prague, 1874). His printed works—here first given accurately—are 1. 'Diverse ingegnosissime e rarissime Partite di Toccate, Canzone, Ricercari . . . Stampate da Lodovico Bourgeat . . . Mogont. 1693'—two copies in possession of the writer,

[1] So, and not Frohberger, is the name spelt by the last investigator, Dr. E. Schebek.

[2] This alone shows that the received date of his birth, 1635, must be wrong.

one with Italian title, the other with Italian and German. The copies quoted in other works with dates 1695, 1714, are printed from the same plates, but with different titles. 2. 'Diverse . . . etc., Prima continuazione. Mog. 1696.' 3. 'Suites de Clavecin, par Giacomo Frobergue,' Amsterdam, Roger (a copy of the first edition in the Fitzwilliam Museum, Cambridge). The second edition is in the library at Berlin, where are also several autograph vols. of Froberger's dated 1649 and 1656, containing, amongst others, some of the pieces in the above collections. The Imperial Library at Vienna also contains a MS. of 222 sheets of Toccatas, Caprices, etc. [see the *Quellen-Lexikon.* A large selection of the clavier and organ works was published in the *Denkmäler d. Tonkunst in Oesterreich* (see DENKMÄLER), edited by Guido Adler; they were afterwards republished alone, in two volumes (Artaria, and Breitkopf & Härtel)]. F. G.

FRÖHLICH. There were four sisters of this name, all natives of Vienna.

1. The eldest, NANETTE (Anna), born Sept. 19, 1793, a pupil of Hummel for the piano, and of Hauss and Siboni for singing, became an excellent artist in both branches. From 1819 to 1854 she was teacher of singing at the Conservatorium of Vienna, where she trained many dramatic and concert singers, since celebrated. She will be always gratefully remembered for having induced F. Schubert to write the following pieces:—'Gott ist mein Hirt' (Psalm xxiii.), op. 132; and 'Gott in der Natur,' op. 133, both for four-part female chorus; 'Nachthelle,' op. 134, for tenor solo and four-part male chorus; the Serenade ('Zögernd, leise'), op. 135, for alto solo and four-part female chorus; the Song of Miriam, op. 136; and Des Tages Weihe ('Schicksalslenker'), op. 146, for soprano solo and chorus. Grillparzer wrote the words for the Serenade and the Song of Miriam also at her instigation.

2. BARBARA, born August 30, 1797, excelled both as a contralto singer and a painter of portraits and flowers. She married Ferdinand Bogner, a government employé and eminent flute player, who was honorary professor at the Conservatorium from 1821 until his death in 1845.

3. JOSEPHINE, born Dec. 12, 1803, a distinguished singer, pupil of her sister at the Conservatorium (1819-21), made her début at concerts so successfully that she was immediately engaged for the court theatre (1821-22). Shortly afterwards, however, she went to Copenhagen, and completed her studies under Siboni, who had settled there. As a concert singer she was very well received in Denmark, Norway, and Sweden, and was appointed private singer to the King of Denmark. Later she went to Italy, and sang in the operas of Venice (1829) and Milan (1831) with brilliant success. The Società Apollinea of Venice elected her an honorary member. After her return to Vienna she seldom appeared at concerts, and turned her attention almost entirely to teaching singing. She died May 7, 1878.

4. KATHARINA, born June 10, 1800, though not a musician, must not be omitted from this band of sisters. Her cultivated mind and sympathetic disposition eminently fitted her to be the intimate friend and associate of the great Austrian poet Grillparzer, who was deeply susceptible to music, and passed the greater part of his life in the house of these sisters until his death in 1872. It was 'Kathi' especially, with her quiet, unassuming ways, whom the poet reverenced as his purest ideal, and who inspired many of his poems. She died March 3, 1879. C. F. P.

FROTTOLE, early Italian songs, of which nine books, containing each on an average sixty-four, were published by Petrucci at Venice between 1504 and 1509. Many of them are by Tromboncino, who so far may be called the Gordigiani of his day. As far as can be gathered from the account of Ambros,[1] the Frottola was essentially a popular melody, or street-song, treated with a certain amount of contrivance. It stood midway between the strict and complicated Madrigal, and the Villotta or Vilanella, which was a mere harmonisation of a tune; and in fact as the use of counterpoint increased it disappeared, its better elements went into the Madrigal, its lower into the Vilanella. The words of the Frottole were often comic (in fact the word is a synonym for a joke) but still oftener extremely sentimental. Ambros (iii. 478) cites some in which the song of the cicada and the mewing of a cat are imitated. The poem was in verses, sometimes very numerous. The music was set almost exclusively for four voices. Besides those printed at Venice, a book of twenty-two was published at Rome by Junte in 1526. See Ambros, as below, Eitner's *Bibliographie*, and Vogel's *Bibliothek der gedruckten weltlichen Vocalmusik Italiens.* G.

FRUYTIERS, JAN, Flemish poet and musician of the 16th century, was living at Antwerp in 1565. He was a Lutheran, and author of the words and music of 'Ecclesiasticus of de wijse sproken Jesu des soons Syrach,' etc. (Antwerp, Selvius, 1565), a metrical translation of the book of Ecclesiasticus. The music is printed in the fine type of Plantin. This scarce book is the more remarkable as it was published by permission of Margaret of Parma, Governess of the Netherlands, only a few months before she enforced the decrees against the heretics which brought about the War of the Gueux. The melodies are chiefly popular Flemish airs. The 35th Cantique (Ecclus. xxiv.) is set to a French dance of the 15th century, called 'L'homme armé,'—not to be confounded with the celebrated

[1] *Geschichte*, iii. 464-489.

song of the same name, so often used as a theme for entire masses by composers of the 15th and 16th centuries. The song is in 3–2 time, the dance in 2–4, and in the form of a round. [L'HOMME ARMÉ.] M. C. C.

FUCHS, ALOYS, bass singer in the Imperial chapel from 1836, and government employé in the war department at Vienna, born June 23, 1799, at Raase in Austrian Silesia, remarkable as an ardent collector of autographs. His collection of music, books, portraits, etc., purchased out of a small salary by dint of rigid economy, has often been described in detail. It contained specimens from all nations, though the Italian and German masters were most fully represented, and especially Mozart. These materials were partly used by Otto Jahn in his Life of that master. Fuchs contributed articles to several musical periodicals, and took a keen interest in everything connected with the history and literature of music. Severe illnesses compelled him to part with his treasures one by one, and thus his whole collection was scattered. Thalberg bought the remaining autographs; the Mozarteum a fair copy of Mozart's works; Grasnick of Berlin the collection of portraits; the ecclesiastical institution of Göttweig the library; and Butsch, the bookseller of Augsburg, the rest of the papers and biographical articles. Fuchs died at Vienna, March 20, 1853. C. F. P.

FUCHS, ANTON, born at Munich on Jan. 29, 1849. Baritone singer of distinction, who has also devoted himself with conspicuous success to the work of operatic stage management, in which capacity he has been engaged since 1880 at the Munich Opera, and since 1882 in the Festspiele at Bayreuth. W. W. C.

FUCHS, CARL, violoncellist, born in 1865 at Offenbach in Germany, was a pupil of Cossmann at the Frankfort Conservatoire until 1886, when he studied at St. Petersburg under Davidov. Is now settled at Manchester, where he is a professor at the Royal College, soloist at the Hallé-Richter concerts, and member of the Brodsky Quartet. He is an excellent chamber-music player, having often performed at the London 'Popular Concerts' with success. He draws a rich, full tone from his instrument. W. W. C.

FUCHS, FERDINAND KARL, born in Vienna, Feb. 11, 1811, died there Jan. 7, 1848. Popular song-writer; produced two operas at Vienna in 1842. W. W. C.

FUCHS, GEORG FRIEDRICH, born at Mayence, Dec. 3, 1752, died at Paris, Oct. 9, 1821, won considerable fame as a clarinettist in his day. Was a professor at the Paris Conservatoire and composer of various works for wind instruments. W. W. C.

FUCHS, JOHANN NEPOMUK, born at Frauenthal, May 5, 1842, an accomplished, all-round musician, has held the appointment of capellmeister in various towns (since 1880 at the Vienna Opera). In 1894 he was appointed a director of the Vienna Conservatorium. Composed in 1872 the opera 'Zingara.' W. W. C.

FUCHS, KARL DORIUS JOHANN, pianist, conductor, and critic, was born at Potsdam, Oct. 22, 1838. Pupil of his father, an organist, he was compelled to give lessons on the pianoforte whilst yet a collegian. In 1859 was a student at the University of Berlin, and at the same time took lessons on the pianoforte under Von Bülow. Henceforth his life was divided between music and literature. In 1869 he was organist at Stralsund, and in 1870 took the degree of Dr. Phil. at Greifswald, his thesis being *Präliminarien zu einer Kritik der Tonkunst.* In 1871-75 he lived in Berlin as pianist, teacher, and critic; in 1875-79 at Hirschberg, where he founded a musical society of which he was the conductor; and in 1879 moved to Danzig, where he has held several appointments. His leaning is towards philosophical analysis, a tendency which reacts on his playing, which is of the intellectual order. In conjunction with Hugo Riemann he wrote a *Praktische Anleitung zum Phrasieren* (1886) of which an English translation has appeared in New York. Said by Riemann to be 'the first who attempted phrasing in orchestral performances.' W. W. C.

FUCHS, ROBERT, brother of J. N. Fuchs, was born at Frauenthal, Feb. 15, 1847. He has been since 1875 professor of theory at the Vienna Conservatoire, and is chiefly known to the outside world as composer of five Serenades for string orchestra, which enjoy wide popularity. Has also composed a Symphony (op. 37 in C), a piano Concerto, a Mass, several works for the chamber, and two operas. W. W. C.

FÜHRER. See DUX.

FÜHRER, ROBERT, born at Prague, June 2, 1807; in 1839 succeeded his master Wittasek as organist to the Cathedral there. His irregular life, however, lost him the post, and in 1843 he left Prague. In 1853-55 he was organist at Gmunden and Ischl, and then settled in Vienna, where he died, Nov. 28, 1861, in great distress in a hospital. His compositions, published from 1830 in Prague and Vienna, are numerous and good. (For list see Fétis.) They comprise masses, graduales, offertories, preludes, fugues, a method for the pedal-organ, a handbook for choirmasters, a *Praktische Anleitung zu Orgelcompositionen*, etc. Whatever his merits as a musician, however, he was a dishonest man, for he actually published Schubert's Mass in G under his own name (Marco Berra, Prague, 1846), a fact which requires no comment. M. C. C.

FUENTES, DON PASQUALE, born about the beginning of the 18th century at Albaida in the province of Valencia in Spain, was maestro de capilla at first at the church of St. Andrea, and from 1757 at the cathedral of Valencia. He died there April 26, 1768. Fétis gives a list of sacred and secular compositions, one of which, a

'Beatus vir' *a* 10, is printed in Eslava's *Lira Sacro-Hispana* (*Quellen-Lexikon.*)

FÜRSTENAU, a family of distinguished flautists and good musicians.

1. Caspar, born Feb. 26, 1772, at Münster, was early left an orphan under the care of A. Romberg, who tried to force him to learn the bassoon, as well as the oboe, which he had been already taught; but his preference for the flute asserted itself, and he shortly became so proficient, as to support his family by playing in a military band, and in that of the Bishop. In 1793-94 he made a professional tour through Germany, and settled at Oldenburg, where he entered the Court band, and gave lessons to the Duke. In 1811 the band was dispersed, and Caspar again travelled with his son. He died at Oldenburg, May 11, 1819.

2. Anton Bernhard, a finer flautist than his father, born Oct. 20, 1792, at Münster; first appeared at a Court concert in Oldenburg when only seven. He remained with his father, the two taking long journeys together. In 1817 he was engaged for the municipal orchestra of Frankfort, from whence he removed in 1820 to Dresden, where he remained in the service of the King of Saxony till his death, Nov. 18, 1852. In 1826 he accompanied Weber on his last sad journey to London, tended him with anxious care, and assisted him to undress the night before his death. (See Max Maria von Weber's Life of his father, ii. 703.) He composed several pieces and two Methods for the flute.

3. His son Moritz, born in Dresden, July 26, 1824, also a flautist, at seventeen entered the royal band. He made some valuable contributions to the history of music, such as *Beiträge zur Geschichte der königlichen sächsischen musikalischen Capelle* (1849); *Zur Geschichte des Theaters und der Musik in Dresden*, 2 vols. (1861); and *Die Fabrication musikalischer Instrumente in Voigtlande* (1876). In 1852 he was appointed Custos of the royal collections of music, and received the order of Albert of Saxony. From 1858 he was flute professor at the Dresden Conservatorium, and he died at Dresden, March 25, 1889. F. G.

FUGATO. A name given to an irregularly fugued movement, in which the fugue-form is not strictly followed (especially as to strettos and pedal-points), though the structure is fugal and contrapuntal. Fugato passages are often introduced in orchestral music with the happiest effect, as in first and last movements of the Eroica Symphony, in the Allegretto of No. 7, both by Beethoven, and in the first movement of Mendelssohn's Italian Symphony, immediately after the double bar, etc. F. A. G. O.

FUGHETTA. A short condensed fugue—a miniature fugue—correct and complete as to form, but with all its dimensions curtailed. No. 10 of Bach's thirty Variations is a Fughetta, as is also No. 24 of Beethoven's thirty-three Variations (op. 120). Both are in two sections, each repeated. F. A. G. O.

FUGUE. A musical movement in which a definite number of parts or voices combine in stating and developing a single theme, the interest being cumulative.

This definition immediately suggests two points:—

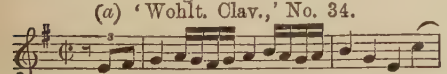
1. The main idea of a fugue is that of one voice contrasting with others; not, as in the first movement of a sonata, of one section contrasting longitudinally with other sections. Indeed the fugal form may be said to be 'a question of texture rather than of design,'[1] and it has even been suggested that the term 'a fugue' is incorrect and that we should rather speak of a composition being written in fugue, just as we speak of a poem being written in hexameters. This essential of a fugue brings us to the second point in our definition.

2. It is essential that a fugue be conceived in a definite number of parts or voices;[2] two parts at least are obviously necessary, so that one may contrast with the other. It is possible to imagine an entirely melodic sonata; an entirely melodic fugue is a contradiction. For similar reasons a texture of harmonic blocks of chords is quite alien to the fugal form.

From what has been said it is clear that the fugue is of more artificial and less primitive origin than the 'cyclical' forms. The sonata form can be traced directly back to the folk-song; the fugue seems to be descended from the contrapuntal experiments of mediæval monks. For this reason perhaps, and partly because fugue writing is so excellent a scholastic training, the idea has grown up that a fugue is necessarily dull and pedantic, justifying the famous aphorism that 'a fugue is a composition in which one voice runs away from the others and the hearer from them all.' It is surely clear that a form which has inspired the most magnificent music of the greatest composers must be something more than an academic exercise or an arbitrary collection of scholastic regulations. Indeed just as the 'rules' of the sonata have been shown to be based on deep principles which underlie the whole of musical form, so the rules of fugue may be shown to be based on principles equally deep.

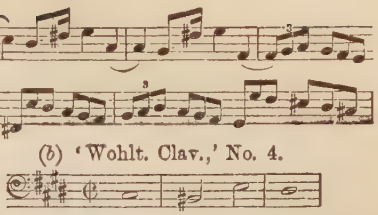
The fugue, like every other form of art, has had its origin and development. In the 16th century the word meant a movement in canonic form; indeed the name 'canon' is merely short for 'fuga per canonem,' a fugue according to rule. In these times there were two species of fugue, the limited fugue, which was what we now call a strict canon, and the unlimited fugue which started canonically and soon broke off into free passages, with occasional points of imitation. It was the text-book of Fux (1725) which placed

[1] D. F. Tovey, Lecture on Beethoven's 'Missa Solennis.'



[2] The term 'voice' is used throughout this article as the equivalent of 'part,' not necessarily a vocal part.

the fugue on its present basis, though still in a very simple and undeveloped form. Thus the way was prepared for J. S. Bach, who took the fugue form as set forth in Fux's *Gradus ad Parnassum* and applied to it the new key-system with its endless possibilities of modulation, enriching it at the same time with his boundless wealth of melodic and harmonic imagination. Bach rose superior to all the rules and regulations with which Fux had hedged in the fugue, and evolved out of Fux's skeleton the living fugue, the quintessence of fugue, freed from all the impurities of pedantry. From the time of Bach the word 'fugue' has connoted a very definite musical form which will now be described.



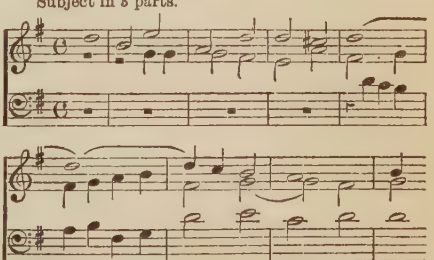
As this is not a text-book, no attempt will be made to enumerate all the rules which are found in primers.[1] Only those factors of a fugue will be described here which are essential to its nature as set out in the above definition. All the principles enunciated will be referable to the examples set by great composers; they, and not the theorists, will be taken as the criterion.[2] Writers on music have a tendency to divorce theory from practice, and in no branch of the art is this the case more than in the fugue. It is an extraordinary thing that hardly any of the well-known treatises on fugue so much as mention Bach;[3] and one modern teacher, it is understood, actually used to forbid the study of Bach's fugues because they are 'contrary to the rules.'[4]

We can now proceed to a detailed description of the fugal form. It is obvious that the theme on which the whole work hangs must be clearly and unequivocally presented at the outset, and this cannot be done better than by giving it to the voice or voices sufficient to enunciate it entirely unaccompanied. This is, as a matter of fact, the way in which a fugue does invariably start, and the theme thus propounded is called the *subject*.[5] The subject of a fugue must be of a character to arrest and hold the attention whenever it is heard. Cherubini's somewhat oracular remark, 'the subject must neither be too long nor too short,' really contains the nucleus of the matter. The subject must be long enough to contain a definite idea, it must not be so long that the memory cannot retain it. Here follow examples of the longest and shortest fugue subjects in Bach's *Wohlt. Clavier*.

(*a*) 'Wohlt. Clav.,' No. 34.

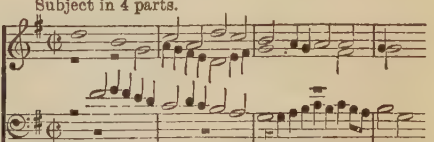
(*b*) 'Wohlt. Clav.,' No. 4.

Although the subject is always announced by itself yet this does not mean that only one voice is heard at the beginning. The subject may be in two, three, or even four parts, and in these cases the subject should be described as a double, triple, or quadruple subject. As a matter of fact fugues with subjects in two or more parts are usually called fugues on two subjects, or even double fugues, but it is plain that there can only be one subject to a fugue,[6] and this subject, when it is in two or more parts, almost invariably makes its various appearances as a whole and not in its separate parts. The name double fugue seems better applied to those cases where a secondary theme appears during the course of the movement (this will be dealt with later).



(*a*) Haydn, 'Achieved is the glorious work,' from the *Creation*.

Subject in 2 parts.



(*b*) Leo, 'Dixit Dominus.'

Subject in 3 parts.

(*c*) Cherubini, 'Et vitam.'

Subject in 4 parts.

Fugue subjects can be divided roughly into three classes:—

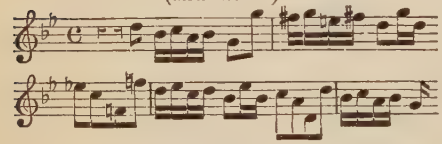
[1] For the sake of completeness the famous treatises on fugue should be mentioned: Fux, 1725; Marpurg, 1753; Albrechtsberger, 1790; Cherubini, 1833; Richter, 1876. For English students there are two excellent primers by J. Higgs and E. Prout.

[2] Prof. Prout is one of the few writers on fugue who have deliberately taken the works of the great masters as their standard.

[3] Marpurg is an honourable exception.

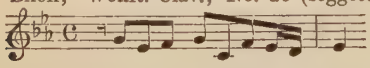
[4] Quoted in the preface to Prout's *Fugue*.

[5] There is an apparent exception in the case of an 'accompanied fugue,' in which case the announcement of the subject is heard simultaneously with a full harmonic accompaniment. This will be dealt with later.



[6] Cherubini recognises this and refuses to use the nomenclature 'fugue on two subjects,' saying that a fugue 'cannot have more than one principal subject.' He proposes to call such fugues 'fugues on one subject with one, two, or three counter-subjects.'

1. Those that are in themselves complete melodies usually of a very definite rhythmical nature. In fugues on such subjects the interest of the fugue depends chiefly on the intrinsic beauty of the subject itself at its various appearances. Such subjects are usually called 'andamenti.' (See ANDAMENTO.)



2. Those which consist of some short passage with perhaps a characteristic interval. Such a subject is not necessarily beautiful in itself but becomes so when treated and developed in the course of the movement. Such subjects come under the class of 'soggetti.' (See SOGGETTO.)

3. Those which consist merely of a short figure and are usually called 'attacco' (*q.v.*) The 'attacco' seldom forms the subject of a complete fugue; there is, however, an example in Bach's *Wohltemperirtes Clavier*, No. 27.

(*a*) BACH, Organ fugue G Minor (andamento).

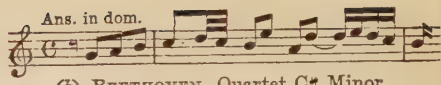
(*b*) BACH, 'Wohlt. Clav.,' No. 26 (soggetto).

(*c*) BACH, 'Wohlt. Clav.,' No. 27 (attacco).

The subject having been stated, another voice enters with an *answer* to this statement. In most text-books the answer is described as an *imitation* of the subject, and, this definition having been given, it is found necessary to employ several paragraphs in explaining that the answer is not an imitation but a modification of the subject. The truth is that the answer is not in its essence an imitation of the subject. The answer is what its name implies, a *reply*. The subject alone is a 'broken arc'; it requires the answer to complete the 'perfect round.' The subject and answer may be compared to the obverse and reverse of a medal.[1]

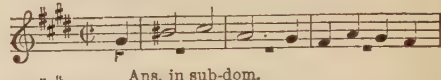
This answering of the subject can be brought about in more than one way:—

1. The answer may be a repetition of the subject in a different key. This is called a *real* answer. If the subject is entirely in the tonic, the real answer is usually in the dominant (occasionally in the sub-dominant). If the subject is in the dominant, the real answer is in the tonic.



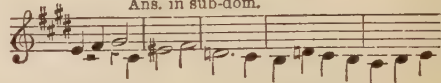
(*a*) BACH, 'Wohlt. Clav.,' No. 1.

Sub. in tonic.



[1] Rockstro describes the answer very well as a 'fore-shortening' of the subject.

Ans. in dom.



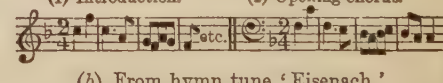
(*b*) BEETHOVEN, Quartet C♯ Minor.

Sub. in tonic.

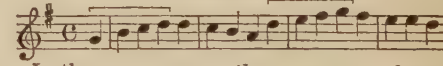
Ans. in sub-dom.

(*c*) HANDEL, 'Then shall they know' (Part II); *Samson*.

Sub. in dom. Ans. in tonic.



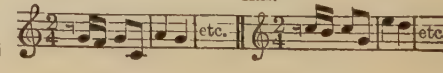
(See also REAL FUGUE, below.)



2. Recourse is frequently had to the universal feeling which divides the octave into two unequal portions at its fifth note, so that the interval of a fifth from tonic to dominant is felt to have its exact correlative in the interval of a fourth from dominant to tonic. It was this feeling that led the early ecclesiastical musicians to add to each 'authentic' mode, which was divided into two parts at its fifth note, a corresponding 'plagal' mode, starting at that fifth note, and itself divided into two parts at its fourth note, that is, the final of the authentic mode. This analogy between plagal and authentic seems to be universally perceived in music. This can be shown by the two following examples drawn from very different sources, neither of which can be suspected of being influenced by fugal considerations, since one is from a comic opera and the other from a German chorale.

(*a*) From *Dorothy*, CELLIER.

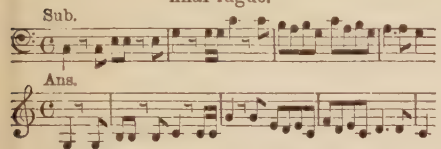
(1) Introduction. (2) Opening chorus.



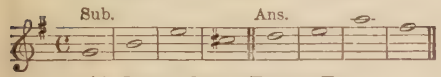
(*b*) From hymn tune 'Eisenach.'

In the same manner the answer to a fugue-subject is often compressed into the plagal or extended into the authentic compass, inversely according as the subject is authentic or plagal. An answer conceived on this plan is called a *tonal* answer. Many rules are given in the text-books for finding the correct tonal answer to a fugue. It will serve our purpose better to give several examples of tonal answers by great composers to show the various modifications which they adopt. These examples will also prove how very far from being a mere imitation of the subject a fugue answer generally is. (See TONAL FUGUE, below.)

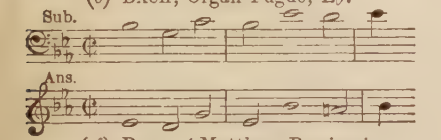
(*a*) BACH, 'Wohlt. Clav.,' No. 25.



Sub. Ans.



(*b*) HANDEL, 'Hallelujah,' *Messiah*.



(*c*) BACH, 'Ich hatte viel Bekümmerniss,' final fugue.

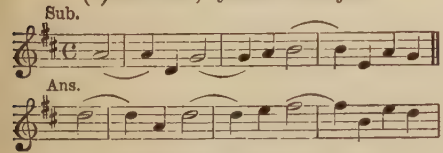
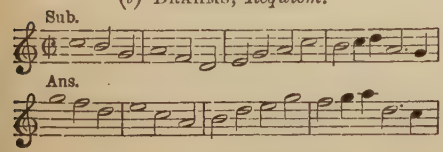
(*e*) BACH, Organ Fugue, E♭.

(*f*) BACH, 'Matthew Passion.'

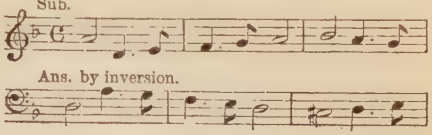


(*g*) KIRNBERGER.

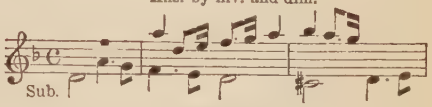


(*h*) BEETHOVEN, Pf. Sonata, op. 101.

(*k*) MOZART, Quartet G Major.



(*l*) BRAHMS, *Requiem*.

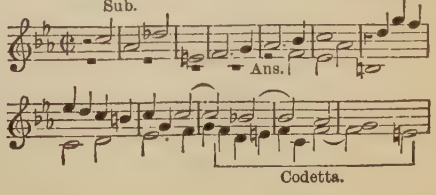


3. The answer is occasionally an inversion, diminution, or augmentation of the subject.

(*a*) BACH, 'Kunst der Fuge,' No. V.

(*b*) No. VI.

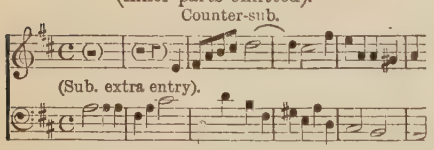
(*c*) No. VII.



While the second voice announces the answer, the first voice goes on its way in counterpoint with it. Sometimes this counterpoint takes the shape of a definite theme of which further use is made in the course of the fugue; it is then called a *counter-subject*. The counter-subject is usually in double counterpoint with the subject, designed, that is, to appear either above or below it as occasion requires. A counter-subject is by no means an inalienable factor in a fugue; for instance seventeen of the forty-eight fugues of Bach's *Wohltemperirtes Clavier* have no regular counter-subject.

BACH, 'Wohlt. Clav.,' No. 44.

When the subject and answer have been thus propounded, the other voices enter in turn with subject or answer alternately. Sometimes the duet between the first two voices is lengthened by a few bars before the entry of the third voice: this small digression is called a *codetta*.

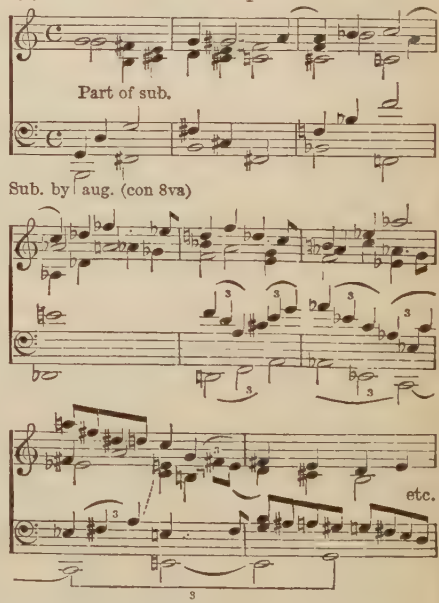


HANDEL, 'And with His stripes,' *Messiah*.

The complete statement of subject or answer by all the voices employed is called the *exposition*. The exposition usually consists of subject and answer entering alternately,[1] and one or more short codette. If there is a counter-subject, it appears in that voice which last had the subject or answer.[2] This fugal exposition is in itself such a very definite and unmistakable mode of expression that it is often introduced into choral and instrumental works which are not fugues. Such a torso is called a *fugato* passage or merely 'fugato.' Beethoven was particularly fond of the fugato: good examples are found in the slow movements of his first and seventh symphonies.

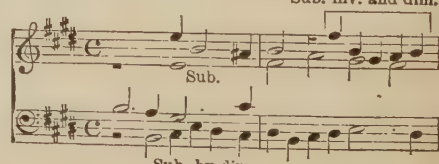
Now it is necessary, before the subject, as the hero of the plot, sets out on its career of adventure, that its nature and characteristics should be thoroughly impressed on the attention. Sometimes the exposition alone suffices for this; but sometimes an *extra entry* of the subject is added at the end of the exposition before any modulation takes place: this most frequently happens in those fugues where the relative positions of subject and counter-subject have been the same throughout the various entries of the exposition. The extra entry then presents the subject in a new aspect with regard to the counter-subject.

BACH, 'Patrem' from *B Minor Mass* (inner parts omitted).



Sometimes this extra entry is not enough by itself, and the exposition is followed by a whole series of extra entries, a sort of complement to the exposition; this is called the *counter-exposition*. In the counter-exposition the answer usually leads off, followed by the subject; sometimes both subject and answer are *inverted* in the counter-exposition[3] (*e.g.* Bach. *Wohlt. Clav.* No. 15).

Up to now there have been no serious modulations in the fugue, but when the exposition and counter-exposition are over, there begins what is known as the *middle section* of the fugue. This consists of a contrapuntal web gradually leading through some definite scheme of modulations to the final section or climax of the fugue. This contrapuntal web consists of a series of *episodes* (usually founded on the main subject and counter-subject) interspersed with entries of the subject in various new situations and guises. At the time when the rules of fugue were crystallised by Fux, modulations were of a very mild nature and as a consequence the later theorists, regardless of musical progress, have strictly circumscribed the modulations which a fugue writer 'is allowed' to make. It need hardly be said that the rules for fugal modulation are of no more value than any of the other arbitrary rules of fugue. Not a single one of the fugues, either in the *Wohltemperirtes Clavier* or in the *Kunst der Fuge*, follows the scheme of modulation which was afterwards prescribed by Cherubini.[4]

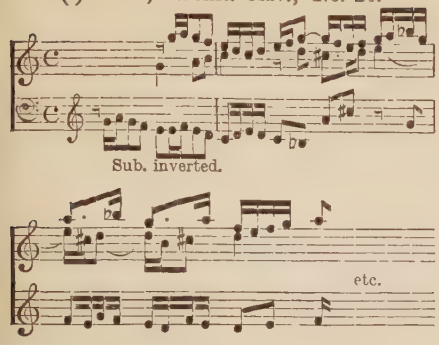


The various ways in which the successive entries of subject, answer, and counter-subject are made to grow in interest during the middle section of a fugue have been codified into a scheme of *devices*, which may be summarised as follows:—

(*a*) The subject and counter-subject may be themselves altered (i.) by *augmentation*, (ii.) by *diminution*, (iii.) by *inversion*, (iv.) by '*cancrizans*' motion.

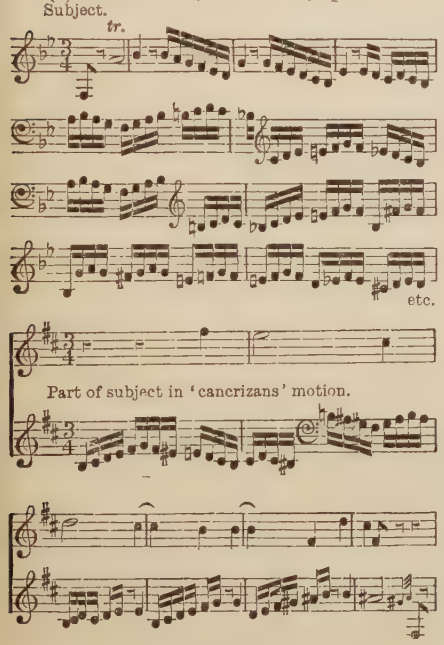
(*a*) R. STRAUSS, 'Also Sprach Zarathustra.'

(*b*) BACH, 'Wohlt. Clav.,' No. 33.



[1] This is not invariable.

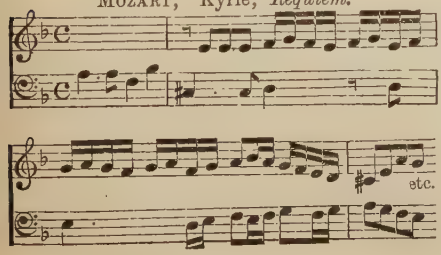
[2] The counter-subject originally appears as a counterpoint to the answer; therefore when it accompanies the subject it often has to be modified. This modified form bears the same relation to the original counter-subject as the subject bears to the answer, and might well be called the 'counter-answer,' but this term is never used.

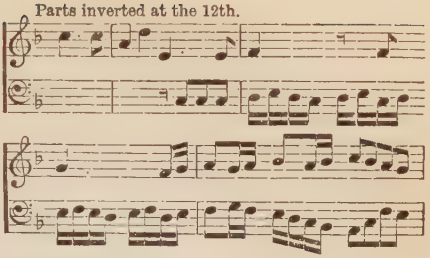


[3] Sometimes exposition and counter-exposition are separated by an episode, *e.g. Wohlt. Clav.* No. 11.

[4] Cherubini's rules for modulation are as follows: When the fugue is in a major key—dominant, relative minor, sub-dominant, super-tonic minor, mediant minor, dominant. When the fugue is in a minor key—mediant major, dominant minor, or sub-mediant major, or sub-dominant minor, or seventh major.

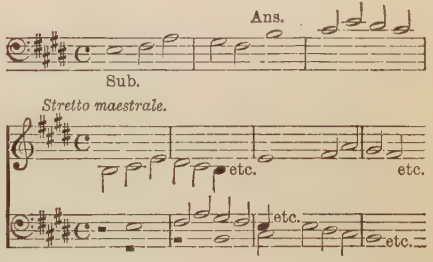
(*c*) BACH, 'Wohlt. Clav.,' No. 20.





(*d*) BEETHOVEN, Pf. Sonata, op. 106.

(*b*) The subject with its various counter-subjects can be presented inverted in double counterpoint at various intervals (usually the octave, tenth or twelfth).



MOZART, 'Kyrie,' *Requiem*.

(*c*) The device of *stretto* may be made use of. Stretto is defined by Cherubini as 'a device which consists in bringing the entrance of the response nearer to that of the subject'; to which it may be added that a stretto often consists in introducing a second entry of the subject instead of the answer at these close quarters. This 'hurried' introduction of the answer can often be introduced at more than one point of the subject, as the following examples will explain. When the entrance of the answer follows close on that of the subject, it is said to be a *close* stretto. A stretto in which all the voices take part, and in which each voice takes up subject or answer in turn in their entirety and without any modification, is called a masterly stretto or '*stretto maestrale*.'

BACH, 'Wohlt. Clav.,' No. 33.

The device of stretto may also be combined with the various other devices of augmentation, etc., just described. A good example of stretto combined with augmentation will be found in the fugue 'Cum Sancto' from Beethoven's 'Missa Solennis.'

The emotional effect of stretto is obvious, and the closer the stretto the greater the excitement produced. Therefore, where more than one stretto is employed in a fugue, the simpler is usually placed first, and the closest and most elaborate is kept till later, so that the fugue may grow in interest.

(*d*) Sometimes one or two subsidiary subjects are introduced in the course of the fugue. These may be introduced in one of two ways: (i.) by a regular fugal exposition in the middle of the fugue, as in Bach's organ fugue in C minor (Peters' edition, vol. iv.). (ii.) They can be imposed on the normal flow of the counterpoint as in the fourth fugue (C♯ minor) of the

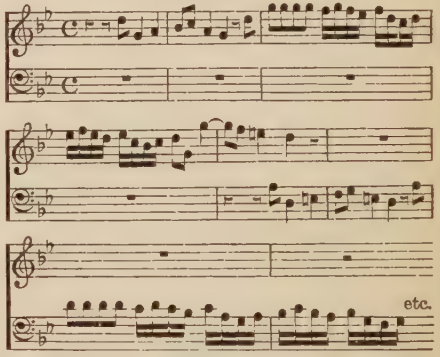
Wohltemperirtes Clavier. Such fugues are very properly called double or triple fugues.

In the middle section of a fugue the composer is usually said to be 'free' to proceed as he likes: this is only true in so far as it means that no hard and fast regulations can be laid down for his guidance at this point; but it is just here that in reality the composer is most emphatically not free, except in so far as every composer is always free. If he wishes to make his fugue an organic and inevitable whole, then it is especially in these 'free' passages that he must keep the direction and tendency of the whole movement most clearly in his mind.

After the wanderings of the middle section there follows a natural desire for home, but home under a new aspect, looked at with eyes which have witnessed all the wonderful developments of which the infant theme has become capable as it reaches maturity. This is the climax of the fugue, and is usually heralded by a return to the original key. The climax, then, is the place where the subject will be presented in its most exciting aspect. If there are several stretti in the fugue, the closest or most elaborate will be reserved for this point: if there is only one stretto, the composer will probably place it here. Indeed this portion of the fugue is often called *the stretto*, but a stretto is by no means universal in a fugue; in many of Bach's fugues the climax is marked by an emphatic entry of the subject in the principal key. In a double or triple fugue the climax is usually marked by the combination of all the subjects previously announced separately.

After the climax comes a peroration or coda. This very often contains a *pedal* on the dominant and sometimes also on the tonic. In many cases, right at the close, the contrapuntal texture gives way to massive blocks of harmony (*e.g.* Mendelssohn, 42nd Psalm). Sometimes the end takes the form of an elaborate cadenza, as in Bach's organ fugue in C minor (Peters, vol. iv.).

Before ending this description of the fugal form two slight variants must be noticed:—



I. *The Fugue on a Chorale*.—There are two species of this form:—

(*a*) Where the fugue pursues its normal course, the chorale being superimposed as a canto fermo or an episode during its development (*e.g.* Mendelssohn, 3rd organ sonata, 1st movement).

(*b*) Where each line of the chorale-melody is made the climax of a short fugal passage. The fugal matter being founded on the chorale (*e.g.* Bach's fugue on 'Durch Adam's Fall').

II. *The Accompanied Fugue*.—A fugue is sometimes accompanied; that is to say, that besides the regular fugal exposition and development there are independent parts for other voices or instruments. The usual form of accompanied fugue consists of a normal fugue sung by a choir of voices, while an orchestra plays a partly independent accompaniment. Examples are the 'Cum sancto Spiritu' from Schubert's Mass in F, and the last chorus of Parry's 'Judith.' In an accompanied fugue the texture of the fugal parts is often much looser than in the ordinary fugue. In many of Handel's accompanied fugues the first voice after giving out the subject is silent, while the second voice sings the answer.

HANDEL, 'And He shall purify' (voice parts only) from *The Messiah*.

This then is the construction of a fugue as generally understood. It will be noticed that it falls into three sections: exposition, middle section, and climax (or stretto). These three sections coincide with the design usually described by the formula A. B. A. under which nearly every piece of music may be said to fall. This has led some theorists to trace a connection between the fugal and the sonata forms,[1] but in reality there is no more intimate connection between them than the very vague similarity just mentioned, which applies equally to every other musical form. The fugue is essentially contrapuntal in its texture, while a sonata-movement is harmonic. In a fugue there is no break, a cadence is only the signal for a fresh start. The sonata-movement is, on the other hand, by nature broken up into sections. A sonata-movement may be said to be sewn together, a fugue to be woven. It is, however, quite true that the sonata form has been occasionally affected by fugal considerations, as in Beethoven's sonatas, opp. 101, 110, and 111.[2] In the same way the prelude to Wagner's 'Die Meistersinger' is a well-known instance of a movement where three subjects are at first presented separately and harmonically as in a sonata, and afterwards combined as if in the stretto of a triple fugue.

The art of fugue has found its greatest exponent in the works of J. S. Bach. Haydn and Mozart seem to have known little of Bach and his works. Moreover, their ideas seemed

[1] Prout, *Fugue*, chap. ix. [2] Hadow, *Sonata Form*, chap. xi.

to shape themselves naturally in those cyclic forms which were developing into the great symphonic form of Beethoven. Their fugues, fine as they are, seem to have been written text-book in hand, and not to be a natural mode of expression. The result is that the fugues of Haydn and Mozart actually seem old-fashioned compared with those of Bach, and more academic in their feeling. The same may be said of Cherubini and, in spite of their splendour, of Beethoven's fugues. Perhaps Bach was attracted to the fugal means of expression because of its romantic possibilities. The definite decorative scheme of the sonata form, with its strongly contrasted sections, is eminently fitted for absolute music—music which stands for itself and by itself. Absolute music depends on contrast of mood; but the essence of romantic music is that some idea or mood from without is grafted on to the musical stem. Such a scheme as this demands unity of mood, some central idea running through the whole, surrounded by attendant episodes, the whole in a sort of chiaroscuro. This is certainly the principle which underlies the fugal form, and it is also the principle which underlies the various forms in which the romantic composers found it necessary to express themselves. Can we not trace an analogous emotional need and an analogous means of expression in the fugues of Bach on the one hand, and on the other in Schumann's pianoforte concerto with its single theme, in his C major fantasia with its 'leiser Ton,'[1] in the persistent melancholy figures of Chopin's preludes, in the 'idée fixe' of Berlioz, and above all in the 'leit-motif' of Wagner's music-dramas? Perhaps Wagner's leit-motif compares more closely with a canto fermo than with a fugue subject, and we can trace a most interesting parallel between the leit-motif of Wagner and the fugue-on-chorale of Bach. The introduction of a chorale as a canto fermo in a fugue only makes its due emotional effect when the chorale is well known to the hearers,[2] otherwise its introduction will be quite pointless. Thus the introduction of the chorale is to a certain extent dramatic in its emotional effect. In the same way a leit-motif imposed on the polyphonic web of Wagner's music makes its effect largely because of its dramatic power produced by force of association. R. V. W.

[A few additional particulars on Real and Tonal Fugue, from the articles on these subjects by W. S. Rockstro in the first edition of the Dictionary, may not be out of place.]

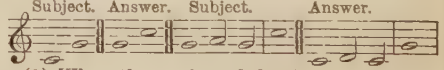
REAL FUGUE.—This is an invention of much older date than its tonal analogue; and is, indeed, the only kind of fugue possible in the ecclesiastical modes. For, in those ancient tonalities, the Dominant differs widely from that of the modern scale, and exercises widely different functions; insomuch that the answer to a given subject, constructed with reference to it, would, in certain modes, be so distorted as to set all recognition at defiance. The idea of such a dominant as that upon which we now base our harmonic combinations is one which could never have suggested itself to the mediæval contrapuntist. Accordingly, the composers of the 15th and 16th centuries regulated their subjects and answers in conformity with the principles of the system of Hexachords. When a strict answer was intended, its solmisation was made to correspond exactly, in one hexachord, with that of the subject in another. Where this uniformity of solmisation was wanting—as was necessarily the case when the answer was made in any other interval than that of the fourth or fifth above or below the subject—the reply was regarded as merely an imitative one.[3] [See HEXACHORD.] But, even in imitative replies, the laws of Real Fugue required that a fifth should always be answered by a fifth, and a fourth by a fourth—the only licence permitted being the occasional substitution of a tone for a semitone, or a major for a minor third. In practice both the strict and the imitative Answer were constantly employed in the same composition: *e.g.* in the *Kyrie* of Palestrina's 'Missa Brevis,' quoted as an example under HEXACHORD, the subject is given out by the alto in the hexachord of C; answered strictly by the bass in that of F; again answered, in the same hexachord, by the treble; and then imitated, first by the tenor, and afterwards by the bass, with a whole tone, instead of a semitone, between the second and third notes. Among the best writers of the best period of art we find these mixed fugues—which would now be called 'Fugues of Imitation'—in much more frequent use than those which continued strict throughout, and forming the foundation of some of the finest polyphonic masses and motets.

When the imitation, instead of breaking off at the end of the few bars which form the subject, continues uninterruptedly throughout an entire movement, the composition is called a perpetual fugue, or, as we should now say, a canon. A detailed classification of the different varieties of real fugue, perpetual, interrupted, strict, or free, in use during the 14th and 15th centuries, would be of very little practical service, since the student who would really master the subject must of necessity consult the works of the great masters for himself. In doing this, he will find no lack of interesting examples, and will do well to begin by making a careful analysis of Palestrina's 'Missa ad Fugam,' which differs from the work published by Alfieri and Adrien de Lafage under

[1] The motto of Schumann's fantasia could be equally well illustrated by one of Bach's fugues.

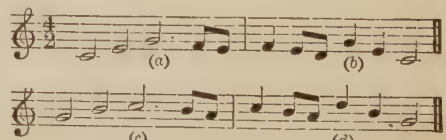
[2] It may be objected that modern audiences do experience a decided emotional thrill at the introduction of the chorale, for instance in Mendelssohn's E minor fugue, without being at all familiar with the tune, but even in this case they do recognise that it *is* a chorale. It calls up associations of church worship and a great crowd singing, and the effect is to this extent dramatic.

[3] See the admirable exposition of the Laws of Fugue in J. J. Fux's *Gradus ad Parnassum*. Vienna, 1725, pp. 143, *et seq.*



the title of 'Missa Canonica,' in one point only, and that a very curious one. In the 'Missa Canonica,' in the first or Dorian mode, two voices lead off a perpetual real fugue, which the two remaining voices supplement with another, distinct from, but ingeniously interwoven with it; the two subjects proceeding uninterruptedly together until the end of each several movement—a style of composition which is technically termed 'Canon, four in two.' In the 'Missa ad Fugam,' in the seventh mode, the four voices all start with the same subject, but after a few bars separate themselves into two choirs, each of which diverges into a perpetual real fugue of its own, which continues uninterruptedly to the end of the movement, after the manner of the 'Missa Canonica.'[1]

The real fugue of the polyphonic composers, as perfected in the 16th century, was of two kinds—limited, and unlimited. With the limited form—now called canon—we have here no concern.[2] The unlimited real fugue started with a very short subject, adapted to the opening phrase of the verbal text—for it was always vocal—and this was repeated note for note in the answer, but only for a very short distance. The answer always began before the end of the subject; but after the exact imitation carried on through the first few notes, the part in which it appeared became 'free,' and proceeded whither it would. The imitation took place generally in the fifth above or the fourth below; sometimes in the fourth above, or fifth below, or in the octave; rarely, in unlimited real fugue, in any less natural interval than these. There was no counter-subject; and, whenever a new verbal phrase appeared in the text, a new musical phrase was adapted to it in the guise of a second subject. But it was neither necessary that the opening subject should be heard simultaneously with the later ones; nor that it should reappear, after a later one had been introduced. Indeed, the cases in which these two conditions—both indispensable, in a modern fugue—were observed, even in the slightest degree, are so rare, that they may be considered as infringements of a very strict rule.

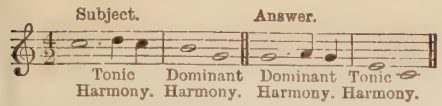


The form we have here described was brought to absolute perfection in the so-called 'School of Palestrina,' in the latter half of the 16th century. The first departure from it—rendered inevitable by the substitution of the modern scale for the older tonalities—consisted in the adaptation of the answer to the newer law, in place of its subjugation, by aid of the hexachord, to the ecclesiastical modes. [See HEXACHORD.] The change was crucial. But it was manifest that matters could not rest here. No sooner was the transformation of the answer recognised as an unavoidable necessity than the whole conduct of the fugue was revolutionised. In order to make the modifications through which it passed intelligible, we must first consider the change in the answer, and then that which took place in the construction of the fugue founded upon it—the modern tonal fugue.

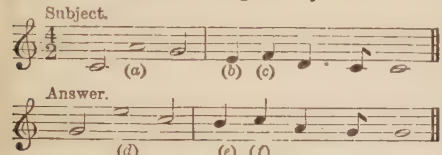
TONAL FUGUE.—The essential feature of this form of fugue, which is by far the more important of the two, is the modification of the intervals of the subject in the answer, so as to return to the primary key. The essence of this modification consists in answering the tonic by the dominant, and the dominant by the tonic: not in every unimportant member of the subject—for this would neither be possible nor desirable—but in its more prominent divisions. The first thing is to ascertain the exact place at which the change from real to tonal imitation must be introduced. For this process there are certain laws. The most important are—

(1) When the tonic appears in a prominent position in the subject it must be answered by the dominant—all prominent exhibitions of the dominant being answered in like manner by the tonic. The most prominent positions possible are those in which the tonic passes directly to the dominant, or the dominant to the tonic, without the interpolation of any other note between the two; and, in these cases, the rule is absolute.

(2) When the tonic and dominant appear in less prominent positions, the extent to which Rule 1 can be observed must be decided by the composer's musical instinct. Beginners, who have not yet acquired this faculty, must carefully observe the places in which the tonic and dominant occur; and, in approaching or quitting those notes, must treat them as fixed points to which it is indispensable that the general contour of the passage should accommodate itself.



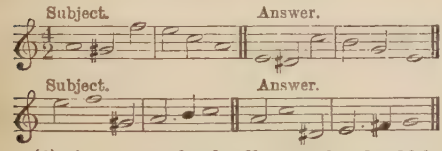
(a) Dominant, answered by Tonic, at (c).
(b) Dominant, answered by Supertonic, at (d).



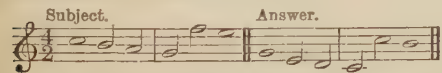
(3) The observance of Rules 1 and 2 will ensure compliance with the next, which ordains that all passages formed on a tonic harmony, in the subject, shall be formed upon a dominant harmony in the answer, and *vice versâ*.

[1] Choron's edition of the 'Missa ad Fugam' is out of print; but several copies of the work are preserved in the Library of the British Museum. [See RACCOLTA GENERALE.] Albrechtsberger gives the Second Agnus Dei as an example, in his *Gründliche Anweisung zur Composition*, vol. ii. p. 330 of Merrick's Eng. Transl. (Cocks & Co.) The 'Missa Canonica' is printed in the 'Cinq Messes de Palestrina,' edited by Adrien de Lafage (Paris, Launer; London, Schott & Co.)

[2] Those who wish to trace the relation between the two will do well to study the 'Missa Canonica,' edited by La Fage, and by him attributed to Palestrina, or the 'Missa Canonica' of Fux, side by side with Palestrina's 'Missa ad Fugam'; taking the two first-named works as examples of limited, and the third of unlimited real fugue.



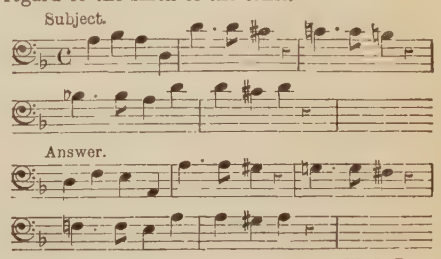
(4) The third, fourth, and sixth of the tonic should be answered by the third, fourth, and sixth of the dominant respectively.



(a) Sixth of Tonic. (b) Third of Tonic. (c) Fourth of Tonic. (d) Sixth of Dominant. (e) Third of Dominant. (f) Fourth of Dominant.

(5) The interval of the diminished seventh, whether ascending or descending, should be answered by a diminished seventh.

(6) As a general rule all sevenths should be answered by sevenths; but a minor seventh, ascending from the dominant, is frequently answered by an ascending octave; in which case its subsequent descent will ensure conformity with Rule 4, by making the third of the dominant answer the third of the tonic.

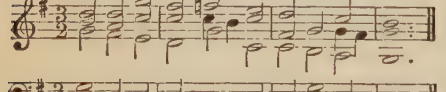


(7) The most difficult note of the scale to answer is the supertonic. It is frequently necessary to reply to this by the dominant; and when the tonic is immediately followed by the supertonic, in the subject, it is often expedient to reiterate, in the answer, a note, which, in the original idea, was represented by two distinct intervals; or, on the other hand, to answer, by two different intervals, a note which, in the subject, was struck twice. The best safeguard is careful attention to Rule 3, neglect of which will always throw the whole fugue out of gear.

(a) Tonic, answered by Dominant, at (c).
(b) Supertonic, answered by Dominant, at (d).

Simple as are the foregoing rules, great judgment is necessary in applying them. Of all the qualities needed in a good tonal subject, that of suggesting a natural and logical tonal answer is the most indispensable. But some subjects are so difficult to manage that nothing but the insight of genius can make the connection between the two sufficiently obvious to ensure its recognition. The answer is nothing more than the pure subject, presented under another aspect; and, unless its effect shall exactly correspond with that produced by the subject itself, it is a bad answer, and the fugue in which it appears a bad fugue. A painter may introduce into his picture two horses, one crossing the foreground, exactly in front of the spectator, and the other in such a position that its figure can only be truly represented by much foreshortening. An ignorant observer might believe that the proportions of the two animals were entirely different; but they are not. True, their actual measurements differ; yet, if they be correctly drawn, we shall recognise them as a well-matched pair. The subject and its answer offer a parallel case. Their measurement (by intervals) is different, because they are placed in a different aspect; yet, they must be so arranged as to produce an exactly similar effect. We have shown the principle upon which the arrangement is based to be simply that of answering the tonic by the dominant, and the dominant by the tonic, whenever these two notes follow each other in direct succession; with the further proviso, that all passages of melody formed upon the tonic harmony shall be represented by passages formed upon the dominant harmony, and *vice versâ*. Still, great difficulties arise when the two characteristic notes do not succeed each other directly, or when the harmonies are not indicated with inevitable clearness. The subject of Handel's chorus, 'Tremble, guilt,' shows how the whole swing of the answer sometimes depends on the change of a single note. In this case a perfectly natural reply is produced, by making the answer proceed to its second note by the ascent of a minor third, instead of a minor second, as in the subject—*i.e.* by observing Rule 4 with regard to the sixth of the tonic.

W. S. R.



FULDA, Adam de, a Franconian monk, born about the year 1450, is chiefly celebrated for a famous Tract on Music, written in 1490, and printed by Gerbert von Hornan in his *Scriptores eccles. de Mus. Sacr.* vol. iii. p. 329. In this work Guilielmus Dufay is eulogised as the first composer who wrote in regular form; and mention is made of the fact that he overstepped the Γ ut, and e la, of Guido, by three degrees, below and above. The *Dodecachordon* of Glareanus contains a Motet *a* 4, by Adam de

Fulda, of very advanced character for the period; and an *Enchiridion*, published at Magdeburg, in 1673, contains a Motet 'Ach hülff mich layd und senlich klag.' [See list of MS. compositions in the *Quellen-Lexikon*, where it is pointed out that his reference to himself as 'musicus ducalis' indicates that he held a court position, possibly in the service of the Bishop of Würzburg.] W. S. R.

FULL ORGAN. This term, when standing alone, generally signifies that the chief manual, or Great Organ, is to be used, with all its stops brought into requisition. Sometimes the term is employed in an abbreviated form, and with an affix indicating that a portion only of the stops is to be played upon—as 'Full to Fifteenth.' In the 18th century the expressions 'Full Organ,' 'Great Organ,' and 'Loud Organ,' were severally used to indicate the chief manual organ. [See Organ.] E. J. H.

FUMAGALLI, Adolfo, born Oct. 19, 1828, at Inzago in the province of Milan, received instruction in music and the pianoforte from Angeloni at the Conservatorio, Milan, and in 1848 made his début in that town as a pianist. He made a great success afterwards as a brilliant fantasia player at Turin, Paris, and Belgium, and in 1854 returned to Italy. He died at Florence, May 3, 1856, quite suddenly, after a three days' illness, having played at a concert there on the 1st. His compositions include fantasias, capriccios, and other light drawing-room pieces, among which 'Les Clochettes,' op. 21 (with orchestra), was popular at the time. His brothers, Disma (1826-93), Polibio (born 1830), and Luca were also pianists; of these the best known is Luca, born May 29, 1837. In 1860 he played in Paris. In 1875 an opera of his, 'Luigi XI.,' was produced at the Pergola, Florence. A. C.

FUNDAMENTAL BASS is the root note of a chord, or the root notes of a succession of chords, which might happen to be the actual bass of a short succession of chords all in their first positions, but is more likely to be partly imaginary, as in the following short succession of complete chords, which has its fundamental bass below on a separate stave:—

Fundamental Bass.

Rameau was the first to develop the theory of a fundamental bass, and held that it might 'as a general rule proceed only in perfect Fourths or Fifths upwards or downwards.' Helmholtz defines it as 'the compound tone which represents the chord, as distinguished from its *bass*, that is, the tone which belongs to the lowest part.' C. H. H. P.

FURIANT, a movement of a fiery, impulsive character, such as would be classed under the general name of scherzo. Like 'Dumka,' it has been introduced into the terminology of classical music by Dvořák, who uses both frequently in his chamber music.

FUX, Johann Joseph, born 1660 of a peasant family in the hamlet of Hirtenfeld, near Gratz in Styria. Nothing is known of his early life or studies, as he refused to give information on the subject even to Mattheson for his *Grundlage einer Ehrenpforte* (Hamburg, 1740; see p. 340, letter dated 1718). From 1696, however, all is clear. In that year he was appointed organist to the ecclesiastical foundation 'Zu den Schotten' in Vienna; and married a Viennese, by whom he had no children. In 1698 he became court composer, in 1705 second, and in 1712 first, capellmeister to the cathedral of St. Stephen. In 1713 he was appointed vice-capellmeister to the court, and capellmeister to the Dowager Empress Wilhelmine Amalie. This post he resigned in 1718, as he had done that at the cathedral in 1715 upon his promotion to be head capellmeister to the court. He received many proofs of court favour. To the King of the Romans—Archduke, afterwards Emperor, Joseph I.—he dedicated his first opus, *Concentus musico-instrumentalis* in seven partitas (Felsecker, Nuremberg, 1701), and the 'Missa Canonica' (1718); and to the Emperor Charles VI. his most important work *Gradus ad Parnassum* (1725). In 1723, when laid up with gout, the Emperor Charles had him conveyed in a litter to Prague, that he might be present at the performance of his opera 'Costanza e Fortezza,' written for the coronation. Fux died at Vienna, Feb. 13, 1741, and was buried at St. Stephen's. Among his best pupils were Zelenka, Muffat, Tuma, and Wagenseil. An oil-painting of him in the costume of the period is in the museum of the Gesellschaft der Musikfreunde at Vienna. Fux considered his art in a serious light, and was held in general respect. He was courteous to all, and eminently kind and just in his dealings with the musicians under him. As a composer he was most industrious; 405 works by him are still in existence: 50 masses; 3 requiems; 57 vespers and psalms; 22 litanies and completoria; 12 graduals; 14 offertoriums; 22 motets; 106 hymns; 2 Dies iræ; 1 Domine; 1 Libera (290 church-works in all); 10 oratorios; 18 operas (of which 6 were grand operas—'dramme per musica'—and the other 12 'componimenti per camera' and 'feste teatrali per musica'); 29 partitas and overtures; and 8 pieces for clavier. [See also list in *Quellen-Lexikon*.] The greater part of these compositions, either copied or in autograph, are in the Imperial Library at Vienna; and the Gesellschaft der Musikfreunde also possesses a considerable number.

Of his works only few are printed: his *Concentus*, already mentioned, 'Elisa,' festa teatrale

(Jeanne Roger, Amsterdam, 1719), and the 'Missa Canonica' (see below). Proske's *Musica divina*, vols. ii. and iii., contain seven church-works. Specimens of his masses, motets, and instrumental compositions are to be found in the *Denkmäler der Tonkunst in Oesterreich* (I. i., II. i., and IX. ii.). Thirty-six Trios for two violins and bass (published about 1700) are lost. His dramatic works are now valueless, though in their day they contributed much to the lustre of the court; while his oratorios, written for Lent, were still more quickly forgotten. Among his MSS. are thirty-eight sacred 'Sonate a tre,' which were often played in divine service, and are masterpieces of freshness, invention, and variety. It is evident that Fux enjoyed 3-part writing, for in his *Gradus* he says 'the master's hand may always be detected even in 3-part writing,' and 'I have often written in three parts, and not unsuccessfully,' a statement which even Mattheson endorses (*Critica Musica*, i. p. 131), though he was as a rule no friend to Fux. In his church music he was always reverent, and though polyphonic writing was second nature to him, he usually abstained from unnecessary subtleties in sacred music. One exception to this must, however, be made. His 'Missa Canonica,' written throughout 'a cappella,' a masterpiece containing every species of canon, is unique in its way. Here Fux displays his marvellous knowledge of counterpoint, combined with the richest modulation; and, as Marpurg says (*Abhandlung von der Fuge*, p. 130), speaking specially of the double canon in the 'Christe eleison,' 'his harmony is gorgeous, and at the same time thoroughly in keeping with the sacredness of the occasion.' The mass is dedicated to the Emperor as a proof 'that classic music, far from being extinct, has here gained one more step in advance' (see dedication in Italian). The Imperial Library at Vienna contains a copy of it by Michael Haydn (1757), and the Royal Library at Dresden another by Zelenka, Fux's pupil. It has been printed at Leipzig by Peters and Kühnel. The frequent performances of this mass at the cathedral and the court speak well for the efficiency of the singers. The most convincing proof of Fux's ability as a teacher is his *Gradus ad Parnassum*, written in Latin in the form of a dialogue between master and pupil, and consisting of two parts, the first on the theory, and the second on the practice, of composition. It has passed through innumerable editions, and been translated into four languages. The dates of publication are as follows:—the original, in Latin, Vienna, 1725; German edition, by Lorenz Mizler, Leipzig, 1742; Italian, by Alessandro Manfredi, Carpi, 1761; French, by Sieur Pietro Denis, Paris, 1773; and English, anonymous, London, 1791. Its usefulness has been attested by such men as Piccinni, Durante, P. Martini, the Abbé Vogler, Paolucci, Gerbert, Cherubini, and in our own day by Heinrich Bellermann (*Der Contrapunct*, etc., Berlin, 1862). Mozart used it in his contrapuntal exercises, and Haydn repeatedly studied it, and founded his teaching upon it. An exhaustive biography of the master, with a thematic catalogue of his compositions, has been drawn up with his usual accuracy by Dr. von Köchel from authentic information, with the title *J. J. Fux, Hofcompositor und Hofkapellmeister der Kaiser Leopold I., Joseph I., und Karl VI., von* 1698 *bis* 1740 (Hölder, Vienna, 1872). C. F. P.

FZ. The abbreviation of the Italian word *forzando*, meaning that the note or chord against which it is played should be *forced* beyond the normal sound of the passage. It is always proportionate; and thus a *fz* in a *piano* passage will be far less loud than in a *forte* passage. *sfz* or *sf* (*sforzando*) is more commonly used than *fz*. G.

G

G. The fifth note of the natural scale—the dominant of C, the relative major of E minor. It is *sol* in French and in solfaing. It has F♯ in its signature. G minor has B♭ and E♭ in the signature, and is the relative minor of B flat major. G gives its name to the treble clef, the sign for which is nothing but a corruption of the letter. [See CLEF.] The Greek Gamma gives its name to the gamut or scale.

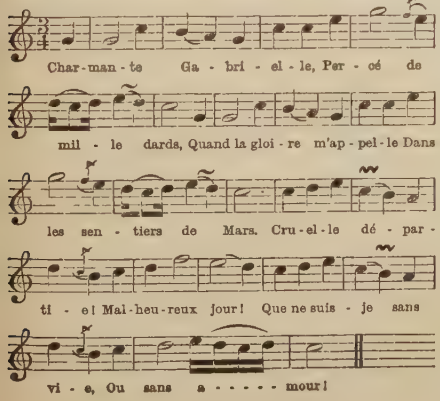
As to its use in composition—two of Haydn's twelve Grand Symphonies are in G, and there are several others of note in the same key ('Oxford,' 'Letter V,' etc.), but there is no remarkable one by Mozart, and not one by Beethoven, nor by Schubert, Schumann, or Mendelssohn. Of Beethoven's sixteen Quartets one (No. 2), and of his eleven Overtures one ('Ruins of Athens'), the Sonata op. 31, No. 1, two Violin Sonatas, and the PF. Concerto No. 4, do something to restore the balance, but it is singular how much he avoids the key.

G minor has Mozart's Symphony, Mendelssohn's Concerto, and Brahms's quartet, op. 25, to ennoble it. G.

GABLER, JOHANN, of Ulm, built the celebrated organ in the abbey of Weingarten in 1750. It has four manuals, and seventy-six speaking stops, and is credited with 6666 pipes. It is also said that the monks were so pleased with it that they gave Gabler a florin per pipe over and above the contract price. He died about the year 1784. V. DE P.

GABRIEL, MARY ANN VIRGINIA, of Irish parentage, born at Banstead, Surrey, Feb. 7, 1825, learned the piano from Pixis, Dohler, and Thalberg, and harmony and construction from Molique. Her principal work was a Cantata named 'Evangeline,' founded on Longfellow's poem; she wrote many operettas, one of which, 'Widows bewitched,' was performed by the German Reed Company in 1867, and had a long run. Her Cantatas 'Dreamland' and 'Evangeline' were performed at Covent Garden in 1870 and 1873. Many of her songs were very popular. Miss Gabriel married Mr. George E. March (author of most of her librettos) in Nov. 1874, and died from the effects of an accident on August 7, 1877. G.

GABRIELI, a family of great Italian musicians.



1. ANDREA, celebrated contrapuntist, born about 1510, in the quarter of Venice called Canareggio. He was a pupil of Adrian Willaert, maestro di cappella of St. Mark's (1527-62). In 1536 he entered the Doge's choir; in 1566 succeeded Claudio Merulo as second organist of St. Mark's; and at the time of his death, 1586, was first organist. His fame spread not only throughout Italy, but also to Germany and the Netherlands. His three best-known pupils were his nephew Giovanni, Leo Hassler, and Peter Sweelinck. In 1574 the Republic commissioned him to write the music to be performed at the reception of Henry III. King of France; for which occasion he composed several pieces, one being for twelve voices in two choirs, 'Ecco Vinegia bella,' printed in the *Gemma Musicalis* (Venice, Gardano, 1588). His finest work is 'Psalmi Davidici, qui poenitentiales nuncupantur, tum omnis generis instrumentorum, tum ad vocis modulationum accomodati, sex vocum' (Venice, 1583). [He edited a collection of 'Greghesche' by various composers, in 1564, under the pseudonym Manoli Blessi, and afterwards (1571) acknowledged his identity.] Among his numerous compositions may be mentioned—'Sacrae cantiones quinque vocum, liber primus' (1565); Madrigali, lib. 1, a 5 (1566); lib. 2, a 5, 6, and 8 (1570); 'Missarum sex vocum, liber primus' (1572); 'Canzoni alla francese per l'organo' (1571); Madrigali a 6 voci (1574); and a 3 (1575); 'Cantiones ecclesiasticae' (1576); and 'Canti concerti a 6, 7, 8, 10, e 16 voci' (1587). In the last are ten pieces by his nephew. [He wrote music to the choruses in 'Oedipus Tyrannus' in 1585, and they were printed in 1588; also a set of 'Mascherate' (1601). Six of his vocal works are in vol. ii. of Torchi's *Arte Musicale in Italia*, and four organ pieces in vol. iii. An eight-part Ricercar, edited by H. Riemann, is published by Augener & Co. See *Quellen-Lexikon* for detailed list.] His organ music was printed with his nephew's in three vols. of Ricercari (1593-96). Andrea seems to have strongly felt the necessity of executing vocal music on instruments. Proske's *Musica divina* contains a missa brevis and no fewer than ten motets of his, all for four voices.

2. GIOVANNI, born in Venice, 1557, pupil of his uncle Andrea, by 1575 already well known as a composer,[1] succeeded Claudio Merulo as first organist of St. Mark's, Jan. 1, 1585. He died probably in 1612, as Gianpaolo Savii succeeded him on August 12 of that year, but his monument in San Stefano gives August 12, 1613, as the date of his death. Although he seems never to have left Venice he was well known throughout the civilised world. The works of his pupils, Heinrich Schütz, Alois Grani, and Michael Praetorius, testify to the deep respect they all entertained for him. His contrapuntal facility was extraordinary; his 'Sacrae symphoniae' (1597) contains motets for varying numbers of voices, up to sixteen, and in the similar collection of 1615 nineteen parts are employed. The first part of the Symphoniae is dedicated to Count George Fugger, in acknowledgment of his having invited Gabrieli to his wedding. The necessity for the orchestra is still more marked in Giovanni than in his uncle Andrea; his modulations are

[1] This assumes that he was identical with the Giovanni d'Andrea Gabrielli, who was one of the musicians of the Duke of Bavaria in that year. This identity is disputed by Eitner in the *Quellen-Lexikon*.

often so bold and difficult that we can scarcely believe they were ever intended for voices. In this respect he may be called the father of the chromatic style. For particulars of his times and contemporaries see Winterfeld's *Johann Gabrieli und seine Zeit* (1834), two vols. of text and one vol. of examples, containing twenty-three pieces for voices (from four to sixteen), one for organ, and one for quartet. Others will be found in Bodenschatz; Rochlitz; in *Musica sacra* (Schlesinger, 1834), etc. Rochlitz's Collection (Schott) contains an In excelsis of his for Soprano and Tenor solo, and chorus (*a* 4), with violins, three horns, and two trombones; also a Benedictus for three choirs. Five vocal works are in Torchi's *Arte Musicale*, vol. ii., and an organ piece in vol. iii.

GABRIELLE, CHARMANTE, that is, Gabrielle d'Estrées, mistress of Henri IV. The reign of Louis XVIII. revived an artless little romance, which, like the song 'Vive Henri IV.' [see VIVE HENRI QUATRE], recalled pleasant memories of the Béarnais. 'Charmante Gabrielle' was not only sung far and wide at that royal epoch, but the authorship of both words and music was attributed to the gallant king, and the mistake is still often repeated. True, Henri suggested the song to one of the poets of his court, but we have his own authority for the fact that he did not himself write the stanzas. The letter in which the king sent the song to Gabrielle is in the *Recueil des Lettres missives* of Berger de Xivrey (iv. 998, 999), and contains these words:—'Ces vers vous représenteront mieulx ma condition et plus agréablement que ne feroit la prose. Je les ay dictez, non arrangez.' The only date on the letter is May 21, but it was written in 1597 from Paris, where Henri was collecting money for his expedition to Amiens, and making preparations to leave Gabrielle for the campaign against the Spaniards. It was probably Bertaut, Bishop of Séez, who, at the king's 'dictation,' composed the four couplets of the romance, of which we give the first, with the music in its revived form:—

The refrain is not original; it is to be found word for word in the *Thesaurus harmonicus* of Besard (1603), and in the *Cabinet ou Trésor des nouvelles chansons* (1602); and as at that time it took more than five or six years for an air to travel from the court to the people, we may safely conclude that it was no novelty. Fetis attributes the air to Eustache Du Caurroy, maître de chapelle to Charles IX., Henri III., and Henri IV.; but the music of that 'prince of musicians,' as Mersennus calls him, is so imbued with science, not to say pedantry, that it is impossible to suppose the author of the contrapuntal exercises in his 'Mélanges' to have had anything in common with the composer of so simple and natural a melody. Its origin is undoubtedly secular; and there is the more reason to believe it to have been borrowed from an air already popular that the words 'Cruelle départie, Malheureux jour' occur in the 'Chansons sur les airs mondains.' In the book of cantiques entitled *La pieuse Alouette avec son tirelire* (1619) we find a proof that the Church borrowed the air and prevailing idea of this song from the world, rather than the reverse, for the religious refrain,

Douce vierge Marie,
Secourez-moi!
Otez-moi ou la vie,
Ou bien l'émoi,

is obviously founded on the love-song of 1597.

Such is all the positive information we have been able to obtain about 'Charmante Gabrielle'; but the mystery which surrounds its origin rather increases than diminishes the attraction of this celebrated song. G. C.

GABRIELLI, CATTERINA, born at Rome, Nov. 12, 1730, daughter of Prince Gabrielli's cook, one of the most beautiful, accomplished, and capricious singers that ever lived. At the age of fourteen, the Prince, walking in his garden, heard her singing a difficult song of Galuppi, sent for her, and after listening to her performance, promised her his protection and a musical education. She was placed first under Garcia, *lo Spagnoletto*, and afterwards under Porpora. A great success attended her début (1747) as prima donna, at Lucca, in Galuppi's 'Sofonisba.' Guadagni gave her some valuable instruction in the style in which he himself excelled,—the pure and correct cantabile. This she was therefore now enabled to add to her own, which was the perfection of brilliant bravura, with a marvellous power of rapid execution and an exquisitely delicate quality of tone. At other theatres in Italy she met with equal success, singing in 1750, at Naples, in Jommelli's 'Didone,' after which she went to Vienna. Here she finished her declamatory style under the teaching of Metastasio, and fascinated Francis I., who went to the opera only on her nights. Metastasio is said to have been not indifferent to the charms of this extraordinary singer, still known as *la Cochetta* or *Cochettina*, in memory of her origin;

but she did not respond. Her capricious treatment of her numerous adorers gave rise to hundreds of stories, among which one may be quoted. By this it appears that the ambassadors of France and Portugal were both desperately enamoured of her at Vienna. The former, concealing himself in her apartments, saw enough to confirm his suspicions, and rushed upon her with his sword, with which he would doubtless have transfixed her, had not the busk of her bodice turned aside the point of the blade. She pardoned the Frenchman, who had thrown himself on his knees before her, on condition of her retaining his sword, on which she determined to have the words engraved, *Épée de M. . . . . qui osa frapper la Gabrielli*, etc.; but Metastasio prevailed upon her to give up this design. In 1765 she quitted Vienna, laden with wealth, and went to Sicily, where she excited the same furore, and exhibited the same caprices. She was imprisoned by the King, because she would not sing her part in the opera above a whisper. During the twelve days of her imprisonment she gave sumptuous entertainments, paid the debts of poor prisoners, and distributed alms in profusion. Each evening she assembled the other inmates of the gaol, to whom she sang her favourite songs in the most painstaking manner. The King was obliged to set her free, and her reputation with the public stood higher than ever. In 1767 she went to Parma, where the Infant Don Philip fell madly in love with her, and persecuted her so far as sometimes to shut her up in a room of which he kept the key. Terrible scenes occurred between them, and she called him on one occasion *gobbo maladetto*. Having escaped from Parma in 1768 she went to Russia, where she astonished Catherine II. by demanding 5000 ducats as salary, a sum, as the Empress objected, larger than the pay of a field-marshal; to which Gabrielli simply replied, 'Then let your field-marshals sing for you'—as Caffarelli once replied in similar circumstances. She appeared in London in the season of 1775-76. Burney says of her that 'she had no indications of low birth in her countenance or deportment, which had all the grace and dignity of a Roman matron.' The public here was prejudiced against her by the stories current of her caprice; and she only remained during one season.[1] Burney extols the precision and accuracy of her execution and intonation, and the thrilling quality of her voice. She appeared to him 'the most intelligent and best-bred virtuosa with whom he had ever conversed, not only on the subject of music, but on every subject concerning which a well-educated female, who had seen the world, might be expected to have information.' She sang with Pacchierotti at Venice in 1777, and at Milan in 1780 with Marchesi, with whom she divided the public into two parties. After this, Gabrielli retired to Rome with her sister Francesca, who had followed her everywhere as seconda donna, and lived upon her savings, which amounted to no more than 12,000 francs per annum. She died in April 1796 of a neglected cold. A beautiful little portrait of her in mezzotint, now very rare, was engraved by D. Martin in 1766 from a painting by Pompeo Battoni. J. M.

[1] Fétis is mistaken in saying that she never came to England, and in the whole of his explanation of her reasons for refusing engagements in London. He also erroneously calls her sister Anna.

GABRIELLI, Domenico, dramatic composer and violoncellist, known as 'il Menghino del violoncello,' born at Bologna 1640; first in the band of San Petronio (from 1680), then in the service of Cardinal Pamfili (before 1691). In 1676 he became a member, and in 1683 President, of the Società Filarmonica in Bologna. He died July 10, 1690. Of his eleven operas, produced in Bologna, Padua, and Venice, 'Cleobulo' (1683) was the most successful. [An oratorio, 'S. Sigismondo rè di Borgogno,' MS. dated 1687, is preserved at Modena.] His instrumental compositions 'Balletti, ghighe, correnti, sarabande, a due violini e violoncello con basso continuo,' op. 1 (Bologna, 1684), are interesting. F. G.

GABUSSI, Giulio Cesare, a Bolognese composer of the 16th century, pupil of Costanzo Porta, was maestro di cappella in Rome about 1580, and from 1582 to 1611 at the cathedral of Milan. He was for some time in the service of the King of Poland, and died before 1619. Books of madrigals appeared in 1580 and 1598, magnificats and other church music in 1589 and 1619, and 1623. (See *Quellen-Lexikon.*)

GABUSSI, Vincenzo, composer and teacher of singing, born at Bologna early in the 19th century, studied counterpoint under Padre Mattei. He brought out his first opera at Modena in 1825, and then came to London, and remained there for about fifteen years teaching singing and accompaniment. After this he retired to Bologna. In 1834 he produced 'Ernani' at the Théâtre des Italiens, Paris, and in 1841 'Clemenza di Valois' at the Fenice in Venice, without success. He composed chamber music for instruments, but is best known by his vocal duets, which are still sometimes heard. He died in London, Sept. 12, 1846. M. C. C.

GADE, Niels Wilhelm, was born Feb. 22, 1817, at Copenhagen, the son of a maker of musical instruments. His first instruction in music was obtained from a teacher who esteemed mechanical industry beyond talent, and it seems was not very well satisfied with the progress of his pupil. Gade learned a little about guitar, violin, and pianoforte, without accomplishing much on either instrument. Later on he met with more able masters in Wexschall, Berggreen, and Weyse, and entered the royal orchestra at Copenhagen as violinist, attaining in that practical school the rare degree of mastery in instrumentation which his publications show from the first. Through his 'Ossian' overture, which,

on the approval of Spohr and Schneider, was crowned in 1841 with the prize awarded by the Copenhagen Musical Union, he attracted the attention of the music-loving king, and at once received, like many other men of talent in Denmark, a royal stipend, intended to assist him in a foreign journey. Thus equipped, Gade turned towards Leipzig, where by Mendelssohn he was introduced to the musical public at large. (See Mendelssohn's Letters, Jan. 13, March 3, 1843.)

After the production of his first symphony (March 2, 1843) and the cantata 'Comala' at Leipzig (March 3, 1846), Gade travelled in Italy, and on his return in 1844, Mendelssohn, who was then staying at Berlin and Frankfort, entrusted him with the conducting of the Gewandhaus concerts. In the winter of 1845-46 he acted as sub-conductor to Mendelssohn at Leipzig, and after the death of the latter conducted alone till the spring of 1848, when he returned to Copenhagen for good, to occupy a post as organist and to conduct the concerts of the Musikverein. In 1861, at the death of Glaeser, he was appointed Hof-capellmeister, and received the title of Professor of Music. He visited England for the first time in 1876, to conduct his 'Zion' and 'The Crusaders' at the Birmingham Festival. He died at Copenhagen, Dec. 21, 1890.

The intimate friend of Mendelssohn and Schumann, Gade was in some sense their disciple; his earlier works showing faint traces of the influence of the former, as his later works do that of the latter. Still Gade's distinguished and amiable musical physiognomy is far from a mere reflex of theirs; he has always had something to say for himself, and has from the first contrived to say it in a manner of his own. His musical speech is tinged with the cadences of Scandinavian folk-song, and almost invariably breathes the spirit of northern scenery. All his works show the same refined sense for symmetry, for harmonious colouring and delicate sentiment. His themes, if rarely vigorous or passionate, are always spontaneous as far as they go, and never without some charm of line or colour. As with a landscape painter, the fascination of his pieces lies in the peculiar poetical impression conveyed by the entire picture rather than by any prominent details; and as in a landscape this fascinating total impression is always the result of perfect harmony of colour, so in Gade's works it is traceable to the gentle repose and proportion of his themes and the suave perfection of his instrumentation. The following is a list of Gade's compositions:—

1. Nachklänge aus Ossian, Overture, orch.
2. Frühlingsblumen, three pieces for piano.
3. Sange af Agnete og Havemanden.
4. Nordiske Tonebilleder, pf. duet.
5. First Symphony, C minor.
6. First sonata for pf. and vln. in A.
7. Im Hochland, Overture, orch.
8. String quintet in E minor.
9. Nine Lieder in Volkston, for two soprani and pf.
10. Second Symphony, in E.
11. Six Songs for 4-part male choir.
12. Comala, cantata, soli, choir, and orch.
13. Five Part-songs, S.A.T.B.
14. Overture, No. 3, in C.
15. Third Symphony in A minor.
16.
17. String Octet in F.
18. Three pianoforte pieces in march-form for four hands.
19. Aquarellen, for pf. two books.
20. Fourth Symphony, in B flat.
21. Second sonata for pf. and vln. in D minor.
22. Three Tonstücke for organ.
23. Frühlingsfantasie, cantata.
24.
25. Fifth Symphony in D minor.
26.
27. Arabeske for pf.
28. Pianoforte sonata in E minor.
29. Novelletten, pf. trio in A minor.
30. Erl King's Daughter (Elverskud), cantata, for soli, choir, and orch.
31. Volkstänze, for pf.
32. Sixth Symphony, in G minor.
33. Five Lieder for male choir.
34. Idyllen for pf.
35. Frühlingsbotschaft, cantata.
36. Der Kinder Christabend, for pf.
37. Hamlet, concert-overture.
38. Five songs for male choir.
39. Michel Angelo, concert-overture.
40. Die heil ge Nacht, cantata.
41. Four Fantasiestücke for pf.
42. Pf. trio in F.
43.
44.
45. Seventh Symphony, in F.
46. Ved Solnedgang, cantata.
47. Eighth Symphony in B minor.
48. Kalanus, cantata.
49. Zion, cantata, for baritone solo, choir and orch.
50. Die Kreuzfahrer (The Crusaders), cantata.
51. Bilder des Jahres, four part-songs for female choir with solos, and pf. (4-hand) accompt.
52. Den Bjaergtagne, cantata.
53. Novelletten, four pieces for string-orchestra.
54. Gefion, cantata.
55. Sommertag auf dem Lande, five pieces for orch.
56. Violin concerto.
57.
58.
59. Third Sonata, vln. and pf. in B flat.
60. Psyche, cantata.
61. Holbergiana, orchestral suite.
62. Fourth Sonata for vln. and pf. in B flat. (Volkstänze im nordischen Charakter.)
63.
64. Der Strom (after Goethe's Mahomed), cantata, for soli, choir, pf. obbligato, and orch.

[In addition to the above, a cantata, 'Baldurs Dröm,' for soli, choir, and orchestra, was written in 1858, but not published till 1897. In 1863 he wrote a funeral march for Frederik VII.; in 1869 a 'Festsang i Rosenborg Have.' In 1872 he wrote a 'Festmusik' for the opening of the Northern Industrial Exhibition at Copenhagen; in 1879 a work for the Jubilee of the Copenhagen University; and in 1883 a composition for the northern 'Kunstnermöde' (Artists' Congress) in the same city. From 1884 dates a 'Ulysses' march, and from 1888 a 'Festmarsch' for Christian IX.'s Jubilee. The opera 'Mariotta' seems not to have been performed, although an overture and several numbers were published.] E. D.

GADSBY, Henry, son of a musician, born at Hackney, Dec. 15, 1842, entered St. Paul's choir in 1849, and remained till 1858. The instruction in harmony which he and Stainer, as an exception due to their musical faculty, received from W. Bayley, the then master of the boys, is virtually the only teaching that Mr. Gadsby ever received; the rest is due to his own perseverance. [He was organist of St. Peter's, Brockley, Surrey, for some time up to 1884, when he succeeded Hullah as professor of harmony at Queen's College, London. He was one of the original professors at the Guildhall School of Music, and is a member of the Philharmonic Society, and a fellow of the Royal College of Organists.]

Mr. Gadsby's published works are the 130th Psalm; a Cantata (1862); 'Alice Brand' (1870); 'The Lord of the Isles' (Brighton Festival, 1879); 'Columbus,' for male voices (Crystal Palace, 1881); 'The Cyclops'; Festival Service (1872); Overture, 'Andromeda' (1873); Organ Concerto in F; String Quartet (1875); Andante and Rondo piacevole, Pf. and Flute (1875); music

to 'Alcestis' (1876), and to Tasso's 'Aminta' (1898). In addition to these he has in MS. three Symphonies, in C, in A—portions of which have been played at the Crystal Palace—and in D (Crystal Palace, 1888); Overtures to the 'Golden Legend' and 'Witches' Frolic,' and an Intermezzo and Scherzo (British Orchest. Soc. 1875); orchestral scene, 'The Forest of Arden' (Philharmonic, 1886). He has also written many Songs, Part-songs, Anthems, and Services, and musical treatises and handbooks. G.

GÄNSBACHER, JOHANN, capellmeister of the cathedral at Vienna, born May 8, 1778, at Sterzing in the Tyrol. At six years old he was a chorister in the village church of which his father was choirmaster. Later he learnt the organ, piano, violoncello, and harmony at Innspruck, Halle, and Botzen. In 1795 he entered the University of Innspruck, but on the formation of the Landsturm in 1796 served as a volunteer, and won the gold 'Tapferkeits-medaille.' In 1801 he was in Vienna, studied under Vogler and Albrechtsberger, and was recommended as a teacher by Haydn, Gyrowetz, and distinguished patrons. He next accompanied Count Firmian to Prague in 1807, and devoted himself entirely to composition. In 1809 he was at Dresden and Leipzig, revisited his home, and in the following year settled for a time in Darmstadt to renew his studies under Vogler. Weber and Meyerbeer were his fellow-pupils, and the three formed a lasting friendship. Weber especially retained a sincere affection for him, took him to Mannheim and Heidelberg, where Gänsbacher assisted in his concerts, and at a later time proposed to him to compete for the vacant post of court capellmeister in Dresden. Meantime Gänsbacher lived alternately in Vienna, where he became acquainted with Beethoven, and Prague, where he assisted Weber with his 'Kampf und Sieg.' He also served in the war of 1813, went to Italy as captain in military service, and was even employed as a courier. This unsettled life at length came to a satisfactory end. At the time that Weber was suggesting his settling at Dresden, the capellmeistership of the cathedral at Vienna fell vacant by the death of Preindl (Oct. 1823); Gänsbacher applied for it, was appointed, and remained there for life. He died in Vienna, July 13, 1844, universally respected both as a man and an artist. As a composer he belongs to the old school; his works are pleasing, but betray by their solidity the pupil of Vogler and Albrechtsberger. His compositions number 216 in all, of which the greater part are sacred,—thirty-five masses, eight requiems, two Te Deums, offertories, etc. He wrote also a symphony, several serenades, marches, and concerted pieces; pianoforte pieces with and without accompaniment; songs accompanied by various instruments; music to Kotzebue's 'Die Kreuzfahrer'; a Liederspiel, etc. Two requiems, two masses, and several smaller church works were published by Spina and Haslinger; three terzettos for two soprani and tenor (op. 4) by Schlesinger; Schiller's 'Erwartung' by Simrock; and sonatas and trios by various publishers. A song of his is given in Ayrton's *Sacred Minstrelsy*.

His son Dr. JOSEPH, born 1829, was a valued teacher of singing in Vienna, and professor at the Conservatorium. C. F. P.

GAFORI, FRANCHINO, or FRANCHINUS GAFURIUS, born at Ospitaletto near Lodi, Jan. 14, 1451, a priest and a writer on music. His first instructor was Goodendag, or, as he Latinised his name, Bonadies. Circumstances led him to Mantua, Verona, Genoa, and in 1478, in company with the fugitive doge Adorno, to Naples. There he found Tinctor and two other great Belgian musicians, Garnier and Hycart; and there he remained for more than two years till driven back to Lodi by war and the plague. He passed a short time as maestro di cappella at Monticello and Bergamo, and in 1484 became attached to the cathedral at Milan, where he died June 24, 1522, still in full vigour. Though a man of much learning and research, and in some respects a pedant—witness the headings of his chapters and the terms he coined—Gafori was no mere archæologist. He addressed himself to the wants of his time, and in consequence enjoyed for long a wide and special authority. His great drawback was his overweening conceit, often displayed in the very titles of his books. Hawkins has devoted chapters 72, 73, 74, and 75 of his *History* to him, and has given copious extracts from the *Practica Musicae*, his most important work, and the *Apologia*. G.

The following is a short list of the various editions of the musical works of this writer:—

A. 'Theoricum opus armonice discipline.' Franciscus de Dino. Naples, 1480. 4to. 115 leaves.

Gerber and Becker quote another work, 'De Effectibus . . . Musicae,' as published in this year. The mistake arose from the title of the first chapter being taken as that of the whole work.

B. 'Theorica Musice.' Philippus Mantegatius. Milan, 1492. Fol. 64 leaves.

The 2nd edition of A.

C. 'Practica Musice.' Guillermus Signerre. Milan, 1496. Fol. 111 leaves.

Becker states that an Italian translation of this work was published by Gotardus de Ponte in 1500, but no copy is known. It is probably a mistake arising from a confusion with H, which is written in Italian.

D. 'Musice utriusque Cantus practica.' Angelus Britannicus. Brescia, 1497. Fol. 111 leaves.

The 2nd edition of C.

E. 'Practica Musicae utriusque Cantus.' Bernardinus Misinta de Papia. Brescia, 1502. Fol. 111 leaves.

The 3rd edition of C.

F. 'Practica Musicae utriusque Cantus. Augustinus de Zannis de Portesio. Venice, 1512. Fol. 82 leaves.

The 4th edition of C.

[G. 'Practica Musicae,' etc. Venice, 1522. Fol.]

Mentioned in Brunet's Manual as the 5th edition of C, but otherwise unknown.

H. 'Angelicum ac divinum Opus Musice.' Gotardus de Ponte. Milan. 1496, 1508. Fol. 48 leaves. Hain (7409) mentions an edition dated 1500, but this is probably a misprint.

I. 'De Harmonia Musicorum Instrumentorum.' Gotardus Pontanus: Milan, 1518. Fol. 106 leaves.

Draudius, followed by Walther, Gerber, and Becker, mentions a work called 'Practica Musica' as published in 1518; but Fétis points out that this arises from a misdescription of I.

K. 'Apologia Franchini Gafuri . . . adversus Joannem Spatarium.' A. de Vicomercato. Turin, 1520. 10 leaves.

The British Museum possesses copies of all these editions (excepting G, the existence of which is doubtful, and the 1496 edition of H, the only known copy of which is in the Musée Calvet, at Avignon); copies of A, B, C, D, H

(1508), and I, are in the University Library, Cambridge ; of B, C, F, H (1508), and I, in Anderson's College, Glasgow ; of B, E, H (1508), and I, at the Bodleian Library, Oxford ; of C at Trinity College, Dublin ; and of C and I in the Royal College of Music. W. B. S.

GAGLIANO, Giovanni - Battista da, younger brother of Marco da G., was born at Florence about 1585, and educated as a priest and musician. In 1613 he succeeded to the post, formerly held by Marco da G., of musical instructor to the younger priests of S. Lorenzo. In 1634 he is entitled musician to the Grand Duke of Tuscany. He died about 1650. List of works :—

1. Varie musiche di Giovan-Batista da Gagliano. Libro primo. Nouamente composto e dato in luce. In Venetia, appresso Alessandro Vincenti. 1623. Fol. pp. 38. In the Bibl. nazionale, Florence. (Vogel.)

2. Motetti per concertare a 2, 3, 4, 5, 6, e 8 voci. Venetia, Aless. Vincenti. 1626. 26 numbers. In the Proske Bibl. Regensburg. (Eitner.)

3. Psalmi vespertini cum Litaniis Beatissimae Virginis quinis vocibus modulandi auctore Joanne Baptista a Gagliano sereu. mag. Ducis Etruriae musico. Opus tertium. Venetiis apud Alex. Vincentium. 1634. 4to, 13 numbers. Five part-books (the Altus missing) in the British Museum.

4. Il secondo libro de' motetti a sei et otto voci per concertarsi nell' organo, ed altri strumenti. Di G.-B. da G. musico del seren. Gran Duca di Toscana. Dedicati all' illus. Sig. Marchese Cerbone dal Monte, Venetia, Aless. Vincenti. 1643. 4to. No. 17 'Lauda Sion' by Marco da Gagliano. Seven part-books in the Breslau Stadtbibl. (Bohn.)

'Salve Regina' a tre voci, No. 6 in Marco da G's Sac. Cant. 1622. In the Berlin königl. Bibl. M88. W 59 contains six motets in score (publ. 1643) ; and in W 35 Nos. 424-430 are songs from the 'Varie Musiche,' 1623. (Eitner.)

C. S.

GAGLIANO, Marco da (1602-1642). Although 'Fiorentino' follows Gagliano's name on the title-pages of some of his books, this was only a way of showing respect to the town in which he lived from his youth, for he was born in the little village of Gagliano, a few miles north of Florence, about 1575. His father Zanobi, when he moved into Florence, was known by the name of his village 'da Gagliano,' and not by his surname. (See Dr. Emil Vogel, *Zur Geschichte des florentiner Musiklebens von* 1570-1650, *Vierteljahrsschrift für Musikwissenschaft*, 1889.) Marco was educated as a priest, and studied music under Luca Bati, maestro di cappella, 1595-1608, at S. Lorenzo, Florence, learning to play both organ and theorbo. In 1602 he replaced Bati as instructor in church music to the younger priests of S. Lorenzo, receiving two scudi a month. On the death of Bati, Gagliano became maestro di cappella of S. Lorenzo in November 1608, and before 1611 he was also appointed maestro di cappella to the Grand Duke of Tuscany. On Jan. 26, 1609, he was made Canon of S. Lorenzo, under the designation of SS. Cosimo and Damiano, and later, on Jan. 2, 1614, a Protonotario Apostolico. In the meantime he had become the centre of the musical life of Florence. In June 1607 he inaugurated the 'Accademia degl' Elevati,' and singers, composers, and music-lovers became members of it. From 1608 it was under the protection of Cardinal Ferdinando Gonzaga. As a member Gagliano took the name of 'l'Affannato' (the anxious one). The Accademia was still in existence in 1620 ; after that nothing more is heard of it.

A great deal of light is thrown on Gagliano's life at this period by his own letters, twenty-nine of which are preserved in the Gonzaga Archives at Mantua. Written between 1607 and 1622 the larger number are addressed to Cardinal Gonzaga. They may be read in the appendix to Dr. Vogel's paper, *Viertelj.* 1889. They show that on the invitation of Prince Francesco he visited Mantua towards the close of 1607, and it was there that his opera 'Dafne' was first produced ; probably the performance took place before the end of January 1608, for Caterina Martinelli, who played 'Dafne' and 'Amore' in it, was taken ill early in February and died on March 9. 'Dafne' was received with great enthusiasm and approval. Jacopo Peri, after seeing the score, wrote to the Cardinal that this was a finer setting of Rinuccini's words than any before made. To the present age 'Dafne' and other early operatic efforts represent 'the most primitive form of modern secular music,' but they were 'very effective to minds which were absolutely free from any experience whatever of theatrical representation accompanied by music throughout' (C. H. H. Parry, *Music of the 17th Century*, 1902). It must not be forgotten that Gagliano had been trained by Luca Bati, who was a pupil of Francesco Corteccia, in the narrow contrapuntal paths of virtue, but in Florence he was in the midst of a youthful band of reformers, determined to get away from old-fashioned formulæ and to revive the old Greek idea of drama combined with music, under fresh conditions of expression. 'Dafne' shows unmistakable progress in this direction ; the declamatory recitative especially has more life, a more emotional setting of the sense of the words. The work was published in 1608 with an original and entertaining preface by Gagliano, expressing his personal opinions on many points. He protests against the habit of adding 'gruppi, trilli, passaggi ed esclamazioni' to music unless with some definite design or purpose, such as showing the grace and facility of the singer. He thinks every singer should articulate distinctly, so that the sense of the words may be understood. Turning to the origin of 'rappresentazioni in musica,' he passes rapidly in review Peri's setting of 'Dafne,' Peri's 'Euridice,' and Monteverde's 'Arianna' with expressions of the warmest appreciation. He gives practical directions as to the performance of his opera ; instruments accompanying solo voices should face the singers so that voice and instrument move in harmony ; at the rising of the curtain, to arrest the attention of the audience, a sinfonia should be played by various instruments ; the latter will also serve to accompany the chorus and play the ritornelli. It may be noted here that the only instrumental piece in the score of the opera is a short 'Ballo'

at the end, the rest consists of voice-parts and bass. Finally, he states that the songs 'Chi da lacci d'Amor,' 'Pur giacque estinto al fine,' 'Un guardo, un guardo appena,' and 'Non chiami mille volte,' which shine like stars among the others ('lampeggiano tra l'altre mie come stelle'), were composed by one of the principal members of the Accademia, 'gran protettore della musica.' He gives no name, but it is fairly certain that the composer in question was Cardinal Ferd. Gonzaga (Vogel, *Viertelj.* 1889). Later on 'Dafne' was performed in Florence, probably during the Carnival of 1610. Gagliano remained in Mantua for the wedding ceremony in May of the Duke of Mantua's son, receiving on his departure a present of 200 scudi from the Duke for his musical services. He returned in June to Florence, where Peri had been acting as his deputy at S. Lorenzo; while at Mantua he had found time to compose the music for the Holy Week services at S. Lorenzo at the beginning of April 1608. Gagliano died Feb. 24, 1642, at Florence, and was buried in S. Lorenzo on Feb. 26. A terra-cotta bust of him is placed in the chapter-house with the inscription:—'Marcus a Galliano Zenobii filius insignis hujus Collegiatae ex cappellano canonicus ser. magni Etruriae ducis musicae cappellae magister morum probitate et doctrinae praestantia celeberrimus obiit anno salutis MDCXLII.'

The comparatively small amount published by Gagliano is partly due to the fact that he severely criticised his own work, and only printed the music he thought worthy to survive him; but it is also known that a certain number of his compositions which were printed have now disappeared. For instance, the text exists of an opera written by Andrea Salvadori and set to music by Gagliano in 1619:—'Il Medoro, rappresentato in Musica nel Palazzo del Ser. Gran Duca di Toscana in Firenza per l'elezione all' Imperio della S. C. M. dell' Imp. Ferdinando II. In Firenze per il Cecconcelli.' During the Carnival of 1622 it was performed in Mantua, and Gagliano's own letters at that time prove him to have been the composer. On Jan. 31, 1622, he wrote from Florence:—'Invio a V. A. Sma. per il presente procaccio, due atti del Medoro, l'altro non ho avuto tempo di scriverlo, ma con prima occasione lo manderò. È parso all' autore di variare i corì per rappresentarla, stimando che l'opera potesse riuscire troppo grave, e perciò ha mescolato il ridicolo.' Again, on Feb. 7:—'Mando a V. A. Sma. il restante del Medoro.' Only the text by Salvadori exists of an early attempt at oratorio or sacred drama ('azione sacra') by Gagliano, the 'Rappresentazione di Santa Orsola, Vergine et Martire,' first performed at Florence in 1624; and the music of many of the small works composed for especial occasions must have been lost in the same way. List of works:—

1. Di Marco da Gagliano Fiorentino. Il primo libro de' Madrigali a cinque voci. Novamente stampato. In Venetia, appresso Angelo Gardano. 1602. 4to, pp. 21. Dedicated to Ridolfo, Principe d'Hanalt. Also contains 'Luce soave' by Luca Bati; and 'Scherzo con l'aure' with the second part 'Così d'Arno su 'l lido' by Gio. del Turco. Five part-books in Bologna Liceo Musicale.

2. The same. Novamente ristampato. Venetia, appresso Angelo Gardano & Fratelli. 1606. Five part-books in the Bologna Liceo Musicale.

3. Di M. da G. Il secondo libro de' Madrigali. A cinque voci. Novamente stampato. In Venetia, appresso Angelo Gardano. 1604. 4to, pp. 21. Dedicated to Gio. del Turco, Cavaliere di S. Stefano, who 'volle apparare da me gli insegnamenti del contrapunto, nel quale si è avanzata cotanto,' etc.: Firenze, 30 Aprile, 1604. Contains one madrigal by Luca Bati, one by Pietro Strozzi, and 'Corso hai di questa' by Gio. del Turco, which with Gagliano's 'Fuggi lo spirito' in the same volume, were written in memory of Jacopo Corsi, who must have died early in 1604. Five part-books in Bologna Liceo Musicale.

4. Di M. da G. Il terzo libro de' madrigali. A cinque voci. Novamente stampato. In Venetia, appresso Angelo Gardano. 1605. 4to, pp. 21. Dedicated to Cosimo Cini; Fiorenza, 8 Febbraio, 1605. Contains two madrigals by Luca Bati, one by Giovanni, and one by Lorenzo del Turco. Five part-books in Bologna Liceo Musicale.

5. Di M. da G. Il quarto libro de' madrigali. A cinque voci. Novamente stampato. In Venetia, appresso Angelo Gardano. 1606. 4to, pp. 20. Dedicated to Don Ferdinando Gonzaga, Priore di Barletta: Firenze, 1 Febbraio, 1606. Contains one madrigal by Luca Bati, one by Giovanni, and one by Lorenzo del Turco. Five part-books in the Cassel ständische Landesbibl.

6. Officium defunctorum quatuor paribus vocibus concinendum, una cum aliquibus funebribus modulationibus. Marco a Gagliano authore. Venetiis apud Angelum Gardanum et Fratres. 1607. 4to, pp. 21. Dedicated to Conte Cosimo della Gherardesca: Fiorenze, 15 Gennaio, 1607. Sixteen numbers, twelve with Latin text, four (Madrigaletti spirituali) with Italian. The Tenor and Bassus part-books only are known, in the Bibl. Riccardiana, Florence.

7. La Dafne di Marco da Gagliano nell' accademia degl' elevati l'affannato, rappresentata in Mantova. In Firenze, appresso Cristofano Marescotti. 1608. Folio, pp. IV. 55. Dedicated to Vincenzio Gonzaga, Duca di Mantova e di Monferrato: Firenze, 20 Ottobre, 1608. In British Museum, etc.

8. Il quinto libro de' madrigali a cinque voci. Di Marco da Gagliano nell' accademia degl' elevati l'affannato. Novamente stampato. In Venetia, appresso Angelo Gardano e Fratelli. 1658 (a misprint for 1608 which occurs on the title-page of each part-book, but is correctly printed on the inner leaf). 4to, pp. 21. Dedicated to Lodovico Arrighetti: Fiorenza, 25 Ottobre, 1608. Five part-books in British Museum, etc.

9. Missa et sacrae cantiones, sex decantandae vocibus Marci a Gagliano Florentini ac musices sereniss. mag. Etruriae Duci Praefecti. Florentiae, apud Zenobium Pignonium. 1614. 4to, pp. 24. Dedicated to Seren. Cosmo, Magno Etruriae Duci. Florentiae die 26 Aprilis, 1614. Contains fifteen motets and one mass. Six part-books in the Proske Bibl. Regensburg.

10. Musiche a una, due e tre voci di M. da G. maestro di cappella del serenissimo Gran Duca di Toscana. Novamente composte e date in luce. In Venetia. 1615. Appresso Ricciardo Amadino. One vol. in fol. pp. 45. Dedicated to Gio. Francesco Grazzini: Fiorenza, 15 Ottobre, 1615. Includes 'Tu venisti cor mio' by L. Arrighetti. Contains the songs from the 'Ballo di donne turche insieme con i loro consorti di schiavi fatti liberi. Danzato nel Real Palazzo de Pitti all' Altezze di Toscana. Il Carneval dell' anno 1614.' Is in the Bibl. nazionale, Florence, etc.

11. Il sesto libro de' madrigali a cinque voci di M. da G. maestro di cappella del serenissimo Gran Duca di Toscana. Al molto illre. Sigr. e Patron mio collendis. il Sig. Cosimo del Sera. Novamente stampati. Stampa del Gardano in Venetia. 1617. Appresso Bartholomeo Magni. 4to, pp. 20. Contains one madrigal by L. Arrighetti, three 'd'Incerto,' whom Dr. Vogel thinks was probably Cardinal Ferd. Gonzaga. Five part-books in Bologna Liceo Musicale.

12. The same. Novamente ristampati. 1620. Five part-books in the Canal Bibl., Crespano.

13. Basso generalis Sacrarum cantionum unis ad sex decantandarum vocibus. Marci a Gagliano, insignis et Collegiatae Ecclesiae Sancti Laurentii Canonici, et musices serenissi. magni Etruriae Ducis Praefecti. Liber Secundus. Venetiis, 1623. Sub signo Gardani apud Bart. Magnum. Folio, pp. 48. In British Museum. With the six other part-books, publ. 1623, in the Berlin königl. Bibl. Dedicated to Filippo del Nero: Firenze, 1 Agosto, 1622. 23 compositions, No. 6 'Salve Regina' for three voices is said to be by Gio. Batt. Gagliano. At the end of this volume, addressed 'ai benigni lettori,' is Gagliano's protest against Mutio Effrem's attacks on his madrigals, with the wish that they were more openly made, so that he could answer them. Effrem at once published 'Censure di Mutio Effrem sopra il sesto libro de' madrigali di M. Marco da Gagliano maestro di cappella della cattedrale di Firenze.' Venetia, 1623. Folio, pp. 30, in which he reprints Gagliano's letter with an impertinent reply (see Parisini, *Cat. della Bibl. del L. M. Bologna*, vol. I., and Vogel, *Viertelj.* 1889 app.), as well as fourteen of the madrigals in score, noting at the beginning of each the errors he or his pupils have been able to discover; he added a madrigal of his own to show what a madrigal should be!

14. La Flora del Sig. Andrea Salvadori. Posta in musica da M. da G. maestro di cappella del seren. Gran Duca di Toscana. Rappresentata nel Teatro del Seren. Gran Duca nelle reali nozze del ser. Odoardo Farnese, Duca di Parma e di Piacenza, e della seren. Principessa Margherita di Toscana. In Firenze, per Zanobi Pignoni. 1628. Fol., p. 144. Dedicated to Odoardo Farnese. Peri composed the part of Clori: 'le musiche furono tutte del Sig. M. da G., eccetto la parte di *Clori*, la quale fu opera del Sig. Jacopo Peri, e però sopra ciascuna sua aria si son poste le due lettere J. P.' In Modena Bibl. Estense, etc.

15. Responsoria Maioris hebdomadae quatuor paribus vocibus decantanda Marci a Gagliano, Musices seren. Magni Etrurie Ducis Prefecti. Venetiis apud Bart. Magni. 1630. 4to, p. 40. Dedicated to D. Alex. Martio-Medici. Florentie kalendis Martii anno 1630. Thirty-one numbers. Four part-books complete in the Canal Bibl. Crespano. This was the last work published in Gagliano's lifetime.

Other compositions:—'Bel pastor' (Dialogo di ninfa e pastore). Musiche di Pietro Benedetti. Libro primo. Fiorenza. 1611. 'Ecco solinga' a una voce. The same. Libro secondo. Venetia. 1613. 'O uolce anima' a 5 voci. Secondo libro de' madrigali a 5 voci di Gio. del Turco. Firenze. 1614. 'Nasce questo' a 5 voci. Terzo libro de' madrigali a 5 voci di Filippo Vitali. Venetia. 1629. 'Lauda Sion' a 8 voci. Secondo libro de' motetti a 6 e 8 voci di Gio. Battista da Gagliano. Venetia. 1643.

The madrigals attributed to Gagliano in 'De' fiori del giardino' 2da parte, Norimberga, P. Kaufmann, 1604, were composed by Gio. del Turco, and were included in Gagliano's first book of madrigals, 1602. MSS.—In the Bologna Liceo Musicale.—'Benedictus qui venit' for four voices, in score in the handwriting of the Abbé Santini. Folio score of the first (1606 ed.), fifth and sixth books of madrigals for five voices. The score and separate parts of the Finale dell' atto IV., and the Coro di Nereidi e Napee in the opera 'La Flora.' In a MS. of the 18th century, a Messa a cinque voci con basso continuo; a Messa festiva a quattro voci pure col basso numerato; and a motet 'Viri Sancti' a cinque voci (the last, doubtful if by Gagliano). Dated 1594, Firenze. It is improbable that this early date is correct. In the Berlin königl. Bibl. (L. 190) an 18th century MS. with the same three compositions; the five-part mass is called 'Flores apparuerunt,' and on the four-part mass is noted 'unica e rara.' Also the Lauda Sion for eight voices, published 1643 (MS. W. 59, No. 812, in score). The Responsi per la settimana santa for four voices, published 1630 (MS. L. 132). The Responsoria 'In monte Oliveti' for four voices, with basso continuo (MS. 6910, in score). Recent reprints.—Robt. Eitner. *Die Oper von ihren ersten Anfängen*, etc., vol. 10 of the *Publikation älterer prakt. u. theoret. Musikwerke*, Berlin, 1881. The first and last parts of 'Dafne.'

F. A. Gevaert. *Les Gloires de l'Italie*, 1868, vol. i. p. 116, 'Alma mia dove' a due voci; vol. ii. p. 116, 'Valli profondi' a una voce; both taken from Musiche a 1, 2 e 3 voci, 1615. The latter, arranged for the organ, was published in A. H. Brown's *Select Compositions*, 2nd series, No. 69, 1876.

Hugo Goldschmidt. *Studien zur Geschichte der ital. Oper.* 1901, App. D. From 'La Flora': 1. Coro 'Bella Diva' a 5 voci; 2. Coro 'Taci Pane' a 2 voci; 3. Clori's air, composed by Peri; 4. Zeffiro's song 'Eccomi un quel'; 5. Coro 'delle grazie.'

Luigi Torchi included a song from 'La Flora' in the 'Raccolta' published by Ricordi, Milano, and inserted a Benedictus and two madrigals in the fourth vol. of his *Arte Musicale in Italia*.

The preface to the opera 'Dafne' was published separately soon after 1844 in Florence (Parisini, i. 45). C. S.

GAGLIANO, a celebrated family of violin-makers at Naples. ALESSANDRO, the first, worked from about 1695 to 1725. His work, like that of his sons, is good and substantial, but it exhibits the same unattractive greyish-yellow varnish which was used by the sons. Alexander calls himself 'alumnus' of Stradivarius, and all the Gaglianos worked more or less on the Stradivari model. His sons, NICOLO (1700-40) and GENNARO (1710-50), made a large number of good instruments. His grandson, FERDINANDO (1736-81), son of Nicholas, like all his Italian contemporaries, exhibits a marked decline. The later Gaglianos established a manufactory of violin-strings, which to this day enjoys a world-wide reputation. P. D.

GAILHARD, PIERRE, born August 1, 1848, at Toulouse, first received instruction in singing there at the Conservatoire, and in 1866 and 1867 at the Conservatoire of Paris, from Révial, where he gained the three first prizes for singing, opéra, and opéra-comique. On Dec. 4, 1867, he made his début, with great success, at the Opéra Comique as Falstaff in Ambroise Thomas's 'Songe d'une Nuit d'Été,' and remained there until 1870 playing in the 'Châlet' and 'Toréador' of Adam, 'Mignon,' 'Haydée,' etc. On March 25, 1868, he sang Ferdinand VI. in a revival of Auber's 'Part du Diable'; in 1869 in three new operas, viz. March 10, as the Count d'Arlange in Offenbach's 'Vert Vert'; Sept. 11, Barbeau in Semet's 'Petite Fadette,' and Dec. 20, as the Chevalier de Boisjoli in Auber's 'Rêve d'Amour.' On Nov. 3, 1871, he made his début at the Grand Opéra as Mephistopheles in 'Faust.' He remained a very successful member of that company until Dec. 1, 1884, when he was appointed manager of that theatre with M. Ritt, on the death of M. Vaucorbeil. His parts included Leporello, Caspar, St. Bris, Claudius in 'Hamlet,' Don Pedro ('L'Africaine'), etc.: in new operas July 17, 1874, Paulus in Membrée's 'Esclave' (Salle-Ventadour): April 5, 1876, Richard in Mermet's 'Jeanne d'Arc'; Dec. 27, 1878, Simon in Joncières's 'Reine Berthe'; April 14, 1882, Guido da Polenta in A. Thomas's 'Françoise de Rimini,' and finally, April 2, 1884, as Pythias in the revival of Gounod's 'Sapho,' wherein he gave an admirable presentment of a drunken debauchee (*Annales du Spectacle*). He also sang with success at the various concerts, notably Nov. 19, 1874, in 'Judas Maccabaeus,' under Lamoureux. On leave of absence, from 1879 to 1883 inclusive, he was a favourite singer at the Italian Opera, Covent Garden, where on May 10, 1879, he made a highly successful début as Mephistopheles, being, in the opinion of many connoisseurs, the best representative of the part since Faure. His parts in London included Caspar, Leporello, Assur in 'Semiramide,' both St. Bris and Marcel in the 'Huguenots,' Peter in 'L'Étoile du Nord'; June 26, 1880, Girod on the production in Italian of 'Le Pré-aux-Clercs'; June 9, 1881, Osmin on the revival of the 'Seraglio'; July 11, 1882, the title part in Boito's 'Mefistofele,' and July 5, 1883, the Podesta on the revival of 'Gazza Ladra.' He was equally excellent both as a singer and actor in both serious and comic

parts. The Ritt and Gailhard management of the Opéra ended Dec. 31, 1891, on the appointment as manager of M. Bertrand. In 1893 Gailhard joined the latter as manager, soon after the production, Feb. 24, of the successful ballet 'Maladetta,' scenario by himself, music by Paul Vidal, and on the death of his partner, Dec. 30, 1899, became sole manager. The chief features of his career were the production of Wagner's operas, viz. 'Lohengrin,' Sept. 16, 1891; 'Walkyrie,' May 12, 1893; revival of 'Tannhäuser,' May 13, 1895; 'Meistersinger,' Nov. 10, 1897; 'Siegfried,' Jan. 3, 1902; Verdi's 'Rigoletto' and 'Otello'; Leoncavallo's 'Paillasse' (Pagliacci), Mozart's 'Seraglio' (1903). Of native composers, Gounod's 'Roméo' at the Grand Opéra, Méhul's 'Joseph' and Berlioz's 'Prise de Troie' (Nov. 15, 1899). Of more modern composers: Reyer's 'Sigurd' (1885); and 'La Statue' (1903); Massenet's 'Le Cid' (1885); 'Le Mage' (1891); 'Thaïs' (1894); Saint-Saëns's 'Ascanio' (1890); and 'Les Barbares' (1901); Paladilhe's 'Patrie' (1886); Bourgault-Ducoudray's 'Thamara' (1891); Chabrier's 'Gwendoline' (1893); Maréchal's 'Déidamie' (1893); Lefebvre's 'Djelma' (1894); Augusta Holmès's 'Montagne Noire' (1895); Duvernoy's 'Hellé' (1896); Bruneau's 'Messidor' (1897); Rousseau's 'Cloche du Rhin' and Vidal's 'Burgonde' (1898); Chabrier's 'Briséis' (1899); Joncières's 'Lancelot' (1900); Xavier Leroux's 'Astarte' (1901); Hillemacher's 'Orsola' (1902); D'Indy's 'L'Étranger' (1903), and Erlanger's 'Fils de l'Étoile' (1904). *Ballets:* Messager's 'Deux Pigeons' (1885); Wormser's 'L'Étoile' (1897), and Duvernoy's 'Bacchus' (1902), etc. Besides the ballet mentioned above, M. Gailhard wrote the libretto with M. Gheussi, the libretto of Paul Vidal's 'Guernica,' produced at the Opéra Comique in 1895, which met with no success, but obtained the Prix Monbinne in 1896. Among the artists who began their career at the Opéra under M. Gailhard's management may be mentioned Mmes. Rose Caron, Melba, Eames, Bréval, Ackté, Héglon, MM. Alvarez, Saléza, Renaud, Delmas, the De Reszke brothers, and the Gresse father and son. On July 6, 1886, he was appointed a chevalier of the Légion d'honneur. A. C.

GALEAZZI, Francesco, a violin player, born at Turin in 1738 (Fétis says 1758) and for many years leader of the band at the Teatro Valle at Rome. He deserves special notice, not so much as a composer of numerous instrumental works, as the author of one of the earliest methodical instruction-books for the violin, which bears the title of *Elementi teorico-prattici di musica, con un saggio sopra l' arte di suonare il violino analizzata*, Roma, 1791 e 1796. He died, according to Fétis, in 1819. P. D.

GALILEI, Vincenzo. Among the little group of philosophic dilettanti who were accustomed to meet in the Palace of Giovanni Bardi at Florence, during the closing years of the 16th century, no figure stands forth with greater prominence than that of Vincenzo Galilei, the father of Galileo Galilei, the great astronomer. This enthusiastic apostle of artistic progress—or retrogression?—was born, at Florence, *circa* 1533; and, after studying music, at Venice, under Zarlino, attained, in later life, considerable reputation as a Lutenist. We shall, however, do him no injustice if we describe him as a literary *savant* of high general culture, but a very imperfectly-educated musician.

When the great question of the resuscitation of the Classical Drama, on the principles adopted by the Greek Tragedians, was debated at the Palazzo Bardi, Galilei took an active part in the discussion; and, according to Giov. Batt. Doni, was the first who composed melodies for a single voice—*i.e.* after the manner of the then nascent Monodic School. His first attempt was a Cantata, entitled 'Il Conte Ugolino,' which he himself sang, very sweetly, to the accompaniment of a viol. This essay pleased very much, though some laughed at it—notwithstanding which, Galilei followed it up by setting a portion of the Lamentations of Jeremiah, in the same style. Quadrio also speaks of his Intermezzi; but no trace of these, or of the Monodic Cantata, can now be discovered.

Vincenzo Galilei's writings on subjects connected with Art are, however, of great interest. One of these—a Dialogue, entitled *Il Fronimo* (Venice, 1568)—is especially valuable, as throwing considerable light on the form of Tablature employed by the Italian Lutenists, and their method of tuning the instrument, in the latter half of the 16th century. Another important work, entitled *Dialogo di V. G. . . . della musica antica e moderna . . . . contra Gius. Zarlino* (Florence, 1581), was produced by some remarks made by Zarlino, in his *Istitutioni armoniche* (Venice, 1558), and *Dimostrationi armoniche* (Venice, 1571), concerning the Syntonous Diatonic Scale of Claudius Ptolomy, which he preferred to all other Sections of the Canon, and which Galilei rejected, in favour of the Pythagorean immutable system. It is impossible to believe that Galilei ever really tuned his lute on the Pythagorean system, which was equally incompatible with the character of the instrument and the characteristics of the Monodic School. Moreover, Zarlino himself preferred that the lute should be tuned with twelve equal semitones to the octave. But Galilei, whose prejudices were strong enough to overthrow his reason, followed up this attack by another, entitled *Discorso di V. G. . . . intorno all' opere di messer Gioseffo Zarlino da Chioggia* (Florence, 1589), and a second edition of the *Dialogo* (Florence, 1602). In these works, he argues the subject with great acrimony: but, the scale advocated by Zarlino represents the only form of Just Intonation now adopted by

any European theorist; and the scale he advocated for the lute is the only one now used for the pianoforte, the organ, and tempered instruments of every kind. The *Dialogo* contains, however, much interesting matter, but very slightly connected with the controversy with Zarlino; for instance, the text and musical notation of the three apocryphal Greek Hymns, to Apollo, Calliope, and Nemesis, which have since given rise to so much speculation, and so many contradictory theories.

Vincenzo Galilei died at Florence towards the close of the 16th century, or beginning of the 17th. W. S. R.

GALIMATHIAS. A French term of very doubtful derivation (Littré), meaning a confused unintelligible affair. 'Galimathias musicum' is a comic piece of music for orchestra with clavier and other instruments obbligato, composed by Mozart in 1766 at the Hague, for the festivities at the coming of age of William of Orange the Fifth (March 8). Mozart, then on his road from London, was just ten years old. The piece is in thirteen short numbers ending with a variation on the Dutch national air of 'Wilhelmus von Nassau.' (Köchel, No. 32; O. Jahn, 2nd ed. i. 44.) In a letter of Feb. 5, 1783, Mozart speaks of a galimathias opera —'Gallus cantans, in arbore sedens, gigirigi faciens.' G.

GALIN. See Chevé, vol. i. p. 513.

GALITZIN, Nicolas Borissovich, a Russian Prince who is immortalised by the dedication to him by Beethoven of an overture (op. 124) and three quartets (opp. 127, 130, 132). Of his birth nothing is known; he died on his estates in the province of Kurski in 1866. In 1804-6 he was in Vienna, and doubtless made the acquaintance of Beethoven and his music at the house of Count Rasoumowsky, the Russian ambassador, for whom at that very date Beethoven wrote the three quartets (op. 59) and at that of the Count von Browne, an officer in the Russian service, for whom Beethoven had written several works (opp. 9, 10, 22, etc.). In 1816 Moscheles met him at Carlsbad, and speaks of him as a practical musician (*Leben*, i. 27). In 1822 he was married and living in Petersburg in very musical society, his wife an accomplished pianoforte player and he himself a violoncellist and an enthusiastic amateur. At this time, Nov. 9, 1822, he[1] writes to Beethoven a letter full of devotion, proposing that he shall compose three new quartets at his own price, to be dedicated to the Prince. Beethoven accepts the offer (by letter, Jan. 25, 1823), and fixes 50 ducats (say £23) per quartet as the price. Feb. 19, the Prince replies, that he has 'given an order' for 50 ducats to his banker, and will immediately remit 100 more for the two others. May 5, 1823, he writes again, 'you ought to have received the 50 ducats fixed for the first quartet. As soon as it is complete you can sell it to any publisher you choose—all I ask is the dedication and a MS. copy. Pray begin the second, and when you inform me you have done so I will forward another 50 ducats.'

From this time the correspondence continues till Beethoven's death. Galitzin's further letters —in French, fourteen in number—are full of enthusiasm for Beethoven, pressing money and services upon him, offering to subscribe for mass, symphony, and overture, and volunteering his willingness to wait for 'the moments of inspiration.' In fact he had to wait a long time. The first quartet (in E♭, op. 127) was first played at Vienna, March 6, 1825, and is acknowledged by the Prince on April 29. The second (in A minor, op. 132) was first played Nov. 6, 1825, and the third (in B♭, op. 130) on March 21, 1826. These were received by the Prince together, and were acknowleged by him Nov. 22, 1826. He also received a MS. copy of the Mass in D and printed copies of the Ninth Symphony and of the two overtures in C, the one (op. 124) dedicated to him, the other (op. 115) dedicated to Count Radzivill. Thus the whole claim against him was—Quartets, 150 ducats; Overture (op. 115), 25 ducats; Mass, 50 ducats; loss on exchange, 4 ducats; total, 229 ducats, not including various other pieces of music sent. On the other hand he appears, notwithstanding all his promises, to have paid, up to the time of Beethoven's death, only 104 ducats. It should be said that in 1826 war and insurrections had broken out in Russia, which occupied the Prince and obliged him to live away from Petersburg, and also put him to embarrassing expenses. After the peace of Adrianople (Sept. 14, 1829), when Beethoven had been dead some years, a correspondence was opened with him by Hotschevar, Carl van Beethoven's guardian, which resulted in 1832 in a further payment of 50 ducats, making a total of 154. Carl still urges his claim for 75 more to make up the 150 for the quartets, which Galitzin in 1835 promises to pay, but never does. In 1852, roused by Schlindler's statement of the affair (ed. i., pp. 162, 163), he writes to the *Gazette Musicale* of July 21, 1852, a letter stating correctly the sum paid, but incorrectly laying it all to the account of the quartets. Other letters passed between him and Carl Beethoven, but they are not essential to the elucidation of the transactions.

There can be no doubt that Galitzin's intentions were excellent, that the world owes to him the existence of the three quartets, and that he was lavish of admiration and promises to pay. No doubt, too, he had to wait a long while, and to undergo a great deal of disappointment, but this he ought to have known was inevitable in dealing with a man of Beethoven's temperament, whose mode of production has been elsewhere shown to have been so slow and uncertain. For

[1] [The letters here referred to have not yet (1905) been printed in Deiters's revised edition of Thayer's *Biography of Beethoven*.]

the payments of 50 and 25 ducats he had more than ample compensation in the copies of the Mass and the Overture, the pleasure he derived from them, and the credit and importance they must have given him in the musical circles of Russia. For the copies of Sonatas, Overture (op. 115), Terzet, and other works sent him by Beethoven, he appears to have paid nothing, nor can he justly demur to Beethoven's having sold the quartets to publishers, or performed them in public, after the carte blanche which he gives him in his third letter, where all he stipulated for was the dedication and a MS. copy.

The son of the preceding, Prince GEORGE GALITZIN, was born at St. Petersburg in 1823, and died in Sept. 1872. He was not only a great lover of music, like his father, but was a composer of various works for orchestra, chamber, and voices, and an able conductor. In 1842 he founded in Moscow a choir of seventy boys, whom he fed, clothed, and educated. It was for long one of the sights of the city. He also maintained an orchestra, with which he gave public concerts, and visited England and France in 1860. A. W. T.

GALLENBERG, WENZEL ROBERT, GRAF VON, of an old Carinthian family, born at Vienna, Dec. 28, 1783, died at Rome, March 13, 1839, has his place in musical history as a prolific composer and in virtue of his indirect connection with Beethoven.

His passion for music, manifested at a very early age, led him to forego the advantages of an official career and to devote himself to the art. His master in the science was Albrechtsberger. On Nov. 3, 1803, being then not quite twenty, he married the Countess Julie Guicciardi, who had been the object of one of Beethoven's transient but violent passions.

During the winter following, young Gallenberg made his appearance in Würth's Sunday Concerts as author of several overtures, which made no impression. In 1805 we find the youthful couple in Naples, where at the great festival of May 31, 1805, in honour of Joseph Bonaparte, Gallenberg prepared the music, which was mostly of his own composition—three overtures, eight pieces for wind band, and dances for full orchestra. It was greatly applauded, and was doubtless one cause of his being appointed a year or two later to the charge of the music in the court theatre. The ballet troupe was one of the finest in Europe, and Gallenberg embraced the opportunity of improving the Neapolitan school of instrumental music by giving frequent adaptations of the best German productions—complete movements from Mozart, Haydn, Cherubini, and others, which opened new sources of delight, and afforded young composers new standards of excellence. Thus what the Neapolitan school had done for opera in Germany during the 18th century was in some degree repaid by Gallenberg in the 19th.

When Barbaja undertook the management of the court theatre at Vienna (Dec. 21, 1821), he introduced Gallenberg to assist in the management—an arrangement which, however, existed but two years. In Jan. 1829 Gallenberg himself became lessee of this theatre, on a contract for ten years, which, though at first successful, soon came to an end from want of capital. From the autumn of 1816 to the spring of 1838 we again find him in Naples employed by Barbaja as ballet composer and director; and in March, 1839, we read of his death at Rome at the age of fifty-six.

Gallenberg wrote from forty to fifty ballets, but the local records alone retain even the names of most. We add the titles of a few which in their day were reported as of some interest to the general musical public.

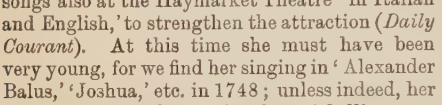
'Samson' (Naples and Vienna, 1811); 'Arsinoe und Telemaco' (Milan, 1813); 'I Riti Indiani' (Do. 1814); 'Amleto' (Do. 1815); 'Alfred der Grosse' (Vienna, 1820); 'Joan d'Arc' (Do. 1821); 'Margereta' (Do. 1822); 'Ismaans Grab' (Do. 1823); 'La Caravana del Cairo' (Naples, 1824); 'Ottavio Pinelli' (Vienna, 1828); 'Das befreite Jerusalem' (Do. do.); 'Caesar in Egypten' (Do. 1829); 'Theodosia' (Do. 1831); 'Orpheus und Eurydice' (Do. do.); 'Agnes und Fitz Henri' (Do. 1833); 'Biancas Wahl' (Do. 1835); 'Latona's Rache' (Do. 1838). A. W. T.

GALLI, CORNELIO, a native of Lucca, one of the Gentlemen of the Chapel to Queen Catherine in the time of Charles II. Mr. Berenclow told Humfrey Wanley that he was a great master of the finest manner of singing, and was one of the first who introduced it into England. J. M.

GALLI, FILIPPO, was born at Rome in 1783. Though destined for the clerical profession, young Galli's strong taste for music proved insurmountable. When only ten, he had developed a musical talent beyond his age, and was remarked as a player and accompanist. His voice, when formed, was a fine tenor. At the age of eighteen he married. Compelled by circumstances to choose a career, he selected that of Opera, and made his début, in the carnival of 1804, at Bologna. He met with a brilliant success, and became one of the first of Italian tenors; but six years afterwards a serious illness changed his voice completely, and made it a bass. Paisiello persuaded him to cultivate his new voice, and profit by the change. This he did, and became one of the greatest bassi cantanti that his country has produced. His first appearance in his new quality was in the carnival of 1812 at S. Mosè in Venice, in the 'Inganno Felice' of Rossini. He sang next at Milan, and then at Barcelona. Rossini wrote for him the parts of Fernando in 'La Gazza Ladra' and of 'Maometto.' Galli appeared for the first time at Paris, Sept. 18, 1821, in the former, and, though singing out of tune in the first act, achieved a considerable success

on the whole. He returned to Paris in 1825, and made a great sensation ; but his vocalisation had become rather slow and heavy. This defect was noticed when he came to London. Ebers engaged him with Zuchelli for the season of 1827, and his salary was fixed at £870. He made his first appearance, as usual, in 'La Gazza Ladra.' His voice was less flexible than Zuchelli's, but its tone was deep and full, and, according to Rossini, he was the only singer who ever filled the part of Assur satisfactorily. In 1828 Galli went to Spain ; thence to Rome and Milan in 1830. In the following year he went to Mexico, and remained attached to the Opera in that city from 1832 to 1836. In 1839 and 1840 he was singing at Barcelona and Milan, but was at length obliged to accept the place of chorus-master at Madrid and Lisbon. Amiable and cultivated, Galli had but one fault, that of boundless extravagance. At the end of 1842 he arrived at Paris in the greatest want, and, as a charity, obtained a professor's place at the Conservatoire. His chief income was derived from a yearly benefit concert, at which the Italian singers performed. Of this he was deprived in 1848. He then fell into great misery, and died June 3, 1853. J. M.

GALLI, Signora, a mezzo-soprano, who made her début in Galuppi's 'Enrico,' Jan. 1, 1743, in London. She and Frasi, 'after transplantation from Italy, took root in this country, and remained here in great public favour, for many years' (Burney). Galli was frequently employed in male parts on the stage. Though her manner was spirited and interesting, she was little noticed by the public till she sang in Handel's 'Judas,' 1746, when she gained such applause in the air 'Tis Liberty,' that she was encored in it every night, and became an important personage among singers. She had already sung in 'Joseph,' 1744, and she subsequently performed principal parts in 'Joshua,' 'Solomon,' 'Susanna,' 'Theodora,' 'Jephtha,' etc. She is said to have been a favourite pupil of Handel (Cradock). Twenty years later she sang in Sacchini's 'Perseo' (1774) and 'Montezuma' (1775). She became the companion of the celebrated Miss Ray, and was with her when she was assassinated by Hackman, April 7, 1779. She afterwards fell into extreme poverty, and, about the age of seventy, was induced to sing again in oratorios. She appeared at Covent Garden as late as 1797. Lord Mount-Edgcumbe had the curiosity to go, and heard her sing 'He was despised.' Her voice was cracked and trembling, but it was easy to perceive that her school was good. She died in 1804. J. M.



GALLI-MARIÉ, Célestine, born Nov. 1840 in Paris, was taught singing by her father, Mécène Marié de l'Isle, formerly a singer at the Paris Opera under the name Marié. In 1859 she made her début at Strasburg, and next sang in Italian at Lisbon. About this time she married a sculptor named Galli, who died soon after in 1861. In April 1862, on the production at Rouen in French of the 'Bohemian Girl,' she attracted the attention of the late Émile Perrin, and obtained from him an engagement at the Opéra Comique, of which he was then director. Here she made her début, August 12, in 'La Serva Padrona,' revived for the first time for over forty years. She made a great success in this, and in a revival of Grisar's 'Les Amours du Diable' (1863), since which time she remained at that theatre until the end of 1885, with the exception of engagements in the provinces, in Italy, Belgium, and elsewhere. Among the operas in which she has appeared may be named:—March 24, 1864, 'Lara' (Maillart); Dec. 29, 1864, 'Capitaine Henriot' (Gevaert); Feb. 5, Massé's 'Fior d'Aliza,' and Nov. 17, 1866, 'Mignon'; Nov. 23, 1867, 'Robinson Crusoé,' and Jan. 18, 1872, 'Fantasio' (Offenbach); April 24, 1872, Paladilhe's 'Passant,' at Chollet's farewell benefit; Nov. 30, 1872, Massenet's 'Don César'; March 3, 1875, 'Carmen'; April 11, 1876, Guiraud's 'Piccolino'; Oct. 31, 1877, Poise's 'Surprise de l'Amour'; Jan. 19, 1879, Pessard's 'Le Char,' etc., and in revivals of Hérold's 'Marie,' Grisar's 'Les Porcherons,' 'Mireille,' singing the parts of Taven and Andreloun, and as the heroine Rose Friquet in Maillart's 'Dragons de Villars.' As Mignon and Carmen, the most important parts created by her, she has earned for herself world-wide celebrity. In 1886 she played with a French company for a few nights at Her Majesty's Theatre as Carmen, in which she made her début, Nov. 8, and as the Gipsy in 'Rigoletto.' She was well received, but would doubtless have appeared to greater advantage with the support of a better company. On Dec. 11, 1890, she reappeared at the Opéra Comique —then located in the building now called the Théâtre Sarah-Bernhardt,—as Carmen, with Melba as Michaela, Jean de Reszké as Don José, and Lassalle as Escamillo, in a performance given to raise funds for a monument to Bizet.

'Mme. Galli-Marié should take rank with those numerous artists who, although endowed with no great voice, have for a century past rendered to this theatre services made remarkable by their talent for acting and their incontestable worth from a dramatic point of view. . . . Equally capable of exciting laughter or of provoking tears, endowed with an artistic temperament of great originality . . . which has permitted of her making out of parts confided to her distinct types . . . in which she has represented personages whose nature and characteristics are essentially opposed' (Pougin). She died at Vence, near Nice, Sept. 22, 1905. A. C.

GALLIA, Maria, incorrectly called Maria Margherita by Burney, was a sister of Margherita de l'Épine, and pupil of Nicolo Haym. She appeared for the first time at the Lincoln's

Inn Fields Theatre in 1703. She sang in 1706 and 1708 in 'Camilla,' in the libretti of which she is called JOANNA MARIA. In the former year she also performed the principal rôle in the 'Temple of Love' by Saggione,[1] to whom she was then married. Documents (in the possession of the present writer), signed by this composer, and by his wife as Maria Gallia Saggione, show that they received respectively £150 and £700 for a season of nine months,—large sums at that early date. Gallia appeared in Clayton's 'Rosamond' at its production in 1707. She sang songs also at the Haymarket Theatre 'in Italian and English,' to strengthen the attraction (*Daily Courant*). At this time she must have been very young, for we find her singing in 'Alexander Balus,' 'Joshua,' etc. in 1748; unless indeed, her name is incorrectly put for that of Galli. J. M.

GALLIARD (Ital. *Gagliarda*; Fr. *Gaillarde*). An old dance, as its name implies, of a merry character. 'I did think,' says Shakespeare, 'by the excellent constitution of thy leg that it was formed under the star of a galliard.' It was generally in 3–2, but sometimes in common time. [It was apparently used as a bright contrast to the stately pavan, which it always followed. In the *Fitzwilliam Virginal Book*, there are twenty-four instances in which the pieces are thus coupled together, often with identity of theme, as in two pieces by Bull quoted below. The theme is as follows :—

It was described by Praetorius as 'an invention of the devil,' and 'full of shameful and obscene gestures, and immodest movements.' From the fact of its coming from Rome it was also called ROMANESCA. E. P.

GALLIARD, JOHN ERNEST, son of a perruquier of Zell, in Hanover, where he was born about 1687. He studied composition under Farinelli—uncle of the singer, and director of the concerts at Hanover—and Steffani. He soon attained distinction as a performer on the oboe, which he had studied with Marschall, and coming to England about 1706 was appointed chamber musician to Prince George of Denmark. On the death of Draghi, the then sinecure appointment of organist at Somerset House was bestowed upon him. He speedily learned English, and composed a Te Deum and Jubilate and three anthems ('I will magnify Thee, O Lord,' 'O Lord God of Hosts,' and 'I am well pleased'), which were performed at St. Paul's and the Chapel Royal on occasions of thanksgiving for victories. In 1712 he composed the music for Hughes's opera 'Calypso and Telemachus,' which was performed at the Queen's Theatre in the Haymarket. In 1713 he was playing in the orchestra at the opera, having a solo part in the accompaniment of the last air in the first act of Handel's 'Teseo.' From about 1717 he was employed by Rich to furnish the music for the curious admixtures of masque and harlequinade which he exhibited under the name of pantomime, and produced several excellent compositions for pieces of that description. In 1728 he set for two voices, cantata-wise, the Morning Hymn of Adam and Eve from Milton's 'Paradise Lost.' This admirable composition was afterwards enlarged by Dr. Benjamin Cooke by the addition of orchestral accompaniments and the expansion of some of the movements into choruses. In 1742 Galliard published a translation of Pier Francesco Tosi's *Opinioni di Cantori Antichi e Moderni, o sieno Osservazioni sopra il Canto Figurato*, under the title of *Observations on the Florid Song; or, Sentiments on the Ancient and Modern Singers.* In 1745 he had a benefit concert at Lincoln's Inn Fields Theatre, at which were performed his music for the choruses in the tragedy of 'Julius Caesar,' by John Sheffield, Duke of Buckinghamshire, and a piece for twenty-four bassoons and four double basses. Galliard died early in 1749, leaving a curious collection of music, most of which is now in the Henry Watson Music Library, Manchester. Besides the pieces mentioned he composed music for 'Pan and Syrinx,' opera, 1717; 'Jupiter and Europa,' pantomime, 1723; 'The Necromancer; or, Harlequin Dr. Faustus,' pantomime, 1723; 'Harlequin Sorcerer, with The Loves of Pluto and Proserpine' (the second title afterwards changed to 'The Rape of Proserpine'), pantomime, 1725; 'Apollo and Daphne; or, The Burgomaster tricked,' pantomime, 1726; 'The Royal Chace; or, Merlin's Cave,' a musical entertainment, 1736, in which occurred the famous hunting song 'With early horn,' which the singing of Beard rendered so extremely popular; music for Lee's tragedy 'Oedipus'; several cantatas, songs, solos for violin, violoncello, bassoon, etc. At the time of his death he had nearly completed the composition of an Italian opera, 'Oreste e Pilade, overo la Forza dell' Amicizia.' Sir John Hawkins conjectured, from internal evidence, that Galliard made the translation of the Abbé Raguenet's *Parallèle*, published in 1709 under the title of *A Comparison between the French and Italian Musick and Operas, with Remarks*, and was the author of *A Critical Discourse upon Operas in England, and a Means proposed for their Improvement*, printed at the end of that translation; whilst Dr. Burney, judging from the same evidence, was of a contrary opinion. W. H. H.

GALLICULUS (probably a Latinised form of the German Hähnel or Hähnlein), JOANNES, theoretical writer and composer, lived in Leipzig about 1520. He is thought to have held some

[1] Erroneously attributed to Greber by Burney.

scholastic post. His theoretical work was first entitled 'Isagoge de Compositione Cantus' (Leipzig, 1520), and was dedicated to Georg Rhau, who was then Cantor at St. Thomas's, Leipzig, and by whom it was afterwards frequently republished at Wittenberg from 1538 onwards under the title 'Libellus de compositione Cantus.' It is Galliculus who tells us of Rhau's composition of a Mass *a* 12 on occasion of the Disputation between Luther and Eck at Leipzig in 1519. He also expresses the opinion which has been practically adopted in later times, that choral compositions for four voices are the best; that bass, tenor, alto, and soprano, are sufficient for all purposes, and that every additional voice-part is so far superfluous, as wanting a definite compass. His compositions consist of (1) a Passion according to St. Mark (in Rhau's 'Harmoniae De Passione Domine,' 1538); (2) some liturgical pieces for Easter and Christmas (in Rhau's 'Officia Paschalia,' 1539, and 'De Nativitate,' 1545); (3) two Magnificats (Rhau's 'Vesperarum Officia,' 1540-45); (4) Psalm II. Quare fremuerunt *a* 4 (Ott, 1537). For a further account of the Passion Music see Otto Kade, *Die aeltere Passionscompositionen*, 1893. The part of the Evangelist is set in the simple Church Recitative; the other parts are mostly *a* 4, some *a* 2. Kade praises highly the contrapuntal art and melodic expressiveness of Galliculus. J. R. M.

GALLUS, Jacobus. See Handl.

GALLUS, Joannes, called in France Jehan le Cocq and in the Netherlands Jan le Coick, a composer of the 16th century, who was maestro di cappella to the Duke of Ferrara in 1534 and 1541. It is impossible in our present information to say whether his name was really Le Cocq or Gallus, for in the customs of the time the process of Latinising surnames and that of adopting sobriquets were equally common. Some compositions of his have been attributed to Jhan Gero, but he is not to be confused with that composer, or with the other (younger) composer called Gallus, whose real name was Handl. For works in the various collections, printed and in MS., see the *Quellen-Lexikon*; the first book of madrigals by him and other authors was published at Venice in 1541, and the motets, called 'Symphonia quatuor modulata vocibus,' in 1543. M.

GALOP. A very spirited quick round dance in 2–4 time. Galops have one and sometimes two Trios, and are often written with an Introduction and Coda.

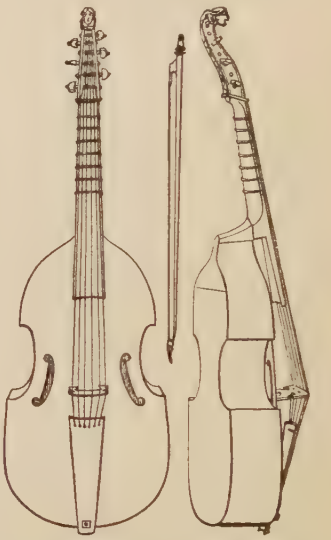
The dance is of German origin, and its old name was Hopser or Rutscher—describing the step. It appears to have received that of Galop on its introduction into France about the beginning of the 19th century, where it soon took root. G.

GALOUBET. The French name for the tabor-pipe. The instrument is still in use in some of the French country districts. (See Fingering (Wind Instruments), Pipe and Tabor.) F. K.

GALUPPI, Baldassare, was born on Oct. 18, 1706, on the island of Burano, near Venice, whence he received the surname of Il Buranello, by which he was frequently known. His first teacher was his father, a barber, who played the violin at the local theatre. In 1722 he made his first appearance as a composer with the opera of 'La Fede nell' Incostanza, ossia Gli Amici Rivali.' It was performed at Vicenza under the first title, and at Chioggia under the second, being hissed off the stage at one if not both places. This determined Galuppi to devote himself to the serious study of composition, and he entered the Conservatorio degli Incurabili at Venice, where he became a pupil of Lotti. In collaboration with his fellow-pupil, G. B. Pescetti, he brought out an opera, 'Gli odi delusi dal sangue' (libretto by A. M. Lucchini), at the Teatro S. Angelo at Venice in 1728, which was followed the next year by 'Dorinda,' of which the libretto was by Benedetto Pasqualigo (not Marcello, as erroneously stated by Allacci). We may conclude that these operas were successful, as Galuppi thenceforward continued to compose operas by himself, sometimes as many as five in a year, for Venetian theatres. 'Issipile' (1738) and 'Adriano in Siria' (1740) were composed for Turin, and in 1741 he went to London, where he arranged the pasticcio, 'Alexander in Persia,' for the Haymarket. He also composed an original opera, 'Penelope,' which was not very successful. 'The genius of Galuppi,' says Burney (*Hist. of Music*, iv. 447), 'was not as yet matured; he now copied the hasty, light, and flimsy style which reigned in Italy at this time, and which Handel's solidity and science had taught the English to despise.' The next year's opera, however, 'Scipione in Cartagine,' as well as 'Enrico' (1743) and 'Sirbace,' was more favourably received, and, though Galuppi himself returned to Venice after their production, his music enjoyed a long-continued popularity in England. Indeed Burney considered that he had more influence on English music than any other Italian composer.

In 1748 Galuppi became vice-maestro di cappella at St. Mark's, and in 1762 he became principal maestro. The year 1749 appears to have seen the beginning of his very successful career as a composer of comic operas, with 'L' Arcadia in Brenta' (libretto by Goldoni), produced at the Teatro S. Angelo. In 1750 he and Goldoni produced 'Arcifanfano Re de' Matti,' and in 1754 'Il Filosofo di Campagna,' the most popular of all his lighter works. It was performed in London (Haymarket) in 1761, and the following year in Dublin, under the title of 'The Guardian Trick'd.'

In 1766 he was invited to St. Petersburg by



the Empress Catherine II., and made a very favourable impression with his 'Didone Abbandonata' (Madrid, 1752; Venice, 1765). 'Il Re Pastore' (Parma, 1762) was given the next year, and in 1768 he composed 'Ifigenia in Tauride' for the Russian opera-house, after which he returned to Venice. He there resumed his position as director of the Conservatorio degli Incurabili, to which he had been appointed in 1762, and had made the institution the most celebrated of its kind when Burney visited him in 1770 (*Present State of Music*, i. 175). He died on Jan. 3, 1785. [On the centenary of his death, in 1885, a monument was erected to his memory at Burano. As inquiries are often made by members of Browning Societies and others as to the 'Toccata of Galuppi,' to which Browning referred in his poem of that name, it is perhaps well to state that no particular composition was taken as the basis of the poem.]

Galuppi's principal claim to remembrance rests on his comic operas, in which he showed himself fully worthy of his more celebrated collaborator, Goldoni. His melody, though attractive, is not strikingly original; but he had a firmer grasp of harmony, rhythm, and orchestration than most of his Italian contemporaries. He is also important for his contribution to the development of the concerted finale, being apparently the first composer to extend the final ensemble of Leo and Logroscino into a chain of five or six clearly defined movements, in the course of which the dramatic action can be said to progress. He did not, however, realise the value of gradually increasing the number of persons singing; and compared with Mozart's his finales show little feeling for the imposing effect of a well-managed musical climax, although they certainly are a great advance on anything that had been attempted before.

A list of Galuppi's extant works will be found in Eitner's *Quellen-Lexikon*; for the operas the most complete bibliography is that of M. Alfred Wotquenne, *Baldassare Galuppi, étude bibliographique sur ses œuvres dramatiques* (Brussels, 1902). The library of the Brussels Conservatoire possesses several of his autograph scores. E. J. D.

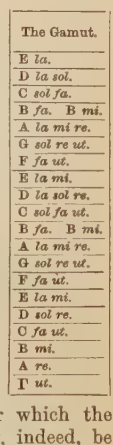
GAMBA. An open slotted organ-stop, generally of eight-foot pitch, and of a stringy or reedy quality of tone. The bearded Gamba has a *frein*, bar, or roller placed in front of the mouth of the pipe to augment the amplitude of the vibrations. Recent developments of this class of stop under the name of Viol d'Orchestre have resulted in such pipes possessing a very small scale, keen tone, and quick speech. T. E.

GAMBA, VIOLA DA (*gamba*, Ital. for 'leg') —a knee-viola, as distinguished from viola da braccio (*braccio*, Ital. for 'arm'), or the viola to by played on the arm—is an obsolete stringed instrument, played with a bow and held between the knees: a predecessor of the violoncello. It is of about the same size as the violoncello, but has a flat back, like a double-bass; the openings in the belly have not the *f*-shape, but are variously cut, generally in a thin crescent. The finger-board was originally provided with frets,

which were afterwards discontinued; it was mounted with six catgut strings, which were ultimately increased to seven, the three lowest covered with wire. The two kinds were thus tuned:—

The Gamba was for a long period the most popular of all bowed instruments, and, especially in England (which by some is believed to be its original home), Holland, and Germany, appears to have been the favourite instrument of society. Shakespeare, in 'Twelfth Night,' mentions as a special accomplishment of Sir Andrew Aguecheek that 'he plays o' the viol-de-gamboys.' In the pictures of Gerard Dow, Terburg, and other great Dutch masters of the 17th century we see again and again richly dressed ladies and gentlemen playing the gamba. At one time few noblemen's or gentlemen's houses were without a 'chest,' containing a set of four or more gambas of different size, often expensively got up, carved and inlaid with ivory or tortoise-shell. This popularity of the gamba lasted up to the middle of the 18th century, when the violoncello began gradually to supersede it. Burney, who heard it played by Abel, the last great performer upon it in London, describes its tone as 'radically crude and nasal,' and adds that 'a human voice of the same quality would be considered

intolerable.' This is certainly a somewhat strong statement. In tone and character the gamba does not materially differ from the tenor of our own days; and its banishment from the modern orchestra is easily accounted for by the fact that its higher notes are equally well and more easily produced on the tenor, while the effect of the lower strings is much finer on the violoncello. The gamba was handled very much in the same way as the violoncello, except that some virtuosi had additional strings attached at the back of the neck, on which they played a pizzicato accompaniment with the thumb of the left hand, [and that the bow was held, like those of all the viol family, in the way now associated with the double-bass only]. Sebastian Bach was the last great composer who wrote for the gamba, and he appears to have had a special predilection for it. We have from his pen three sonatas for clavier and gamba (B.-G. vol. ix.) and a number of obbligato accompaniments for airs in his cantatas and the Passion Music. He also employs it in a Concerto grosso for two viole da braccia, two viole da gamba, violoncello, violone, and harpsichord, and on other occasions uses it to attain special orchestral effects, its peculiar beauty being naturally the chords of six or seven notes that could be produced. A striking instance is the exquisitely beautiful introduction to the Cantata 'Gottes Zeit' (B.-G. vol. xxiii. p. 149) where we find two separate gamba-parts combined with flutes, which must have produced a very peculiar effect. [Fine compositions were written for the instrument in earlier times by the Englishmen Daniel Norcome and Christopher Sympson; Marin Marais's suites are remarkably beautiful, and among the later composers who employed it were Telemann, Aug. Kühnel, and Marcello.] By the end of the 18th century most gambas were converted into violoncellos, and for that reason are but rarely met with nowadays.



Michael Praetorius in his 'Syntagma musicum' (published 1619) distinguishes between the 'viola di gamba' and the 'gross viola di gamba,' which he also calls 'violono' or 'contrabasso di gamba.' This latter one we must suppose to have been the earlier form of the double-bass, which, as a fact, does belong to the viol tribe, and not to that of the violin, as is shown by its flat back.

C. F. Abel (died 1787), a pupil of Bach, and Lidl, an Englishman (died 1789), were the last virtuosi on the gamba. Burney, and Mozart in his letters, both speak of the Elector Maximilian III. of Bavaria as an accomplished gambist. A Mrs. Ottey (1723) and a Miss Ford (1760) are recorded among English players of reputation. [The art of the viol da gamba as a practical instrument has been revived in recent years by Miss Hélène Dolmetsch.]

The Italian instrument-makers made gambas only down to the middle of the 17th century, when after the general adoption of the violin, they seem at once to have supplanted it by the violoncello. In England, France, and Germany they were made up to the middle of the 18th century. Joachim Tielke of Hamburg (1660-1730) had a great reputation as a maker. P. D.

GAMBLE, John, a violinist in the 17th century, was a pupil of Ambrose Beyland, one of the violins to Charles I. He afterwards performed at one of the theatres, and was a cornet player in the Chapel Royal. In 1656 he published 'Ayres and Dialogues to be sung to the Theorbo Lute or Bass Viol,' many of the words by Thomas Stanley, author of the *History of Philosophy*. In 1659 he published a second book entitled 'Ayres and Dialogues for One, Two, and Three Voyces.' [At the Restoration he became 'musitian on the cornet' in the Chapel Royal; he lost all his property in the fire of London; and in 1674 his name appears as one of the musicians-in-ordinary. He died in 1687.—*Dict. of Nat. Biog.*] W. H. H.

GAMUT, the name of a complicated plan of the musical scale (from G to e''), which was in use as long as the system of the hexachords was recognised; it is a contraction of 'gamma ut,' the Greek letter being used to denote the first note, or 'Ut' of the lowest hexachord, the lowest note of the bass stave. This was the starting-point of the first hexachord, and the use of the Gamut seems to have been as a kind of *memoria technica* in changing from one hexachord to another, according to the principles of Mutation. It may be remarked that a useful part of the Tonic Sol-Fa system, by which, in modulating from the tonic to the dominant, for instance, the 'soh' of one bar becomes the 'do' of the next, is a survival of the principle for which the Gamut existed. The Gamut may, indeed, be regarded as the ancestor of the T.S.F. Modulator. See Hexachord and Tonic Sol-Fa. The word 'Gamut' was sometimes loosely used for the whole range of a voice or instrument, in the modern sense of 'compass.' 'Gamut G' is the organ-builders' name for the note G of the bass clef; and in the old English church writers, 'Gamut,' 'A re,' 'E la mi,' and 'F fa ut' are used to denote the keys of the compositions. Without some practical knowledge of the Gamut, the point of the scene in 'The Taming of the Shrew' (ii. 1) between Bianca and Hortensio, must be in great measure lost. The words 'one cliff, two notes have I,' as will be seen at once in the annexed reproduction of the Gamut, refer to the fact that the note B was expressed by a natural and a flat, being in the former case the third or 'mi' of the hexachord beginning on G, and in the latter the fourth,

or 'fa,' of the hexachord beginning on F. This small circumstance was the commencement of the system of accidentals, and thus opened the door for modern modulation. M.

GANDO, Nicolas, type founder, born at Geneva early in the 18th century, resided first in Berne and then in Paris, where he established a foundry for a new musical type. His son, Pierre François, born at Geneva, 1733, was his assistant and successor. They published *Observations sur le traité historique et critique de M. Fournier*, etc. (Berne and Paris, 1766), with the view of showing that Ballard's process was an imitation of Breitkopf's. It contained, amongst others, specimens of six pieces of ancient music printed by Ballard, and a Psalm by Roussier in Gando's own characters, and printed by his process, the notes and the lines requiring a separate impression, and the effect resembling copper plate. Fournier replied (see his *Manuel typographique*, pp. 289-306), criticising the Gandos and their type, which was, however, superior to his own, though inferior to those of Breitkopf in their own day, and still more to those of Duverger and others since. The father died in 1767, the son in 1800, both in Paris. M. C. C.

GANZ. A musical family of Mayence.

1. Adolf, born Oct. 14, 1796, a violinist, studied harmony under Hollbusch; conductor at Mayence (1819), capellmeister to the Grand Duke of Hesse Darmstadt (1825); composed a melodrama, overtures, marches, lieder, and choruses for men's voices. He came to London in 1840, was conductor of the German Opera in 1840-42, and died there, Jan. 11, 1870.

2. His brother, Moritz, a violoncellist of the old school, born at Mayence, Sept. 13, 1806, was first violoncello under Adolph at Mayence, and (1826) in the royal band at Berlin, where he succeeded Duport and Romberg. In 1833 he visited Paris and London, returning to the latter in 1837, when he and his brother Leopold played at the Philharmonic on May 1. In 1845 he led the violoncellos at the Beethoven Festival at Bonn. His tone was full and mellow, and his execution brilliant, though his style was of the old school. His compositions for his instrument are numerous, but few only have appeared in print. He died Jan. 22, 1868, in Berlin.

3. The third brother, Leopold, violinist, was born at Mayence, Nov. 28, 1810, played much with Moritz in the style of the brothers Bohrer, whom they succeeded in the royal band at Berlin (1826). Leopold was well received at the Hague, Rotterdam, and Amsterdam, and in 1837 visited England with his brother. They published the duets in which their polished and brilliant execution had excited so much admiration. Leopold died in Berlin, June 15, 1869. M. C. C.

4. Eduard, son of Adolf, born at Mayence, April 29, 1827, came to London with his father in 1840, and while in England studied the pianoforte with Moscheles and Thalberg; he settled in Berlin, founded a music-school in 1862, and died there, Nov. 26, 1869.

5. Wilhelm, born at Mayence, Nov. 6, 1833, paid his first visit to England in 1848, and occasionally assisted his father, who was chorus-master under Balfe at Her Majesty's Theatre; he thus enjoyed opportunities of hearing the finest singers of the day, notably Jenny Lind. Ganz returned with his father to Mayence after the London season, but settled finally in London in 1850. He studied harmony, etc. with Carl Eckert, Carl Anschütz, and others. From about 1856, when he was engaged as accompanist for Jenny Lind's tour through England and Scotland, he has been almost constantly associated with the great *prime donne* in succession. For some years he was organist at the German Lutheran church in the Strand; and he played second violin in Dr. H. Wylde's New Philharmonic Society, at the establishment of that institution in 1852. In 1874 Ganz was conductor jointly with Wylde, and in 1879, on the latter's resignation, undertook the enterprise alone, carrying the concerts on at first under the old name, and subsequently, after 1880, as 'Mr. Ganz's Orchestral Concerts,' for three seasons, during which such large works as Berlioz's 'Symphonie Fantastique,' and Liszt's 'Dante Symphony' were heard for the first time in London in their entirety. Among the artists who first appeared at these concerts were Mme. Essipoff, Mme. Sophie Menter, Saint-Saëns, Pachmann, and others. Ganz has been for many years a professor of singing at the Guildhall School of Music, and a Jubilee concert was held in his honour in 1898. M.

GARAT, Pierre Jean, born at Ustaritz, April 25, 1764, died in Paris, March 1, 1823, the most extraordinary French singer of his time. He was the son of an avocat, and destined for the bar, but early manifested a passion for music, which he studied under Franz Beck, composer and conductor at Bordeaux. He seems, however, never to have gone deeply into the subject, for he was a poor reader, and owed his success to his natural gifts and the opportunity he enjoyed of hearing Gluck's works and of comparing the artists at the French and Italian operas in Paris. He possessed a fine-toned expressive voice of unusual compass, including both baritone and tenor registers, an astonishing memory, and a prodigious power of imitation, and may fairly be said to have excelled in all styles; but his great predilection throughout his life was for Gluck's music. Having been the favourite singer of Marie Antoinette, who twice paid his debts, he fled from Paris during the Terror, and with Rode took refuge at Hamburg, where the two gave very successful concerts. After his return to France at the end of 1794 he appeared at the 'Concert Feydeau' (1795) and the 'Concert de la rue Cléry' with such brilliant success that he was appointed professor of singing at

the Conservatoire in 1799. Among his pupils were Roland, Nourrit, Despéramons, Ponchard, Levasseur, Mmes. Barbier-Walbonne, Chevalier-Branchu, Duret, Boulanger, Rigaut, and Mlle. Duchamp, whom he married when he was fifty-five. He retained his voice till he was fifty, and when that failed him tried to attract the public by eccentricities of dress and behaviour. He composed several romances, 'Bélisaire,' 'Le Ménestrel,' 'Autrefois,' 'Je t'aime tant,' etc., extremely popular in their day, but now so monotonous and uninteresting as to make it evident that the style in which Garat sang them alone ensured their success. G. C.

GARCIA, a Spanish family of musicians, who have been well characterised as 'representative artists, whose power, genius, and originality have impressed a permanent trace on the record of the methods of vocal execution and ornament' (Chorley). Various church musicians of the name were eminent at different times in Spain, notably Don Francisco Saverio (1731-1809) who was maestro de capilla at Saragossa, and wrote an oratorio 'Tobia' in 1752. He may have been related to the family of singers, the founder of which, MANUEL DEL POPOLO VICENTE, was born at Seville, Jan. 22, 1775. Beginning as a chorister in the Cathedral at the age of six, at seventeen he was already well known as composer, singer, actor, and conductor. By 1805 he had established his reputation at home, and his pieces —chiefly short comic operas—were performed all over Spain. He made his début in Paris, Feb. 11, 1808, in Païr's 'Griselda,' singing in Italian for the first time. Within a month he had become the chief singer at that theatre. In 1809 he produced his 'Poeta calculista,' originally brought out at Madrid in 1805. In 1811 he set out for Italy. At Naples Murat appointed him (1812) first tenor in his chapel. There he met Anzani, one of the best tenors of the old Italian school, by whose hints he profited largely. There also, still combining the rôles of singer and composer, he produced his 'Califfo di Bagdad,' which obtained an immense success. In 1815 Rossini wrote for him one of the principal rôles in 'Elisabetta,' and in 1816 that of Almaviva. About the end of 1816 he returned from Naples to England, and thence to Paris, where he revived his 'Califfo,' produced 'Le Prince d'occasion,' and sang in Catalani's troupe, where he made a great hit as Paolino in the 'Matrimonio Segreto.' Annoyed by Catalani's management, he left Paris for London about the end of 1817. In the ensuing season he sang in the 'Barbiere' with Mme. Fodor, and in other operas, with much éclat. In 1819 he returned to Paris, and sang in the 'Barbiere,' not till then heard there. There he remained till 1823, performing in 'Otello,' 'Don Giovanni,' etc., and composing 'La mort du Tasse' and 'Florestan' for the Grand Opèra, besides 'Fazzoletto' at the Italiens, 'La Meunière' at the Gymnase, and three others which never reached the stage. In the spring of 1823 he reappeared in London, where he was still a most effective singer (Ebers). Here he founded his famous school of singing. He sang in London again in 1824 in 'Zelmira' and 'Ricciardo e Zoraide.' In the same year his 'Deux contrats' was given at the Opéra Comique. In 1825 he was in London again, his salary having risen from £260 (1823) to £1250. He continued to gain still greater fame by teaching than by singing, and his fertility as a composer was shown by at least two Italian operas 'Astuzia e prudenza' and 'Un Avertimento.' The education of his illustrious daughter Marie, subsequently Mme. Malibran, was now completed, and under his care she made her début. [See MALIBRAN.] He then realised the project he had long entertained of founding an opera at New York, and set out with that object from Liverpool, taking with him an Italian company, which included the young Crivelli as tenor, his own son Manuel and Angrisani, De Rosich, Mme. Barbieri, Mme. Garcia, and his daughter. At New York he produced no less than eleven new Italian operas in a single year. In 1827 he went to Mexico, where he brought out eight operas, all apparently new. After eighteen months' stay, he set out to return with the produce of this hard toil; but the party was stopped by brigands, and he was denuded of everything, including nearly £6000 in gold.

Garcia now returned to Paris, where he reappeared at the Italiens. He then devoted himself to teaching; and died June 2, 1832. Garcia was a truly extraordinary person. His energy, resource, and accomplishments may be gathered from the foregoing brief narrative. His singing and acting were remarkable for *verve* and intelligence. He was a good musician, and wrote with facility and effect, as the list of his works sufficiently shows. Fétis enumerates no less than seventeen Spanish, nineteen Italian, and seven French operas. Words and music seem to have been alike easy to him. His most celebrated pupils were his daughters Marie—Mme. Malibran, and Pauline—Mme. Viardot, Mmes. Rimbault, Ruiz-Garcia, Méric-Lalande, Favelli, Comtesse Merlin; Adolphe Nourrit, Géraldy, and his son Manuel Garcia.

MANUEL GARCIA was born at Madrid, March 17, 1805. His education began early, and at fifteen he received instruction in harmony from Fétis, and in singing from his father. In 1825 he accompanied his father to America. Once more in Paris (1829) he quitted the stage, and devoted himself to teaching. A little later he undertook a serious scientific inquiry into the conformation of the vocal organs, the limits of registers, and the mechanism of singing; of which the results were two—(1) his invention of the Laryngoscope, the value of which is now universally recognised by physicians and artists, and (2) his *Mémoire sur la voix humaine*,

presented to the French Institut in 1840, which may be said to be the foundation of all subsequent investigations into the voice. Appointed professor of singing at the Conservatoire, he published in 1847 his *Traité complet de l'art du chant*, which has been translated into Italian, German, and English, and has gained a world-wide reputation. Among his pupils were Mmes. Jenny Lind, Catherine Hayes, Henriette Nissen, M. Bataille, and his son Gustave. In 1848 Garcia resigned his position at the Conservatoire, and came to London, where he was appointed a Professor at the Royal Academy of Music, a post which he retained until 1895. On March 17, 1905, his hundredth birthday was celebrated by a banquet, at which many eminent persons were present. His portrait, by J. S. Sargent, R.A., was presented to him earlier in the day. Among other distinctions, special orders were conferred upon him by the sovereigns of England, Germany, and Spain. [See also MALIBRAN, and VIARDOT.] J. M.

GARCIN, JULES AUGUSTE (real name SALOMON), violinist and conductor, born at Bourges, July 11, 1830. He came of a family of artists, his maternal grandfather, Joseph Garcin, being director of a travelling company which performed opéra-comique in the central and southern provinces of France for nearly twenty years with great success. At the age of thirteen Garcin entered the Paris Conservatoire, where he studied the violin under Clavel and Alard; he gained the first prize in 1853, and in 1856 became a member of the opera orchestra, and after a competitive examination was appointed (1871) first solo violin and third conductor. In 1878 he was appointed second conductor at the concerts of the Universal Exhibition. From 1860 he was a member of the orchestra of the Concerts du Conservatoire, first as solo violin, and then as second conductor in place of Altès, who had become first conductor at the opera at the end of 1879. At that time the first conductor of the Société des Concerts was Deldevez, who had replaced Hainl in 1872. In 1885, Deldevez having retired on account of health, Garcin was elected conductor of the Société des Concerts with a majority of twenty-six votes over Guiraud.

Garcin, who was a pupil of Bazin for harmony, and of Adam and Ambroise Thomas for composition, wrote a number of works for violin and orchestra or piano, the most prominent of which is a concerto played by himself at the Conservatoire, at the Concerts Populaires in 1868. He was an experienced and conscientious artist, without the exaggerated gestures and manner which too often deceive the public. He retired in 1892, and died in Paris, Oct. 10, 1896. A. J.

GARDANE, ANTONIO, a composer, printer, and publisher of music in Venice from 1538 to 1569. From and after 1557 his name is given as Gardano. After 1570 his sons Cipriano and Annibale published a few works, and an Angelo Gardano, whose relationship does not appear, many more. [There was an Alessandro in a small way at Rome who published between 1583 and 1623 (*Quellen-Lexikon*).] The Venice house lasted till 1619. Their publications consist of the Masses, Psalms, Motets, Madrigals, Canzoni, and other compositions, of Arcadelt, Jachet, Lasso, Rore, Nanini, and other great Flemish and Italian writers, and fill many volumes. [See Eitner, *Bibliog. der Sammelwerke, Quellen-Lexikon*, and Vogel, *Bibl. d. ged. Weltl. Vocalmusik Italiens.*] G.

GARDINER, WILLIAM, the son of a stocking manufacturer at Leicester, was born in that town March 15, 1770. He became an assistant to his father in his business, to which he afterwards succeeded, and which he carried on during the rest of his life. But the taste for music never forsook him. His business occasionally required him to visit the continent, and he availed himself of such opportunities to become acquainted with the works of the best foreign composers, particularly of the great German masters, so that for a long period he knew more about their productions, especially those of Beethoven, than the majority of English professors. [See Thayer, *Beethoven*, i. 441.] Both at home and abroad he sought and obtained the acquaintance of the best musicians of all ranks, both professors and amateurs. In his youth he composed some songs and duets, which were published as the productions of 'W. G. Leicester.' He next produced, under the title of 'Sacred Melodies,' a selection of pieces by the best masters, chiefly foreign, adapted to English words, which he hoped might be adopted in our churches to the exclusion of the clumsy verses of Sternhold and Hopkins, and Tate and Brady. Six volumes of this work appeared at distant intervals, and it included a volume of selections from the works of English cathedral composers. It must be confessed that the Procrustean plan was followed with the music in order to fit it to the words; yet, notwithstanding, the work had the merit of introducing to the notice of the English public many fine compositions. In 1817 Gardiner edited and added notes to the Rev. C. Berry's translation of Beyle's *Life of Haydn* and R. Brewin's translation of Schlichtergroll's *Life of Mozart*, and other pieces. He next compiled an oratorio, entitled 'Judah' (1821), by adapting English words to music selected principally from the masses of Haydn, Mozart, and Beethoven, and connected by compositions of his own. He wrote to Beethoven offering him 100 guineas for an overture to this work, but received no reply, owing, as he supposed, to the miscarriage of his letter. In 1832 he published a work, entitled *The Music of Nature; or, an attempt to prove that what is passionate and pleasing in the art of singing, speaking, and performing upon musical instruments, is derived from the sounds of the animated world.* The musical examples were

published separately. In 1838 he published two volumes called *Music and Friends; or, Pleasant Recollections of a Dilettante*—the utility of which is much impaired by its frequent inaccuracy,—with a third volume in 1853. In 1840 he adapted Pope's *Universal Prayer* to music by Haydn, Mozart, and Beethoven. *Sights in Italy, with some Account of the present State of Music and the Sister Arts in that Country*, appeared in 1847. Besides these works Gardiner composed a few anthems. He died at Leicester, Nov. 16, 1853, in the eighty-fourth year of his age. W. H. H.

GARDONI, Italo, born at Parma late in 1821, studied singing under De' Cesari. He made his début at Viadana in 1840 in 'Roberto Devereux.' In the same year he was engaged by Ronzani, with whom he went to Turin and Berlin, where he sang the rôle of Rodrigo, with Rubini as Otello. Rubini took a great fancy for the young artist, and predicted for him a brilliant career. Gardoni sang during two seasons at Milan, and afterwards at Brescia. Thence he went to Vienna, and sang, in company with Viardot, Alboni, and Tadolini, in the 'Barbiere,' 'Linda,' etc. In 1844-45 he appeared at the Académie Royale, creating the tenor parts in 'Marie Stuart,' 'L'Ame en peine,' etc. In Paris Gardoni remained for three years, singing the principal rôles in the 'Favorite,' 'Robert le Diable,' 'Charles Six,' etc. In 1847 he went to the Théâtre des Italiens, and in the same spring made his first appearance at Her Majesty's Theatre, and 'by his charm of person and of voice (somewhat slight though the latter has proved) did more to reconcile the public to the loss of Signor Mario than could have been expected. A word is his due—as the due of a real artist, who has finished every phrase that he has sung, and has pointed every word that he has said. There has always been the real Italian elegance—and that more universal elegance which belongs to no country—in Signor Gardoni' (Chorley). Here he created the tenor rôle in Verdi's 'Masnadieri.' Since then, with the exception of a few seasons spent at St. Petersburg, Madrid, Amsterdam, and Rome, Gardoni came every spring to London, and returned to Paris (Italiens) for the winter.

Gardoni belonged to the *mezzo carattere* class of tenors. His répertoire was rather exceptionally large; for he sang in the 'Barbiere,' 'L'Italiana in Algieri,' and 'Le Comte Ory,' as well as in the 'Puritani,' 'Sonnambula,' 'Robert le Diable,' 'Masaniello,' and Gounod's 'Faust.' He was a member of the 'Société de Bienfaisance Italienne' of Paris, and a chevalier of the Corona d'Italia. He married a daughter of Tamburini, August 14, 1847; and in 1874 retired from the stage, dying on March 30, 1882. J. M.

GARLANDIA, Johannes de. The works on music which appeared under this name were formerly ascribed to a Gerlandus who, owing to some confusion of dates, was said to have flourished in 1041, but who was afterwards identified with the mathematician Gerlandus, canon of the abbey of St. Paul at Besançon in the middle of the 12th century. It appears, however, more probable that the writer on music, Johannes de Garlandia, was identical with the grammarian and poet of that name who flourished nearly a century later. Of the life of this latter we gather several particulars from his great work *De triumphis Ecclesiae* (finished in 1252), of which the British Museum possesses an almost contemporary copy (Claudius A. X.), which has been printed by Mr. Thomas Wright. Born in England [or in Co. Louth, Ireland. W. H. G. F.] late in the 12th century, Johannes de Garlandia studied first at Oxford, about 1206 and afterwards, about 1212 at Paris. Here he opened a school in the Clos de Garlande, since known as the Rue Gallande, from which he is supposed to have derived his name de Garlandia, or, as one early writer spells it, de Gallandia. It was probably about this time that he wrote his treatise on music. In 1218 we find him present at the siege of Toulouse, apparently himself taking part in the crusade against the Albigenses. It was to this place also that he was invited in 1229 to assist in the formation of the newly founded University; and here he remained till 1232, when he and his colleagues were forced to leave owing to the persecution to which they were subjected at the hands of the Dominicans and others. They escaped after many dangers to Paris, where John de Garlandia was still residing in 1245. Here no doubt were written most of his poems on historical and theological subjects, and his grammatical treatises. The titles of his musical works which have come down to us are two fragments, *De fistulis* and *De nolis*, printed by Gerbert from a MS. at Vienna;—*De musica mensurabili positio*, of which there are MSS. at Paris and Rome; in this work the author figures as a composer, giving, among many other examples of his own, one in double counterpoint;—a treatise, *De cantu plano*, to which he himself refers in the last-mentioned work; this may be the *Introductio musice plane et etiam mensurabilis* in the St. Dié MS. —Philip de Vitry refers to other works by de Garlandia, of whom he writes as 'quondam in studio Parisino expertissimum atque probatissimum.' The *Optima introductio in contrapunctum pro rudibus*, contained in MSS. at Pisa and Einsiedeln, should perhaps be assigned to a Johannes de Garlandia of a later date; or, if the work of the same man, must have been written by him when at an advanced age. The same may be said of the extracts quoted by Handlo and Hanboys. Most of the above works are printed by de Coussemaker.

A John de Garlandia is mentioned by Roger Bacon as eminent at Paris apparently shortly before 1267. A. H.-H.

GARRETT, Dr. George Mursell, was born at Winchester, June 8, 1834. In 1844 he entered the choir of New College, Oxford, where he studied under Dr. S. Elvey until 1848. He then returned to Winchester and studied for six years with Dr. S. S. Wesley, to whom he acted as assistant from 1851 to 1854, when he accepted the post of organist at the cathedral of Madras, but returned to England in 1857 on his appointment as organist at St. John's College, Cambridge. Dr. Garrett took the degree of Mus. B. in 1857, and that of Mus. D. in 1867. In May 1873 he succeeded J. L. Hopkins as organist to the University. In Nov. 1878, by grace of the senate, he received the degree of M.A. *propter merita*, a distinction which had never been previously conferred on a musician who did not fill a professorial chair. Dr. Garrett was also an examiner for the University, the Local Examination, and the Irish Intermediate Education Board; University Lecturer on Harmony; an Honorary Fellow of Trinity College, London; and a member of the Philharmonic Society. His compositions include a sacred cantata, 'The Shunammite' (performed by the Cambridge University Musical Society in 1882 and at the Hereford Festival in the same year), church music, songs, part-songs, and a few pieces for the organ; but it is chiefly as a composer of services that he won his wide reputation. He died at Cambridge, April 8, 1897. W. B. S.

GASCHET (or GACHET), John. Originally a stationer in Hereford, who settled at York in or before the year 1516, living within the Minster Close. It may be claimed that he was the first English provincial music publisher, for he issued at least six musical service books according to the usage of the York Cathedral,—a Missal, 1516, a Breviary, 1526, a Processional, 1530, and other works. These will be found fully described in Davies's *Memoirs of the York Press*, 1868. It has been suggested that Gaschet was also a printer, but this is rather doubtful. The Missal of 1516 was printed by one Peter Oliver, and it was afterwards reprinted on the Continent. After Gaschet's time there is no evidence that any one of the York presses printed music until the beginning of the 18th century. Psalm books from movable music type are found with York imprints bearing dates 1715-20, etc.; general music came forty years after this latter date. F. K.

GASPAR DI SALÒ. See Salò.

GASPARINI, Francesco, born at Camajore near Lucca, March 5, 1668, was a pupil, first of Corelli and afterwards of Bernardo Pasquini, was Maestro di Coro at the Ospedale di Pietà in Venice, and a member of the Accademia Filarmonica. In 1725 he was elected maestro by the Chapter of St. John Lateran, but he was already in broken health at the time of his appointment, and retired upon half-pay in August of the following year. He retained his post nominally, with Girolamo Chiti for a coadjutor, [until his death, which took place on March 22, 1727]. The celebrated Benedetto Marcello was his pupil for many years both at Venice and at Rome, and a correspondence between them, continued up to a few weeks before the death of Gasparini, testifies to the esteem in which the great scholar held his master. A professional conflict between Gasparini and A. Scarlatti, the origin of which was unknown to Baini, took the form of an exchange of cantatas, by no means a regrettable method of retort between rival and disputative artists.

Gasparini wrote equally well for the church and for the stage, and Clément gives a list of thirty-two operas. Several of them were favourites in London in the early part of the century. [His oratorios were 'Mosè liberato dal Nilo' (Vienna, 1703), 'Nascita di Cristo' and 'Nozze di Tobia' (1724), 'Santa Maria egittiaca,' and 'L'Atalia.' *Quellen-Lexikon.*] He also composed several cantatas. But the work by which he is now best remembered is his treatise upon accompaniment entitled *L'Armonico prattico al cembalo, ovvero regole, osservazioni ed avertimenti per ben suonare il basso e accompagnare sopra il cembalo, spinetta ed organo*, 1708. This work was republished as lately as 1802 at Venice, and has maintained its position in Italy even since the appearance of the clearer and better arranged treatise of Fenaroli. [Cerù's mistake of ten years in the dates of appointment to the Lateran, and death (*Cenni Storici dell' insegnamento della musica in Lucca*) was followed in various dictionaries, and in the appendix to the first edition of the present work. It has been fully disproved in an interesting article by Enrico Celani in the *Rivista Musicale Italiana*, vol. xi. p. 228, entitled 'Il primo amore di Pietro Metastasio.'] E. H. P.

GASSIER, Édouard, born 1822 (Pougin), was taught singing at the Conservatoire, Paris, and in 1844 gained the first prize for opera and opéra-comique, and the second prize for singing. On April 22, 1845, he made a successful début at the Opéra Comique in Paris as Fiesque on the production of Auber's 'Barcarolle.' He soon left that theatre for Italian opera, and played on the stages of Palermo, Milan, Vienna, and Venice. In 1848 he married Josefa Fernandez (see below). From 1849 to 1852 the Gassiers were engaged in Spain, and in 1854 at the Italiens, Paris, where Gassier made his début as Assur in 'Semiramide.' Chorley heard him in the part, and described him 'as more competent than interesting . . . a voice not of first-rate quality, wanting strength'; but he admitted that he sang the difficult and florid music very well. On Dec. 23 of this year he sang as Ferrando on the production in Paris of 'Trovatore.' In 1855 the Gassiers were engaged at Drury Lane in Italian opera under

E. T. Smith, where Gassier made his début, April 16, as the Count in 'Sonnambula,' and later played Figaro in 'Il Barbiere,' and Malatesta in 'Don Pasquale,' his wife being the heroine on each occasion. In 1860 he was engaged alone by Smith at Her Majesty's; in 1861 with Mme. Gassier at the Lyceum under Mapleson, where they sang together as Samuel and Oscar in the production in England of Verdi's 'Ballo in Maschera,' and as Don Juan and Zerlina. From 1862 to 1867 Gassier was engaged at Her Majesty's, and in 1868 at Drury Lane under Mapleson, and sang the usual baritone repertory; and in the operas new to England—in 1863 as Troilo in Schira's 'Nicolo de' Lapi,' and Mephistopheles in 'Faust'; in 1864 as Page in Nicolai's 'Merry Wives,' and Ambrose in Gounod's 'Mireille'; in 1866 Thoas in Gluck's 'Iphigénie en Tauride'; in 1867 Pirro in a revival of Verdi's 'Lombardi,' Fra Melitone in 'La Forza del Destino,' Figaro in the 'Nozze,' etc. In 1870 he sang under Wood at Drury Lane in two operas new to England—May 12 as Don Beltrano in Mozart's 'L'Oca del Cairo,' and, July 5, Laertes in 'Mignon.' He was a very useful singer and actor, and withal, according to Santley, 'a very good comrade.' He died in Havana, Dec. 18, 1871.

His wife, Josefa, *née* Fernandez, was born in 1821 at Bilbao. She was originally a chorus-singer, but later was taught singing by Pasini, a favourite tenor of the period. On April 8, 1846, she made her début at Her Majesty's as Elvira in 'Ernani,' according to Chorley; but she was admittedly a failure. Later she sang in Spain, Milan, and Genoa. In 1855 at Drury Lane she made a great temporary success as Amina, Lucia, Norina, and Rosina in 'Il Barbiere.' In this opera she introduced with great success 'Ah che assorta,' called the Gassier vocal waltz, composed for her by the Genoese composer Venzano. At the end of the season, according to the *Musical World*, she was presented with the managerial testimonial of a magnificent piece of plate. In the autumn she sang at Jullien's Concerts, Covent Garden. In 1858 she sang again under Smith at the same theatre, and in 1861 with Mapleson at the Lyceum, with diminished favour. Chorley's description of her in the *Athenæum* was that she was 'one of the sour and acute soprani,—still the effect she produced in certain parts by the dash and audacity of her execution' was such that Meyerbeer wanted her to sing at Covent Garden as Catherine in 'L'Étoile,' 'a notion of which he was only dispossessed by the lady's utter physical unfitness for . . . male attire' (*Athenæum*). She died at Madrid, Nov. 8, 1866. A. C.

GASSMANN, Florian Leopold, born May 4, 1729, at Brüx in Bohemia: in 1736 ran away from his father, who wished to educate him as a merchant. By playing the harp he worked his way to Bologna, where he studied for two years under Padre Martini. He then entered the service of Count Leonardi Veneri at Venice, and his compositions were soon in general request. In 1762 he was invited to Vienna as a ballet-composer. In 1771 he had entered on his new office and suggested the formation of the 'Tonkünstler Societät,' a Fund for the Widows and Orphans of Vienna musicians, a society which in 1862 was reorganised under the name of the 'Haydn.' See Pohl's *Denkschrift*, etc. (Vienna, 1871). On the death of Reutter, the Emperor Joseph II. appointed him in March 1772 Court capellmeister with a salary of 800 ducats. Gassmann died at Vienna, Jan. 22, 1774, owing to a fall from his carriage. He composed twenty-three Italian operas, of which two were translated into German, 'L'Amor artigiana' by Neefe and 'La Contessina' by Hiller. [See list in the *Quellen-Lexikon.*] He also composed an oratorio, 'La Betulia liberata' (Vienna, 1771), and much church music, which Mozart thought more of than of his operas (Letter, Feb. 5, 1783). When at Leipzig, he said to Doles, who could not quite join in his praises, 'Papa, if you only knew all we have of his in Vienna! As soon as I get back I shall study him in earnest, and hope to learn a great deal.' Gassmann cannot be said to have exercised any special influence on the development of musical form effected during his time by Emanuel Bach, Haydn, and Mozart. His best pupil was Salieri, who educated Gassmann's daughters as opera-singers after their father's death. F. G.

GASTOLDI, Giovanni Giacomo, born at Caravaggio about the middle of the 16th century; maestro di cappella at Santa Barbara in Mantua [from about 1581 until his death, which seems to have taken place in the first decade of the 17th century.] He was the author of 'Balletti *a* 5 per cantare, suonare, e ballare' (Venice, 1591-95; Antwerp, 1596), which are said to have served Morley as models for his 'Ballets or Fa-las.' His later collections are 'Balletti *a* 3 voci,' etc. 1594, and 'Canzonette *a* 3 voci.' Two of them are well known to English amateurs under the names of 'Maidens fair of Mantua's city,' and 'Soldiers brave and gallant be.' Two others, 'Viver lieto voglio,' and 'A lieta vita,' are given by Burney in his *History of Music.* These were adopted as Hymn tunes by Lindemann in 1597 to the words 'Jesu, wollst uns weisen,' and 'In dir ist Freude' respectively (Döring, 'Choralkunde,' 45). [A magnificat and two madrigals are in vol. ii. of *L'Arte Musicale in Italia*, and 'Al mormorar' in *Ausgewählte Madrigale.*] F. G.

GATES, Bernard. Second son of Bernard Gates of Westminster, Gent. Born probably in 1685, is mentioned in 1702 as one of the Children of the Chapel Royal; was made a Gentleman of the same in 1708 in place of John Howell, who died July 15, and Master of the Choristers,

vice J. Church [at some time before 1732]; resided in James Street, Westminster. He was a member of the choir of Westminster Abbey, and held the sinecure office, now abolished, of Tuner of the Regals in the King's household—see the memorial tablet at Aston.

His chief claim to mention is his connection with Handel, whose 'Esther' was acted under Gates's care by the Children of the Chapel Royal at his house, Feb. 23, 1732, and afterwards at the King's Theatre, Haymarket. He also sang one of the airs in the Dettingen Te Deum on its first performance in 1743. [In 1737 his wife died and he retired to North Aston near Oxford, where he died, Nov. 15, 1773, at the age of eighty-eight (according to the epitaph at Westminster). He was buried in the north cloister of the Abbey on Nov. 23; he bequeathed his property to Dr. T. S. Dupuis with a further remainder to Dr. Arnold. He composed a service in F, and some single songs. His portrait is in the Music School Collection at Oxford. (Corrections from *Dict. of Nat. Biog.* etc.).] G.

GAUL, Alfred Robert, born at Norwich, April 30, 1837, was a chorister in Norwich Cathedral from 1846, and was afterwards articled pupil and assistant to Dr. Buck. He held the post of organist in succession at Fakenham, St. John's, Lady Wood, Birmingham, and St. Augustine's, Edgbaston. He took the degree of Mus.B. at Cambridge in 1863. He was appointed conductor of the Walsall Philharmonic Society in 1887, and has been teacher of harmony and counterpoint at the Birmingham and Midland Institute, and other places. His works, the superficial fluency of which has won them a wide popularity, include 'Hezekiah,' oratorio, Amateur Harmonic Association, Birmingham, 1861; Psalm i. 1863; 'Ruth,' sacred cantata, 1881; 'The Holy City' (Gaul's best-known work), Birmingham Festival, 1882; Passion Music, 1883; Psalm cl. London Church Choir Association, 1886; 'Joan of Arc,' Birmingham Festival Choral Society, 1887; 'The Ten Virgins,' 1890; 'Israel in the Wilderness,' Crystal Palace, 1892; and 'Una,' Norwich Festival, 1893. Many psalms, hymn-tunes, chants, part-songs, etc. and some pianoforte pieces, are also included among his compositions. *Brit. Mus. Biog.*

GAULTIER, Denys, and Gaultier 'le vieux,' the last two members of a celebrated family of lute players, or 'luthériens' as they were then called, lived in Paris during Louis XIII.'s reign. Titon du Tillet (*Le parnasse françois*, 1732) states that they both came from Marseilles, but in a lute codex in the Bibliothèque nationale, Paris (Vm. 2659, No. 5), is an 'Allemande giguée de Gautier de Lion' which occurs again in four other lute-books and is in each case called 'Gigue du vieux Gaultier,' so it seems probable that Gaultier 'le vieux,' born about 1597, lived originally in Lyons. (O. Fleischer, *Denis Gaultier, Vierteljahrs. für Musikwiss.* 1886.) It is just possible that this Gaultier was 'Mr. Gootiere, the famous lutenist in his time' (Thos. Mace, *Musick's Monument*, 1676, p. 48), the Jacques Gaultier or James Gouter, court-lutenist in England from 1617 to 1647, whom Constantin Huygens met in London in 1622. In October 1647 Gaultier sent him 'quelques petites choses de nostre luth et quelques airs à chanter,' presumably of his own composition. Two years later they were corresponding on the subject of a 'luth de Bologne' that Huygens was anxious to acquire; in a letter preserved in the British Museum (Add. MS. 15,944, f. 46, dated in pencil '28 Aug. 49'), Gaultier writes: 'Je vous prie, Monseigneur, de ne trouver rude que je traite avec vous de pris pour quoy que ce soit, qui soit à moy. Je vous priray de regarder l'état de ma fortune. Après trent année de service à un si grand roy et royne, que je n'ay rien à montrer que ce luth; et de plus je suis marié,' etc. (See also MM. Jonckbloet et Land, *Correspondance de Constantin Huygens*. Leyde, 1882, pp. 207, 210.) This was rather ungrateful, for he was receiving an annuity of £100 for his services by royal warrant (see *Dict. Nat. Biog.* s.v. Gouter). M. de la Barre also writing to Huygens (p. 148) on Oct. 15, 1648, alludes to 'Mrs. les Gautiers et autres excellents joueurs de luth.' There is a portrait of Jacques Gaultier with the inscription:—'Jacobo Goutero, inter regios magnae Britanniae Orpheos et Amphiones Lydiae, Doriae, Phrygiae testudinis fidicini et modulatorum,' etc. 'Joannes Livius fecit et excudit' (Claussin, *Suppl. au cat. de Rembrandt*, 1828, p. 75, No. 58). It is thought that he returned to France about the time of the Commonwealth and settled in Paris with his cousin Denys (Fleischer, *Viertelj.* 1886, p. 81). There his great reputation brought him numbers of pupils, 'même des personnes de la première condition,' says Titon du Tillet, who mentions amongst others, Gallot, du Fau, du But, Mouton, etc. He adds that M. de Troys, the famous painter who died 1730 at the age of eighty-six, was in his youth a friend of Gaultier, and painted a fine portrait of him which he believes was engraved. This does not give us any very definite date, but would be about 1664 if de Troys painted it when he was twenty.

Mattheson (*Grundlage einer Ehrenpforte*, 1740, p. 88), mentioning Froberger's stay in Rome between 1650 and 1655, says he then went to France 'und nahm die frantzösische Lautenmanier von Galot und Gautier auf dem Clavier an, die damahls hochgehalten wurde.' Gaultier 'le vieux' died about 1672 in Paris. The title only is known of a volume that included compositions of both Gaultiers:—'Livre de tablature des pièces de luth de M. Gaultier, Sr. de Neüe et de M. Gaultier, son cousin, sur

plusieurs différentes modes, avec quelques règles qu'il faut observer pour le bien toucher,' gravé par Richer, à Paris chez la veuve de M. Gaultier, dans La Monnoye. (Becker, *Die Tonwerke des 16. und 17. Jahrhunderts*, 1855, p. 280, gives 'Livre de tablature de pièces de luth sur différens modes,'.Paris, 1664, folio.) Titon du Tillet also mentions 'L'Immortelle,' 'La Nonpareille,' and 'Le Tombeau de Mesangeau' as the principal pieces composed by Gaultier 'le vieux.' The last named is in a MS. in the Bibl. nationale, Paris. De La Borde (*Essai sur la musique*, 1780, iii. p. 522) says that Gaultier, a friend and pupil of Mesangeau, composed it in memory of him; 'on ne se lassait pas de l'entendre.' Fleischer gives the names of three other pieces, 'Le Loup,' 'La conquérante,' and 'Les Larmes de Boset ou la volte.' See also the list of works of Denys Gaultier.

Denys Gaultier, of Marseilles, migrated to Paris and was certainly living there some time before the death of Sieur l'Enclos, the lute player, in 1630. He composed three pieces in his memory, Nos. 60, 61, and 62 in the Hamilton Codex, entitled 'Tombeau de Monsr. de Lenclos,' 'La consolation aux amis du Sr. Lenclos' and 'La résolution des amis du Sr. Lenclos sur sa mort.' Denys was a renowned lute player; Mersenne (*Harmonie universelle*, 1636, livre 2, p. 92), writing of the lute, mentions 'la difficulté qu'il y a de le toucher aussi parfaitement que les sieurs l'Enclos, Gautier,' etc. Gaultier's compositions for the lute are always effectively written, generally consisting of short dance tunes grouped together in sets or suites. The characteristic fashion of labelling each piece with a descriptive title such as 'Phaëton foudroyé,' 'Artemis ou l'oraison funèbre,' 'La coquette virtuosa,' 'La caressante,' is shown in the Hamilton Codex, an important collection of sixty-two of Denys Gaultier's compositions, entitled 'La Rhétorique des Dieux' compiled between 1650 and 1655, and now in the Berlin königl. Museum (No. 142, obl. 4to). Fleischer published all the music in the *Vierteljahrsschrift* for 1886. He mentions that Dr. Suchier of Halle drew his attention to the fact that in the list of 'Lieutenans-généraux au bailliage et Comté en Beauvoisis,' 1414-1680, is a 'M. Denis Gaultier, lieutenant-général en 1656.' Gaultier died before 1664. Among his compositions Titon du Tillet mentions 'L'Homicide' and 'Le Tombeau de Lenclos' (both in the Hamilton Codex) and 'Le Canon' (in Perrine's Livre de musique). Fleischer adds 'Le Tombeau de Raquette,' 'La champré,' 'La belle ténébreuse' and 'Allemande grave ou son tombeau.' List of compositions:—

The Hamilton Codex: 'La Rhétorique des Dieux' de D. G. (see for contents O. Fleischer. *Vierteljahrsschrift*. 1886).

Livre de musique pour le lut. Contenant une métode nouvelle et facile, etc. par le Sr. Perrine. (Priv. du. roy dated Dec. 9, 1679.) Has 'Le canon ou courante de Mr. Gaultier,' lute tablature with transcription.

Pièces de luth en musique par le Sr. Perrine. Paris. 1680. A collection of lute pieces by both Gaultiers in tablature with transcription. Fleischer reprints two: 'Pavane du Jeune Gaultier,' and 'Allemande ou Tombeau de l'Enclos du Jeune Gaultier.'

Pièces de luth de Denys Gaultier sur differens modes nouveaux. Gravé par Richer avec privilège du roy. A Paris chez l'autheur, rue baillete, proche la Monnoye. obl. 8vo, no date. Is in the Paris Bibl. nationale (Vm. f. 2687 de la réserve); also the following MSS: —Vm. 2658. obl. 4to. Pièces de luth recueillies et écrites à Caen et autres lieux es années 1672-73, par S. de Brossard. Contains pieces by Gaultier.

Vm. 2659, obl. 4to. Lute pieces by 'Gautier le vieux,' 'Gautier de Paris,' 'Gautier de Lion,' 'Gautier.'

Vm. 2660, obl. 4to. Pieces by Gaultier.

Vm. 2660, (3) obl. 8vo. Pieces by Denys Gaultier, the larger number initialled G. only. (Fleischer.)

In the Paris Conservatoire Bibl. No. 22,342. The Codex Milleran, a collection of lute pieces.

In the Berlin königl. Bibl. No. 20,052. The lute-book of Virginia Renata von Gehema, includes two pieces by 'Gottier,' a 'Gigue' and 'Cuoranta Gravelin.'

In Vienna Hofbibl. No. 17,706. A collection of pieces in lute tablature by various composers. Includes 'L'Homicide,' anonymous, and 'Courante (d.g.) Le Canon'; 'Allemande Courente'; 'Gigue, Courente; L'Immortelle'; 'Courente, suit la superbe de Duteaux,' 'Dernière Courente'; all by Denys Gaultier. (Mantuani's Cat.)

In the Mecklenburg-Schwerin Bibl. A MS. in lute tablature, dated Oct. 10, 1651. Among the seventy-two compositions Nos. 52, 54, and 69 are 'Courantes de gauttier'; No. 56, 'Jacconne de gauttier'; 57, 'Courante de l'immortelle de gauttier'; 59, 'Capr. de gautier'; and 63, 'Allemande de gauttier.' (Kade's Cat. p. 267.)

In No. 97 of the Gripsholm Bibl. 'La Payssant,' 'L'immortelle,' 'Courante de D.Gautier,' 'Le canon courante du Gautier,' 'Courante du Gautier,' etc. (Tobias Norlind, *Die Musikgeschichte Schwedens*).

In the Basle Universitätsbibl. is a 'Courante de Gauthier' and 'Gigue de Gautier' (J. Richter's Cat.).

In the Bodleian (MS. Mus. Sch. C. 616-618) there is a very fine collection of MS. lute music, in three small obl. volumes, by Dubut le vieux, Mouton, Pinel, Gallot, Blanrocher, Emon, etc., but the larger number of preludes, pavans, sarabandes, courantes, allemandes, gigues, and one canarie, are all by Gautier, 'le vieux Gautier,' 'Gautier de P.,' and 'Gautier de Lyon.' These include the allemande 'Les dernières paroles ou Testament de Mezangeau,' the courantes 'Les larmes de Boisset,' 'L'immortelle,' with the 'Contrepartie de l'immortelle,' and 'L'adieu' by le vieux Gautier; the sarabande 'La Bergère' by Gautier; the allemand 'Le tombeau de Blanrocher,' the pavan 'La dedicace,' the courantes 'La belle homicide,' 'La champré,' and 'La confidente,' and the canarie by Gautier de P(aris).

A similar MS. (Mus. Sch. F. 576) contains the three courantes 'Le Canon,' 'L'immortelle,' 'L'homicide,' and a sarabande by Gautier.

C. S.

GAUNTLETT, Henry John, eldest son of the Rev. Henry Gauntlett, was born July 9, 1805, at Wellington, Salop. He was educated by his father, and at an early age evinced an aptitude for music, especially for playing on the organ. His father was presented to the vicarage of Olney, Bucks, and there, at the age of nine, young Gauntlett entered on the duties of his first organist appointment. [His father took him to London about 1821, and Attwood wished to take the boy as a pupil, but his father refused, and, after a short stay in Ireland as a private tutor,] he was articled to a solicitor in 1826. During his clerkship he pursued the study of law and music with equal assiduity, and in 1827 obtained the post of organist of St. Olave's, Southwark, which he held for upwards of twenty years. In 1831 he was admitted a solicitor, and commenced practice in the City of London in partnership with a brother. About 1836, having attained a high reputation as an organist, he commenced his advocacy of a reform in organ-building by the adoption of the C organ in the place of the old F and G instruments. He met with the strongest opposition, but finding a valuable auxiliary in William Hill, the organ-builder (who, under his superintendence constructed the organs in St. Luke's, Cheetham, Manchester; St. Peter's, Cornhill; Ashton-under-Lyne Church; Dr. Raffles' Chapel, Liverpool; and St. John's, Calcutta; and reconstructed the large organs in Birmingham Town Hall, and Christ Church, Newgate Street), he attained his

aim, and through his exertions the C organ was firmly settled in England. In 1836 he became evening organist of Christ Church, Newgate Street, [at a salary of two guineas a year. The organ at this church was transformed in time for the visit of Mendelssohn in 1837, and he played upon it (see an account in the *Musical World* of Sept. 15, 1837). He lectured at the London Institution in 1837-42.] In 1842 Dr. Howley, Archbishop of Canterbury, conferred on him the degree of Doctor of Music. About the same time he gave up the law and devoted himself wholly to music. In the year 1844 Gauntlett, in conjunction with Charles Child Spencer, drew attention to the subject of Gregorian music (of which he was a devoted adherent) by the publication of the Hymnal for Matins and Evensong (Bell & Daldy). It is as a composer and editor of psalm and hymn tunes that he will be best remembered. For upwards of forty years he worked in that field with unwearied enthusiasm, and there was scarcely a publication of any note issued during that period in which he was not engaged as editor, assistant, or contributor. Able articles from his pen, abounding in learning and spirit (the opinions confidently expressed), will be found in the first six volumes of *The Musical World*, in *The Morning Post*, *The Orchestra*, and *The Church Musician*. After quitting St. Olave's and Christ Church in 1846, Gauntlett was successively organist of Union Chapel, Islington (for eight years), of All Saints, Notting Hill, and of St. Bartholomew the Less, Smithfield. He was chosen by Mendelssohn to play the organ part in 'Elijah,' on its production at Birmingham, August 26, 1846. He died suddenly, from heart disease, Feb. 21, 1876, and was buried at Kensal Green Cemetery.

Gauntlett's principal publications, besides those mentioned, were :—

The Psalmist, 1839-41; *Gregorian Canticles*, 1844; *The Church Hymn and Tune Book* (with Rev. W. J. Blew), 1844-51; *Cantus Melodici*, 1845 [originally intended as the title of a separate work, and subsequently as the preface to *The Church Hymn and Tune Book*]; *The Comprehensive Tune Book* (with Kearns), 1846-47; *The Gregorian Psalter*, 1846; *Harmonies to Gregorian Tones*, 1847; *Comprehensive Choir Book*, 1848; *Quire and Cathedral Psalter*, 1848; *Christmas Carols*, 1848; *The Bible Psalms*, 1848; *Chants, Ancient and Modern*, 1848; *The Hallelujah* (with Rev. J. J. Waite), 1848-55; *The Stabat Mater, set to eight melodies*, 1849; *Order of Morning Prayer*, 1850; *Church Anthem Book* (incomplete), 1852-54; *Hymns for Little Children*, 1853; *The Congregational Psalmist* (with Rev. Dr. Henry Allen), 1856; Carlyle's *Manual of Psalmody*, 1860; *Christmas Minstrelsy*, 1864; *Tunes, New and Old*, 1866; Harland's *Church Psalter and Hymnal*, 1869; *Service of Song*, 1870; *Parish Church Tune Book*, 1871; *National Psalmody*, 1876. In 1856 he worked at an *Encyclopædia of the Chant*, for the Rev. J. J. Waite (published in 1885.) [List from *Dict. of Nat. Biog.*] W. H. H.

GAVEAUX, Pierre, born at Béziers, August 1761; died insane at Charenton, Feb. 5, 1825; studied composition under Beck, conductor of the theatre at Bordeaux. There he made his début as tenor with a success which decided his future career. His voice was warm and flexible, he sang with great expression, and during an engagement at the Opéra Comique in Paris in 1789 created many important parts. As a composer he produced between 1792 and 1818 no less than thirty-five operas, written in an easy and essentially dramatic style, natural and simple in melody, but not characterised by depth or originality. Among these may be specified 'Les deux Suisses' (1792); 'Le petit Matelot' (1796); 'Léonore ou l'amour conjugal' (1798), the same subject which Beethoven afterwards set as 'Fidelio'; 'Le Bouffe et le Tailleur' (1804), sung by Ponchard and Cinti-Damoreau as late as 1835, and played in London in 1849; and 'Monsieur Des Chalumeaux' (1806), afterwards played as a pantomime. He also published a book of Italian 'Canzonette' dedicated to Garat, and another of French 'Romances.' These are forgotten, but some of his opera airs have maintained their popularity, and occupy an honourable place in 'La Clé du Caveau.' [The titles of twenty-six operas are given in the *Quellen-Lexikon*.] G. C.

GAVINIÉS, Pierre, an eminent French violin player, born at Bordeaux, May 26, 1726. [But see the *Quellen-Lexikon* on the question of the date.] His instructors are unknown, but it is assumed that he was self-taught, forming his style chiefly after the great Italian violinists, who were then much in the habit of travelling in France. He was still a boy when he made his first successful appearance at the Concert Spirituel in 1741, and after this to the end of his life he but rarely left Paris, where he soon came to be considered as the best living violinist, and was a great favourite in fashionable circles. Contemporary writers attribute to him all the qualities of a really great performer—wonderful execution, a great tone, spirit, and feeling. His fiery temperament at one time got him into considerable trouble: he became involved in a *liaison* with a lady of the court, and on being detected had to fly from Paris, but was captured and imprisoned for a year. This experience effectually sobered him, and we are assured that later in life he was as much esteemed for his social virtues as for his artistic gifts. During his imprisonment he composed a piece which, under the name of 'Romance de Gaviniés,' for a long time enjoyed considerable popularity in France, and, according to Fétis, used to move the hearers to tears, when performed by the composer. He directed the Concert Spirituel in 1773-77, and on the foundation of the Conservatoire in 1794, was appointed to a professorship of the violin. He died at Paris, Sept. 9, 1800.

In France Gaviniés is generally considered the founder of the great French school of violinists. This is true in one sense, as he was the first professor of the violin at the Conservatoire, but with such a predecessor as Léclair, the title appears at least disputable. Viotti is said to have spoken of him as the French Tartini. But, although there can be no doubt that Gaviniés did more than any one before him towards transplanting into France the true and earnest style of the great Italian school of violin playing, it is impossible to rank him in any way with Tartini as a composer for the violin or even as

a performer. His works, while not devoid of a certain pathetic dignity, do not show an individual original style, and are in every respect inferior to Tartini's masterpieces. They are on the whole rather dry and laboured. On the other hand it must be granted that they indicate considerable advance in technical execution. His most celebrated work, 'Les vingt-quatres Matinées,' surpasses in difficulty anything ever written by Tartini, and as we are assured that Gaviniés used to play them even in his old age with the greatest perfection, we must assume him to have possessed an eminent execution. But it cannot be denied that his manner of writing for the violin, and the peculiar class of difficulties which his studies contain, show a tendency to go beyond the natural resources of the instrument—in fact, a tendency to exaggeration, such as invariably makes its appearance after a classical period in any art, and such as, in the art of violin playing in particular, is represented towards the end of the 18th century by the masters who lived after Tartini and before Viotti. It is for this reason that Gaviniés's 'Matinées' cannot be ranked with the classical studies of Rode, Kreutzer, and Fiorillo. This, however, does not preclude their being both of interest and use to advanced students.

Capron, Robineau, and Le Duc *aîné*, are the best known of Gaviniés's numerous pupils. Besides the 'Matinées' he published six Concertos for the Violin, two sets of Sonatas for Violin and Bass (some of which have been recently republished by Alard and David), six Sonatas for two violins, three Sonatas for Violin Solo (one of them entitled 'Le Tombeau de Gaviniés'). He also composed an opera, 'Le Prétendu,' which was played at the Comédie-Italienne in 1760. P. D.

GAVOTTE. A French dance, the name of which is said to be derived from the Gavots, or people of the *pays de Gap* in Dauphiné. Its original peculiarity as a *danse grave* was that the dancers lifted their feet from the ground, while in former *danses graves* they walked or shuffled—(Littré). It is in common time, of moderately quick movement, and in two parts, each of which is, as usual with the older dances, repeated. In the original form of the dance the first part consisted of four and the second of eight bars; when introduced as one of the movements of a suite, it has no fixed number of bars. The gavotte should always begin on the third beat of the bar, each part finishing, therefore, with a half-bar, which must contain a minim, and not two crotchets. Occasional exceptions may be found to the rule that the gavotte is to begin on the third crotchet, as, for instance, in that of No. 3 of Bach's 'Suites Françaises,' which commences on the first crotchet, but of which, it should be noticed that in the most authoritative editions it is termed an 'Anglaise.' In any case it is not strictly a gavotte. The same may be said of the 'gavotte' in Gluck's 'Orphée,' which begins on the fourth beat of the bar, and should therefore rather have been marked 'Tempo di Gavotta.' A second gavotte frequently succeeds the first as a 'trio,' in the modern sense of that term. This second gavotte is either similar in construction to the first, as in Bach's orchestral Suite in D ('Französische Ouvertüre'), or is a MUSETTE, *i.e.* founded on a 'drone-bass,' as in the third and sixth of Bach's 'Suites Anglaises.' The position of the gavotte in the suite is not invariable, but it usually follows the sarabande, though occasionally it precedes it. E. P.

GAWLER, WILLIAM, an organist and composer, said to have been born at Lambeth in 1750; he died there March 15, 1809. In 1785 he was organist to the 'Asylum of Refuge for female orphans, Lambeth,' and in the following year published a book of 'Hymns and Psalms' in use there, followed by a 'Supplement.' Other sacred compilations and compositions followed and preceded this work, including 'Harmonia Sacra,' Dr. Watts's 'Divine Songs,' 'Voluntaries for the Organ,' etc. 'Lessons for the Harpsichord' and similar works also came from his pen. Before 1798 he had turned music publisher, living at 19 Paradise Row, Lambeth, and from here he issued much sheet and other music. F. K.

GAWTHORN, NATHANIEL, clerk at the Friday Lecture in East Cheap, published in 1730 a collection of psalm tunes in four parts under the title of 'Harmonia Perfecta,' containing also some hymns and anthems, and an Introduction to Psalmody. W. H. H.

GAYARRÉ, JULIAN, born Jan. 9, 1844, either at Roncal[1] or near Pampeluna,[2] was the son of a poor blacksmith. Through the kindness of Señor Eslava, a Spanish musician, he studied singing at the Conservatorio of Madrid. He began his career at Varese as a second tenor, but soon after made a great success as Nemorino in 'L'Elisir.' He sang at Parma and Rome 1873, where on April 6 he played Amadeus II. in Libani's 'Conte Verde,' and on April 8, 1876, Enzo in Ponchielli's 'Gioconda' at the Scala, Milan; he sang at Vienna, St. Petersburg, South America, and elsewhere. From 1877 to 1881 he was engaged at Covent Garden, where he made his début, April 7, 1877, as Fernando in 'La Favorita,' and proved himself a very serviceable tenor, though he did not fulfil the hopes entertained of him as Mario's successor. He played with success in the 'Huguenots,' 'Prophète,' 'Tannhäuser,' 'Lohengrin,' 'Der Freischütz,' 'Puritani,' 'Lucia,' 'Lucrezia,' 'Rigoletto,' etc. He reappeared there in 1886 and 1887, and sang, on July 12, 1887, the tenor part in the production of Glinka's 'Vie

[1] *Grande Encyclopédie.*
[2] *Illustrated Sporting and Dramatic News.*

pour le Czar.' In the meantime he played in Madrid, in 1884 at Paris in Italian, in 1886 for a few nights as Vasco da Gama in French at the Opéra, in 1888 at Milan, and in 1889 in Spain. On Jan. 2, 1890, he died at Madrid, universally regretted on account of his many charitable actions—*e.g.* the foundation of a school of singing for indigent youths of his native country. (*Gazzetta Musicale di Milano.*) A. C.

GAZZA LADRA, LA (The Thieving Magpie). A comic opera in two acts; libretto by Gherardini; music by Rossini; produced at La Scala, Milan, May 31, 1817, in London at the King's Theatre, March 10, 1821, and in Paris, Sept. 18. In English (adapted by Bishop) as 'Ninetta, or the Maid of Palaiseau,' at Covent Garden, Feb. 4, 1830. G.

GAZZANIGA, Giuseppe, one of the most celebrated opera composers of his time, born at Verona, Oct. 1743; pupil of Porpora, both in Venice and at San Onofrio in Naples. He also studied under Piccinni. Through Sacchini's influence his first opera, 'Il finto cieco,' was performed in Vienna (1770). [But Riemann gives the date of this work as 1786, and says that Gazzaniga's first opera was entitled 'Il barone di Trocchia.'] Among his many operas may be mentioned 'Il convietato di pietro,' the forerunner of 'Don Giovanni,' which had an extraordinary success in Venice (1787), Ferrara, Rome, Bergamo, and London, where it was performed repeatedly. [See the *Monatshefte f. Musikgeschichte*, 1870, No. 3, and the *Viertelj. f. Musikwiss.* vol. iv. p. 251.] Gazzaniga was afterwards maestro di cappella at Crema, where he devoted himself entirely to church music, [He died there early in 1819. Three oratorios are mentioned in the *Quellen-Lexikon*, where eight of his numerous operas are noted as extant.] F. G.

GEBAUER, Franz Xaver, born in 1784 at Eckersdorf, Glatz, Prussian Silesia, received his early musical education from his father, the village schoolmaster. In 1804 he became organist at Frankenstein; and in 1810 went to Vienna, where he soon became known for his extraordinary execution on the Jew's-harp, and lived by giving excellent pianoforte lessons, and playing the violoncello. In 1816 he was appointed Chordirector of the church of St. Augustin, and there, thanks to his indefatigable efforts, the larger works of the great masters were satisfactorily performed. He was also one of the earliest and most active members of the Gesellschaft der Musikfreunde, founded in 1813. In 1819, through his endeavours, were started the Spirituel-Concerte, which continued in existence until 1848, and into the programmes of which none but sterling works were admitted. Gebauer was the first conductor, but did not long enjoy the fruit of his labours. In Oct. 1822 he returned from a journey to Switzerland seriously ill, and died in Vienna on Dec. 13, sincerely regretted as a sterling musician and an upright man. He published a few lieder, and left a small number of choral compositions in MS. He was intimate with Beethoven, who in a note preserved by Seyfried (*Beethovens Studien*, Anh. 36, and Nohl's *Briefe*, No. 234), puns upon his name in his favourite style, calling him 'Geh' Bauer' and 'der Bauer.' C. F. P.

GEBEL, Johann Georg, who gives a detailed account of his own life in Mattheson's *Grundlage einer Ehrenpforte*, 1740, was born at Breslau in 1685. He was apprenticed to a tailor when fourteen, but threw this up for music when eighteen, and became a pupil of Fr. Tiburtius Winckler, the cathedral organist. At the Hofcapelle concerts he often accompanied soloists, either from the figured bass, or when they were extemporising, by ear only. He acted as deputy organist for Winckler, Krause, and others, and also gave lessons in music. In 1709 he was appointed organist at the Pfarrkirche at Brieg, and continued his studies with the capellmeister G. H. Stöltzel. In 1713 he returned to Breslau and was appointed organist, and in 1714 Musikdirector at the Church of S. Christopher. Gebel failed to obtain the principal organistship of S. Elisabeth in 1739, a post which his second son occupied ten years later. Of an ingenious turn of mind, he invented a Clavichord with quartertones, and a large Clavicembalo with six complete octaves, etc. In 1749, although old and feeble, he took the place of his second son as organist of the Dreifaltigkeitskirche at Breslau, but died in 1750. His two elder sons were both professional musicians, and it is not always easy to distinguish between the respective compositions of father and son, but to the father may probably be attributed:—In the Berlin königl. Bibl. MS. 7210, Passion-music with instrumental accompaniment. MS. 7212, four sonatas for string instruments. MS. 7213, two sonatas for two flutes or strings. (Eitner, *Quellen-Lexikon.*) In the Bibl. of the Joachimsthalsche Gymnasium, Berlin, three cantatas in score. (Eitner.) In Lübeck Stadtbibl. in a MS. collection of motets for four voices in score: No. 20, G. Gebel. Motetta: 'Der Herr ist mein Licht.' (Stiehl's Cat. p. 19.)

Gebel himself (Mattheson, p. 407, etc.) says he composed many Clavier pieces; a Canon in thirty parts, which had to be played through twelve times if it were to end in the key in which it began; Psalms for double choir; a Mass for double choir with instrumental accompaniment; forty-eight Chorales for the organ; Partite, Chaconnes, etc.

Georg Gebel, his elder son, born Oct. 25, 1709, at Brieg, began to play the harpsichord when four years old. He was carefully taught by his father, and when twelve years old was taken to exhibit his powers as an organist before the Duke and Duchess of Oels. He acted as deputy organist to his father, studied composition,

and in 1729 became sub-organist at S. Maria Magdalena, Breslau. In 1730 he was playing the second harpsichord at the Italian opera in Breslau. Among his friends were Fedele, the organist Hoffmann, and the lutenist Kropfgans. In 1733 he became capellmeister to the Duke of Oels. In 1735 he was appointed Clavicembalist in the Dresden Hofcapelle, then at Warsaw under the direction of Count von Brühl, but soon after returned to Dresden, where he learned to play the Pantaleon, a difficult stringed instrument invented by Hebenstreit. He married Susanna Gebel, a clever painter, and devoted a great deal of his time to painting. In 1747 Johann Friedrich von Schwarzburg appointed him concertmeister and later capellmeister at Rudolstadt. He died Sept. 24, 1753, at Rudolstadt at the early age of forty-four, worn out by the strain of constant overwork. The mass of his music probably suffered from the haste with which it was produced; for he rivalled his father in the quantity that he composed. In the Mecklenburg-Schwerin grossherzogl. Bibl. is a 'Partita per il cembalo composta da Georg Gebel, maestro dei concerti di sua Altezza sereniss. Monsignore il Principe regnante di Schwartzburgo,' etc. Dedicated to Joh. Fried. of Schwarzburg. Printed at the expense of C. F. Eschrich at Rudolstadt. And in MS. part-books: —Oratorium auf den heiligen Christ-Abend, 'Jauchzet ihr Himmel, erfreue dich Erde,' for Soprano, Alto, Tenor, Bass, Clarino I. and II., Fagotto, Flauto, Viol. I. and II., Viola e Fondamento. The text-book is dated 1748. Sinfonia in G, and Sinfonia in D♯ (*i.e.* D major), for Corno I. and II., Oboe I. and II., Viol. I. and II., Viola e Fondamento. Sinfonia in D major, for same instruments, with the addition of Clarino I. and II. (Kade's *Cat.* p. 295).

In the Gotha herzogl. Bibl. is a MS. cantata 'Ich will meinen Engel senden.' (Eitner.)

In the Darmstadt Hofbibl. is a MS. score of a sinfonia for Viol. I. and II., Viola and Basso. (Eitner.) Three MS. Partite *a* 4 (2 vln., viola, and bass) and one overture *a* 7 (Fl. douce, Fl. trav., ob. 2, vln., viola, and bass) are in Breitkopf's Catalogue for 1765.

Gebel is also said to have composed music for two years of Church high-days and festivals; more than a hundred Sinfonie and Partite; Passion-music; Christmas oratorios; twelve operas, of which one 'Serpillius und Melissa' was performed at Dresden, and five more at Rudolstadt, 'Oedipus,' 1751; 'Medea,' 1752; 'Tarquinius Superbus,' 1752; 'Sophonisbe,' 1753; and 'Marcus Antonius,' 1753.

Georg Sigismund, the second son of Johann Georg Gebel, was born in Breslau, 1715. He was a clever composer and clavier player. In 1736 he was appointed sub-organist at S. Elisabeth, Breslau. He married, June 17, 1744, the daughter of the organist J. G. Hoffmann. In 1748 he became organist at the Dreifaltigkeitskirche, Breslau, and in 1749 principal organist at S. Elisabeth, which post he held till his death in 1775. (Marpurg, *Hist.-krit. Beyträge*, 1754, i. 364.) He published various compositions for the organ. C. S.

GEDACKT-WORK (*i.e. gedeckt*). All the Flue-stops of an organ composed of pipes that are entirely covered or closed in at the top are members of the 'Gedackt' or Covered-work. To this class, therefore, belong the Sub-Bourdon, 32; Bourdon, 16; Stopped Diapason, 8; and Stopped Flute, 4 foot-tone. When made to a 'small scale,' and voiced so as to produce a sweet tone, the adjective 'Lieblich' is prefixed, as Lieblich Bourdon, 16 ft., Lieblich Gedackt, 8 ft., Lieblich Flote, 4 ft. Large stopped pipes are generally made of wood; the smaller ones either of wood or metal. Covered Stops were first made in Germany, in the early part of the 16th century. E. J. H.

GEIGE (Germ.), the exact equivalent of our word 'fiddle,' as a familiar, if not slightly contemptuous, term for instruments of the violin family. It seems more than likely that it is derived from the same source as the word 'jig,' for the old French word 'gigue' or 'gique' originally meant a fiddle, whether or not it were derived from the English. See the *Oxford Dictionary*, s.v. 'Jig.'

GEIGEN-PRINCIPAL, *i.e.* Violin Diapason. An organ-stop of 8 ft. or unison pitch; crisp in tone, and held to resemble the violin in quality. A 'violl and violin' stop originally formed one of the features in the choir organ of the instrument in the Temple Church, built by Father Smith in 1688; but seems to have been removed shortly afterwards to make room for an additional reed stop. The Geigen-principal was first brought under notice in England in recent times by Schulze, who introduced two, one of 8 ft. and another of 4, into the admirable little organ he sent to the Great Exhibition of 1851. The stop was subsequently adopted by the English organ-builder Lewis, who made several excellent specimens of it. E. J. H.

GEISLER, Paul, born August 10, 1856, at Stolp in Pomerania, received his first musical instruction from his grandfather, who was conductor at Marienburg in Prussia, and was afterwards a pupil of Constantine Decker, a pianist and composer of considerable distinction. In 1881 he conducted at the Leipzig Musical Theatre. The following year he was associated with A. Neumann's travelling Wagner company, after which he occupied for two years a post as conductor in Bremen. He resided for many years first in Leipzig and then in Berlin before taking up his present post, that of director of the Conservatoire at Posen. He has produced three operas: 'Ingeborg' (Bremen, 1884), 'Hertha' (Hamburg, 1891), and 'Palm' (Lubeck, 1893). His remaining works include two cyclic cantatas: 'Sansara' and 'Golgotha'; several symphonic poems, of

which two deserve special mention: 'The Pied Piper of Hamelyn' and 'Till Eulenspiegel'; the music to five dramas, a number of smaller vocal compositions, and a few piano works. His style is thoroughly modern, but without extravagance. He has a consummate mastery of the resources of technique, and his compositions exhibit qualities both in the intellectual and emotional sense which make it hard to understand that he should not have achieved a more prominent position amongst the contemporary German composers than that he now occupies. The bulk of his compositions remain in MS., but a few of his more interesting works are available, amongst them the full score of the 'Pied Piper,' which was performed in 1880 under the auspices of the Allgemeiner deutscher Musikverein at Magdeburg, where it had considerable success. E. E.

GELINEK, Joseph, secular priest, composer of variations for pianoforte, born Dec. 3, 1758, at Selcz in Bohemia, where his father was schoolmaster. He was well grounded in music at home, and on going to Prague to complete his philosophical studies took lessons from Segert in composition and organ playing. In 1783 he became a divinity student at the General-Seminar, the orchestra of which at that time executed standard works so well as to elicit praise from Mozart himself when in Prague. Mozart also applauded Gelinek's pianoforte playing, and encouraged him to persevere. In 1786 he was ordained priest, and became domestic chaplain and pianoforte teacher to Prince Joseph Kinsky, who settled an income upon him for life, and took him to Vienna, where he studied with Albrechtsberger. He then accompanied Prince Poniatowsky to Rome, with the view to obtain further instruction, but illness obliged him to return to Vienna. There he became the favourite pianoforte teacher of the nobility, and was liberally paid. In 1795 he entered Prince Esterhazy's household as chaplain and music master, and remained there till his death, which took place in Vienna, April 13, 1825. For Gelinek's relations with Beethoven, see vol. i. p. 223*a*, and Czerny in Pohl's *Jahresbericht des Conservatoriums in Wien*, 1869-70.

Gelinek composed with ease and rapidity; both he and his publishers made large profits from his works, the variations in the fashionable style of the day especially having a ready sale; many of these were no doubt made by other hacks under Gelinek's name. Of these there is a thematic catalogue (Offenbach, Andre) containing ninety-eight, with spaces for more. [The catalogue of Gelinek's extant works is summarised in the *Quellen-Lexikon.*] The monotony which was one of their weak points is well hit in Weber's epigram:—

An den berühmten Variationen-Schmidt Gelinek.

Kein Thema in der Welt verschonte dein Genie,
Das simpelste allein—Dich selbst—variirst Du nie.

Although at that time the rage, they are shallow and superficial; and like his fantasias, rondos, marches, dance-music and arrangements, his few sonatas, songs, etc. are all now forgotten. Notwithstanding considerable losses, Gelinek left 42,000 gulden (about £4000) among his poor relations. C. F. P.

GEMINIANI, Francesco, an eminent violin player and composer, was born at Lucca in 1680. His first teacher on the violin was Carlo Ambrogio Lunati, surnamed 'il Gobbo,' at Milan. He afterwards studied under Corelli at Rome, and is said to have had instruction in composition from Alessandro Scarlatti. [He was violinist in the band of the Signoria at Lucca from 1707 to 1710.] Geminiani must be considered one of the foremost representatives of the school of Corelli, however different, owing to the peculiarity of his character and talent, he proved himself to be as a performer and composer from his great master. While classical beauty and imperturbable dignity were the main characteristics of Corelli's style, Geminiani's unbounded vivacity of temperament showed itself in his performances, which contemporary critics invariably describe as eccentric. Tartini is said to have spoken of him as 'il furibondo Geminiani.' This easily accounts for the fact that, however great his success as a solo player, he failed as a leader and conductor, from want of the necessary calmness and control. Burney relates, on the authority of Barbella, that he lost the post of leader of the opera-band at Naples because 'none of the performers were able to follow him in his tempo rubato and other unexpected accelerations and relaxations of measure,' and that 'after this discovery he was never trusted with a better part than tenor during his residence in that city.'

In 1714 he came to England, and quickly gained a great reputation as a virtuoso, although he appears to have but rarely played in public, and to have supported himself by teaching and playing in the houses of the nobility. When invited to play at a court-concert, he only consented under the condition that Handel should accompany him. If nevertheless he failed to gain an established and secure position in life, this again is attributable to the peculiarity and eccentricity of his character, which did not allow him to make the best of his opportunities or to pursue any definite plan of life. While he made but rare use of his really great talent as a performer, he spent much time in writing theoretical works of but doubtful value. He also indulged in a foolish passion for dealing in pictures, without, we are assured, having much knowledge of the subject. This at one time involved him in difficulties and brought him even into prison, from which he was only extricated by Lord Essex, his friend and pupil. This same nobleman procured for him in 1728 the post of master and composer of the State Music in Ireland, on

Cousser's death in 1727. It is supposed that Horace Walpole objected to this appointment on account of Geminiani being a Roman Catholic. At all events it was not Geminiani, but Dubourg, his pupil, who went to Dublin in this official capacity. [Geminiani paid long visits to Dublin, and in 1736 settled down in a splendid house with concert-room attached, in Spring Gardens, a court at the lower end of Dame Street. Here, from 1737 to 1741, he received pupils, and gave private concerts. On his return to London, his 'Concerns and Great Music Room' were taken over by one Charles, a horn player (*Dublin Journal*, Nov. 1742). In 1741 Geminiani gave a benefit concert in the 'little theatre in the Haymarket,' and his third set of concertos, op. 6, was published in London. He seems to have lived in London until 1749, when he conducted Lenten Concerts at Drury Lane Theatre;] he then went to Paris and remained there until 1755. Nothing, however, is known about his doings there, except that he brought out a new edition of his Solo-Sonatas. From Paris he returned to London. [At the close of 1761, he went to visit Dubourg. Grief for the loss of a MS. treatise on music, stolen from his lodging in College Green, is said to have hastened his death, which took place on Sept. 17, 1762. In Pue's *Occurrences*, Sept. 18-21, 1762, the fact is noted, and the composer is stated to have been in the ninety-sixth year of his age, which would make the date of his birth 1667. *The Gentleman's Magazine* for 1762, gives Sept. 24 as the date of death.]

Geminiani and Veracini (see that name), coming at about the same time to England, found the art of violin playing in every respect in its infancy. Corelli's Solos were considered to afford almost insurmountable difficulties of execution. Now Geminiani not only played these, but in his own compositions shows considerable progress in the technique of the violin, by freely employing the shift, and by frequent use of double-stops. Burney naïvely enough assures his readers that some of Geminiani's Sonatas were too difficult to be played by any one. His published compositions—Sonatas and Concertos for the violin—show him to have been a clever musician, but, with all his impetuosity, wanting in originality and individuality. His slow movements are more modern in feeling than most of Corelli's, bearing a certain likeness to Tartini's style, though without ever equalling the best works of that great master. His Allegros have a more developed and freer form than those of Corelli, but it is gross exaggeration of Burney to describe them as eccentric and rhapsodic.

The most valuable contribution, however, which he has made to the literature of the instrument is his *Art of Playing the Violin*, op. 9, London.[1] This book, written in English, was the very first of its kind ever published in any country; six years earlier than Leopold Mozart's *Violinschule*. It has the great merit of handing down to posterity the principles of the art of playing the violin, as they were finally established by Corelli. The rules which Geminiani gives for holding the violin and bow, the management of the left hand and the right arm, are the same as are recognised in our days. In one particular point he even appears to have been in advance of his time, since he recommends the holding of the violin on the left hand side of the tail-piece—a practice now universally accepted and indispensable for a higher development of the technique—but, strange as it seems, not adopted either by Leopold Mozart or by the masters of the German school until the beginning of the 19th century.

His other theoretical works, including *Rules for Playing in a true Taste on the Violin, German Flute, Violoncello and Harpsichord*, op. 8 (qu. 1739); *Guida Armonica*, op. 10 (1742); *The Art of Accompaniment*, op. 11 (1755); *Treatise of Good Taste* (1749); *The Art of Playing the Guitar*, 1760; are of little value, although many of them appeared not only in English, but in Italian, French, German, and Dutch.

Of original compositions he published the following:—XII Solos, op. 1, London, 1716; Six Concertos in seven parts, op. 2, London, 1732, and Paris, 1755, in score; Six Concertos, op. 3, London and Paris, 1775; Six Concertos, op. 4, 1743; XII Solos, op. 4, London, 1739; Six Solos for Violoncello, op. 5 (these are arrangements from the violin-solos); Six Concertos, op. 6, London, 1741; Six Concertos in eight parts, op. 7, 1746; XII Sonatas for Violin, op. 11, London, 1758; XII Trios and VI Trios, the latter arrangements of op. 1; Pièces de Clavecin, Harpsichord, London, 1743. He also made and published in London an arrangement of Corelli's Solos, op. 5, as 'Concerti grossi.' See list of works in the *Quellen-Lexikon*. P. D.; additions and corrections by W. H. G. F. *et al.*

GEMSHORN (*i.e.* Chamois horn), an organ-stop eight, four, or two feet in length, the pipes of which, generally of metal, are taper-shaped, being at the top only about one-third the size of what they are at the mouth, with a tone somewhat lighter than that of a cylindrical stop of the same scale at the mouth; and very musical. It was first introduced here by Father Smith, who placed one in the choir organ at the Temple. It passed out of sight for many years; but was reintroduced by William Hill, and has remained in great favour ever since. E. J. H.

GENÉE, Franz Friedrich Richard, the son of a music-director in a theatre at Danzig,

[1] [This seems to be practically identical with an anonymous work, *The Art of Playing on the Violin with a New Scale*, etc. included in Fralleur's *Modern Musick-Master*, 1731. See E. Heron-Allen's *De Fidiculis Bibliographia*, pt. v. sect. 2, where the date 1720 is conjectured for that of the publications of this treatise in book form, but reference to F. Kidson's *British Music Publishers* shows that it cannot have appeared before 1734. The whole question is discussed in *The Oxford History of Music*, vol. iv. *The Age of Bach and Handel*, p. 175, note.]

born there, Feb. 7, 1823; was at first intended for the medical profession, but took up music and studied with A. Stahlknecht at Berlin. Between 1848 and 1867, he was successively capellmeister at theatres at Reval, Riga, Cologne, Aix-la-Chapelle, Düsseldorf, Danzig, Mayence, Schwerin, Amsterdam, and Prague, from 1868 to 1878 he was conductor at the Theatre 'an der Wien' in Vienna, retiring in the latter year to his villa at Pressbaum in the neighbourhood of Vienna. He was a clever writer of librettos, and often collaborated with F. Zell, writing some of his own books as well as others for Strauss, Suppé, and Millöcker. The list of his own operettas, very few of which have attained more than an ephemeral success, is as follows: 'Der Geiger aus Tirol' (1857); 'Der Musikfeind' (1862), 'Die Generalprobe' (1862), 'Rosita' (1864), 'Der schwarze Prinz' (1866), 'Am Kunenstein' (with Flotow, 1868), 'Der Seekadett' (1876), 'Nanon' (1877), 'Im Wunderlande der Pyramiden' (1877), 'Die letzten Mohikaner' (1878), 'Nisida' (1880), 'Rosina' (1881), 'Die Zwillinge' (with Roth, 1885), 'Die Piraten,' 'Die Dreizehn' (1887). He also wrote many part-songs, among which one for male-voices, 'Italienische Salat,' is most amusing in its travesty of the older style of Italian operas sung to nonsense words. [Riemann's *Lexikon* and *Opern-Handbuch*; Baker, *Dict. of Mus. Biog.*]

GENERALI, Pietro, born Oct. 4, 1783, at Masserano, near Vercelli. His real name was Mercandetti, but his father, becoming bankrupt, changed his name and removed to Rome. Pietro studied music under Giovanni Massi, a pupil of Durante, and soon wrote masses and church music. In 1800 he produced his first opera, 'Gli Amanti ridicoli,' after which he travelled to Southern Italy, and coming back to Rome in 1801 composed a cantata, 'Roma Liberata,' and two operas, 'Il Duca Nottolone' and 'La Villana al cimento.' These were followed by 'Le Gelosie di Giorgio' (Bologna, 1802); 'Pamela nubile' and 'La Calzolaja' (Venice, 1803); 'Misantropia e pentimento,' after a play of Kotzebue's; 'Gli Effetti della somiglianza' (*ibid.* 1805); and 'Don Chisciotto' (Milan, 1805). These are for the most part *opere buffe*; and an attempt at opera *semi-seria*, 'Orgoglio e Umiliazione' (Venice), was a failure. In 1807 he wrote 'L'Idolo Cinese' for the San Carlo, and 'Lo Sposo in Bersaglio' for Florence. Many other comic operas were well received in Venice, especially 'Adelina,' a farce, 'La Moglie di tre mariti,' and his *chef-d'œuvre* 'I Baccanali di Roma' (Venice, 1815). In the meantime Rossini had come to the front, and Generali's popularity suffered. [In 1817 he accepted a situation as conductor of the theatre at Barcelona, but returned to Italy in 1821.] Ultimately he withdrew to Novara, and accepted the post of maestro di cappella to the cathedral. In his retirement he studied Rossini's style, appropriating as much of it as he could; and in 1827 reappeared, first at Trieste and then at Venice, where his 'Francesca di Rimini' (Dec. 26, 1829) was a total failure. He returned to Novara, and died there Nov. 3, 1832. His operas number in all more than forty-five. [He also wrote much church music, an oratorio, masses, etc.] Generali's reputation, says Fétis, rests on his having been the first to employ certain harmonies and modulations of which Rossini took advantage. In fact he was the true precursor of Rossini, but the latter possessed genius, while Generali had only talent. An 'Elogio' of him by C. Piccoli was published at Novara in 1833. F. G.; additions from Riemann's *Lexikon*.

GENET, Eleazar, also called Carpentras, after the French town in which he was born, was priest, singer, and composer, attached to the papal court from 1508 to 1518, when he is said to have been made a bishop; he was soon afterwards sent by the Pope on a mission to Avignon, where he seems to have spent the rest of his life. He once revisited Rome, and during his stay there his 'Lamentations' for Holy Week were performed by his former colleagues. Struck by many defects, he made considerable alterations in his work, had a magnificent copy made, which is still preserved in the Pontifical Chapel, and wrote a dedication to Clement VII., who was Pope at the time. Of detached pieces by Genet in the various collections of the time, we know very few. [See Eitner's *Bibl. d. Mus. Sammelwerke*, the *Quellen-Lexikon*, etc.] Two motets from the first and third books of the 'Motetti della Corona' (Petrucci, Fossombrone, 1514), two psalms from the 'Psalmorum Selectorum Tom. II.' (Petreius, Nuremberg, 1539), and a few two-part motets printed by Gardane in 1543, a slender legacy, if in truth these had been all the works—and they were very nearly being all—that were to come to us; for Genet's position and the powerful patronage he enjoyed made him independent of the usual collections and publishers, and enabled him to bring out his works in an exceptional way, which almost resulted in their being lost to posterity. It was only in modern times that a copy, the only complete one known at present, of four splendid volumes, printed by De Channay for Genet at Avignon, was found in the Imperial Library at Vienna. These books are remarkable for being the first to introduce Briard's new types, in which the notes are round instead of square and diamond shaped, and, what is much more important, ligatures are abandoned, and the complicated system in which the same notes have different meanings at different times gives place to a simple method, such as we use at present, in which the notes bear at all times a fixed ratio to each other. This improvement, first introduced in the publication of Genet's works, may, we think, be fairly attributed to his suggestion. Of the four volumes the first contains five masses—'Se

mieulx ne vient,' 'A lombre dung buissonet,' 'Le cueur fut mien,' 'Fors seulement,' and 'Encore iray je jouer.' The second volume contains Hymns for the principal church festivals of the year, the third, Lamentations, and the fourth a collection of Magnificats. The composer, who cared so little for a wide popularity in his lifetime, and wrote with the learned musicians of the Papal Chapel in his mind's eye rather than the general public, who scorned the popular editions and published his works for a chosen few, does not belie his character in the works themselves. We have in them music that appeals to serious and learned musicians alone. Solemn and dignified, the bishop-musician writes as if from his episcopal throne, unbending and severe in style, but appealing not in vain to the sympathy of his Roman colleagues, who indeed valued so highly and cherished so long the works he gave them, that fifty years after his death nothing less than the special command of Pope Sixtus IV. could shake their firm adherence to the 'Lamentations' of Genet or cause them to recognise in place of them those of the popular Palestrina. Much of Genet's music was written in the short intervals of comparative health allowed him by an agonising complaint which attacked him in the ears and brain, was beyond the experience of his physicians, and embittered the last years of his life. J. R. S. B.

GENOVEVA. Opera in four acts, the words, after Tieck and Hebbel, arranged by Robert Reinick, and the composer; music by Schumann (op. 81). Produced at Leipzig, June 25, 1850. Performed in English, by the pupils of the Royal College of Music, at Drury Lane Theatre, Dec. 6, 1893.

GEORGES, Alexandre, born at Arras, Feb. 25, 1850, studied at the École de Musique Religieuse (Niedermeyer), where he carried off the first prizes for organ, piano, and composition, as well as diplomas as maître de chapelle, and organist, awarded by the State. Georges has written music for two plays by Villiers de l'Isle-Adam, 'Le Nouveau Monde' in 1883, and 'Axel,' 1894; for 'Alceste' at the Odéon, 1891; an opéra-comique in one act, 'Le Printemps,' was performed at the Ministry for Public Works, in 1888, and later at the Théâtre Lyrique; a three-act 'opéra lyrique,' 'Poèmes d'Amour,' (Bodinière, 1892); 'Charlotte Corday,' lyric drama in three acts (Opéra Populaire, March 1901). Among his concert works, his 'Chansons de Miarka' for voice and orchestra, words by J. Richepin), are some of the most beautiful of modern French songs, and his symphonic poems, 'Leila,' 'La Naissance de Vénus,' 'Le Paradis Perdu,' etc., have added greatly to his reputation as a master of orchestration; he is distinguished by his interesting harmonisation, and his essentially French musical temperament. G. F.

GERARDY, Jean, Belgian violoncellist, was born at Spa, on Dec. 7, 1877, commencing his studies when seven years of age under Bellmann, a pupil of Grützmacher and member of the famous Heckmann Quartet. In 1885 he entered the Verviers Conservatoire, made phenomenally rapid progress, and was already a graduate in 1888. Prior to this he had made occasional appearances as a soloist near home (at Liège where his father was professor at the Conservatoire, at Aix la Chapelle, Lille, and elsewhere), but it was in the year 1888 that he definitely adopted the career of travelling virtuoso which he has continued since, fulfilling his first engagement at a concert at Nottingham in which Ysaÿe and Paderewski also took part. His next appearance was in London, where he gave several successful recitals, followed up by tours in France, Germany, and Russia. He has visited the United States three times and Australia twice, being heard chiefly in solos, though in America he has occasionally taken part in concerted music, playing quartets under Ysaÿe and Marteau and trios with Kreisler and Hofmann. In London, which he visited in 1903 after an absence of five years, he has been heard so far mainly in concertos, solos, and sonatas, but may be credited with the intention to give more attention later on to chamber music. He is still of course a very young man, and upon the threshold of his career. As a boy his style was a marvel of purity, and he was marked out by the critics as the legitimate successor of Piatti as a classical player. In his present day playing he displays more feeling for the romantic than the Italian master, as well as a greater *penchant* for modern works (especially those of the French and Belgian school); but there is the same absence of exaggeration, the same mastery over the bow in the production of long-sustained notes, and the same perfect taste in the management of the portamento. Some living violoncellists play with greater power, none with greater charm than Gerardy. W. W. C.

GERBER, Heinrich Nicolaus, born Sept. 6, 1702, at Weingen-Ehrich in the principality of Schwarzburg; son of a peasant, studied at the University of Leipzig, where his love of music found encouragement in the teaching and conversation of Sebastian Bach; in 1728 he was organist at Heringen, and in 1731 court organist at Sondershausen. Here for the first time he felt himself safe, as, on account of his extraordinary height, he had been constantly pursued by the recruiting officers of Frederick William I. He composed much for clavier, organ, and harp; a complete Choralbuch, with figured basses; and variations on chorales, long and widely used. He also made musical instruments, and planned many improvements and new inventions. Among others a kind of Strohfiedel or Xylophone, harpsichord-shape, with a compass of four octaves; the keys liberated wooden balls which struck on bars of wood, and thus produced the notes. From 1749 Gerber was

also court-secretary. He died at Sondershausen, August 6, 1775.

His son Ernst Ludwig, was born at Sondershausen, Sept. 29, 1746; learned singing and clavier from his father, and studied music from an early age. In 1765 he went to the University of Leipzig, but returned home in order to assist his father in his offices, and succeeded him on his death. He then entered on those labours which finally conducted him to an end he himself scarcely contemplated, and by which he has earned the gratitude of all lovers of music. His love of musical literature suggested to him the idea of making a collection of portraits of musicians, for which he wrote biographies, mainly on the authority of Walther's *Lexicon* (1732). As Walther was at that time out of date, he procured the necessary additions, obtained biographical sketches of living musicians, took journeys, and tried to fill up the gaps by consulting all the books then in existence on the subject. Thus the idea suggested itself of adapting Walther's work to the wants of the time, and of writing a completely new work of his own, which eventually became the *Historisch-biographische Lexikon der Tonkünstler* (two vols. Leipzig, Breitkopf, 1790 and 1792) translated into French by Choron (1810, 1811). While writing musical articles and reviews for various periodicals (*Erfurter Gelehrten Zeitung; Leipziger Allg. Musik. Zeitung* from 1798, etc.; Becker's *Literatur der Musik* and the *Quellen-Lexikon* contain a list of his scattered articles) he received from all quarters corrections and information of all kinds, which enabled him, or rather made it his duty, to prepare an enlarged edition. Accordingly his *Neues hist. biogr. Lexikon der Tonkünstler* appeared in four vols. with five appendices (Leipzig, Kühnel, 1812, 1814). This new edition did not supersede the former one, to which it often refers the reader; but rather completed it. Gerber took pains to keep up with the times, recorded events for after use, was continually making additions to his collection of books and music, and composed industriously pianoforte sonatas and organ preludes. Hoping to keep together the collection he had made at the cost of so much labour and pains, he offered it for sale to the Gesellschaft der Musikfreunde in Vienna, with the solitary stipulation that he should retain it during his own life. The price was fixed, and the negotiation completed in January 1815, but he still continued his additions, encouraged doubtless by the knowledge that his treasures would be in safe keeping, in a city so famed for its musical tastes. He was still court secretary at Sondershausen when he died, June 30, 1819, in universal respect; leaving behind him the reputation of one who, with singular disinterestedness and out of a true love for music, had devoted the energies of his whole life to a single end. His Lexicon forms the foundation of all future undertakings of the same kind; and if new Dictionaries are to satisfy the wants of the age to the same extent that his did, their authors must possess industry as persevering, knowledge as eclectic, and a love of music as devoted, as those which inspired Gerber. C. F. P.

GERBERT von Hornau, Martin, an eminent writer on the history of music, born August 12, 1720, at Horb on the Neckar. He received a thorough literary education, including music, at Ludwigsburg. In 1737 he entered the Benedictine monastery of St. Blaise in the Black Forest, was ordained priest in 1744, and appointed Prince-Abbot, Oct. 15, 1764. Historical research, especially in music, was his favourite pursuit, and a taste for this he endeavoured to infuse into the convent. The library afforded him ample materials, and much valuable matter hitherto unused. But this was not enough. Between the years 1759 and 1765 he travelled through Germany, France, and Italy, making important discoveries, and establishing relations with various learned societies. His acquaintance with Padre Martini at Bologna was of special service to him. Their objects were closely connected—Gerbert's work being a history of Church music, Martini's one of music in general. In 1762 Gerbert published his prospectus in Marpurg's *Critische Briefe*, vol. ii. p. 313, and invited contributions, which were furnished him in abundance. The first volume was nearly complete when a fire at the monastery in 1768 destroyed all the materials which had been collected; in 1774, however, the complete work appeared at St. Blaise, in two vols. 4to, with 40 engravings, under the title *De cantu et musica sacra a prima ecclesiae aetate usque ad praesens tempus*; a book which has ever since formed the foundation of all musical scholarship, although naturally requiring much correction at the present day. A description of it appears in Forkel's *Geschichte der Musik*, which without Gerbert's work would possibly never have been written, or would at any rate have been published later and in a far less complete form. Ten years after, in 1784, appeared Gerbert's second great work *Scriptores ecclesiastici de musica sacra potissimum*, three vols. also printed at St. Blaise; a collection of treatises by the most important writers on music, afterwards continued by Coussemaker. Three more works, also printed at St. Blaise, deserve special mention, *Iter alemannicum, accedit italicum et gallicum* (1765; 2nd ed. 1773; German ed. by Kochler, Ulm, 1767), which contains the account of his travels; and abounds in interesting particulars; *Vetus liturgia alemannica* (two vols. 1776); and *Monumenta veteris liturgiae alemannica* (two vols. 1777). He also made the Latin translation of *Opusculum theodiseum de Musica*, a treatise in four chapters written in old German by Notker (Labes) a monk of St. Gall in the 10th

century (see Becker's *Literatur der Musik*, p. 68). His other writings are mainly theological. Some offertories of his composition were published at Augsburg. [A 'Missa in Coena Domini' by him is printed at the end of *De cantu et musica sacra*. In 1787 the abbot obtained the consent of the chapter to banish all instruments but the organ from the church, and thenceforth nothing was heard but the Gregorian chant, or simple four-part masses with organ accompaniment.]

Gerbert died at St. Blaise, May 13, 1793. He realised the ideal of virtue and industry in his illustrious order; his gentle character and engaging manners secured the friendship of all who came in contact with him. Bonndorf (four leagues from St. Blaise, and the chief town of the principality) is indebted to him for a hospital and house of correction, over the entrance of which is the inscription 'Dedicated by Martin II. to the poor, and to the improvement of mankind.' He also built the fine church of the Convent (after the model of the Pantheon at Rome), and founded and endowed an orphanage for the five surrounding districts. The peasants of the neighbourhood, of their own accord, erected his statue in the market-place of Bonndorf, a most unusual tribute of respect. His memory still lives in the district. Carl Ferdinand Schmalholz, the able musical director of the Cathedral at Constance, possessed an excellent half-length oil picture of Gerbert. [See the *Musical Times* for Nov. and Dec. 1882, which contains an admirable essay on Gerbert by Professor F. Niecks, based on such sources as Schlichtegroll's *Nekrolog auf das Jahr* 1793 and Sander's *Reise zu St. Blasien*, 1781.] C. F. P.

GERICKE, Wilhelm, orchestral, choral, and operatic conductor, born April 18, 1845, in Graz, Styria; studied at the Vienna Conservatorium, 1862-65, chiefly under Dessoff. On leaving the Conservatorium he went to Linz as conductor, remaining there till offered the second conductorship of the Hofoper in Vienna in 1874. At the opera he was associated with Hans Richter. In 1880 he became conductor of the Gesellschaftsconcerte, and also took the leadership of the Singverein in the Austrian capital. He remained thus employed until 1884, when he went to America, and for five years conducted the Boston Symphony Orchestra, declining a re-engagement on account of his health. Returned to Vienna, he again became conductor of the Gesellschaftsconcerte, and continued in the office until 1895. After three years of rest he accepted a reappointment as conductor of the Boston orchestra, whose great efficiency is largely due to his indefatigableness and skill as a drill-master, his conscientious devotion to high ideals, and his remarkable sense of euphony and tonal balance. He is the composer of an operetta, 'Schön Hannchen' (Linz, 1865), a requiem, a concert overture, many solo songs and choruses, and considerable chamber music. H. E. K.

GERLE, Hans, lutenist and lute-maker of Nuremberg, published in 1532 a book of instructions for the viol and the lute entitled *Musica Teusch auf die Instrument der grossen und kleynen Geygen auch Lautten*. A second part appeared in the following year. It is quoted by John Dowland in the short treatise on lute-playing appended to Robert Dowland's *Varietie of Lute-lessons* (1610). A second edition, with additional examples, was printed in 1546, under a slightly different title. In 1552 Gerle published *Ein newes sehr kunstliches Lautenbuch*, containing compositions by distinguished lutenists in tablature. There are copies of these three books, all of which are now of extreme rarity, in the Royal Library at Berlin. J. F. R. S.

GERMAN, J. Edward, one of the most distinguished of the younger English composers, was born at Whitchurch, Shropshire, Feb. 17, 1862, and was educated at Bridge House School, Chester, until 1878, when he returned to Whitchurch. Here he spent much time in organising a local band, which used to perform at village concerts. While arranging and composing the music for this band, he taught himself the violin, enough to play solos. At the beginning of 1880, he went to Shrewsbury to study with Walter Hay; in September of that year he entered the Royal Academy of Music, with the organ (under Dr. Steggall) as principal study. In the following year he took the violin as principal study, under Weist-Hill and Alfred Burnett. In 1885 he won the Charles Lucas medal with a Te Deum for chorus and organ, and became a sub-professor of the violin. His principal composition, while at the Academy, was an operetta, 'The Rival Poets,' performed at St. George's Hall, Dec. 21, 1886. This work showed very remarkable power of writing graceful and really comic music, and on its revival by the pupils of the Academy at the same hall on March 7, 1901, its success was emphatic. He left the Academy in 1887, and was made an Associate. For a little more than a year German led the life of an orchestral violinist, playing in theatres and elsewhere, and occasionally appearing as a soloist, cultivating his talent for composition at the same time. At the close of 1888 he was engaged as musical director of the Globe Theatre, under the management of Richard Mansfield, and his first great opportunity came in the production of the incidental music to 'Richard III.' This, the first of a long series of compositions for plays, was at once hailed as something a good deal better than what theatre-goers were as a rule accustomed to hear, and in the form of orchestral suites, arrangements, and extracts, many of the compositions for plays have obtained universal and lasting popularity, From the second theatrical composition, the

music for 'Henry VIII.' at the Lyceum (1892) the 'Shepherds' Dance' and other numbers at once caught the ear of musical people and the general public, and have maintained their popularity ever since. Although so much in request as a purveyor of music for Shakespearean revivals and original plays, German has never lost sight of the higher walks of art; since the production of his first symphony in E minor, at the Crystal Palace in 1890, many orchestral suites, symphonic poems, etc. have been brought forward, mostly at the provincial festivals of the autumn, and always with great success. In non-orchestral music, it is curious to see how, although himself a violinist, he has favoured the wind instruments, as in his charming 'Suite' for flute and piano, a serenade for wind instruments, another serenade for tenor voice with accompaniment of piano and wind, and many other compositions. When Sir Arthur Sullivan's last opera 'The Emerald Isle' was left unfinished at his death (1901), German was commissioned to finish it, and his part of the work was done with such remarkable skill that with the production of his charming 'Merrie England,' it seemed as if the success which the Savoy Theatre had enjoyed for so long under Sullivan was to be continued under German; this might indeed have been so if the younger man had been strong enough to resist the various influences which allowed all kinds of interpolations into the score of this and of his next work, 'A Princess of Kensington' (1903). The cultivated section of the public which had hailed the new composer as the legitimate successor of Sullivan (and it must be admitted that German had contrived to give them something quite as good as Sullivan, while preserving his own individuality), naturally resented the liberties taken with the pieces, and the career of the theatre as the home of national light opera of a high class ceased with this work. German's music leans to what is light and graceful rather than to what is strongly emotional or tragic; but his ideas are original, their expression is always exquisitely refined, and his skill of orchestration is remarkable. He writes admirably for the voice, and it is no wonder that his songs are as popular with singers and musicians as they are with the public. He was made a Fellow of the Royal Academy of Music in 1895, and a member of the Philharmonic Society in 1901. The following is a list of his compositions:—

Operetta, 'The Rival Poets' (with accompaniment of two pianos), 1886.
Overture, 'On German airs,' 1889.
Music to *Richard III.* (Globe Theatre), 1889.
Symphony No. 1, in E minor (Crystal Palace), 1890.
Funeral March (Henschel's Symphony Concerts), 1891.
Music to *Henry VIII.* (Lyceum Theatre), 1892.
Gypsy Suite (Crystal Palace), 1892.
Serenade for wind instruments, 1892.
Suite, flute and piano, 1892.
Music to *The Tempter* (Haymarket Theatre), 1893.
Symphony No. 2, in A minor (Norwich Festival), 1893.
Serenade, tenor voice, piano, and wind instruments, 1894.
Music to *Romeo and Juliet* (Lyceum Theatre), 1895.
Symphonic Suite in D minor (Leeds Festival), 1895.
Church music in *Michael and his Lost Angel* (Lyceum Theatre), 1896.
Music to *As You Like It* (St. James's Theatre), 1896.
Fantasia, 'In Commemoration' (Philharmonic, Jubilee concert), 1897.
Symphonic Poem, 'Hamlet' (Birmingham Festival), 1897.
Music to *Much Ado about Nothing* (St. James's Theatre), 1898.
Symphonic Suite, 'The Seasons' (Norwich Festival), 1899.
Music to *Nell Gwyn* (Prince of Wales's Theatre), 1900.
Opera, 'The Emerald Isle' (with Sir Arthur Sullivan), 1901.
Opera, 'A Princess of Kensington' (Savoy Theatre), 1903.
Welsh Rhapsody (Cardiff Festival, 1904).
Music to *Antigone* (published but not performed).
Music for pianoforte solo, and duet, violin and piano, clarinet, flute, violoncello, etc. part-songs, songs, etc.

M.

GERMAN SIXTH. See SIXTH.

GERN, AUGUST, was foreman to Cavaillé-Col of Paris, and came over to London to erect the organ built by the latter for the Carmelite Church at Kensington. Having set up on his own account in London in 1866, he built an organ for the French Church near Leicester Square, besides many excellent instruments for churches and private houses. V. DE P.

GERNSHEIM, FRIEDRICH, eminent player, composer, and conductor, born of Hebrew parents at Worms, July 17, 1839. He received his first instruction in music from his mother, an able pianist, and was then put successively into the hands of Liebe, Pauer, and Rozenheim. He also learned the violin, and under Hauff the theory of music. His ability might have tempted him to become a virtuoso, but he fortunately preferred a different path, and at the Conservatorium of Leipzig under Moscheles, Hauptmann, Rietz, and Richter, during the years 1852-55 underwent a thorough musical education. He followed this up by a residence in Paris, where he was much esteemed as a teacher and player. Since then he has been successively at Saarbruck (1861); Cologne, as Professor of Pianoforte, Counterpoint, and Fugue (1865); Rotterdam, as conductor of the 'Eruditio Musica,' and of the Theatre (1874). [In 1890-97 he was a teacher at the Stern Conservatorium and director of the Sternscher Gesangverein till 1904; he was made a member of the senate of the Royal Academy of Arts in Berlin. His works include four symphonies, of which those in G minor and B♭ are remarkable, an overture, 'Waldmeisters Brautfahrt,' concertos for violin and pianoforte, and many choral works, such as 'Salamis,' 'Hafis,' 'Wächterlied an der Neujahrsnacht 1200,' 'Preislied,' 'Nornenlied,' 'Phöbus Apollo,' 'Agrippina,' etc. His chamber music consists of three quartets and two quintets, for piano and strings; two trios, one of which, in F (op. 28) was often given at the Popular Concerts; three violin sonatas, two string quartets, and a string quintet.] G.

GERO, JHAN (? 1518-1553). For some time it was thought that Jhan Gero and Maistre Jhan were one and the same person, and under this impression Fétis records that Gero was maestro di cappella first at Orvieto Cathedral, and afterwards to the Duke of Ferrara. The latter part of the statement certainly applies to Maistre Jhan and not to Gero. That there were two composers is shown by their compositions being

ETELKA GERSTER

always kept quite distinct, a *primo libro de madrigali* by Jhan Gero and one by Maistre Jhan were published at Venice (Ant. Gardane) in 1541. Collections of various compositions contain works by both, as in *Selectissimae cantiones*, Augsburg, 1540; *Electiones diversorum motetorum*, Venice, 1549; and the *Sextus tomus evangeliorum*, Nuremberg, 1556.

List of works:—

Jhan Gero. Il primo libro de madrigali italiani et canzoni francese, a due voci. Novamente composti, etc. Aggiuntovi alcuni canti di M. Adriano, e di Const. Festa. 1541. Excudebat Venetiis, apud Antonium Gardane. Duo primi, di Jhan Gero. Obl. 4to, pp. 56. The Cantus part-book in the Vienna Hofbibl. Eighteen editions of this book appeared down to 1637.

Di Jehan Gero musico eccellent. Libro primo delli madrigali a quatro voci, a notte negre, da lui novamente composti, etc. Et da gli suoi proprii exemplari estratti. Opera nova, artificiosa et dilettevole, come a Cantanti sarà manifesto. Venetiis, apud Hieronymum Scotum. 1549. Obl. 4to, pp. 34. The Tenor part-book in the Bologna Liceo Musicale.

The same. Libro secondo. 1549. Obl. 4to, pp. 22. Tenor part-book in Bologna Liceo Musicale.

Jhan Gero primo a tre. Quaranta madrigali a tre voci de l' eccellente Musico Jhan Gero. Novamente con somma diligentia ristampati e corretti. A tre voci. In Venetia appresso di Antonio Gardane. 1553. Obl. 4to, pp. 34. Libro secondo, 1556. Three part-books in the Munich Hofbibl.

In Collections:—

1. Selectissimae necnon familiarissimae cantiones. Augsburg, M. Kriesstein. 1540. Jhan Gero:—'Io v' amo anci' for three voices.

2. Trium vocum cantiones centum a praestantiss. divers. nationum. Tomi primi. Norimbergae, J. Petreium. 1541. Contains thirty-two Italian songs by Jhan Gero (see Eitner, *Bibliog.* for text).

3. Di Constantio Festa. Il primo libro de madrigali a tre voci, con la gionta de quaranta Madrigali di Jhan Gero, etc. 1541, Venetiis. Ant. Gardane. The title-page appears to be incorrect, possibly thirty-nine madrigals were composed by Jhan Gero, of these, thirty-two were certainly his. Four of the madrigals in this volume were reprinted in the 1543-51-56-64-68 editions.

4. Il secondo libro de li madrigali de diversi eccellentiss. autori a misura di breve. A quatro voci. Venetiis. Ant. Gardane. 1543. Contains fourteen madrigals by Jan Gero. Another edition was published 'Venetia. G. Scotto. 1552.'

5. Electiones diversorum motetorum distincte quatuor vocibus. Venetia. Ant. Gardane. 1549. Jhan Gero:—'Deus qui sedes' and 'Tibi derelictus.'

6. Musica quatuor vocum, quae materna lingua Moteta vocantur. Venetiis. H. Scotum. 1549. Six motets by Jehan Gero.

7. Il vero terzo libro di Madrigali de diversi autori a note negre . . . a quatro voci. Venetia. 1549. Jhan Gero:—'Felice l'alma'; 'Una ragazz' una.'

8. Madrigali a tre voci de diversi eccellentiss. autori. Libro primo. Venetia. Ant. Gardane. 1551. And in 1555-59-61-69-97 editions. Nine madrigals by Jhan Gero.

9. Evangelia dominicorum et festorum dierum musicis numeris. Tomi primi. Noribergae. 1554. Joan. de Gero:—'Hodie Christus natus est' for five voices.

10. Sextus tomus evangeliorum. Noribergae. 1556. Joh. Gero:—'Peccantem me quotidie' and 'Deus in homine tuo' for four voices.

11. Selectissimorum triciniorum (Bassus). Noribergae. 1559. Thirteen Italian madrigals by Joan. Gero.

12. Musica libro primo a tre voci di Adrian Wigliar, Cipriano de Rore, Archadelt, Jhan Gero, etc. Vinegia. Scotto. 1566. Five madrigals by Gero, from the 1551 Madrigali a 3 voci, *q.v.*

13. Della scelta di madrigali de più eccellenti autori de' nostri tempi di Vinegia. Libro primo. Firenze. G. Marescotti. 1582. Jhan Gero; 'Alla dolce ombra,' 'Rare grazie celesti.'

14. Bicinia, sive cantiones suaviss. duarum vocum. Antverpiae. P. Phalesius. 1590. Giovan. Gero: 'Au joly son du chansonet,' 'Non si vedra gianai,' 'Quand je boy du vin.'

MSS.

In the Berlin Königl. Bibl: some madrigals in MS. T. 141. In the Bologna Liceo Musicale: motets by Joan Gero, 'O magnum mysterium (*a* 4), 'Vox de coelis' (*a* 4), 'O sacrum convivium' (*a* 5) in a codex inscribed '1518 a dì 10 di giugno,' which if correct is an earlier date for Gero than is to be found elsewhere. It is a year before the first appearance of a motet by 'Maistre Jhan' (see Parisini's Cat. iii. 3).

In the British Museum: A madrigal for two voices, 'Non si vedra gianai' in Add. MS. 5054, p. 218. Three for two voices: 'Refuses d'amours,' 'Quant j'estoie à marier,' 'Tant que vivrai en cage,' in Add. MS. 31,406, copied 'from a MS. written in ye year 1551, and wch. belonged to Walterus Erle one of the Gentlemen of ye Bedchamber to K. Henry ye 8th.' Two of the madrigals for two voices from the 1545 edition, 'Phillida mia,' and 'Au joly son du chansonnet' in Add. MS. 34,071, ff. 145, 15.

In the Fitzwilliam Museum, Cambridge: Nine madrigals for two voices in MS. 112.

Gero's compositions have been reprinted in Stafford Smith's *Musica Antiqua*, p. 134, 'Phillida mi più chei' (*a* 2) from the 1545 edition.

In Peter Wagner's 'Das Madrigal und Palestrina' (*Vierteljj.* viii. 478), three from the *Madrigali de diversi autori a quatro voci*, 1543.

In Luigi Torchi's *L'arte musicale*, 1897, vol. i. four compositions for four voices. Two from the *Madrigali de diversi autori*, 1552; one from *Il vero terzo libro*, 1549, and 'O beatum pontificem' from *Musica quator vocum*, 1549.

C. S.

GERSTER, Etelka, born June 17, 1855, at Kaschau, Hungary, received instruction in singing from Mme. Marchesi at Vienna, and made her début, in Jan. 1876 (*Illustr. Zeitung*), at Venice as Gilda, and Ophelia, with great success. She played next at Genoa and Marseilles, and in February and March 1877 at Kroll's Theatre, Berlin, with her sister Mme. Bertha Kauser Gerster at an Italian season there under the direction of Signor Pietro Gardini. She made a great success there, and subsequently at Pesth, where she married Gardini; she also appeared at the Silesian Festival at Breslau. On June 23 of the same year she made her début at Her Majesty's as Amina, and became an immediate favourite, remaining there for four seasons until 1880 inclusive. Her parts there included the Queen of Night, Elvira ('Puritani'), Linda, Dinorah, Lucia, Edith ('Talismano'), Margaret, Violetta, and Gilda. Apropos of the last, the *Saturday Review* of June 29, 1878, wrote that she has 'given a fresh proof of her extraordinary vocal and dramatic genius. The exquisite beauty of her singing has never been shown to greater advantage, and her acting at every moment reveals true art and feeling. Among fine touches in Mme. Gerster's dramatic performance, we may specially note her wrapping her head in a cloak before she rushes in at the fatal door in the last scene, that she may at least not see the descending knife.'

In 1878, 1883, and 1887, she sang in opera and concert, in America. She also sang with great success at the Birmingham Festival of 1879. On May 29, 1890, she reappeared in London, at Covent Garden, as Amina, but her vocal powers were impaired. Soon after this she retired from public life to her villa at Bologna. In 1896 she opened a school of singing at Berlin; among her pupils was Frau v. Dulong. A. C.

GES. The German term for G flat.

GESE or GESIUS, Bartholomäus (or more familiarly Barthel Göss), was born about 1555 at Müncheberg near Frankfurt-on-the-Oder in Brandenburg. Like many of the older Lutheran cantors he was first a student of theology. He was cantor at Frankfurt from at least 1595 to his death in 1613 (according to some authorities), or 1621 (according to Eitner). His works, like those of Michael Praetorius, are important as covering the whole field of the liturgical music of the older Lutheran Church, and showing the thoroughly liturgical character of the older Lutheran service with its mixture of Latin and German and its combination of plain-song and vocal polyphony, before first the Church Cantata and then the Organ-accompanied Chorale had swallowed up everything, and before Pietism and Rationalism between them had destroyed all further interest in the artistic development of a proper Church Music in Lutheran or Protestant Germany. His more important works are as follows:—

1. 'Historia vom Leiden und Sterben unsers Herrn Jesu Christi,' etc. (Passion according to St. John for two to five voices), Wittenberg, 1588. This work was reprinted by Commer in his edition of Lassus, and appears also in Schöberlein's 'Schatz des liturgischen Gesanges.'

2. Hymni Scholastici . . . 4 v. (adjectae quaedam precationes 3 voc. unâ cum cantionibus Gregorianis), 1597. Two editions appeared, with 37 and 41 numbers respectively.

3. Psalmodia choralis continens Antiphonas, Psalmos, Responsoria, Hymnos, Introitus, etc. additis Lamentationibus quae Vesperi in hebdomada Palmarum . . . 1600. 631 plain-song melodies to Latin and German texts.

4. Geistliche Lieder . . . mit 4 und 5 Stimmen nach gewöhnlichen Choral-melodien gesetzet . . . Various collections, 1601, 1603, 1605, 1607. The collection of 1607 contains 252 German texts and 45 Latin.

5. Cantiones sacrae Chorales . . . Introitus, Kyrie, Sequentiae, etc. 4-6 voc. 1610.

6. Missae ad imitationem Orlandi et aliorum . . . 5 voc. 1611, contains ten masses with Nicene Creed, Sanctus, and Agnus, based on themes from Motets of Lassus and others.

7. Opus novum continens Missas, Introitus, etc. 4-9 voc. 1613, contains fourteen masses and other music, including a St. Matthew Passion for six voices.

8. Magnificat 5 and 6 ton . . . insertis cantionibus aliquot natalitiis . . . Resonet in laudibus, In dulci jubilo, etc. (It was a favourite custom at Christmas in Lutheran churches to sing the Latin Magnificat with Christmas carols inserted between the verses. It was in a similar fashion that Bach's Magnificat was originally produced at Leipzig. See Spitta, *J. S. Bach* (Eng. tr. vol. ii. pp. 369-374).

9. Eitner enumerates a large number of occasional compositions, chiefly for weddings and funerals, after the custom of the time.

Gese also published in 1615 a theoretical work entitled 'Synopsis musicae practicae' with numerous examples of Hymns for four voices.

Besides the 'St. John Passion,' Schöberlein's 'Schatz' contains a large number of Gese's four and five-part settings of German Chorales. J. R. M.

GESELLSCHAFT DER MUSIKFREUNDE at Vienna. This institution, now of world-wide celebrity, was suggested in 1812, and founded in 1813, mainly through Dr. Joseph von Sonnleithner, after two great performances of Handel's 'Alexander's Feast,' by all the first artists of Vienna, in the Imperial Riding-school, on Nov. 29 and Dec. 3, 1812. In 1814 the statutes received the Imperial sanction, a president (Count Apponyi) and board of directors were appointed, the formation of a musical library and museum decided upon, and four annual subscription-concerts announced. These took place in the Redoutensaal—the first (Dec. 3, 1815) in the Small Hall, the others in the large one. The 'Musikfeste' (oratorios only, with 1000 performers) were repeated in the Riding-school every year until 1847, when Mendelssohn was to have conducted his 'Elijah,' but his death occurred a few days before the date fixed for the performance. Since 1859 two extra concerts have been given every year, besides the original four. For many years the number of performers has been about 80 in the orchestra, and from 300 to 350 in the chorus; the latter form the 'Singverein,' founded in 1858. The 'Orchesterverein,' established in 1860, gives a few soirées annually. Soirées, with miscellaneous programmes, were held regularly from 1818 to 1840. At the four general concerts all masters worthy of note have been and are still represented. Beethoven himself was invited to write an oratorio for the Society, but was unfortunately at the time too busy with other works (the Mass in D, etc.) to comply with the request. The Society has twice had a well-known patron of music at its head—the Archduke and Cardinal Archbishop Rudolf from 1814 to 1831, and the Archduke Anton from 1831 to 1835. Down to 1848 the concerts were conducted by the best musicians among the members in turn; but in 1851 Hellmesberger was appointed as professional conductor. His successors were—Herbeck in 1859, Rubinstein in 1871, Brahms in 1872, and Herbeck again in 1875. Herbeck died Oct. 28, 1877, and Hellmesberger resumed the duties of the office in the following season. In 1878 Eduard Kremser was conductor till 1880, when W. Gericke held the post; between his departure for America in 1884 and his return, the concerts were conducted by Hans Richter (1884-90), and Gericke had a second tenure of the office in 1890-95, since which date it has been in the hands of Richard von Perger (1895-1900), Ferdinand Löwe (1900-4), and Franz Schalk (1904). The formation of the 'Singverein' under Herbeck added greatly to the interest of the concerts. Besides such works as Beethoven's Mass in D, and Bach's Passion-music (both St. Matthew and St. John) several of Schubert's works—'Der häusliche Krieg,' 'Lazarus,' the B minor Symphony, etc.—have been produced.

The possessions of the Society in works of art have gradually increased, and are now of enormous extent. The library, the foundation of which was formed by Gerber's valuable collection, acquired in 1819, now contains nearly 4000 printed vols. and about 40,000 numbers of music, printed or manuscript. [Gerber.] Among the latter are many valuable autographs and literary curiosities, including Mozart's PF. concerto in D minor, a quintet (1768), his last cantata (Nov. 1791); Schubert's 9th Symphony, Masses in A flat and G, the opera 'Alfons und Estrella,' the Singspiele 'die Zwillingsbrüder,' and 'der vierjährige Posten,' four stringed quatuors, and many songs; Haydn's 'Ten Commandments,' Mass in B flat, a great cantata (1768), six stringed quatuors (1771); Beethoven's first violin concerto (a fragment), many songs, the sonata op. 81 (first part), a quantity of sketches, the Eroica (a copy, revised by Beethoven); choruses by Gluck and Handel, and other treasures. The museum includes a large collection of pictures and engravings of celebrated musicians, and a collection of ancient musical instruments, medals, busts, etc. [Herr C. F. Pohl, the writer of this article, was archivist and librarian from 1866 until his death, in 1887, when he was succeeded by Dr. Eusebius Mandyczewski.] In 1830 the Society built a house of its own (Tuchlauben), but having far outgrown the accommodation there, removed in 1870 to the present large building 'an der Wien,' where the concerts are now held.

The 'Conservatorium,' founded by the Society in 1817, and still in connection with it, has grown to great importance from very small beginnings. It includes instruction in every branch which a pupil can possibly require. In 1870 an opera school was opened, which gives operatic performances. To this was added in 1874 a dramatic school, which gives theatrical

representations. At present (1905) the Institution is attended by 950 pupils, who receive instruction from sixty-seven professors. The successive directors of the old institution were Kiesewetter (1817-25), Hauschka (1825-32), Lannoy (1833-34), Chimani (1835-36), Klemm (1837-42), and Preyer (1843-47). For four years the school was shut up, and on its reorganisation Hellmesberger was appointed professional director in 1851, and continued at the post until his retirement in 1893. He was succeeded in that year by J. N. Fuchs, who was followed in 1899 by the present director, Ritter von Perger. Amongst the innumerable artists who have been educated there we may mention Ernst, Goldmark, Staudigl, and Hans Richter, as representatives of a number too large for our space. C. F. P.

GEVAËRT, François Auguste, Director of the Brussels Conservatoire, born July 31, 1828, at Huysse, a village near Oudenarde. His father, a baker, wished to bring him up to his own trade, but his great musical ability becoming apparent, he was sent in 1841 to the Conservatoire at Ghent, where he studied under Sommère and Mengal. He was then appointed organist of the Jesuits' Church, and in 1846 a Christmas cantata of his composition was performed in Ghent. In June 1847 his Psalm 'Super flumina' was performed at the festival of the 'Zangverband'; and Spohr, who was present, congratulated the young composer. In the previous May he had won the first prize for composition at the national competition in Brussels, but was allowed to postpone his foreign tour for two years, during which he produced in Ghent his first opera, 'Hugues de Somerghen' (March 23, 1848), followed by 'La Comédie à la ville,' at Brussels, a decided step in advance. In 1849 he started on his tour, and after a short stay in Paris proceeded to Spain, where he composed an orchestral fantasia 'Sobre motivos españoles.' His reports on Spanish music, regularly forwarded to the Ministre de l'Intérieur, were printed in the bulletin of the Académie of Brussels for 1851. From Spain he went to Italy, and returning through Germany reached Ghent in the spring of 1852. On Nov. 27 of that year he produced 'Georgette' (one act) at the Théâtre Lyrique in Paris; and in Oct. 1854 'Le Billet de Marguerite,' in three acts, libretto by Leuven and Brunswick—both with extraordinary success. 'Les Lavandières de Santarem' (Oct. 28, 1855), however, was a fiasco. Gevaërt received the order of Leopold for his cantata 'De nationale verjaerdag,' composed in honour of the fifth anniversary of King Leopold's reign. 'Quentin Durward' (March 25, 1858), 'Le Diable au Moulin' (1859), 'Château Trompette' (1860), 'La poularde de Caux' (1861, with other composers) and 'Le Capitaine Henriot' (Dec. 29, 1864), were all successes at the Opéra Comique in Paris. So also was 'Les Deux Amours,' opéra-comique, at the theatre of Baden-Baden, 1861. A cantata 'Le Retour de l'armée' was performed at the Grand Opéra in 1859. Other important compositions are a Requiem for male voices and orchestra; 'Jacques van Artevelde,' ballads, choruses, etc. In 1867 he was appointed 'Chef de chant' at the Académie de Musique, Paris, a post resigned by Halévy in 1845. This post Gevaërt retained till the Opéra in the Rue Le Peletier was closed (Sept. 1870) on account of the war. From that time he devoted his attention to the history of music, and in 1875 brought out the first part of his *Histoire et Théorie de la musique dans l'Antiquité* (Henzel, Paris, one vol. 8vo), a work remarkable for much new matter, the result of careful and original research. This had been preceded by his *Leerboek van den Gregoriaenschen zang* (Ghent, 1856), his *Traité d'instrumentation* (1863), and *Les Gloires d'Italie* (Paris, 1868), a collection of secular vocal music by Italian composers of the 17th and 18th centuries, with introduction and biographies, etc. [Among his later works are *Recueil de chansons du XV^e Siècle* (1875), and other editions of old compositions; *Les origines du chant liturgique* (1890); *La mélopée antique* (1895); *La Musique, l'art du XIX^e Siècle* (1896)]. In 1871 he succeeded Fétis as director of the Conservatoire at Brussels; a post which gave scope for his remarkable powers of organisation. One of his reforms consisted in placing the singing-classes under the annual inspection of some celebrated singer. Faure was the first engaged. In 1873 Gevaërt was elected a member of the Académie des Beaux-Arts in place of Mercadante; an appointment hailed with satisfaction in France. Gevaërt is incontestably a musician of a very high order; and his fame rests on the solid foundation of a thoroughly good early education. [See also Brussels Conservatoire.] G. C.

GEWANDHAUS CONCERTS. So called from their being held in the Hall of the Gewandhaus, the ancient armoury of the city of Leipzig. They date from the time when Bach was Cantor of the Thomasschule (1723-50), and the original title was 'das grosse Concert.' The first performances were held in a private house in 1743; the conductor was Doles, afterwards Cantor of the Thomasschule (1756-89), and the orchestra consisted of sixteen performers. They were interrupted by the Seven Years' War, but resumed on its termination in 1763, under the direction of J. A. Hiller, who conducted them at his own risk, and gave them the title of 'Liebhaber-concerte.' The orchestra was increased to thirty, and regular performances were held down to Easter 1778. After a pause of three years the concerts were resumed, and located in the Gewandhaus, to which a hall for balls and concerts had lately been added. The credit of this change is due to Bürgermeister Karl Wilhelm Müller, who has a right to be considered as the founder of the

institution in its present form. He and eleven of his friends constituted themselves a board of directors, appointed J. A. Hiller as conductor, and opened a subscription list for twenty-four concerts. The first concert in the new rooms took place on Sept. 29, 1781; the first regular subscription concert on Nov. 25. At present there are twenty winter-concerts and two benefit concerts, one for the orchestra pension-fund, the other for the poor. The programmes are miscellaneous—orchestral pieces, instrumental and vocal solos, and choruses. Since 1809 eight soirées, devoted to chamber-music, have also been given. The most brilliant period of the Gewandhaus Concerts was during Mendelssohn's conductorship.

The names of the conductors are as follows:—Johann Friedrich Doles (1743-44); Johann Adam Hiller (1763-85); Johann Gottfried Schicht (1785-1810); Johann Philipp Christian Schulz (1810-27); Christian August Pohlenz (1827-35); Felix Mendelssohn Bartholdy (1835-1843); Ferdinand Hiller (1843-44); Niels W. Gade (1844-48); Julius Rietz (1848-60); Karl Reinecke (1860-95); Arthur Nikisch (1895). [For the centenary celebration of the concerts in 1881, a history of the institution was written by A. Dörffel. A new building, much more convenient than the old, was opened in 1884. See also Dr. Emil Kneschke's *Zur Geschichte des Theaters und der Musik in Leipzig* (1864).] C. F. P.

GHAZEL. A short form of Persian poetry, in which the rhyme of the two first lines is repeated in every alternate line throughout the piece. The name has been adopted by F. Hiller for a pianoforte piece (opp. 54, 130) in which a phrase recurs occasionally as a refrain. G.

GHEYN, VAN DEN. A Flemish family of bell founders, who originally belonged to the town of Malines, and afterwards spread to Saint Trond, Tirlemont, Nivelles, and Louvain. Their names are found on bells in the chimes of Malines and Louvain with various dates ranging from 1516 to 1757, that of the second great bell of the church of St. Rombaud at Malines.

The ornament of the family, Matthias van den Gheyn, son of André François, was born April 7, 1721, at Tirlemont, removed to Louvain, was appointed organist of the church of St. Peter 1741, and on July 1, 1745, became by public competition carillonneur to the town of Louvain, which two posts he retained till his death, June 22, 1785. As carillonneur his duties were to play on all market days, fête days, and other public occasions, to keep the chimes in tune and to set fresh tunes for hours and half-hours on the drum of the carillon, whenever so required by the authorities; for this the salary was 100 'pattacons' a year. For private festivities extra fees were paid. His habit was, in addition to his regular duties, to extemporise on the carillon for half an hour every Sunday. Matthias married Feb. 24, 1745, and had seventeen children, one of whom, Josse Thomas (born 1752), succeeded him as organist after his death.

Chev. X. V. van Elewyck, from whose pamphlet (*Matthias van den Gheyn*, Louvain, Peeters, 1862) the foregoing account has been condensed, has collected fifty-one compositions by Matthias. Of these three were printed—*Fondements de la basse continue*, etc. (Louvain, Wyberechts); '12 petites sonates pour l'orgue ou le clavecin et violon' in continuation of the foregoing; 'Six Divertiments pour clavecin' (London, Welcker, Gerrard Street, Soho). The rest remained in MS. during his lifetime; they consist of a second treatise on harmony and composition, Preludes and Fugues for the organ, Sonatas for Clavecin, and Airs, Rondos, Marches, Menuets, Fugues for three and four parts, etc., for the carillons. Elewyck published a volume selected from these (Schott, 1863), forming vol. i. of his *Anciens Clavecinistes Flamandes*. G.

GHRO, Johann, born in Dresden, was organist to the Churfürstl. Schule of S. Affran, in Meissen, Saxony, in 1604-12, and in 1625 Musik-director and organist of the Kapelle of Rudolph von Bünaw at Wesenstein. He published pavans and galliards, which are described as plain and heavy in style.

List of works:—

1. Sechsvnddreissig neue liebliche vnd zierliche Intraden, so zuvor niemals gesehen, noch inn Truck kommen, jetzo aber zu sonderlichen wolgefallen allen der Edlen musica Liebhabern, bevor aufs denen, so sich der Text nicht gebrauchen, zur fröligkeit mit füuff Stimmen gesetzet . . . Durch Johannem Ghro Dresd. Gedruckt zu Nürnberg durch Paulum Kauffmann. 1603. 4to. Five part-books in the Wolfenbüttel herzogl. Bibl. (See Vogel's Cat.) It was reprinted in 1611, with the same title, but 'Gedruckt zu Nürnberg durch Abraham Wagenmann in verlegung David Kaufmanns. 1611.' Contents the same, with the original preface dated 1603. Five part-books in the Liegnitz königl. Ritteracademie Bibl.

2. Dreissig neue ausserlesene Padovane und Galliard, mit fünff Stimmen, so zuvor niemals in Truck kommen, auff allen Musikalischen Instrumenten lieblich zugebrauchen. Componirt durch Johannem Ghro Dresd. Gedruckt zu Nürnberg durch Paulum Kauffmann. 1604, 4to. The preface is dated from 'Meissen, am Tage Petri u. Pauli im 1604 Jare. Joh. Ghro. Organist der Churfürstl. Schul zu S. Affran daselbsten.' Five part-books in the Frankfurt Gymnasial Bibl. etc. (See Israel's Cat.) It was reprinted in 1612, to the title was added '. . . lieblich zugebrauchen. Sampt einem zu end angehengtem Quotlibet genannt, Bettlermantel, von mancherley guten Flecklin zusammen gestickt und geflickt . . . mit vier Stimmen verfertigt, durch Johann Ghroen Dresdensem der Churfürst. Schulen in Meissen Organisten. Gedruckt zu Nürnberg durch Abraham Wagenmann in verlegung David Kauffmans. 1612.' 4to. It contains eighteen Padovanen and twelve Galliarden for five voices and the Quotlibet for four voices. Five part-books in the Breslau Stadtbibl. etc. (See Bohn's Cat.)

3. Bettler Mantel, von mancherley guten Flecklein zusammen gestickt und geflickt, allen denen so inen was neues belieben lassen, zu Ehren mit vier Stimmen in Truckt verfertiget durch Johann Ghroen Dresdensem, der Churfürstl. Schulen inn Meissen Organisten. Gedruckt zu Nürmberg, durch Paulum Kauffmann. 1606. 4to. The Altus and Tenor, the only two part-books known, are in the Berlin königl. Bibliothek. (Eitner.)

4. Trifolium sacrum musicale oder geistliches musikalisches Kleeblätlein . . . insonderheit aber den antahenden jungen Knaben zum täglichen Exercitio zum bestem componiret . . . durch Johann Grohen Dressel. dero Zeit der Bünauischen Capellen zum Wesenstein verordneten Direct. und Organisten. Nürnberg, durch Ah. Wagenmann gedr. in verl. David Kauffmanns. 1625, 4to. Three part-books, the Prima vox and the Tertia vox, are in the Berlin königl. Bibl. A composition by Joh. Groe 'Das ist mir lieb' in four movements, written for five voices, is in Burckhard Grossman's 'Angst der Hellen . . . der cxvi. Psalm Davids, durch etzliche vornehme Musicos im Chur und Fürstenthum Sachsen.' etc. Jena. 1623. A MS. copy of it (MS. z 110) is in the Berlin Königl. Bibl. (Eitner.)

In the Liegnitz Ritteracademie Bibl. in MS. 24 (No. 58) third part, is a 'Padouan *a* 5' by Joan. Groh. (See Pfudel's Cat. p. 37.)

In the Zwickau Ratsschulbibl. in MS. 10. No. 378, a motet 'Lobet den Herren' for eight voices, by Johannes Groh. (See Vollhardt's Cat.)

Becker, *Die Tonwerke des 16. u. 17. Jahrh.* 1855, gives a work by J. Groh, 'Der CIV Psalm zu XXI Versikuln gesangweis gesetzt u. nach Art der Motetten zu 3, 4, bis 8 Stimmen.' Nürnberg. 1613. 4to.

Eitner, *Tänze des 15. bis 17. Jahrhunderts*, 1875, p. 126, reprinted No. 5 from Ghro's 36 *Intraden*, 1611. C. S.

GEWANDHAUS, LEIPZIG

GIARDINI, Felice de, an eminent violinist, was born at Turin, April 12, 1716. He entered the choir of Milan Cathedral as a boy, and became a pupil of Paladini in singing, composition, and the harpsichord. He afterwards returned to Turin, and studied the violin under Somis. He was still very young when he entered the opera-band at Rome, and soon afterwards that of San Carlo at Naples. In possession of a brilliant execution, he appears to have been fond of displaying it by interpolating in the accompaniments of the airs all sorts of runs, shakes, and cadenzas, and thereby eliciting the applause of the house. Of this habit, however, he was cured in an emphatic manner. During the performance of an opera of Jommelli's, the composer came into the orchestra and seated himself close to young Giardini. Giardini, anxious to give the maestro a proof of his cleverness, introduced into the ritornello of a pathetic air a brilliant cadenza of great length, at the end of which Jommelli rewarded him with a sound box on the ear. Giardini in after years was fond of relating this incident, and used to add that he never had a better lesson in his life. He certainly proved himself not only an eminent virtuoso, but an equally good leader and conductor.

From Naples he started in 1748 for a tour through Germany and thence to London. The date of his first public appearance here is variously given. According to Burney it took place in 1750, at a concert of Cuzzoni's. His success was immense, and Burney affirms that no artist, Garrick alone excepted, was ever so much applauded as Giardini. His powerful yet mellow tone, the brilliancy and boldness of his execution, the spirited and expressive style in which he played the grand works of Tartini, as well as his own lighter but pleasing compositions, created a perfect furore, and he became at once the declared favourite of the London public. We may form an idea of the peculiarity of his style from the fact that when De Bériot came to England, the old musicians, who still remembered Giardini, were greatly struck by the similarity of De Bériot's style to his. [In 1751 he started subscription concerts with the oboist Thomas Vincent.] After Festing's death in 1752, Giardini took the place of leader at the Italian Opera, and appears to have infused new life and spirit into the band, which had much deteriorated under Festing's languid leadership.

In 1756 he undertook the management of the Italian Opera, but thereby suffered great losses. Nevertheless we find him as impresario in 1763, 1764, and 1765. After this he devoted himself once more to playing and teaching the violin, and leading at concerts and musical festivals. At this period F. Cramer became his formidable rival, though the two remained on most friendly terms. From 1770 to 1776 he was leader at the Three Choir Festivals, from 1774 to 1780 at the Pantheon Concerts, and in 1782 and 1783 once more at the Italian Opera. In 1784 he left England, apparently resolved to retire from public activity and spend the rest of his life in Italy. But his restless spirit brought him back to London in 1790, when he started a Comic Opera at the Haymarket. This proving a failure, he went with his troupe to Russia, and died at Moscow, Dec. 17, 1796.

Giardini's immense success on his first appearance in London was no doubt greatly due to the fact that he really was the first violin-virtuoso of eminence that had been heard there, and his star went down as soon as Salomon and Cramer became his rivals; but notwithstanding this, his influence on musica and operatic life in England was considerable. He brought out a number of operas, though with little success. [He composed the second part of an oratorio, 'Ruth,' in 1763, the first part being by Avison and the third by Boyce. In 1765 and 1768 he wrote the other two parts], and his work was several times performed in London. His numerous compositions for the chamber include, nine sets of six violin solos (sonatas) (opp. 1, 4, 5, 6, 7, 8, 11, 16, 19), Violin Duets (opp. 3, 5); six Sonatas for Piano and Violin (op. 3); Twelve Violin Concertos (opp. 4, 5, 15); seven sets of Trios for stringed Instruments (opp. 2, 4, 13, 17, 20, 26, 28), six Quintets for strings (op. 11); eighteen Quartets for strings (opp. 22, 23, and 29). P. D.

GIBBONS. The name of a noted family of English musicians.

1. The Rev. Edward Gibbons, Mus.Bac., born about 1570, was possibly son of William Gibbons, one of the Waits of the town of Cambridge. He graduated as Bachelor of Music at Cambridge, and on July 7, 1592, was incorporated at Oxford. [At midsummer of that year he became organist and master of the choristers at King's College, Cambridge. About 1599] he was appointed organist of Bristol Cathedral and also priest-vicar, sub-chanter, and master of the choristers there. He resigned these appointments in 1609 on receiving those of organist and custos of the college of priest-vicars in Exeter Cathedral, which he retained until the silencing of the organ and choir in 1644. [See West's *Cath. Org.* p. 6.] Hawkins says he was sworn a gentleman of the Chapel Royal, March 21, 1604; but that is a mistake, as his name is not to be found in the cheque-book of the Chapel, and the date given is that of the admission of his younger brother, Orlando, as organist. Some compositions of his are preserved in the Music School at Oxford; and an anthem, 'How hath the city sate solitary!' with a prelude for the organ and accompaniments for viols is contained in the Tudway collection,

British Museum (Harl. MS. 7340). He is said to have advanced £1000 to Charles I. during the civil war, for doing which his estate was confiscated, and himself and three grand-children compelled to quit his house when he was upwards of eighty years of age. Matthew Locke was his pupil at Exeter.

2. Ellis, brother of the preceding, was organist of Salisbury Cathedral at the latter end of the 16th century. He contributed two madrigals—'Long live fair Oriana,' and 'Round about her chariot'—to 'The Triumphs of Oriana,' 1601. About the same time he ceased to be organist of Salisbury, but whether by death or resignation does not appear. W. H. H.

3. Orlando Gibbons, younger son of William Gibbons, one of the Cambridge Waits, and thus younger brother of the two preceding musicians. He was born at Cambridge in 1583, and was admitted into the choir of King's College in Feb. 1596, under his elder brother, Edward, who was master of the choristers at the time. The name, spelt 'Gibbins,' appears regularly in the lists of payment from early in 1596 until the second week after Christmas 1597, when it occurs at the top of the list as that of the senior chorister. The single entry in the winter of 1598 is possibly that of a younger brother. After leaving the choir, no doubt on the breaking of his voice, he was paid various sums for music written for various festivities at Michaelmas 1601, 1602, and 1603, and at Christmas 1602 and 1603. On March 21, 1604, he succeeded Arthur Cock, deceased, as organist of the Chapel Royal in London, and in 1606 he took the degree of Mus. B. at Cambridge (Abdy Williams, *Degrees in Music*, pp. 125 and 156, where the words of the grace are quoted, referring to his having studied music for seven years).

He must have mastered a good deal more than the rudiments of composition by 1611, when he joined Byrd and Bull in the compilation of virginal pieces called *Parthenia*. This contains a fantasia in four parts by Gibbons, which is so masterly in design, so finely invented, and so splendidly carried out, that we meet with nothing at all comparable to it until the time of Bach. Another work by Gibbons alone made its appearance possibly about the same time; the 'Fantasies of Three Parts' (for viols) are unfortunately without date, or more trustworthy clue to the time of their appearance than can be obtained from the facts that the composer is called 'Batchelour of Musick,' so that it must have been after 1606, and that the dedication to Edward Wray, one of the grooms of the king's bedchamber, shows that it must have been before 1622, when Wray lost his place. As the title also contains the words 'Late Organist of His Majesties Chappell Royall'—and there is nothing to show that Gibbons was dismissed from that post during his life—its evidence may be a little discounted; still, we are left without actual evidence of the date of the compositions, which, from internal evidence, are a good deal less mature than the great fantasia in *Parthenia*. The dates 1609 and 1610 have been suggested, but apparently quite without ground; a comparison of the titles of the Fantasies and *Parthenia* implies, indeed, that whereas the former claims to be the first music 'cut in copper, the like not heretofore extant' (in England, of course), while the latter only claims to be the 'first music that ever was printed for the Virginalls,' the Fantasies must have preceded the publication of *Parthenia*. (See Engraving, vol. i. p. 783.) The Fantasies are nine in number, four for treble, meane, and bass viols, and five for two trebles and bass. They are all cast in the same form, in a fugal style; they must have been popular for a long time after their first appearance, as they were reprinted several times, as *circa* 1630, and in 1653; in 1648 they appeared in a collection of 'XX koninckly che Fantasien' (the only complete copy known is in the library at Wolfenbüttel), and in 1843 they were again brought out by the Musical Antiquarian Society, edited by Dr. E. F. Rimbault. The same society reprinted the all-important publication of 1612, Gibbons's 'First Set of Madrigals and Motets of 5 Parts; apt for viols and voyces.' There are thirteen complete madrigals (no motets), but as some of these are divided into two, three, or even four sections, each as long as an ordinary madrigal, we may count the number as twenty. Among them are some, such as 'The Silver Swan,' 'O that the learned poets,' and 'Dainty fine bird,' that have remained popular wherever madrigals are sung. Besides these, which are really masterpieces in their kind, such things as 'What is our Life?' and 'Trust not too much, fair youth,' are magnificent examples of the finest English workmanship in the polyphonic style. In 'What is our Life?' especially, the composer shows that he has attained that instinct for musical expressiveness which had already created a kind of revolution in the music of Italy, and the first traces of which in England are to be met with in Gibbons's later works. Sir Christopher Hatton has been credited with the authorship of the words, from a passage in the dedication to him: 'They were most of them composed in your owne house, and doe therefore properly belong vnto you, as Lord of the Soile; the language they speake you prouided them, I onely furnished them with Tongues to vtter the same.' Whether Sir Christopher Hatton or some one else wrote the words, there can be no doubt that they are of excellent quality, and certain turns of thought and phrase suggest that they are all by the same hand. There is further evidence that the composer was on terms of intimacy with his patron, in the fact that in the collection of virginal-

music called 'Benjamin Cosyn's book,' in the Royal Collection at Buckingham Palace, there is a piece by Gibbons entitled 'La: Hatten's Galliard.' In the *Declared Accounts of the Audit Office* is the following entry, communicated by G. E. P. Arkwright, Esq.:—'Alsoe allowed for money paid to Orlando Gibbons one of his Ma^ties^ Musicions for the virginalles to attend in his highnes privie Chamber which was heretofore supplied by Walter Earle deceased at xlvi^li^ p. ann. during his life the first payement to begin from the feast of St. Michaell the Archaungel 1619. By war^t^ under the Signett dated at West^m^ the xxvij^th^ day of January Anno xvij^mo^ R. Jacobi due for one whole year ended at Mich^as^ 1620 xlvi^li.^' He received this salary, or pension, until 1623, and after his death, Thomas Warwick, or Warrock, was appointed musician for the virginals in 1630. In May 1622 he accumulated the degrees of bachelor and doctor of music at Oxford, on the occasion of the foundation of the history professorship by Camden, who requested the university to confer the musical degrees upon Gibbons as well as upon Heather, the first occupant of the chair. Heather, or Heyther, was a musician by profession, and had been a chorister of Westminster Abbey; he does not appear to have been a composer, and, by way of exercise for the degree, it seems beyond question that Gibbons wrote the anthem, 'O clap your hands' to serve for both degrees. (Dr. W. H. Cummings is in possession of a copy of this anthem, inscribed 'Dr. Heather's Commencement Song, compos'd by Dr. Orlando Gibbons.' The copy was in Gostling's sale.) In 1623 Gibbons was rated as residing in the Woolstaple, Westminster, and in the same year he was appointed organist of the Abbey in succession to John Parsons. In 1625 he was commissioned to compose the music on the occasion of the reception of Henrietta Maria by Charles I., and was commanded to be present at Canterbury. He died there, on June 5, Whitsunday, of an apoplectic seizure. The report of the *post-mortem* examination held on him is preserved in the Record Office, and was printed in the *Athenæum*, Nov. 14, 1885. He was buried on the day following his death in Canterbury Cathedral, where a monument to his memory was placed against the wall of the north aisle of the nave. The inscription on it is given in full in West's *Cath. Org.* p. 106. His widow, Elizabeth, daughter of John Patten of Westminster, yeoman of the vestry of the Chapel Royal, bore him seven children between 1607 and 1623, and died in 1626. A portrait of the composer, by an unknown artist, is in the Music School, Oxford.

Only a very few of the magnificent anthems left by Gibbons in manuscript can be even approximately dated; but on a copy of some of them, in the British Museum (Add. MS. 31,821), are some notes, apparently on the authority of Dr. Philip Hayes, which serve as some sort of guide to the dates of a few of them. 'Great King of Gods' was 'made for the King's being in Scotland, 1617,' and 'This is the record of John' is noted as being 'made for Laud, the president of St. John's, Oxford, for John Baptist's Day.' Now Laud was president of St. John's from 1611 to 1621, so that we have a limit of time for this intensely interesting anthem, which shows the influence of the new Italian music, and the monodic style, upon one of the greatest of all the polyphonic writers. The words, although set to music that is never ungainly or anything but flowing and melodious, have evidently suggested the inflection of the music in a way that hitherto had not appeared in England. Another anthem is more exactly dated by a copy in St. George's Chapel, Windsor, where it is recorded that 'Behold, Thou hast made my days but a span long,' was composed at the request of Anthony Maxey, dean of Windsor, and performed at his funeral, and in the autograph of the same anthem at Christ Church, Oxford, the same destination of the anthem is given. Dean Maxey's successor was appointed on May 11, 1618. A portrait, copied from a lost original once in the possession of a Mrs. Fussell, is in the Music School, Oxford.

A number of services and anthems were printed in Barnard's *Church Music*, and these, together with some other works of the same kind, were also given in Boyce's *Cathedral Music*. The number of extant compositions for the church was completed in 1873 by the publication of a volume of services, anthems, and the separate organ-parts to sundry other anthems, etc., otherwise unknown, edited by the Rev. Sir F. A. Gore Ouseley. These excluded the music already contained in Boyce's *Cathedral Music*. The following list of Gibbons's works is believed to be complete:—

SERVICES

Preces in F, *a* 5. (MSS. at Ch. Ch., Oxford, and St. Peter's College, Cambridge, called 'First Preces' in both. Ouseley.)
Preces in G, *a* 5. (Barnard, called 'First Preces.' Ouseley.)
Psalm, 'to First Preces,' 'Thou openest Thine hand.' (Barnard.)
First Service, Morning and Evening, in F, *a* 4. (Barnard, Boyce, Novello.)
Second Service, *a* 5, in D minor. (Barnard, Ouseley.)
Te Deum, Benedictus, Kyrie, Creed, Sanctus, Magnificat, and Nunc Dimittis, *a* 4, in G. (Ouseley.)
Sanctus, *a* 4, in F. (Boyce.)

FULL ANTHEMS

Deliver us, O Lord. *a* 4. (Barnard, Ouseley.)
Part 2. Blessed be the Lord God. (Do., do.)
Almighty and Everlasting God. Full, *a* 4. (Barnard, Boyce, Novello.)
Hosanna. Full, *a* 6. (Boyce, Novello.)
O clap your hands. Full, *a* 8. (Boyce, Novello.)
2nd part. God is gone up. (Do., do.)
O Lord, in Thy wrath. *a* 6. (Ouseley.)
O Lord, in Thee is all my trust. *a* 5.
Why art thou so heavy, O my soul? *a* 4. (Ouseley.)
Blessed be the Lord God of Israel. *a* 4. (Ouseley.)
O Lord, increase my faith. *a* 4. (Ouseley, Novello.)
Lift up your heads. *a* 6. (Novello.) Organ part in Ouseley.

VERSE ANTHEMS

(The number of parts is in all cases the largest number employed.)

Behold, Thou hast made my days. Funeral anthem, *a* 5. (Barnard Ouseley.)
This is the record of John. *a* 5. (Ouseley, Novello.)
Behold, I bring you glad tidings. *a* 6. (Ouseley.)
If ye be risen. *a* 5. (Ouseley.)
We praise Thee, O Father. *a* 5. (Ouseley.)

Lord, grant grace. *a* 8. (Ouseley.)
Glorious and powerful God. *a* 5. (Ouseley, Novello.)
See, see, the word is incarnate. *a* 6. (Ouseley.)
Sing unto the Lord. *a* 5. (Ouseley.)
Blessed are all they. *a* 6. (Ouseley.)
Great King of Gods. *a* 5. With Viols. (Ouseley.)
O all true faithful hearts. *a* 5. With Viols. (Ouseley.)
The eyes of all wait upon Thee. (Novello.)
I am the Resurrection. (Incomplete, in British Museum, Add. MSS. 29,366-68.)

HYMNS

O Lord, how do my woes increase. *a* 4. (Leighton's *Teares or Lamentations*, Ouseley.)
O Lord, I lift my heart to Thee. *a* 4. (Leighton's *Teares*, etc., Ouseley.)
Sixteen hymn tunes, appended to George Withers's *Hymns and Songs of the Church* (1623), reprinted by J. R. Smith (1856). Four of the hymns, which have only treble and bass in the original, are given in Ouseley, in their original form; eight are harmonised in *Fattendon Hymns*, Oxford, 1899; and six are in *Hymns Anc. and Mod.*, 1904.

MADRIGALS

All for five voices, printed (in part-books) in 1612; reprinted by the Musical Antiquarian Soc.

The Silver Swan. (Novello.)
O that the learned poets. (Novello.)
I weigh not fortune's frown.
Pt. 2. I tremble not at noise of war.
Pt. 3. I see ambition never pleas'd.
Pt. 4. I feign not friendship where I hate.
How art thou thrall'd. | Pt. 2. Farewell, all joys.
Dainty fine bird. (Novello.)
Fair ladies that to love. | Pt. 2. 'Mongst thousands good.
Now each flow'ry bank.
Lais now old.
What is our life? (Ausgewählte Madr.)
Ah! dear heart. (Novello.)
Fair is the rose.
Nay, let me weep.
Pt. 2. Ne'er let the sun. | Pt. 3. Yet if that age.
Trust not too much, fair youth. (Arion.)

The Cries of London. *a* 6. (In MSS. in the Royal College of Music; in Brit. Mus., Add. MSS. 29,372-77, etc.)
The Country Cry, and other pieces of the same kind, are found without any composer's name in Brit. Mus., Add. MSS. 17,792-96 and 29,427.

FANCIES FOR VIOLS

Nine Fantasies of three parts, printed early in the 17th century (see above). Reprinted by the Mus. Antiq. Soc.
22 Fancies of three parts in MS. at Ch. Ch., Oxford.

VIRGINAL MUSIC

Six pieces in *Parthenia*. (Printed in 1611; reprinted by the Mus. Antiq. Soc., in the *Trésor des Pianistes*, etc.)
Galiardo in C.
Fantasia of four parts. (In Dannreuther's *Primer of Ornamentation*, correctly transcribed from the original.)
The Lord of Salisbury his Pavin.
Galiardo in A minor.
The Queenes Command.
Praeludium in G.
In the Fitzwilliam Virginal Book there is a Pavane and a Fantasia or variations, 'The Woode soe wilde.'

MS.

In Benjamin Cosyn's Virginal Book, in the Royal Library at Buckingham Palace, are twenty-five pieces by Gibbons, besides one more attributed to him in the index.
In the Ch. Ch. Library, Oxford, are eleven of the pieces called 'In Nomine,' seven in five parts and four in six. Also voluntaries, etc.

M.

CHRISTOPHER GIBBONS, Mus.D., second son of Orlando Gibbons, was born in 1615 (baptized on August 22). He was a chorister in the Chapel Royal, and was afterwards educated in the choir of Exeter Cathedral under his uncle, Edward. In 1638 he was appointed organist of Winchester Cathedral, which appointment he was compelled to quit in 1644, when he joined the Royalist army. In 1660 he was appointed organist of the Chapel Royal, private organist to Charles II., and organist of Westminster Abbey. On July 7, 1664, the University of Oxford conferred on him the degree of Doctor of Music, 'per literas regias,' on which occasion the Dean and Chapter of Westminster made him a present of £5. [He was succeeded at Westminster Abbey by Albertus Bryan in 1666.] He died Oct. 20, 1676, and was buried in the cloisters of Westminster Abbey. Some anthems of his composition as well as fancies for viols, etc., are extant in MS. at Ely, the British Museum, the Royal College of Music, etc., and some of his hymns are printed in the second set of Dering's *Cantica Sacra*, 1674, but he excelled more as a performer than a composer. [He joined Matthew Locke in the composition of the *Masque of Cupid and Death*, performed 1653.] A portrait of him is preserved in the Music School, Oxford.

W. H. H.

GIBSON, GEORGE ALFRED, violinist, born at Nottingham, Oct. 27, 1849. Began the study of the violin at the age of ten under his father. Studied afterwards under Henry Farmer, and made appearances as a soloist at the age of twelve. In 1867 he came to London and played in the band at the Prince of Wales's Theatre; in 1870 he was a first violin in the Italian Opera at Drury Lane, a year later he joined the Covent Garden orchestra. He made his first appearance at the Monday Popular concerts on Jan. 28, 1882, appearing at intervals until 1893, when on the retirement of Herr Straus he was appointed to the post of viola in the Quartet. On Nov. 5, 1893, he was appointed leader of Her Majesty's Private Band. Mr. Gibson's reputation rests entirely on his concerted music playing, in private as well as in public, and on his ability as a teacher. He is professor of the violin at the Royal Academy of Music, and the Guildhall School of Music.

W. W. C.

GIGELIRA. See XYLOPHONE.

GIGOUT, EUGÈNE, an eminent French organist, born at Nancy, March 23, 1844, was educated at the maîtrise of the cathedral there, and entered Niedermeyer's École de Musique religieuse, in Paris, at the age of thirteen. He was one of Niedermeyer's favourite pupils, and subsequently married his younger daughter; he was professor in that school for upwards of twenty years, and, after a long interval, re-entered it in 1902 as professor of the organ. He became organist of Saint-Augustin in 1863, and during his tenure of that post, made tours as a virtuoso on the organ, in England, Germany, Italy, Spain, Switzerland, and played in Paris during the various international exhibitions. He enjoys a great reputation as an extempore player. In 1885 he founded an organ school for organ and improvisation, subventioned by the State, an institution which has produced many distinguished pupils. Gigout has written numerous pieces of importance for his instrument; his 'Album Grégorien,' in two volumes, containing more than 300 pieces, has become a classic; a volume of 'Pièces brèves' in the modal style of plain-song, and a collection called 'L'Orgue d'Église' are of great value; besides these, he has published many transcriptions, vocal and church music, a 'Méditation' for violin and orchestra, a pianoforte sonata, and many other things.

G. F.

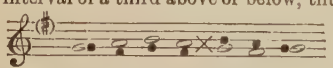
GIGUE or GIGA is an old Italian dance which derives its name (or *vice versâ*) from the *Giga*, *Gigue*, *Geige*, or early fiddle. It was

written indiscriminately in 3–8, 6–8, 3–4, 6–4, and 12–8 time, and was in two strains or sections, each of which was repeated. Its time was lively, and it was usually employed to finish up a Suite. A good example is that which winds up No. 8 of Corelli's twelve solos.

Bach also employs them to close his Suites, and has left an immense variety, not a few of which are in common time, as well as 9–16 and 12–16. The well-known one in the Partita in B♭ is in 4–4, and that in the last Partita of the same set in 8–4. Handel's sixteen Suites contain thirteen Gigues, one of which contains 143 bars, and unlike most gigues, is not divided into two sections. [There was a convention that the second part of the gigue should be built on an inversion of the first subject. See Spitta, *J. S. Bach*, Engl. tr. iii. 159.] Mozart has left a very fine little specimen (Köchel, p. 574) which he wrote in an album at Leipzig after a surfeit of Bach.

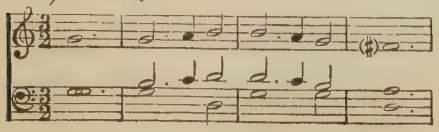
English Jigs seem to have no special characteristics. The word came to be synonymous with any light irreverent rhythm, giving the point to Pope's line

Make the soul dance upon a jig to heaven. G.

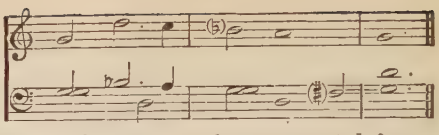


GILES, Nathaniel, Mus.D., son of Thomas Giles, organist of St. Paul's Cathedral, was born in or near Worcester about the middle of the 16th century. In 1559 he was admitted a chorister of Magdalen College, Oxford, which office he resigned in 1561. In 1577 he was appointed a clerk in the same chapel, but retained the place only until the next year. He graduated at Oxford as Bachelor of Music, June 26, 1585. On Oct. 1, 1595, he received the appointments of clerk, organist, and master of the choristers of St. George's Chapel, Windsor. [The warrant of his appointment is printed in West's *Cath. Org.* p. 132.] On the death of William Hunnis in June 1597, he was appointed, on July 4, gentleman and master of the children of the Chapel Royal. Having supplicated for the degree of Doctor of Music in 1607, but from some unknown reason not having performed the exercise for it, he proceeded to it July 5, 1622. It has been asserted that on the accession of Charles I. he was appointed organist of the Chapel Royal, but there is no record of such an appointment in the Cheque Book. Giles contributed to Leighton's *Teares or Lamentacions of a Sorrowfull Soule*, 1614; a service and an anthem by him were printed in Barnard's *Church Music*, 1641, and other anthems, etc., are extant in MS. at Ely, Ch. Ch. Oxford, the Fitzwilliam Museum at Cambridge, the Royal College of Music, etc. A curious 'Lesson of Descant of thirtie eighte Proportions of sundrie kindes' by him is printed in the appendix to Hawkins's *History of Music*. Giles died Jan. 24, 1633, and was buried in one of the aisles of St. George's Chapel, Windsor, where an inscription was placed over his grave which stated him to have been master of the children there forty-nine years, master of the children of the Chapel Royal thirty-eight years, and to have been seventy-five years of age. A comparison with the dates given above, which are all derived from authentic records, will show that all three statements on the gravestone are erroneous. W. H. H.

GILMORE, Patrick Sarsfield, a popular bandmaster in the United States, was born Dec. 25, 1829, in Co. Galway. [He became a member of the regimental band at Athlone, Co. Westmeath in 1845, and in 1849] he went to Canada with an English band of which he was a member, and soon after went across into the United States and settled at Salem, Massachusetts, where he was appointed leader of a military band. In 1859 Gilmore went to Boston and organised a band, named after himself, which became distinguished for its fine playing, the result of his training. During the Civil War Gilmore was a bandmaster in the Federal Army stationed at New Orleans, where, in 1864, he gave a festival with a monster orchestra made up from the army bands, and startled the audience with some novelties, one of which was the firing of guns by electricity, making the report come on the first beat of the bar, as though they were great drums. This effect was reserved for the performances of patriotic music. Gilmore's widest reputation, not confined to the United States, was earned by his success in organising the two immense music festivals in Boston—one in 1869, known as the National Peace Jubilee, with an orchestra of 1000 and a chorus of 10,000; the other in 1872, called the World's Peace Jubilee, with 2000 players in the band and 20,000 choristers. On each occasion a powerful organ, chimes of bells, anvils and artillery were added to the orchestral resources, and an immense shed was built for the concert-room. Shortly after the second jubilee Gilmore went to New York and took charge of a large military band, with which he travelled over the United States and even about Europe on concert tours. He also had charge of large bands at concert gardens in New York and at summer resorts on the neighbouring coast. His compositions of military and dance music, as well as his arrangement of works of different kinds for open-air performance, have enjoyed a wide popularity. [He died at St. Louis, Sept. 24, 1892.] F. H. J.; additions by W. H. G. F.



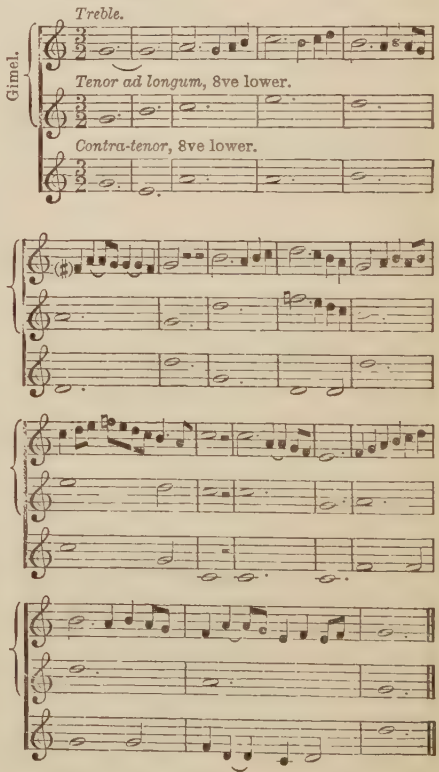
GILSON, Paul, born at Brussels, June 15, 1865, is an eminent Belgian composer, who has been professor of harmony at the Conservatoire Royal at Antwerp since 1902. He is the author of numerous orchestral, choral, and vocal com-



positions. Having learnt the elements of music from the organist Cantillon, he studied harmony and counterpoint with Duyck, a pupil of the elder Fétis. He also took private lessons from Gevaert, the director of the Brussels Conservatoire, and in 1889 obtained the Prix de Rome, instituted by the Belgian government in imitation of the similar prize given by the French Institut. His prize cantata, 'Sinaï,' performed in 1890 at Brussels, produced a very great sensation. It was followed by a symphonic work, 'La Mer,' after a poem by Eddy Levis, which is recited before each movement of the symphony. Performed at the Concerts Populaires of Brussels in 1892, afterwards at Paris, at the Colonne Concerts, and in many towns of Germany (Crystal Palace, Nov. 1897), it is published in a piano score by Breitkopf & Härtel. It reveals a most remarkable mastery of orchestral technique, a strong sense of picturesque instrumentation, an uncommon knowledge of harmony joined to an interesting originality of invention, together with a clever employment of rhythms taken from oriental folk-music. Though of Flemish race, M. Gilson is the spiritual descendant of the young Russian School, whose works he has studied with marked attention. Besides his cantata already spoken of, we may mention among his choral works, 'Francesca de Rimini,' for soli, choir, and orchestra (Concerts Populaires, Brussels, 1895); Inaugural Cantata for the Brussels Exhibition of 1897; and 'Le Démon,' an oratorio, after Lermontov, performed at Mons. For orchestra there are a fantasia on Canadian themes, a Scottish Rhapsody, a 'Humoresque' for wind instruments, often played at the Brussels Conservatoire. About thirty songs, with accompaniment for piano or orchestra. M. Gilson's dramatic works include a ballet, 'La Captive' (Théâtre de la Monnaie, 1902); incidental music for Em. Hiel's drama, 'Alva,' and an opera, 'Prinses Zonneschijn' (produced at Antwerp, 1904). The composer has numerous compositions as yet unperformed. M. K.

GIMEL (from the Latin *gemellus*, 'twin'), a form of discant described by Gulielmus Monachus, a writer of the 15th century, as peculiar to the English. It was sung by two voices, generally at the interval of a third above or below, thus:—

Sometimes, however, in a 'Gimel ad modum de Fauxbourdon,' the voices were a sixth or even a tenth apart, as in the following example, in which a contratenor 'bassus' (*i.e.* below the tenor) is added.



The treble part was often constructed from a plain-song melody, with embellishments, as in Fauxbourdon. Gulielmus gives an example founded on this plain-song,

in which the 'twin' voices are a sixth apart, and a contratenor bassus is again added, as in the previous example.

See Coussemaker, *Scriptores*, iii. 289, 292.

In the 16th century the term *gimel* was applied to any part of a vocal composition that was temporarily 'divided.' Such a gimel occurs in the first treble part of Tye's *Euge Bone* mass at the words 'Pleni sunt coeli' (p. 35 of Mr. Arkwright's *Old English Edition*). In the Sadler part-books at Oxford (MS. Mus. e. 1-5 of the Bodleian Library) may be seen an example of a double gimel. It occurs in Robert White's 5-part antiphon 'Justus es, Domine,' at the words 'Tribulatio et angustia invenerunt me.' Both the treble and alto parts are divided for

some fifty bars, or nearly a third of the whole composition, and are accompanied by the bass part only. In the Eton folio MS. 178, the word 'gemellum' is used, and is contradicted by the word 'semellum' (*i.e.* single), when the single undivided part is resumed. J. F. R. S.

GIOCONDA, LA. Opera in four acts, the libretto founded on Victor Hugo's *Angelo* by 'Tobia Gorrio' (*i.e.* Arrigo Boito); music by Amilcare Ponchielli. Produced at the Scala, Milan, April 8, 1876; in a revised version at Genoa, in December 1879; and at Milan again in the following February. At Covent Garden, May 31, 1883, in Italian, with M. Edouard de Reszke in the part of Alvise; in English, by the Moody-Manners Company, at the Kennington Theatre (first time in English in London), May 6, 1903, with Mme. Blanche Marchesi in the title part.

GIORDANI. An Italian musical family of the 18th century, the head of which seems to have been one CARMINE GIORDANO, or Giordani, who wrote an opera, 'La Vittoria d'Amor,' at Naples in 1712, and whose 'versetti' for organ are in the Brit. Mus. (Add. MS. 14,247); a cantata for soprano is in Add. MS. 14,227. That the name 'Carmine' was the surname of the family is an error which has been copied from Fétis into most of the dictionaries. The family appeared in comic operas at Naples until 1753, when the father, two daughters, and the elder son, Tommaso, migrated to London. TOMMASO was born in Naples about 1740, and went to Dublin in 1761, where he produced Italian operas at the Smock Alley Theatre, with a brother, a dancer, who cannot have been Giuseppe (see below). In or about 1762 the whole family, with the exception of Giuseppe, came out at the Haymarket Theatre with great success; in 1765 and 1766 Tommaso was again in Ireland, and on April 24 of the latter year, he brought out his comic opera 'Love in Disguise' for the first time. He conducted the Castle Ode for Lord Townshend, the Viceroy, in August 1769. His 'Artaserse' is mentioned in Bremner's catalogue for 1778. In the winter of 1778-79 he opened the little theatre in Capel Street (not Chapel Street), in partnership with a singer named Lini, and remained there for over three years. He returned to London in 1781, and lodged at Spring Gardens, in the room above John O'Keeffe. Two of his airs were introduced into Arnold's 'Castle of Andalusia.' He returned to Dublin in 1784-85, married a Miss Wilkinson, and settled in the Irish capital. He taught Lady Morgan, Tom Cooke, and others, the piano. In April 1789 he composed and conducted a new Te Deum in the Catholic Chapel, Francis Street, Dublin, at a solemn High Mass, in thanksgiving for the King's recovery. In the same year his opera, 'Perseverance,' was produced at the Crow Street Theatre, Dublin. After 1798 we hear no more of Giordani, but his son Tommaso carried on the profession of music-teacher in Dublin for thirty years. An opera of 'Antigono' (1773) is in the British Museum, an oratorio 'Isaac' was produced in Dublin in 1769, and another opera, 'The Siege of Gibraltar,' in the Capel Street Theatre, Dublin, in December 1783, and a list of overtures, songs, concertos, quartets, and sonatas, is given in the *Quellen-Lexikon*.

The younger brother, GIUSEPPE, was born about 1744 at Naples, and learnt composition at the Conservatorio di Loreto there. In 1771 he brought out his first opera, 'L'Astuto in imbroglio,' at Pisa, and in 1772 joined his father and brother in London, producing an opera, 'Il Bacio,' there in 1774, a work which achieved such success that it was given until 1782. He joined his elder brother's enterprise in Dublin, and was composer and director of the music until 1782, when he went back to Italy, remaining there for ten years, producing operas, oratorios, etc. in great numbers. In 1791 he went to Fermo to conduct operas, and died there Jan. 4, 1798. His works include two oratorios, 'La fuga in Egitto' (1775), 'Le tre ore d'Agonia di Nostro Signore Gesu Cristo' (performed at Dresden, 1807), a mass, motets, etc. and five operas, canzonets, overtures, concertos, quartets, etc. (see the *Quellen-Lexikon*). A song, 'Let not age,' has preserved its popularity to the present day, and it is probable that the well-known 'Caro mio ben' is by this youngest of the family, who was commonly known as 'Giordanello.' (Information from Eitner's and Riemann's Lexicons, and from W. H. Grattan Flood, Esq.) M.

GIORDANO, UMBERTO, was born at Foggia on August 27, 1863. His father, who was an artisan, intended to bring up his son to his own trade, but in deference to the arguments of a friend, who had observed the boy's musical temperament, he allowed him to receive such musical instruction as Foggia afforded. Giordano's education was completed at the Conservatoire of Naples, where he studied under Paolo Serrao. He remained at Naples for nine years, and while still *in statu pupillari* wrote an opera 'Marina,' which attracted the favourable notice of the publisher Sonzogno. In response to a commission from the latter Giordano wrote 'Mala Vita,' the libretto of which was based by Daspuro upon the powerful but singularly repulsive play of that name. This work was produced at Rome in 1892. The fashion for operatic melodrama of the most blood-curdling type was then at its zenith, and 'Mala Vita' hit the taste of the day as much perhaps by the so-called 'actuality' of its subject as by any pretension to musical value. Giordano's next opera 'Regina Diaz' (Naples, 1894) was a failure, but with 'Andrea Chénier' (Milan, 1896) he scored what hitherto has proved to

be the greatest success of his career. 'Andrea Chénier' speedily made the round of the Italian theatres, and it was produced at Berlin in 1898. It was given in London by the Carl Rosa Company in an English version at the Camden Theatre on April 2, 1903. In 1897 a revised version of 'Mala Vita' was produced under the name of 'Il Voto,' and in 1898 'Fedora,' an operatic version of Sardou's famous drama, repeated in a less degree the success of 'Andrea Chénier.' The composer's latest opera, 'Siberia' (Milan, 1904), appears to have been decidedly less successful. Giordano is a typical member of the group of composers who sprang into fame on the skirts of Mascagni, whose methods of workmanship his earlier operas reproduce with singular fidelity. In 'Andrea Chénier' he displayed a more definite individuality of style, and indeed there are passages in this and in his later works that exhibit considerably more refinement of execution than the Neo-Italian school usually attempts. Giordano has an exuberant gift of melody and a strong feeling for dramatic effect, but his scores lack solidity, and in his music the usual theatrical tricks for extorting applause too often take the place of a sincere expression of emotion. R. A. S.

GIORGI. See Banti.

GIOVANELLI, Ruggiero, born 1560 at Velletri, near Rome. Nothing is known of his circumstances or early studies. In 1585 we find him maestro di capella to San Luigi de' Francesi in Rome; from thence he passed to the Chiesa dell' Anima, belonging to the German College; and, March 12, 1594, was appointed Palestrina's successor at St. Peter's, entering on his duties three days later. On April 7, 1599, he was made a member of the Sistine choir. He was living in 1615, as in that year he published the second volume of his new edition of the 'Graduale,' undertaken at the request of Pope Paul V., and magnificently printed at the Medici press, but disfigured by many arbitrary alterations of the text. Proske has inserted a 'Dixit' of Giovanelli's in his *Musica Divina* (Tom. iii.), and speaks of his works as 'graceful, pure in style, very pleasing in harmony, and able to bear comparison with those of the greatest masters.' Baini's *Palestrina* also contains many allusions to Giovanelli. Amongst his works preserved in the Pontifical Chapel at Rome, Baini specially mentions a 'Miserere' for four and eight voices, and a Mass, *a* 8, on Palestrina's madrigal 'Vestiva i colli'; but he does not seem to have known of a particularly fine Mass *a* 12, characterised by Proske as full of beauty and imagination. Giovanelli was a great composer of madrigals, even in that fertile age. He published six books of them, with one of Canzonette and Vilanelle, in the years 1585, 1586, 1588, 1589, 1593, 1599, and 1606. Others are to be found in the collections of Scotto and Phalese (Eitner, *Sammelwerke*). [Four madrigals are translated in Morley's *Madrigals to five voices*, 1598; and three specimens of his work are in Torchi's *L' Arte Musicale in Italia*, vol. ii.] The date of his death is unknown. F. G.

GIOVANNINI, a name interesting in musical history solely on account of the part it plays in the discussion concerning the song 'Willst du dein Herz mir schenken?' which for many years was attributed to Sebastian Bach. The song appears in the larger of the two music books of Anna Magdalena Bach, written on two leaves now loose, but evidently once belonging to the volume, in which they occur after p. 111. The outer page of the first leaf bears the title 'Aria di Govannini' (*sic*), the song itself appearing on the two interior pages. As a copy of the song 'Schlummert ein, ihr matten Augen' is written on the outer page of the second leaf, it has been considered that the contents of these pages were contemporary with the rest of the book, and Zelter, into whose hands the volume came from C. P. E. Bach, hazarded the conjecture that the song was by Bach himself, that the Italian name was the equivalent of the composer's first name, and that the copy was made partly by Anna Magdalena herself. Zelter's theory became fixed in the public mind as a certainty, since a play by Ernst Leistner and a novel by A. E. Brachvogel made the composition of the song an incident in the love-story of Bach; and even at the present day the question can hardly be taken as settled. Forkel refused from the first to believe in its authenticity, judging it from internal evidence, but Dr. W. Rust has adopted Zelter's theory, and has even gone so far as to assert that some of the bass notes are in the composer's autograph (B.-G. xx. I. p. 15). More recently, however, strong evidence has been brought which may be taken as proving the song to be the composition of an actual Giovannini, whose name appears in Gerber's *Lexicon* as that of an Italian violinist and composer, a pupil of Leclair's, who lived chiefly in Berlin from 1740 until his death in 1782. In the same writer's *Neues Lexicon* (1812-14) the additional information is given that about 1745 he went to London, and produced, under the pseudonym of the Count of St. Germain, a pasticcio entitled 'L' Incostanza delusa' in which the airs were much admired. He also published some violin solos under the same name. Dr. Spitta, in his excellent *résumé* of the question (*J. S. Bach*, English translation, vol. iii. p. 661, etc.), tells us further that songs by Giovannini are included in Graefe's *Odensammlung* (1741 and 1743), two of which were since published in Lindner's *Geschichte des deutschen Liedes*, etc. (1871). These are said to show a strong resemblance to the style of 'Willst du dein Herz mir schenken?' and there seems no longer any reasonable doubt

that this Giovannini is the real composer. The external evidence quite admits the possibility of this, as the book may very probably have come into other hands after the death of Anna Magdalena Bach, and so competent a critic as Dr. Spitta saw no reason to endorse Dr. Rust's opinion that some of the notes are in Bach's handwriting; while from internal evidence it might well be thought that no musician who had even a slight acquaintance with Bach's work could ever suspect it to be by him. See also the preface to B.-G. xliii. II., by Graf Waldersee, p. xv.; and the *Vierteljahrsschrift f. Musikwissenschaft*, i. p. 350 f. M.

GIPSY'S WARNING, THE. An opera in three acts; words by Linley and Peake; music by Sir Julius Benedict. Produced at Drury Lane, April 19, 1838. It was much acted in Germany. 'Rage, rage, thou angry storm,' and 'Blest be the home,' were long favourites in concert rooms. G.

GIRARDEAU, ISABELLA, DETTA LA ISABELLA, an Italian singer, married to a Frenchman, who performed in the early Italian Operas in London. She is, perhaps, the same as the Isabella Calliari mentioned in Quadrio's list among the female singers who flourished in 1700-20. She succeeded 'the Baroness' at the Haymarket, and appeared first in 'Almahide.' She sang in the first and succeeding performances of Handel's 'Rinaldo.' In this, one of her songs, 'Bel piacer,' was wholly unaccompanied even by a bass,—a severe trial for any voice. On Dec. 12 of the same year, Gasparini's 'Antiochus' was produced, in which La Isabella took a part, as she did also in the following January in his 'Ambleto.' In the latter she had 'a noisy song for trumpets and hautbois obligato' (Burney), from which it may be inferred that her voice was very strong. J. M.

GIRELLI AGUILAR, SIGNORA, an Italian prima donna, who took part in the 'grand dramatic serenata' composed by Mozart (1771) in honour of the nuptials of the Archduke Ferdinand, celebrated at Milan on Oct. 17 of that year. 'The archduke and his bride, not only frequently inclined their heads from their box and applauded the maestro, but encored two airs sung by Manzuoli and Girelli' (Holmes, p. 79). After this, Girelli married a Frenchman named Aguilar, and visited London, succeeding Grassi, and singing the principal rôle in Vento's 'Sophonisba' (1772-73); after which her name is not found again in London. J. M.

GIS. The German name for G sharp.

GISELLE, OU LES WILIS. A ballet by Adolphe Adam on a plot adapted from Heine by Théophile Gautier; produced at the Grand Opéra, July 4, 1841, at Her Majesty's, March 12, 1842. It contained one of Carlotta Grisi's greatest parts.

The subject was employed by Loder in his opera of 'The Wilis, or The Night Dancers,' and Puccini's 'Le Villi' is on the same subject.

GISMONDI, CELESTE, a mezzo-soprano engaged at the opera in London in 1732-34. She made her first appearance (Dec. 1732) as Lisaura in Handel's 'Alessandro.' She played a small part in 'Orlando' (1733); parts were assigned to her (1733) also in 'Deborah,' 'Tolomeo,' and 'Ottone,' but, after this, she is said by M. Schœlcher to have assisted in setting up the rival theatre in Lincoln's Inn Fields. The newspapers of the day (Nov. 3, 1735), however, give another account of her secession, by announcing the death of 'Signora Celeste Gismondi . . . Wife to Mr. Hempson an English Gentleman, on Tuesday [Oct. 28], after a lingering Illness. She perform'd in Mr. Handel's Operas for several Winters with great Applause, but did not sing this season on any stage, on Account of her Indisposition.' J. M.

GITTERN (or GHITTERN, etc.), an obsolete instrument of the guitar type. It is mentioned several times by Chaucer in such terms as to show that it was used for the accompaniment of songs. Other later writers refer to it, and it is named in a list of musical instruments which had belonged to Henry VIII. as: 'Four gitterons which are called Spanish vialles.' There can be but little doubt that it underwent many minor changes in shape and character during the period of its use, and that the name was by no means definitely fixed upon one particular form, but would be assigned to any of the guitar tribe.

In the 17th century it appears to have had but little difference from the cithren, that difference being its smaller size, and its being strung with gut instead of wire, as was the cithren. Drayton in *Polyolbion*, 1613, seems to confirm this as to stringing by the lines:—

> Some that delight to touch the sterner wire
> The Cithren, the Pandore, and the Theorbo strike.
> The Gittern and the Kit the wandering fiddlers like.

In *An English Dictionary* by E. Coles, 1713, the definition of 'ghittern' is 'a small kind of cittern.' John Playford published, with the date 1652, *A Book of New Lessons for the Cithren and Gittern*, a copy of which is in the Euing Library, Glasgow. In advertisements Playford alludes to this (a later edition) as having been 'printed in 1659, and at various dates between 1664 and 1672 he advertises as 'newly printed' another work, *Musick's Solace on the Cithren and Gittern*. The gittern and cithren never appear to have had much popularity in England, and after the last-named date they seem to have died a natural death. The music transcribed for the instruments was written in tablature on a four-line stave. About 1756-58 the cithren had a revival in the English guitar, a wire-strung instrument which closely resembled it. This, however, gave place to the gut-strung Spanish variety as now used. (See CITHER, GUITAR.) F. K.

GIUGLINI, Antonio, born at Fano, 1827; appeared in London first in 1857 at Her Majesty's Theatre, [where on April 11 he made his début under Lumley, as Fernando in 'La Favorita,' and afterwards sang as Arturo, Edgardo, and Manrico. In 1858 he was re-engaged, and played as Thaddeus on the production, in Italian, of the 'Bohemian Girl,' Ferdinand in Verdi's 'Luisa Miller,' and Raoul at Titiens's début. In 1859 and 1860 he sang under E. T. Smith at Drury Lane and Her Majesty's. In 1861 he sang under Mapleson at the Lyceum, in 1862-64 at Her Majesty's under the same manager. His parts in new operas comprised Riccardo in 'Un Ballo,' Zamberto in Schira's 'Nicolo de' Lapi,' Faust, Fenton in 'Falstaff' and Vincent in 'Mirella.' In the autumn of 1864 he was engaged at St. Petersburg, but did not appear owing to incipient madness. In 1865 he returned to England, but had to be confined by his manager in Dr. Tuke's Asylum at Chiswick. In the autumn he was removed to Italy, and died at Pesaro on Oct. 12, 1865. A. C.] He possessed a sweet and high tenor voice, which was 'a welcome variety after the stentorian exhibitions of recent singers before him; and an elegance of style of which some critics, nevertheless, complained as cold, languid, and over drawn-out' (Chorley). J. M.

GIULIETTA E ROMEO. Opera in three acts, libretto by Romain, music by N. Vaccaj. Produced at Milan, Oct. 31, 1825; at the King's Theatre, Haymarket, London, April 10, 1832. For other operas on the subject see Romeo and Juliet.

GIURAMENTO, IL. A *Dramma serio*; libretto by Rossi from V. Hugo's *Angelo*; music by Mercadante. Produced at La Scala, Milan, in the spring of 1837; at Her Majesty's London, 1840; and at the Théâtre-Italien, Paris, Nov. 22, 1858. Another better-known opera on the same subject is by Ponchielli. See Gioconda, La. G.

GIUSTO, correct, suitable—'Tempo giusto,' in suitable time; as the fugues in 'Israel in Egypt,' 'Egypt was glad,' 'He led them through the deep'; and also 'Thy right hand, O Lord,' and 'The horse and his rider.' Also used in the sense of 'strict,' to restore the time after a *tempo rubato*. G.

GIZZIELLO, Gioacchino Conti, detto, so-called after his master, D. Gizzi, was one of the greatest singers of the 18th century. Born Feb. 28, 1714, at Arpino (Naples), he early underwent the preparation for the career of a sopranist. He gained a round, full, sweet voice of great extent and penetrating quality, which was united to a strong natural taste and feeling in music. At the age of fifteen he made his début at Rome, with immense success. In 1731 he excited the greatest enthusiasm there by his singing in Vinci's 'Didone' and 'Artaserse.' An anecdote is related of this occasion, showing how much other singers were already affected by his fame. [See Farinelli.] He sang at Naples in 1732 and 1733 with the same success. Three years later (April 13, 1736), he is announced in the London newspapers as 'expected here in a few days.' This was the critical moment at which the split occurred in Handel's company, and the great master was at a loss for artists to replace those who had seceded. On May 5, he began with 'Ariodante,' and Gizziello, who then made his first appearance in London, 'met with an uncommon reception; in justice to his voice and judgment, he may be truly esteemed one of the best performers in this kingdom' (*Daily Post*). In presence of Farinelli, no more could be said of the young singer, who was still 'so modest and diffident, that when he first heard Farinelli, at a private rehearsal, he burst into tears, and fainted away with despondency' (Burney). 'Atalanta' was brought out May 12, Gizziello again singing the principal man's part, as he did, a little later, in 'Poro.' In 1737 he appeared in 'Arminio,' 'Berenice,' 'Giustino,' and 'Partenope.' In 1743 he went to Lisbon, where the improvement in his style, due to the example of Farinelli, was at once perceived. Charles III. King of Naples, engaged both him and Caffarelli to sing in the 'Achille in Sciro' of Pergolesi. Caffarelli came from Poland, and Gizziello from Portugal, and met for the first time. The former sang the first song with splendid effect, and Gizziello thought himself lost, as he listened to the continued applause; but he sang his own song, which followed, with such pathos and expression that he divided the honours of the performance. In 1749 he was invited by Farinelli to sing at Madrid with Mingotti; and stayed there three years. He then returned to Portugal. About the end of 1753 he quitted the stage, and settled at his native place. He died at Rome, Oct. 25, 1761. An excellent mezzotint portrait of him was scraped by Alex. Van Haecken, after a picture by C. Lucy, in 1736, folio. A good impression of it is scarce. J. M.

GLADSTONE, Dr. Francis Edward, was born at Summertown, near Oxford, March 2, 1845. When fourteen he was articled to Dr. S. S. Wesley, with whom he remained at Winchester for five years. After being organist for two years at Holy Trinity Church, Weston-super-Mare, in 1866 he obtained the post of organist at Llandaff Cathedral. In March 1870 Gladstone was appointed organist at Chichester Cathedral, but three years later he moved to Brighton, where he remained until 1876, when, after a short residence in London as organist of St. Mark's, Lewisham, he accepted the post of organist at Norwich Cathedral, which he held from 1877 to 1881. Dr. Gladstone then became organist of Christ Church, Lancaster Gate, London, a post which ill-health compelled him to resign in 1886. He took the degree of Mus. B. Cantab. in 1876, and shortly

after was made an Honorary Member of the Royal Academy of Music. He took the degree of Mus.D. in 1879, and is also a Fellow of the College of Organists, a Member of the Board of Musical Studies at Cambridge, and a teacher of organ, etc. at the Royal College of Music. Having been received into the Roman Catholic Church, he was appointed director of the choir at St. Mary of the Angels, Bayswater, about 1887, and held the post until 1894. Dr. Gladstone, who is one of the first of living English organists, has composed much music for his instrument, besides services, anthems, songs, a chorus (with orchestral accompaniment), 'A wet sheet and a flowing sea,' an overture (MS.), a piano trio (MS.), and two sacred cantatas—'Nicodemus' (produced by the Highbury Philharmonic Society 1880) and 'Philippi, or the Acts of Paul and Silas in Macedonia,'—the latter of which was written for the North-Eastern Choirs Association, and produced at Newcastle in July 1883. A cantata, 'Constance of Calais,' performed by the Highbury Philharmonic Society, in 1885; a mass in E minor (MS.), written for the Brompton Oratory; and a short mass in E♭, are among Dr. Gladstone's most important works. W. B. S.

GLÄSER, Franz, born at Obergeorgenthal in Bohemia, April 19, 1798; studied the violin at the Conservatorium of Prague in 1813-17; going to Vienna in the latter year he became conductor at the Leopoldstadt Theatre, in 1822 at the Josephstadt Theatre, in 1827 at the Theatre 'an der Wien,' and in 1830 at the Königstadt Theatre in Berlin. From 1842 to his death, August 29, 1861, he was court conductor at Copenhagen. He wrote a great number of operas, musical comedies, farces, etc., only one of which, 'Des Adlers Horst' (Berlin, 1832[1]), achieved a wide celebrity. M.

GLAREANUS, Henricus, so called because he was born (in June 1488) in the Canton of Glarus, his real name being Loris or, Latinised, Loritus; a celebrated teacher of music. He is said to have been a shepherd-boy in his youth; but he studied music with Rubellus at Berne, and afterwards under Cochläus at Cologne, where he was crowned poet-laureate in 1512 for a poem in honour of the Emperor, which he composed and sang to his own accompaniment. In 1515 he was teaching mathematics at Basle, and in 1517 was appointed, at the recommendation of Erasmus, professor of philosophy and 'artes liberales' in Paris. He returned in 1522 to Basle, where he is said to have set up a school, and from whence he removed to Freiburg im Breisgau in 1529. Prof. H. Schreiber, in an excellent monograph on Glareanus (Freiburg, 1837), proves that it was not at the University of either Paris, Basle, or Freiburg, that he was professor. He was blind in his later years, and died March 28, 1563, at Freiburg. His friends, Erasmus, Justus Lipsius, and Vossius, wrote panegyrics on him. His principal works on the theory of music are *Isagoge in musicen Henrici Glareani*, etc. (the dedication 'ad Falconem Consulem urbis Aventinensis,' Avignon, is headed 'Basileae, anno Christi 1516, 4to ad idus Martias'), now extremely scarce, containing chapters on solmisation, the intervals, modes, tones, and their treatment; and ΔΩΔΕΚΑΧΟΡΔΟΝ (1547, fol.), a still more important work, the aim of which is to prove that there are twelve church modes, corresponding to the ancient Greek modes, and not eight, as many writers have maintained. The third part contains numerous examples from the works of Okeghem, Obrecht, Josquin de Près, and other musicians of the 15th and 16th centuries, valuable also as specimens of early music-printing. Wonnegger of Lithuania published an abstract of the *Dodecachordon* (Freiburg, 1557), the second edition of which (1559) contains a poem by Glareanus in praise of the thirteen Federal cities of Switzerland, set to music by Manfred Barbarin. The catalogue of Draudius mentions a third treatise *De musices divisione ac definitione* (Basle, 1549); but as the headings of the chapters are identical with those in the *Dodecachordon*, it can scarcely be a separate work. In 1888 Peter Bohn made a German translation of the *Dodecachordon* (*Publik. d. Ges. f. Musikforschung*), with the examples in modern score, and an abstract of Schreiber's biography. His theory of the twelve church modes, as parallel to the ancient Greek modes, will assure for Glareanus a lasting place among writers on the science of music. F. G.

GLASENAPP, Carl Friedrich, born at Riga, Oct. 3, 1847, studied philology at Dorpat, and has lived since 1875 in his native town. He is the author of the authoritative life of Wagner; his book, *Richard Wagner, Leben und Wirken*, appeared in two volumes in 1876, and the second edition, much enlarged, in 1882. In 1894 appeared the first instalment of the third edition, which is not yet complete (1905), the second volume having appeared in two portions in 1897 and 1899. A translation, with still further amplifications, by Mr. Wm. Ashton Ellis, is in progress, the three volumes having appeared in 1900, 1901, and 1903. The fourth volume of Mr. Ashton Ellis's work (1904) is independent of Glasenapp. M.

GLAZOUNOV, Alexander Constantinovich, born August 10, 1865, in St. Petersburg, was the son of a well-known publisher and bookseller. After leaving the 'Real' or modern school, Glazounov attended some lectures at the University of St. Petersburg as a 'voluntary' or non-attached student. At nine he began to take lessons in pianoforte and elementary theory,

[1] The dictionary-makers have made various errors with regard to the date of this work. Riemann's *Opern-Handbuch* gives it as 1830, but the author has the correct date, 1832, in his *Lexikon*; in Baker's *Biog. Dict.* the date is given as 1833, probably owing to the fact that the opera is mentioned in a summary of works given at Berlin in the previous year, in the *Allgem. Musik Zeitung* for Jan. 1833. Riemann's *Lexikon* (5th ed.) gave the date of death as 1869, but the 6th ed. corrects it, and the newspapers of 1861 confirm the above date.

with Elenovsky, and before he was thirteen showed a great aptitude for composition. In 1879 he became acquainted with Balakirev, who advised him to continue his general culture, while grounding himself thoroughly in classical music. A year or two later, Balakirev, realising his uncommon talent, recommended him to study privately with Rimsky-Korsakov, under whose guidance he completed a course of composition and theory, extending over a year and a half. Glazounov is endowed with phenomenal musical memory. He himself has said: 'At home we had a great deal of music, and everything we played remained firmly in my memory, so that, awaking in the night, I could reconstruct, even to the smallest details, all I had heard earlier in the evening.' His most remarkable feat in this way was the complete reconstruction of the overture to Borodin's opera 'Prince Igor.' Glazounov's First Symphony, composed at sixteen, was given by Balakirev at one of the concerts of the Free School in 1882. It was re-orchestrated five times before the composer, satisfied with the result, finally published it as op. 5. Almost simultaneously he wrote the Quartet in D (op. 1) and the Pianoforte Suite on the theme S-a-c-h-a (diminutive of his own name Alexander) op. 2. His First Overture (on Greek themes, op. 3) was performed at one of the concerts of the Russian Musical Society under the baton of Anton Rubinstein. Thus the leaders of the two opposite musical factions united to forward the interests of this gifted youth. Thanks in some degree to the friendly appreciation of Liszt, he soon became known outside Russia. His earliest successes abroad date from 1884 (First Symphony at Weimar), 1889 (Concerts of the Paris Exhibition), and 1897 (Fourth Symphony at the Philharmonic Society, London, July 1, and Fifth Symphony at Queen's Hall Symphony Concerts, Jan. 28). Glazounov's activity has been chiefly exercised in the sphere of instrumental music. Unlike so many of his compatriots he has never been attracted to opera, nor is he a prolific composer of songs. Although partly a disciple of the New Russian School he is separated from Balakirev, Rimsky-Korsakov, and Moussorgsky by his preference for classical forms in music. From the outset of his career he shows a mastery of technical means such as we are accustomed to associate only with full maturity. Perhaps on account of this facility, some of his earlier works suffer from over-elaboration and a redundancy of accessory ideas. But the tendency of his later compositions is almost always towards greater simplicity and clearness of expression. Glazounov's music is melodious, although his melody is not remarkable for richness or variety. It is usually most characteristic in moods of restrained melancholy. His harmony is far more distinctive and original, and frequently full of picturesque suggestion. As a master of orchestration he stands, with Rimsky-Korsakov, at the head of a school pre-eminently distinguished in this respect. Although Glazounov has made some essays in the sphere of programme music in the symphonic poems 'Stenka Razin,' 'The Forest,' and 'The Kremlin'—and more recently in the Suite 'Aus dem Mittelalter'—yet his tendency is mainly towards classical forms. At the same time, even when bearing no programme, much of his music is remarkable for a certain descriptive quality. The last to join the circle of Balakirev, he came at a time when solidarity of opinion was no longer essential to the very existence of the New Russian School. It was natural that, more than its earlier members, he should pass under other and cosmopolitan influences. The various phases of his enthusiasm for Western composers are clearly traceable in his works. In one respect Glazounov is unique, since he is the only Russian composer of note who has been seriously dominated by Brahms. But although he has ranged himself with the German master on the side of pure musical form, a very cursory examination of their respective works suffices to show how much less 'abstract' is the music of the Russian composer than that of Brahms. Even while moving within the limits of conventional form, Glazounov's music is constantly suggesting to the imagination some echo from the world of actuality. It is in this delicate and veiled realism—which in theory he seems to repudiate—that he shows himself linked with the spirit of his age and his country. The strongest manifestation of his modern and national feeling is displayed in the energetic and highly-coloured music of the ballet 'Raymonda.' Comparing this work with Tchaikovsky's ballet 'The Sleeping Beauty,' it has been said that while in the latter each dance resembles an elegant statuette, 'bizarre, graceful, and delicate,' the former shows us 'colossal groups cast in bronze'; life viewed at moments of supreme tension and violent movement, caught and fixed irrevocably in gleaming metal. It proves that this Russian idealist has moods of affinity with the realism and oriental splendour of Rimsky-Korsakov and Borodin. The ballet 'Raymonda,' and its musical antithesis the Sixth Symphony, with its wonderful contrapuntal finale, are probably the most popular of Glazounov's works.

Apart from his art, Glazounov's life has been uneventful. Few composers have made their début under more favourable auspices, or have won appreciation so rapidly. Nor has he ever experienced the sting of neglect or the inconvenience of poverty. His life, it has been truly remarked, seems the realisation of a fairy tale set to music.

Glazounov made his first appearance as a conductor at the Paris Exhibition of 1889, and

has frequently acted in that capacity at the Russian Symphony Concerts, St. Petersburg. In 1900 he was appointed professor at the St. Petersburg Conservatorium, where he takes the class for instrumentation and score-reading. His seventh symphony in F, op. 77, was played for the first time in England at the Royal College of Music, Feb. 17, 1903. The list of his works, mostly published by Belaiev, is as follows :—

Op.
1. String quartet in D.
2. Suite on the theme 'S-a-c-h-a,' for pf.
3. Overture on Greek themes, No. 1.
4.
5. First Symphony in E.
6. Overture on Greek themes No. 2.
7. Serenade, for orchestra.
8. Elegy (To the Memory of a Hero), for orchestra.
9. Characteristic Suite for orchestra.
10. String Quartet in F.
11. Serenade for small orchestra.
12. Poème lyrique, for orchestra.
13. Symphonic poem, 'Stenka Razin.'
14. Two pieces for orchestra, 'Idylle' and 'Rêverie Orientale.'
15. Five Novelettes for string quartet.
16. Second Symphony in F sharp minor.
17. Pensée à Liszt, violoncello and pf.
18. Mazurka for orchestra.
19. Fantasia, 'The Forest,' for orchestra.
20. Two pieces for violoncello with accompaniment for pf. or orchestra.
21. Wedding March for orchestra.
22. Two pieces for pf. 'Barcarole' and 'Novelette.'
23. Valses on the theme 'S-a-b-e-la.'
24. Rêverie for horn and pf.
25. Prelude and two mazurkas for pf.
26. Symphonic Sketch for orchestra, 'Une fête Slave,' adapted from a movement in
28. Quatuor Slave in G.
27. Two melodies to words by Poushkin.
28. Orchestral Fantasia, 'The Sea.'
29. Oriental Rhapsody for orchestra.
30. Symphonic Picture, 'The Kremlin.'
31. Three Etudes for pf.
32. Meditation for violin with pf. accompt.
33. Third Symphony in D.
34. Orchestral Sketch, 'Spring.'
35. Suite (for string quartet).
36. Petite Valse for pf.
37. Nocturne for pf.
38. Quartet for brass instruments, 'In modo religioso.'
39. String quintet.
40. Triumphal March (Chicago Exhibition, 1895) with chorus *ad libitum*.
41. Grande Valse de Concert, for pf.
42. Three Miniatures for pf.
43. Valse de Salon, for pf.
44. Elegy for viola with pf. accompt.
45. Carnaval, Overture.
46. Suite, 'Chopiniana,' for orchestra.
47. Valse de Concert, for orchestra No. 1.
48. Fourth Symphony in E flat.
49. Trois Morceaux for pf.
50. Cortège solennel, for orchestra.
51. Valse de Concert, for orchestra, No. 2.
52. Orchestral Suite, 'Scènes de ballet.'
53. Fantasia for orchestra.
54. Two Impromptus for pf.
55. Fifth Symphony in B flat.
56. Coronation Cantata, for mixed chorus, soli, and orchestra.
57. Ballet, 'Raymonda.'
57*a*. Suite from Do.
58. Sixth symphony in C minor.
59. Six Songs with pf. accompt.
60. Six do. do.
61. Ballet, 'Ruses d'Amour.'
62. Prelude and Fugue for pf.
63. Cantata for female chorus, and soli, accompt. for two pfs. eight hands.
64. String quartet in A.
65. Cantata for soli, choir, and orchestra. 'Memorial Cantata.' (Leeds Festival, 1901.)
66. Hymn to Poushkin for female chorus.
66. Six Songs with pf. accompt.
67. Ballet, 'The Seasons.'
68. Pas de caractère, for orchestra.
69. Intermezzo romantico for orchestra.
70. String quartet in D.
71. Chant du ménestrel for violoncello with pf. or orchestral accompt.
72. Theme and variations for pf.
73.
74. Pf. Sonata in B flat.
75. Pf. Sonata in E.
76.
77. Seventh Symphony in F.
79. Orchestral Suite, 'Aus dem Mittelalter.'
80. Duet for sopr. and alto, with pf. accompt.

R. N.

GLEASON, Frederick Grant, an American composer, organist, and teacher, was born in Middletown, Conn., Dec. 17, 1848. His first musical studies were made under Dudley Buck in Hartford; in 1869 he entered the Conservatorium of Leipzig, where he worked under Moscheles, Richter, Plaidy, and Lobe. The following year he went to Berlin to continue his studies in theory and pianoforte playing under Loeschhorn, Weitzmann, and Haupt; and still later studied the pianoforte with Beringer in London. After his return to America he occupied several posts as organist in cities of his native state, but from 1877 lived and worked in Chicago, until his death, Dec. 6, 1903. Mr. Gleason has produced a considerable number of compositions in most of the forms of the art, several of which have been performed in the United States; they are marked rather by ambition and extravagance than any potent musical impulse. Among them are two romantic operas, 'Otto Visconti,' the overture of which was performed in Leipzig in 1892; and 'Montezuma,' of which Mr. Gleason wrote both text and music; a symphonic poem 'Edris,' op. 21; the cantatas 'God our Deliverer,' 'The Culprit Fay,' 'Praise Song to Harmony,' and 'Auditorium Festival Ode'; several pieces of chamber music; part-songs, sacred choruses, and pieces for organ and the pianoforte. R. A.

GLEE. A piece of unaccompanied vocal music in at least three parts, and for solo voices, usually those of men. The glee, though possibly suggested by the madrigal, to which this description partially applies, is separated from it, so far as its origin is concerned, by a long interval of time. The production of madrigals ceased altogether, both on the Continent and in England, in the course of the first quarter of the 17th century. The first glees are due to the beginning of the 18th century, and the finest specimens of them to the seventy-five years between the middle of that century and the end of the first quarter of the 19th. Vocal compositions by masters of the latter part of the 17th century are sometimes found, in collections printed after their decease, to which the word Glee is appended. These are not glees, in the now accepted sense of the word, but simply airs by those masters, harmonised subsequently for three or four voices; or choruses, mostly from operas, from which the original orchestral parts are simply omitted. Two eminent English composers, Arne and Boyce, wrote each a few pieces which they or their subsequent editors called glees; but their productions in other styles altogether surpassed these, both in excellence and number. The earliest, possibly the greatest, master of the glee proper is Samuel Webbe, during whose long life (1740-1816) the best specimens of this class of composition were produced. Webbe actually outlived many of the most eminent practitioners in the school of which he was the founder.

The word 'glee' in no way describes or characterises the kind of composition to which it

gives a name. It is simply the Anglo-Saxon *gligg*—music. A glee is not therefore necessarily of a cheerful character, as the name might seem to imply. That music was in early times commonly associated with cheerfulness is possibly true. The 'Gliggman,' according to Warton, was identical with the 'Joculator.' But the words of a glee may be mournful or sprightly, and the music such as will express them becomingly. The 'serious glee' is no more a misnomer than the 'cheerful.' Both terms have been used by glee composers again and again.

The glee differs from the madrigal, as might be expected from the distance apart of their epochs, in its *tonality*, which is uniformly modern. Not only so. Whereas the 'subjects' of the madrigal are generally few, always contrapuntally treated, and this often at considerable length, those of the glee are generally many, and only rarely developed at all. Masses of harmony, rare in the madrigal, are common in the glee, and indeed give it some of its best effects. The characteristic figure of modern tonality, the 'perfect cadence,' rarely and timidly introduced in the former, is of frequent occurrence in the latter—sometimes indeed of such frequent occurrence as to give to many of these compositions a halting and disconnected character, as though they were continually about to come to an end. Indeed the short phrases, incessant cadences, frequent changes of rhythm and pace of the average glee, contrast unfavourably with the 'long resounding' phrases of the madrigal, never brought to an end in one part till they are begun in another, overlapping one another, bearing one another up, and never allowing the hearer to anticipate a close till everything that can be done with every subject has been done, and the movement comes to a natural end.

In so far as the glee composer exhibits this power of sustentation, this strength of wing—the highest and the rarest qualification for every kind of polyphonic composition—his productions will be lasting in their attraction. Every one of the best glee writers, such as Webbe, Stevens, Callcott, Horsley—has exhibited it frequently and in very high perfection; and this together with a constructive power which we should seek in vain in the musical compositions of the madrigalian era. Stevens's glee, 'Ye spotted Snakes,' is a model of construction, and if not the earliest, is one of the earliest specimens of pure vocal music in the 'sonata form.'

The glee proper is wholly independent of instrumental accompaniment. The name, however, is occasionally given to compositions like 'The Chough and Crow,' by Sir Henry Bishop. These would be better entitled accompanied trios, quartets, or choruses. The principal glee composers, over and above those already named—without exception Englishmen—are Attwood, Battishill, Cooke, Danby, Hindle, Lord Mornington, Paxton, and Spofforth. [For the bibliography of the early Glee and Catch Collections see CATCH; also MADRIGAL; PART-SONG.] J. H.

GLEE CLUB, THE. This club originated in some meetings at the house of Mr. Robert Smith in St. Paul's Churchyard, commenced in 1783, at which motets, madrigals, glees, canons, and catches were sung after dinner. The meetings were subsequently held at Dr. Beever's and other houses until, in 1787, it was resolved to establish a society to be called 'The Glee Club,' the first public meeting of which took place at the Newcastle Coffee House on Saturday, Dec. 22, 1787. The original members were, R. Smith, Dr. Arnold, Dr. Beever, Rev. J. Hinckes, T. S. (afterwards Dr.) Dupuis, J. Roberts, J. Heseltine, T. Aylward, C. Wright, T. Gregory, H. Desdier, L. Atterbury, and T. Linley. The professional members were, S. Webbe, J. Dyne, P. Hobler, J. W. (afterwards Dr.) Callcott, J. Hindle, J. Bartleman, S. Webbe, jun., and S. Harrison. In 1788 the Club removed to the Freemasons' Tavern, thence to the Crown and Anchor until Feb. 1790, when it returned to the Freemasons' Tavern, but removed once more, on July 6, 1791, to the Crown and Anchor, and again returned to the Freemasons' Tavern. In 1790 Samuel Webbe composed for the Club his 'Glorious Apollo,' which was ever after sung at the meetings as the opening glee, while Byrd's canon 'Non Nobis' was sung immediately after dinner, often followed by Dr. Cooke's canon 'Amen.' After 'Glorious Apollo' (first sung with three voices to a part and then full) the chairman, vice-chairman, conductor, sub-conductor, and secretary, each named a glee, and then the members according to seniority. Among the eminent visitors who have contributed to the music of the meetings were Samuel Wesley (who played Bach's fugues upon the pianoforte, or an extemporaneous effusion on some conspicuous passage in a glee recently sung), Moscheles, and Mendelssohn. The Club was dissolved in 1857 and the library sold. The Club must be distinguished from another Glee Club formed in 1793, the original members of which were Shield, Johnstone, Charles Bannister, Incledon, Dignum, C. Ashley, and W. T. Parke, the last of whom (*Musical Memoirs*, ii. 175) states that 'it was held on Sunday evenings at the Garrick's Head Coffee House in Bow Street, Covent Garden, once a fortnight, when we amused ourselves by singing the works of the old and modern masters, after which we sat down to supper.' C. M.

GLEN. An eminent Scotch firm of musical instrument makers. Thomas Macbean Glen, the founder, was born at Inverkeithing, Fifeshire, in May 1804; commenced business in the Cowgate, Edinburgh, in 1827; in 1836 removed to North Bank Street, and died July 12, 1873. Amongst the instruments invented by him was a wooden Ophicleide, of which a large number were made, and known as 'Ser-

pentcleides.' The business was carried on from 1866 by his sons John (b. 1833) and Robert (b. 1835). The Glens are now chiefly noted for their bagpipes, of which they are the recognised best makers. G.

Another bagpipe firm founded by Alexander Glen (born at Inverkeithing in 1801), elder brother of the preceding Thomas Macbean Glen, is established in Edinburgh. Both firms have issued musical works in connection with the bagpipe.

John Glen, son of Thomas Macbean Glen, born in Edinburgh in 1833, was a high authority on, and possessed a uniquely valuable library of, early Scottish music. His published works are: *The Glen Collection of Scottish Dance Music*, two books, 1891 and 1895, and *Early Scottish Melodies*, 1900. All these are full of original research, and contain much biographical and historical matter which the student cannot afford to ignore. He died Nov. 29, 1904.

Robert Glen, his younger brother, born in Edinburgh 1835, is an equally great authority on ancient musical instruments, of which he has a fine collection, and on Scottish antiquities. He is, in addition, an accomplished artist in the representation of old instruments and similar subjects. F. K.

GLIERE, Reinhold Moritzovich, born at Kiev, Dec. 30, 1874 (O.S.). He is a gold medallist of the Moscow Conservatoire, where he studied from 1894 to 1900 under Taneiev and Hyppolitov-Ivanov. His published works include: Sextet for strings, op. 1; string quartet, op. 2; octet for strings, op. 3. His symphony in E flat, composed in 1899, was first performed in Moscow at a concert of the Russian Musical Society in 1902. R. N.

GLINKA, Michael Ivanovich, whom Liszt designated the 'Prophet-Patriarch' of Russian music, was born June 2 (May 20, O.S.), 1803, at Novospasskoi in the Government of Smolensk, the estate of his father, a retired military man. Glinka's early childhood was spent in the custody of his maternal grandmother, who reared him, physically and morally, in a hot-house atmosphere; thereby laying the seeds of that extreme delicacy of nerves and constitution from which he suffered to the end of his days. From infancy he showed remarkable sensibility to all musical sounds. The first ten years of his life were spent almost exclusively in the country, where he grew up under the influence of the folk-music, which left an indelible impression upon his gifted nature. In his autobiographical notes, Glinka gives the following account of these childish impressions: 'Sometimes my father entertained a large party of friends and relatives; and on these occasions, he would send for my uncle's musicians, a small orchestra drawn from the serfs on his estate, which lay eight versts away from ours. This band generally remained several days at our house, and when the guests had finished dancing, would play other kinds of music. . . . Some of their pieces made a new and indescribable impression upon me, so that for days afterwards I was in a kind of hectic state, or possessed by delicious languor. Once, when the time came for my drawing-lesson, I was so absent-minded that my teacher reproved me because my thoughts were entirely filled with music. "What am I to do?" I replied, "music is my very soul." . . . I often took a violin or piccolo, and tried to join in with the band, keeping of course to the tonic and dominant. . . . During supper Russian national songs were played, arranged for two flutes, two clarinets, two horns and two bassoons. This "meltingly" sad—but to me satisfactory combination—delighted me, especially the horns in the lower registers (I could not endure shrill tones); and perhaps these songs which I heard in my childhood first suggested the idea of making use of our national music.'

Glinka received his earliest instruction on the pianoforte from his governess, Fräulein Klammer. In 1817 he was sent to an aristocratic private school in St. Petersburg, which he left in 1822. During this period he took a short course of piano lessons from the celebrated John Field. When the latter left St. Petersburg, he continued to study the piano under Obmana and Carl Meyer. With the violin he made less progress, although he took lessons from Böhm, an excellent player and distinguished teacher, who frequently remarked to his pupil with pessimistic foreboding: 'Messieu Klinka, fous ne chouerez chamais du fiolon.' In 1822 he made his first essays in composition (variations and a valse for piano). Unluckily he never underwent any complete course of theoretical study until much later in life.

In 1823 Glinka travelled in the Caucasus, and was profoundly impressed by the sublime mountain scenery. On his return, he spent some time at his country home at Novospasskoi, devoting himself to the classical masters: Haydn, Mozart, Beethoven, and Cherubini. At this time he composed a few pieces for his uncle's band. In 1824 he entered the Ministry of Ways and Communications, and settled in St. Petersburg. He now worked in a desultory fashion with various masters, and wrote a septet, two overtures, a quartet, etc. He also took singing lessons from an Italian master, Belloli, and many of his early amateurish songs date from this period. None of these early compositions, although not lacking in grace and attractive melody, can be regarded as more than tentative efforts to express himself in music. During the four years he spent in the government service and lived in the capital, Glinka moved in a distinguished social circle, and enjoyed the friendship of the Counts Wielgorsky, Th. Tolstoi, the singer Ivanov, and the poets Joukovsky, Delvig and Poushkin.

His mental growth at this time must have been rapid, and we learn from his contemporaries that he was an excellent linguist, a good mathematician, and fond of natural science, in fact something of a specialist in zoology. In 1828 he resigned his official position, and, acting on medical advice, went to Italy, where he spent nearly three years in Milan, Rome, and Naples. At this time he made the personal acquaintance of Donizetti and Bellini, and went through a phase of idolatry for Italian music. The enchantment was the natural result of his surroundings, and was not permanent. The remembrance of the strong, sad, yet highly-coloured music of his native land awoke suddenly to remind him that the soft and sensuous beauty of Italian melody was in reality alien to his nature. The intention of some day composing a national opera—hitherto a vague and nebulous dream—now began to take a definite form. In 1833 he left Italy and went to Berlin, where he placed himself under the celebrated master Dehn, and at twenty-nine embarked upon his first serious course of theory. Dehn realised the waste of time involved in putting such a pupil through a long and graduated method of instruction. He helped Glinka to reduce to some kind of order his considerable stock of desultory knowledge, and gave him what may be described as a bird's-eye view of harmony, counterpoint, fugue, and composition generally. The following year the death of his father compelled Glinka to return to Russia. The idea of composing a national opera was firmly rooted in his mind, and received the warmest encouragement from the literary circles he frequented. The poet Joukovsky first suggested to him the subject of 'Ivan Sousanin' (the hero of 'A Life for the Tsar') as being characteristically Russian. The actual libretto was entrusted to Baron Rozen. But Glinka's ardour, once aroused, soon outstripped that of his librettist, with the result that the latter was frequently obliged to fit words to ready-made music. Glinka himself says, 'The idea of contrasting the national music of Russia and Poland, many of the themes, and even the details, all flashed into my mind at once.' Under these circumstances it is not surprising that the libretto, while excellent as regards dramatic effect, is poor in literary quality. The opera took about two years to complete, and for a considerable time the Intendant of the Imperial Opera refused to accept it. Finally the influence of Glinka's friends prevailed, and the work, under the title of 'A Life for the Tsar,' was performed for the first time, in the presence of the Imperial family, Nov. 27, 1836. The success of the opera was immediate. The public were carried away by the freshness of the music—which with all its novelty did not depart too far from their accepted ideal—and still more touched by the patriotic sentiment of the subject. A few 'aristocrats,' sneering at the national colouring of the work, spoke of it as 'the music of coachmen'; thereby provoking Glinka's sarcastic rejoinder: 'What does it matter, since the men are superior to their masters!' But the more thoughtful critics saw that the opera was new in the best sense of the word, and marked a fresh departure in art—the birth of a genuine school of Russian Music.

In 1838 Glinka was sent to Little Russia to discover fine voices for the service of the Imperial Chapel, in which he held the office of choir-master from 1836 to 1839. He had already composed a few numbers of a second opera upon Poushkin's poem 'Russlan and Lioudmilla,' but the work proceeded slowly; partly because of the multiplicity of librettists who took part in its construction, and partly because of Glinka's failing health and painful domestic dissensions, which led to his separation from his wife. The first performance of 'Russlan and Lioudmilla' did not take place until November 1842, and it soon became evident that this work—the supreme effort of Glinka's genius—was not destined to please the public. 'Russlan,' while lacking the human interest and dramatic movement of 'A Life for the Tsar,' is infinitely superior from the purely musical point of view. As in his first opera, Glinka contrasted the characteristic melody and rhythms of Russia and Poland, so in 'Russlan' he employs—with far greater mastery—the music of the neighbouring East, side by side with that of his native land. Thus we have a chorus based upon a Persian melody; a ballet movement upon a Turkish theme in 6–8 time, and several genuine Tatar airs. Both Glinka's operas practically follow the traditional forms of French grand opera, while showing a certain freedom from conventional limitations which raises them above the fashionable model of the day. Glinka, for all his strong sense of nationality, was an eclectic who assimilated the Italian sense of beauty and respect for the human voice, the audacity and brilliance of the French School as represented by Berlioz, and the solidity—especially as regards technical methods—of the German classical composers.

The failure of 'Russlan and Lioudmilla,' the fruit of his matured convictions, came as a bitter disappointment to Glinka. Suffering in body and discouraged in spirit, he left Russia in 1844 for a prolonged sojourn in France and Spain. In Paris he made the acquaintance of Berlioz, whom he regarded as 'the first composer of the day—in his own line.' A similarity of destinies—both were smarting under the unappreciative attitude of their compatriots—drew Berlioz and Glinka more closely together. In an article in the *Journal des Débats* in 1845, the French composer spoke very highly of Glinka's music, praising its originality and freshness of inspiration; while Glinka on the

MICHAEL IVANOVICH GLINKA

other hand did all in his power to forward the interests of Berlioz in Russia. The study of Berlioz's music and of the Paris public had its practical influence upon Glinka. 'I am determined to compose some orchestral concert pieces,' he wrote at this time; 'for I think it would be possible to unite the requirements of art and the demands of the public, and, profiting by the present perfection of instrumentation and execution, to compose works which should satisfy both the connoisseur and the ordinary hearer.' The outcome of this resolve was: 'The Jota Aragonese,' 'Night in Madrid,' 'Kamarinskaya,' etc. Another important work which Glinka composed between 1838 and 1842 was the incidental music to Count Koukolnik's tragedy 'Prince Kholmsky.' This consisted of an overture, three songs, and four entr'actes, and is considered the finest example of Glinka's symphonic music. 'Many touches in "Prince Kholmsky,"' wrote Tchaikovsky, 'recall the brush of Beethoven. . . . Each entr'acte which follows the overture is a little picture painted by a master-hand. They are symphonic marvels, which would suffice a second-rate composer for a whole series of long symphonies.' In Spain Glinka collected a great deal of musical material for future use. On his return to Russia he went first to Smolensk and thence to Warsaw, where he remained three years. 'Kamarinskaya' was composed in 1848, 'Night in Madrid' in 1851, and during a second visit to Paris in 1852 he began a symphonic poem on the subject of Gogol's 'Tarass Boulba' which was never finished. On the outbreak of the Crimean War, Glinka was moved by patriotic feelings to return to St. Petersburg. Here he began a new opera on a play by Shakhovsky, but soon tired of it. In 1855 he started to write his Autobiography, at the request of his sister Madame Shestakov. During his connection with the Imperial Chapel, Glinka had composed a few examples of church music; now, after an interval of fourteen years, he once more turned his attention to this branch of his art. Believing that the harmonisation of the old folk-songs was based upon the ecclesiastical modes, he resolved to study the music of the Western Church, and went to Berlin in 1856 in order to go into the matter with Dehn. He was not destined to carry his studies very far. Returning from a concert at which the trio from 'A Life for the Tsar' had been sung, he was seized with a fit, and died at five in the morning of Feb. 15, 1857. Glinka was buried in Berlin, but a few months later his remains were transported to St. Petersburg, and re-interred in the cemetery of the Alexander Nevsky Monastery.

Glinka's chief claim to be admitted to the first rank of musical genius lies in the fact that he possessed, in an extraordinary degree, both the assimilative and germinal forces. He summed a long series of tentative efforts to create a national opera, and at the same time he laid the foundation of the modern Russian School of Music. He did not merely play with local colour, but recast the primitive speech of the folk-song into a new and polished idiom, so that henceforth Russian music was able to take its place among the distinctive schools of Western Europe. His operas must, therefore, be regarded as epoch-making works, even by those who compare the quality of the music unfavourably with the operatic masterpieces of other nations. It is a mistake to suppose that Glinka was lacking in creative power. He rarely uses the folk-tunes in their crude state. Almost invariably he originated his own melodies, although they were penetrated through and through by national sentiment and colour. His harmony is in perfect keeping with this characteristic melody, and he shows himself in many instances to be a skilful contrapuntist. Although he makes no tiresome display of musical erudition it is impossible to study his scores without realising that he was a master of all technical means. Glinka's orchestral fantasias strike us as extraordinarily fresh and modern, even after the lapse of half a century. His orchestration, strong without violence, is invariably rich, felicitous and full, though temperate, in colour. He preferred, as far as possible, to get his effects by simple means, and did not crave the aid of 'every modern luxury.' A retarded development—the result of an amateur atmosphere, delicate health, and the comparative indifference of his contemporaries, are all reasons why Glinka did not accomplish all that might have been hoped from the distinguished quality of his genius. But a man's influence on succeeding generations is not always in proportion to the volume of his work. Glinka possessed that initiative faculty which begets a whole school of disciples and leaves an undying influence upon his art.

Glinka's chief works—none of which bear opus numbers—include:—

INSTRUMENTAL MUSIC

ORCHESTRAL

Two Spanish overtures, 'The Jota Aragonese' and 'Night in Madrid'; Fantasia 'Kamarinskaya'; Incidental music to 'Prince Kholmsky'; Valse-Fantaisie (1839, new edition, 1856).

CHAMBER AND PIANOFORTE MUSIC

String quartet in F (1830); Minuet for string quartet; 'Pathetic' trio for pianoforte, clarinet, and bassoon (1826-27). Sextet for pianoforte and strings (1833-34). For Pianoforte about forty pieces in all, including five valses, seven mazurkas, eight sets of variations, four fugues, polkas, nocturnes, polonaises, etc.

VOCAL MUSIC

OPERATIC

'A Life for the Tsar,' opera in four acts with an epilogue; 'Russlan and Lïcudmilla,' opera in five acts. Female chorus with orchestral accompaniment composed for the pupils of the Catharine Institute (1841); Ditto, composed for the pupils of the Smolny Convent (1856); Polish hymn 'Great is our God,' mixed chorus and orchestra (1837); Memorial cantata for the Emperor Alexander I., Pianoforte, tenor-solo and mixed chorus (1826); Tarantella with chorus and dances; Prayer 'In the hour of Life's trouble' (mezzo-soprano); 'The Midnight Review' (bass); 'Rachel's Song' and the 'Hebrew Song' from Prince Kholmsky. Songs with pianoforte accompaniment, about eighty-five in all, of which the best known are: 'Doubt'; Gretchen's Song (Meine Ruh' ist hin); 'Thou wilt soon forget me'; 'I am here, Inezilla' and 'The Lark.' About ten duets and six vocal quartets and trios.

[See Berlioz's *Les Musiciens*, p. 205, and the *Rivista Mus. Italiana*, xi. p. 725, for interesting essays.] R. N.

GLISSANDO (Ital. 'sliding'), a direction generally used of pianoforte passages in which the back of the finger is made to slide, producing a very brilliant scale, of course exclusively on the white keys. In the finale of Beethoven's sonata in C, op. 53, there are passages in octaves which were formerly practicable as *glissando* passages on pianos with a light touch. The parallel passage in Weber's 'Concertstück' can be played thus even on a modern piano. Certain *glissando* effects can be produced on the violin and the harp, the latter of which, by special manipulation of the pedals, can produce an arpeggio of the diminished seventh in *glissando*. M.

GLOCKENSPIEL, a name applied to any instrument by means of which a series of bells can be struck by a single performer, and the effect of a chime be produced with little trouble. In Germany the term includes both the smaller kinds of CARILLONS, and a stop on the organ which brings a set of small bells into connection with the keyboard. The *istromento d' acciajo* which appears in the score of the 'Zauberflöte,' is such a set or frame of bells played by means of a keyboard, and represents in the orchestra the Glockenspiel played by Papageno on the stage. The instrument used in German military bands is composed of inverted metal cups arranged pyramidally on a support that can be held in the hand. It is somewhat similar in shape to the 'Turkish crescent' formerly used in the British army. It is this form of the instrument which has been introduced by Wagner into the orchestra; its effective employment in the 'Feuerzauber' in 'Die Walküre' is a familiar instance of its occurrence. The peal of four large bells or tubes cast for the performance of Sullivan's 'Golden Legend' is arranged for convenience in a somewhat similar form. M.

GLORIA is the name which is generally applied in England to the short hymn Gloria Patri, and in the Roman Church to the longer hymn Gloria in Excelsis, which is also called the 'Great Doxology,' or 'Angelical Hymn,' because its first words are those of the angels who appeared to the shepherds. The former is of unknown origin, and was in use in the Anglo-Saxon offices. The custom of singing it after each psalm is peculiar to the Western Church.

The Gloria in Excelsis is probably of Eastern origin. In the Western Church it was formerly used at the beginning of the Liturgy when the Te Deum was used at the end. In the Mass it follows the Kyrie. It now comes at the conclusion of the Communion Service in the English Church, immediately before the blessing. It appears in the Common Prayer Noted of 1550 with an adaptation of the old church melodies by Marbeck, but it does not appear to have been sung in the early days after the Reformation in England, and received little attention from English composers. At the present day it is set equally with the other portions of the Communion Service. C. H. H. P.

GLOUCESTER FESTIVAL. See THREE CHOIRS, FESTIVAL OF.

GLOVER, CHARLES W., born in London, Feb. 1806, was a pupil of T. Cooke. He became a violin player in the orchestras of Drury Lane and Covent Garden Theatres. In 1832 he was appointed musical director at the Queen's Theatre, Tottenham Street, and continued so for some years. He was the composer of numerous songs and duets, some of which were very popular, as 'Jeannette and Jeannot,' 'Sing not that song to me, sweet bird,' 'Of love, pretty maidens, beware.' He died in London, March 23, 1863. W. H. H.

GLOVER, JOHN WILLIAM, born at Dublin, June 19, 1815, studied there, and played in an orchestra from 1830. In 1848 he succeeded Haydn Corri as director of the music in the Catholic Pro-Cathedral, and was appointed professor of vocal music in the Normal Training School of the Irish National Education Board. In 1851 he founded the Choral Institute of Dublin, and for many years was an energetic promoter of choral music in Ireland. He composed two Italian operas by Metastasio, 'St. Patrick at Tara,' a cantata performed at the O'Connell centenary in 1870; 'Erin's Matin Song,' 1873; an ode to Thomas Moore, 'One hundred years ago,' 1879; and an opera on 'The Deserted Village,' 1880, besides church music, songs, concertos, etc. He died Dec. 18, 1899 (*Brit. Mus. Biog.*, etc.).

GLOVER, SARAH ANN, daughter of a clergyman in Norwich, was born there in 1785, and died at Malvern, Oct. 20, 1867. As far as any individual can be credited with the invention of such a system as the Tonic Sol-Fa notation, Miss Glover must be regarded as its inventor. Her *Manual of the Norwich Sol-Fa System* was published in 1845, but about four years before that Mr. John Curwen discovered the practical excellence of her system, and after various modifications and improvements, devoted himself to its promulgation. In 1850 Miss Glover published a *Manual containing a Development of the Tetrachordal System.*

GLOVER, STEPHEN RALPH, teacher and composer, was born in 1812 in London. From the year 1840 to nearly 1870 his facile pen produced sacred and sentimental songs, ballads, duets, and pianoforte pieces, resulting in a record of some twelve to fifteen hundred separate compositions, many of them published. The duet 'What are the wild waves saying?' (1850), and the multitude of his ballads, are now justly forgotten, as well as 'Beauty and the Beast,' a chamber opera, 1863. Less popular but more favourable examples of his talent are perhaps contained in a collection of (12) 'Songs from

the Holy Scriptures,' published by Jefferys; and his setting of Longfellow's 'Excelsior' is not without merit.

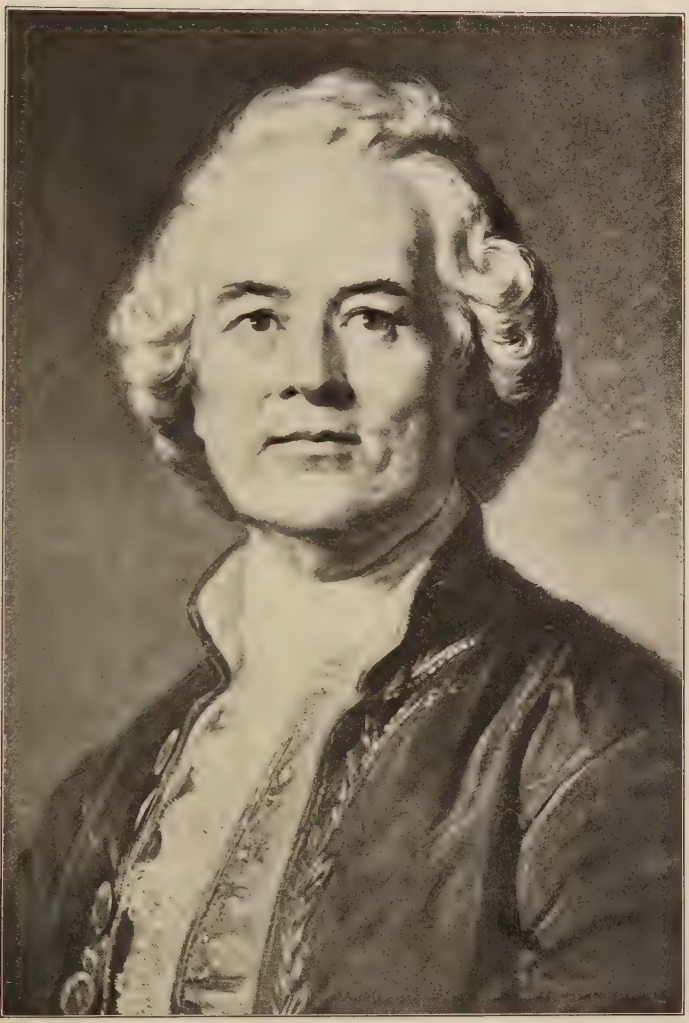
Stephen Glover, who was never very robust, retired in early life to the country; but his death took place in London (Bayswater), when he was fifty-eight, on Dec. 7, 1870.

His music received that mere drawing-room popularity which proclaimed it worthless as representative of genuine national song on the one hand, and as the effort of a pioneer of culture on the other. His success in the narrow field of his labours was enormous, and has probably not been equalled, in the publisher's sense, by any composer of the present day, although all generations suffer from musicians who regard the expediency of the moment as their natural law. It is due to Stephen Glover to say, while considering his works in this connection, that little evidence of power to do better things appears therein. L. M. M.

GLOVER, William Howard, born at Kilburn, London, June 6, 1819, was a son of Mrs. Glover, the celebrated actress. He learned the violin under Wagstaff, leader of the Lyceum band, and began life by a long tour on the continent, after which he returned to England and led a desultory career for some years in London and the provinces—teaching, playing, conducting, composing, and even appearing on the stage in opera. He was for many years musical critic to the *Morning Post*. His chief works were 'Tam O'Shanter,' a cantata produced by the New Philharmonic Society, July 4, 1855, and performed at the Birmingham Festival of the same year, the operas of 'Ruy Blas,' produced at Covent Garden, Oct. 31, 1861, and 'Aminta,' at the Haymarket Theatre; 'Once too often,' operetta at Drury Lane, Jan. 20, 1862; 'The Coquette'; 'Palomita' (New York); Overtures to 'Manfred' and 'Comala'; numerous songs, romances, etc. [He arranged performances of Beethoven's 'Pastoral Symphony,' with pictorial and choregraphical illustrations in 1863, and of 'Israel in Egypt' on a somewhat similar plan in 1865.] In 1868 Glover quitted England for New York, where he was conductor of Niblo's orchestra, and died Oct. 28, 1875. W. H. H. [additions from *Dict. of Nat. Biog.*, etc.]

GLUCK, Christoph Willibald, Ritter von, born July 2, 1714, baptized July 4, at Weidenwang, near Neumarkt, in the Upper Palatinate. His father, Alexander, and his mother, Walburga, belonged to the household of Prince Lobkowitz, and it was at his castle of Eisenberg that the future reformer of the lyric drama passed his early days. At twelve he was sent for six years to the Jesuit school at Kommotau in Bohemia, where he studied classics, and had his first lessons in singing, the violin, harpsichord, and organ. In 1732 he went to Prague, where he continued his musical education under Czernohorsky, and also learned the violoncello; maintaining himself in the meanwhile by singing in church, playing the violin at the peasants' dances in the neighbouring villages, and giving concerts in the larger towns near Prague. In 1736 he went to Vienna, and at the house of Prince Lobkowitz was fortunate enough to meet Prince Melzi, a distinguished amateur, who engaged him for his private band, took him to Milan, and placed him with G. B. Sammartini to complete his studies in harmony. Gluck soon began to write operas[1]—'Artaserse' (Milan), 1741; 'Demetrio' (Venice) and 'Demofoonte' (Milan), 1742; 'Artamene' (Crema), in 1743; 'La Finta Schiava' (in collaboration), (Venice), 'Ipermestra,' 'Sofonisba' (Milan), in 1744; and 'Poro' (Turin), 1744. All these and 'Ippolito' (Milan, Jan. 1745) were well received, and in consequence of their success he was invited in 1745 to London as composer for the opera at the Haymarket. Here he produced 'La Caduta de' Giganti' (Jan. 7, 1746), 'Artamene' (rewritten), and a pasticcio, 'Piramo e Tisbe,' all without success, Handel declaring that the music was detestable, and that the composer knew 'no more counterpoint than his cook'—Waltz, who, however, was a fair bass singer. Counterpoint was never Gluck's strong point, but the works just named had not even originality to recommend them. He also appeared on April 23, 1746, at the Haymarket Theatre in the unexpected character of a performer on the musical glasses, accompanied by the orchestra (see the *General Advertiser*, March 31, and H. Walpole's letter to Mann, March 28). [Harmonica.] But his journey to England, mortifying as it was to his vanity, exercised an important influence on Gluck's career, for it forced him to reflect on the nature of his gifts, and eventually led him to change his style. The pasticcio taught him that an air, though effective in the opera for which it was written, may fail to make any impression when transferred to a different situation and set to different words. A visit to Paris shortly after gave him the opportunity of hearing Rameau's operas; and in listening to the French composer's admirably appropriate recitatives, he came to the conclusion that the Italian opera of that time was but a concert, for which, as the Abbé Arnaud happily expressed it, the drama furnished the pretext. Returning to Vienna by way of Hamburg and Dresden [where 'Le Nozze d' Ercole e d' Ebe' was produced in June 1747], he applied himself to the study of æsthetics as connected with music, and of the language and literature of various countries, taking care at the same time to frequent the most intellectual society within his reach. 'Semiramide riconosciuta' (Vienna, 1748) is a decided step in advance, and in it

[1] The list of works given here has been corrected from M. Wotquenne's thematic catalogue.



may be detected the germ of Gluck's distinctive qualities. [About this time the composer fell in love with Marianna Pergin, daughter of a rich merchant, who refused his consent to the marriage. This, accordingly, took place after the father's death on Sept. 15, 1750.] His next work was 'Filide,' or 'La Contessa de' Numi' (1749), a serenade, or more properly cantata, in two acts, written at Copenhagen for the birthday of Christian VII. 'Ezio' was given at Prague in 1750, and 'La Clemenza di Tito' at Naples 1752; from the latter Gluck borrowed many a page for his French operas 'Armide' and 'Iphigénie en Tauride.' These operas were followed in 1752 by 'Issipile' (Prague), and in 1754 by 'Le Cinesi,' first performed at Schönbrunn, 'La Danza' (Laxemburg, 1755), 'L' Innocenza giustificata' (Vienna, 1755), and 'Antigono' (Rome, 1756). [For this last he was rewarded with the order of the Golden Spur, and henceforth the title of 'Ritter' or 'Chevalier' is added to his name in his published works.] From 1755 to 1761 Gluck was permanently in Vienna, and to all appearance failing; he wrote divertissements for the palaces of Laxemburg and Schönbrunn; composed airs for the comedies or comic operettas performed at the court theatre: and produced an opera in three acts, 'Tetide' (1760), of which nothing has survived. [The ballet of 'Don Juan' (Vienna, 1761), and a visit to Bologna, were the most prominent events of his career before his definite change of style.] The years that he spent in Vienna, far from being wasted, were probably most useful to him, for by these apparently insignificant works he was acquiring flexibility of style, and securing powerful patrons, without losing sight of his ultimate aim. His opera 'Orfeo ed Euridice'[1] (Vienna, Oct. 5, 1762)—the libretto not as heretofore by Metastasio, but by Calzabigi—showed to all capable of forming a judgment what were the aims of the reformer of the lyric stage. After the production of this fine work, however, he returned to Metastasio and to *pièces de circonstance* for the court theatre—'Il Trionfo di Clelia' (1763); 'La Rencontre imprévue,' afterwards produced in German as 'Die Pilgrime von Mekka' (1764); 'Il Parnasso confuso,' 'La Corona,' and 'Telemacco,' first produced in Rome, 1750, and partly re-written (1765); in fact he was obliged to bend to circumstances, and before all things to please the princes who protected him and sang his music. 'Il Parnasso' was played by four archduchesses, the archduke Leopold accompanying them on the harpsichord. It was probably between this date and the departure of Marie Antoinette for France (May 1770) that Gluck acted as singing master to that princess.

At length, thinking the time had come for bringing his ideas before the public, and finding in Calzabigi a poet who shared his taste for strong dramatic situations, he produced in Vienna 'Alceste' (Dec. 16, 1767) and 'Paride ed Elena' (1770). The scores of these operas were published in Vienna (1769-70),[2] and dedicated respectively to the Archduchess Leopold and the Duke of Braganza. Each contains a dedicatory epistle, briefly explaining Gluck's views on dramatic music. As far as theory went, his system was not new, as it rested on the outlines already sketched by Benedetto Marcello in his 'Teatro alla Moda' (1720); but theory and practice are two different things, and Gluck has the rare merit of showing in his 'Alceste' and 'Paride' that he was both composer and critic, and could not only imagine but produce an opera in which all is consecutive, where the music faithfully interprets each situation, and the interest arises from the perfect adaptation of the *ensemble* of the music to the whole of the drama. The composition of these two great works did not prevent his writing the intermezzi of 'Le Feste d' Apollo,' 'Bauci e Filemone,' and 'Aristeo,' produced at the court theatre of Parma in 1769, but not published.

In spite of the favour he enjoyed at the court of Vienna, and of the incontestable beauties contained in 'Orfeo,' 'Alceste,' and 'Paride ed Elena,' Gluck's countrymen criticised his new style in a manner so galling, that, conscious of his own power, and by no means devoid of vanity, he resolved to carry out elsewhere the revolution he had determined to effect in dramatic music. In Bailly du Rollet, an attaché of the French embassy in Vienna, he found an enthusiastic partisan and a valuable auxiliary; they consulted as to a drama in which music might be employed for enhancing the expression of the words and the pathos of the situations; and their choice fell upon Racine's 'Iphigénie.' This opera, 'Iphigénie en Aulide,' was written in French in 1772, partially rehearsed at the theatre in Vienna towards the end of the same year, and produced at the Opéra in Paris, April 19, 1774. Gluck left no means untried to ensure success—statements of his views, public announcements (*Mercure de France*, Oct. 1772 and Feb. 1773), public tributes of respect to J. J. Rousseau, letters to authors whose good-will it was desirable to propitiate—in short everything that ability and experience in such matters could suggest. And yet if it had not been for the all-powerful protection of his former pupil, Marie Antoinette, he would in all probability have failed in getting his work performed, so strong was the opposition which his arrival in France had roused, especially amongst those interested in keeping him out of the 'Académie de Musique.' The Dauphiness seems to have been really attached to her old singing master. In a letter to her sister Marie Christina (May 3, 1777) she calls him 'notre

[1] Printed in 1764 in Paris at the expense of Count Durazzo.

[2] Printed in folio by G. T. Trattnern with movable types.

CHRISTOPH WILLIBALD, RITTER VON GLUCK

cher Gluck,' and after the success of 'Orphée' she granted him a pension of 6000 francs, and the same sum for every fresh work he should produce on the French stage.

The appearance of 'Iphigénie en Aulide' marks a new era in the history of French opera. This severe and deeply conceived work transports us bodily into Greece ; it is pervaded throughout by an antique atmosphere, of the days of Sophocles rather than of Euripides. What a bold innovation is the overture, with the inexorable voice of the oracle making itself heard, and with the striking unison passage, which at once forces the ruling thought of the drama into notice, while it closely connects the symphony with the action on the stage ! Then again, how grand, how just, how pathetic is the declamation of all the airs ! These airs, it must be confessed, succeed each other too rapidly, and one cannot but regret that the librettist did not perceive how much the action is retarded by making three airs follow each other in one act, a mistake which might easily have been avoided. But how ingenious are the artifices to which Gluck resorts in order to give variety to the recitative and the declamatory passages ! How skilfully he brings in his short incisive symphonies, and how much effect he produces by syncopation ! How appropriately he introduces the orchestra to emphasise a word, or to point a dramatic antithesis ? How graceful is the chorus 'Que d'attraits' ! and how startling and attractive are the brilliancy, force, and boldness of the harmony in the hymn of triumph 'Chantons, célébrons notre reine' ! While listening to the air of Agamemnon, 'Au faîte des grandeurs,' the enthusiastic Abbé Arnaud exclaimed, 'With that air one might found a religion.' What a depth of expression is contained in the air 'Par un père cruel à la mort condamnée,' and what heart-rending emotion in the recitative

> J'entends retentir dans mon sein
> Le cri plaintif de la nature !

not to speak of the scene in which Clytemnestra faints, the duet between Achille and Iphigénie which gave rise to so many discussions, the quartet, or the dance music !

Owing to the support of the court and the pains taken by Gluck to obtain a thoroughly satisfactory performance, 'Iphigénie' was most favourably received. Its success gave the finishing stroke to the antiquated works of Lully and Rameau, and introduced into grand opera the revolution already effected in opéra-comique by Philidor, Monsigny, and Grétry.

'Iphigénie' was speedily followed by 'Orphée et Eurydice,' adapted from the 'Orfeo' already mentioned, and produced at the Académie, August 2, 1774. This opera made a profound impression, although Gluck was compelled to transpose the music of Orpheus to suit Legros, a tenor, as there was no contralto capable of taking the part.

In accordance with a desire expressed by Marie Antoinette, and which Gluck was too good a courtier to refuse, 'Le Poirier' (or 'L'Arbre enchanté'), a comedy by Vadé, which he had composed in 1762, and 'Cythère Assiégée,' a piece of Favart's which he had converted into an opera in 1759, were performed at the court theatre at Versailles in 1775. The latter work was also produced in Paris (August 1, of the same year) with a divertissement by P. M. Berton, and with a want of success which compelled Arnaud to admit that 'Hercules was more at home with the club than the distaff.'

For this failure, however, Gluck was consoled by the brilliant success of his 'Alceste,' which he rearranged for the French stage (April 24, 1776), and which created quite as much enthusiasm as 'Orphée' had done, notwithstanding a want of variety in the libretto. It is in this fine work that the oracle of Apollo pronounces its stern decree on a reiterated note which strikingly pictures the immutability of the infernal deities. This touch of deliberate inspiration was not lost on Mozart in 'Don Giovanni,' nor on Ambroise Thomas in 'Hamlet.'

In order to prove that it was not in tragedy alone he excelled, but that he also possessed the descriptive faculty, and could depict scenes of luxury, and express tender and graceful sentiments, Gluck composed 'Armide' (Sept. 23, 1777). He had been reproached with having no melody, and with making his singers shriek ; this work, which contains many charming passages, and a duet magnificent for passion and tenderness, was his answer. The excitement it aroused is almost incredible. Piccinni had recently arrived in Paris, and, under Marmontel's superintendence, was composing his 'Roland,' to be produced four months after 'Armide.' His admirers, and the partisans of the old Italian music, were furious at Gluck's success, and every one knows the lengths to which the war of the Gluckists and Piccinnists was carried. It was even more violent than the old quarrel of the Bouffons, since the combatants were encouraged by the bodily presence of the rival masters. Marmontel, La Harpe, Ginguené, d'Alembert, the Chevalier de Chastellux, Framery, and Coquéau, were among the attacking party, while the chief defenders were Suard and the Abbé Arnaud. Not content with disparaging Gluck's genius in his *Essai sur les révolutions de la Musique*, Marmontel went the length of writing an entire poem, 'Polymnie,' in praise of the Italian school and his favourite Piccinni. Space will not permit us to enumerate the pamphlets, epigrams, and satires, which emanated from both sides in this contest ; nearly all that are of any importance may be found in the collection of the Abbé Leblond — *Mémoires pour servir à l'histoire de la révolution opérée dans la Musique par M. le Chevalier Gluck* (Naples and Paris, 1781, with a portrait of Gluck engraved by Saint Aubin). The champions of the Italian

school accused him of composing operas in which there was 'little melody, little nature, and little elegance or refinement.' They declared that the noise of his orchestra[1] was necessary to drown his clumsy modulations; that his accompanied recitative was nothing but an overloaded imitation of the Italian 'recitativo obbligato'; that his choruses were less dramatic than those of Rameau; and that his duets were borrowed, and badly borrowed, from the 'duetti a dialogo' which he had heard in Italy. They could not forgive what Marmontel calls his 'harsh and rugged harmony, the incoherent modulations, mutilations, and incongruities contained in his airs,' but they were most offended by his 'want of care in choosing his subjects, in carrying out his designs, and giving completeness and finish to his melodies.' In short they denied him the possession of any creative genius whatever. They might as well have denied the existence of the sun—but passion invariably blinds its votaries.

The Abbé Arnaud, on the other hand, met the systematic disparagement of Marmontel and La Harpe with his *Profession de foi en musique*; an excellent treatise on musical æsthetics, though little more than a paraphrase of the celebrated dedication which Gluck himself had prefixed to the score of 'Alceste.' This statement of the great reformer's principles is well worth transcribing.

> When I undertook to set the opera of 'Alceste' to music (he begins), I resolved to avoid all those abuses which had crept into Italian opera through the mistaken vanity of singers and the unwise compliance of composers, and which had rendered it wearisome and ridiculous, instead of being, as it once was, the grandest and most imposing stage of modern times. I endeavoured to reduce music to its proper function, that of seconding poetry by enforcing the expression of the sentiment, and the interest of the situations, without interrupting the action, or weakening it by superfluous ornament. My idea was that the relation of music to poetry was much the same as that of harmonious colouring and well-disposed light and shade to an accurate drawing, which animates the figures without altering their outlines. I have therefore been very careful never to interrupt a singer in the heat of a dialogue in order to introduce a tedious ritornelle, nor to stop him in the middle of a piece either for the purpose of displaying the flexibility of his voice on some favourable vowel, or that the orchestra might give him time to take breath before a long-sustained note.
>
> Furthermore, I have not thought it right to hurry through the second part of a song if the words happened to be the most important of the whole, in order to repeat the first part regularly four times over; or to finish the air where the sense does not end in order to allow the singer to exhibit his power of varying the passage at pleasure. In fact, my object was to put an end to abuses against which good taste and good sense have long protested in vain.
>
> My idea was that the overture ought to indicate the subject and prepare the spectators for the character of the piece they are about to see; that the instruments ought to be introduced in proportion to the degree of interest and passion in the words; and that it was necessary above all to avoid making too great a disparity between the recitative and the air of a dialogue, so as not to break the sense of a period or awkwardly interrupt the movement and animation of a scene. I also thought that my chief endeavour should be to attain a grand simplicity, and consequently I have avoided making a parade of difficulties at the cost of clearness; I have set no value on novelty as such, unless it was naturally suggested by the situation and suited to the expression; in short there was no rule which I did not consider myself bound to sacrifice for the sake of effect.

[1] Gluck was the first to introduce cymbals and the 'Grosse caisse' or big drum into the orchestra.

It can never be out of place to recall such precepts as these—precepts which will be worth following to the end of time. Gluck himself bore them carefully in mind in composing his 'Iphigénie en Tauride,' produced in Paris (in four acts) with immense success, May 18, 1779. It is the highest and most complete expression of his genius. Amongst its many beauties must be specified the air of Thoas; the airs 'Je t'implore et je tremble' (borrowed from 'Telemacco'), 'O malheureuse Iphigénie' (originally written for 'La Clemenza di Tito'), 'Unis dès la plus tendre enfance,' sung by Pylades; and, beyond all, the sleep of Orestes—the heart-breaking remorse of the deceitful parricide, the spirited choruses, and the barbarous Scythian dances. These passages all glow with colour, though the means by which the effect is produced are of the simplest kind. By this *chef-d'œuvre* Gluck amply vindicated his superiority over Piccinni, whose 'Iphigénie en Tauride' (Jan. 23, 1781) could not make way against that of his rival.

The last work which Gluck composed for the Opéra in Paris was 'Echo et Narcisse' (Sept. 21, 1779). Though not very successful it was revived in August 1780, and one of the airs, and the 'hymne à l'Amour,' have since been introduced into 'Orphée.' It was, however, with 'Les Danaïdes' that Gluck intended to close his laborious career; but an apoplectic seizure compelled him to relinquish the task, and he transferred the libretto to his pupil Salieri. He then retired to Vienna, where he passed his last years in the enjoyment of the position secured by his fame and his large fortune, until a second stroke of apoplexy carried him off, Nov. 15, 1787.

The authorities for this sketch of Gluck's career, and for the notices of the most remarkable passages in his operas, are various historical documents, and the biographies and critiques of Leblond (*Mémoires pour servir à l'histoire de la Révolution opérée dans la Musique par M. le Chevalier Gluck*, 1781, translated into German by J. G. Siegmeyer, Berlin, 1823); F. J. Riedel (*Ueber die Musik des Ritters Christoph von Gluck, verschiedene Schriften*, Vienna, 1775); Miel, Solié, Anton Schmid (*Chr. W. Ritter von Gluck*, Leipzig, 1854); Fétis, Hector Berlioz (*A travers Chants*); Ad. Adam (*Derniers Souvenirs*); Desnoiresterres (*Gluck et Piccinni*, Paris, 1872), etc. For more minute details the reader is referred to Schmid's work, which is most complete as regards the catalogue of Gluck's compositions. [Besides the authorities already named, mention must be made of A. B. Marx's *Gluck und die Oper* (Berlin, 1862); C. H. Ritter's *Reform der Oper durch Gluck und Richard Wagner* (Brunswick, 1884); A.

Jullien's *La Cour et l'Opéra sous Louis XVI.* (Paris, 1878); *Gluck and the Opera*, by Ernest Newman (London, 1895); and the thematic catalogue of M. Wotquenne (Breitkopf & Härtel, 1904)]. To this list must be added the magnificent edition begun by Mlle. Pelletan, evidently the work of an ardent admirer; of which the full scores of the two 'Iphigénies,' with a portrait, and preface in three languages, 'Alceste,' 'Armide,' 'Echo et Narcisse,' the 'Prologo' of 1767, and 'Orphée' have appeared at present. For those who wish to study the physiognomy of this diplomatic composer, impetuous artist, and amusingly vain man, there are the engravings of Miger[1] and Sichling from the portrait painted by Duplessis in 1775, Saint Aubin's engraving from Houdon's celebrated bust, and Philippeaux's from the picture painted by Houdeville. There is a full-length statue of Gluck by Cavelier in the Opera House in Paris. Under Miger's portrait are the words of Pythagoras, 'He preferred the Muses to the Sirens,' words applied to him by Wieland, and, as such, in striking contrast to the many bitter remarks of earlier German critics.

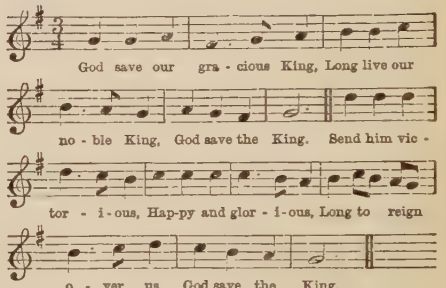
Before summing up our opinion of Gluck's works as a whole, we have only to remark that, according to Fétis, he failed in symphony proper, and was by no means distinguished as a composer of sacred music. [A list of extant 'symphonies' (*i.e.* overtures), trios, sonatas, a concerto, and a quartet, is given in the *Quellen-Lexikon.*] He wrote a portion of an oratorio, 'Il Convito di Baldassare,' and for the church the psalm 'Domine, Dominus noster' for choir and orchestra, a 'De profundis' for the same (engraved), an 'Ave verum' and 'Tantum ergo' for four-part choir with organ, and a part of the cantata 'Le Jugement dernier,' completed by Salieri. [Seven odes by Klopstock set for voice and harpsichord accompaniment, were printed in Vienna (1787), Berlin, Copenhagen, and elsewhere; the Göttingen *Musenalmanach* for 1774-75 contains eight songs.]

Gluck's fame therefore rests entirely on his dramatic compositions. Padre Martini said that he combined in the musical drama 'all the finest qualities of Italian, and many of those of French music, with the great beauties of the German orchestra'—in other words, he created cosmopolitan music. He was not satisfied with introducing a correct style of declamation, and banishing false and useless ornaments from the stage; and yet if he had merely carried to perfection the work begun by Lully and Rameau; if his efforts had been limited to removing the harpsichord from the orchestra, introducing the harp and trombones, employing the clarinets, scoring with skill and effect, giving more importance and interest to the overture, and employing with such magic effect the artifice of momentary pauses to vary or emphasise speech in music,—if he had done no more than this he would have earned our gratitude, but he would not in that case have been one of the monarchs of art. What then did he accomplish that was so extraordinary? He grasped the idea that the mission of music was not merely to afford gratification to the senses, and he proved that the expression of moral qualities is within her reach. He disdained all such tricks of the trade as do not appeal to the heart,—in fact he 'preferred the Muses to the Sirens.' He aimed at depicting historic or legendary characters and antique social life, and in this work of genius he put into the mouth of each of his heroes accents suited to their sentiments, and to the spirit of the times in which they lived. He made use of the orchestra to add to the force of a dramatic situation, or (in one noble instance) to contrast external repose with the internal agitation of a remorseful conscience. In a word, all his French operas show him to have been a noble musician, a true poet, and a deep thinker.

Like Corneille he has endowed France with a series of sublime tragedies; and if the author of 'Le Cid,' 'Les Horaces,' 'Cinna,' 'Polyeucte,' and 'Pompée' may be justly reproached with too great a preference for Lucan and Seneca, there is perhaps also cause for regret that Gluck was too much influenced by the declamatory school then prevalent in France. But, like the father of French tragedy, how nobly has he redeemed an occasional inflation or monotony, a few awkward phrases, or trifling inaccuracies of style! There is another point of resemblance between these two men, whose manly genius was reflective rather than spontaneous; all their works have in common the element of grandeur, but they differ from one another in physiognomy, form, and character. The influence of such Art as theirs is anything but enervating; on the contrary it elevates and strengthens the mind, and is thus placed beyond the reach of the caprices of fashion or the attacks of time. G. C.

The following summary of Gluck's dramatic works, with the dates of first performances, is based upon the catalogue of M. Wotquenne, already mentioned:—

Artaserse, Milan, Dec. 26, 1741.
Demetrio, Venice, May 1742.
Demofoonte, Milan, Dec. 26, 1742.
Artamene, Crema, 1743.
Sofonisba, Milan, Jan. 13, 1744.
La Finta Schiava (in collaboration), Venice, May 17--.
Ipermestra, Turin, Oct. 1744.
Poro, Turin, Dec. 26, 1744.
Ippolito, Milan, Jan. 31, 1745.
La Caduta de' Giganti, London, Jan. 7, 1746.
Artamene (rewritten), London, March 4, 1746.
Le Nozze d' Ercole e d' Ebe, Dresden, June 29, 1747.
Semiramide riconosciuta, Vienna, May 14, 1748.
La Contessa de' Numi, Copenhagen, April 9, 1749.
Ezio, Prague, 1750.
La Clemenza di Tito, Naples, Nov. 4, 1752.
Issipile, Prague, 1752.
La Cinesi, Schönbrunn, Sept. 24, 1754.
La Danza, Laxemburg, May 5, 1755.
L' Orfano della China (ballet), Vienna, 1755.

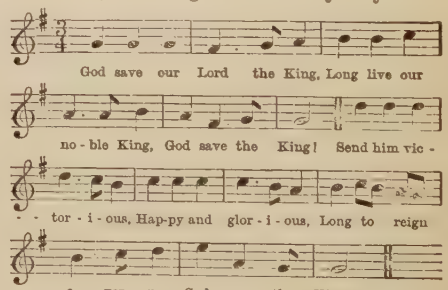


[1] An etching of this by Le Rat forms the frontispiece to Part IV. of Lajarte's admirable *Bibliothèque musicale du Théâtre de l'Opéra*, 1876.

Alessandro (ballet), Laxemburg, 1755.
Les Amours champêtres (doubtful), Schönbrunn, 1755.
L' Innocenza gratificata, Vienna, Dec. 8, 1755.
Antigono, Rome, Feb. 9, 1756.
Il Re Pastore, Vienna, Dec. 8, 1756.
Le Déguisement pastoral (doubtful), Schönbrunn, 1756.
Le Chinois poli en France (doubtful), Laxemburg, 1756.
L'Ile de Merlin, Schönbrunn, Oct. 3, 1758.
La Fausse Esclave, Schönbrunn, 1758.
L'Arbre enchanté, Schönbrunn, Oct. 3, 1759.
Le Diable à quatre (doubtful), Laxemburg, 1759.
Cythère Assiégée, Schwetzingen, 1759.
Tetide, Vienna, Oct. 8, 1760.
L'Ivrogne corrigé, Schönbrunn, 1760.
Le Cadi dupé, Schönbrunn, 1761.
Don Juan (ballet), Vienna, 1761.
Orfeo ed Euridice, Vienna, Oct. 5, 1762.
Il Trionfo di Clelia, Bologna, May 14, 1763.
La Rencontre imprévue, Vienna, Jan. 1764.
Il Parnasso confuso, Schönbrunn, Jan. 24, 1765.
Telemacco, Vienna, Jan. 30, 1765.
La Corona, Vienna, 1765 (not performed).
Prologo, Florence, Feb. 22, 1767.
Alceste, Vienna, Dec. 16, 1767.
Le Feste d' Apollo, Parma, Aug. 24, 1769.
Paride ed Elena, Vienna, Nov. 30, 1770.
Iphigénie en Aulide, Paris, April 19, 1774.
Orphée et Eurydice, Paris, August 2, 1774.
L'Arbre enchanté, Versailles, Feb. 27, 1775.
Cythère Assiégée (revised), Paris, August 1, 1775.
Alceste, Paris, April 24, 1776.
Armide, Paris, Sept. 23, 1777.
Iphigénie en Tauride, Paris, May 18, 1779.
Echo et Narcisse, Paris, Sept. 21, 1779.

A ballet, 'Semiramis,' which appeared in 1785, is probably apocryphal.
Cantata, 'The Last Judgment,' finished by Salieri, is in MS. in the Gesellschaft der Musikfreunde at Vienna. In the same library are eleven symphonies or overtures, and a string quartet.
Seven Odes of Klopstock for voice and clavier were published in 1787 at Vienna.
A symphony for six instruments, dated Venice, 1746, is in the Court Library at Vienna, where there are also two other symphonies.
The Brussels Conservatoire possesses three symphonies, and there is a concerto for flute and strings at Carlsruhe.
Seven trios for two violins and bass were published in London by Simpson, and six sonatas for the same instruments, by the same publisher, in 1746.
A quartet is in the Gesellschaft der Musikfreunde at Vienna.
An orchestral march and an unpublished sonata are mentioned in Wotquenne's catalogue.

GNECCO, FRANCESCO, according to Fétis, was born in 1769 at Genoa, became a pupil of Mariani, musical director of the Sistine Chapel and of the Cathedral of Savona, and died in 1810 at Milan. According to Regli and Paloschi, Gnecco was born in 1780, was a pupil of Cimarosa, and died in 1811 at Turin. Gnecco composed several operas, both serious and comic, of which two only, we believe, have ever been performed out of Italy, viz. 'Carolina e Filandro,' 1798, at the Italian Opera in the Salle Favart, Paris, Oct. 11, 1817 (Castil Blaze), and 'La Prova d' un opera seria,' opera buffa in two acts, libretto by the composer, produced at Milan, 1805, and at the Salle Louvois, Paris, Sept. 4, 1806, with Signora Canavassi and Barilli. This last opera was a great success, and enjoyed considerable popularity. It was thrice revived in Paris, viz. in 1810, in 1831 with Malibran and Lablache; on Oct. 28, of the same year, with Pasta; and on Nov. 20 it was played with the first act of 'Tancredi' on the occasion of Malibran's last appearance in Paris. In 1834 it was reduced to one act. 'La Prova' was produced June 23, 1831, at the King's Theatre, with Pasta, Curioni, Lablache, and, thanks to the last-named singer, became popular. It was revived in one act July 3, 1854, with Lablache, Viardot-Garcia, Stigelli, and Ronconi, and was last produced on June 18 and 19, 1860, at Her Majesty's, for Ciampi, since which it has disappeared from the stage. A duet from it, 'O guardate che figura,' was highly popular in the concert-room when sung by Viardot and Tamburini, and on one occasion the former made it a vehicle for imitation of the latter's mannerisms, which the gentleman by no means took in good part. (*Musical Recollections*, Rev. J. E. Cox.) A. C.



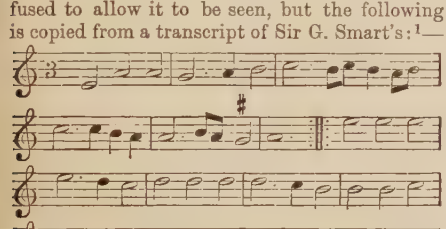
GOD SAVE THE KING. The so-called 'National Anthem' of England, a tune in two sections, the first of six bars, the second of eight.

O Lord our God, arise,
Scatter his enemies,
And make them fall.
Confound their politics,
Frustrate their knavish tricks,
On Thee our hopes we fix,
God save us all.

Thy choicest gifts in store
On him be pleased to pour,
Long may he reign.
May he defend our laws,
And ever give us cause
To sing with heart and voice,
God save the King.

Its first public performance is stated to have been at a dinner in 1740 to celebrate the taking of Portobello by Admiral Vernon (Nov. 20, 1739), when it is said to have been sung by Henry Carey as his own composition, both words and music. The nearest known copy to that date is that in the *Harmonia Anglicana* of 1742 or 1743, as follows.[1] It is marked 'for two voices,' but we give the melody only.

O Lord our God, arise,
Scatter his enemies,
And make them fall.
Confound their politicks,
Frustrate their knavish tricks,
On him our hopes are fix'd,
O save us all.

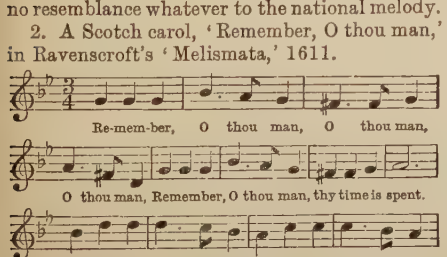


This is the nearest we can arrive at to the original form of the air and words, and both will be found somewhat different from those with which we are familiar. The fact that Henry Carey was the author of both is testified to by J. Christopher Smith, Handel's amanuensis, and by Dr. Harington; but for the evidence the

[1] See Chappell's *Popular Music* (orig. ed.), ii. 704.

reader must be referred to W. Chappell's full statement in his *Popular Music* (orig. ed.), pp. 694, 695, and to Chrysander's *Jahrbücher* (i. 287-407). In 1745 it became publicly known by being sung at the theatres as 'a loyal song or anthem' during the Scottish Rebellion. The Pretender was proclaimed at Edinburgh, Sept. 16, and the first appearance of 'God save the King' was at Drury Lane, Sept. 28. For a month or so it was much sung at both Covent Garden and Drury Lane; Burney harmonised it for the former, and Arne for the latter. Both words and music were printed, the latter in their present form, in the *Gentleman's Magazine*, Oct. 1745.

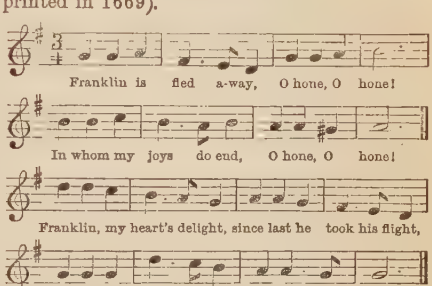
How far 'God save the King' was compiled from older airs will probably never be known. Several exist with a certain resemblance to the modern tune.



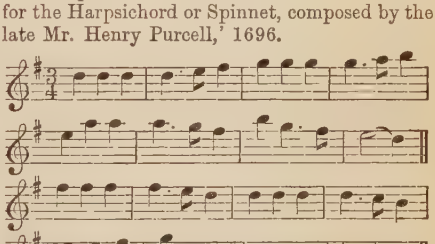
1. An 'Ayre,' without further title, at fol. 98 of a MS. book attributed to 'Dr. Jan Bull,' and dated 1619. The MS., formerly in possession of Pepusch and of Kitchener, came into the hands of Richard Clark, whose widow refused to allow it to be seen, but the following is copied from a transcript of Sir G. Smart's:[1]—

This is in two strains of six and eight bars, and besides its general likeness it has both the rhythm and the melody of the modern air in the first four bars of the second strain; but the minor mode makes an essential difference in the effect.

A piece entitled 'God save the King' occurs in the same MS., fol. 56, but this is founded on the phrase  and has no resemblance whatever to the national melody.



2. A Scotch carol, 'Remember, O thou man,' in Ravenscroft's 'Melismata,' 1611.



[1] Printed by W. H. Cummings (*Mus. Times*, May 1878). The sharps

This is the air on the ground of which 'God save the King' is sometimes claimed for Scotland. It is in two strains of eight bars each, and has the rhythm and melody of the modern tune in the first and third bars of the second strain. But it is in the minor.

3. A ballad, 'Franklin is fled away' (first printed in 1669).

4. A piece in 'A Choice Collection of Lessons for the Harpsichord or Spinnet, composed by the late Mr. Henry Purcell,' 1696.

Here the similarity is confined to the recurring rhythm in the first and third bars of each section.

Thus the rhythm and phrases of 'God save the King,' and even the unequal length of the two strains (its most essential peculiarity), had all existed before. So also did some of the phrases of the words. 'God save the king' is found in the English Bible (Coverdale, 1535), and as the phrase is in no sense a rendering of the Hebrew words, which literally are 'Let the king live,' it seems to follow that the phrase must have been employed in the translation as one familiar to English readers. Froude has also quoted a watchword of the navy as early as 1545—'God save the king,' with the countersign 'Long to reign over us' (*Hist.* chap. xxii.). 'God save King James' is the refrain of a ballad of 1606; and 'God save Charles the king, Our royal Roy, Grant him long to reign, In peace and joy,' is the opening of another ballad dating probably from 1645.

Both words and tune have been considerably antedated. They have been called 'The very words and music of an old anthem that was sung at St. James's Chapel for King James the

there given are omitted from the signature; as Dr. Cummings surmises, with great probability, that they were added after Bull's time.

Second' (Victor's letter, Oct. 1745). Dr. Arne is reported to have said that it was a received opinion that it was written for the Catholic Chapel of James II. This is the date given it by Burney in Rees's Cyclopædia (Chappell, p. 694), and Dr. Benjamin Cooke had heard it sung to the words 'Great James our King.' But Dr. Cooke was not born till 1734, and his 'James' must have been (James III.) the Pretender. And as to the Catholic Chapel of James II., to have been sung there it must surely have been in Latin, of which certainly no traces are found [but see below].

Lully's (1633-87) claim to the tune, sometimes put forward, rests on the *Souvenirs de la Marquise de Créqui*, which is now known to be a mere modern fiction. The tune, however, quickly crossed the Channel. It is found in *La Lire Maçonne . . . de Vignolles et du Bois . . . à la Haye* as early as 1766, and it is worth noting that[1] the first bar has there taken its present form, and that the close is as follows :—

It was adopted as the Danish National Air, to a version made by Harries, beginning 'Heil Dir, dem liebenden,' and was expressly stated to have been written for the melody of 'God save great George the King.' (*Flensburger Wochenblatt*, Jan. 27, 1790.) The Berlin form, beginning 'Heil dir im Siegerkranz,' is by Balthasar Gerhard Schumacher, and was published in the *Spenersche Zeitung*, Berlin, Dec. 17, 1793. See a paper by A. Hoffmann von Fallersleben in his *Findlinge*, Leipzig, 1859.

W. Chappell quoted more than one additional occasional stanza as well as parody of 'God save the King.' But perhaps none are so curious as the extra stanza which is said to have been sung at Calais at the banquet given in honour of the Duke of Clarence, when, as Lord High Admiral of England, he took Louis XVIII. across the Channel :—

God save noble Clarence,
Who brings her king to France,
God save Clarence!
He maintains the glory
Of the British navy,
O God make him happy!
God save Clarence!

The tune was a great favourite with Weber. He introduced it into his Cantata 'Kampf und Sieg' (No. 9) and his 'Jubel Ouvertüre,' and has twice harmonised it for four voices—in D and B♭ (both MS.—Jähns, Nos. 247, 271). With Beethoven it was at least equally a favourite. He wrote seven variations on it for Piano (in C ; 1804), arranged it for solo and chorus with accompaniment of pf., violin, and violoncello (B. & H. No. 259), and introduced it into his Battle Symphony ; àpropos of the latter the following words are found in his journal : 'I must show the English a little what a blessing they have in God save the King' (Nohl, *Beethoven-Feier*, p. 55). Our own Attwood harmonised it in his anthem 'I was glad' for the coronation of George IV., as he did 'Rule Britannia' for the coronation of William IV.

Dr. Cummings has published an investigation of the subject in the *Musical Times* (March to August 1878) more complete than any preceding it ; and has expanded the article into a volume [see below]. I have only been able to avail myself of his copy of Bull's Ayre, and must refer my readers to the authorities already mentioned, and to an article by Major Crawford, in Julian's *Dictionary of Hymnology*, p. 437. G.

[In an article originally intended for insertion in the first edition of this Dictionary, Major Crawford inclined to the belief that the song was 'really sung in James II.'s chapel in 1688, and preserved in the memory of the adherents of the Stuart family.' According to this, it came into the hands of John Travers, who set it as a Latin chorus for the birthday of the Princess of Wales, and had it performed in the winter of 1743-44. The words were as follows, and may represent the actual original of the hymn :—

O Deus optime!
Salvum nunc facito
Regem nostrum ;
Sit lætа victoria,
Comes et gloria,
Salvum nunc facito,
Te Dominum.

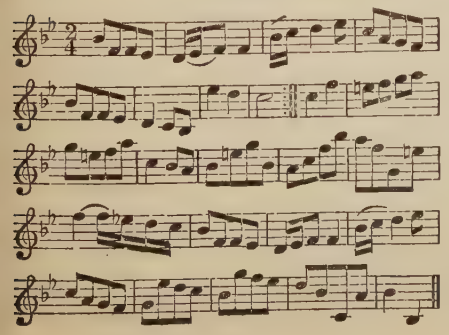
Exurgat Dominus ;
Rebelles dissipet,
Et reprimat ;
Dolos confundito ;
Fraudes depellito ;
In Te sit sita spes ;
O salva nos.

Dr. Cummings supports this theory as to the words, and considers that the tune may have been an adaptation from Bull's air, modified by tradition.]

Since the above was written, no definite solution of the problem of the authorship of either words or music has been made. Dr. Cummings has put his facts into book-form, under the title *God save the King, the origin and history of the music and words of the National Anthem* (Novello, 1902). In the various articles which appear from time to time in magazines and newspapers, Henry Carey still divides about equally with Dr. John Bull the credit of its composition. The present writer ventured, in *The Minstrelsy of England* (first series, 1901, Bayley and Ferguson), to broach a new theory suggesting the probability of its composition or its modern revival being due to James Oswald, a Scottish musician who settled in London in 1742. Oswald became a hack-writer for John Simpson, the publisher of all early copies (with

[1] If the tune is alike in the 1st and 2nd (1775) editions. See Tappert in *Mus. Wochenblatt*, August 31, 1877.

the exception of that in *The Gentleman's Magazine*, October 1745) of the piece prior to 1747, the date of Simpson's death.



The arguments laid down are admittedly inconclusive, but suggest a line of inquiry which has been hitherto overlooked. Briefly put, they are to this effect: that the claim for Carey is untenable, and merely rests on two statements made half a century after the supposed events, one being dependent on the memory of a person as to what song was sung at a public dinner (after the bottles had circulated), and another one equally vague: that we have no real knowledge as to 'God save the King' before 1745; for the date 1742 which Chappell gives for *Harmonia Anglicana* (of which work, by the way, no copy appears to be now known), or the same publication under its later title *Thesaurus Musicus*, is not proven: that Oswald was working for Simpson and probably edited this publication, and that for some reason he did not wish to claim much excellent work, frequently using a *nom de plume*: that Oswald was appointed chamber-composer to George III. over the heads of better-known men: and finally that the chimes of Windsor Parish Church, which were arranged in 1769 by Oswald himself, played among other tunes 'God save the King,' and this is stated to have been named on the dial-plate 'Oswald's' (misread 'Osweld's') 'air.'

For fuller details of this theory the reader is referred to *The Minstrelsy of England* above quoted. Chappell's *Popular Music*, Dr. Cummings's articles in the *Musical Times*, 1878, and his book 1902, with Richard Clarke's *Account of the National Anthem*, 1822, will give the inquirer all the original matter that has been collected on the subject.

A further early copy of the air, up to the present unnoticed, is here appended. The tune occurs as a minuet in a country dance named 'Long live the King' from Johnson's collection of country dances, dated 1748, but probably issued in the autumn of 1747.

LONG LIVE THE KING.

From 'A Choice Collection of 200 Favourite Country Dances,' vol. iv. 1748. Published by John Johnson, Bow Churchyard.

F. K.

GODARD, BENJAMIN LOUIS PAUL, born in Paris, August 18, 1849, first studied the violin under Richard Hammer, and entered the Conservatoire in 1863, where he studied harmony under Reber: he competed twice for the Prix de Rome, but without success. He then left the institution and joined several societies for chamber music, in the capacity of viola player, at the same time devoting himself to composition with an ardour and a fertility which time only served to increase. He wrote numerous songs, of which several are most charming, a violin sonata, and a number of pieces for piano, some very pretty; he also orchestrated with much delicacy Schumann's 'Kinderscenen' (produced in this form at the Concerts du Châtelet in 1876), for at the beginning of his career he seemed to be specially inspired by this master both in the concentrated expression of his songs and in the elegant forms of his piano pieces. He next produced more fully developed compositions: two violin concertos, the second of which, entitled Concerto Romantique, was played at the Concerts Populaires by Mlle. M. Tayau in 1876, and repeated several times both by her and M. Paul Viardot; a trio for piano and strings; a string quartet and a piano concerto played by G. Lewita at the Concerts Populaires in 1878. In this year Benjamin Godard, bracketed with Th. Dubois, carried off the prize at the musical competition instituted by the municipality of Paris, and his prize composition 'Tasso' was performed with much success at the Concerts du Châtelet (Dec. 18, 22, and 29, 1878). This dramatic symphony, written on a poem by Grandmougin, both the words and music of which are inspired by the 'Damnation de Faust,' still remains Godard's chief work, and that upon which his artistic reputation is most firmly founded. The composer here shows a real talent and a rare instinct for orchestration, though at times his rhythms are apt to become too bizarre and his employment of excessive sonority too frequent. He also possesses unusual feeling for the picturesque in music, and is able at will to strike the poetic note and to impart a vigorous dramatic accent. With all this we have to notice an inconsistent mixture of Italian forms and of totally opposite styles, which proves that the composer has not set before himself an ideal resulting from serious reflection. There is also a tendency to employ far too freely the whole strength of the orchestra, and an unfortunate habit of contenting himself

with the first idea that occurs to him without duly considering it in order to enrich it in orchestration; and lastly—and this is the composer's chief fault—a too rapid productiveness and a too great leniency in judging his own works. After the exaggerated success of this very interesting and promising work, M. Godard, intoxicated by praise, only produced compositions the good qualities of which have often been obscured by too hasty workmanship. The most important are 'Scènes Poétiques' (Concerts du Châtelet, Nov. 30, 1879); a symphony (Do. Dec. 26, 1880); 'Diane, poème dramatique' (Concerts Populaires, April 4, 1880); 'Symphonie-ballet' (Do. Jan. 15, 1882); 'Ouverture dramatique' (Do. Jan. 21, 1883); 'Symphonie Gothique' of no interest (Do. Nov. 11, 1883); 'Symphonie Orientale,' five descriptive pieces on poems by Leconte de Lisle, Aug. de Châtillon, Victor Hugo, and Godard (for he is himself a poet at times), the most remarkable of which is the piece called 'Les Éléphants,' cleverly contrived to give the effect of ponderous weight (Do. Feb. 24, 1884); and lastly a 'Symphonie Légendaire,' written partly for orchestra alone, partly for solo vocalists, and partly for chorus and orchestra. This libretto, too, is by various poets, of whom Godard is one, and forms on the whole a somewhat heterogeneous production, embracing all kinds of fantastic paraphernalia, through which the composer can revel in descriptive music to his heart's content (Concerts du Châtelet, Dec. 19, 1886). After the retirement of Pasdeloup, who was a firm admirer of Godard's works, and generally allowed him to conduct them himself, the latter formed the idea of reviving the Concerts Populaires under the name of Concerts Modernes, but the undertaking proved impracticable, lasting with great difficulty till the end of its first season (Oct. 1885–April 1886). The suite, 'Lanterne magique,' and many of the graceful if rather superficial songs, are the things by which Godard is best known in England. A one-act opera, 'Les Bijoux de Jeannette,' was given in Paris in 1878; and on Jan. 31, 1884, Godard brought out at Antwerp a grand opera, 'Pedro de Zalamea,' written on a libretto by Silvestre and Détroyat, but without success. Some selections from it, performed at concerts in Paris, had no better fate. He subsequently wrote three orchestral incidental pieces for *Much Ado about Nothing*, produced at the Odéon, Dec. 8, 1887. On Feb. 25, 1888, his opera 'Jocelyn' was produced at Brussels with moderate success. ['Le Dante,' in four acts, was given at the Opéra Comique in 1890, and 'Jeanne d'Arc' in 1891, the successful 'La Vivandière' being produced at the Opéra Comique, April 1, 1895. This is the only one of his larger works as yet given in England, having been produced by the Carl Rosa Company at Liverpool in 1896, and at the Garrick Theatre, London, in 1897.] He left two grand operas, 'Les Guelphes' and 'Ruy Blas.' He died at Cannes, Jan. 10, 1895. Godard had undoubted talent, and would have had much more success had he known how to impose a stricter discipline upon his natural gifts, and to judge his own compositions more severely, without thinking that all the productions of his facile pen merited the attention of the musical world. A. J.

GODBID, William, the chief English printer of music from type at the middle of the 17th century. He printed all the musical works published by John Playford between the years 1658 and 1678. In or about this latter year Godbid, having died, left his widow Anne, and John Playford, junior (son of the above-named, and apparently apprenticed to Godbid) in possession of his printing works in Little Britain.

In 1682, Anne Godbid had died or retired, and J. Playford, junior, alone retained the business until his death in 1686, in which year the plant is advertised as for sale. Godbid and his successor were also particularly noted for general learned and mathematical works in addition to musical publications. Frequently (following the old printers' custom) initials only are used on the imprints, as:—'W. G.' or 'printed by A. G. and J. P.' F. K.

GODDARD, Arabella, a distinguished English pianoforte player, of an old Salisbury family, was born at S. Servans, St. Malo, Jan. 12, 1836, at the age of six was placed under Kalkbrenner in Paris, and afterwards had a few lessons from Mrs. Anderson and from Thalberg in England. She made her first appearance in public at the Grand National Concerts at Her Majesty's Theatre, of which Balfe was conductor, on Oct. 23, 1850, where her style and mechanism at once made a great impression. On Thalberg's recommendation, she was placed in the hands of Mr. J. W. Davison, who led her to the study of those great compositions, many of which she played in England for the first time. On April 14, 1853, she made her début, and at once fixed her position as a classical player, at the concert of the Quartet Association, in Beethoven's pianoforte sonata in B♭, op. 106. The winter of 1854 and the whole of 1855 were passed by Miss Goddard in Germany and Italy. She carried her classical répertoire with her; played *inter alia* at the Gewandhaus Concert, Oct. 1855; and was received with enthusiasm by some of the best critics of Germany. Returning to England, she made her first appearance at the Philharmonic on June 9, 1856, in Sterndale Bennett's Concerto in C minor (then in MS.); at the Crystal Palace (in Moscheles' Concerto in E) on March 13, 1858, and at the Monday Popular Concerts on March 9, 1859.

In 1857 and 1858 Miss Goddard played in London all the last sonatas of Beethoven (from op. 101 to 111)—at that time almost absolute novelties to most of her hearers—as well as many other masterpieces by Clementi, Dussek, Mozart,

Mendelssohn, and other masters, either solo or with accompaniment of stringed instruments, in addition to the usual classical Concertos, Trios, Sonatas, etc. In 1859 she married Mr. Davison, who, as already stated, was her real master and the former of her taste. In 1873 Madame Goddard left England for a lengthened tour through America, Australia, and India, returning in the autumn of 1876, and making her first reappearance in two recitals at St. James's Hall on Oct. 12 and 19. She appeared in London at Sims Reeves's benefit concert in March 1882; a benefit concert was given for her on March 9, 1890, and she became a Roman Catholic in 1900. G.

GODEFROID, the name of two brothers whose reputation was founded on their skilful harp-playing. The elder, Jules Joseph, was born at Namur, Feb. 23, 1811, and wrote pieces for his instrument, as well as two comic operas, 'Le diadesté' and 'La chasse royale.' He died in Paris, Feb. 27, 1840. The younger brother, Dieudonné Joseph Guillaume Félix, born July 24, 1818, at Namur, was a pupil of the Paris Conservatoire, and spent the latter part of his life in Brussels. Besides numerous harp solos, etc., he wrote an oratorio, 'La fille de Saül'; two operas, 'La harpe d'or' and 'La dernière bataille,' and a great number of drawing-room pieces for the pianoforte, which enjoyed great popularity in their day. He died at Villers-sur-Mer, July 8, 1897. [Riemann's *Lexikon*; Baker's *Biog. Dict.*]

GODFREY. A family of English military bandmasters. Charles Godfrey, the founder, was born Nov. 22, 1790, at Kingston, Surrey; [was a drummer in the First Royal Surrey Militia]; in 1813 joined the Coldstreams as a bassoon player, and in 1825 became bandmaster, a post which he filled with honour till his death, Dec. 12, 1863, at his house in Vincent Square, Westminster, after fifty years' service. [He had been discharged from military engagement in 1834, but remained a civilian bandmaster.] He was appointed Musician in Ordinary to the King in 1831, and was one of the Court of Assistants of the Royal Society of Musicians. The first journal of military music published in England, under the name of *Jullien's Journal*, was arranged by Mr. Godfrey. His three sons were educated at the Royal Academy of Music.

Daniel, the eldest, born Sept. 4, 1831, entered the Royal Academy of Music as a student of the flute in 1847, and was bandmaster of the Grenadier Guards from 1856 to 1896, when he formed a band of his own. In 1872 he took his band to the United States—the first visit of an English military band since the Independence. He is well known here and abroad by his waltzes for military band—'Guards,' 'Mabel,' 'Hilda,' etc. He died at Beeston, near Nottingham, June 30, 1903.

The second, Adolphus Frederick, born at Westminster in 1837, entered the Coldstreams in 1856, and in 1863 succeeded his father as bandmaster of that regiment. He resigned this post in 1880, and died August 28, 1882.

Charles, the third, born Jan. 17, 1839, joined the Scots Fusiliers as bandmaster in 1859 and left that regiment in 1868 for a similar position in the Royal Horse Guards, from which he retired in Jan. 1904. He is professor of military music at the Royal College of Music, and the Guildhall School of Music.

Several of the third generation of Godfreys have won distinction in music. Daniel Eyers Godfrey, L.R.A.M., son of Daniel, born 1868, was at King's College School and the Royal College of Music (from 1884); was conductor of the London Military Band in 1890; and after a tour, as conductor of an opera troupe, in South Africa in 1891-92, settled at Bournemouth, where he has raised the orchestra of the Winter Gardens to a high pitch of excellence. His performances of the classics and of modern works show him to be a conductor (not merely a bandmaster) of very high rank, and the Symphony Concerts, which he has directed since their foundation in 1894, have an important influence on national as well as on local music. He was appointed resident musical adviser to the Corporation in 1895, and subsequently manager of the Winter Gardens. (See Symphony Concerts.)

Three sons of Charles Godfrey, junior, have also shown remarkable ability: Arthur Eugene Godfrey, born Sept. 28, 1868, was a chorister at St. Paul's Cathedral in 1877-83, studied at the Royal Academy of Music in 1883-89, gaining various prizes, and becoming an associate of the Academy; he has won experience as a theatrical conductor, and a string quartet, songs, etc., give evidence of considerable talent. He has written much incidental music for plays, and his musical comedy, 'Little Miss Nobody,' was produced with great success at the Lyric Theatre, and ran for over six months, from Sept. 1898. He was musical adviser to Messrs. Robert Cocks & Co., and is now manager of Messrs. Hopwood & Crew, Ltd. He is a clever accompanist. Charles George Godfrey, born in London, Dec. 1866, was educated at St. Paul's School, and the Royal Academy of Music, and got his first experience of military music as occasional substitute for his father. He has been successively organist of St. John's Church, Wapping; bandmaster to the Corps of Commissionaires (1887); conductor of the military band at the Crystal Palace, 1889-97. In the seasons of 1897 and 1898 he was conductor at the Pavilion Gardens, Buxton; and at Easter, 1899, was appointed musical director at the Spa, Scarborough, a post he still fills with distinction and success. He conducts an orchestra in the spring and

autumn in the Grand Hall, and a military band in the gardens in the summer. He has arranged much music for military band, and has written some orchestral pieces. HERBERT A. GODFREY, born 1869, was educated at Christ's Hospital and the Royal School of Art (1884-86); he joined the Crystal Palace Military Band in 1889, solo cornet, and became its conductor in 1897, after obtaining experience as a conductor at Folkestone in 1895 and 1896. His works include marches and *pièces d'occasion*, as well as a complete ballet, 'The Home of the Butterflies,' 1901. [Information from *Brit. Mus. Biog.*, etc.] M.

GODOWSKY, LEOPOLD, distinguished pianist, was born at Wilna, in Russian Poland, Feb. 13, 1870, where his father was a physician. When but three years of age Godowsky began to show signs of rare musical aptitude, so that on its early and rapid development it was decided that he should follow a musical career. Many of his juvenile attempts at original composition, made at this time, have since been utilised by Godowsky. His first public appearance as a pianist occurred in his native town in 1879, his success being so emphatic that a tour through Poland and Germany was there and then decided upon for him. At thirteen years of age, by the generosity of a rich Königsberg banker, he was able to enter the Hochschule in Berlin, where his masters were Bargiel and Rudorff. There he remained two years, and in 1884 made his first American tour, in conjunction with Ovide Musin, the violinist. Two years later he returned to Europe and became a pupil in Paris of Saint-Saëns. Then followed a tour in France and a visit to London, in 1887 and 1888, where he was commanded to appear at the British Court. In 1890 he returned to America in consequence of his English success. There he married in 1901 Miss Frieda Saxe, and returned for a tour to Europe; but subsequently he made his home successively in New York, Philadelphia, and Chicago (where he was director of the Conservatoire), and toured through the States and Canada. On Dec. 6, 1900, Godowsky appeared in Berlin, and set the seal upon his fame by a series of fine performances, which placed him in the front rank of contemporary pianists, a position he still continues not only to occupy but to strengthen. As a pianist he is a master of tone-gradation, he has an exquisite touch, and excels in the simultaneous manipulation of many themes. The list of his compositions is not large, but it is in some ways the most important addition to the literature of pianoforte technique since Liszt's compositions were produced. His fifty studies on Chopin's 'Études' are really original compositions, not mere transcriptions, and are full of merit. He himself has written a number of concert studies—opp. 11, 12, and 14, and sundry smaller works, as the polonaise in C, Minuet in F, a couple of concert Valses, and some songs; a Toccata, op. 13; three Pieces, op. 15; and four pieces, op. 16. R. H. L.

GÖTTERDÄMMERUNG. The fourth and last section of Wagner's RING DES NIBELUNGEN (which see) first performed at Bayreuth, August 17, 1876. G.

GOETZ, HERMANN, born at Königsberg, Dec. 17, 1840, showed remarkable musical powers in early life, but was not regularly taught music (he took some lessons from L. Köhler) until he was at the University of Königsberg, when he decided to adopt the career of a musician, and placed himself, in 1860, at the Stern Conservatorium in Berlin, under Bülow for piano, and Ulrich for composition. In 1863 he was appointed organist at Winterthur, and moved to Zürich in 1867, but retained the Winterthur appointment until 1870, when ill-health compelled him to resign the post. He devoted himself to the composition of an opera, the libretto of which was based by J. V. Widmann on *The Taming of the Shrew*, and called 'Der Widerspänstigen Zähmung.' After innumerable disappointments, the composer at last had the good fortune to take his work to Ernst Frank, who was then capellmeister at Mannheim. With characteristic sympathy and insight the eminent conductor saw that the opera had all the elements of success, and it was produced under his direction at Mannheim, on Oct. 11, 1874. Its success was immediate and decisive. In Feb. 1875 it was played at Vienna, and made its way to Leipzig, Berlin, and the other important German operatic centres. It was published in an English version by Augener & Co. in London, minutely analysed in the *Monthly Musical Record* in 1878, and produced at a matinée at Drury Lane, Oct. 12, 1878. In 1880 it was revived by the Carl Rosa Company at Her Majesty's Theatre, when, as on many former occasions in Germany, Mlle. Minnie Hauk, who undertook the principal part, substituted, for the finest number of the work, the splendid septet in the last act, an ineffective vocal waltz which the composer had reluctantly consented to write for her.

The fame of the opera brought Goetz's other works into prominence; they were not extensive, but they possess such individuality of conception, and such beauty of style, that they were not long in finding enthusiastic admirers, some of whom went so far as to compare Goetz with Brahms, to the disadvantage of the latter. The most important of the early compositions is the symphony in F, a work of lasting beauty, and one that well deserves a place in every classical repertory. The choral setting of Schiller's 'Nänie,' op. 10, and the (posthumous) setting of Psalm cxxxvii. for soprano solo, chorus, and orchestra, were the first of Goetz's non-operatic works to make their way in England. The latter was given first here by the London Musical Society, June 27, 1879. The chamber compositions, which include a trio and a quintet

for piano and strings (the latter work including a double bass), the piano sonata for four hands, and the concerto for piano and orchestra, are marked by very high qualities. Whether from failing health, or from some other cause, Goetz's second opera, 'Francesca da Rimini,' produced at Mannheim, Sept. 30, 1877, after the composer's death, was not on a level with his first. Two of the three acts were finished, and the third sketched, by the composer, at whose request his friend Frank finished the score, and directed the performance. Goetz had died on Dec. 3, 1876, nearly ten months before its production.

Goetz is often quoted as an instance of a brilliant career cut short by an early death; but if we think of the work of certain masters who only lived to about the same age, such as Purcell, Mozart, and Mendelssohn, we shall easily realise that the reason must be sought elsewhere for the undoubted fact that Goetz's music has not taken so important a place in history as it was at one time expected to take. Few as his works are, it is evident to the most cursory reader of his scores that already there are signs of his having begun to repeat himself, to form a habit of expressing the same sentiment or emotion in the same way; and, in short, that the freshness of his invention was beginning to get exhausted. In all, or almost all, of his compositions we feel that he is at his best in a tenderly elegiac mood; that his music gives a picture of a life full of disappointment, and proceeds from a nature quite unfitted to buffet with the world. It is always refined, and on occasion touches chords of sincere and deep emotion. If the comic side of the Shakespearean play on which his most successful work was based seems altogether beyond him, it must be conceded that the musical characterisation of Katharine is a masterpiece in its way. It may be doubted, however, whether her somewhat querulous accents in the earlier scenes represent Shakespeare's shrew; and, charming as is the scene in which she submits herself and acknowledges her love for Petruchio, the spectator feels that in this introspective melancholy which is the prominent note of the character, much of the hearty animal spirits of the original has been lost.

Goetz may perhaps be described as the legitimate artistic descendant of Schumann, though he possessed far more than Schumann's power of expressing himself freely and fully in the classical forms, and a feeling for the effective disposition of his voices and instruments which Schumann only rarely attained. In the symphony there occurs one of those haunting touches in which both Schumann and Brahms take special delight; in the second movement, a charming intermezzo, the horn gives out a call which is absolutely appropriate to the character of the instrument, and which gives a peculiarly beautiful colouring to the whole movement. In many places in the quintet, too, the value of the combination of the stringed instruments chosen to accompany the pianoforte—one violin, viola, violoncello, and double bass—is fully felt. Even in the pianoforte sonata for four hands there are passages which are so happily conceived for exactly this combination, that one feels that no other medium could make precisely the same effect. He was a thoroughgoing romantic, though he never reached the depths of lyric passion which Schumann knew so well how to reflect in music. For those who do not require much variety or contrast of musical emotion, and who can throw themselves willingly into a mood of refined melancholy, Goetz's music must have a permanent charm of its own. For further particulars the reader is referred to the *Zeitschr.* of the *Int. Mus. Ges.* iii. 177.

The list of his published works is as follows:—

Op.
1. Trio, pf. and str., in G minor.
2. Three easy pieces for piano and violin.
3. Three songs.
4. Rispetti, six Italian folk-songs.
5. Three Kinderlieder in Swiss dialect.
6. Quartet, pf. and str., E major.
7. Nine pianoforte pieces, 'Lose Blätter.'
8. Two pianoforte sonatinas.
9. Symphony, F major.
10. Nänie, for mixed choir, solos and orch. (words by Schiller).
11. Cantata for male voices and orch. (words by W. Müller).
12. Six songs for soprano or tenor.
13. Genrebilder, six pianoforte pieces.

POSTHUMOUSLY PUBLISHED.

14. Ps. cxxxvii. for soprano solo, choir and orch.
15. Frühlingsouvertüre, for orch.
16. Quintet, pf. and str. (with double bass), in C minor.
17. Sonata, for pianoforte, four hands, in G minor.
18. Concerto for piano, in B flat major.
19. Six songs.
20. Four songs for male voice quartet.
21. Seven songs for four-part chorus.
22. Violin concerto in G major, in one movement.

The two operas above-mentioned have no opus-numbers.

M.

GOLDBERG, JOHANN GOTTLIEB (or THEOPHILUS), born at Königsberg about 1720, was a pupil of Sebastian Bach, from 1733 to 1746, and one of the most remarkable players on the clavier and organ of the middle of the 18th century. He was brought to Bach from Königsberg by Count Kaiserling, the Russian ambassador, of whose establishment he appears to have been a member. Bach held him up as his cleverest and most industrious pupil, and with reason, for to immense executive power he joined an extraordinary facility of improvisation, and of playing the most difficult music at sight. His works (as named by Gerber) are not important, and remain in MS.—a motet and a psalm for voices and orchestra; preludes and fugues; twenty-four polonaises with variations; two concertos; a sonata, and six trios for flute, violin, and bass—all exhibiting a certain melancholy, and strong individuality. During the Seven Years' War (1756-1763) he was 'Kammermusikus' to Count Brühl. Bach's Thirty Variations were written for Goldberg at the request of Count Kaiserling (in exchange for a golden goblet and 100 louis d'or), and he was accustomed to play them nightly to the Count to lull him to sleep. They are sometimes known as the Goldberg Variations. G.

GOLDBERG, Joseph Pasquale, born at Vienna, Jan. 1, 1825 ; began his career as a violinist, as a pupil of Mayseder, and studied counterpoint and composition under Ritter von Seyfried at Vienna. At the age of twelve he appeared at the Grand Redoutensaal, and performed a concerto in E minor, with orchestra, of his own composition, dedicated to Spohr. After a few years he left Vienna for Italy, and played at Trieste, Venice, Bergamo, etc. From Italy he went to Paris, and was then urged by Rubini and Meyerbeer to become a singer ; he received his vocal instruction from Rubini and Bordogni, and afterwards from the old Lamperti in Italy. He was engaged for three years as primo basso assoluto in the principal theatres of Italy. At the age of eighteen in 1843, he made his début at Padua in Donizetti's 'Regina di Golconda,' and met with a most favourable reception. At Verona and Genoa he sang with his sister, Fanny Goldberg Marini, at that time one of the most celebrated prima donnas of Italy, in 'Maria di Rohan.' But being of a serious and retiring disposition, and detesting the stage, he decided to leave it, and returned to Paris determined to sing only at concerts and to teach singing. At Paris he became a favourite, and was on the most intimate terms with Rossini, Donizetti, Chopin, Halévy, and Thalberg. In 1847 he came to London to fulfil a six-weeks' engagement with Jullien. From 1850 to 1861 he made several provincial concert tours in England with Grisi, Alboni, Mario, etc., and then settled in London. Among his pupils we will name Giuglini and Brignoli, Mme. Gassier, Mme. Rabatinsky, and his own sister, Caterina Goldberg-Strossi, who earned a great success at La Scala, Milan, and at Barcelona. In 1871 Goldberg was commissioned by Correnti, Minister of Public Instruction, to report upon the Conservatoires of Italy, and to propose reforms in the method of instruction. His proposals were approved by Lauro Rossi, the then Principal of the Naples Conservatorio, and have since been put in force throughout Italy. In consideration of these services Goldberg was created a Knight of the Crown of Italy. He was the composer of 'La Marcia Trionfale,' which was played by the military bands when the troops of Victor Emanuel entered Rome for the first time. Goldberg was for many years professor at the Royal Academy of Music, and also professor to H.R.H. the Princess Louise. He died in Vienna, Dec. 20, 1890. G.

GOLDMARK, Carl, born May 18, 1830,[1] at Keszthely on the Plattensee, Hungary, his father being a 'cantor' in the Jewish synagogue there, and too poor to afford to give him regular musical instruction. The village schoolmaster taught him the rudiments, and he entered the school of the 'Oedenburger Musik-Verein' in 1842. Here his talents, exhibited on the violin at a concert in the winter of 1843-44, were remarkable enough to warrant his being sent to Vienna to study in earnest ; and in 1844-45 he was a pupil of Leopold Jansa, entering the Conservatorium in 1847 as a pupil of Böhm for violin, and of Preyer for harmony. The political disturbances of 1848 compelled the authorities to close the institution, and Goldmark was thrown on his own resources. He was engaged in the theatre-band at Raab, and on the capitulation of the town to the government he was actually led out to be shot as a rebel. A friend of his explained the mistake, and his life was spared. In 1850 he returned to Vienna, and worked hard for the next seven years, becoming familiar with all the orchestral instruments, and making numerous essays in original composition. These, which consisted of a quartet for piano and strings, an overture, a couple of songs, and a psalm for soli, chorus, and orchestra, were performed at a concert on March 20, 1857, when the quartet was the most favourably reviewed of the compositions, in the *Wiener Zeitung*. After a couple of years spent in further study at Pesth, where another concert of his works took place in 1859, he returned for good to Vienna in 1860, and set up as a pianoforte teacher. By this time he had completed some of the compositions which have made his name best known throughout the musical world, such as the symphony (or suite) called 'Ländliche Hochzeit' and the 'Sakuntala' and 'Penthesilea' overtures. Some piano pieces, published without opus numbers by Haslinger, date from this time, and, with the works given at the concert of 1857, correspond with the spaces in the list of numbered compositions. The 'Sakuntala' overture, performed at one of the Philharmonic Concerts in Vienna on Dec. 26, 1865, was at once recognised as an important work, and even a critic so chary of his praise as Hanslick spoke of its wealth of orchestral colouring, and considered that the composer had got over his earlier love of dissonance. Goldmark was for a time a critic too, and expressed himself strongly in the *Konstitutionnelle Zeitung* in favour of Wagner, whose works he had carefully studied so far as they were at that time accessible.

Almost ten years were devoted to the composition and revision of his first opera 'Die Königin von Saba,' in four acts, to a libretto by Mosenthal, a work which, produced March 10, 1875, at the Hofoper at Vienna, under Gericke's conductorship, and with a splendid cast, including Materna, Wild, and Beck, made an emphatic success. It was only natural that, like so many Jews before and after him, Goldmark should have thrown himself ardently into the work of composing an opera on a Jewish

[1] In the useful little pamphlet upon the composer by Otto Keller (Leipzig, H. Seemann) the date 1832 is given as that of the composer's birth, but the more generally accepted date is proved to be correct by the circumstance that an account is given of certain celebrations in honour of his seventieth birthday, which is duly dated 1900.

CARL GOLDMARK

subject; but, apart from all the patronage which such a work was sure to obtain from a large section of the Viennese public, there are in it remarkably high qualities, and the fine use of oriental colour, the clever characterisation of the personages, and the brilliant effect of the whole, deserve all the recognition they have obtained all over Germany, and in many towns in Italy, as well as in New York and Madrid. Up to the present time its scriptural subject has prevented its production in England. The habit of slow workmanship, and the stringent self-criticism which caused him to write the third act twice over, had much to say to the success of the work with the public, for there are few first operas which show so complete a mastery of stage-craft, and in which the dramatic and musical elements are so deftly combined. The charge was (perhaps inevitably) brought against it that it owed too much to Wagner, and in a certain sense this is quite true, for Goldmark accepted the artistic tenets of Wagner wholeheartedly, although in the invention and treatment of his themes there now seems very little ground for the accusation. Another four years, from 1882, were spent in the composition of his second opera, 'Merlin' (libretto by Siegfried Lipiner), produced also at Vienna, on Nov. 19, 1886, in which the last act was subjected to thorough revision after the first performance, greatly to its advantage. The list of Goldmark's operas is completed by 'Das Heimchen am Herd' (libretto by Willmers, founded on Dickens's *Cricket on the Hearth*), produced at Berlin, June 27, 1896; 'Die Kriegsgefangene' produced at Vienna, Jan. 9, 1899; 'Götz von Berlichingen' (Pesth, 1902); and 'Der Fremdling,' not yet performed.

Goldmark's main characteristics are his complete mastery over every kind of musical effect, his wealth of melodic invention, and skill in manipulating his themes. If he has never sounded the deepest notes of human emotion, or given the world any passage of real sublimity, his works have given great pleasure to many classes of musicians, not alone to the frequenters of the opera. His orchestral works are always effective and often interesting, and his chamber-compositions, notably his two suites for piano and violin—made familiar to English audiences by Sarasate—tell of his early familiarity with the violin. The list of his works is as follows:—

Op.
1-4. Unpublished early works. See above.
5. 'Sturm und Drang,' pianoforte pieces.
6. Trio for pf. and strings.
7.
8. String quartet in B flat.
9. String quintet in A minor.
10. 'Regenlied' for chorus.
11. Suite for piano and violin, E major.
12. Three pieces for piano, 4 hands.
13. Overture, 'Sakuntala.'
14. Two choruses for male voices.
15. 'Frühlingsnetz,' male quartet, with accompt. of 4 horns and pf.
16. 'Meeresstille und glückliche Fahrt,' for male voices and horns.
17. Two choruses for male voices.
18. Twelve songs.
19. Scherzo in E minor for orchestra.
20. 'Beschwörung,' song for low voice.
21. Four songs.
22. Dances for pf., 4 hands; also for orchestra.
23. 'Frühlingshymne,' for alto solo, chorus, and orchestra.
24. 'Im Fuscherthal,' six choral songs.
25. Sonata in D for violin and pf.
26. Symphony (Sinfonische Dichtung), 'Die ländliche Hochzeit.'
27. 'Die Königin von Saba,' opera in 4 acts.
28. Violin concerto in A minor.
29. Two Novelletten, prelude and fugue, for pf.
30. Quintet in B flat, pf. and strings.
31. Overture, 'Penthesilea.'
32. Songs from Wolf's *Wilder Jäger*.
33. Trio, pf. and strings.
34. Four Songs.
35. Symphony, E flat.
36. Overture, 'Im Frühling.'
37. Eight songs for high voice.
38. Overture, 'Der gefesselte Prometheus.'
39. Sonata for pf. and vcello.
40. Psalm cxiii.
41. Two male choruses.
42. Two four-part songs with pf.
43. Suite in E flat, pf. and violin.
44. Overture, 'Sappho.'
45. Scherzo in A for orchestra.
46-8.
49. Overture, 'In Italien.'

Without opus numbers:—
A symphonic poem, 'Zrinyi,' and a second violin concerto, are among Goldmark's most recent works.
Operas:—'Merlin,' 'Das Heimchen am Herd,' 'Die Kriegsgefangene,' 'Götz von Berlichingen,' and 'Der Fremdling.' M.

GOLDSCHMIDT, ADALBERT VON, born May 5, 1848, in Vienna, was originally intended for the law, but, after passing his examinations, preferred to follow his own inclinations and devote himself actively to the study of music. When twenty-two years old he composed his first important work, 'Die Sieben Todsünden,' an allegorical drama, the text of which is by Robert Hamerling, though containing several contributions from the pen of the composer. This was produced at Berlin in the spring of 1876, a few months before the 'Nibelungen Ring' made its appearance at Bayreuth, so that, although it was not published until later, it cannot have been influenced by the 'Ring.' This circumstance is the more interesting that there is much internal evidence tending to display the two works as the result of similar waves of musical thought. Goldschmidt's drama was heard in Paris under Lamoureux's conductorship, at Hanover, Leipzig, Königsberg, Fribourg, and Vienna, and was received everywhere with acclamations except in the composer's native town, where it was the object of acrimonious attacks from the press. Liszt, to whom the drama is dedicated, thought very highly of it, and kept up the most amicable relations with the composer until his death. Another important work, which is available in print, is the music drama, 'Helianthus,' of which he wrote both the text and the music, and which is in many ways a considerable advance on its predecessor. It was produced at Leipzig in 1884. The work, however, which is in all probability his best, remains unpublished: the trilogy, 'Gaea' (1889), of the text of which Catulle Mendès has issued a French translation. It is claimed for this work that it is entirely new in form and conception, and a progressive move in dramatic music, being one step farther towards the reunion of all the arts. Those who were privileged to see the manuscript were filled with enthusiasm. An influential committee was formed under the patronage of the Archduke Eugene of Austria; a famous

impresario, Pollini, undertook the management, and a phenomenal artistic success was predicted.

Unfortunately Pollini died. Intrigues from outside dismembered the committee, and the whole scheme was shelved indefinitely. Disgusted at this rebuff, Goldschmidt has lived a very retired life for the last eight years, continuing to work as actively as before, but sadly disillusioned as to the prospect of receiving his due. His 'Die fromme Helene' was produced at Hamburg in 1897. Besides the works described, he has published a symphonic poem and about a hundred songs, many of which attain to a very high level of artistic excellence. Goldschmidt's style has a certain amount of the Wagnerian element, but not enough to affect his strong vein of originality. It is remarkable to think that, saturated as we have been for a generation with the products of Wagnerian epigoni, the work of this composer will still strike one as something fresh and new. His musical diction is powerful, and if perhaps harsh at moments, is never commonplace; while his unconventionality does not tempt him to cross the line where eccentricity begins. E. E.

GOLDSCHMIDT, Otto, pianist, composer, and conductor, born Aug. 21, 1829, at Hamburg, where his father and grandfather resided as merchants; studied the piano and harmony under Jacob Schmitt and F. W. Grund. At the age of fourteen he entered the Leipzig Conservatorium, where, until 1846, he studied the piano and composition as a pupil in Mendelssohn's class. In 1848 he was sent to Paris, with the view of continuing his studies under Chopin, whose acquaintance he made, and was present at the last concert given by him in the Salle Pleyel. He came to England in 1848, and in the following year played at the Musical Union, and at a concert of Mlle. Jenny Lind's at Her Majesty's Theatre. In 1851 he went to America, succeeding Benedict as conductor of a series of concerts given by Jenny Lind. He married that lady at Boston, U.S.A., on Feb. 5, 1852. From 1852 to November 1855 he and his wife resided at Dresden, and from 1858 lived in or near London. He conducted the festivals held at Düsseldorf and Hamburg in 1863 and 1866 respectively, and in 1863 was appointed Vice-Principal of the Royal Academy of Music, then presided over by Sir W. Sterndale Bennett, with whom he edited 'The Chorale Book for England,' a collection of chorales set to translations of German hymns by Miss C. Winkworth (Longmans, 1863). He composed the oratorio 'Ruth' (op. 20) for the Hereford Festival of 1867, and it was subsequently performed in London, Düsseldorf, and Hamburg. 'Music' (op. 27), a choral song for soprano solo and female chorus, to words by Sir Lewis Morris, was given at the Leeds Festival of 1898. He introduced into Germany Handel's 'Ode for S. Cecilia's Day,' and in England conducted 'L' Allegro ed Il Penseroso,' for which he wrote additional accompaniments. These works had not been heard in Germany or England in a complete form since Handel's time. In 1875 the Bach Choir, an association of amateurs, was formed under his direction. At its first concert on April 26, 1876, Bach's Mass in B minor, with additional accompaniments by Mr. Goldschmidt, was performed for the first time in England. The marked success of that performance, and the subsequent prosperity of the choir, are due in a large measure to the earnestness and devotion of the first conductor. (See Bach Choir.) Besides the choral works already mentioned Mr. Goldschmidt has published a Pianoforte Concerto; a ditto Trio; Pianoforte Studies; two duets for two pianos; songs, and part-songs; two pieces for clarinet (or violin) and piano, are op. 26. In 1861 he was elected Honorary Member of the Philharmonic Society, in 1864 a Member of the Swedish Royal Academy of Music, and in 1876 the King of Sweden conferred on him the Royal Order of Wasa; in 1893 the medal 'litteris et artibus' was conferred on him, together with the commandership of the order of the Polar Star. Mr. Goldschmidt is an honorary member of the Royal Academy of Music, a vice-president of the Royal College of Organists and of the Musical Association, and has been a member of the Council of the Royal College of Music since its foundation. An interesting biography appeared in the *Musical Herald* for May 1896. A. D. C.

GOLDWIN, John, born about 1670, was a pupil of Dr. William Child, and was in the choir of St. George's, Windsor, in 1690. On April 12, 1697, he was appointed successor to his master as organist of St. George's Chapel; in 1703 he became also master of the choristers. He died Nov. 7, 1719. His Service in F is printed in Arnold's *Cathedral Music*, and Boyce and Page also printed some of his anthems; others remain in MS. in Tudway and at Ely Cathedral, where he is entered as Golding. The largest collection of his compositions, including twenty-one anthems, motets, and services, is in the Christ Church Library, Oxford. 'I have set God alway before me' is a very favourite little anthem at cathedrals, melodious and agreeable. W. H. H.

GOLINELLI, Stefano, born Oct. 26, 1818, at Bologna, was taught pianoforte playing and counterpoint by Benedetto Donelli, and composition by Vaccaj. He was professor at the Liceo of Bologna from 1840 to 1870, having been appointed by Rossini while director. To this composer Golinelli dedicated his twenty-four preludes for pianoforte, op. 23. He became acquainted with Hiller while on a visit to Bologna in 1842, and dedicated to him his twelve Studies, op. 15. He subsequently made a tour throughout Italy, and acquired a reputation as

a composer. He also played in France, Germany, and England, appearing in London in 1851 at the Musical Union, playing with Sivori and Piatti. He retired from public life altogether in 1870, and subsequently resided at Bologna or in the country. His compositions, to the number of 200, published by Ricordi, Boosey & Co., and Breitkopf & Härtel, are written exclusively for the piano. They include five Sonatas, three Toccate (opp. 38, 48, and 186); twenty-four Preludes dedicated to Mlle. Louise Farrenc (op. 69); twenty-four Preludes 'Ai Giovani Pianisti' (op. 177), adopted by the Liceo; Album, dedicated to Mercadante; Tarantella, op. 33; Barcarola, op. 35; 'Adèle et Virginie,' two melodies, op. 34; 'Le Viole Mammole,' op. 39; Allegretto giojoso, Milan, 1878; operatic fantasias, etc. He died at Bologna, July 3, 1891. A. C.

GOLLMICK, Adolf, born Feb. 5, 1825, at Frankfort-am-Main. He received instruction on the pianoforte from his father, Carl Gollmick (1796-1866), writer and composer, and on the violin from Riefstahl and Heinrich Wolf. In 1844 he came and settled in London, and gave his first concert on August 21 at Pape's Pianoforte Rooms. He was favourably received both as pianist and violinist. In 1847 he founded the Réunion des Beaux-Arts, in 1864 the Westbourne Operatic Society, and in 1879 the Kilburn Musical Association. In addition he gave concerts in London and the provinces, and at Hamburg, Frankfort, etc. His compositions include the operas 'Balthazar,' performed in private at Frankfort, 1860; 'The Oracle,' Bijou Theatre, Bayswater, 1864; 'Doña Costanza,' Criterion Theatre, 1875; 'The Heir of Lynne,' operatic cantata, Dublin and St. George's Hall, 1877; 'The Blind Beggar of Bethnal Green,' dramatic cantata, London, Birmingham, etc., 1877; a symphony in C minor, MS.; a pianoforte quartet and trio in C minor; drawing-room pieces, 'Abschied,' 'The Dripping Well,' 'La Flatteuse'; transcriptions of German Volkslieder, various songs, etc. He died in London, March 7, 1883. A. C.

GOLTERMANN, Georg Eduard, born in Hanover, August 19, 1824, was the son of an organist, and learnt the violoncello at first from Prell the younger, and afterwards from Menter of Munich, where he studied composition with Lachner. In 1850-52 he made tours as a concert violoncellist, and in 1851 a symphony of his was played at Leipzig; in 1852 he was music director at Würzburg, and in 1853 went to Frankfort as second capellmeister at the Stadt Theater, being first conductor from 1874. He celebrated his twenty-fifth anniversary as conductor there on May 1, 1878, and died there Dec. 29, 1898. A violoncello concerto and some other effective pieces for his own instrument obtained great popularity in their day. Another violoncellist of the same name, but apparently not related to this one, was Joh. Aug. Julius Goltermann, born July 15, 1825, at Hamburg, and died April 4, 1876, at Stuttgart; from 1850 to 1862 he held a professorship of the violoncello at Prague, and from the latter date until his retirement in 1870, was a member of the court band at Stuttgart.

GOMBERT, Nicolas, one of the most important and prolific composers of the 16th century, was born at Bruges, as we learn from the title-page of his motets, and was attached to the service of Charles V. [He was apparently in the emperor's chapel from 1520 to 1531, and master of the choristers from 1530 to 1534; in the latter year he was prebend, and subsequently canon, of Tournai. In 1537 he went to Spain with twenty singers, and held an office in the Imperial chapel at Madrid. Van der Straeten is the chief authority for the dates given above.] That Josquin was his master is testified by Hermann Finck in his *Practica Musica*, and Fétis has given us the quotation from the copy of this rare work in his possession. 'Nostro vere tempore' (the book was published in 1556) 'novi sunt inventores, in quibus est Nicolaus Gombert, Jusquini piae memoriae discipulus, qui omnibus musicis ostendit viam, imo semitam ad quaerendas fugas ac subtilitatem, ac est author musices plane diversae a superiori. Is enim vitat pausas,[1] et illius compositio est plena cum concordantiarum tum fugarum.' Gombert set to music a poem by Avidius on the death of Josquin, which was also set by Benedictus. Burney gives us the music of this, but 'after performing the tedious task of scoring the setting by Gombert, found its chief merit to consist in imitations of his master.' A great merit nevertheless, for Gombert, a mere lad when Josquin died, persevered in his imitations so successfully that he not only came to be looked upon as his master's greatest pupil, but was able in due time, and when his own genius became mature, to engrave his name on a separate link in the chain of musical history. In the hands of his predecessors, in Josquin's especially, contrapuntal skill had already become subservient to the beauty of the music. A further improvement was making itself visible in the art. Composers began more and more to vary the character of their music according to the subject of the words. No one worked with this end more in view than Gombert, and nothing helped him so much as the increasing love for secular chamber music. Musicians of his time, far from looking down upon secular music, were beginning to make it one of their great specialities. It gave them full scope for their fancy, they were hampered by no prescribed forms, they had no prejudices to overcome. It gave them free access and welcome into half the educated homes in Europe. Gombert seems to delight in it. He chooses the prettiest pastoral subjects, and sets them to descriptive music, and while the birds are dis-

[1] The introduction of frequent pauses had become very common in music. Philip Basiron is censured for giving way to this 'fashionable folly' (Burney, vol. ii. p. 533).

coursing the pleasures of Spring in notes imitating their natural language, while shepherd and shepherdesses sing of love and the wolf meantime attacks their flock, or while all the stirring incidents of the 'chasse à courre' are vividly depicted to us, there is no extravagance, only the simple happy treatment which Haydn or Mozart would have employed when in such a mood. Gombert's love for nature is apparent in the very titles of his songs—'En ce mois délicieux'; 'Joyeux verger'; 'Le chant des oiseaux'; 'L'été chaud bouilloit'; 'Je m'en vois au vert bois,' etc. His power of description he carries into all the higher forms of his art, and his motets and psalms were not, in their time, surpassed for the wonderful manner in which the noble music blends itself with the ideas the words convey. Eitner's *Bibliographie der Musik-Sammelwerke* (Berlin, 1877) mentions nearly 250 of Gombert's compositions, printed in upwards of ninety different collections between 1539 and 1573. [In the *Quellen-Lexikon* the list of collections is given, as well as the motets, etc., in MS.] A single motet, 'In nomine Jesu,' printed twenty-six years before any of these under the name *Gompert* in the Motetti B (Venice, Petrucci, 1503) must surely be the work of another composer. J. R. S.-B.

GOMEZ, Antonio Carlos, a Portuguese by parentage and a Brazilian by birth, was born at Compinas, July 11, 1839, was sent to Europe by the Emperor, and received his musical education at the Conservatorio of Milan. His first work for the stage, 'A noite do castello,' was given at Rio de Janeiro in 1861, and his European début as a composer was made at the Teatro Fossati, Milan, in Jan. 1867, in a little piece called 'Se sa minga,' which had a remarkable success. His next was another 'revue' called 'Nella Luna' (1868), and he established his fame with 'Il Guarany,' produced at La Scala, March 19, 1870, and shortly after brought out at Genoa, Florence, and Rome. In this country it was first performed on July 13, 1872, at Covent Garden. This was followed by 'Fosca' at the Scala, on Feb. 16, 1873, which was unsuccessful; and that by 'Salvator Rosa' (Genoa, Feb. 21, 1874), a great success there and elsewhere. 'Maria Tudor' was produced at Milan in 1879, 'Lo Schiavo' at Rio in 1889, and 'Condor' at Milan in 1891. Besides these operas Señor Gomez composed an ode entitled 'Il Saluto del Brasile,' which was performed in the Exhibition Building at Philadelphia on July 19, 1876. Gomez's music is full of spirit and picturesque effect, and is therefore popular, but it is wanting in originality, and too obviously indebted to Verdi and Meyerbeer. [Another cantata, 'Colombo,' was written for the Columbus Festival in 1892. Gomez was appointed director of the Conservatorium at Parà in 1895, but he died a few months after reaching Parà, on Sept. 16, 1896. Baker's *Biog. Dict.*] G.

GOMPERTZ, Richard, born at Cologne, April 27, 1859, learnt the rudiments of music from his mother, an accomplished musician, began the study of the violin under Franz Derkum, from the age of seven years. He played with orchestra at the age of twelve, and became a pupil of the first violin professor of the Conservatorium, Professor O. von Königslöw. At the same time his general studies were pursued at the Gymnasium. In 1875 Gompertz went to Berlin to study with Joachim, and remained there for three years. His first appearance as a mature artist was at the Gürzenich Concerts, Cologne, where he played on two occasions under Ferdinand Hiller. He travelled as soloist with the Cologne Männergesangverein. In 1880 he was invited by Professor (now Sir Charles) Stanford to take up work as a player and teacher in Cambridge, and while there played at all the important concerts of the Cambridge University Musical Society, and formed the Cambridge string quartet, with which he appeared at many of the Wednesday Popular Concerts there. On the foundation of the Royal College of Music in 1883 he became a teacher of the violin, and Professor in 1895. In 1884 and 1886 he appeared at the Crystal Palace concerts in important solos, and in the winter of 1886 he took part with Mme. Haas and Signor Piatti in a performance of Beethoven's 'Triple Concerto' at the first of Henschel's London Symphony Concerts. In later years he appeared almost exclusively, so far as London concerts were concerned, in the valuable concerts given by his own quartet, in which Messrs. H. Inwards, E. Kreuz, and C. Ould were his companions. Gompertz raised the standard of quartet-playing to something a good deal nearer that of the Joachim Quartet than could be heard elsewhere in London, and did a great work as an educator. In 1899 he went to live at Dresden, and since that time has been active as a composer, his most important published work being a remarkably fine and original sonata for piano and violin (published by Otto Wernthal). A book of songs was also published, and in MS. are more sonatas, songs, and violin studies as well as a violin concerto. Gompertz is a master of ensemble playing, and as a soloist he has temperament and fire as well as great technical skill. M.

GONDOLIERS, THE, or The King of Barataria. Comic opera in two acts, by W. S. Gilbert, set to music by Arthur Sullivan; produced at the Savoy Theatre, Dec. 7, 1889.

GONG. (Fr. *Tam-tam*, from the Indian name.) This is a Chinese instrument, made of bronze (80 copper to 20 tin); in form, a thin round plate with the edges turned up, like a shallow sieve or tambourine. It is struck with a stick, ending in a large padded leather knob. The effect produced is an awful crash or clang, which adds considerably to the horrors of a melodramatic scene. An early instance of its use

(possibly the first) as an orchestral instrument is in Gossec's funeral music in honour of Mirabeau. Meyerbeer has even used it *pianissimo* with the orchestra, in 'Robert le Diable' (scene of the resurrection of the nuns); and Cherubini has one stroke of it in his Requiem in C minor, absolutely solo ('Dies irae,' bar 7). If a long-continued and loud noise is desired, it should first be struck very gently, and the force of the stroke gradually increased until the effect becomes almost terrific.

It is a remarkable property of the alloys of copper and tin, that they become malleable by being heated and then plunged into cold water. Gongs are thus treated after being cast, and are then hammered. This was a secret in Europe until found out some years ago by M. d'Arcet, an eminent French chemist. V. DE P.

GOODBAN, THOMAS GOODHURST, was born at Canterbury, Dec. 21, 1784. His mother was a vocalist, and his father combined the three qualifications of violinist, lay vicar of the cathedral, and host of the Prince of Orange tavern, where in 1779 he founded the Canterbury Catch Club. At seven years old Goodban became a chorister of the cathedral under Samuel Porter. After leaving the choir he was placed in a solicitor's office, but on his father's death, about 1798, changed the legal profession for that of music. In 1809 he was appointed a lay clerk in the cathedral, and in 1810, on the retirement of his cousin, Osmond Saffrey, was made leader and director of the Catch Club. In 1819 the members of the club presented him with a silver bowl and salver as a token of esteem.

Goodban was author of some instruction books for the violin and pianoforte, and of *The Rudiments of Music*, published about 1825, a work once highly popular. He was also the inventor of a 'Musical Game' for imparting elementary instruction, and of 'Musical Cards' for teaching the theory of music. He died at Canterbury in his seventy-ninth year, May 4, 1863, leaving three sons, all members of the musical profession. The eldest, CHARLES, Mus. B. Oxon., was born at Canterbury, August 1812, and died at Hove, August 6, 1881. The second, HENRY WILLIAM, born 1816, wrote an overture which was played at the Crystal Palace in 1885, and was also a violoncellist. The third son, THOMAS, born July 28, 1822, was a violinist; and a nephew of T. Goodban, senior, JAMES FREDERIC, was also a violinist, and organist of St. John's, Paddington. [He died at Harborne, Kent, Feb. 1, 1903, aged seventy. He was an A.R.A.M.] W. H. H.

GOODGROOME, JOHN, born about 1630, was a chorister in St. George's Chapel, Windsor. On the accession of Charles II. in 1660 he was appointed a Gentleman of the Chapel Royal, and on Nov. 28, 1664, on the death of Purcell's father, was made Musician in Ordinary to the King. He composed several songs, some of which appeared in *The Treasury of Musick*, 1669, and died June 27, 1704. A John Goodgroome, probably his son, was organist of St. Peter's, Cornhill, about 1725. Theodore Goodgroome, the singing-master of Samuel Pepys and his wife, was probably his brother. W. H. H.

GOODSON, KATHARINE. See HINTON, MRS. ARTHUR.

GOODSON, RICHARD, born 1655; in 1682 was appointed organist of New College, Oxford, and in the same year succeeded Edward Lowe as organist of Christ Church, and Professor of Music in the University. [It is probable that he received the degree of Mus. B. about this time (see Abdy Williams, *Degrees in Music*, p. 83).] Some Odes composed by him for performance at the Acts at Oxford are still extant. He died at Great Tew, Jan. 13, 1718, and was buried in the south aisle of Christ Church Cathedral. [Additional information from Dr. W. H. Cummings.] His son, RICHARD, Mus. B., was the first organist of Newbury, to which post he was appointed August 24, 1709. He graduated Mus. B. March 1, 1716. On the death of his father he succeeded him in both posts, and was also organist of New College. He died Jan. 9, 1741. W. H. H.

GOOVAERTS, ALPHONSE JEAN MARIE ANDRÉ, born at Antwerp, May 25, 1847, comes of an artistic family, his grandfather being a Flemish poet of some celebrity, and his father an excellent amateur musician. When still a child M. Goovaerts showed great talent for music, but after some education at the Jesuits' College at Antwerp, owing to family losses he was obliged at the age of fifteen to embrace a mercantile career. During this part of his life he studied music with the greatest assiduity, and soon after 1866 (when he obtained a post in the Antwerp Town Library) his sacred motets began to be performed in the churches of his native town. From 1868 to 1874 he published seven small volumes of Flemish songs, to words by Franz Willems, set for three voices and intended for the use of primary Flemish schools. In 1869 his 'Messe Solennelle,' for orchestra, chorus, and organ, was performed on St. Cecilia's Day with great success, although it was the work of a musician entirely self-taught in harmony, composition, and orchestration. It had been preceded by a small Mass *a* 4 with organ accompaniment, and several Flemish songs, etc. M. Goovaerts next began to occupy himself with literature, without however neglecting the composition of church music. In 1874 he began the efforts for the reform of church music by which he is best known. Having been appointed musical secretary to the Antwerp Cathedral, he established an amateur *Domchor*, for which he transcribed ninety motets, etc., by Palestrina, Lasso, and the great Flemish and Italian composers. These attempted reforms met with strong opposition, to which M. Goovaerts replied by articles in the *Fédération Artistique* and other papers, and by a work on the subject

published simultaneously in French and Flemish in 1876, *La Musique d'Église. Considérations sur son état actuel et Histoire abrégée de toutes les écoles de l'Europe.* After two journeys in Germany and Holland, to study the work of the Ratisbon school of the former country and the Gregorian Association of the latter, M. Goovaerts in 1881 became one of the leaders of the Gregorian Association founded by the Belgian bishops in that year, for which he composed a motet, 'Adoramus,' for four equal voices. In 1877 he was crowned by the Belgian Académie, and in 1880 he received the gold medal for his *History of Music Printing in the Netherlands.* In the same year appeared his valuable work on Abraham Verhoeven, which was translated into Flemish in the following year. M. Goovaerts, after having been for some time Assistant Librarian at the Antwerp Town Library, was appointed in 1887 keeper of the Archives Royales at Brussels. He is a member of many learned societies, both Belgian and foreign. The following is a list of his principal musical and literary works :—

MUSICAL.

Ave Maria.	Adoramus.
2 O Salutaris.	Ave verum.
Flemish Songs.	Tantum Ergo.
Pieces for Piano and Violin.	O Jesu, sapientia.
Petite Messe.	Noël (P. V.)
Messe Solennelle.	Lieder and Scenas.
Dree stemmige Liederen voor de Schooljeugd.	Choral Music, etc.

LITERARY.

W. B. S.

GORDIGIANI, Lugi, the son of one musician (Antonio) and the younger brother of another (Giovanni Battista, 1795-1871, a singer and teacher), has been called the Italian Schubert. He was born at Modena, June 21, 1806. His musical education was most desultory, but his talent was great, and while still in his teens he had written three Cantatas. In 1820 his father died, and he was forced to make a living by writing pianoforte pieces under such German *noms de plume* as Zeuner and Von Fürstenberger. His start in life was due to two Russian princes, Nicholas Demidoff and Joseph Poniatowski the latter of whom not only furnished him with the libretto of an opera, 'Filippo,' but himself acted in it with his wife and brother, in Florence, in 1840. Between the years 1835 and 1849 Gordigiani composed or produced nine other operas, all at different theatres in Florence. But it is by his 'Canzonette' and 'Canti populari' for voice and piano that he will be remembered—delicious melodies, of a sentimental, usually mournful, cast, in the taste or on the actual melodies of old Italian national tunes, and often set to words of his own. They are more than 300 in number, and were published in parts, usually of eight or ten each, with characteristic titles—'In cima al monte,' 'Le Farfalle di Firenze,' 'Mosaico Etrusco,' etc. They have been republished everywhere and in all languages. Among the best known of his compositions are the charming duets for female voices on popular themes. He also published a collection of Tuscan airs with accompaniments in three books. Gordigiani was odd and fantastic in manners and disposition. He died at Florence, May 1, 1860. G.

GORDON, John, the son of an eminent watchmaker of the same names, was born in the parish of St. Martin, Ludgate, March 26, 1702. He was admitted a foundation scholar at Westminster, and elected thence to Cambridge, where he became pensioner of Trinity College, June 18, 1720. In 1721 he obtained a scholarship in the same college. He left Cambridge, June 1, 1722, and returned to London to study law, in view of which he had, on Nov. 9, 1718, entered as a student at Gray's Inn. On Jan. 16, 1723, he was elected Professor of Music in Gresham College, which place had become vacant by the death of Dr. Edward Shippen. On Feb. 10, 1725, he was called to the Bar at Gray's Inn, but continued to hold his professorship till his death, Dec. 12, 1739. W. H. H.

GORDON, William, a Swiss of English descent, born about the end of the 18th century. In his youth he studied music as an amateur, and was a pupil of Drouet, the celebrated flautist. After the fall of the first French Empire he obtained a captain's commission in one of the regiments of Swiss Guards in Paris. In 1826 he began his improvements in the construction of the flute. The Swiss Guards being disbanded after the revolution of 1830, Gordon devoted his whole attention to his favourite object. In 1833 he went to Munich, where he had some flutes made on a novel plan. He circulated prospectuses of his invention in Germany, Paris, and London. He came to London in the hope of finding a large demand for his instruments, but was doomed to disappointment, and returned to Lausanne. In 1836 he became deranged, and (with the exception of a short interval in 1839) remained so until his death. His modifications were perhaps anticipated, but certainly carried out by Boehm, and resulted in the flute which bears that name. [For the controversy in regard to the priority of invention, see C. Welch's *History of the Boehm Flute*, 3rd ed.] [See Boehm ; Flute.] W. H. H.

GORGHEGGI. [See Solfeggi.]

GORIA, Alexandre Édouard, born in Paris, Jan. 21, 1823, was a pupil of the Conservatoire from 1830 to 1839, under Dourlen and Zimmerman ; he took the first pianoforte prize in 1835, and had a successful career as a teacher and a

writer of popular drawing-room pieces until his death, July 6, 1860. [Baker's *Biog. Dict.*]

GOSS, John Jeremiah, born at Salisbury in 1770, received his musical education as a chorister of the cathedral there, of which he subsequently became a lay vicar. On Nov. 30, 1808, he was appointed a gentleman of the Chapel Royal, and about the same period obtained the places of vicar choral of St. Paul's Cathedral and lay vicar of Westminster Abbey. His voice was a pure alto of beautiful quality, and his skill and taste in part-singing remarkable. He was for many years the principal alto at the Meetings of the Three Choirs. He died in London, April 25, 1817. W. H. H.

GOSS, Sir John, Knight, Mus.D., son of Joseph Goss, organist of Fareham, Hants, where he was born Dec. 27, 1800. In 1811 he became one of the children of the Chapel Royal under John Stafford Smith, and on leaving the choir became a pupil of Attwood, under whom he completed his musical education. [He became organist of Stockwell Chapel in 1821; in 1824] he was appointed organist of the new church of St. Luke, Chelsea, and in 1838 succeeded Attwood as organist of St. Paul's Cathedral. On the death of William Knyvett in 1856 Goss was appointed one of the composers to the Chapel Royal. He was knighted in 1872, and shortly afterwards resigned his appointment at St. Paul's. He graduated as Doctor of Music at Cambridge in 1876. Goss's compositions consist of services and anthems, chants, psalm-tunes, glees, songs, orchestral pieces, etc. Of his anthems [a list of twenty-seven is given in Brown and Stratton's *Brit. Mus. Biog.*] the best known are 'If we believe,' written for the funeral of the Duke of Wellington; 'Praise the Lord, O my soul,' composed for the bicentenary festival of the Sons of the Clergy; 'The wilderness'; 'O Saviour of the world'; and 'The Lord is my strength,' composed, together with a 'Te Deum,' for the Thanksgiving for the recovery of the Prince of Wales (Feb. 27, 1872). Of his glees, published 1826 and 1852, 'There is beauty on the mountain' is a charming specimen of truly graceful composition. [In 1827 he edited a collection of hymn-tunes under the title *Parochial Psalmody.*] In 1833 he published *An Introduction to Harmony and Thorough-bass*, a second edition of which appeared in 1847, and which reached a 13th edition. In 1841 he edited a collection of *Chants, Ancient and Modern*; and in 1856 the *Church Psalter and Hymnbook*, in conjunction with the Rev. W. Mercer. He also published *The Organist's Companion*, a series of voluntaries and interludes, besides other works. His music is always melodious and beautifully written for the voices, and is remarkable for a union of solidity and grace, with a certain unaffected native charm which ought to ensure it a long life. [He died at Brixton, May 10, 1880. See an interesting biography of Goss in the *Musical Times*, April–June 1901.] W. H. H.

GOSSEC, François Joseph, born Jan. 17, 1734, at Vergnies, a village in Belgian Hainault, five miles from Beaumont. He was the son of a small farmer whose name is spelt Gossé, Gossez, and Gosset, in the registers of his native place. From early childhood he showed a decided taste for music, and there is a story that while herding the cows he made himself a fiddle out of a sabot with strings of horse-hair. He was always particularly fond of the violin, and studied it specifically after leaving the cathedral of Antwerp, of which he was a chorister till the age of fifteen. In 1751 he came to Paris, and was fortunate enough to make the acquaintance of Rameau, and to become conductor of the private band which was maintained by the Fermier-général La Popelinière for the express purpose of trying the new works of his protégé and friend, the author of 'Castor et Pollux.' It was while conducting these performances, and observing the poverty of French instrumental music, that Gossec conceived the idea of writing symphonies: his first was performed in 1754, the year before Haydn's first known concerted compositions. It was some time before the public appreciated this new style, but his quartets, published in 1759, became rapidly popular. By this time he was attached to the household of the Prince de Condé, who gave him the opportunity of making himself known both as composer and conductor. Under this encouragement he entered upon the departments of sacred and dramatic music, and quickly gained a reputation in both. In his 'Messe des Morts,' which made a great sensation when first performed at St. Roch, 1760, he has produced an effect which must have been not only quite new but also very mysterious and impressive, by writing the 'Tuba mirum' for two orchestras, the one of wind instruments concealed outside, while the strings of the other, in the church, are playing an accompaniment *pianissimo* and *tremolo* in the upper registers. In his oratorio of 'La Nativité'[1] he does the same with a chorus of angels, which is sung by an invisible choir at a distance.

In writing for the stage he was less of an innovator. [After a first attempt in 'Le Tonnelier,' with Audinot], he produced successively 'Le Faux Lord' (1765), a three-act opera, left unfinished owing to the badness of the libretto; 'Les Pêcheurs' (1766), long and successfully performed; 'Toinon et Toinette' (1767); 'Le double déguisement' (1767), withdrawn after the first representation; 'Sabinus' (1774); 'Alexis et Daphné,' produced the same night with 'Philémon et Baucis' (1775); 'Hylas et Sylvie' (1776); 'La Fête de village,' intermezzo (1778); 'Thésée' (1782), reduced to three acts, with one of Lully's airs retained

[1] Words by Chabanon de Maugris, who died in 1780.

and re-scored; 'Rosine' (1786); [and 'La Reprise de Toulon' (1796). He also collaborated with Philidor and Botson in 'Berthe,' produced at Brussels in 1775]. A number of works were written in honour of the republic, and in connection with various revolutionary celebrations; two of the best known are 'L'Offrande à la liberté' (Oct. 2, 1792); and 'Le Triomphe de la République, ou le Camp de Grandpré' (Jan. 27, 1793). In these he introduced the 'Marseillaise,' with slight alterations in the air and harmony, and very telling instrumentation. 'Les Sabots et le Cérisier' was given in 1803; 'Le Perigourdin' and 'Nitocris' were not publicly performed.

The ease with which Gossec obtained the representation of his operas at the Comédie Italienne and the Académie de Musique, proves how great and legitimate an influence he had acquired. He had in fact founded the 'Concert des Amateurs' in 1770, regenerated the 'Concert Spirituel' in 1773, been second conductor of the Académie in 1780-82, had organised the 'École de Chant,' the predecessor of the 'Conservatoire de Musique,' in 1784, and at the time of the Revolution was conductor of the band of the National Guard. He composed many pieces for the patriotic fêtes of that agitated period, among which the 'Hymne à l'Etre suprême' and 'Peuple, réveille-toi,' and the music for the funeral of Mirabeau, in which he introduced the lugubrious sounds of the gong, deserve special mention. On the foundation of the Conservatoire in 1795 Gossec was appointed joint inspector with Cherubini, Lesueur, and Méhul, and professor of composition, a post he retained till 1814, Catel being one of his best pupils. He wrote numerous 'solféges,' and an 'Exposition des principes de la Musique' for the classical publications of the Conservatoire. He was a member of the Institut from its foundation (1795), and a Chevalier of the Legion of Honour (1802). He retired from his professorship in 1815, but until 1823 continued to attend the meetings of the Académie des Beaux-Arts, in which he took great interest. He died at Passy, where he had long resided, Feb. 16, 1829.

Gossec's works are both numerous and important, and include, besides the compositions already named, twenty-six symphonies for full orchestra, one of which 'La Chasse,' suggested to Méhul his 'Ouverture du jeune Henri'; three symphonies for wind; a symphonie-concertante for eleven instruments; overtures; quartets, trios, and other chamber music; masses with full orchestra; a 'Te Deum,' then considered very effective; motets for the Concert Spirituel, including a 'Dixit Dominus' and an 'Exaudiat'; several oratorios, among them 'L'Arche d'Alliance,' performed at the Concert Spirituel, and 'Saul,' in which he inserted an 'O Salutaris' for three voices, composed for Rousseau, Lais, and Chéron, during a country walk; fine choruses for Racine's 'Athalie' and Rochefort's 'Electre' (1783); and finally a 'Dernière Messe des Vivants' (1813), and the ballet héroïque of 'Calisto,' neither of which has been engraved; both are in the large collection of his autographs in the library of the Conservatoire.

Gossec's life may be held up as a model to young artists; without money or friends, we may even say without genius, and without the aid of masters, he educated himself, and by toil and study attained the rank of a classical composer. His career presents one unfortunate peculiarity. No sooner had he worked out an original idea than some man of genius stepped forward and appropriated the ground he had won. As a writer of symphonies he saw his 'Chasse' and his twenty-first Symphony in D eclipsed by those of Haydn; as a composer of sacred music he was surpassed by Mozart, in spite of the long-continued popularity of his 'Messe des Morts'; and at the theatre he was entirely thrown into the shade by Grétry and Gluck. In spite of all this, however, the French school has good reason to be proud of him; he was completely exempt from envy, and, with a disinterestedness truly praiseworthy, did all in his power to promote the works of his great rivals. Nature and his many struggles had made him usually very reserved, but he could be kind on occasion, as he was to Mozart in 1778, who hits him off in a line—'Mein sehr guter Freund und sehr trockener Mann' (April 5).

An oil-painting of him ornaments one of the rooms in the library of the Conservatoire. There is another small portrait engraved by Frémy after Brun, and a marble bust by Caillouete, a pupil of Cartellier. The Belgians, always ready to show honour to the illustrious men of their own country, erected at Vergnies a monument to the memory of Gossec, in the form of a quadrangular fountain surmounted by his bust. It was inaugurated Sept. 9, 1877.

In England Gossec is almost entirely unknown. Probably the only piece published here is the 'O Salutaris' named above, and the fine library of the Royal College of Music contains but one of his compositions. [The most trustworthy authorities for Gossec's life are P. Hédouin's *Gossec, sa vie et ses ouvrages*, Valenciennes, 1852, and E. G. J. Gregoir's *Notice biographique sur F. J. Gossé, dit Gossec*, Mons, 1878.] G. C.

GOSTLING, Rev. John, born about 1650,[1] [was the son of Isaac Gostling, mercer, of East Malling, Kent, and was admitted to St. John's College, Cambridge, from Rochester School, in Oct. 1668, aged eighteen. W. H. C.] He was sworn a gentleman extraordinary of the Chapel Royal on Feb. 25, 1678-9, and three days later was admitted in ordinary, on the death of

[1] At the time of his marriage, Feb. 27, 1674-5, he was said to be 'about twenty-four.' Chester's *London Marriage Licences*.

William Tucker. He is called 'a base from Canterbury, Master of Arts.' He subsequently became a minor canon of Canterbury, vicar of Littlebourn, chaplain to the King, Sub-dean of St. Paul's and Prebendary of Lincoln. He died July 17, 1733. He was one of the most famous singers of his time, on account of the volume and compass of his bass voice. He was one of the 'ministers' at the coronations of James II. and of William and Mary. Hawkins gives an anecdote explaining the origin of Purcell's anthem, 'They that go down to the sea in ships,' a work written to suit Gostling's voice, and at his own request, in his *History*, p. 707 (Novello's ed.). [See vol. i. pp. 195, 196.] M.

GOTTSCHALK, Louis Moreau, born at New Orleans, May 8, 1829, of an English father, Doctor of Science at Cambridge, Mass., and a French mother, daughter of Count Antoine de Bruslé, colonel of a cavalry regiment and governor of St. Domingo at the time of the insurrection. His family being in easy circumstances, young Gottschalk studied the piano as an amusement; at the age of twelve, having already gained much applause as a performer, he obtained permission to go to France in order to perfect himself. In Paris his first master was Charles Hallé; he afterwards studied with Camille Stamaty, and for composition with Maleden, who was Saint-Saëns's first master. While he was in Europe his family sustained heavy pecuniary losses, and he at once thought of turning his talents to account. He was not content with merely playing in drawing-rooms, but gave concerts, by which his name as a composer and pianist was quickly established. He also made a professional tour in the French provinces, Savoy, Switzerland, and Spain, in which last country he had an enormous success (1852). On his return from his travels he was recalled by his father to New Orleans. He then began his first tour through America, playing his piano compositions and conducting his orchestral works at monster festivals; a symphony entitled 'La Nuit des Tropiques,' a triumphal cantata, an overture, fragments of an unpublished opera, etc., were heard in this way. [His two operas, 'Charles IX.' and 'Isaura de Salerno,' were never performed; besides the symphony just mentioned, his orchestral works include a second, called 'Montevideo,' a grand march dedicated to the Emperor of Brazil, 'Escenas campestres cubanas,' and 'Gran Tarantella.' Baker's *Biog. Dict.*] His success was so great that an American speculator, Max Strakosch, since famous for having brought out Mme. Patti, engaged him to make an enormous tour through the States. From this period Gottschalk's career was one of incessant and successful travel. He died suddenly at Rio de Janeiro, Dec. 18, 1869, at the very time when, tired of his wandering life, he was planning a quiet retreat at Paris. For some time he had been weakened by fever and fatigue, and at one of his concerts, as if seized by a fatal presentiment, he was unable to finish his last composition, 'La Morte.' Probably no artist travelled more than Gottschalk; in Spanish America, where he was idolised by the public, there is scarcely a town of any importance where he did not give concerts. He wrote voluminously for the piano, and his works, popular at the time of their production, have an originality and a local colour which were much enhanced by the extraordinary charm, passion, and melancholy of his playing. He began to compose at the age of sixteen, and his 'Bananier,' at one time famous in both hemispheres, dates from this time. Few of his pieces except a Tarantella for piano and orchestra, often played by Planté, have lived to the present day, and even most of their titles are forgotten. Gottschalk himself is only remembered as an exceptionally gifted virtuoso, whose successes were considerable, but who was not a great artist in the highest sense of the term, since he was never connected with the classical school, and his compositions owe their worth entirely to the charm, freshness, and variety of his playing. A. J.

GOTTSCHED, Johann Christoph, born Feb. 2, 1700, at Judithenkirch near Königsberg, died at Leipzig, Dec. 12, 1766, deserves mention in this place because of his attitude to opera generally and to Italian opera in particular. His career as a writer, and as professor in the Leipzig University, lay apart from music, but that he took a great interest in music is proved by the fact that his house was a centre of musical activity in the lifetime of Bach, whose pupil, Krebs, was the teacher of Frau Gottsched, a lady of remarkable literary attainments, and an ardent amateur of music. The professor used his great influence on behalf of German opera, and compiled a kind of preparatory catalogue of German plays printed between 1450 and 1750, with and without music, under the title of *Nöthiger Vorrath zur Geschichte der deutschen dramatischen Dichtkunst*, etc. (Leipzig, 1758; with a continuation published 1765). It seems fairly certain that Gottsched's weekly publication, *Die vernünftigen Tadlerinnen*, was the original model for J. A. Scheibe's periodical *Der critische Musikus*, in which systematic attacks were made upon the ridiculous customs of Italian opera as then presented. Whether based upon the opinions held by Gottsched or not, this work of Scheibe's had wide influence in banishing Italian opera from Germany, and in establishing German opera in its stead. (See Scheibe.) (*Quellen-Lexikon*; Spitta's *Bach*, Engl. transl. iii. 241, 250; *Sammelbände* of the *Int. Mus. Ges.* Jhrg. ii. pp. 654 ff.) M.

GOUDIMEL, Claude (fl. 1549-1572), was born in Besançon. He had probably moved to Paris by 1549, in which year he makes his

first appearance as a composer in a book of chansons published by Du Chemin of Paris. On the title-pages of two works published in 1553 and 1555 respectively, his name is printed as joint publisher with Du Chemin. In 1557 Goudimel was living in Metz, in close association with many of the Huguenots there. He probably joined the Reformed Church soon after 1558, the year in which his masses, the last music that he composed for the Catholic Church, were published. M. Michel Brenet's discovery of the 1551 edition of Goudimel's 'Psaumes en forme de motets' (*Claude Goudimel, Essai bio-bibliographique*, Besançon, 1898) is interesting, for there is little doubt that Catholics and Huguenots alike made use of the melodies in the Huguenot psalters, until Catholic authority stepped in and forbade the practice. M. Douen (*Clément Marot et le psautier huguenot*, 1878) discusses at great length the question as to the authorship of these melodies, and on the whole concludes that Goudimel did not compose them, but added his harmonies to well-known tunes, the melody being nearly always placed in the tenor part. A feeling of uneasiness among the Huguenots in Metz led to large numbers of them leaving between 1565 and 1568 to seek safer quarters; Goudimel returned to his native town Besançon, going later on to Lyons. In the poetical works of Paul Melissus Schedius published at Frankfort in 1574 and 1575 are pieces addressed to Goudimel, and in the later edition are also two letters, written in Latin, from Goudimel to Melissus. The first is dated 1570; the second from Lyons, August 23, 1572, was written on his return from Besançon only a few days before his death, for Goudimel perished in the massacre of the Huguenots at Lyons, August 27, 1572. The doubt expressed by Hawkins (*Hist. of Music*, p. 421, ed. 1853) as to Goudimel ever having 'past the limits of his own country' is justified by later researches, for M. Brenet, who in his able essay deals with every available source of information, was unable to discover any trace of Goudimel's residence in Rome, where he is popularly supposed to have founded a school of music, in which Animuccia, Alessandro della Viola, Gio. Maria Nanino, the great Palestrina, and others, were pupils. Palestrina's adoption of themes in Goudimel's compositions is sometimes quoted as a proof of their connection. In his 'Missa brevis' (1570) he borrowed from Goudimel's 'Audi filia' mass, and in his 'Missa sine nomine' (1570) from Jean Maillard's 'Je suis déshérité' mass, which had been published together in 1558. But M. Brenet gives instances of his using other compositions in the same way, and in this he was following the custom of the time. There seems also to be no ground for supposing that Goudimel was a member of the Papal choir.

Nearly all the principal collections of chansons published in Paris from 1549 onwards contain compositions by Goudimel. There are thirty-two in the set published by Nicolas Du Chemin commencing with the 'Premier livre, contenant XXV. chansons nouvelles à quatre parties en deux volumes, les meilleures et plus excellentes qu'on a pu choisir entre plusieurs non encore imprimées, par l'advis et jugement de bons et sçavans musiciens: 1549,' and concluding in 1554 with the 'Unziesme livre, contenant XXII. chansons,' etc. There are at least sixteen in those published by Adrien le Roy and Robert Ballard, from the 'Sixiesme livre de chansons nouvellement composées en musique à quatre parties par bons et excellens musiciens, imprimées en quatre volumes, 1556,' to the 'Vingt-deuxiesme livre de chansons à quatre et cinq parties, 1583.' (See M. Brenet, also Eitner's *Bibliog. der Musik-Sammelwerke*, for text, and for the numerous editions of the various volumes.) Single songs are also to be found in two books of 'Chansons, nouvellement mises en musique par bons et scavantz musiciens à quatre parties en quatre volumes: Paris, Michel Fezandat, 1556'; and in a 'Premier livre de chansons . . . par bons et excellents autheurs: Paris, Nicolas Du Chemin, 1557.'

Two songs, for five voices are in the 'Mellange de chansons tant des vieux autheurs que des modernes, à cinq, six, sept et huict parties: Paris, Adr. Le Roy et Robt. Ballard, 1572.' Two more in 'Le premier livre à quatre parties de la Fleur des Chansons de deux plus excellents musiciens de ce temps, à scavoir de Orlande de Lassus et de Claude Goudimel: celles de M. Claude Goudimel n'ont jamais été mises en lumière: Lyon, Jean Bavent, 1574'; the Deuxième livre, 1575, is said to contain seven songs. In *Les amours de P. de Ronsard . . . commentées par Marc. Ant. de Muret:* Paris, 1553, are four Odes in four-part harmony. They were reprinted by M. Julien Tiersot, *Ronsard et la musique de son temps* (Leipzig, 1903), who gives an interesting appreciation of Goudimel's music; the Ode à Michel de l'Hospital 'est d'une beauté harmonieuse, d'une ampleur de lignes dont on ne trouve pas beaucoup d'autres exemples dans la musique profane du XVI^e^ siècle,' etc. In 1555 appeared 'Q. Horatii Flacci poetae lyrici odae omnes quotquot carminum generibus differunt ad rhythmos musicos redactae: Parisiis, Nicolas Du Chemin et Claude Goudimel.' (See Brunet, *Man. du libraire*. col. 326.) Also the 'Chansons spirituelles de Marc-Antoine de Muret mises en musique à quatre parties: Paris, Nicolas Du Chemin, 1555.' Both works are said to contain four-part music by Goudimel, although at the present time no copy of either book seems to be known. It is thought that the following work, edited by Goudimel, was first published in Lyons in 1572: 'L'excellence des chansons musicales composées par M. Jaques Arcadet tant propres à la voix qu'aux instruments, recueillies et reveuës par Claude Goudimel natif

de Besançon. Par Jean de Tournes, imprimeur du roy à Lyon, 1586.'

One composition, 'Par le desert de mes peines' for four voices, rather unexpectedly appears in a quaint little book entitled: *Instruction methodique et fort facile pour apprendre la musique practique*, par Corneille de Montfort, dit de Blockland, 1587, Jean de Tournes à Lyon. The explanation is given by 'l'imprimeur au lecteur,' 'Voyant qu'à la fin de ce petit traicté y avoit quelques pages blanches, j'en ay voulu remplir une partie de la dernière chanson à quatre, qu'a composé feu Claude Goudimel, l'un des premiers musiciens de son temps,' etc.

A great number of psalm-books, each containing from six to ten compositions by Goudimel, were published in Paris, at first by Du Chemin, but from 1557 onwards by Adr. Le Roy and Robt. Ballard. M. Brenet gives the full title of the 1551 edition already alluded to: 'Premier livre, contenant huyct Pseaulmes de David, traduictz par Clement Marot et mis en musique au long (en forme de mottetz) par Claude Goudimel; dont aulcuns vers (pour la commodité des musiciens) sont à trois, à quatre, et à cinq parties, et aussi à voix pareilles,' etc. Later editions appeared in 1557 and 1565. The 'Tiers livre' is of interest, as the dedication is dated from Metz, June 20, 1557. The series was concluded by the 'Huitiesme livre' in 1566. Six psalms set to music by Goudimel were included in 'Le second livre des pseaulmes . . . en forme de motetz par divers excellents musiciens. De l'imprimerie de Simon Du Bosc et Guillaume Gueroult,' 1555. The two books, 'du meslange des pseaumes et cantiques à trois parties, recueillis de la musique d'Orlande de Lassus et autres excellens musiciens de nostre temps,' 1577, each contained two of Goudimel's psalms. 'Cinquante pseaumes de David, avec la musique à cinq parties d'Orl. de Lassus, Vingt autres pseaumes à cinq et six parties par divers excellents musiciens. De l'imprimerie de Jerosme Commelin, 1597,' included 'A toy ô Dieu, qui es là-haut' for six voices by Goudimel.

The first complete psalter appeared in 1564: 'Les CL. pseaumes de David, nouvellement mis en musique à quatre parties par Claude Goudimel, Paris, Adr. Le Roy et R. Ballard.' It was reissued in 1565. In both editions the dedication is dated from Metz. An edition in one volume was published at Geneva: 'par les héritiers de François Jaqui, 1565'; a later edition, also printed at Geneva—'par Pierre de Saint-André, 1580'—was republished by M. Henry Expert, *Les Maîtres Musiciens de la Renaissance française*, 1895-97.

Lobwasser's German translation of the psalms was first published with Goudimel's music in 1573: 'Der Psalter . . . in deutsche reyme verstendiglich und deutlich gebracht . . . durch Amb. Lobwasser. Und hierüber bey einem jeden Psalmen seine zuhörige vier Stimmen,' etc. Its steady popularity was shown by the number of reprints, in 1578, 1597, 1615, 1649, 1698, etc. (see *Douen*, vol. ii.).

Goudimel's music is to be found in nearly all the psalm-books published in various languages during the 17th and 18th centuries. For instance, in those issued at Delft, 1602; Charenton, 1607; Geneva, 1667 and 1668; at Hanau, 1612, with both the French and German translations; at Zurich, 1701, 'Die Harpfe des Königs Davids . . . durch J. K. Hardmeyer angestimmet dass sie sowol in denen gewonnlichen Weisen des getreuen Märtyrers Cl. Goudimels, als in denen neuen Gesangweisen gesungen werden können,' etc. Again the French melodies are used in 'De CL. Psalmen Davids . . . door Petrum Dathenum': Amsterdam, 1620; in 'Ils Psalms da David, suainter la melodia francêsa, . . . Lurainz Wietzel,' 1733; and in the Italian editions 'Li CL. sacri Salmi di Davide . . . accomodati alle melodie di A. Lobwasser da And. G. Planta,' 1740; and 'Ils Psalmis da David, segond melodia de A. Lobwasser,' 1762.

The music in the 'Vierter Theil der Arien . . . ausgegeben von Hein. Alberten,' 1645; No. 33, psalm 19; Siebender Theil, 1648; No. 9, psalm 146; Achter Theil, 1650; No. 7, psalm 125, is 'nach der Weise des berümbten Goudimels.'

There are five masses composed by Goudimel; Du Chemin, in 1554, published one, 'Il ne se trouve en amitié,' with four motets and two magnificats (first printed in 1553); the four others were published by Adr. Le Roy et R. Ballard in 1558: 'Missae tres a Claudio Goudimel . . . cum quatuor vocibus. *Audi filia. Tant plus ie metz. De mes ennuis.*' 'Missae tres a Cl. de Sermisy, Joanne Mallard, Claudio Goudimel, cum quatuor vocibus conditae. *Le bien que i'ay*, Cl. Goudimel.' The last has been edited by M. Ch. Bordes: *Anthologie des maîtres religieux primitifs*, vol. ii. p. 42, No. 9. There are modern MS. scores of the five masses and of one magnificat in the Munich Library.

In other works:—

1. Primus liber septemdecim continet 4 et 5 vocum modulos, etc.: Paris, 1551. Motets: 'Quare fremuerunt' for five voices, and 'Domine quid multiplicati sunt' for four voices; the latter was reprinted in 'Liber quartus eccle. cant. 4 vocum': Antwerp, Tylman Susato, 1553; and in 'Tertia pars magni operis musici': Nuremberg, 1559. There are also MS. copies of it in the British Museum (Add. MS. 11,584), and in the Königsberg Library.
2. Canticum Beatae Mariae Virginis, Parisiis, ex typographia Nicolai Du Chemin et Claudii Goudimel, 1553. Magnificat primi toni, and Magnificat octavi toni, both for four voices.
The same. Adr. Le Roy et R. Ballard, 1557. Magnificat tertii toni, for four voices.
3. Quartus liber modulorum, 4, 5, et 6 vocum: Paris, Simon Du Bosc et Guillaume Gueroult, 1555. Two motets, first printed in 1554.

In MS.:—
In the Berlin Königl. Bibl. modern scores of motets and psalms. (Eitner.)
In Rome in the library of Santa Maria in Vallicella there were, according to a note of Baini, ten MS. motets for 4, 5, 6, 8, and 12 voices. (Brenet).
The Santini catalogue includes eight motets for 4, 5, 6, 8, and 12 voices; four magnificats; and the five masses.
The Kiesewetter Catalogue includes the Mass, 'Il ne se trouve' for four voices, and three motets.

In modern publications:—
O. Douen: *Clément Marot et le psautier huguenot*, 1878, 2 vols. and *Choix de psaumes*: Paris, 1879.
August Ebrard: *Ausgewählte Psalmen Davids nach Goudimels Weisen*: Erlangen, 1852. Thirty-three psalms.
Riggenbach und Löw: *Ausgewählte Psalmen . . . mit den Tonsätzen Cl. Goudimels*: Basel, 1868. Forty psalms.
A. Reissmann: *Allg. Gesch. der Musik*, 1863, II. No. 6. One psalm.
R. Schlecht: *Gesch. der Kirchenmusik*, 1871, Nos. 49, 50. Two psalms.
C. V. Winterfeld: *Die evangelische Kirchenmusik*, 1843, Musikbeilage, p. 40. Seven psalms.
H. Bellermann: *Der Contrapunct*, 1862, p. 340, No. 7. Motet 'O crux benedicta' for five voices.
Van Maldeghem: *Trésor musical*, 3ème année, 1867. Musique religieuse. 'Salve Regina' for twelve voices, scored from the Vatican MS. and two motets for four voices. 11ème année, 1875. Musique profane. Three chansons for three voices, in score. Vol. iii. of 'Arion' contains Goudimel's Psalm cv.
See also the *Rivista Musicale Italiana*, vol. vi. p. 495.

C. S.

GOULDING & CO. (afterwards D'Almaine & Co.), an important London music publishing house, founded by George Goulding about the year 1784.

Goulding's first address was 25 James Street, Covent Garden, from whence he issued songs, and minor instrumental publications, one of these being 'Six Sonatinas for the harpsichord or pianoforte by a pupil of Giuseppe Haydn; 'Pupil' being engraved very small and 'Haydn' very large. In or near the year 1787 Goulding's address was 'The Haydn's Head,' 6 James Street, probably due to a renumbering of the street rather than to a change of premises. Shortly after this he had an additional place of business at 17 Great Turnstile, but about 1790 this secondary address gave place to one at 113 Bishopsgate Street.

Early in 1799 Goulding took others into partnership, and removed westward to 45 Pall Mall, the new firm being styled 'Goulding & Co.' or 'Goulding, Phipps, & D'Almaine.' They obtained Royal patronage, and became 'music-sellers to the Prince and Princess of Wales.'

In 1803 the firm took over a second place of business at 76 St. James Street, but in 1804-5 they had given up both this and the Pall Mall shop, and removed to 117 New Bond St., with an agency at 7 Westmorland St., Dublin (1803-16). In 1808-9 the number in New Bond Street changed to 124, and about this time, Phipps having left the firm to establish one of his own (Phipps & Holloway), it became 'Goulding, D'Almaine, & Potter.' In 1811 they established themselves in a fine old mansion (still externally unchanged and now occupied by Messrs. Crosse & Blackwell) at the north-east corner of Soho Square, numbered 20. Messrs. Goulding remained at 20 Soho Square until 1858, and from here they did an enormous trade. About the year 1835 Goulding's name is absent from the name of the firm, which then stood as 'D'Almaine & Co.' In 1838 their catalogue is advertised to contain works from 200,000 engraved plates, and after this year D'Almaine & Co. removed to 104 New Bond Street. In later years the house becomes 'D'Almaine & Mackinlay.'

Mr. D'Almaine died in his eighty-third or eighty-fourth year in 1866, and in 1867 the plates and stock were sold by auction. The firm D'Almaine & Co. is still known in the musical world.

The earlier publications of George Goulding were of a minor character, being principally books of popular airs for the flute or violin, with tutors for these instruments, a few song sheets and similar class of music. After the removal to Pall Mall the standard of publication became higher, and much of the vocal music of the day, including some operas, was published by the firm. The Soho Square period may, however, be regarded as the golden age of the house, and from here the bulk of Bishop's music was issued, and many volumes of an ornamental character, with Selections of Scottish and Welsh airs, etc. In 'Melodies of Various Nations,' one of their common types of issue, appeared the spurious 'Sicilian air' which afterwards blossomed into 'Home Sweet Home.' For some years about this time John Parry was their chief musical arranger and editor.

D'Almaine & Co. still maintained the 'popular' character of issue, and in the early sixties Quadrilles, Lancers, and other drawing-room music bear their imprint.

F. K.

GOUNOD, Charles François, born in Paris, June 17, 1818. He received his early musical education from his mother, a distinguished pianist, and having finished his classical studies at the Lycée St. Louis, and taken his degree as Bachelier-ès-lettres, in 1836 entered the Conservatoire, where he was in Halévy's class for counterpoint, and learned composition from Paër and Lesueur. In 1837 his cantata 'Marie Stuart et Rizzio' obtained the second 'prix de Rome,' which he shared with the pianist Louis Chollet; and in 1839 he won the 'Grand prix' for his cantata 'Fernand.' No artist or literary man can tread the soil of Italy with indifference, and Gounod's residence in Rome exercised an influence on his ardent imagination, of which his whole career bears traces. The years he spent at the Villa Medici as a pensioner of the Académie de France, were chiefly occupied with the study of the music of the old masters, especially Palestrina; and his first important compositions were a mass for three equal voices and full orchestra, performed May 1, 1841, at the Church of San Luigi dei Francesi (the unpublished MS. is in the Library of the Paris Conservatoire), and a mass for three voices without accompaniment, produced in Vienna in 1842. It was while visiting Austria and Germany on his way back to Paris, that he first heard the compositions of Robert Schumann, of which he knew nothing previously; the effect they must have had on the impressionable mind of the young composer may be imagined. The ideas imbibed in Rome, however, prevailed, he remained faithful to Palestrina, and on reaching Paris became organist and maître de chapelle of the 'Missions étrangères.' It was at this period that he attended for two years a

CHARLES FRANÇOIS GOUNOD

course of theology; in 1846 he even became an out-pupil at the 'Séminaire,' and it was generally expected that he would take orders. Fortunately he perceived the mistake in time, and renounced the idea of the priesthood; but these years of theological study had given him a love of reading, and literary attainments of a kind rarely possessed by modern musicians. We may believe that he employed the five years of silence (1845-50) in studying the works of Schumann and Berlioz—the former then almost unknown in France; the latter encountering nothing but opposition and unmerited abuse. With his keen intellect, refined taste, and aptitude for subtle analysis, Gounod would have no difficulty in appreciating both the leading characteristics and the defects of these two original composers; he would, doubtless, next endeavour to discover the best method of creating an individual style for himself, profiting by the study of models so dangerous if followed too closely. It was probably during this time that he wrote his 'Messe solennelle' in G, for solos, chorus, orchestra, and organ, and which gave him his first appearance before the world—by a strange and almost prophetic chance, in London! Four numbers from that work, included by Mr. Hullah in a Concert at S. Martin's Hall, Jan. 15, 1851, formed the text of various articles in the English papers, and especially of one in the *Athenæum* (Jan. 18) which was reprinted in Paris and elsewhere, and caused much discussion. 'Whatever the ultimate result, here at any rate is a poet and musician of a very high order.'

But the theatre was destined mainly to occupy Gounod for many years. His first opera, 'Sapho,' in three acts, was given at the Académie, April 16, 1851, with Mme. Viardot in the principal part. It contains many passages rich in colour, though scarcely dramatic; the grand scena of Sapho, 'Héro sur la tour,' her final song, 'O ma lyre immortelle,' and the herdsman's air, have alone survived. In writing the numerous choruses for Ponsard's tragedy of 'Ulysse' (1852), M. Gounod again attempted to produce an antique colouring by means of rhythmical effects and modulations of an obsolete character; but the music—though betraying a master hand, was stigmatised as monotonous, and the charming chorus of the 'Servantes infidèles' was the only piece received with real enthusiasm. In 1852 he became conductor of the Orphéon in Paris; and the eight years he was there engaged in teaching choral singing gave him much valuable experience both of the human voice in itself, and of the various effects to be obtained from large bodies of voices. For the Orphéonistes he composed several choruses, and two Masses for four men's voices; but such works as these were not calculated to satisfy the ambition of so exceptionally gifted an artist. Anxious to try his strength in all branches of music, he wrote several symphonies (one in D, a second in E♭[1]), which were performed with success at the concerts of the 'Association des jeunes Artistes,' but are of no importance. In France, however, the stage is the sole avenue to fame and fortune, and accordingly his main efforts were made in that direction. The 'Nonne Sanglante' (Oct. 18, 1854), a five-act opera founded on a weird legend in Lewis's 'Monk,' was given only eleven times, although it contains a second act of a high order of merit as music, and a very striking duet—that of the legend. After this second failure at the Académie Gounod was compelled to seek success elsewhere, and accordingly produced 'Le Médecin malgré lui,' an opéra-comique arranged by Carré and Barbier from Molière's comedy, at the Théâtre Lyrique (Jan. 15, 1858). The music is refined, but not in the least comic. The most successful number was the septet of the consultation; as for the charming *couplets* sung by Sganarelle when in liquor, they are delightful from a musical point of view, and essentially lyric, but contain not a particle of the *vis comica*. Under the title of the 'Mock Doctor' the piece had a fair success in London. 'Faust,' however, also produced at the Théâtre Lyrique, March 19, 1859, with Mme. Miolan-Carvalho as Marguerite, placed Gounod at once in the first rank of living composers. The fantastic part of Faust may not be quite satisfactory, and the stronger dramatic situations are perhaps handled with less skill than those which are more elegiac, picturesque, or purely lyric, but in spite of such objections the work must be classed among those which reflect high honour on the French school. The Kermesse and the garden-scene would alone be sufficient to immortalise their author. 'Philémon et Baucis,' a one-act opera composed for the theatre at Baden, was re-written in three acts for the Théâtre Lyrique, and performed Feb. 18, 1860. The score contains some charming passages, and much ingenuity and elegance of detail; but unfortunately the libretto has neither interest, movement, nor point, and belongs to no well-defined species of drama. After the immense success of 'Faust,' the doors of the Académie were naturally again opened to Gounod, but the 'Reine de Saba' (Feb. 28, 1862) did not rise to the general expectation. The libretto, written by Gérard de Nerval, embodies ideas more suitable for a political or a psychological exposition, than for a lyric tragedy. Of this great work nothing has survived but the dialogue and chorus between the Jewesses and Sabeans, in the second act, the air of the Queen in the fourth act (afterwards inserted in 'Faust'), the choral march, the choral dance, and, above all, the elegant and picturesque airs de ballet. Under the name of 'Irene' an English version of the opera was occasionally performed in London. The success

[1] The second of these was played by the Philharmonic, 1866, and both have been repeatedly heard at the Crystal Palace.

of 'Mireille' (Théâtre Lyrique, March 19, 1864), a five-act opera founded on the Provençal poem of F. Mistral, was secured by the cast, especially by the splendid performance of Mme. Miolan-Carvalho, whose part contains one of the most remarkable airs of modern times ('Mon cœur'). Mme. Faure-Lefebvre—as Andreloun—and the other artists combined to make an excellent ensemble. Still 'Mireille' is descriptive and lyric rather than dramatic; accordingly by Dec. 15, 1864, it was reduced to three acts, in which abridged form it was revived in 1876. Its overture is admirable, and a great favourite in English concert rooms. This charming pastoral was succeeded by 'La Colombe' (June 7, 1866), originally written for the theatre at Baden, and known in England as the 'Pet Dove,' and by 'Roméo et Juliette' (April 27, 1867), a five-act opera, of which the principal part was again taken by Mme. Miolan. The song of Queen Mab, the valse, the duets, a short chorus in the second act, the page's song, and the duel scene in the third act, are the favourite pieces in this opera.

Gounod wrote incidental music for Legouvé's tragedy 'Les deux Reines,' and for Jules Barbier's 'Jeanne d'Arc' (Nov. 8, 1873). He also published much church music, besides the 'Messe Solennelle' already mentioned, and the 2nde Messe des Orphéonistes; a 'Stabat Mater' with orchestra; the oratorio 'Tobie'; cantata, 'A la Frontière,' performed at the Paris Opéra in 1870; 'Gallia,' a lamentation, for soprano solo, chorus, and orchestra, produced at the Albert Hall, London, at the opening of the International Exhibition (May 1, 1871); a De Profundis; an Ave Verum; Sicut cervus; and various other hymns and motets, two collections of songs, and many single songs and pieces, such as 'Nazareth,' and 'There is a green hill.' For orchestra a Saltarello in A, and the Funeral march of a marionette. A *jeu de plume*, on the propriety of which we will not decide, but which is unquestionably extremely popular, is his 'Meditation' for soprano solo with various obbligato parts on the first Prelude of Bach's 48.

After a stay of some years in England, during which he appeared in public at the Philharmonic, the Crystal Palace, and other concerts, and formed a choir under his own name (which afterwards became the Albert Hall Choral Society, and ultimately the Royal Choral Society), Gounod recollected that he had been elected a member of the 'Institut de France' on the death of Clapisson (1866); and returning to Paris, in 1875 resumed the position to which his genius entitled him. On the 5th of April 1877, he produced 'Cinq Mars' at the Théâtre de l'Opéra Comique, a work which bears traces of the haste in which it was designed and executed. 'Polyeucte,' produced at the Grand Opera, Oct. 7, 1878, though containing some fine music, did not add to the fame of the author of 'Faust.'

In spite of its entire failure, he continued to write new works for the Opéra, where, up to the present time, 'Faust,' originally written for another theatre, has alone held its ground, though 'Roméo et Juliette' has enjoyed a second period of great success both in Paris and in London. 'Le Tribut de Zamora' was represented on April 1, 1881, but the opera disappeared from the bills as quickly as 'Polyeucte' had done. He then took up his first opera, 'Sapho,' enlarged it into four acts, added some music, and produced it in this form on April 2, 1884. According to the general opinion the work lost by this treatment, and the only parts which were still pleasing were those in which a certain youthful charm was found in the midst of purely scholastic scoring. The result was not such as the author had wished for, and 'Sapho' was withdrawn after a limited number of representations. During the last years of his life, Gounod was plunged into a religious mysticism, and devoted himself to the composition of great sacred works, especially adapted to the taste of a large section of the English public. The first of these, 'The Redemption,' sketched in 1868, but not finished till 1881, was performed at the Birmingham Festival of 1882, and in Paris, April 3, 1884; the second, 'Mors et Vita,' composed when he was rewriting 'Sapho,' was produced at the Birmingham Festival of 1885, and in Paris, May 22, 1886. This new ideal of dramatico-religious music, which he calls 'music treated in the style of fresco' (*Musique plane et peinte à fresque*) seems to have first occurred to Gounod when he turned his attention to religious subjects in order to emulate the reputation of Berlioz's 'Enfance du Christ' and Massenet's 'Marie Magdeleine,' and desired to introduce innovations on the work of his rivals. He has made simplicity an absolute rule. The long recitatives on a single note, or rising and descending by semitones, the solo parts proceeding invariably by the intervals of a third, a sixth, or an octave, while the choral and orchestral parts adhere to incessant reiterations of the same chords; these impart a monotony and a heaviness to the work which must weary the best disposed audience. The same style predominates in the 'Messe à Sainte Cécile' (1882), in the mass 'Angeli custodes,' and in the 'Messe à Jeanne d'Arc,' which he declared his intention of composing on his knees in the Cathedral of Rheims on the stone on which Joan of Arc knelt at the coronation of Charles VII. This work was first performed in the Cathedral of Rheims, July 24, 1887, and in the church of S. Eustache in Paris, Nov. 22, S. Cecilia's Day, 1887. A fourth Messe Solennelle and a Te Deum were published in 1888.

[Among Gounod's less important works may be mentioned: 'Les Sept Paroles de Jésus'; 'Jésus sur la lac de Tibériade'; a symphony, 'La Reine des Apôtres'; a cantata, 'Le vin des Gaulois et la danse de l'épée,' various pianoforte pieces, and

a method for the cornet-à-pistons. 'Les Drames sacrés' was performed at the Vaudeville, Paris, in 1893. The composer wrote an essay on Saint-Saëns's 'Ascanio' in 1889, and a rhapsodical effusion on Mozart's 'Don Juan,' translated into English by Windeyer Clark and J. T. Hutchinson (1895). His posthumous works include two operas—'Maître Pierre' and 'Georges Dandin'—and a mass for St. Peter's in Rome.] Verdi was made grand officer of the Legion of Honour in March 1880, and Gounod received the same distinction in the following July. He died at Saint-Cloud, Oct. 18, 1893.

To sum up, Gounod was a great musician and a thorough master of the orchestra. Of too refined a nature to write really comic music, his dramatic compositions seem the work of one hovering between mysticism and voluptuousness. This contrast between two opposing principles may be traced in all his works, sacred or dramatic; in the chords of his orchestra, majestic as those of a cathedral organ, we recognise the mystic—in his soft and original melodies, the man of pleasure. In a word, the lyric element predominates in his work, too often at the expense of variety and dramatic truth.

An autobiographical work down to the year 1859 was edited by Mrs. Weldon in 1875, and amplified and published in French in 1895. Memoirs by Marie Anne de Bovet (1891) and Th. Dubois (1895) may be mentioned. G. C.; continued by A. J.

GOUVY, Louis Théodore, prolific composer, born of French parents, July 2, 1819, at Goffontaine, Saarbruck, where his father was a large ironfounder. He took his degree at the college at Metz, and proceeded to Paris in 1840 to study the law. Hitherto, though possessing an unmistakable talent for music, he had had no instruction in it, and had probably not heard a single classical piece. But being at the Conservatoire he happened to hear Beethoven's seventh Symphony. This at once fired his mind, and he wrote home to announce his determination to be a musician. His parents' consent obtained, he placed himself under Elwart for three years, then resided at Berlin, where he published his 'Opus 1,' and thence went for more than a year to Italy. In 1846 he returned to Paris, and made occasional visits to Germany, where his music has been frequently played with success, ultimately taking up his residence at Oberhomburg.

His published and unpublished works (of which a list is given by Fétis and Pougin) extend to op. 88, containing more than 170 numbers, many of them of large dimensions. [They include seven symphonies, a sinfonietta, 'Symphonische Paraphrasen,' two concert-overtures, an octet for wind, a sextet for flute and strings, a quintet for pianoforte and strings, and one (serenade) for strings alone, five string quartets, five trios, sonatas, and other works for violin and violoncello with piano, and many piano solos, songs, etc.; a 'Missa brevis'; a 'Requiem'; 'Stabat Mater'; a cantata, 'Golgotha'; dramatic scenas: 'Asléga,' 'Œdipe,' 'Iphigénie en Tauride,' 'Electra,' 'Frühlings Erwachen' for soprano solo, male chorus, and orchestra, 'Polyxena,' for the same. An opera, 'Der Cid,' was accepted in 1863 at Dresden, but never performed. Gouvy was made a member of the Berlin Academy in 1895, and a chevalier of the Legion of Honour in 1896. He died at Leipzig, April 21, 1898.] G.

GOW. A family of Scottish musicians notable during the latter part of the 18th and the beginning of the 19th centuries, the first of whom—

Niel Gow, was born (according to Principal Baird of Edinburgh, probably in error) at Strathband in Perthshire. All other accounts concur in naming the birthplace as Inver near Dunkeld. Of humble parentage, he was born March 22, 1727, and intended for the trade of a plaid-weaver. At a very early age he showed a taste for music, and at nine began to play the violin. He was self-instructed until the age of thirteen, when he received some lessons from John Cameron, a retainer of Sir George Stewart, of Grandtully. He became distinguished by his performance of Scotch tunes, particularly strathspeys and reels, in which he has probably never been excelled or equalled. His fame soon reached London, and his assistance was long sought at fashionable balls and assemblies. He had an uncommonly powerful bow hand, particularly in the up stroke. He was ably supported by his brother, Donald, on the violoncello. Gow died at Inver, near Dunkeld, on March 1, 1807. He had four sons, all distinguished as musicians, and his and their compositions were published in the 'Collections' issued by the Gow family. His fame, however, rests on the performance, rather than the creation, of Scotch reels, etc. His early patron was the Duke of Athol, whose patronage also extended to his sons.

Niel Gow's portrait was painted by Sir Henry Raeburn, and was reproduced in a mezzotint plate. It is curious to note that the chin is placed on the right side of the tailpiece, showing that Gow retained the habit of the old violinists, first altered by Geminiani. (See Geminiani.) F. K.

Nathaniel Gow, the most famous of Niel Gow's sons, was born at Inver, May 28, 1763. In early life he came to Edinburgh, and at the age of sixteen was appointed one of His Majesty's Trumpeters for Scotland at a salary of £70 or £80 per year. In Edinburgh he took lessons on the violin from the best Scottish violinists, to supplement those given him by his father. In 1791 he succeeded his brother, William, as leader of the orchestra of the Edinburgh Assembly, and throughout the rest of his life maintained a high position in the Scottish

musical world as performer, provider, and composer of the dance-music then in use in the northern capital. Whether or not his playing was equal to that of his father, it is certain that he was a more tutored performer, and had, in addition, some skill in composition and theoretical music. In 1796 he entered as partner in a music-selling and publishing business with William Shepherd, an Edinburgh musician and composer, their first place of business being at 41 North Bridge Street, Edinburgh. Nathaniel Gow had, before this, aided his father in the issue (through Corri and Sutherland) of three collections of Strathspey reels. While Gow was still actively engaged in his ordinary professional work the firm Gow and Shepherd published vast quantities of sheet-music (principally dance-music), and numbers of 'Collections' by the Gow family and others. In or about 1802 Gow and Shepherd removed to 16 Princes Street (which, in 1811, was renumbered 40), and did even a larger business than before. Shepherd having died in 1812 Gow found himself in monetary difficulties, and unable to meet his partnership liabilities with his partner's executors, in spite of the great trade done by the firm and Gow's professional earnings, which were exceptionally large. In 1814 the stock-in-trade was sold off, but in 1818 Gow again entered into the music business, with his son, Niel Gow, as a partner at 60 Princes Street. This continued until 1823, when the son died. For eight months Gow was again a partner in the music trade with one Galbraith, but Gow and Galbraith ceased business in 1827, when Gow became a bankrupt. About this time he also was attacked with a serious illness, which confined him to his room until his death on Jan. 19, 1831. In his later years his patrons were not backward in his behalf. A ball for his benefit realised £300, and other three in subsequent years yielded almost as great a sum. He had a pension from George IV. and another of £50 a year from the Caledonian Hunt. He was twice married, and left a family behind him, not distinguished as musicians; his clever son, Niel, died before his father. For particulars regarding the Gow family the reader is referred to Mr. John Glen's *Scottish Dance-Music*, bk. ii. 1895; and for a contemporary notice to the *Georgian Era*, vol. iv. 1834. A biographical article on Niel Gow appeared in *The Scots' Magazine* for January 1809.

The chief composition by which Nathaniel Gow is remembered to-day is 'Caller Herrin',' a piece written as one of a series to illustrate the musical street-cries of Edinburgh. The original sheet, which was published about 1798 or 1800, gives the cry of the Newhaven fishwife mingling with 'George St. bells at practice' and other fishwives entering into the scene. This remained purely as an instrumental tune for more than twenty years, when Lady Nairne, taking the melody, wrote her best lyric to it, and published them together in *The Scotish Minstrel*, vol. v. *circa* 1823.

After Gow's bankruptcy Alexander Robertson and Robert Purdie, both Edinburgh music publishers, acquired the rights of publication of the Gow Collections, and added to them 'The Beauties of Niel Gow' (three parts), 'The Vocal Melodies of Scotland' (three parts), and 'The Ancient Curious Collection of Scotland' one part. As the Gow 'Collections' are of the highest value in the illustration of Scottish National music (many of the airs contained therein being traditional melodies printed for the first time) the following list with the dates of publication is given:—

'A Collection of Strathspey Reels' (edited) by Niel Gow at Dunkeld (1784).
'A Second Collection' (1788); 'A Third' (1792); 'A Fourth' (1800); 'A Fifth' by Niel Gow and Sons (1809); and 'A Sixth' (1822).
'A Complete Repository of Original Scots Slow Strathspeys and Dances' (edited) by Niel Gow and Sons (1799); 'Part Second' (1802); 'Part Third' (1806); 'Part Fourth' (1817). All in folio.
In addition to these there are several collections of airs issued by Nathaniel Gow, being the composition of his pupils or patrons, beside a vast number of single sheets of similar works by the Gow family and others. F. K.

Other sons of Niel Gow were William (1751-1791), Andrew (1760-1803), and John (1764-Nov. 22, 1826). They were each musicians of average merit as violinists and composers of Strathspeys, etc., some of which appear in the Gow publications.

Prior to 1788 John and Andrew had settled in London, where they established a music-selling and publishing business at 60 King Street, Golden Square. On the death of Andrew in 1803 John removed to 31 Carnaby Street, Golden Square, and in 1815-16 to 30 Great Marlborough Street. Before 1824 he had taken his son into partnership, and at 162 Regent Street they were 'music-sellers to His Majesty,' issuing much of the then popular quadrille and other sheet dance-music.

Niel Gow, junior, the son of Nathaniel Gow, was a musician of excellent talent. He was born about 1795, and remained with his father in Edinburgh, where he died, Nov. 7, 1823. His compositions include 'Flora Macdonald's Lament' ('Far over yon hills of the heather so green'), and 'Cam' ye by Athol,' songs equally famous with his father's 'Caller Herrin'.' F. K.

GOWARD, Mary Anne. See Keeley, Mrs.

GRABU, Lewis, or Louis Grabut, or sometimes Grebus, a French musician, who came to England about 1666, and finding favour with Charles II., whose predilection for everything French was unbounded, was assigned a prominent place in the direction of the Court music, to the great chagrin of John Banister, then 'Master of the Music.' [He was leader of the band from 1668. W. Nagel, *Gesch. d. Musik in England*, vol. i. p. 58, etc.] Upon Oct. 1, 1667, he produced at Court an 'English Song upon Peace,' which Pepys, who heard it, criticised very unfavourably, although admitting, at the same time, that 'the instrumental musick he had

brought by practice to play very just.' His incapacity both as performer and composer were commented upon by Pelham Humfrey (Pepys, Nov. 15, 1667). His opera, 'Ariadne, or, The Marriage of Bacchus,' originally composed to a French text, was produced at Drury Lane, adapted to English words, in 1674. [In 1679 he contributed a song to Durfey's 'Squire Old Sap' (see Durfey's *New . . . Songs*, 1683.] He was selected to compose the music for Dryden's opera, 'Albion and Albanius,' produced at Dorset Garden, June 6, 1685, at great expense, but performed for six nights only. It has been asserted that its failure was occasioned by the Duke of Monmouth's rebellion, the news of which reached London on the last day it was played: the real causes, however, were the innate worthlessness of both drama and music. Both were published (in 1687), and readers may therefore judge for themselves. Dryden, in his preface to the piece, bestowed some extravagant encomiums upon Grabu, extolling him above all English composers, but a few years later changed his tone and awarded the palm to Purcell. A satirical song upon the piece, ridiculing both author and composer, is contained in Hawkins's *History* (Novello's edition, p. 707). [An account of the piece is in the preface to F. Spence's translation of St. Evremond's *Miscellanies*, London, 1686.] It is presumed that Grabu lost his Court appointment, but he seems to have remained in England, as in 1690 he composed the instrumental music for Waller's alteration of Beaumont and Fletcher's 'Maid's Tragedy.' A few songs by him are contained in some of the collections of the period. W. H. H.

GRACE NOTES, or GRACES, the English name for the ornaments in vocal and instrumental music — appoggiaturas, acciaccaturas, mordents, turns, shakes, and many more — which are treated of in this work under the general head of AGRÉMENS, as well as under their own separate names. G.

GRADUAL. This term is used in two quite distinct senses. (1) Its original use is to denote the respond sung at Mass in the Roman rite between the Epistle and the Gospel. This particular respond was called *responsorium graduale*, perhaps out of a fancied similarity to the psalms of degrees (Psalms cxx.-cxxxiv.) or gradual psalms, because the gradual was sung from the steps of the ambo or pulpit in church, and it was thought that the Gradual psalms were so-called, from being similarly sung on the steps of the temple. The so-called 'graduals' of composers from the time of Byrd onward are of quite a different style, even when designed for the same position in the Mass. They will be more properly discussed in the article MOTET.

(2) From this use the term was taken and applied to the book containing such graduals, or, more generally speaking, to the book containing all the Gregorian music of the Mass; and in this sense the word has been used to denote the service-book which is the musical counterpart of the Missal since the later Middle Ages (see ANTIPHONAL). For further particulars as to both these uses of the term see GREGORIAN MUSIC. W. H. F.

GRADUATES IN MUSIC. See DEGREES IN MUSIC.

GRADUS AD PARNASSUM. The title of two important progressive works on music. 1. Fux's treatise on composition and counterpoint —*Gradus ad Parnassum, sive manuductio ad compositionem musicae regularem, methoda nova ac certa, nondum ante tam exacto ordine in lucem edita: elaborata a Joanne Josepho Fux* (Vienna, 1725; 1 vol. folio). It was translated into German by Mizler (Leipzig, 1742), into Italian by Manfredi (Carpi, 1761), and into English, *Practical rules for learning Composition, translated from a work entitled Gradus ad Parnassum, written originally in Latin by John Joseph Feux, late chief composer to the Roman Emperor Charles VI.*—Welcker, 10 Hay Market (a thin folio with no date, published 1791. See FUX). This contains, in addition to the exercises in the text, a Kyrie and Amen from the Missa Vicissitudinis.

2. Clementi's well-known work *Gradus ad Parnassum, ou l'art de jouer le Pianoforte demontré par des Exercices dans le style sévère et dans le style élégant. Composé et dedié à Madame la Princesse Wolkonsky, née Wolkonsky, par Muzio Clementi, membre de l'Académie Royale de Stockholm.* (London, no date [1803]).

It is in two parts or volumes, containing in all 100 exercises. Some of these are marked as having been published before, and extended and revised by the author. Thus Ex. 14 is headed 'extrait par l'auteur de ses Duos à 4 mains, œuvre xiv, publié à Londres en 1784. Tulit alter honores. Virg. apud Donat.' Ex. 39, Adagio in B♭, is entitled 'Scena patetica,' and so on. The work has at the beginning an English motto from Dr. Johnson—'Every art is best taught by example.' Clementi published as an Appendix to the *Gradus*, an *Introduction to the Art of Playing the Pianoforte* (*cir.* 1802-3), containing 134 Exercises, Gavottes, Gigues, Airs with Variations, etc., partly his own, but chiefly by other composers. They are arranged, each key with its relative minor — usually a prelude or preludes by Clementi, followed by pieces. G.

GRÄDENER, CARL GEORG PETER, born Jan. 14, 1812, at Rostock, received his first musical employment as a violoncellist at Helsingfors. After three years he went to Kiel and was appointed Musikdirector to the University there, a post which he retained for ten years. In 1851 he founded an academy for vocal music at Hamburg, and remained there until, in 1862, he was appointed to teach singing and theory in the Vienna Conservatorium. After three years he

returned to Hamburg, where he taught in the Conservatorium, and spent the rest of his life. In 1867 he joined F. W. Grund in forming the Hamburger Tonkünstlerverein, the presidentship of which he held for some years. As a composer of chamber music, the chief interest of which centres in the ingenuity and freshness of its harmonies and the excellence of its form, he is justly esteemed. His works include an oratorio ('Johannes der Täufer'), two symphonies, an overture ('Fiesco'), a piano concerto, romance for violin and orchestra, an octet, three quartets and a trio for strings, two quintets, two trios for piano and strings, three violin sonatas, a violoncello sonata, besides many pieces for the piano. He also wrote a *Harmonielehre* (1877), and his contributions to musical literature were collected and published in 1872 as *Gesammelte Aufsätze*. He died at Hamburg, June 10, 1883. His son HERMANN THEODOR OTTO, born May 8, 1844, at Kiel, entered the Vienna Conservatorium in 1862; in 1864 was appointed organist at Gumpendorf, and became a member of the court orchestra in Vienna. In 1874 he was appointed teacher of harmony, etc., in the Conservatorium, and in 1882 received the title of Professor. In 1886 he became director of the academical society for orchestral music, and of the academical Gesangverein. In 1899 he succeeded Bruckner as lector for harmony and counterpoint in the Vienna University. His compositions, though not numerous, show very strong individuality. They include an orchestral 'Capriccio' and 'Sinfonietta,' a 'Lustspielouvertüre,' an octet and quintet for strings, a quintet, trios, and impromptus for pianoforte and strings, intermezzi for violin and pianoforte, a sonata for two pianos, a set of variations for organ, strings and trumpet, and a violin concerto. As in the case of his father, he is at his best in chamber music; his piano quintet has been played in London with success. M.

GRAFTON, RICHARD, a famous early typographer, notable in musical history for having printed some of the first books of English Church service. A citizen of London and a grocer, he went to Paris with Edward Whitchurch about 1537 at the suggestion and by the aid of Thomas Cromwell for the purpose of getting the Bible printed in English. When nearly completed the Inquisition seized the printer whom Grafton and Whitchurch had employed, and the two partners with Coverdale had to fly to England. They afterwards bought a number of the confiscated and condemned copies from a haberdasher, and completed the work in London. In 1539 they obtained from Henry VIII. a patent for the printing of Bibles, and many editions with the Psalter appeared. In 1541 Grafton was printing alone, living in the house of the Gray Friars, just then dissolved. In 1544 Grafton produced Cranmer's Litany under the title, *An exhortacion unto praier thought mete by the Kynges Maiestie . . . . Also a Letanie with sufferages to be saied or songe in the tyme of the said processions. Imprinted by Richard Grafton . . the XVI day of Iune . . 1544*, 8vo. In 1550 he reprinted John Merbecke's *Booke of Common praier noted*. These are both important works in the annals of English Church Music and in the history of Musical typography. Grafton is supposed to have died about 1571. He used as his emblem a woodcut depicting a grafted apple-tree bearing fruit (graft), springing out of the bung-hole of a barrel (tun). F. K.

GRAHAM, GEORGE FARQUHAR, son of Lieut.-Col. Humphrey Graham, was born in Edinburgh, Dec. 29, 1789, and educated in the High School and University there. He studied music as an amateur, and was to a great extent self-taught. In 1815 he and George Hogarth acted as joint secretaries of the first Edinburgh Musical Festival, and in the next year Graham published *An Account of the First Edinburgh Musical Festival, to which is added Some General Observations on Music*. He passed some years in Italy in pursuit of musical knowledge. He composed and published some ballads, and contributed the article 'Music' to the 7th edition of the *Encyclopædia Britannica*. The article was reprinted separately in 1838, with the addition of an Introduction and Appendix under the title of *An Essay on the Theory and Practice of Musical Composition*. About the same time he assisted in bringing out the Skene MS., and contributed an interesting paper to the appendix. [See DAUNEY.] He wrote the article 'Organ' for the 8th edition of the *Encyclopædia Britannica*. In 1848-49 he furnished historical, biographical, and critical notices to *The Songs of Scotland, adapted to their appropriate Melodies*. He died in Edinburgh, March 12, 1867. W. H. H.

GRAN CASSA or GRAN TAMBURO, the Italian term for the bass-drum. [DRUM, vol. i. p. 733.] V. DE P.

GRANCINO, PAOLO, a violin-maker of the second rank. Born at Milan, he learnt his art under Nicolo Amati at Cremona. His violins are dated from 1665 to 1690. His son GIOVANNI (1696-1715), who dates 'from the sign of the Crown' in the Contrada Larga of Milan, was a maker of higher merit. His violins, tenors, and violoncellos, are usually of a large flat pattern, and present a development of the Amati model analogous to that of Stradivari. His sons GIAMBATTISTA and FRANCESCO carried on his business (1715-46) under the title of 'Fratelli Grancini.' P. D.

GRAND. A word formerly much in use in England to denote a classical composition of full dimensions or for full orchestra. Thus the twelve Symphonies written by Haydn for Salomon were known as 'Grand.' A grand sonata or a grand concerto meant one in complete classical form. It probably originated in the French *grand* or German *grosse*. (See Beethoven's

Sonatas, opp. 13, 26, 28, 106, 115, and most of his symphonies, etc.) G.

GRAND DUKE, THE, or The Statutory Duel. Comic opera, in two acts, the words by W. S. Gilbert, music by Sir Arthur Sullivan. Produced at the Savoy Theatre, March 7, 1896.

GRAND OPERA. See OPERA.

GRAND PIANOFORTE. See PIANOFORTE.

GRAND PRIX DE ROME. The Académie des Beaux-Arts, a branch of the Institut de France, holds annual competitive examinations in painting, sculpture, engraving, architecture, and music. The successful candidates become pensioners of the government for a period of four years, and as such are sent to Rome, where they reside at the Villa Medici, in the 'Académie de France' founded by Louis XIV. in 1666. Hence the term 'Grand prix de Rome' is applied to those musicians who have obtained the first prize for composition at the Institut de France. The Prize was established on the reorganisation of the Institut in 1803. [In 1864 the procedure was modified by a decree of Napoleon III.: from 1864 to 1871 the works were judged by a special jury composed of nine members drawn by lot from a list chosen by the general superintendent of theatres. Since 1872 the final judgment has been restored to the united sections of the Académie des Beaux-Arts; and the method of procedure is as follows:—The six composers forming the musical section of the Institut, assisted by three composers not belonging to the above-mentioned body, give a preliminary verdict, which the entire Académie has to ratify or veto. The competition takes place in June, and the performance of the prize cantata in October, at the annual public séance of the Académie des Beaux-Arts. A. J.] The prize composition was originally a cantata for one voice and orchestra; subsequently for one male and one female voice; but for the last forty years three characters have been required, and it has now attained to the importance of a one-act opera. The libretto is also furnished by competition, in which distinguished writers often take part; while the most popular singers take pleasure in performing these first compositions of the young aspirants. In the event of no composition proving worthy of the Prize, it stands over till the next year, when two may be adjudged (see 1805, 1819, etc.).

We append a complete list of the musicians who have gained this gratifying and eagerly coveted distinction, with the titles of their cantatas.

1803. Androt. 'Alcyone.'
1804. No first prize.
1805. Dourlen, and Gasse. 'Cupidon pleurant Psyché.'
1806. Bouteiller. 'Héro et Léandre.'
1807. No first prize.
1808. Blondeau. 'Marie Stuart.'
1809. Daussoigne. 'Agar dans le désert.'
1810. Beaulieu. 'Héro.'
1811. Chelard. 'Ariane.'
1812. Hérold. 'La Duchesse de la Vallière.'
1813. Panseron. 'Herminie.'
1814. Roll. 'Atala.'
1815. Benoist. 'Œnone.'
1816. No first prize.
1817. Batton. 'La mort d'Adonis.'
1818. No first prize.
1819. Halévy, and Massin-Turina. 'Herminie.'
1820. Leborne. 'Sophonisbe.'
1821. Rifaut. 'Diane.'
1822. Lebourgeois. 'Geneviève de Brabant.'
1823. Boilly, and Ermel. 'Pyrame et Thisbe.'
1824. Barbereau. 'Agnès Sorel.'
1825. Guillion. 'Ariane dans l'Ile de Naxos.'
1826. Paris. 'Herminie.'
1827. J. B. Guiraud. 'Orphée.'
1828. Ross - Despréaux. 'Herminie.'
1829. No first prize.
1830. Berlioz, and Montfort. 'Sardanapale.'
1831. Prévost. 'Bianca Capello.'
1832. A. Thomas. 'Hermann et Ketty.'
1833. Thys. 'Le Contrebandier espagnol.'
1834. Elwart. 'L'entrée en loge.'
1835. Boulanger. 'Achille.'
1836. Boisselot. 'Velléda.'
1837. L. D. Besozzi. 'Marie Stuart et Rizzio.'
1838. Bousquet. 'La Vendetta.'
1839. Gounod. 'Fernand.'
1840. Bazin. 'Loyse de Montfort.'
1841. Maillart. 'Lionel Foscari.'
1842. Roger. 'La reine Flore.'
1843. No first prize.
1844. Massé, and Renaud de Vilback. 'Le Renégat.'
1845. No first prize.
1846. Gastinel. 'Vélasquez.'
1847. Deffès. 'L'Ange et Tobie.'
1848. Duprato. 'Damoclès.'
1849. No first prize.
1850. Charlot. 'Emma et Eginhard.'
1851. Delehelle. 'Le Prisonnier.'
1852. Léonce Cohen. 'Le Retour de Virginie.'
1853. Galibert. 'Le rocher d'Appenzell.'
1854. Barthe. Francesca di Rimini.'
1855. Conte. 'Acis et Galatée.'
1856. No first prize.
1857. Bizet, and Charles Colin. 'Clovis et Clotilde.'
1858. David. 'Jephté.'
1859. Ernest Guiraud. 'Bajazet et le joueur de flûte.'
1860. Paladilhe. 'Le Czar Ivan IV.'
1861. Dubois. 'Atala.'
1862. Bourgault - Ducoudray. 'Louise de Mézières.'
1863. Massenet. 'David Rizzio.'
1864. Sieg. 'Ivanhoe.'
1865. Lenepveu. 'Renaud dans les jardins d'Armide.'
1866. Emile Pessard. 'Dalila.'
1867. No first prize.
1868. Wintzweiller, and Rabuteau. 'Daniel.'
1869. Taudou. 'Françoise de Rimini.'
1870. Maréchal, and Ch. Lefebvre. 'Le Jugement de Dieu.'
1871. Serpette. 'Jeanne d'Arc.'
1872. Salvayre. 'Calypso.'
1873. Paul Puget. 'Mazeppa.'
1874. Ehrhart. 'Acis et Galatée.'
1875. Wormser. 'Clytemnestre.'
1876. Hillemacher, and P. V. de la Nux. 'Judith.'
1877. No first prize.
1878. Broutin and Rousseau. 'La Fille de Jephté.'
1879. Hue. 'Médée.'
1880. Hillemacher (Lucien). 'Fingal.'
1881. No first prize.
1882. Marty and Pierné. 'Edith.'
1883. Vidal. 'Le Gladiateur.'
1884. Debussy. 'L'Enfant prodigue.'
1885. Leroux. 'Endymion.'
1886. Savard. 'La Vision de Saül.'
1887. Charpentier. 'Didon.'
1888. Erlanger. 'Velléda.'
1889. No first prize.
1890. Caraud. 'Cléopâtre.'
1891. Silver. 'L'Interdit.'
1892. No first prize.
1893. Bloch. 'Antigone.'
1894. Rabaud. 'Daphné.'
1895. Letorey. 'Clarisse Harlowe.'
1896. Mouquet. 'Mélusine.'
1897. D'Ollone. 'Frédégonde.'
1898. No first prize.
1899. Leradé. 'Callirhoe.'
1900. Schmitt. 'Semiramis.'
1901. Caplet. 'Myrrha.'
1902. Kunc. 'Alcyone.'
1903. Laparra. 'Ulysse.'
1904. Pech. 'Médora.'
1905. Galloia. 'Maia.'

A few of the cantatas have been engraved, but the greater part are unpublished. At the instance of the writer of this article, and by his endeavours, the whole of the autographs of these interesting compositions have been deposited in the Library of the Conservatoire in Paris, under the title of 'Fonds des Prix de Rome.' G. C.; additions by A. J. and G. F.

GRANDI, ALESSANDRO, a 17th century composer of motets, concerning whom nothing is definitely known, excepting only what can be gathered from the title-pages of the earlier editions of his works. (See Eitner's *Quellen-Lexikon.*) He seems to have been born in Sicily, was possibly a pupil of Giovanni Gabrieli, and certainly maestro in the church of Santo Spirito at Ferrara from 1610 to 1617. In the latter year he went to Venice as a member of the choir of St. Mark's, where he became deputy conductor in 1619. In 1628 he was chief conductor at S. Maria Maggiore in Bergamo, where he died shortly before July 8, 1637 (see his posthumously-published 'Messe concertate'). His first book of masses, *a* 3, appeared in 1630; a second (with a psalm of Giov. Croce's in it) in 1636, for two, three, and four voices with accompaniment *ad libitum*; and the 'messe concertate,' *a* 8, in 1637. A book of psalms, *a* 8, was issued in 1629; 'Salmi per i vespri,' *a* 4, with litanies, etc., in 1707; and various collec-

tions of motets, with and without accompaniment, in 1610, 1613, 1614, 1616, 1619, 1620, 1621, 1629, and 1637. Two books of accompanied madrigals appeared in 1616 and 1622; and four books of 'Cantade et Arie a voce sola,' were issued from 1620 onwards, only two of which are now in existence. (*Quellen-Lexikon.*)

GRANDIOSO (Ital.). In a grand or broad style.

GRANDSIRE. The name given to one of the methods by which changes in ringing are produced. It is supposed to be the original method. [See CHANGE-RINGING.] C. A. W. T.

GRANJON, ROBERT. Born about the beginning of the 16th century at Paris, a type-founder who was one of the first to introduce round notes instead of square and lozenge-shaped ones, and at the same time to suppress the ligatures and signs of proportion, which made the notation of the old music so difficult to read—and thus to simplify the art. His efforts, however, appear to have met with little or no success. His first publications are said to be dated 1523, and the first work printed on his new system, 'Le Premier Trophée de Musique,' a collection of *chansons*, etc., in 1559, at which time he had left Paris for Lyons; he was at Rome in 1582, where he printed the first edition of Guidetti's *Directorium*, having been called to Rome by the Pope in order to cut the capital letters of a Greek alphabet.

Whether he or Briard of Bar-le-duc was the first to make the improvements mentioned above is uncertain. Briard's Carpentras (printed in the new style) was published at Avignon in 1532, but Granjon appears to have made his invention and obtained letters patent for it many years before he had an opportunity of exercising it. See BRIARD, and Fétis for more details. G.

GRANOM, LEWIS CHRISTIAN AUSTIN, a composer who flourished about the middle of the 18th century, and produced many songs and pieces which were popular in their day. His first work was 'Twelve Sonatas for the Flute,' published in 1751. He afterwards published 'Six Trios for the Flute,' 1755, and a collection entitled 'The Monthly Miscellany,' consisting of duets for flutes, songs, etc. His 'Second Collection of forty favourite English Songs, with string accompaniments, in score; dedicated to Dr. Boyce,' bears the opus number xiii. Nothing is known of his biography. W. H. H.

GRAS, JULIE AIMÉE JOSÈPHE DORUS-, whose family name was Steenkiste, was born at Valenciennes, Sept. 7, 1805. DORUS was the name of her mother. She was the daughter of the leader of the band, and educated by her father. At the age of fourteen she made a début in a concert with such success as to obtain a subsidy from the authorities to enable her to study at the Conservatoire of Paris. There she was admitted Dec. 21, 1821; and received instruction from Henri and Blangini. With a good voice and much facility of execution, she obtained the first prize in 1822. Paër and Bordogni then helped to finish her education. To the former she owed her appointment as chamber-singer to the king. In 1825 she began her travels, going to Brussels first, where she sang with such success as to receive proposals for the opera. She now gave six months to study for the stage, and made a brilliant début. After the revolution of 1830 she went to the Paris Opéra, and made her first appearance in the 'Comte Ory' with great applause. On the retirement of Mme. Damoreau-Cinti from the Grand Opéra in 1835 Mlle. Dorus succeeded to the principal parts in 'La Muette,' 'Guillaume Tell,' 'Fernand Cortez,' etc. She had already created the rôles of Thérésina in 'Le Philtre,' of Alice in 'Robert le Diable,' the page in 'Gustave,' Marguérite in 'Les Huguenots,' and Eudoxie in 'La Juive.' In 1839 she visited London, where she had a very warm reception. Having married M. Gras, one of the principal violins at the Opéra, April 9, 1833, Mlle. Dorus for some years kept her maiden name on the stage. The management of the theatre having passed into the hands of M. Stolz, she had the mortification to see her chief parts given to Mme. Stolz, and consequently retired in 1845. She continued, however, to sing occasionally in Paris and in the provinces. In 1847 she reappeared in London, and renewed her former triumphs; as she did again in 1848 and 1849, singing in the latter year Auber's Italianised 'Masaniello.' In 1850-51 Mme. Dorus-Gras remained in Paris, singing in a few concerts; but after that her artistic career came to an end, [although she lived until the age of ninety-one, dying in Paris, Feb. 6, 1896. Baker's *Dict.*] J. M.

GRASSET, JEAN-JACQUES, a distinguished violin player, born at Paris about 1769. He was a pupil of Berthaume, and is reported to have excelled by a clear, though not powerful tone, correct intonation and technique. After having been obliged to serve in the army for several years—which he appears to have spent not without profit for his art in Germany and Italy—he returned to Paris and soon gained a prominent position there. On the death of Gaviniés in 1800 he was appointed professor of the violin at the Conservatoire, after a highly successful competition with a number of eminent performers. Soon afterwards he succeeded Bruni as 'chef d'orchestre' at the Italian Opera, which post he filled with eminent success till 1829, when he retired from public life. He published three Concertos for the Violin, five books of Violin-Duos, and a Sonata for Piano and Violin, which are not without merit. He died at Paris in 1839. P. D.

GRASSHOPPER or HOPPER, in a square or upright pianoforte of ordinary London make, is that part of the action known technically as the escapement lever or jack, so constructed with base mortised into the key and backpiece, that

it may be taken out or replaced with the key, without disturbing the rest of the mechanism, There is a regulating screw perforating the jack, tongue, or fly, as it is variously called, of the grasshopper, drilled into the backpiece and bearing a leather button, the position of which and the pressure of a spring determine the rake of the jack, and consequently the rise and rebound of the hammer; the rebound being further regulated by a contrivance attached to the jack, when not an independent member, and used for checking or arresting it after the blow. In grand pianofortes, and in upright ones with crank lever actions, the escapement apparatus is less easily detached from the action.

It is not recorded by whom the Grasshopper was introduced, although the escapement part of it existed in Cristofori's 'linguetta mobile'; but the tradition which attributes it to Longman & Broderip, pianoforte makers in London, and predecessors of the firm of Clementi & Collard, may be relied upon. John Geib patented in London in 1786 a square action with the jack, and the setting off button acting upon the key, also, in another form, the screw holding the button perforating the jack—but with the button in front of it. The improved form with which we are acquainted, with the button behind the jack, was adopted by Messrs. Longman & Broderip, and soon became general. A. J. H.

GRASSI, Cecilia, who afterwards became the wife of John Christian Bach ('English Bach'), was born in 1746. She came to London with Guarducci in 1766, as 'first woman,' and remained in that capacity at the opera for several years. Burney thought her 'inanimate on the stage, and far from beautiful in her person; but there was a truth of intonation, with a plaintive sweetness of voice, and innocence of expression, that gave great pleasure to all hearers who did not expect or want to be surprised.' She was succeeded in 1772 by Girelli, but remained in England until the death of her husband in 1782, when she returned to Italy, and retired from public singing. J. M.

GRASSINEAU, James, born of French parents in London, about 1715; was first employed by Godfrey, the chemist, of Southampton Street, Strand, then became Secretary to Dr. Pepusch, at whose instance he translated the *Dictionnaire de musique* of Brossard (Paris, 1703), with alterations and additions, some of which are said to be by Pepusch himself:—*A Musical Dictionary . . . of Terms and Characters* etc., London, 1740, an 8vo of 343 pages, with a recommendation prefixed, signed by Pepusch, Greene, and Galliard. [Some years afterwards an 'appendix' of 52 pp. was issued; it is now scarce.] A second edition is said to have been published in 1769 by Robson with an appendix taken from Rousseau. [The *Dictionarium Musica* (*sic*) by John Hoyle, a Yorkshire musician, appeared about 1770, and went into several editions; it is a mere abridgment of Grassineau's dictionary, although it pretends to be an original work. Grassineau died in London in 1769.] G.; additions by F. K.

GRASSINI, Josephina (as she signed herself), was born at Varese (Lombardy), in 1773, of very humble parents. The beauty of her voice and person induced General Belgiojoso to give her the best instruction that could be procured at Milan. She made rapid progress in the grand school of singing thus opened to her, and soon developed a powerful and extensive contralto, with a power of light and finished execution rarely found with that kind of voice. She had the great advantage of singing in her first operas with such models as Marchesi and Crescentini. Grassini made her débuts at Milan, in the carnival of 1794, in Zingarelli's 'Artaserse,' and the 'Demofoonte' of Portogallo. She soon became the first singer in Italy, and appeared in triumph on all the chief Italian stages. In 1796 she returned to Milan, and played in Traetta's 'Apelle e Campaspe,' and with Crescentini and Bianchi in the 'Giulietta e Romeo' of Zingarelli. The year after she excited the greatest enthusiasm at Venice as 'Orazio.' In 1797 she was engaged to sing at Naples during the fêtes held on the marriage of the Prince. In 1800, after Marengo, she sang at Milan in a concert before Buonaparte, and was taken by him to Paris, where she sang (July 22) at the national fête in the Champ de Mars, and in concerts at the opera. In 1804 she was engaged to sing in London from March to July for £3000, taking the place of Banti. Here she had to contend with Mrs. Billington in popular favour, though their voices were very different. Lord Mount-Edgcumbe speaks in disparaging terms of that of Grassini, though he gives her credit for great beauty, 'a grace peculiarly her own,' and the excellence of her acting. Her style was then 'exclusively the *cantabile*, and bordered a little on the monotonous. She had entirely lost all her upper tones, and possessed little more than one octave of good, natural notes; if she attempted to go higher, she produced only a shriek, quite unnatural, and almost painful to the ear.' Her first appearance was in 'La Vergine del Sole,' by Mayer, [or Andreozzi, according to the contemporary journals] in a part well suited to her; but 'so equivocal was her reception, that when her benefit was to take place she did not dare encounter it alone, but called in Mrs. Billington to her aid.' The tide then turned, and Grassini became the reigning favourite. 'Not only was she rapturously applauded in public, but she was taken up by the first society, *fêtée*, caressed, and introduced as a regular guest in most of the fashionable assemblies.' Very different from this was the effect produced by Grassini on other hearers, more intellectual, though less cultivated in music, than Lord Mount-Edgcumbe. De Quincey found her voice

'delightful beyond all that he had ever heard.' Sir Charles Bell (1805) thought it was 'only Grassini who conveyed the idea of the united power of music and action. She *died* not only without being ridiculous, but with an effect equal to Mrs. Siddons. The "O Dio" of Mrs. Billington was a bar of music, but in the strange, almost unnatural voice of Grassini, it went to the soul.' Elsewhere he speaks of her 'dignity, truth, and affecting simplicity.' Such was her influence on people of refined taste, not musicians. In 1804 she sang again in Paris; and, after 1806, when she quitted London, continued to sing at the French Court for several years, at a very high salary (altogether, about £2600). Here the rôle of 'Didone' was written for her by Paër. After the change of dynasty, Mme. Grassini, whose voice was now seriously impaired, lost her appointment at Paris, and returned to Milan, where she sang in two concerts in April 1817. In 1822 she was at Ferrara, but died at Milan, January 3, 1850.

In 1806 a fine portrait of her was scraped in mezzotint (folio) by S. W. Reynolds, after a picture by Mme. Le Brun. It represents her in Turkish dress, as 'Zaira' in Winter's opera. J. M.

GRAUN. The name of three brothers, sons of an Excise collector at Wahrenbrück near Dresden, one of whom made a lasting mark on German music.

The eldest, AUGUST FRIEDRICH, born at the end of the 17th century, was at the time of his death cantor of Merseburg, where he had passed the greater part of his life, 1727-1771.

JOHANN GOTTLIEB, born in Wahrenbrück about 1698, was an eminent violinist, and composer of instrumental music much valued in his day. He was a pupil of Pisendel. After a journey to Italy, where he had instruction from Tartini, he was in the Dresden band until 1726, when he became concertmeister at Merseburg, and had Friedemann Bach for some time as his pupil. In 1727 he entered the service of Prince von Waldeck, and in 1728 that of Frederick the Great, then Crown Prince at Rheinsberg. On the King's accession he went to Berlin, and remained there till his death, Oct. 27, 1771, as conductor of the royal band. Of his many compositions only a set of violin sonatas, six harpsichord or organ concertos (with Agrell), and eight sonatas (trios) for two flutes and violin, were printed (see the *Quellen-Lexikon*). Burney in his *Present State* (ii. 229) testifies to the great esteem in which he was held. The excellence of the then Berlin orchestra is generally attributed to him. P. D.

The most celebrated of the three is the youngest, KARL HEINRICH, born at Wahrenbrück, May 7, 1701. He was educated with Johann Gottlieb at the Kreuzschule in Dresden, and having a beautiful soprano voice, was appointed, in 1713, 'Raths-discantist,' or treble-singer, to the town council. Grundig the cantor of the school, the court-organist Petzold, and the capellmeister Joh. Christoph Schmidt, were his early musical instructors, and he profited by the friendship of Ulrich König the court-poet, and of Superintendent Löscher, who defended him from the pedantic notions of an inartistic Burgomaster. His career both as a singer and composer was largely influenced by his study of the vocal compositions of Keiser, the then celebrated composer of Hamburg, and of the operas of the Italian composer Lotti, who conducted in person a series of performances in Dresden, with a picked company of Italian singers. Even during this time of study, Graun was busily engaged in composing. There still exist a quantity of motets and other sacred vocal pieces, which he wrote for the choir of the Kreuzschule. In particular may be cited a 'Grosse Passions-Cantata,' with the opening chorus 'Lasset uns aufsehen auf Jesum,' which, as the work of a boy of barely fifteen, is very remarkable. [Three other early passion oratorios are mentioned in the *Quellen-Lexikon*.] Upon König's recommendation he was appointed tenor to the opera at Brunswick when Hasse was recalled to Dresden in 1725. The opera chosen for his first appearance was by Schurmann the local capellmeister, but Graun being dissatisfied with the music of his part replaced the airs by others of his own composition, which were so successful that he was commissioned to write an opera, and appointed vice-capellmeister. This first opera, 'Pollidoro' (1726), was followed by five others; 'Sancio,' 1727, 'Scipio Africano,' 1732, 'Timareta,' 1733, 'Lo specchio della fedeltà' and 'Pharao Tubaetes,' 1735; and besides these he composed several cantatas, sacred and secular, two 'Passions-Musiken,' and instrumental pieces. His fame was now firmly established. In 1735 he was invited to Rheinsberg, the residence of the Crown-Prince of Prussia, afterwards Frederick the Great. This powerful amateur continued Graun's friend and patron till his death. Here he composed about fifty Italian cantatas, usually consisting each of two airs with recitatives. They were highly valued at the time, and contain ample materials for an estimate of Graun's style of writing for the voice. He also wrote 'Trauermusik' for Duke August Wilhelm of Brunswick (1738) and King Frederick William I. (1740). When his patron came to the throne in 1740, he gave Graun the post of capellmeister, with a salary of 2000 thalers, and despatched him to Italy to form a company of Italian singers for the opera at Berlin. In Italy he remained more than a year, and his singing was much appreciated. After his return to Berlin with the singers he had engaged, he spent some years of remarkable activity in composing operas. Those of this period amount to twenty-eight in all [a complete list will be found in the *Quellen-Lexikon*]; 'Rodelinda, Regina di Longobardia' appeared in 1741, and 'Merope,' his last, in 1756. In his operas he gave his

chief consideration to the singer, as indeed was the case with all Italian operas at that time. His forte, both in singing and in composition, resided in the power he possessed of executing adagios, and of expressing tenderness and emotion. Although his operas, as such, are now forgotten, they contain airs which merit the attention of both singers and public, a good instance being 'Mi paventi' from 'Britannico' (1751), with which Mme. Viardot-Garcia used to make a great effect. A collection of airs, duets, terzettos, etc., from Graun's operas was edited by the celebrated theorist Kirnberger, in 4 vols. (Berlin, 1773). 'Montezuma' was reprinted as vol. xv. of the *Denkmäler Deutscher Tonkunst.*

Towards the close of his life Graun again devoted himself to church music, and two of the works belonging to this period have carried his name down to posterity; and are indeed those by which he is now almost exclusively known. These are the 'Te Deum' which he composed for Frederick's victory at Prague (1756)—first performed at Charlottenburg at the close of the Seven Years' War, July 15, 1763—and still more, 'Der Tod Jesu,' or Death of Jesus, a 'Passions-Cantata,' to words by Ramler, a work which enjoyed an unprecedented fame, and placed its author in the rank of classical composers. In Germany the 'Tod Jesu' holds, in some degree, the position which is held by the 'Messiah' in England. It was first executed in the Cathedral of Berlin on March 26, 1755, and has since then been annually performed in Passion-week. A centenary performance took place in 1855 in presence of Frederick William IV. Of late years some opposition has been raised to the continual repetition of an antiquated work [in consequence of an endowment for the purpose], but it may to a great extent be justified by the complete and masterly form in which it embodies the spirit of a bygone age. Looked at from a purely musical point of view, and apart from considerations of age or taste, the 'Tod Jesu' contains so many excellences, and so much that is significant, that no oratorio of the second half of the 18th century, excepting perhaps Mozart's 'Requiem' and Haydn's 'Creation,' can be compared to it. Graun was a master of counterpoint; his harmony—as his biographer, J. A. Hiller, says—was always 'clear and significant, and his modulation well regulated.' His melodies may be wanting in force, but they are always full of expression and emotion. That he possessed real dramatic ability may be seen from his recitatives, and these are the most important parts of the 'Tod Jesu.' [It was first performed in England at St. Gabriel's, Pimlico, in Lent, 1877, and at an orchestral concert at the Royal Academy of Music, April 1, 1887, under Barnby's direction.]

Graun's instrumental compositions, trios, pianoforte concertos, etc., have never been published and are of little value. [See the *Quellen-Lexikon.*] He wrote thirty-one solfeggi, which form an excellent singing method, and he invented the so-called 'Da me ne satio'—a putting together of the syllables, da, me, ni, po, tu, la, be, for the practice of solfeggio, which however has been little used. Graun died at Berlin, August 8, 1759, in full enjoyment of the king's favour, illustrious among his contemporaries, and, after Hasse, the chief composer of Italian opera of his time. [See the *Sammelbände* of the *Int. Mus. Ges.* vol. i. pp. 446 ff., and the *Zeitschr.* vol. vi. p. 71.] A. M.

GRAUPNER, Christoph, composer, born 1687 (baptized Feb. 22) at Kirchberg in Saxony, near the Erzgebirge; came early to Leipzig, where he studied nine years at the Thomasschule under cantors Schelle and Kuhnau. He began to study law, but was driven by the Swedish invasion to take refuge in Hamburg, where he passed three years (1706-9) as harpsichord player at the opera under Keiser. The Landgrave Ernst Ludwig of Hesse Darmstadt, then staying in Hamburg, having appointed him his vice-capellmeister, he removed in 1710 to Darmstadt, and in the same year was promoted to the capellmeistership on the death of Briegel. Here he did much to elevate both sacred and dramatic music, and greatly improved the court performances, the excellence of which is mentioned by Telemann. In 1723 he was proposed, together with Bach and Telemann, for the post of cantor at the Thomasschule (when Bach was elected), but he preferred remaining in Darmstadt. In 1750 he lost his sight, a great trial to so active a man, and died May 10, 1760, in his seventy-eighth year.

Graupner worked almost day and night; he even engraved his own pieces for the clavier, many of which are very pleasing. Of his operas the following were produced in Hamburg:—'Dido' (1707), 'Die Lustige Hochzeit' (with Keiser, 1708), 'Hercules und Theseus' (1708), 'Antiochus und Stratonice' (1708), 'Bellerophon' (1708), and 'Simson' (1709). [Three operas, written for Darmstadt, are mentioned in Riemann's *Lexikon*; 'Berenice und Lucio' (1710), 'Telemach' (1711), and 'Beständigkeit besiegt Betrug' (1719)]. After this he wrote only church and chamber music. Between the years 1719 and 1745 he composed more than 1300 pieces for the service in the Schlosskirche at Darmstadt—figured chorales, pieces for one and more voices, and chorales with accompaniment for organ and orchestra. The court library at Darmstadt contains the autograph scores and the separate parts of these, which were printed at the Landgrave's expense; Superintendent Lichtenberg furnished the words. The same library also contains in MS. fifty concertos for different instruments in score; eighty overtures; one hundred and sixteen symphonies; several sonatas and trios for different instruments in various combinations, mostly in score; six sonatas for the harpsichord with gigues, preludes,

and fugues. Of his printed works there also exist eight 'Partien' for the Clavier dedicated to Ernst Ludwig of Hesse (1718); 'Monatliche Clavier-Früchte,' consisting of preludes, allemandes, courantes, sarabandes, minuets, and gigues (Darmstadt, 1722); and 'Die vier Jahreszeiten,' four suites for clavier (Frankfurt, 1733). We must also mention his 'Neu vermehrtes Choralbuch' (Frankfurt, Gerhardt, 1728). Graupner's autobiography is printed in Mattheson's *Ehrenpforte*, p. 410, and a list of the operas written for Hamburg will be found in the same author's *Musik. Patriot.* C. F. P.

GRAVE. One of the slow Tempos, indicating perhaps rather character than pace. As familiar instances may be given the opening movement of the Overture to the 'Messiah' the short Choruses in plain counterpoint in 'Israel in Egypt'—'And Israel saw,' 'He is my God,' etc.; the two recitatives, 'As God the Lord,' in 'Elijah'; 'The nations are now the Lord's,' in 'St. Paul'; 'What ailed thee' in the 114th Psalm; the Rex tremendae in Mozart's 'Requiem'; the Introduction to Beethoven's Sonate Pathétique, and that to the Prison scene in 'Fidelio.' G.

GRAVE MIXTURE. An organ-stop consisting chiefly of pipes representing the lower or more grave of the partial tones, overtones, or harmonics. T. E.

GRAVICEMBALO. An Italian corruption of the term *Clavicembalo*, a harpsichord. A. J. H.

GRAY, Alan, born at York, Dec. 23, 1855, was educated at St. Peter's School, York, and Trinity College, Cambridge. He took the degrees of LL.B. in 1877, of LL.M. in 1883, of Mus.B. in 1886, and Mus.D. in 1889. He was at first intended for the legal profession, but after studying with Dr. E. G. Monk devoted himself altogether to music. He was appointed musical director at Wellington College, in 1883, and held that post till 1892, when he succeeded Stanford as organist of Trinity College, Cambridge, and conductor of the Cambridge University Musical Society.

The first of his compositions to obtain an important hearing was 'The Widow of Zarephath,' York Minster, 1888. His cantatas are as follows: 'Arethusa,' Leeds Festival, 1892; 'The Legend of the Rock Buoy Bell,' Hovingham Festival, 1893; 'The Vision of Belshazzar,' Hovingham, 1896; 'A Song of Redemption,' Leeds Festival, 1898. An Easter ode (1892), and a Festival Te Deum (1895), have not been published, nor has a 'Coronation March' played at the Hovingham Festival of 1902. An andante and allegro for pianoforte, violin, and violoncello, were played at one of the Broadwood concerts in January 1903; and two quartets, one for strings alone, the other for pianoforte and strings, are still in MS., like a sonata for pianoforte and violin, and various slighter pieces. Four organ sonatas were published in 1889, and an album of four songs are of still earlier date. Three groups of part-songs have been written for the Magpie Madrigal Society, and some are published in the series called *Arion* (modern series). A cantata, 'Odysseus among the Phoeacians,' has not yet been performed. Dr. Gray is a fellow of the Royal College of Organists. M.

GRAY & DAVISON. Robert Gray established an organ factory in London in 1774, and was succeeded by William Gray, who died in 1820, and then by John Gray. In 1837-38 the firm was John Gray & Son, after which John Gray took Frederic Davison into partnership. Gray died in 1849, but the name of the firm remains, the present address being 6 Pratt Street, N.W. Amongst the many organs erected by these makers all over the country, we may mention those in the Crystal Palace Handel orchestra), St. Paul's, Wilton Place, and St. Pancras, London; Magdalen College, Oxford; and the Town-Halls of Leeds, Bolton, and Glasgow.

In 1876 they took up the business of Robson, and have also a factory in Liverpool, having succeeded Bewshur in that town. V. DE P.

GRAZIA, CON; GRAZIOSO (Ital.), 'gracefully.'

GRAZIANI, Francesco, born at Fermo, April 16, 1829, a singer who appeared in London first at the Royal Italian Opera in 1855. (He had previously sung in Italy, and in Paris from 1855.) He made his début in the 'Trovatore,' then also produced here for the first time. In this 'the song "Il balen" exhibited to its best advantage one of the most perfect baritone voices ever bestowed on mortal. Such an organ as his is a golden inheritance; one, however, which has tempted many another beside himself to rely too exclusively on Nature' (Chorley). Graziani continued to sing in London and Paris, with almost undiminished powers, for many years. His voice, though not extensive downwards, had beautiful and luscious tones, reaching as high as G, and even A. He appeared with great effect as Nelusco in the 'Africaine' when that opera was first produced in London in 1865.

His brother, Lodovico, born at Fermo in August 1823, was a dramatic tenor, for whom the part of Alfredo in 'Traviata' was written. He sang in Paris, London, and Vienna in about 1858-60 with great success, and died at Fermo in May 1885. J. M.

GREAT OCTAVE. See C, vol. i. p. 433.

GREAT ORGAN. This name is given, in modern instruments, to the department that generally has the greater number of stops, and those of the greater power, although occasional exceptions are met with as to one or other of these particulars; as when a Swell of more than proportionate completeness, or a Solo organ, composed of stops of more than the average strength of tone, forms part of the instrument.

The use of the term 'Great Organ' in England can be traced back for upwards of 400 years. In the *Fabrick Rolls of York Minster*, under date 1469, the following entry occurs:—'To brother John for constructing two pair of bellows for the great organ, and repairing the same, 15*s.* 2*d.*' English Organs at that period, and for nearly a century and a half afterwards, were invariably single manual instruments. This is clearly intimated in numerous old documents still in existence. Thus the churchwardens' accounts of St. Mary's, Sandwich, contain the following four memoranda:—'1496. Payd for mending of the *lytell* organys, iij*s.* iv*d.*' 'Item, for shepskyn to mend the *grete* organyse, iij*d.*' More clearly still:—'1502. Paid for mending of the *gret* organ bellowis and the *small* organ bellowis, v*d.*' 'Item, for a shepis skyn for *both* organys, ij*d.*'

It was no uncommon circumstance before the Reformation for a large or rich church to possess one or even two organs besides the chief one. Thus at Worcester Cathedral there were, besides the 'great organ' in the choir, a 'pair of organs' in the Chapel of St. George, and another 'pair' in that of St. Edmund. At Durham there were two 'great organs,' as well as a smaller one, all in the choir; and an interesting description has been preserved in Davies's *Ancient Rites and Monuments of the Monastical and Cathedral Church of Durham*, 1672, of the position of two, and the separate use to which these several organs were appropriated:—'One of the fairest pair of the three stood over the quire door, and was only opened and play'd upon on principal feasts.' 'The second pair,—a pair of fair large organs, called the Cryers,—stood on the north side of the choir, being never play'd upon but when the four doctors of the church were read.' 'The third pair were daily used at ordinary service.' Reverting to the York records of the 15th century we find express mention of 'the *large* organ in the choir,' and 'the organ at the altar.'

The 'great' organ was doubtless in all cases a fixture, while the 'small' one was movable; and it is pleasant to notice the authorities of more opulent or fortunate churches helping the custodians of smaller establishments by lending them a 'pair of organs' for use on special anniversaries. An early instance of this good custom is mentioned in the York records of 1485:—'To John Hewe for repairing the organ at the altar of B. V. M. in the Cathedral Church, and for carrying the same to the House of the Minorite Brethren, and for bringing back the same to the Cathedral Church. 13*s.* 9*d.*' A 16th-century entry in the old accounts of St. Mary-at-Hill, London, states the occasion for which the loan of the organ was received:—'1519. For bringing the organs from St. Andrew's Church, against St. Barnabas' eve, and bringing them back again, v*d.*'

We have seen that some of the large churches had two or even three organs in the choir, located in various convenient positions, and employed separately on special occasions. But the idea of placing the small organ close to the large one,—in front of and a little below it,—with mechanism so adjusted that the two organs could be rendered available for use by the same player and on the same occasion,—in fact, of combining them into a two-manual organ,—does not seem to have been conceived in England until about the beginning of the 17th century; and among the earliest artists who effected this important improvement appears to stand Thomas Dallam. This builder made an organ for King's College Chapel, Cambridge, the accounts of which,—entitled, 'The charges about the organs, etc., from the 22nd of June 1605, to the 7th of August 1606,'—are still extant. From the manner in which 'the greate Organ' and 'the greate and litel Organs' are mentioned in these entries, it seems clear that the union of the two was a recent device. Seven years later Dallam built an instrument for Worcester Cathedral, the two departments of which were referred to collectively in the following extract:—'A.D. 1613. All the materials and workmanship of the new double-organ in the Cathedral Church of Worcester by Thomas Dalham, organ-maker, came to £211.' The name 'Chayre organ' is also given to the smaller one. At length, in the contract for the York Cathedral Organ, dated 1632, we find the word 'great' applied to an organ as a whole—'touchinge the makeinge of a great organ for the said church,'—although farther on in the agreement a 'great organ' and 'chaire organ' (in front) are specified. E. J. H.

GREATHEED, Rev. Samuel Stephenson, was born near Weston-super-Mare, Somersetshire, on Feb. 22, 1813. He received his first instruction in harmony from Mr. W. Chappell Ball, organist of St. Mary's, Taunton. In 1831 he entered at Trinity College, Cambridge, where he graduated B.A. as Fourth Wrangler in 1835, and was elected to a Fellowship in 1837. In 1838 he took the M.A. degree, and was ordained by Bishop Allen (of Ely), and in the same year vacated his Fellowship by marriage. In 1838 and 1839 Greatheed spent about six months in Berlin, where he studied music under G. W. Schwarz. In 1840 he was appointed to the Curacy of West Drayton, Middlesex, and in 1862 to the Rectory of Corringham, Essex. He began to study counterpoint systematically in 1844. His published works are as follows:—'Te Deum,' composed upon the original melody; 'Benedictus,' 'Magnificat,' and 'Nunc Dimittis,' upon the eighth tone; ten anthems; 'Enoch's Prophecy,' a short oratorio, performed by the Harmonic Union, June 11, 1856; music to Bishop Coxe's 'Hymn of Boyhood'; organ fugue in the Dorian mode; 'Quam dilecta,' varied for the organ; the *English Gradual*,

containing the plain-song for the Holy Communion, etc.: many harmonies to old Church melodies; a few original chants and hymn tunes; and some pieces for domestic use. He is also the author of 'A Sketch of the History of Sacred Music from the earliest Age,' which appeared in the *Church Builder* (1876-79), and a 'Treatise on the Science of Music' in Stewart's *Teacher's Assistant* (1878-79). W. B. S.

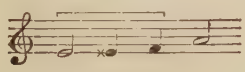
GREATOREX, Thomas, son of Anthony Greatorex, of Riber Hall, Matlock, was born at North Wingfield, near Chesterfield, Derbyshire, on Oct. 5, 1758. In 1772 he became a pupil of Dr. Benjamin Cooke. In 1774, at a performance of sacred music in St. Martin's church, Leicester (of which his sister was then organist), on occasion of the opening of the Leicestershire Infirmary, he had the good fortune to make the acquaintance of the Earl of Sandwich and Joah Bates. The earl invited him to become an inmate of his house, and in 1774, 1775, and 1776, he assisted at the oratorios which were given at Christmas, under Bates's direction, at his lordship's seat, Hinchinbrook House, near Huntingdon. On the establishment of the Concert of Ancient Music in 1776 Greatorex sang in the chorus. In 1781 he was appointed organist of Carlisle Cathedral, a post which he held until about 1784, when he resigned it and went to reside at Newcastle. In 1786 he went to Italy, returning home through the Netherlands and Holland at the latter end of 1788. At Rome he was introduced to the Pretender, Charles Edward Stuart, with whom he so ingratiated himself as to induce the Prince to bequeath him a large quantity of valuable manuscript music. On his return to England Greatorex established himself in London as a teacher of music, and soon acquired a very extensive practice. On the retirement of Bates in 1793 he was, without solicitation, appointed his successor as conductor of the Concert of Ancient Music. In 1801 he joined W. Knyvett, Harrison, and Bartleman in reviving the Vocal Concerts. In 1819 he was chosen to succeed George Ebenezer Williams as organist of Westminster Abbey. For many years he conducted the triennial musical festivals at Birmingham, and also those at York, Derby, and elsewhere. Greatorex published a collection of Psalm Tunes, harmonised by himself for four voices, and a few glees and harmonised airs. Besides these he arranged and composed orchestral accompaniments to many pieces for the Ancient and Vocal Concerts, which were never published. His knowledge was by no means limited to music; he was well skilled in mathematics, astronomy, and natural history, and was a fellow of the Royal and Linnæan Societies. He died July 18, 1831, and was buried in the West cloister of Westminster Abbey. W. H. H.

GREAVES, Thomas, a lutenist, published in 1604, a work entitled 'Songs of Sundrie Kindes; first Aires to be sung to the Lute and Base Violl. Next, Songs of Sadnesse, for the Viols and Voyces. Lastly, Madrigalles for five Voyces.' It consists of twenty-one pieces; fifteen songs and six madrigals. On the title-page the composer describes himself as 'Lutenist to Sir Henrie Pierrepoint, Knight,' to whom he dedicates his work. Nothing is known of his biography. W. H. H.

GREBER, Jakob, born in the latter half of the 17th century, came to London with the singer, Margarita de l'Épine, and produced at the Haymarket Theatre an 'Indian pastoral' called 'The Loves of Ergasto,' April 24, 1705. This had already been composed to an Italian libretto, for the Court Library at Vienna contains a MS. score of 'Gli amori d'Ergasto,' dated (in the *Quellen-Lexikon*) about 1701. A later opera, 'The Temple of Love,' produced in London in 1706 as the work of Greber, is rightly ascribed by Hawkins to the double-bass player, Saggione. See his *History*, vol. v. p. 136, and Burney's *Hist.* (iv. 200, 202). Various cantatas for solo voice, with accompaniment of various instruments, are in existence at Berlin, Rostock, and the Fitzwilliam Museum at Cambridge. (*Quellen-Lexikon.*)

GRECHANINOV, Alexander Tikhonovich, composer, born Oct. 26/13, 1864, in Moscow. He studied the piano under Safonov at the Conservatoire of his native town, but quitted it in 1890, afterwards joining the sister institution at St. Petersburg. Here he completed a course of theory and composition under Rimsky-Korsakov (1893). Grechaninov is a prolific composer of vocal music. His published works include: Nineteen songs with pianoforte accompaniments, opp. 1, 5, 7, 15, 20; a musical picture for bass solo, chorus, and orchestra; twelve choruses, opp. 4, 10, 11, 12, 16; pieces for pianoforte and for violin; several sacred works; and a string quartet (No. 1, op. 2), which took the prize of the St. Petersburg Chamber Music Society, 1894. Among his unpublished works are a symphony in B minor, op. 6; string quartet (No. 2, op. 14); elegy for orchestra, op. 18. Grechaninov has also written incidental music to several plays, and an opera entitled 'Dobrinya Nikitich.' R. N.

GRECO (Grecco or Grieco), Gaetano, born at Naples about 1680, pupil of A. Scarlatti, whom he succeeded in 1717 as teacher of composition in the Conservatorio dei Poveri, where he had Pergolesi, Durante, and Vinci for his pupils. From thence he passed to the Conservatorio di San Onofrio. The date of his death is unknown. None of his music appears to have been printed in his lifetime, and only a very few pieces are known in MS. These are almost entirely for harpsichord, and a selection of them, from a MS. in the Brit. Mus., was edited by Mr. J. S. Shedlock, and published by Novello & Co. See the publications of the *Int. Mus. Ges. Zeitsch.* i. 41, and *Sammelbände*, i. 331. G.



GREEK MUSIC. In treating the theory of Ancient Greek Music we shall follow the lines laid down by Aristoxenus, the greatest of Greek theorists, and proceed from the simple musical facts of concords to the complex phenomena of scales, modes, keys, etc.

A. CONCORDS.—The whole material of musical art is supplied by the scales; and a scale is ultimately determined by concords. In the concords, then, we touch the beginnings of all music, and in the scales we have the potentiality of its highest achievement.

A concord contains two elements, a relation and a direction of the relation; that is, in every concord there are two related notes, and one of them is more fundamental, more akin to the tonic than the other. The ancient Greeks recognised as concords or concordant intervals (*διαστήματα σύμφωνα*) the foundation of a note (1) on its fourth above, (2) on its fifth below, (3) on its octave above, (4) on its octave below. Thirds and sixths were discords (*διάφωνα*) for the Greek ear.

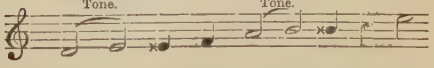
B. SCALES.—The elementary scale (*σύστημα*) is the tetrachord which is built on assumption of the following rules:—(1) The smallest concord is the fourth (*τὸ διὰ τεττάρων*), with the upper note as tonic; (2) this space cannot be divided by more than two intermediate notes; (3) no interval smaller than a quarter-tone (*δίεσις ἐλαχίστη*) can be produced or discriminated; (4) in the division of a fourth, when the upper note is tonic, the lowest interval must be equal to or less than the middle, and less than the highest. The recognition of these rules leaves an infinite variety of possible determination of the inner notes of the tetrachord; but three are taken as typical, and the classes represented by these types are called the *genera* (*γένη*) of music, the Enharmonic, the Chromatic, and the Diatonic—

Scheme of the Enharmonic Tetrachord Scale of the Tonic *A*.

Scheme of the Chromatic Tetrachord Scale of the Tonic *A*.

Scheme of the Diatonic Tetrachord Scale of the Tonic *A*.

(The sign x signifies that the note to which it is prefixed is sharpened by a quarter-tone. The fixed bounding notes of the scale are denoted by minims, the indeterminate passing notes by crotchets. The three close-lying lower notes, occurring only in the Enharmonic and Chromatic (marked by a bracket in the above example), were called the Pycnum (*τὸ πυκνόν*). At a later period the Diatonic genus displaced the others. The Enharmonic is no monstrosity, nor is the smallness of its intervals in itself an objection. We cannot appreciate them because we have lost the habit. But its fatal defect is that its notes cannot be determined by the principle of concord (see Plutarch, *de Musica*, cap. 38, 1145 B). Starting from A we can determine ♯A by the series of concords—



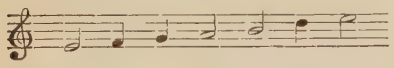
but xA cannot be thus determined.

The more ample scales are produced by the collocation of two or more of these tetrachords. Tetrachords can be collocated—(1) by *conjunction* (*συναφή*), in which case the highest note of the lower tetrachord coincides with the lowest notes of the upper tetrachord. Hence the Heptachord scale—

HEPTACHORD SCALES IN THE THREE GENERA WITH THE NAMES OF THE INDIVIDUAL NOTES.

The name Hypate signifies the 'highest' chord (*i.e.* highest in its position on the instrument), Parhypate signifies 'next the highest,' Lichanus 'forefinger,' Mese 'middle,' Trite 'third,' Paranete 'next the lowest,' Nete 'lowest.' (2) By *disjunction* (*διάζευξις*), in which case a tone separates the several tetrachords from one another. Hence the old Dorian Enharmonic scale (see Aristides Quintilianus, ed. Meibom, p. 21, l. 15)—

(3) By alternate conjunction and disjunction. Hence results a non-modulating scale such as that supplied by the white notes of our keyed



instruments. The octachord scales are exemplifications of it—

Octachord Scales in the Three Genera with the Names of the Individual Notes.

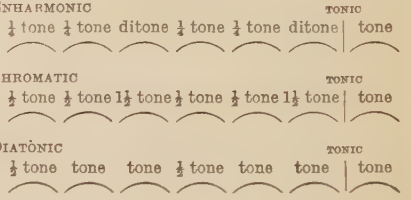
Paramese signifies 'beside the middle.' The last of these methods of collocation practically displaced the others, for it alone was musically satisfactory. The octachord scale alone has a permanent tonic; the others modulate, to use our term, one into the flat, the other into the sharp keys.

Deficient scales are also common, *e.g.* Terpander's scale (see Aristotle, *Probl.* xix. 32, and Nicomachus, ed. Meibom, p. 7)—

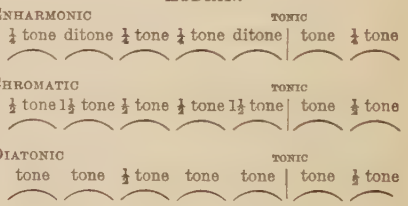
a heptachord scale obtained by omission of one note of the octachord; and the enharmonic scale of Olympus,

a trichord obtained by omission of one note of the tetrachord. For other deficient scales see Aristides Quintilianus, ed. Meibom, p. 21.

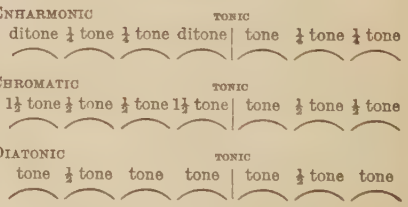
C. Modes. (*a*) *Form of the Modes.* If in the indefinitely prolonged scale arising from the third method of collocating tetrachords we seek for a segment capable of supplying the notes for the first phrase of 'Voi che sapete' we find it in the segment—



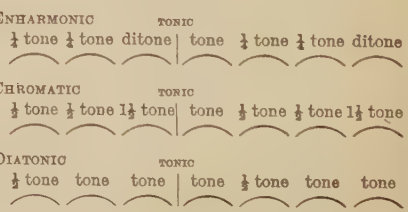
If again we wish to render the opening phrase of 'Deh vieni, non tardar,' we are obliged to abandon that segment, and adopt the following—



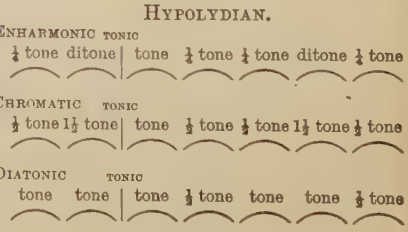
Now, since Greek instruments were limited in compass, different instruments or different tunings of the one instrument were necessary in order to obtain such different segments. In this way these segments obtained a certain importance and *quasi*-independence, and were called modes (*τρόποι* or *εἴδη*). The schemes and names of the modes were as follows—



Mixolydian.



Lydian.



Phrygian.

Dorian.

Hypolydian.

HYPOPHRYGIAN.

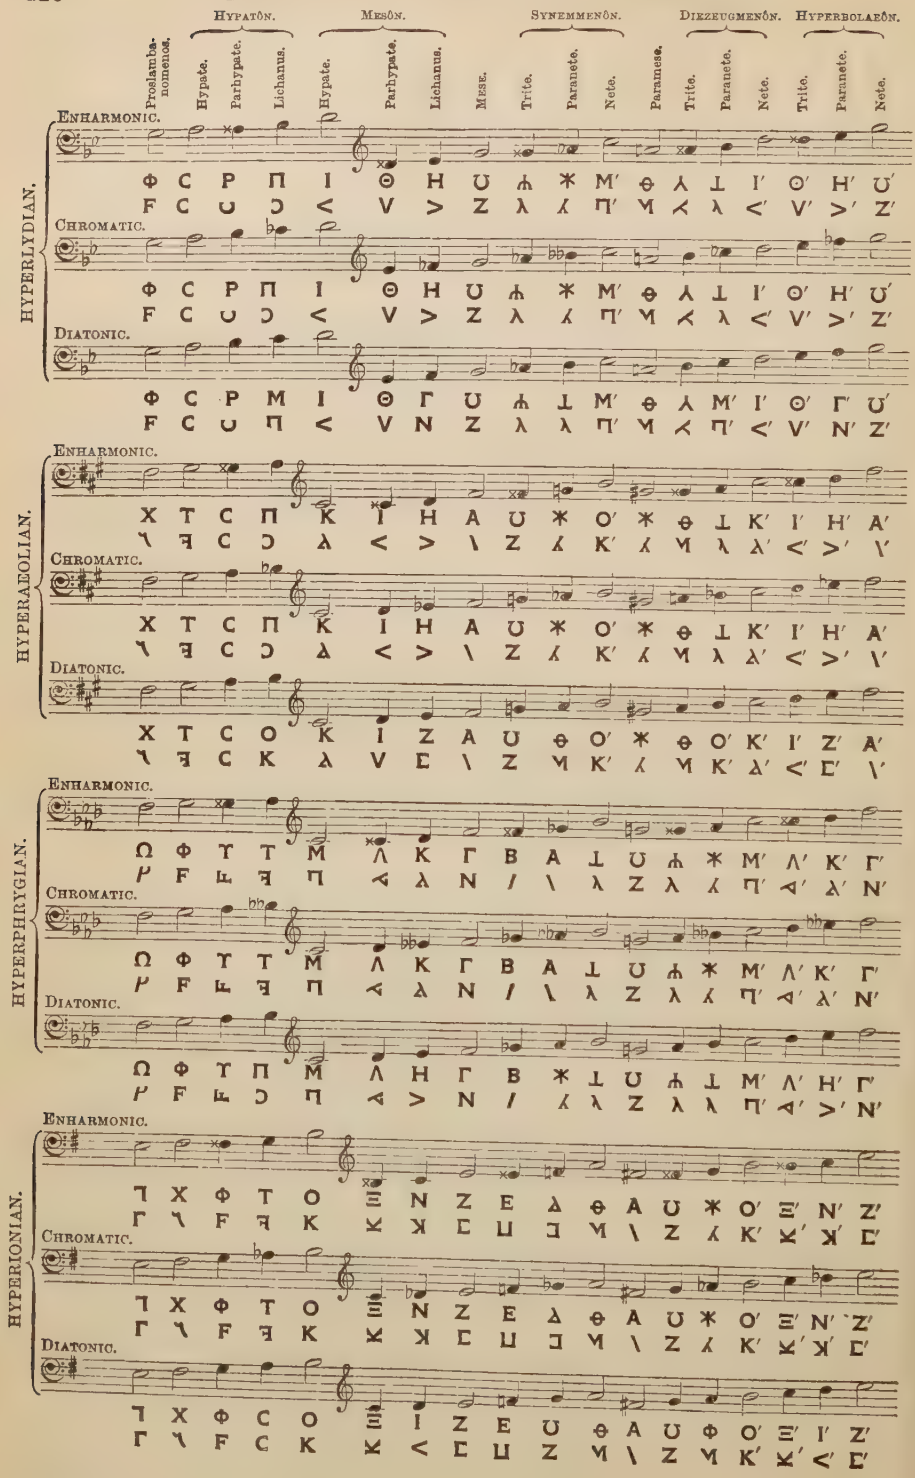
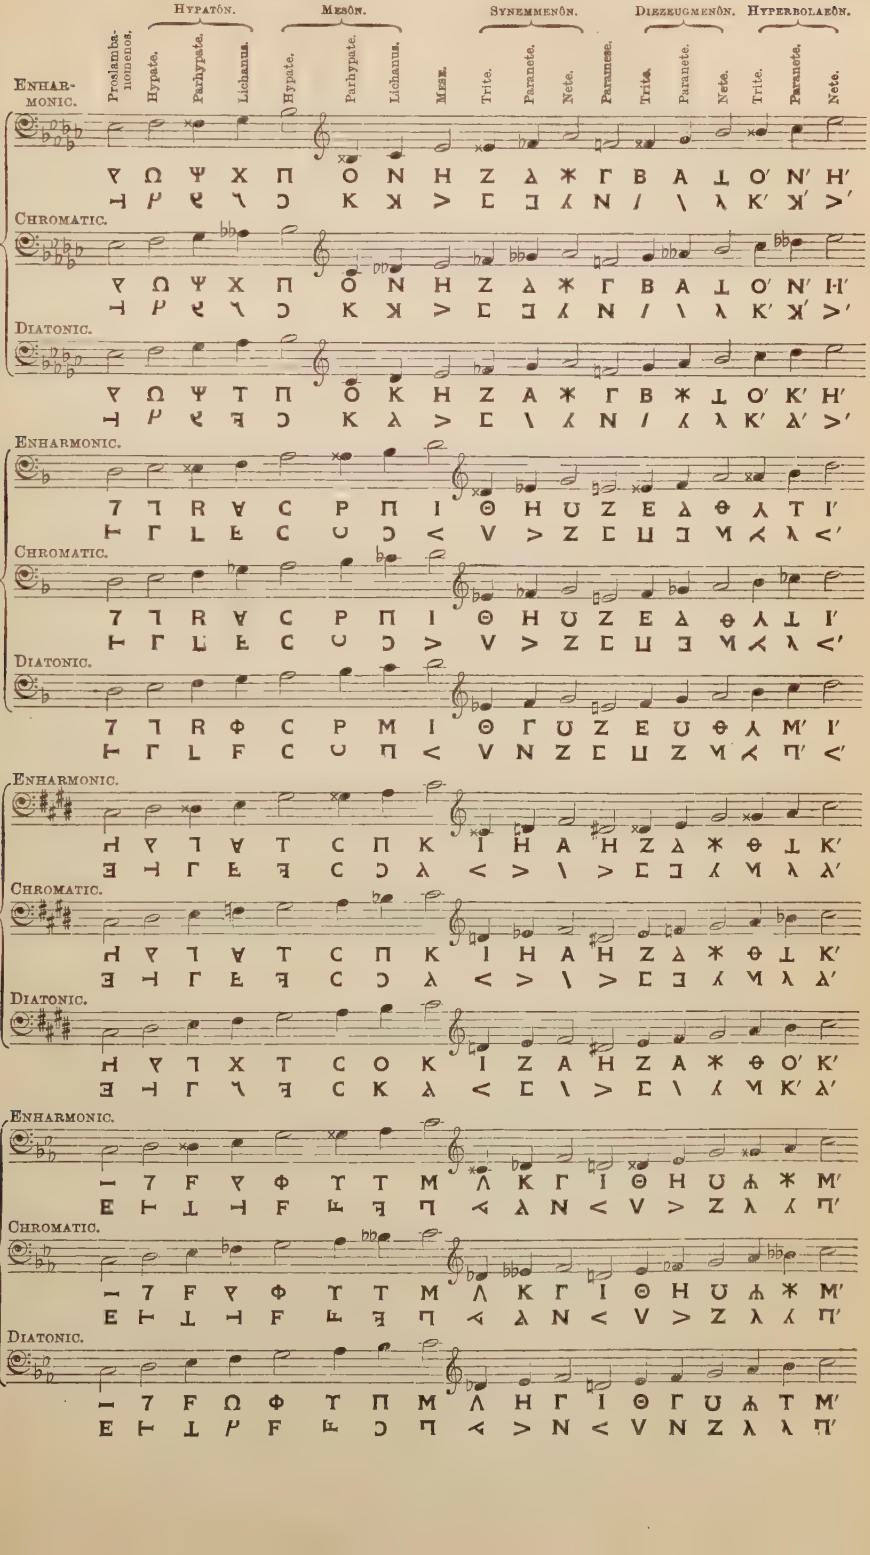
(*b*) *Pitch of the Modes.*—It is a law of Greek music (see Aristotle, *Problems*, xix. 20)—and indeed in the absence of harmony a natural necessity—that the Mese or Tonic must be the predominating or constantly recurring note in every melody. Therefore every mode will take its pitch-character from the position the Mese or Tonic occupies in it. Thus the Mixolydian is intrinsically high-pitched because, since its tonic lies near its upper extremity, in any melody written in that mode the upper notes will be predominant. Hence we understand Aristotle's statement (*Politics*, v. (viii.) 7. 1342 b 20) that certain low-pitched modes suit the failing voices of old men—they would not have to use their higher notes so much as their lower.

From this *intrinsic* pitch-character arises the relative determination of the pitch of the modes. Since *e.g.* the Lydian Mese or Tonic (diatonic) is a tone and a half from the top, and four and a half tones from the bottom of the Lydian mode, while the Dorian Tonic is three and a half tones from the top, and two tones and a half from the bottom, of the Dorian mode, it follows that the Lydian mode is two tones higher than the Dorian.

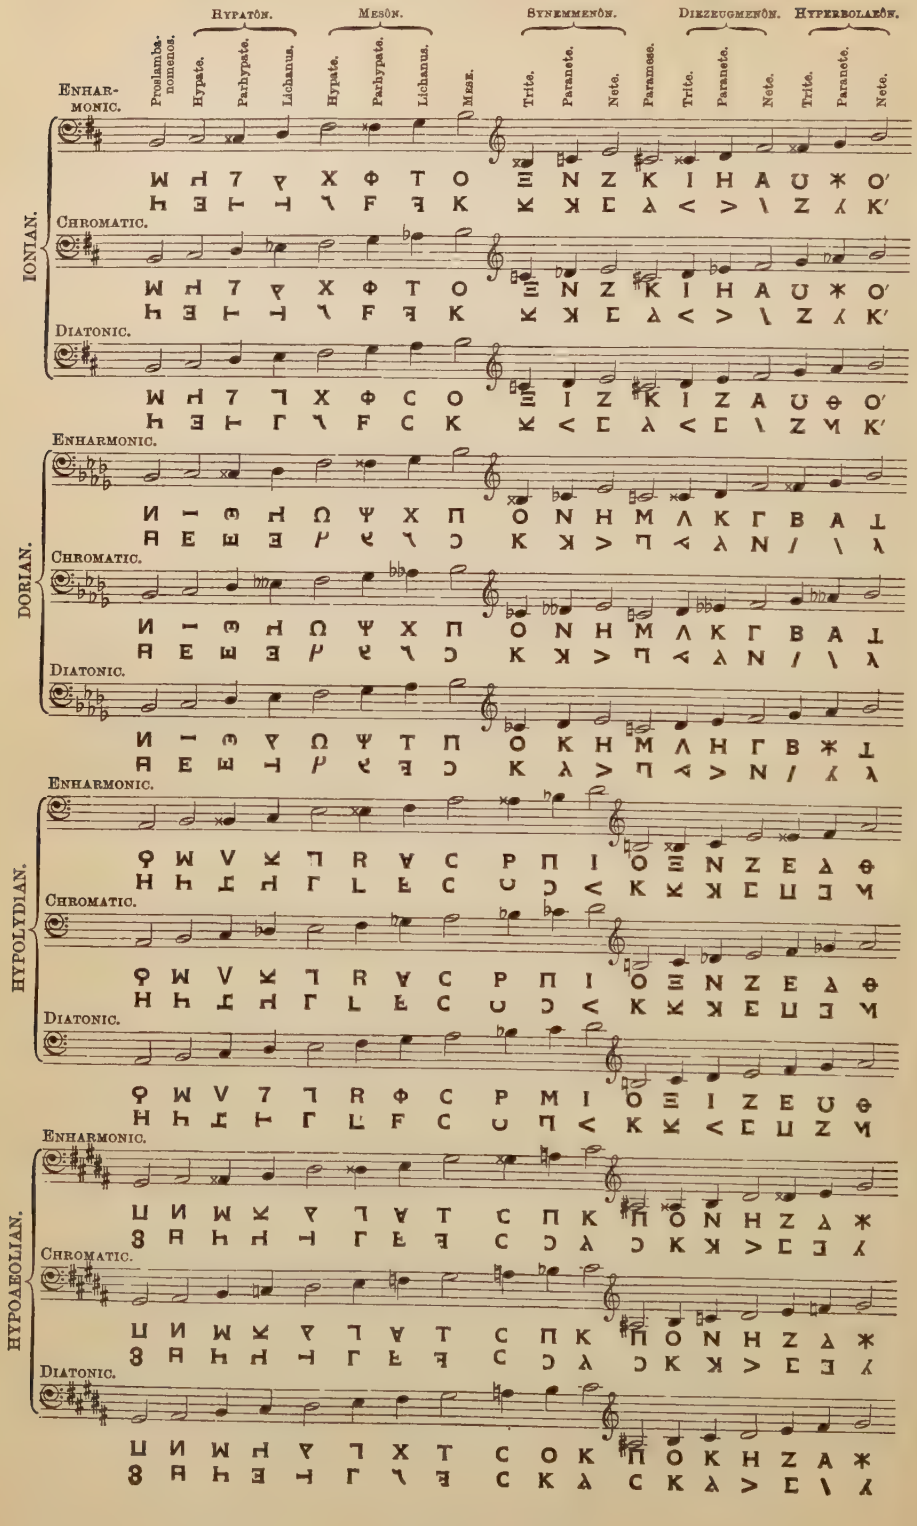
The following table illustrates the pitch relations of the modes, but it is to be observed that the particular limits of pitch here assumed are arbitrary.

THE SEVEN MODES (IN THE DIATONIC GENUS) REPRESENTED IN THEIR RELATIONS OF PITCH.

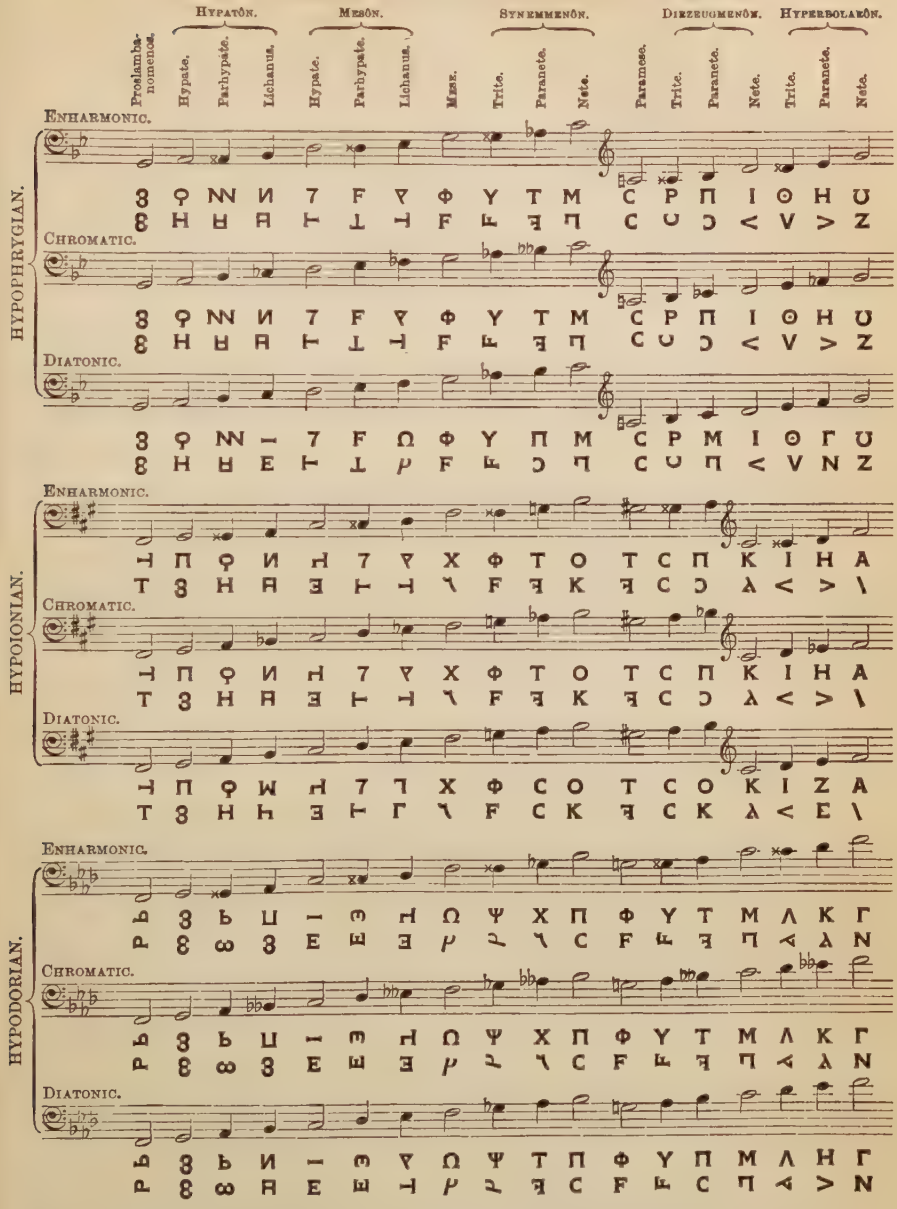




From this table it appears that the Hypodorian with its tonic *F* is the lowest of the modes, and the Hypophrygian, Hypolydian, Dorian, Phrygian, Lydian, and Mixolydian follow at intervals respectively of a tone, a tone, a semitone, a tone, a tone, a semitone.



D. KEYS.—Developed Art called for a more ample scale than the octachord. This was obtained by the addition of tetrachords above and below, so as to form the following type :—



The several tetrachords in it were called respectively Hypatôn, or 'of the highest' strings, *i.e.* lowest notes, Mesôn or 'of the middle,' Diazeugmenôn or 'of the disjunct,' Hyperbolaeôn or 'of the extreme.' In this scale was further incorporated a tetrachord united by conjunction to the tetrachord Mesôn at its upper extremity, and called Synemmenôn or 'of the conjunct,' and the resulting scheme was known as the complete scale (*σύστημα τέλειον*). The important result of this extension was that the modes (as given in C), being all extended to the same type, their independence of form was thereby cancelled; the modes became mere keys (*τόνοι*). The subsequent addition of eight keys with their tonics in the spaces left vacant by the tonics of the seven already existing yielded the following complex of scales (see Alypius, ed. Meibom):—

E. PTOLEMY'S MODES.—In the scheme of the mathematician Claudius Ptolemaeus (fl. 140-160 A.D) the fifteen keys were again reduced to seven modes, and a new nomenclature according to position (*κατὰ θέσιν* as opposed to the old nomenclature *κατὰ δύναμιν* 'according to function') was introduced, by which notes took their names from their mere place in any particular mode; *e.g.*—

GREEK MUSIC

F. TONALITY AND MODALITY.—The most vexed question presented by Ancient Greek Music is that of its tonality or modality. Modern music exhibits two modalities, that of our major and that of our minor mode. The major and the minor scales differ from one another essentially in this that each admits note-relations that the other excludes. Thus the *immediate* relation of C♯ to A—not resolved into any other relations, since A is the tonic—is essential to the scale of A major, but is not to be found in the minor scale. For though C♯ and A both occur in the minor scale of F♯, they are there *mediated* by the relation of both to F♯ as tonic. Similarly the *immediate* relation of C to A, essential to the minor scale of A, is not to be found in the scale of A major. Thus difference of modality means a difference of note-relations. Does, then, Ancient Greek music admit differences of modality? According to the account given above, it does not; and the only modality to be found in it resembles that of our minor scale without the sharpened leading note:—

But it has been customary (see the works of Westphal, Bellermann, Marquard, etc.) to take quite another view of the matter. The modes called Lydian, Dorian, Phrygian, etc. (which in the account given above have been distinguished merely by their *internal pitch-relation*) have been commonly regarded as so many modes differing from one another in such a way as our major and minor modes differ, that is, in respect of the note-relations which they include. On this view, for example, the opening phrases of 'God save the King' would be

(*a*) In the Dorian Mode.

with A as tonic.

(*b*) In the Phrygian Mode.

with G as tonic.

(*c*) In the Lydian Mode.

with F as tonic.

But apart from its inherent improbability, the following arguments may be adduced against this theory.

(1) There is absolutely no reference in the ancient Greek authorities to any such modal distinction (see Monro, *Modes of Ancient Greek Music*).

(2) All the analysis of the Greek authorities reduces scales to tetrachords of the form—

(and, of course, its Chromatic and Enharmonic equivalents) in which the extreme notes are determined as notes fixed by concord, while the intermediate notes are variable. Such an analysis would be radically false if modal distinctions in the modern sense existed. Thus any analysis of our major scale of C would be false that failed to recognise C and G as absolutely determined notes.

(3) Distinct ethical character is attributed to the several Greek modes. But it is attributed to them in virtue of their pitch. If now the modes differ in tonality, they cannot differ in pitch. It would be absurd to say that our major scale *in general* is higher or lower than our minor.

(4) The Greek modes, as we have seen, are regarded as severally suited for voices of different ages. But differences of modality in the modern sense would not account for this. In what way is our major mode more or less adapted to the failing voice of an old man than our minor?

G. ETHOS.—The Greeks had a keen appreciation of the potent effects of music on the *ethos* or mood, and through this on the character; and they are explicit as to the particular moods evoked by particular kinds of music. Thus (Aristides Quintilianus, ed. Meibom, p. 111) Diatonic music was held to be manly and severe, Chromatic sweet and plaintive, Enharmonic stirring and pleasing; again (see Plato, *Republic*, iii. 398 E; Aristotle, *Politics*, v. (viii.) 5. 1340 a 38) high-pitched music was felt to be passionate and expressive of violent grief, low-pitched music to be sentimental and licentious. The moods attributed to the modes depended on the intrinsic pitch of the latter.

H. Singing and Instrumental Music.—Music was pre-eminently song for the Greeks. Instrumental music was mainly accompaniment of the voice. The rise and fall of the melody corresponds in the main to the rise and fall of the spoken words denoted by the accents, which were marks not of stress but of pitch (see Aristoxenus, ed. Meibom, p. 18, l. 14).

Harmony in the modern sense of the term (as the musical relation of notes sounded *simultaneously*) was rudimentary among the Ancient Greeks, and consisted in an optional, single-part accompaniment above the melody, which latter not only was the predominant *tune*, but also supplied in itself the unity and foundation which the bass and other parts so frequently supply in modern music.

I. Notations.—There are two sets of signs, one for the voice (the upper in the Table of keys given in D), the other for the instrument. The first are clearly the letters of the ordinary Ionic alphabet; the second have been explained by Vincent and Bellermann as adapted from the cabalistic signs for the heavenly bodies, but with more plausibility by Westphal as the first fourteen letters of an old Doric alphabet. These fifteen characters (two forms of λ are used), and the letters from which they are taken, are as follows—

H	Ⱶ	E	⊦	Γ	⊬	F	C	K	⊓	≺	⊏	N	Z	Ⴘ
η	ι	ε	λ	γ	μ	F	θ	κ	δ	λ	β	ν	ζ	α

The three notes of a Pycnum were denoted by the same sign in different positions; thus $\vdash = d$, $\perp = \times d$, and $\dashv = \sharp d$. The order in which the several letters are employed has received as yet no satisfactory explanation.

J. Remains of Ancient Greek Music.—The scanty remains of Ancient Greek music are as follows:—

(1) Fragments of the music to ll. 338-344 of the 'Orestes' of Euripides. [These fragments contain two difficulties of notation, a sign ↳ which may signify the end of a bar, and a group of three signs inserted in two places in the text, two of which may signify instrumental notes, while the third (which resembles the first part of the figure 2) may mark a rest. See pp. 427 ff. of *Musici Scriptores Graeci*, edited by von Jan in the Teubner Classics.]

(2) The inscription of Sikelus discovered on a column near Tralles by Mr. W. H. Ramsay. [See *Musici Scriptores Graeci*, pp. 450 ff. or Monro's *Modes of Ancient Greek Music*, pp. 89, 133 ff.]

(3) Several fragments of hymns discovered recently by the French archæologists excavating on the site of Delphi. [See *Musici Scriptores Graeci*, pp. 432 ff. or the appendix of Monro's *Modes of Ancient Greek Music*.]

(4) Three hymns by Mesomedes, a musician in the reign of the Emperor Hadrian. [See *Musici Scriptores Graeci*, pp. 454 ff.]

(5) A few instrumental exercises given by Bellermann in his *Anonymus* (pp. 94-96).

The reader who wishes to consult the original authorities on Greek musical science will find all the most important of them in Meibom's *Antiquae Musicae Auctores Septem* (Elzevir, 1652) and Karl v. Jan's *Musici Scriptores Graeci* (Teubner, 1895). For the discussion of special questions he may consult, among other works, Bellermann's *Anonymi Scriptio de Musica* (Förstner, 1841) and *Tonleiten und Musiknoten der Griechen* (Förstner, 1847); Marquard's *Harmonische Fragmente des Aristoxenus* (Weidmann, 1868); Westphal's *Musik des Griechischen Alterthumes* (Veit, 1883) and *Aristoxenus von Tarent* (Abel, 1883); Monro's *Modes of Ancient Greek Music* (Clarendon Press, 1894); Macran's *Harmonics of Aristoxenus* (Clarendon Press, 1902); and Louis Laloy's *Aristoxène de Tarente* (1904). H. S. M.

GREEK PLAYS, Incidental Music to. The great interest which has of late years been taken at the English Universities in the performances of Greek dramas in the original has given opportunity for the composition of choruses and incidental music. As these works are of some importance in the history of English music, a list of them is here appended:—

The Agamemnon of Aeschylus; Oxford, June 1880. Music by Walter Parratt.
The Ajax of Sophocles; Cambridge, Nov. 28 to Dec. 2, 1882. Music by Sir G. A. Macfarren.
The Birds of Aristophanes; Cambridge, Nov. 27 to Dec. 1, 1883. Music by C. Hubert H. Parry.
The Eumenides of Aeschylus; Cambridge, Dec. 1 to 5, 1885. Music by C. V. Stanford.
The Alcestis of Euripides; Oxford, May 18 to 24, 1887. Music by C. H. Lloyd.
The Oedipus Tyrannus of Sophocles; Cambridge, Nov. 22 to 26, 1887. Music by C. V. Stanford.
The Ion of Euripides; Cambridge, Nov. 1890. Music by C. Wood.
The Frogs of Aristophanes; Oxford, Feb. 1892. Music by C. H. H. Parry.
The Iphigenia in Tauris of Euripides; Cambridge, Nov. 1894. Music by C. Wood.
The Wasps of Aristophanes; Cambridge, Nov. 1897. Music by T. Tertius Noble.
The Agamemnon of Aeschylus; Cambridge, Nov. 16 to 21, 1900. Music by C. H. H. Parry.
The Clouds of Aristophanes; Oxford, March 1 to 6, 1905. Music by C. H. H. Parry.

At Bradfield College various Greek plays have been given, generally with music supplied by C. F. Abdy Williams, and of a deliberately archaic style. 'The Birds' was revived at Cambridge in Nov. 1903 with Parry's music. M.

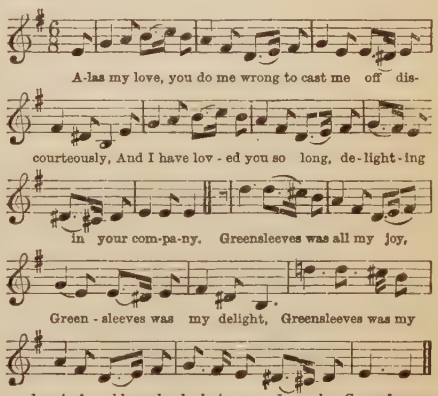
GREEN, James, an organist at Hull, edited *A Book of Psalm-tunes, with variety of Anthems in four parts*, 8vo, which ran through many editions. The fifth appeared in 1724, and in the eighth, published in 1734, the title became *A Book of Psalmody, containing Chanting Tunes for the Canticles and the reading Psalms, with eighteen Anthems and a variety of Psalm tunes in four parts.* The eleventh appeared in 1751. [He lived in London in later life, and was a great bell-ringer, having a belfry of his own at the top of his house. W. H. C.]

GREEN, Samuel, a celebrated organ-builder, born in 1740, studied the art of organ-building under the elder Byfield, Jordan, and Bridge. After commencing business on his own account he erected many instruments in conjunction with the younger Byfield, with whom he was for some years in partnership. Green became the

most esteemed organ-builder of his day, his instruments being distinguished by peculiar sweetness and delicacy of tone. There exist more cathedral organs by him than by any other builder; though most of them have been since altered and enlarged. He erected those in the cathedrals of Bangor, 1779; Canterbury, 1784; Wells, 1786; Cashel, 1786; Lichfield, 1789; Rochester, 1791; and Salisbury, 1792; in Winchester College chapel, 1780; St. George's chapel, Windsor, 1790; and Trinity College chapel, Dublin: in the following churches, chapels, etc. in London, viz. St. Botolph, Aldersgate; Broad Street, Islington; St. Catherine-by-the-Tower; Freemasons' Hall; The Magdalen Hospital; St. Mary-at-Hill; St. Michael, Cornhill; St. Olave, Hart Street; and St. Peter-le-Poor: in the following provincial cities and towns, Aberdeen; Ardwick, near Manchester; Bath; Bolton-le-Moors; Chatham; Cirencester; Cranbourne; Greenwich Hospital; Helston; Leigh; Loughborough; Macclesfield; Nayland; Sleaford; Stockport (St. Peter's); Tamworth; Tunbridge; Walsall; Walton; Wisbech; Wrexham; and Wycombe: at St. Petersburg, and Kingston, Jamaica. He also repaired the organ erected by Dallam in 1632 in York Minster (destroyed by fire in 1829) and that in New College, Oxford. Green died at Isleworth, Sept. 14, 1796. Although always fully employed he died in straitened circumstances, and left little, if any, provision for his family, having invariably expended his gains in the prosecution of experiments with a view to the improvement of the mechanism of the organ. After his death his widow continued to carry on the business for some years. W. H. H.

GREENE, Harry Plunket, son of Richard J. Greene, Esq., of Dublin, born at Old Connaught House, Co. Wicklow, June 24, 1865, was educated at Clifton College, and intended for the Bar, but his voice was so fine that he determined to enter the musical profession, and studied at Stuttgart (under Hromada from 1883), Florence (under Vannuccini), and London (under J. B. Welsh and Alfred Blume). His first public appearance took place in the 'Messiah' at the People's Palace, Stepney, Jan. 21, 1888; in the following March he sang in Gounod's 'Redemption' at one of Novello's Oratorio Concerts, and was soon engaged at all the most important London concerts. For many years he has sung regularly at Boosey's Ballad Concerts, but his more important appearances were at the recitals which he gave jointly with Mr. Leonard Borwick from the year 1893 onwards, in the course of which his artistic interpretation of such great lyrical masterpieces as Schumann's 'Dichterliebe' and the songs of Brahms was justly admired. His sonorous bass voice is of singularly beautiful quality, and his interpretations are always thoroughly intelligent and well thought out. In 1890 he appeared at Covent Garden in a few parts, notably as the Commendatore in 'Don Giovanni,' and the Duke of Verona in 'Roméo et Juliette'; and in the autumn of the same year he made his first festival appearance at Worcester. Two years afterwards, at the Gloucester Festival, his creation of the part of Job in the oratorio of that name, written for him by Sir Hubert Parry, made a profound impression, and since then the same composer has given the singer many other fine opportunities in extensive works as well as in lyrical songs. Greene has made successful tours in Germany, America, etc., visiting the latter country for the first time in 1893. M.

GREENE, Maurice, Mus.Doc., one of the two younger sons of the Rev. Thomas Greene, D.D., vicar of the united parishes of St. Olave, Old Jewry, and St. Martin, Ironmonger Lane (or Pomary), and grandson of John Greene, Recorder of London, was born in London about 1695[1] or 1696. He received his early musical education as a chorister of St. Paul's Cathedral, under Charles King. On the breaking of his voice in 1710 he was articled to Richard Brind, then organist of the cathedral. He soon distinguished himself both at the organ and in composition. In 1716 he obtained (it was said chiefly through the interest of his uncle, Serjeant Greene) the appointment of organist to St. Dunstan's in the West, Fleet Street, and, on the retirement of Daniel Purcell, in 1717, was chosen organist of St. Andrew's, Holborn. He held both those places until the following year, when, on the death of Brind, he became organist of St. Paul's, and in 1727, on the death of Dr. Croft, organist and composer to the Chapel Royal. Greene had a strong admiration for the genius of Handel, and assiduously courted his friendship; and by admitting him to perform on the organ at St. Paul's, for which instrument Handel had an especial liking, had become very intimate with him. Handel, however, discovering that Greene was paying the like court to his rival, Buononcini, cooled in his regard for him, and soon ceased to have any association with him. In 1728, by the artifice of Buononcini, Greene was made the instrument of introducing to the Academy of Ancient Music a madrigal ('In una siepe ombrosa') as a composition of Buononcini's. This madrigal was, three or four years later, proved to have been composed by Lotti. The discovery of the fraud led to the expulsion of Buononcini from the Academy,[2] and Greene, believing, or affecting to believe, that his friend had been unjustly treated, withdrew from it, carrying off with him the St. Paul's boys, and, in conjunction with another friend, Festing, established a rival concert in the great room called 'The Apollo' at the Devil Tavern near Temple Bar; a proceeding which



[1] In the parish register of St. Olave's the entry of his death is followed by the words 'aged 60,' thus confirming the earlier date of birth. W. H. C.

[2] A hard fate; for it is difficult to see that Buononcini was more dishonest than Handel was when he included a fugue of Kerl's in 'Israel in Egypt' as 'Egypt was glad,' without a word to show that it was not his own.

gave rise to the joke, attributed to Handel, that 'Toctor Greene had gone to the devil.' In 1730, on the death of Dr. Tudway, Greene was elected Professor of Music in the University of Cambridge, with the degree of Doctor of Music. As his exercise on the occasion he set Pope's Ode on St. Cecilia's Day, altered and abbreviated, and with a new stanza introduced, expressly for the occasion, by the poet himself. This composition was performed at Cambridge at the Commencement on Monday, July 6, 1730. (A duet from it is given by Hawkins in his *History*, chap. 191.) In 1735, on the death of John Eccles, Dr. Greene was appointed his successor as Master of the King's band of music, in which capacity he produced many odes for the king's birthday and New Year's Day. In 1743 he published his 'Forty Select Anthems,' the work on which his reputation mainly rests. These compositions, it has been remarked, 'place him at the head of the list of English ecclesiastical composers, for they combine the science and vigour of our earlier writers with the melody of the best German and Italian masters who flourished in the first half of the 18th century' (*Harmonicon* for 1829, p. 72). In 1750 Greene received a considerable accession of fortune by the death of a cousin, a natural son of his uncle, Serjeant Greene, who bequeathed him an estate in Essex worth £700 a year. Being thus raised to affluence he commenced the execution of a long-meditated project, the formation and publication in score of a collection of the best English cathedral music. By the year 1755 he had amassed a considerable number of services and anthems, which he had reduced into score and collated, when his failing health led him to bequeath by will his materials to his friend Dr. Boyce, with a request that he would complete the work. [See BOYCE.] Dr. Greene died on December 1, 1755,[1] leaving an only daughter Katherine, who was married to Dr. Michael Festing, Vicar of Wyke Regis, Dorset, the son of her father's friend the violinist. [Greene was buried at St. Olave's, Jewry, and on May 18, 1888, his remains were removed to St. Paul's Cathedral and placed beside those of Boyce. A portrait of Dr. Greene was in the possession of Henry Festing, Esq., of Bois Hall, Addlestone, Surrey, in May 1895.]

In addition to the before-named compositions, Greene produced a Te Deum in D major, with orchestral accompaniments, composed, it is conjectured, for the thanksgiving for the suppression of the Scottish rebellion in 1745; a service in C, composed 1737 (printed in Arnold's *Cathedral Music*); numerous anthems—some printed and others still in MS.; 'Jephthah,' oratorio, 1737; 'The Force of Truth,' oratorio, 1744; a paraphrase of part of the Song of Deborah and Barak, 1732; Addison's ode, 'The spacious firmament,' 'Florimel; or, Love's Revenge,' dramatic pastoral, 1737; 'The Judgment of Hercules,' masque, 1740; 'Phœbe,' pastoral opera, 1748; 'The Chaplet,' a collection of twelve English songs; 'Spenser's Amoretti,' a collection of twenty-five sonnets (1739); two books each containing 'A Cantata and four English songs'; 'Catches and Canons for three or four voices, with a collection of Songs for two and three voices'; organ voluntaries, and several sets of harpsichord lessons. (See the *Quellen-Lexikon*.) It must not be forgotten that Greene was one of the founders of that most valuable institution 'The Society of Musicians.' [FESTING. See *Mus. Times*, June 1888, and Feb. 1903.] W. H. H.

GREENSLEEVES. An old English ballad and tune mentioned by Shakespeare ('Merry Wives,' ii. 1; v. 5). The ballad—'A new Northerne dittye of the Ladye Greene Sleeves'—was entered in the Stationers' Register, Sept. 1580 (22nd of Elizabeth); but the tune is probably as old as the reign of Henry VIII. It was also known as 'The Blacksmith' and 'The Brewer' (Cromwell), and was a great favourite with the Cavaliers. Chappell (from whose *Popular Music of the Olden Time* the above is taken, Plate 3, and pp. 227-233) gives the tune in its oldest form as follows:—

A modified version is found in the 'Beggar's Opera,' to the words 'Since laws were made for ev'ry degree,' and the tune is still sung to 'Christmas comes but once a year,' and to songs with the burden 'Which nobody can deny.' G.

GREETING, THOMAS, was a teacher of the flageolet in London in the latter half of the 17th century, when the instrument appears to have been played on by ladies as well as gentlemen, as we gather from Pepys's *Diary*, which informs us that in 1667 Mrs. Pepys was a pupil of Greeting. He also taught Pepys himself. In 1680[2] Greeting issued a thin oblong small 8vo volume entitled *The Pleasant Companion; or,*

[1] The date is established, as against the 3rd, not only by the inscription on the coffin-plate (according to the Vicar-Choral Book), but by the announcement in the *Public Advertiser* of Wednesday, Dec. 3, to the effect that 'On Monday night died at his house in Beaufort Buildings, Dr. Maurice Greene,' etc.

[2] Hawkins gives 1675 as the date of the first edition, but no such issue is now in existence.

New Lessons and Instructions for the Flagelet, consisting of eight pages of letterpress containing *Instructions for Playing on the Flagelet* signed by Greeting, followed by sixty-four pages of music increased to seventy-two in the second edition in 1682, printed from engraved plates. The music is in a peculiar kind of tablature, dots being placed in the spaces of a stave of six lines to indicate which holes of the instrument were to be stopped to produce each note. The duration of each note is shown above the stave in the same manner as in tablature for the lute. The music consists of the popular song and dance-tunes of the day. The work was reprinted in 1682, 1683, and 1686. W. H. H.

GREGOIR, Jacques Mathieu Joseph, born at Antwerp, Jan. 18, 1817, made his first appearance as a pianist in Dussek's B minor Concerto when only eight years old. After the revolution of 1830 he was sent to Paris to study under Herz, but his health obliged him to return to his native country after a few years. Subsequently he went with his brother to Biberich, where he studied with Rummel until 1837, when he returned to Antwerp. His success as a performer was very great, and some compositions other than the numerous works written for his own instrument were favourably received. A 'Lauda Sion,' a cantata, 'Faust,' and an opera in three acts, 'Le Gondolier de Venise,' were produced shortly before 1848, in which year he established himself for a time in Brussels. After a year's work as music-teacher in an English school at Bruges, he returned to Brussels. Many successful concert-tours were undertaken by him in Germany, Switzerland, and elsewhere. He died at Brussels, Oct. 29, 1876. His pianoforte works include a concerto, op. 100, several excellent books of studies, besides fantasias and other drawing-room pieces. He collaborated in several duets for piano and violin with Vieuxtemps and Léonard, and in several for piano and violoncello with Joseph Servais.

His brother, Édouard Georges Jacques, was born at Turnhout, Nov. 7, 1822. After the journey to Biberich mentioned above, he appeared in London in 1841, with success, and in the following year undertook a concert tour with the sisters Milanollo; in 1847 and 1849 several of his compositions were produced at Amsterdam and in Paris, and after a short tenure of a musical professorship at the Normal School at Lierre in 1850 he settled down at Antwerp, where he exercised a powerful influence in musical matters. He produced a large number of compositions in various forms, among the most prominent of which are the following;—'Les Croisades,' historical symphony (Antwerp, 1846); 'La Vie,' oratorio (Antwerp, Feb. 6, 1848); 'Le Déluge' symphonic oratorio (Antwerp, Jan. 31, 1849); 'Marguérite d'Autriche' (Antwerp, 1850); 'De Belgen in 1848,' drama with overture, airs, choruses, etc. (Brussels, 1851); 'La dernière nuit du Comte d'Egmont' (Brussels, 1851); 'Leicester,' drama with incidental music (Brussels, Feb. 13, 1854); 'Willem Beukels,' Flemish comic opera (Brussels, July 21, 1856), and 'La Belle Bourbonnaise,' comic opera. Two overtures, many part-songs for male chorus, numerous works for piano, organ, and harmonium, to the interests of which last instrument he was particularly devoted, are also among his compositions. His contributions to musical literature are scarcely less abundant than his musical productions (see the long list in Riemann's *Lexikon*). He took an active part in musical journalism, besides writing a number of essays on historical subjects. These latter, though containing much valuable material, are not always trustworthy, as Gregoir was too much given to accepting information from any quarter. A *Histoire de l'Orgue* published at Brussels in 1865, is perhaps the most useful of his literary productions. He died at Wyneghem, near Antwerp, June 28, 1890. M.

GREGORIAN MUSIC is the name given to a large collection of ancient ecclesiastical music, which has been connected with the services and Service-books of the Roman Church ever since early Christian times. It is not the only such collection. Connected with the great Church of Milan there is a similar collection of 'Ambrosian Music,' and in other parts of Western Christendom similar collections formerly existed. Little has survived of African, Celtic, or Gallican church music, apart from what has been incorporated into the Gregorian collection; but discoveries are bringing back to light large parts of the ancient Spanish or 'Visigothic' or 'Mozarabic' music and rites, which were all but entirely ousted by the Roman rites and their music before the end of the 11th century, and are showing that the Visigothic formed with the Ambrosian and the Gregorian a third musical dialect of the Western Church.

Each of these collections is of importance for the history of the art of music. A word must first be said as to their mutual relations, and then attention must be devoted to the Gregorian collection, which is by far the most important. The relation subsisting between the three has already been indicated by calling them three dialects; in other words, they are fundamentally alike, but superficially different. They are similar, partly because they have to do with three similar series of rites, partly also because the same requirements in detail occur in each rite. Psalms have to be sung to an inflected monotone, and lessons chanted to a simple reading tune. Consequently, simple recitative is much the same in each dialect; and even when it develops into elaborate cadences and exquisite embroidery, the principles of elaboration are much the same in each system. Further, in the case of Gregorian and Ambrosian, there is closer actual similarity, for many texts are common to both collections,

and are set to melodies which, in spite of much superficial variation, are at bottom identical. It is more difficult to determine whether these three dialects are united also by a common music-theory; all three were in existence anterior to the system of music-theory which came into vogue in the Middle Ages, and each suffered in more or less degree from being then forcibly conformed to a new and alien system. It is a very delicate matter to try to discover what the earlier and original theory was; and until this is decided it can hardly be determined whether all three dialects shared it. (See MODES.)

The great collection of GREGORIAN MUSIC must now be described. It falls into two principal divisions—the music of the Mass, with which is grouped that of Baptism and other occasional services, and the music of the daily Hours of Divine Service. The first corresponds in the main with the modern Missal, the second with the modern Breviary. The collection for the Mass comprises over 600 compositions set entirely to scriptural words, which may be roughly classified thus:—

At the beginning of the service, and again at the end, a psalm and antiphon were sung. In the former place the piece was known as Introit, or *Antiphona ad introitum* (called also in England *Officium* or office); in the latter place it was called *Communio* or *Antiphona ad communionem*. The former occupied the time of the celebrant's approach to the altar, the latter the time of the communion of the faithful. About 150 of each of these are provided in the Gregorian collection for the Sundays, fasts, and festivals of the year. Between the Epistle and the Gospel two pieces were sung, normally a Respond called the Gradual and an Alleluia; in Eastertide an Alleluia took the place of the Gradual, and on penitential occasions a Tract superseded the Alleluia. Thus for this point of the service the collection contained 110 Graduals, 100 Alleluias, and 23 Tracts. At the offertory, during the offering and preparation of the elements, an antiphon, with several elaborate verses attached to it, was sung; 102 of these sufficed to cover the ground, there being here, as elsewhere, a certain amount of repetition.

These 630 compositions for the various days of the year form the main bulk of the Gregorian music of the Mass. Besides these there was sung also in the Middle Ages an unvarying series of pieces—the Kyrie, the Gloria in Excelsis, the Creed, the Sanctus, and the Agnus Dei—but some of these are late importations to the Mass, brought in after the Gregorian collection was formed. Moreover, they were not, like the Gregorian music, intended for the choir but for the congregation; and each of them had in early days but one simple setting. In the later Middle Ages fresh settings were adapted or composed for these parts of the service, until by the end of the Middle Ages the creed was the only piece of the group which still had but its one primitive melody, without a rival. These various settings, however, like the tropes and sequences and other late mediæval additions, never acquired a proper canonicity, but went along side by side with the Gregorian collection in a sort of deutero-canonical position.

The main collection is not improperly called Gregorian, for the whole tendency of modern enquiries has been to show that St. Gregory had a personal share, to say the least, in the arrangement of the collection. The biographers of the great pope not only relate that he personally supervised the Roman choir-school, but they describe his editorial work in the revision of the music. The accuracy of these statements and of the continuous tradition that flows from them, has been more than once seriously questioned; but fresh researches have shown that the collection attained a final form shortly after St. Gregory's death, and was thenceforward regarded as closed. Moreover, a comparison of Gregorian and Ambrosian versions of the same melody show that a skilful hand has done in the former case exactly the sort of editing which is ascribed to St. Gregory. It may, therefore, be concluded that this Gregorian music of the Mass comes from St. Gregory's hand practically unaltered.

There is less either of fixity or of authenticity in the case of the other great collection of Gregorian music, viz. the music of the Hours of Divine Service. The same great outburst of Roman Song during the 4th, 5th, and 6th centuries which gave the Roman Mass its music, gave also its music to the system of Hour Services. But this group of services had only a semi-official position; and when Rome had provided both monks and clergy with music for their rival but similar schemes of service, there was not, as in the case of the Mass, any restraint as to modification or innovation. The Roman chant, however, soon won a supremacy which was due to its inherent excellence; it was universally adopted elsewhere for the Hour Services, and thus it is possible, in the case of these services, though to a less extent than in the case of the Mass, to point to a Gregorian music for the Hours which forms the original nucleus for all subsequent collections. There is not the same literary or internal evidence of its having passed under St. Gregory's revising hand; but, as emanating from the same source, it may without hesitation be also called Gregorian.

The contents of this second collection are less varied; it may roughly be said to consist of some two thousand antiphons and some eight hundred Greater Responds, exclusive of smaller items such as the Lesser Responds, Invitatories or Versicles. The Hymns do not form properly part of the collection; the Roman Church rigidly excluded them from its system of Hours until the 9th century; and, though they were incorporated from the very beginning in the monastic system,

and were speedily borrowed by the secular office elsewhere than in Rome, they form in reality a separate category. (See HYMN.)

These two great collections suffered much mutilation at the hands of the musicians of the Renaissance. The Gregorian tradition had been carefully preserved in most places through the Middle Ages, especially in England where a very pure Gregorian tradition was early established by the Roman missions to this country, and retained through the liturgical and musical zeal which distinguished the Anglo-Saxon Church. In the 16th century, however, to a growing carelessness there was added a deliberate policy of alteration. Some musicians of the school of Palestrina took the shears to the collection, and, with amazing effrontery and ignorance, mutilated, almost past recognition, the delicate compositions which had survived the 'dark ages' practically intact. The Medicean edition of the Gregorian chant of the Mass, which resulted from this disastrous handling, was held to be the official edition of the music of the Roman Church from the year 1614 onward; and it is not surprising that it swiftly succeeded in crushing all interest and beauty out of the performance of the music. In the 19th century dissatisfaction with the existing state of things began to grow and ferment, till it culminated in the patient restoration, chiefly through the labours of the Benedictines of the Congregation of France, of the true Gregorian tradition and its proper method of execution. Thus the 20th century has witnessed the dethronement of the evil incubus of the 17th. Henceforward the editions of Solesmes are those officially recognised, and a final revision under the auspices of the Benedictines is paving the way for an official Vatican edition, which will restore the true Gregorian music to the use of the whole Latin Church. W. H. F.

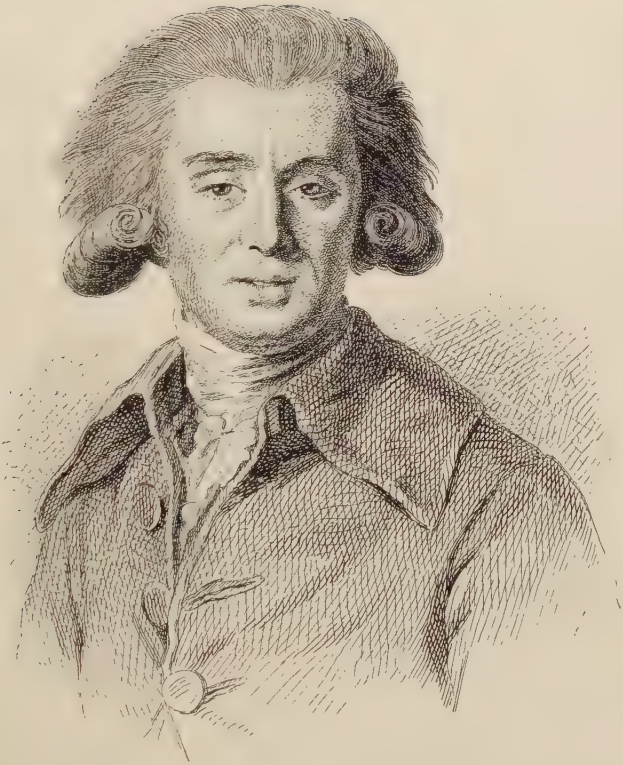
GREGORIAN TONES. This name is given to the eight groups of chants, corresponding to the eight modes (see MODES), to which the psalms are sung under the Gregorian system of antiphonal psalmody. (See ANTIPHON; and PSALMODY.) When the English Church gave up the Latin service-books, it had to resign for the time, with the Latin texts, the whole of their ancient Gregorian melodies; antiphons and responds disappeared both from the Communion service and from the reformed Hour Services of Matins and Evensong. Some adaptations were made from the new English Kyrie, Sanctus, Agnus, Creed and Gloria in excelsis, and a praiseworthy attempt to provide some simple plain-song was made by Merbecke. (See MERBECKE.) Similarly adaptations were made for the Te Deum and for parts of the funeral service; but on the whole it may be said that nothing survived but the psalm-tones, in their naked simplicity, divorced from the antiphons, apart from which they are a mere fragment.

These Gregorian Tones survived in more or less mutilated forms down to the Rebellion, and were among the traditions restored at the Restoration; but by this time their place had been already taken by the Anglican chant, which had grown up out of the decay of the Tones. (See CHANT.) The Gregorian tones were brought back into use as part of the church revival of the early part of the 19th century; they began badly through being borrowed from the most decadent traditions of the continent, and they were taken up for ecclesiastical rather than for musical reasons. The influence of the plain-song revival abroad has latterly made itself felt, and Gregorian chanting has been both better executed and better received. But the tones apart from the rest of the Gregorian music with which they are so inseparably connected, have little chance of making their proper appeal either to musicians or to worshippers. Their future in English services is largely bound up with such questions as the enrichment of the services of the Prayer Book by the recovery of antiphons or the restoration of other parts of the Gregorian collections adapted to the English translations of the texts. Such processes as these are naturally slow, and meanwhile the Tones have attained only a restricted and much controverted position. W. H. F.

GREITER, MATTHIAS, was originally a monk and choir-singer in Strasburg Minster, but in 1524 embraced the cause of the Lutheran Reformation and devoted his poetical and musical talents to its furtherance. In 1549 he accepted the Interim of Charles V., and founded a choir-school to provide for the Church-service in accordance therewith. He is said to have died of the plague in 1552. To the *Strassburger Kirchenamt* 1525 and *Gesangbuch* 1537 he contributed seven Psalm-lieder (free metrical versions of some Psalms), and probably either invented or adapted the melodies which were sung to them ('O Herre Gott, begnade mich,' 'Da Israel aus Egypten zog,' 'Es sind doch selig alle die,' etc.). Zahn in his exhaustive work on Chorale-Melodies attributes six to Greiter. Both hymns and tunes continued for a long time in use in the Lutheran Church. The tune to 'Es sind doch selig' was afterwards transferred to the Hymn 'O Mensch, bewein dein Sünde,' and we are familiar with the magnificent treatment of both words and tune in the 'St. Matthew Passion' of Bach. But Greiter's chief contribution to music consists in several four-voice settings of German songs, and one five-voice, in which, as Eitner says, good harmony, warmth of feeling, and contrapuntal art are united in a masterly way, and show him to have been one of the best composers of the time. Of these Kade, in the Beilagen to Ambros, has reprinted 'Ich stund an einem Morgen,' which is remarkable for its Ground-Bass and the imitations of it in the Soprano and Alto (the melody proper being in the Tenor). Two others have been

reprinted by J. J. Maier in the musical appendix to Liliencron's *Historische Volkslieder*, 'Es wollt ein Jäger jagen,' and 'Von üppiglichen Dingen.' J. R. M.

GRELL, Eduard August, born in Berlin, Nov. 6, 1800, the son of the organist of the Parochialkirche there, received his musical education from his father, J. C. Kaufmann, Ritschl, and finally from Zelter, on whose recommendation he received the appointment of organist of the Nicolaikirche at the age of sixteen. In 1817 he entered the Singakademie, with which institution he was connected in one way or another for nearly sixty years. In 1832 he became its vice-director, under Rungenhagen, after whose death he was in 1853 appointed director, a post which he held until 1876. In 1839 he was appointed Hofdomorganist, and in 1841 was made a member of the musical section of the Royal Academy of Arts, with which institution he was connected until 1881. In 1843-45 he was Gesanglehrer of the Domchor. In 1858 he received the title of professor, and in 1864 the order *pour le mérite*. He died at Steglitz, near Berlin, August 10, 1886. Although his scholastic functions absorbed so large a proportion of his time, he yet found opportunity for the composition of many works of large extent and of the most elaborate structure. He was one of the most learned contrapuntists of his day in Germany, and his works show him to have been not only an ingenious theorist, but a richly gifted artist. His greatest work is a mass in sixteen parts *a capella*, besides which he produced psalms in eight and eleven parts, a Te Deum, motets, cantatas, an oratorio entitled 'Die Israeliten in der Wüste,' and many songs and duets. See Heinrich Bellermann's biography, 1899. M.



GRESHAM MUSICAL PROFESSORSHIP. In the will of Sir Thomas Gresham, the founder of the college bearing his name in the city of London, provision was made for several professorships, and for the 'sallarie' of a person 'mete to rede the lecture of musicke' in the college. Sir Thomas died on Nov. 21, 1579, and his widow on Nov. 3, 1596, upon which the provision for the lectures took effect, the civic authorities requesting the Universities of Oxford and Cambridge to nominate persons properly qualified as professors. Dr. John Bull was appointed the first Professor of Music by the special recommendation of Queen Elizabeth. The ordinance adopted concerning the music lecture, according to Stowe (Strype's edition), ran as follows:—'The solemn music lecture is to be read twice every week in manner following: viz.—the theorique part for half an hour, and the practique, by concert of voice or instruments, for the rest of the hour; whereof the first lecture to be in the Latin tongue and the second in the English tongue. The days appointed for the solemn lectures of music are Thursday and Saturday in the afternoon between the hours of three and four; and because at this time Dr. Bull is recommended to the place by the Queen's most excellent Majesty being not able to speak Latin, his lectures are permitted to be altogether in English so long as he shall continue the place of the music lecturer there.' At first the Professors were given apartments in the college and a stipend of £50 a year, but in the 8th of Geo. III. an Act was passed enabling the lecturers to marry, any restriction in Sir Thomas Gresham's will notwithstanding, and also giving them £50 a year in lieu of their apartments. For many years the Professors had no knowledge of music, and were utterly unqualified to lecture upon it. The following is a list of the professors, with the date of their appointments:—(1) John Bull, Mus.Doc., 1596 (resigned on his marriage); (2) Thomas Clayton, Doctor of Medicine, 1607; (3) Rev. John Taverner, M.A., 1610, elected at the age of twenty-six, subsequently Rector of Stoke Newington; (4) Dr. Richard Knight, physician, 1638; (5) Sir W. Petty, Doctor of Medicine, 1650; (6) Sir Thomas Baynes, Doctor of Medicine, 1660, ejected from office by a vote of the committee; (7) Rev. John Newey, M.A., incumbent of Itching Abbotts and Avington, Hants, 1696; (8) Rev. Dr. R. Shippen, Principal of Brasenose College, Oxford, and Rector of Whitechapel, 1705; (9) Edward Shippen, Doctor of Medicine, 1710; (10) John Gordon, barrister-at-law of Gray's Inn, 1723; (11) Thomas Browne, M.A., Fellow of Trinity College, Cambridge, 1739, elected by an equality of votes, and the committee proceeded to a second election; (12) Charles Gardner, 1739; (13) Thomas Griffin, 1762; (14) Theodore Aylward, assistant director of the Handel Commemoration and organist of St. George's, Windsor, 1771; (15) R. J. S. Stevens, the glee composer, 1801; (16) Edward Taylor, 1837; (17) Henry Wylde, Mus.Doc., 1863; (18) J. F. Bridge, 1890. In 1832 and for some years after, a medal was given by Miss Maria Hackett (the 'choristers' friend') in commemoration of Sir Thomas Gresham for the best choral work, the judges being the Oxford Professor, Dr. Crotch; the Gresham Professor, Mr. Stevens; and Mr. Horsley; and the work was sung at a commemoration service at St. Helen's, Bishopsgate, which had been Sir Thomas's parish church. The Music Lectures at the College were for many years given in the evening, but the present professor changed the time to the afternoon and the place to the City of London School; they are given in English, on days announced in the newspapers, and the admission to them is free. For an instance of the manner in which the intentions of the founder were at one time set at naught see Griffin, Thos. C. M.

GRÉTRY, André Ernest Modeste, born Feb. 8, 1741, at Liége, on the ground-floor of a small house in the Rue des Récollets, now No. 28. His father, a poor violinist, placed him at six years old in the choir of St. Denis; but

under the harsh treatment of his master the little chorister showed no aptitude for music, and at eleven was dismissed as incapable. His next master, Leclerc, as gentle as the former had been cruel, made him a good reader; and Renekin, organist, taught him harmony. His taste for music was, however, developed by listening to the operas of Pergolesi, Galuppi, Jommelli, etc., performed by a company of Italian singers with Resta as conductor. After a year spent in this manner an irresistible impulse urged him to compose; in vain the maître de chapelle tried to teach him counterpoint—he longed to give expression to the thoughts that were burning for utterance; and as his first attempt, produced at Liége in 1758 six small symphonies, and in 1759 a 'messe solennelle' for four voices, none of which have been published. These compositions secured him the protection of the Chanoine du Harlez, who furnished him with the means of going to Rome. Leaving his native city in March 1759, he travelled on foot, with a smuggler for his companion.[1] On his arrival at Rome he was received into the 'Collège de Liége,' founded by a Liégeois named Darcis for the benefit of his townsmen, who were permitted to reside there for five years while completing their specific studies. His master for counterpoint and composition was Casali, who dismissed him as hopelessly ignorant. Grétry never did understand the science of harmony; his mission was to enforce the expression of words by melody, and to compose operas. During his stay in Rome he composed a 'De profundis' and some motets[2] which have not been published, and an intermezzo called 'La Vendemmiatrice' (1765) for the Aliberti theatre. Although the work of a foreigner this operetta was successful, and might have introduced him to more important theatres; but Grétry having read the score of Monsigny's 'Rose et Colas' came to the conclusion that French opéra-comique was his vocation. To get to Paris now became his one idea. He left Rome Jan. 1, 1767, and having reached Geneva asked Voltaire to write him a good libretto for an opéra-comique, a task which Voltaire was incapable of performing, and had the tact to decline. At Geneva he supported himself for a year by teaching singing; and produced 'Isabelle et Gertrude,' a one-act opera by Favart on a subject suggested by Voltaire, and previously set to music by Blaise.[3] At length, by the advice of the owner of Ferney himself, Grétry went to Paris, where he obtained from an amateur the libretto of 'Les Mariages Samnites' in three acts. This work was not performed at that time, but its public rehearsals procured him the patronage of Count de Creutz the Swedish Ambassador, and as a consequence of that, a two-act libretto by Marmontel, 'Le Huron,' successfully performed August 20, 1768. This opera was followed by 'Lucile' (1769), which contains the quartet 'Où peut-on être mieux qu'au sein de sa famille,' which became so popular and played so singular a part on more than one historical occasion[4]; and by 'Le Tableau parlant' (1769), an original and extremely comic piece, and one of Grétry's very best. What life and spirit there are in this refined jesting! How natural and charming are the melodies, with their skilfully varied, but always animated rhythm! How prettily does Isabelle make fun of old Cassandre and his antiquated love-making! How appropriate, and how thoroughly in keeping is the action of each individual on the stage! How pointed and dramatic the duet between Pierrot and Columbine! Grimm was right in proclaiming 'Le Tableau parlant' a real masterpiece.

Grétry now showed his versatility by composing no fewer than three operas,—'Le Sylvain' (1769), of which not even the overrated duet 'Dans le sein d'un père' survives; 'Les deux Avares' (1770), which contains a good comic duet, a march, and a Janissaries' chorus, still heard with pleasure; and 'L'Amitié à l'épreuve' (1770), an indifferent comedy in two acts, reduced to one in 1775 by Favart, without improving either words or music. [The operetta 'Éraste et Lucinde' was also written in 1770.] 'Zémire et Azor' (Dec. 16, 1771) at once placed Grétry in the rank of creative artists. His fertility in ideas was marvellous, and he regularly supplied both the Comédie Italienne and the Théâtre Favart, where he produced successively 'L'Ami de la maison,' three acts (Fontainebleau, Oct. 1771, and Paris, March 14, 1772); 'Le Magnifique,' three acts (1773), the overture of which contains the air 'Vive Henri IV.' most effectively combined with another subject; 'La Rosière de Salency' in four acts, afterwards reduced to three (1774), which contains a remarkable duet between two jealous young women, and the pretty melody 'Ma barque légère,' so well arranged by Dussek for the piano; 'La fausse Magie,' two acts (1775), with the syllabic duet between the two old men, an excellent piece; 'Les Mariages Samnites' (1776), a work which he rewrote several times but which never became popular, though the march supplied Mozart with a theme for Variations; 'Matroco,' a burlesque in four acts composed for the court-theatre at Fontainebleau (1777), and unsuccessfully performed in Paris (1778) against the wish of Grétry; 'Le Jugement de Midas,' three acts (1778), in which he satirised French music of the old style, and especially the manner in which it was rendered by the singers of the Académie; 'L'Amant jaloux,' three acts (1778) —in the second act an exquisite serenade; 'Les Événements imprévus' (1779), in three acts,

[1] These details are taken from Grétry's *Mémoires*.
[2] An autograph 'Confiteor' for four voices and orchestra is in the library of the Paris Conservatoire.
[3] Performed in Paris in 1765. Blaise's ariettes are printed in the *Théâtre de M. Favart* (vol. ix.).
[4] See the article OÙ PEUT-ON ÊTRE MIEUX.

ANDRÉ ERNEST MODESTE GRÉTRY

containing two airs once popular, now forgotten; 'Aucassin et Nicolette,' three acts (1779), in which he endeavoured unsuccessfully to imitate ancient music; 'Thalie au Nouveau Théâtre,' a prologue for the inauguration of the Salle Favart (1783); 'Théodore et Paulin,' lyric comedy in three acts, which failed at first in 1784, and was afterwards given in two acts under the title of 'L'Épreuve villageoise' with marked and well-merited success; 'Richard Cœur de Lion,' three acts (Oct. 21, 1784), the finest of all his works, containing the air, 'O Richard, ô mon roi, l'univers t'abandonne' (which became of historic importance at Versailles, Oct. 1, 1789), and 'Une fièvre brûlante,' on which Beethoven wrote variations. 'Les Méprises par ressemblance,' opera in three acts (1786) now justly forgotten; 'Le Comte d'Albert,' two acts (1786), the success of which was secured by Mme. Dugazon; 'La Suite du Comte d'Albert,' one act (1787); 'Le Prisonnier Anglais,' three acts (1787), revived in 1793 as 'Clarice et Belton,' without making a more favourable impression; 'Le Rival confident,' opera in two acts (1788) which failed in spite of a pleasing arietta and a graceful rondo; 'Raoul Barbe-Bleue,' three acts (1789), a weak production quickly forgotten; 'Pierre le Grand,' three acts (1790), in which the search after local colouring is somewhat too apparent; 'Guillaume Tell,' in three acts (1791), containing a rondo and a quartet, long popular; 'Basile,' one act (1792); 'Les deux Couvents,' three acts (1792); 'Joseph Barra,' one act (1794), a *pièce de circonstance*; 'Callias,' one act (1794), a republican piece, of which the so-called Greek music is justly forgotten, though one of Hoffmann's lines has survived—

Quand nous serons soumis, nous n'existerons plus!

'Lisbeth,' three acts (1797), which contains a romance that has not yet lost its charm; 'Le Barbier de village,' one act (1797); and 'Elisca,' three acts (1799), which was a fiasco.

Long as this list is, it does not include all Grétry's dramatic works. Not content with supplying pieces for the Opéra Comique, his ambition was to distinguish himself at the Académie de Musique. Here he produced 'Céphale et Procris,' three acts (1775), of which the only number worthy of notice was the duet 'Donne-la moi'; 'Les Trois Âges de l'Opéra' (1778), a prologue received with indifference; 'Andromaque,' three acts (1778), the principal rôle of which is accompanied throughout by three flutes in harmony; 'Émilie' ('La Belle Esclave,' 1781), unsuccessfully introduced as the fifth act of the ballet 'La Fête de Mirza'; 'La double Épreuve, ou Colinette à la Cour,' three acts (1782), the finale of the first act full of dramatic truth; 'L'Embarras des richesses,' three acts (1782), a complete failure; 'La Caravane du Caire,' three acts (1783), the words by the Comte de Provence, afterwards Louis XVIII.—as complete a success, owing principally to the ballets, and the picturesque scene of the bazaar; it was performed no less than 506 times; 'Panurge dans l'île des Lanternes,' three acts (1785), a not very lively comic opera; 'Amphitryon,' three acts (1788), badly received; 'Aspasie,' three acts (1789), a partial success; 'Denys le Tyran' (1794), one act, a *pièce de circonstance* which the composer did well not to publish; 'La Rosière républicaine' (1793), one act, another *pièce de circonstance* performed under the title 'La Fête de la raison'—one of the scenes in which represents a church, with an organ on the stage to accompany the sacred choruses; 'Anacréon chez Polycrate,' three acts (1797), containing an air and a trio long favourites; 'Le Casque et les Colombes,' one act (1801), performed only three times; and 'Delphis et Mopsa,' two acts (1803), which met with but little better fate.

The question arises, out of all these fifty operas produced in Paris, how many are there besides 'Le Tableau parlant' which deserve special attention? 'Zémire et Azor,' 'L'Amant jaloux,' 'L'Épreuve villageoise,' and above all 'Richard,' which is still performed with success, and of which nearly every number deserves to be specified, are those we should select. In treating subjects of a more ambitious stamp, such as 'Pierre le Grand' and 'Guillaume Tell,' Grétry did violence to his nature. Broad and vigorous conceptions were not within his range, because they require not only sustained effort, but a thorough mastery of harmony and instrumentation, and this he did not possess. He scarcely ever wrote for more than two voices, and is manifestly perplexed by the entrance of a third, as a glance at the trio-duet in 'Zémire et Azor' will show. 'You might drive a coach and four between the bass and the first fiddle' was wittily said of his thin harmonies. But though it may be thought necessary at the present day to reinforce his meagre orchestration, his basses are so well chosen, and form such good harmony, that it is often extremely difficult to add complementary parts to the two in the original score.[1] And Grétry's instrumentation, though poor, is not wanting in colour when occasion serves. Moreover he was aware of his defects as well as of his capacities. 'In the midst of popular applause how dissatisfied an artist often feels with his own work!' he exclaims at the end of his analysis of 'Huron.' Elsewhere in speaking of his works as a whole, he puts the following words into Gluck's mouth, 'You received from Nature the gift of appropriate melody, but in giving you this talent she withheld that of strict and complicated harmony.' This is true self-knowledge, and by such remarks Grétry has shortened and simplified our task.

The qualities in his music which most excite

[1] 'Guillaume Tell' was reinstrumented by Berton and Rifaut; 'Richard' by Adolphe Adam; 'L'Épreuve villageoise' by Auber; and 'La fausse Magie' by Eugène Prévost.

our admiration are, his perfect understanding of the right proportions to be given both to the ensemble and to each separate part of an opera, and his power of connecting and evolving the scenes, faithfully interpreting the words, and tracing the lineaments, so to speak, of his characters by means of this fidelity of expression in the music. While thus taking declamation as his guide, and believing that 'the most skilful musician was he who could best metamorphose declamation into melody,' Grétry little thought that the day would come when Méhul would say of him that 'what he wrote was very clever, but it was not music' ('il faisait de l'esprit et non de la musique'). No doubt he carried his system too far; he did not see that by trying to follow the words too literally a composer may deprive his phrases of ease and charm, and sacrifice the general effect for the sake of obtaining many trifling ones—a most serious fault. But in spite of his weakness for details—the defect of many a painter—Grétry is a model one never wearies of studying. He excelled in the simple pastoral style, in the touching and pathetic, and in comic opera at once comic and not trivial. By means of his rich imagination, thorough acquaintance with stage business, and love for dramatic truth, he created a whole world of characters drawn to the life; and by his great intelligence, and the essentially French bent of his genius, he almost deserves to be called the 'Molière of music,' a title as overwhelming as it is honourable, but one which his passionate admirers have not hesitated to bestow on him. [Besides his operas, he wrote a number of sacred compositions, enumerated in Brenet's memoir (1884), but without details; an 'Antifona,' *a* 5, dated 1765, is in the Academy of Bologna, and quartets, six symphonies, trios, sonatas, etc., are also mentioned.]

A witty and brilliant talker, and a friend of influential literary men, Grétry possessed many powerful patrons at the French court, and was the recipient of pensions and distinctions of all kinds. In 1785 the municipality of Paris named one of the streets near the Comédie Italienne after him, and in the previous year the Prince-Bishop of Liége had made him one of his privy-councillors. On the foundation of the Conservatoire he was appointed an inspector, a post which he resigned in a year. When the Institut was formed at the same time (1795) he was chosen to fill one of the three places reserved for musical composers. Napoleon made him a Chevalier of the Legion of Honour, on the institution of the order in 1802, and also granted him a pension to compensate for his losses by the Revolution.

A career so successful was likely to intoxicate, and it is not to be wondered at that Grétry had a firm belief in his own merits, and thought himself almost infallible. He has left us several records of his vanity both artistic and intellectual. The first is his *Mémoires ou Essais sur la musique*, published in one vol. in 1789, and reprinted in 1797 with two additional vols., said to have been edited by his friend Legrand, a professor of rhetoric. The first part only is interesting, and as has been aptly said, it should be called 'Essais sur *ma* musique.' In 1802 he brought out *Méthode simple pour apprendre à préluder en peu de temps avec toutes les resources de l'harmonie*, a pamphlet of ninety-five pages with lithograph portrait, in which he exhibits both the insufficiency of his studies and his want of natural talent for harmony. His three vols. *De la Vérité; ce que nous fûmes, ce que nous sommes, ce que nous devrions être* (1803) are simply a pretentious statement of his political and social opinions, with remarks on the feelings, and the best means of exciting and expressing them by music.

Grétry had bought 'l'Érémitage,' near Montmorency, formerly the residence of Rousseau, and it was there he died, Sept. 24, 1813. Three days afterwards (27th) Paris honoured his remains with a splendid funeral; touching and eloquent eulogiums were pronounced over his grave by Bouilly on behalf of the dramatic authors, and Méhul in the name of the musicians. A year later, at a special meeting on Oct. 1, 1814, Joachim de Breton, permanent secretary of the Académie des Beaux-Arts, read a 'Notice sur la vie et les ouvrages d'André Ernest Grétry.' Since then many biographies and critiques have been published; the most important are—*Grétry en famille* (Paris, 1815, 12mo) by A. J. Grétry, his nephew; *Recueil de lettres écrites à Grétry, ou à son sujet*, by the Comte de Livry (Paris, 1809, 8vo); *Essai sur Grétry* (Liége, 1821, 8vo), by M. de Gerlache; L. de Saegher's *Notice biographique sur A. Grétry*, 1809; E. Gregoir's *Grétry*, 1883; and M. Brenet's *Grétry*, 1884. [See FRAMERY.]

There are many portraits of Grétry—one of the best drawn and engraved by 'his friend' Moreau the younger. Another engraving is by Cathelin (1785), from the portrait by Madame Lebrun, with the lines:

> Par des plaisirs réels et de fausses alarmes
> Ce puissant Enchanteur calme ou trouble nos sens;
> Mais de son amitié peut-on goûter les charmes
> Sans égaler au moins son cœur à ses talents.

Besides these there are Isabey's portrait engraved by P. Simon; that taken by the 'physionotrace' and engraved by Quenedey in 1808; those of Forget and P. Adam; and finally Maurin's lithograph from the portrait by Robert Lefèvre. In his youth he is said to have resembled Pergolesi both in face and figure. Comte Livry had a statue made of him in marble, and placed it at the entrance of the old Théâtre Feydeau: it is not known what has become of it. The foyer of the present Opéra Comique contains only a bust of him. In 1842 a statue by Geefs was inaugurated at Liége; being colossal it is

not a good representation, as Grétry was small in stature, and of delicate health.

Grétry had three daughters. The second, LUCILE, born in Paris, 1773, was only thirteen, when her one-act opera 'Le Mariage d'Antonio,' instrumented by her father, was successfully performed at the Opéra Comique (1786). In 1787 she produced 'Toinette et Louis,' in two acts, which was not well received. This gifted young musician made an unhappy marriage, and died in 1793.

We may mention in conclusion that Grétry spent his last years in writing six vols. of 'Réflexions sur l'art,' which, however, have not been published. He also left five MS. operas in three acts—'Alcindor et Zaïde'; 'Zimeo'; 'Electre'; 'Diogène et Alexandre'; 'Les Maures d'Espagne'; and 'Zelmar, ou l'Asile,' in one act. [A complete edition of Grétry's works has been undertaken by the commission for the publication of music by Belgian masters, under the direction of MM. Gevaert, Radoux, E. Fétis, A. Wotquenne, and A. Wouters. Up to 1904 twenty-nine volumes have appeared, containing the most important operas. The edition is published by Messrs. Breitkopf & Härtel.] G. C.

GRIEG,[1] EDVARD HAGERUP, born at Bergen, Norway, June 15, 1843, received his first musical instruction from his mother, a cultivated amateur, began to compose at the age of nine, and, after a meeting with Ole Bull, was sent, on the eminent violinist's recommendation, to the Leipzig Conservatorium, where he remained from 1858 to 1862, studying counterpoint, etc., under Hauptmann and Richter, composition under Rietz and Reinecke, and the piano under Wenzel and Moscheles. On leaving Leipzig, he went to Copenhagen to study under Gade, and in Denmark he came under the influence of Emil Hartmann. The Mendelssohn tradition, still strong at Leipzig, was religiously followed by Gade, and it was not till Grieg returned to Norway and associated with those who were devoting themselves to a distinctively national form of the various arts that he felt his true power. He became intimate with Richard Nordraak, and until that composer's early death in 1866, the two worked hand in hand with the object of fostering a Norwegian school of music. In 1867 Grieg founded a musical union in Christiania, and remained its conductor until 1880. In 1865 and 1870 he visited Italy, and saw much of Liszt in Rome. Grieg's performance of his own brilliant pianoforte concerto at a Gewandhaus Concert at Leipzig in 1879 brought him before the great public in a more prominent way than heretofore, and with the same charming work he made his first appearance in England at the Philharmonic Concert of May 3, 1888, conducting his op. 34 at the same concert. He had already gained great experience as a conductor during his tenure of the post of director of the Philharmonic concerts at Christiania. On this first visit to England his wife accompanied him, and her strongly individual way of singing his songs made such an impression in private, that the husband and wife were persuaded to give a joint recital of piano and song on May 16, and to appear together at the Popular Concerts. Early in 1889 they came again to England. In 1894 the composer received the honorary degree of Mus.D. at Cambridge, and in 1896 he once more visited London. Apart from such journeys he has lived a secluded life at his country house, a few miles from Bergen.

Grieg's music owes much of its success to the skill with which he has adapted the classical structure to themes so nearly allied to actual traditional tunes as to be hardly distinguishable from genuine folk-music. His violin sonata in F, op. 8, his piano concerto before mentioned, and many other works, show remarkable individuality of design; for the composer, while setting his themes in such juxtaposition with each other as to bring out their beauties to the fullest extent, has not scrupled to modify the rules of form as it suited him best to do. That he chooses but rarely to develop his ideas according to a logical plan, is due to a personal preference, not to any want of skill in the art of development, for this quality is clearly to be seen in the prelude and other movements of his suite, 'Aus Holberg's Zeit.' In the smaller, more lyrical forms he is at his best, and his many short pianoforte pieces, and his beautiful songs, show him to far greater advantage than the comparatively few works in which he has essayed the regular classical structures. The music to Ibsen's 'Peer Gynt,' written for a performance of that play, was at first published in the form of a pianoforte duet, and afterwards turned into two orchestral suites of remarkably picturesque character, which are perhaps the most popular of all his works. The strange, haunting harmonies of 'Ase's Death' have an almost magical effect, and in 'Anitra's Dance' there is an oriental character which, appearing again in the fine song 'Die Odaliske,' is very attractive. It might be contended that the few instances in which a musical colouring other than Norwegian has been employed are those which have the deepest appeal to non-Scandinavian hearers, but it is incontestable that it is by his more 'nationalistic' music that he has won the esteem of musicians at large. His music carries the fragrance of his native pine-woods into the concert-room; and it is only after long familiarity with it that its most prominent mannerisms become a little wearisome. Certain harmonic progressions are used almost too often, and in the structure of his melodies there is one sequence of three descending notes, consisting of the tonic, the leading-

[1] The name is a slightly modified form of the Scottish name Greig, an ancestor of the composer, named Alexander Greig, having emigrated from Fraserburgh to Bergen in the 18th century.

note, and the dominant of the key, that can be traced in some form or other in an extraordinarily large number of his compositions, though perhaps nowhere so prominently as in the pianoforte concerto. (Many of the above particulars of Grieg's life are taken from a lecture delivered in Elgin by the late Rev. W. A. Gray, and reported in the *Elgin Courant* of May 27, 1890. In the course of the lecture a 'Funeral Hymn,' in memory of the composer's father, for four voices, was sung from MS. It does not appear among the published works.)

Grieg's published compositions are as follows:—

Op.
1. Four Clavierstücke.
2. Four Songs for alto voice.
3. Three Poetische Tonbilder, pf.
4. Six Songs.
5. Four Songs, 'Melodien des Herzens,' to words by H. C. Andersen.
6. Humoresken, pf.
7. Pianoforte Sonata, E minor.
8. Sonatas, pf. and vln., F.
9. Romanzen und Balladen, pf.
10. Four Songs, 'Romanzen.'
11. Concert-overture, 'Im Herbst,' orch. (and pf., 4 hands).
12. Lyrische Stückchen, pf.
13. Sonata, pf. and vln., G.
14. Two Symphonische Stücke, pf., 4 hands.
15. Romanzen, pf.
16. Concerto, pf. and orch., A minor.
17. Norwegische Volkslieder und Tänze, arranged for pf.
18. Eight Songs.
19. Bilder aus dem Volksleben, Humoresken, pf.
20. 'Vor dem Klosterpforte,' solo, female choir and orch.
21. Four Songs.
22. 'Sigurd Jorsalfar,' pf., 4 hands (see op. 56); the number 22 transferred to two choruses for male voices.
23. 'Peer Gynt,' suite No. 1, pf., 4 hands.
24. Ballade, pf.
25. Five Songs.
26. Four Songs.
27. String quartet, G minor.
28. Albumblätter, pf.
29. Improvisata on two Norwegian songs, pf.
30. Album for male choir.
31. 'Landerkennung,' male choir and orch.
32. 'Der Einsame' ('Bergentrückte'), baritone voice and orch.
33. Twelve Songs.
34. Two Elegiac Melodies for string orch.
35. Norwegische Tänze, orch., and for pf. solo and duet.
36. Sonata, pf. and vcello.
37. Walzer-Capricen, pf. solo and duet.
38. Neue Lyrische Stückchen, pf.
39. Twelve Songs.
40. 'Aus Holberg's Zeit,' suite, pf. solo or string orch.
41. Transcription for pf. of his own songs.
42. 'Bergliot,' ballad for declamation with orch.
43. Lyrische Stückchen, pf.
44. Songs, 'Aus Fjeld und Fjord.'
45. Sonata, pf. and vln., C minor.
46. 'Peer Gynt,' suite No. 1, orch.
47. Lyrische Stücke, pf.
48. Six Songs.
49. Six Songs.
50. Scenes from Björnson's 'Olav Trygvason,' solo, choir, and orch.
51. Romance and variations for 2 pf.
52. Transcription, pf., of six songs.
53. Two Melodien for string orch.
54. Lyrische Stücke, pf.
55. 'Peer Gynt,' suite No. 2, orch.
56. 'Sigurd Jorsalfar,' orch.
57. Lyrische Stücke, pf.
58. Five Songs.
59. Six Songs.
60. Five Songs.
61. Seven Children's Songs.
62. Lyrische Stücke, pf.
63. Two Nordische Weisen, string orch.
64. Symphonic Dances, pf., 4 hands, and for string orch.
65. Lyrische Stücke, pf.
66. Norwegian Melodies, for pf.
67. Song-cycle, Garborg's 'Haugtussa.'
68.
69.
70.

Without opus-number.

Arrangement of a second pianoforte part to four sonatas of Mozart.

(See also *Musical Times*, Feb. 1894 and Feb. 1898, p. 123.) M.

GRIEPENKERL, FRIEDRICH CONRAD, professor at the Carolinum College in Brunswick, born at Peine, near Hanover, in 1782; long tutor in the Fellenberg Institution at Hofwyl in the Canton of Berne; died at Brunswick, April 6, 1849. He wrote *Lehrbuch der Ästhetik* (Brunswick, 1827), in which he applied Herbart's philosophical theory to music; and was the author of the preface to the excellent edition of J. S. Bach's instrumental compositions, edited by himself and Roitzsch, and published by Peters of Leipzig. This work has made his name familiar to many in England.

His son WOLFGANG ROBERT, born May 4, 1810, at Hofwyl, studied at Brunswick and Leipzig, was also an enthusiastic amateur, and an ardent admirer of Meyerbeer's 'Huguenots' and the later works of Berlioz. He was teacher of literature at the Military School of Brunswick from 1840 to 1847. He wrote 'Das Musikfest, oder die Beethovener' (1838 and 1841); 'Ritter Berlioz in Braunschweig' (1843); 'Die Oper der Gegenwart' (1847); and two dramas, 'Robespierre' and 'Die Girondisten,' to which Litolff composed overtures. He died at Brunswick, Oct. 17, 1868. F. G.

GRIESBACH, JOHN HENRY, born at Windsor, June 20, 1798, was eldest son of Justin Christian Griesbach, violoncellist in Queen Charlotte's band, and nephew to Friedrich Griesbach, the oboe player. He studied music under his uncle, George Leopold Jacob Griesbach, and at twelve years of age was appointed violoncellist in the Queen's band. He then studied for some years under Kalkbrenner. On the breaking up of Queen Charlotte's band at her death he came to London and appeared at concerts as a pianist. In 1822 he composed a symphony and a capriccio for pianoforte and orchestra, and shortly afterwards a second symphony for the Philharmonic Society. Although he was after this time principally engaged in tuition he found time to produce numerous compositions of various kinds, and also to attain to no mean skill in astronomy, painting in water-colours, entomology, and mathematics. His principal compositions were 'Belshazzar's Feast,' an oratorio, written in 1835 with a view to stage representation, but such performances being interdicted he some years afterwards remodelled the work, and it was performed, under the title of 'Daniel,' by the Sacred Harmonic Society on June 30, 1854; Overture and Music to Shakespeare's 'Tempest'; 'James the First, or, The Royal Captive,' operetta; 'The Goldsmith of West Cheap,' opera; 'Eblis,' opera (unfinished); 'Raby Ruins,' musical drama; several overtures and other instrumental pieces, anthems, songs, cantatas, etc. He also wrote *An Analysis of Musical Sounds* (published), and *The Fundamental Elements of Counterpoint, The Acoustic Laws of Harmony*, and *Tables showing the Variations of Musical Pitch from the time of Handel to 1859* (unpublished). He was fourteen times a director of the Philharmonic Society. He died at Kensington, Jan. 9, 1875. W. H. H.

EDVARD HAGERUP GRIEG

GRIESINGER, Georg August, deserves a word of grateful mention for his charming little work on Haydn—*Biographische Notizen über Joseph Haydn* (126 pages)—which was originally communicated to the *Allg. Musik. Zeitung* from July to Sept. 1809, and then published by Breitkopf & Härtel in 1810. Griesinger was a 'Legations-Rath' of the Saxon government, and possibly attached to the embassy at Vienna. At any rate he was on intimate terms with Haydn for the last ten years of the life of the latter, and he claims to report directly from his lips, often in his very words. His work was used by Framery for his *Notice sur Haydn* (Paris, 1810), but Griesinger complains that his statements have often been widely departed from, and in one case an absolute invention introduced.

Whether he was the same Griesinger who founded singing societies and public concerts in Stuttgart ten or twelve years after Haydn's death, is not apparent. He died in Leipzig, April 27, 1828. G.

GRIFFIN, George Eugene, pianist and composer, was born in London, Jan. 8, 1781. At sixteen years of age he made his first appearance as a composer by the production of a concerto for pianoforte and orchestra, in which the melody of 'The Blue Bell of Scotland' was introduced. He next published a pf. sonata, with *ad libitum* violin, and an 'Ode to Charity,' inscribed to the supporters of the Patriotic Fund, and published in 1806. His remaining compositions, with the exception of three quartets for stringed instruments, were all for the pianoforte, either alone or in conjunction with other instruments. They comprise two concertos for pf. and orchestra; a quartet for pianoforte and strings; four sonatas; five divertimentos; four rondos; six marches; six airs; a capriccio; an introduction to an arrangement of the military movement from Haydn's twelfth symphony; and two sets of quadrilles. Griffin was one of the original members of the Philharmonic Society. One of his string quartets was given by that body on Feb. 28, 1814, and his pf. quartet on April 14, 1817, he himself playing the piano part. Griffin was stricken with mortal illness whilst attending one of the society's concerts, and died a few days afterwards in May 1863. His compositions were formed upon classical models, and were esteemed in their day, although now forgotten. W. H. H.

GRIFFIN, Thomas, an organ-builder, in 1741 erected an organ in St. Helen's, Bishopsgate, and engaged 'to play himself or provide an organist.' He also built organs in other City churches; in St. Mildred, Bread Street, 1744; St. John's, Westminster; St. George's, Botolph Lane; St. Paul's, Deptford; St. Margaret Pattens, 1749; and St. Michael Bassishaw, 1762. On Jan. 11, 1763 (being then a Common Councilman for Langbourn Ward and one of the Gresham Committee), he was appointed Professor of Music in Gresham College in the room of Charles Gardner, deceased. He seems to have been totally incapable of performing the duties of the office, since we learn from a contemporary newspaper that on Jan. 29, 1763, the day appointed for his first lecture, John Potter, who had acted as deputy to his predecessor, appeared to lecture for him, but the audience refused to hear him, and compelled him to retire; that on Feb. 12 following, Griffin himself appeared, apologised for his absence on Jan. 29, which he assured the audience was owing solely to his not having had sufficient time to prepare a proper lecture, and then retired without saying more; and that he soon afterwards delivered a lecture, which lasted eleven minutes, in an almost inaudible tone of voice. He died in 1771. Hawkins asserts him to have been a barber. He was more probably of the Barber-Surgeons' Company. W. H. H.

GRIFFITH, Frederick, distinguished flute player, was born at Swansea, on Nov. 12, 1867, and began very early to practise his instrument. At the age of fourteen he gained a prize given for the best performance on the piccolo at the National Eisteddfod at Merthyr Tydfil. A series of subsequent successes, particularly that at Cardiff, where he won the prize for the best performance on any instrument, attracted wider public notice, with the result that Griffith entered the Royal Academy of Music and studied for four years, until 1891, under Olaf Svendsen. Next he went to Paris to study under Paul Taffanel, and on his return to London he gave a number of recitals and became director of the Wind-Instrument Chamber Music Society. In addition to some five-and-twenty or more recitals Griffith has made many tours, notably in the English provinces, with Mme. Melba's party; and, in 1902, with the same party again through the Australasian Colonies. He was first flute in the orchestra which played during the performances of Sullivan's *Ivanhoe*, and in 1895 was appointed to a similar post at the Royal Opera, Covent Garden. At the present time (1905) he is professor of the flute at the Royal Academy of Music. Griffith has a beautiful, unforced tone and a command of technique fully up to the very high modern standard. He has issued a volume of biographies of *Notable Welsh Musicians* (1896). R. H. L.

GRIMALDI. See Nicolini.

GRIMM, Julius Otto, German pianist and composer of some note; born March 6, 1827, at Pernau in Livonia; was a pupil of the Conservatorium of Leipzig. When Grimm had finished the course of instruction there, he found employment at Göttingen, and was appointed in 1860 conductor of the Cäcilienverein at Münster in Westphalia, where he was made director of the Musical Academy in 1878. He published pieces for the pianoforte, songs, and a few orchestral compositions, of which latter his 'Suite in canon-form' for stringed orchestra made the round of German concert-

rooms successfully, and in point of clever workmanship deserved all the praise it met with. [A symphony in D minor and a choral and orchestral ode, 'An die Musik,' deserve mention. Grimm died at Münster on Dec. 7, 1903.] E. D.

GRISAR, Albert, born at Antwerp, Dec. 26, 1808, was intended for commerce, and with that view was placed in a house of business at Liverpool. The love of music was, however, too strong in him, and after a few struggles with his family he ran away to Paris, and reached it only a day or two before the Revolution of July 1830. He began to study under Reicha, but the Revolution spread to Belgium, and Grisar was obliged to join his family in Antwerp. His first public success was 'Le Mariage impossible' at Brussels in the spring of 1833. It attracted the attention of the government, and procured him a grant of 1200 francs towards the completion of his musical education. He returned to Paris and henceforward gave himself up almost entirely to the theatre. His first appearance there was at the Opéra Comique with 'Sarah' (1836), followed by 'L'an 1000' (1837); 'La Suisse à Trianon' (Variétés, 1838); 'Lady Melvill' and 'L'Eau merveilleuse' (with Flotow, 1838 and 1839); 'Le Naufrage' (1839); 'Les Travestissements' (Opéra Comique, 1840); 'L'Opéra à la Cour' (with Boieldieu, 1840). Though not unsuccessful he was dissatisfied with himself, and in 1840 went to Naples to study composition under Mercadante; and there he remained for several years. In 1848 he was again in Paris, and did not leave it till his death, which took place at Asnières on June 15, 1869. Nineteen of his comic operas were produced on the stage, and a dozen more remained unperformed. A complete list will be found in Pougin's supplement to Fétis. The most important are the following:—'Gilles Ravisseur' (1848), 'Les Porcherons' (1850), 'Bon soir, Monsieur Pantalon' (1851), 'Le Carillonneur de Bruges' (1852), 'Les Amours du Diable' (1853), 'Le Chien du Jardinier' (1855), 'Voyage autour de ma Chambre' (1859), 'La Chatte merveilleuse' (1862), 'Bégaiements d'amour' (1864), 'Douze innocents' (1865). He also published more than fifty melodies and romances. His statue, by Brackeleer, is in the vestibule of the Antwerp Theatre, and a life of him by Pougin was published by Hachette. With the Parisians he was a great favourite. 'A charming, delicate, natural musician, several of whose works will remain to attest the rare excellence of his talent' is the judgment of a French critic in the *Ménestrel*. On an Englishman, however—and one who knew him and liked him—he made a different impression; 'His music,' says Chorley, 'leaves not the slightest trace on the memory. I cannot recall from the whole list a melody, a touch of instrumental novelty, an indication of character or local colour.' Chouquet (*Musique Dramatique*, p. 286), while praising his fresh and graceful melody and his sympathy with the scene and the situation, will not allow him a place above the second rank. G.

GRISI, Giulia. This famous operatic singer, daughter of Gaetano Grisi, an officer of engineers under Napoleon, was born at Milan, July 28, 1811. She belonged to a family of artists. Her maternal aunt was the celebrated Grassini; her eldest sister, Giuditta (born at Milan, July 28, 1805, died May 1, 1840), was a singer of high merit; and her cousin, Carlotta Grisi, originally educated as a singer, became, under the tuition of Perrot, the most charming dancer of her time. Probably her mother, like the rest of the family, had before marriage made music her profession. If so, with a soldier for a father and a singer for a mother, it may be said that the future 'dramatic soprano' came indeed of suitable parentage. Her earliest instructors were successively her sister Giuditta; Filippo Celli, afterwards resident professor in London; Madame Boccabadati; and Guglielmi, son of the composer of that name. At the age of seventeen she made her first appearance in public as Emma in Rossini's 'Zelmira.' In 1830 Mr. C. C. Greville saw her at Florence with David in 'Ricciardo,' and says, 'She is like Pasta in face and figure, but much handsomer. She is only eighteen.' Rossini took a great interest in the young and promising Giulietta, for whom he predicted a brilliant future. 'Youth, uncommon personal attractions, a beautiful voice, and indications already of that stage talent afterwards so remarkably developed, combined,' says one who speaks with authority on the subject, 'to obtain a reception for their possessor more hearty and more unanimously favourable than often falls to the lot of a débutante.' One of Giulia's warmest admirers was Bellini, who, composing at Milan the opera of 'Norma' for Pasta, recognised in the young artist all the qualifications for a perfect Adalgisa. Strangely enough, when the opera was first brought out, the first act proved almost a fiasco; and it was not until the duet for Norma and Adalgisa in the second act that the audience began to applaud. Dissatisfied with her engagement at Milan, and unable to get herself released from it by ordinary means, the impulsive Giulia took to flight, and escaping across the frontier reached Paris, where she found her aunt, Madame Grassini, her sister Giuditta, and Rossini,—at that time artistic director of the Théâtre des Italiens. She had no trouble in obtaining an engagement. Rossini, who had not forgotten her performance in 'Zelmira,' offered her the part of Semiramide in his own admirable opera of that name; and in 1832 Grisi made her first appearance at the Italian Opera of Paris in the character of the Assyrian Queen, Mlle. Eckerlin representing Arsace, and Signor Tamburini Assur. Nothing could have been more perfect

GIULIA GRISI

than Grisi's success ; and for sixteen consecutive years, from 1832 to 1849, she was engaged and re-engaged at the Théâtre des Italiens. She passed the winter of 1833 at Venice, where Bellini, in 1830, had written and produced 'I Capuleti ed I Montecchi' for the two sisters, Giuditta and Giulia. She did not visit London until 1834, where she made her first appearance, amid general admiration, as Ninetta in 'La Gazza Ladra' (April 8). Her first great London success, however, was achieved in the part of Anna Bolena. The chief characters in this work—which Donizetti had written for Galli, Rubini, and Pasta—became identified in London with Lablache, Rubini, and Grisi. On the occasion of her first appearance in London, the *Times* critic described her voice as a 'pure, brilliant, powerful, flexible soprano . . . one of the finest we ever heard.' 'As an actress,' added the writer, 'Mdlle. Grisi exhibits discriminative powers of no common order.' When she undertook the part of Semiramide, at the King's Theatre, it was said by every one that Pasta having now retired, her only successor was Grisi. In the year 1835 Bellini wrote 'I Puritani' for Grisi, Rubini, Tamburini, and Lablache ; that memorable operatic quartet of which she was the last survivor. It is true that after Rubini had been replaced by Mario the quartet was still incomparable ; and it was for the new combination—Grisi, Mario, Tamburini, and Lablache—that Donizetti, in 1843, composed 'Don Pasquale.' 'Don Pasquale,' like 'Anna Bolena,' visited London and soon became naturalised ; and year after year the Mario quartet, like the Rubini quartet, spent the winter in Paris, the summer in London.

When, in 1846, Mr. Lumley's company was broken up by the sudden departure of his principal singers, together with Mr. Costa, and nearly the whole of the orchestra, the second of the great quartets came to an end. It struggled on for a time in the reduced form of a trio : Grisi, Mario, and Tamburini, without Lablache. Then the trio became a duet ; but Grisi and Mario still sang the *duo concertante* which Donizetti had written for them in 'Don Pasquale,' as no other singers could sing it. They were still 'the rose and the nightingale' of Heine's *Parisian Letters*, 'the rose the nightingale among flowers, the nightingale the rose among birds.' N. P. Willis had heard Grisi in London in the year 1834, and, as he tells us in his *Pencillings by the Way*, did not much like her. On the other hand, Heine heard her in Paris in the year 1840, and, as he assures us in his *Lutetia*, liked her very much. The unbounded admiration of the German poet would probably have consoled Madame Grisi, if she had ever troubled herself about the matter, for the very limited admiration expressed for her by the American prose-writer.

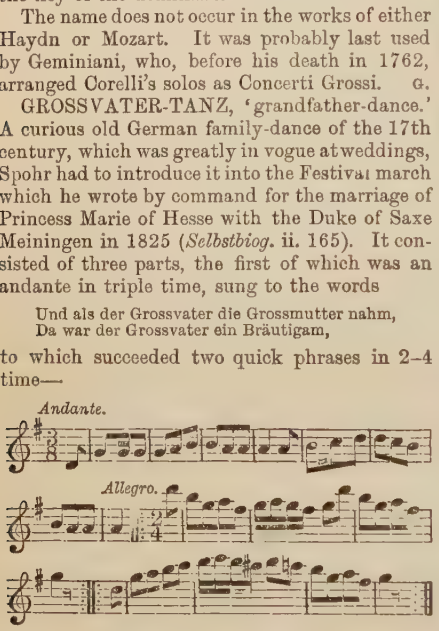
From the year 1834, when she made her début at the King's Theatre, London, until the year 1861, when she retired from the Royal Italian Opera, Madame Grisi only missed one season in London—that of 1842. And it was a rare thing indeed when she was engaged that illness or any other cause prevented her from appearing. She seldom disappointed the public by her absence ; and never, when she was present, by her singing. There is some significance in styling such vocalists 'robust,' for there are robust sopranos as there are robust tenors. Indeed no one who has not really a robust constitution could stand the wear and tear which are the indispensable accompaniments—which form, one might almost say, the very substance—of the life of a great singer. In the year 1854 she made an artistic tour in the United States, in company with Mario. In 1859 she accepted an engagement at Madrid, which was not successful, and was rapidly broken off. In 1861 she signed an agreement with Mr. Gye binding her not to appear again in public within a term of five years. Mr. Gye thought, no doubt, that in this case five years were as good as fifty. But he had reckoned without his prima donna, who, in the year 1866, to the regret of her friends, and to the astonishment of every one, came out at Her Majesty's Theatre in her old part of Lucrezia. After that Madame Grisi still continued from time to time to sing at concerts, and as a concert singer gained much and deserved applause. She had for years made London her headquarters, and on leaving it in 1869 to pay a visit to Berlin had no intention of not returning to the capital where she had obtained her greatest and most prolonged successes. She did not, however, return. Inflammation of the lungs seized her, and after a short attack she died at the Hôtel du Nord, Berlin, on Nov. 29, 1869. Her artistic life had lasted about thirty-five years ; and considering that fact, and the vigorous constitution which such a fact indicates, it may safely be inferred that but for the accident of a severe cold, which appears to have been neglected, she would have lived to something like the age attained by so many distinguished members of the profession to which she belonged, and of which for an unusually long period she formed one of the brightest ornaments.

Grisi was married on April 24, 1836, to Count de Melcy, but the union was not a happy one, and was dissolved by law. Later on she was again married to Mario, by whom she had three daughters. H. S. E.

GROSSE CAISSE and GROSSE TROMMEL are respectively the French and German terms for the bass drum. [DRUM, 3.] V. DE P.

GROSSI. See SIFACE, and VIADANA.

GROSSO. Italian for 'great.' The 'Concerto Grosso' of the first half of the 18th century, said to have been invented by Torelli in 1709, was a piece for a combination of several solo



instruments with the full band. Thus Corelli's Concerti Grossi (op. 6) are described in the title as 'con duoi violini e violoncello di concertino obligato, e duoi altri violini viola e basso di concerto grosso, ad arbitrio che si potranno radoppiare.' The same is the case with Handel's 'twelve Grand Concertos,' which are for two solo violins and a violoncello, accompanied by and alternating with a band of two violins, viola, violoncello, and bass. The piece contained four, five, or six movements of different tempo, one being usually a fugue and one a dance, and all in the same key. It is worth mentioning that J. C. Bach occasionally puts a middle movement in the key of the dominant.

The name does not occur in the works of either Haydn or Mozart. It was probably last used by Geminiani, who, before his death in 1762, arranged Corelli's solos as Concerti Grossi. G.

GROSSVATER-TANZ, 'grandfather-dance.' A curious old German family-dance of the 17th century, which was greatly in vogue at weddings, Spohr had to introduce it into the Festival march which he wrote by command for the marriage of Princess Marie of Hesse with the Duke of Saxe Meiningen in 1825 (*Selbstbiog.* ii. 165). It consisted of three parts, the first of which was an andante in triple time, sung to the words

> Und als der Grossvater die Grossmutter nahm,
> Da war der Grossvater ein Bräutigam,

to which succeeded two quick phrases in 2–4 time—

As this dance usually concluded an evening, it was also called the 'Kehraus' (clear-out). Its chief musical interest arises from the fact that it is the 'air of the 17th century,' used by Schumann in his 'Carnaval' to represent the flying 'Philistines' in the 'March of the Davidsbündler.' He also uses it in the finale of his 'Papillons,' op. 2. E. P.

GROUND BASS (Ital. *basso ostinato*). The most obvious and easily realisable means of arriving at symmetry and proportion in musical works is by repetition, and a large proportion of the earliest attempts in this direction took the safe side of making the symmetry absolute by repeating the same thing over and over again in the form of variations; and of this order of form a Ground Bass, which consisted of constant repetition of a phrase in the Bass with varied figures and harmonies above it, is a sub-order. At an early period of Modern Music this was a very popular device, resorted to alike by Italians, such as Carissimi and Astorga, and by our English Purcell. In the works of Purcell there are a great number of examples, both in his songs in the 'Orpheus Britannicus,' and in his dramatic works, as in the 'Dido and Æneas,' in which, though not a lengthy work, there are three songs on a Ground Bass; the best of which, 'When I am laid in earth,' has often been pointed out as a fine example. An expansion of the idea was also adopted by him in the 'Music before the play' of King Arthur, in which the figure after being repeated many times in the bass is transferred to the upper parts, and also treated by inversion. Bach and Handel both made use of the same device; the former in his Passacaglia for Clavier with Pedals, and the 'Crucifixus' of his Mass in B minor;[1] and the latter in his Choruses 'Envy, eldest-born of Hell' in 'Saul,' and 'O Baal, monarch of the skies' in 'Deborah.' In modern times Brahms has produced a fine example in the Finale to the Variations on a Theme of Haydn in B♭ for orchestra. The finale of his fourth symphony, in E minor, is a monumental example of a Ground Bass that is not absolutely strict.

At the latter part of the 17th century Ground Basses were known by the names of their authors, as 'Farinell's Ground,' 'Purcell's Ground,' etc., and extemporising on a Ground Bass was a very popular amusement with musicians. Christopher Sympson's 'Chelys Minuritionum, or Division Viol' (1665), was intended to teach the practice, which he describes as follows—'Diminution or division to a Ground is the breaking either of the bass or of any higher part that is applicable thereto. The manner of expressing it is thus:—

'A Ground, subject, or bass, call it what you please, is pricked down in two several papers; one for him who is to play the ground upon an organ, harpsichord, or what other instrument may be apt for that purpose; the other for him that plays upon the viol, who having the said ground before his eyes as his theme or subject, plays such variety of descant, or division in concordance thereto as his skill and present invention do then suggest unto him.'

A long extract and a specimen of a 'Division on a Ground' are given in Hawkins's *History*, chap. 149. C. H. H. P.

GROVE, GEORGE, writer on music, first Director of the Royal College of Music, and editor of the first edition of this work, was born on August 13, 1820, at Thurlow Terrace, Wandsworth Road, Clapham. His father, Thomas Grove, came of a yeoman stock, long resident at Penn, Buckinghamshire, and his mother was a woman of some culture, a lover of music, and a proficient amateur. George Grove gained his first schooling as a weekly boarder at an establishment on Clapham Common. Thence he migrated to the

GEORGE GROVE

school started at Stockwell by the Rev. Charles Pritchard, moving with the headmaster, in 1834, to Clapham Grammar School. In 1836 he was articled to Alexander Gordon, a civil engineer in Fludyor Street, Westminster. His musical education began with hearing his mother play from the 'Messiah' to her children out of an old vocal score with voices and figured bass only. From this he advanced to Vincent Novello's Fitzwilliam Music and Bach's 'Forty Eight,' and though never much of an executant he and his brother and sisters used to play and sing a good deal from the oratorios, and regularly attended the concerts of the Sacred Harmonic Society in Exeter Hall. In Feb. 1839 Grove was admitted graduate of the Institution of Civil Engineers, and in 1840-41 worked in the pattern and fitting shops of the firm of Robert Napier on the Broomielaw, Glasgow. Towards the close of 1841 he was sent out by Gordon to act as resident engineer during the erection of a cast-iron lighthouse on Morant Point, Jamaica, and after a short stay in England was despatched on a similar errand to Bermuda, whence he returned in August 1846. He subsequently served under Robert Stephenson at Chester and Bangor (during the erection of the Britannia tubular bridge over the Menai Straits), and while at Chester took an active part in starting a singing class. When his engagement at Bangor terminated in 1849 Grove, at the instigation of Brunel, Robert Stephenson, and Sir Charles Barry, stood for the post of Secretary to the Society of Arts, and was appointed to that post in March 1850, continuing, however, to practise as an engineer for a few years longer. In 1851 he married Miss Harriet Bradley, daughter of Rev. Charles Bradley, and sister of the late Dean of Westminster. As Secretary of the Society of Arts, Grove was brought into close contact with the promoters of the great Exhibition of 1851, and when a company was formed to re-erect the Exhibition buildings at Sydenham, was offered the Secretaryship of the Crystal Palace, moving to Sydenham in October 1852. His association with James Fergusson and an introduction to Stanley, then Canon of Canterbury, turned his attention to Biblical research, and led to his co-operating with William Smith in the *Dictionary of the Bible*, of which he acted as an informal sub-editor, contributing in all upwards of 800 pages out of 3154. This work occupied the bulk of his leisure for nearly seven years, involved two visits to the Holy Land, in 1858 and 1861, and led, as a natural corollary, to the establishment, in 1865, of the Palestine Exploration Fund, in which Grove was 'the head and front of the whole proceeding' (Dean Stanley at Cambridge, May 8, 1867). But he contrived to find time to prosecute his musical studies with great zeal from the moment of his settling in London, attending concerts, purchasing scores, and from 1854 onwards taking an active part in the organisation of the musical performances at the Crystal Palace. The famous analytical programmes grew out of a suggestion of Mr. (now Sir August) Manns, who had become chief conductor of the orchestra in 1855, that Grove should contribute a few words in elucidation of a memorial programme of Mozart's music in 1856. For upwards of forty seasons Grove contributed the bulk of these analytical remarks to the programmes of the Saturday Concerts, those of the works of Beethoven, Mendelssohn, Schubert, and Schumann being, with hardly an exception, from his pen. The analyses of the nine symphonies of Beethoven were eventually expanded into the volume published in 1896, but he rarely allowed any of these commentaries, which can be reckoned by the hundred, to appear twice in the same form. His researches at home or abroad, his conversations with musicians, his general reading were constantly drawn upon to supply fresh and illuminative matter, whether in the shape of musical or literary parallels, details of construction, or anecdotic reminiscences. Grove has frankly admitted that he had forerunners in Thomson, the Professor of Music in Edinburgh in 1840, in John Ella, John Hullah, and Dr. Wylde. But Grove brought to bear on his task an infectious enthusiasm as well as a width of culture which lent his commentaries a peculiar charm and value. There have been better analysists, anatomists, and dissectors of the organism and structure of the classical masterpieces; there has never been so suggestive and stimulating a commentator upon their beauties. Grove's intimate association with Sir Arthur Sullivan dated from 1862, while his long friendship with Madame Schumann and his devoted championship of her husband's compositions began in 1863. In 1867 he made his memorable journey to Vienna in company with Arthur Sullivan (the record of which will be found in the appendix to Mr. Arthur Coleridge's translation of Kreissle von Hellborn's *Life of Schubert*), which resulted in the discovery at Dr. Schneider's of the part-books of the whole of the music of *Rosamunde*. Here also he laid the foundation of his long friendship with C. F. Pohl, and made the acquaintance of Brahms. In May 1868 he succeeded Professor David Masson as editor of *Macmillan's Magazine*, a post which he retained for fifteen years.

Grove, who had in 1860 contributed to the *Times* the first detailed account of the Oberammergau Passion-play which appeared in the English press, wrote from Italy in 1869 some remarkable letters on the alleged miracle of St. Januarius at Naples to the *Times* and the *Spectator*, and till a very few years before his death was a constant contributor on a multiplicity of subjects, mainly musical, to these and other newspapers. He was meantime steadily accumulating illustrative material relating to the

symphonies of Beethoven and Mendelssohn, steeping himself in the music of Schumann and Schubert, and in Sept. 1873 announced to his friends that he had resigned the secretaryship of the Crystal Palace in order to edit the *Dictionary of Music and Musicians* for Messrs. Macmillan. Though he had resigned the secretaryship of the Crystal Palace, Grove maintained his connection by joining the Board of Directors and continuing to edit the programmes of the Saturday Concerts. On June 29, 1875, the honorary degree of D.C.L. was conferred by the University of Durham, on 'George Grove, the eminent civil engineer, and the present editor of *Macmillan's Magazine*, for the great services rendered to literature by his writings'; and it is worthy of remark that the speech of Professor Farrar, who presented him for his degree, laid stress on his contributions to Biblical research and geography, but took no account whatever of his services to music. His many-sidedness was happily hit off by Robert Browning in a private letter, a few months later, when he calls him 'Grove the Orientalist, the Schubertian, the Literate in ordinary and extraordinary.' In 1876 he found time, amid his work on the Dictionary, to write an admirable Geography Primer for Messrs. Macmillan's series, published in Jan. 1877; and in 1877 met Wagner at Mr. Dannreuther's house in Orme Square, besides assisting to entertain him at the Athenæum Club. That Grove was immensely impressed by Wagner there can be no question, but to the end of his life he remained in imperfect sympathy with the spirit and *ethos* of the music drama. But he kept his views to himself, and never aired them in public. Almost the only time he ventured to discuss Wagner in public was when, in 1887, the *Daily Telegraph* had noticed a new opera produced in Pesth and *more suo* praised the composer for not being influenced by Wagner: 'He seems to his credit to have forgotten Wagner's very existence.' Grove promptly wrote to point out that this was incredible. Whatever Wagner's faults, 'that he has made a revolution in the form and structure of opera is admitted by nine-tenths of the musical world.'

In the autumn of 1878 Grove paid a memorable visit to America with Dean Stanley, meeting Longfellow, Oliver Wendell Holmes, Emerson, Eliot, and other leaders of thought, visiting most of the great eastern cities, and getting a glimpse of the South and a run through Canada. 1879 was chiefly devoted to accumulating materials for his monograph on Mendelssohn, and in the autumn he visited Berlin and Leipzig to obtain first-hand information from Mendelssohn's family and friends. The first volume of the Dictionary, containing Parts i.-vi., had been published in 1879, and the Part containing the article on Mendelssohn appeared in Feb. 1880. In July of the same year Grove was the recipient of a very gratifying testimonial in the shape of a purse of 1000 guineas, and an address emphasising his signal services rendered to Biblical History and Geography, and to Music and Musical Literature. The list of subscribers contained the names of the Archbishops of Canterbury and York, Dean Stanley, Millais, Leighton, Frederic Harrison, Arthur Balfour, James Paget, and a host of other distinguished men. Archbishop Tait presided: Dean Stanley and Sir Arthur Sullivan eulogised Grove's services to Biblical research and Music respectively. The gathering was a remarkable testimony to Grove's versatility, for, as Dean Bradley said, it came almost as a revelation to those who had associated him chiefly with Biblical research or literature to find him appropriated by musicians and *vice versâ*. From this time onward, however, his energies were steadily concentrated in the direction of music. He was already hard at work on his article on Schubert, and in the autumn of 1880 paid a special visit to Vienna to gather materials on the spot, and study the MSS. in the possession of the Musikverein. Here he renewed his acquaintance with Brahms, and was greatly assisted in his researches by his devoted friend C. F. Pohl. Schubert proved his chief interest and anodyne in 1881, a year saddened for Grove by the death of Dean Stanley; and in the autumn his theory of the lost 'Gastein' symphony took shape, and his views were embodied in a communication to the *Athenæum* for Nov. 19, 1881 (p. 675). The theory involved, as its corollary, the renumbering of the C major Symphony No. 10, a course invariably followed in the programme-books of the Crystal Palace concerts. Owing to the entire disappearance of the score, and the continued failure of all efforts to bring it to light, Grove's theory still remains in the category of hypothesis, but his own confidence in the accuracy of his deductions remained unshaken. Meantime the movement for the establishment of the Royal College of Music was rapidly maturing. A scheme was mooted at a meeting held at Marlborough House in 1878 to effect an amalgamation with the Royal Academy of Music and the National Training School of Music, but the negotiations fell through, so far as the Royal Academy was concerned. The Training School, on the other hand, willingly fell in with the proposal, and in 1880 a draft Charter was completed, for which the Prince of Wales (now King Edward VII.) undertook to become petitioner to the Privy Council, a special feature of the proposed institution being the raising of a fund to provide not only for the education but in certain cases for the maintenance of those who, having shown themselves by competition worthy of such advantages, were unable to maintain and educate themselves. The Prince of Wales accepted the Presidency of the Council, and the late Dukes of Coburg (then Edinburgh) and Albany, and Prince Christian took an active part in the movement. Grove in July 1881 was

invited to join the Council and Executive Committee of the proposed college, and in March 1882, at the special request of the Prince of Wales, undertook the post of organising financial secretary for a period of six months. Into this campaign he threw himself with the utmost energy, making speeches, delivering addresses, drafting circulars, visiting provincial centres, and in short leaving no stone unturned to promote the end in view. In Feb. 1882, at a meeting convened by the Prince of Wales, and held at St. James's Palace, the scheme was formally launched. In the next fourteen months forty-four meetings were held throughout the country, apart from several held at the Mansion House. As a result of these efforts, in which Grove, with the late Mr. George Watson as his efficient lieutenant, took a most energetic part, a large sum of money was raised, and the promoters were able to realise a considerable instalment of this plan, by founding fifty scholarships for tuition, several of which included maintenance. In the course of the summer of 1882 the directorship was offered to and accepted by Grove, who at once set to work to select and organise his staff, inducing Madame Lind-Goldschmidt to emerge from her retirement, and enlisting the aid, amongst others, of C. H. H. Parry, Walter Parratt, C. V. Stanford, Ernst Pauer, Franklin Taylor, and Arabella Goddard. The Royal College of Music was formally opened by the Prince of Wales, the President and Founder, on May 7, 1883, the ceremony, which was attended by Mr. Gladstone, then Prime Minister, taking place in the building previously occupied by the National Training School of Music, and presented to the Prince of Wales for the purposes of the Royal College of Music by Sir Charles Freake. Four days earlier Mr. Gladstone had offered the new director the honour of knighthood, in acknowledgment of the services he had rendered to the Art of Music in England, and in announcing Grove's decoration the Prince of Wales alluded to him as one who, 'eminent in general literature, has specially devoted himself to the preparation and publication of a *Dictionary of Music*, and has earned our gratitude by the skill and success with which he has worked in the difficult task of organising the Royal College.'

As director of the Royal College of Music Grove exercised a remarkably stimulating and fruitful influence on his pupils. Regarding himself first and foremost as the head of a family, he exhibited a truly parental interest in his young charges. Mere ability was no passport to his favour; science, as he put it, is not everything, 'life is better than efficiency,' and he was quick to recognise sterling qualities of character though unaccompanied by talent. Again holding firmly that the arts reacted on each other, and that the better and wider a musician's education, the better would be his work in music, he did all that was possible to widen the intellectual range of his students. In conversation—for he was always accessible—in his terminal addresses, on which he spent much time and thought, and in the choice of his staff, he never failed to exemplify his belief in the abiding value of culture. Thus he constantly urged his 'children,' as he called them, to read the best poetry; recommended, lent, or gave them books; and insisted on the vital importance of cultivating some intellectual interest as a resource in later life. It was truly said of him that few qualities in a student excited his displeasure more than a casual manner, a slovenly style, and above all want of reverence for great men. 'His smallest piece of advice to a student,' says Dr. Walford Davies, 'was seasoned with what some great man did or said.' He had his drawbacks, which were chiefly due to the defects of his qualities. He was too enthusiastic always to consult his dignity, he was apt to be irritated by trifles, impatient of Philistinism, and inclined to confound thoughtless levity with disloyalty. His lack of sympathy with athleticism and field sports was a disadvantage in dealing with young men, and he was not able to conceal a very intelligible preference for instrumentalists over singers. But with all deductions, throughout his eleven years' tenure of office, he exercised a notable and salutary influence on the best of the students, his interest in whom was by no means bounded by his official relations. Throughout his directorship he was in the habit of inviting select parties of pupils to the Crystal Palace concerts, where he might be seen, Saturday after Saturday throughout the season, in his seat at the back of the gallery, the centre of a group of his 'children,' with a full score in his lap, pointing out his favourite passages, and leading the applause. He also enlisted the aid of generous friends, so that, if a deserving pupil was in need of rest or change, an invitation to the country or seaside was generally forthcoming.

Grove's interest in music outside his immediate official duties was manifested in a variety of ways,—by frequent contributions to the press, by attendance at concerts and festivals, and by writing prefaces, analytical programmes, etc. He had been specially designated by Stanley to write his Memoir, but was obliged to abandon the task owing to his other engagements. He found time, however, to compile the interesting 'History of a Phrase' which appeared in the *Musical World* in 1887, and in the autumn of 1889 carried out a thorough exploration of the villages in the environs of Vienna which Beethoven frequented in the summers of the later years of his life. In the spring of 1891 he took an active part in resisting the proposed measure for the Registration of Teachers, which he considered would most injuriously affect the operations of the Royal College of Music. In the autumn of the same year he initiated the

scheme, carried out by Breitkopf & Härtel (*Times*, Sept. 15), for issuing a facsimile edition of the autograph scores of Beethoven's Symphonies. To the special Beethoven number of the *Musical Times* (Dec. 15, 1892) he contributed an interesting paper on 'The Birds in the Pastoral Symphony.' Overwork and advancing years had now begun seriously to impair Grove's health. Visits to Sir Arthur Sullivan's villa near Monte Carlo at Christmas 1892 and to Ragatz in Sept. 1893, only brought him temporary relief, and consciousness of his failing powers impelled him in Oct. 1894 to resign his directorship. In March 1896 he published his valuable and illuminating commentary on Beethoven's Symphonies. The *Scottish Musical Review* for June 1896 contains a sketch of his old friend, Madame Schumann, and his contributions to the press continued to the close of 1897. As long as health remained he showed the liveliest interest in the welfare of his old pupils, and attended the meetings of the Royal College Council. Early in 1899 his strength began to fail, and he passed away on May 28, 1900, in the old wooden house at Sydenham which he had inhabited for nearly forty years. He is buried in Ladywell Cemetery, Lewisham.

Grove's achievements are all the more remarkable when it is borne in mind that in the strict sense of the words he was neither a scholar, a linguist, nor a musician. These limitations he was never afraid to acknowledge,—see for example the preface to his book on Beethoven's Symphonies,—and he freely availed himself of the best expert aid to supplement his own shortcomings. As one of his most distinguished pupils said of him, 'he taught one to think of him as pre-eminently an *amateur*, and I am inclined to think that this pre-eminence, together with his human kindness, formed his best qualification for a great professional post.' Though he was 'no executant' he never missed any opportunity of hearing good music; his memory was retentive, and he could find his way well enough about the full score of a work with which he was familiar. As a critic he was hampered by his temperament; he hated comparisons, 'would rather love than condemn any day in the week,' and was little concerned with niceties of technique in performance. Where he shone was as a commentator, interpreter, or eulogist; in the words of one of his best friends, 'in handling the great poets or musicians, his knowledge of their outer and inner lives, their friends, surroundings, and general circumstances, together with his minute, loving study of every line and note of their works, gave him a clue to the most abstruse and difficult passages, which more practical and scientific musicians have rarely attained.' Grove's personal devotion to his musical heroes was quite extraordinary. He came to regard them as companions and friends. 'Schubert is my existence,' he wrote while engaged on the article in this Dictionary, and his feeling for Beethoven, though not so tender, was hardly less strong. Personally Grove was a most lovable and delightful man, with a genius for friendship with young and old alike, and for utilising all the means by which friendship is kept in good repair. Before concentrating himself on music he had for many years moved in the mid-stream of culture, he had travelled widely, found time to read everything new or important in art or letters, and reckoned amongst his intimates or acquaintances a very large number of the most distinguished of his contemporaries. It was characteristic of the man that he was always ready to communicate and impart the treasures of a mind thus richly stored to those who needed it most. No one could have acted more conscientiously in accordance with the advice he gave to a young friend: 'Get all the education you can, and never fail to lend a helping hand to any one who needs it.' Of his energy and versatility a curiously interesting sketch will be found in the chapter on Types in H. Taine's *Notes sur L'Angleterre* (Paris, Hachette, edition deuxième, 1872, pp. 76-77). Besides the distinctions and honours already mentioned it may be added that Grove was made a C.B. in 1894, that the late Duke of Coburg decorated him with the Cross of the Order of Merit, and that the University of Glasgow conferred on him the honorary degree of LL.D. On his retirement his pupils at the Royal College presented him with his bust by Mr. Alfred Gilbert, R.A., which he subsequently gave to the College. The teaching staff presented him with his portrait by the late Mr. Charles Furse, A.R.A. Other portraits of him were painted by Henry Philips, H. A. Olivier, and Felix Moscheles. A George Grove Memorial Scholarship has been founded at the Royal College of Music.

Besides the works already mentioned Grove translated Guizot's *Études sur les Beaux-Arts* (1853), and contributed a sketch of his visit to Nâblus to Sir Francis Galton's *Vacation Tourists and Notes of Travel in 1861* (Macmillan, 1862). He also wrote Prefaces to Otto Jahn's *Life of Mozart*, Hensel's *Mendelssohn Family*, W. S. Rockstro's *Life of Handel*, Novello's *Short History of Cheap Music*, Amy Fay's *Music Study in Germany*, *The Early Letters of Schumann*, translated by May Herbert, and Mr. F. G. Edwards's *History of Mendelssohn's 'Elijah.'* [For the sources of the above information, and for further particulars, the reader is referred to the *Life of Sir George Grove*, by C. L. Graves, Macmillan, 1904.] C. L. G.

GRUA, a family of Italian musicians who were renowned in Germany in the 18th century, concerning whose dates very little seems at present to be known with certainty. According to the *Quellen-Lexikon*, Carl Luigi Pietro Grua's name appears in the list of the court musicians at Dresden, as a male alto, in 1691,

and he was appointed vice-capellmeister in 1693; he was at Düsseldorf in 1697, where an opera, 'Telegono,' was performed. F. Walter, in his *Gesch. d. Theaters*, refers to Grua as being capellmeister at Heidelberg in 1718, and at Mannheim from 1734 onwards; but as he speaks of him in 1734 as aged thirty-four, thus making him born in 1700, he cannot be the member of the Dresden choir or the composer of 'Telegono.' Another opera, 'Camillo,' is known by an aria preserved at Berlin and Dresden. A mass and other church compositions are mentioned in the *Quellen-Lexikon*. A PAUL GRUA is mentioned by F. Walter as an organist at Mannheim in 1723, and a PETER GRUA as a violinist there in 1763. The former is possibly the Paul Grua whose death is given in the *Quellen-Lexikon* as taking place before May 17, 1798. Another PAUL GRUA, son of C. L. P. Grua, was sent at the expense of the Elector Carl Theodor to study with Padre Martini and Traetta, was a member of the Mannheim band, migrated with the band to Munich in 1778, and succeeded Bernasconi in 1784 as court capellmeister. His opera, 'Telemacco,' was performed in Munich, 1780, and a 'Miserere' by him for four voices with orchestra is at Berlin and Darmstadt. It is apparently this Paul Grua whose date of birth is given in Riemann's *Lexikon* as Feb. 2, 1754, and that of his death as July 5, 1833. A great number of compositions for the church are ascribed to him in the same book. M.

GRÜTZMACHER, FRIEDRICH WILHELM LUDWIG, a distinguished violoncellist, son of a musician, born at Dessau, March 1, 1832. His musical faculty showed itself very early, and he was thoroughly instructed in theory by F. Schneider, and in the violoncello by Drechsler. In 1848 he went to Leipzig, where he at once attracted the notice of David, and in 1849, when only seventeen, became first violoncello and solo player at the Gewandhaus, and a teacher in the Conservatorium. In 1860 he was called to Dresden as 'Kammer-Virtuos' to the King of Saxony. He visited most of the northern capitals of Europe, and was in England in 1867 and 1868, playing at the Philharmonic (May 20, 1867), Musical Union, and Crystal Palace. His compositions embrace orchestral and chamber pieces, songs, etc., besides concertos and other compositions for the violoncello. His exercises and studies are specially valuable ('Tägliche Uebungen' and 'Technologie des Violoncellspiels,' used in the Leipzig Conservatorium). We are also indebted to him for many careful editions of standard works (Beethoven's Sonatas for Pianoforte and Violoncello, Romberg's Concertos, Boccherini's Sonatas, etc. etc.), and for the revival of some forgotten works of considerable interest. As a player he had an extraordinary command of difficulties, and his style was remarkable alike for vigour, point, and delicacy. As a teacher he was greatly and deservedly esteemed, and formed a number of fine players of all the nations of Europe. He died at Dresden, Feb. 23, 1903. Of his pupils his brother LEOPOLD (*b.* Sept. 4, 1834; *d.* Feb. 26, 1900) was one of the most remarkable. He was for many years first violoncello in the Meiningen orchestra. T. P. H.

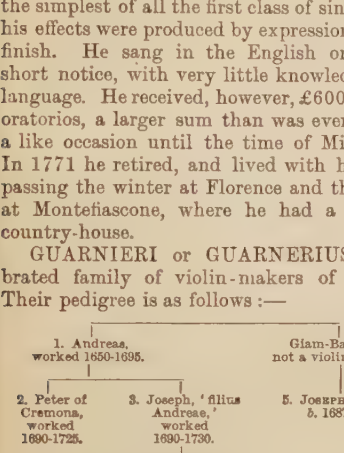
GRUND, FRIEDRICH WILHELM, born at Hamburg, Oct. 7, 1791, at first studied the violoncello and pianoforte with the intention of becoming a public performer on both instruments, but after a few successful appearances in his seventeenth year, his right hand became crippled, and he was obliged to abandon his public career. He now took a keen interest in the musical affairs of his native town, where in 1819 he was instrumental in founding the Singakademie; he remained director until 1862, when he also retired from the direction of the Philharmonische Concerte, with which he had been connected since 1828. In 1867 he took an active part with Grädener in the formation of the Hamburger Tonkünstlerverein. He died at Hamburg, Nov. 24, 1874. His numerous works include two operas, 'Mathilde' and 'Die Burg Falkenstein,' a cantata 'Die Auferstehung und Himmelfahrt Christi,' an eight-part mass, symphonies, overtures, and much chamber music. M.

GRUPPO, GRUPETTO, the Italian names for our TURN, which see. Sebastien de Brossard (*Dictionnaire de Musique*) says that the turn is called *Groppo* (or *Gruppo*) *ascendente* and *Groppo descendente*, according as the last note of the group rises or falls. The two examples given under TRILL represent the two kinds. M.

GUADAGNI, GAETANO, one of the most famous male contralti of the 18th century, was born at Lodi[1] about 1725 (Fétis) or, perhaps, later. Nothing is known of his early history. In 1747 he was singing at Parma: in 1748 he came, very young, to London as 'serious man' in a burletta troupe, with Pertici, Laschi, Frasi, etc. 'His voice attracted the notice of Handel, who assigned him the parts in the "Messiah" and "Samson," which had been originally composed for Mrs. Cibber,[2] in the studying which parts,' says Burney, 'he applied to me for assistance. During his first residence in England, which was four or five years, he was more noticed in singing English than Italian. He quitted London about 1753.' [In 1751-52 he visited Dublin, and sang there with great success. W. H. G. F.] In 1754 he sang at Paris and Versailles, after which he went to Lisbon to sing under Gizziello, and in 1755 narrowly escaped destruction during the earthquake. To Gizziello he owed much of his improvement and refinement of singing. His ideas of acting were derived much earlier from Garrick, who took as much pleasure in forming him as an actor (for 'The Fairies' of Smith), as Gizziello did afterwards in polishing his style of vocalisation. After leaving Portugal,

[1] Or Vicenza (Burney).
[2] He sang also in 'Theodora' (1750).

he acquired great reputation in all the principal theatres of Italy. There he sang the part of 'Telemacco,' written for him by Gluck, who procured his engagement in 1766 at Vienna, as 'Orfeo.' Having excited both admiration and disturbance in that capital, he returned to London in 1769. 'As an actor he seems to have had no equal on any operatic stage in Europe: his figure was uncommonly elegant and noble; his countenance replete with beauty, intelligence, and dignity; and his attitudes and gestures were so full of grace and propriety, that they would have been excellent studies for a statuary. But, though his manner of singing was perfectly delicate, polished, and refined, his voice seemed, at first, to disappoint every hearer, for he had now changed it to a soprano, and extended its compass from six or seven notes to fourteen or fifteen' (Burney). The same writer gives a curious criticism of his style, too long to quote here, from which it appears that he produced his best effects by singing unaccompanied and by fining off his notes to a thread. He had strong resentments and high notions of his own importance, which made him many enemies. He sang under J. C. Bach in the Lent of 1770, and later in the same year was heard at Verona by the Electress of Saxe, who brought him to Munich, where he remained in great favour with the Elector till the death of that prince. In 1766 he sang at Potsdam before Frederick II., who gave him a handsome gold snuff box studded with brilliants,—the finest he had ever given. In 1777 he returned to Padua. There Lord Mount-Edgcumbe heard him (1784) in a *motetto*, and found his voice still full and well-toned, and his style excellent. He insisted on Lord Mount-Edgcumbe going to his house, where he entertained him with *fantoccini*, which he exhibited on a little stage, and in which he took great delight. This writer puts his death in the next year, 1785; but Fétis fixes it much later, in 1797. He amassed considerable wealth, which he spent liberally and charitably. J. M.



GUADAGNINI, a numerous family of Italian violin-makers, of the Cremona school, though probably originating from Piacenza. The first generation consists of LORENZO and JOHN-BAPTIST; the latter seems always to have been a family name. Their exact kinship is uncertain. They worked from about 1690 to 1740. Both claimed to be pupils of Stradivarius. The violins of John-Baptist fully justify this claim. They are finely designed, and covered with a rich dark-red varnish, easily distinguishable from the glaring scarlet varnish used by the second John-Baptist, and are in all respects worthy of the Stradivarian school. John-Baptist dated from Milan, Piacenza, and Turin; he sometimes describes himself as 'Cremonensis,' sometimes as 'Placentinus.' The violins of Lorenzo are of high sterling merit, despite their divergence from the Stradivarian model. The design is often bold to the verge of uncouthness; the corners are heavy and obtrusive; the scroll is quite unlike that of Stradivarius: the varnish, though rich and good, is less brilliant. Both of these makers are highly esteemed, and good specimens command prices varying from £40 to £100. In the second generation a marked decadence is observable. The second JOHN-BAPTIST (probably a son of Lorenzo) made a large number of useful violins of the commoner sort. They are mostly of the Stradivarian pattern. He introduced that unpleasantly high-coloured varnish which is often supposed to be the special characteristic of a 'Guadagnini.' He used excellent wood, and his instruments are in good repute among orchestral players. He usually dates from Piacenza. To the same generation belongs JOSEPH (1740-60), who usually dates from Milan, and claims to be from Cremona. He was probably a brother of the second John-Baptist. His work is massive and full of character, but distinguished by a certain rudeness, in which he probably imitated Joseph Guarnerius. His brownish-yellow varnish contrasts oddly with that of his contemporary John-Baptist and those used in the earlier generation. The third and following generations of the Guadagnini family exhibit a lamentable falling off. Now and then they did their best to imitate the work of their predecessors: more often they seem to have worked at haphazard. The third generation had quite lost the art of varnishing. Sometimes the varnish is a hard and cold imitation of that of John-Baptist the second: sometimes it is a thick, dull, opaque mass, resembling paint: sometimes merely a thin albuminous wash. In the make little often remains of the Cremonese character at all. They nevertheless made a certain number of useful instruments. Members of the family are believed to be still engaged in the violin trade at Turin. E. J. P.

GUALANDI. See CAMPIOLI.

GUARDUCCI, TOMMASSO, TOSCANO, born at Montefiascone about 1720, was a pupil of the famous Bernacchi at Bologna, and became one of the best singers of his time. He appeared at most of the chief theatres of Italy with success from 1745 to 1770. In the autumn of 1766 he was brought over by Mr. Gordon, one of the managers, to the London Opera as 'first man,' with Grassi. In the spring of 1767, two serious operas, 'Caratacco' by J. C. Bach and Vento's 'Conquista del Messico,' were produced; and in these the two new singers excited more attention, and acquired more applause, than before. Guarducci was, according to Burney, 'tall and awkward in figure, inanimate as an actor, and in countenance ill-favoured and morbid; but a man of great probity and worth in his private character, and one of the most correct singers. His voice was clear, sweet, and flexible. His shake and intonations were perfect, and by long study and practice he had vanquished all the difficulties of his art, and possessed himself of every refinement.'

Prejudice at first ran high against him, but his merit made its way, and his highly-polished style was very much admired. He paid a high compliment to the then state of taste in London, by which (he told Dr. Burney) he had profited largely, in discarding superfluous and ill-selected ornaments from his singing. He was, perhaps, the simplest of all the first class of singers. All his effects were produced by expression and high finish. He sang in the English oratorios at short notice, with very little knowledge of our language. He received, however, £600 for twelve oratorios, a larger sum than was ever given on a like occasion until the time of Miss Linley. In 1771 he retired, and lived with his family, passing the winter at Florence and the summer at Montefiascone, where he had a handsome country-house. J. M.

GUARNIERI or GUARNERIUS, a celebrated family of violin-makers of Cremona. Their pedigree is as follows :—

1. Andreas Guarnieri, the first of the family [born about 1626, died Dec. 7, 1698], worked with Stradivari in the workshop of Nicholas Amati, and like Stradivari developed out of his master's model an entirely original style. Excellent instruments of his make, not very highly finished, but covered with fine orange varnish, are dated from the sign of 'St. Theresa,' in Cremona, where he was succeeded by his son 'Joseph filius Andreae.'

2 Pietro Giovanni Guarnieri (born 1655) commonly called 'Peter of Cremona'—from his describing himself in his tickets as 'Cremonensis,' i.e. *from* Cremona—emigrated from Cremona to Mantua, where he also worked 'sub signo Sanctae Teresae.' The originality of the Guarnieri knew no limits: Peter of Cremona has scarcely a point in common with his father or brother. 'There is,' says Mr. Hart, in his work on the violin, 'increased breadth between the sound-holes; the sound-hole is rounder and more perpendicular; the middle bouts are more contracted, and the model is more raised.' His varnish is often equal to that of his brother. The instruments of Peter of Cremona are valued by connoisseurs, but in a less degree than those of his nephew, Peter of Venice.

3. Joseph, 'filius Andreae' (1666–*circa* 1739), who so described himself to distinguish himself from his cousin Giuseppe Antonio (No. 5), first followed his father's pattern; but he soon developed a style of his own, in which the narrow and rapidly-widening waist, the peculiar set of the sound-holes and a more brilliant varnish, are prominent features. Good specimens command prices varying from £30 to £80. Some points first traceable in his work were adopted by his cousin. His son,

4. Peter of Venice (born 1695), adopted his uncle's method, and carried the 'Petrine' make to perfection. Unlike the rest of his family, Peter of Venice had the advantage of that splendid Venetian varnish which astonishes the beholder in the work of Montagnana. His violins, though of high model, have a fine rich tone, and are in their way complete masterpieces. But all the Guarnieri family yield in fame to the celebrated

5. Joseph del Gesù, so called from the I.H.S. which is added to his name on his tickets. Sometimes erroneously said to have been a pupil of Stradivari, with whom his work has nothing in common, he was probably a pupil of his cousin and namesake. His attention seems to have been early diverted from the school of the Amati, in which all his relatives, and Stradivari himself, imbibed their first ideas. He fixed on the works which the early Brescian makers had produced before the Amati family brought into fashion geometrical curves, extreme fineness of finish, and softness of tone. Whoever may have been the instructor of Joseph Guarnerius, his real master was Gaspar di Salò. He revived the bold and rugged outline, and the masterly carelessness, and with it the massive build and powerful tone, of the earlier school. Perfection of form and style had been attained by others: tone was the main quality sought by Joseph, and the endless variety of his work, in size, in model, and in cutting of sound-holes, probably merely indicates the many ways in which he sought it. He was sedulous in the selection of sonorous wood. He is supposed to have obtained a piece of pine of vast size, possessing extraordinary acoustic properties, from which he made most of his bellies. The bellies made from this wood have a stain or sap-mark running parallel with the finger-board on either side. This great block of wood, says Mr. Hart, 'he regarded as a mine of wealth.' He often finished an instrument more carefully, perhaps to special order: the finer examples are well characterised by Mr. Hart as 'a strange mixture of grace and boldness.' These finer examples predominate in what has been termed the 'second epoch' of his life: but the truth is that throughout his career he worked with no uniformity as to design, size, appearance, or degree of finish, and without any guide but his own genius, and the scientific principles he had wrought out by experiment. The story of Joseph Guarnerius making rude instruments while in prison out of chance pieces of wood provided by the daughter of his gaoler, who 'sold them for what they would fetch, in order to alleviate the misery of his confinement,' rests upon no satisfactory evidence. Joseph Guarnerius

made instruments often of very rude appearance, and he may or may not have been at some time imprisoned: but the story of the 'prison Josephs' has probably been invented to explain the hosts of spurious instruments which have found their way all over Europe since the middle of the 18th century. The great tone-producing powers of the 'Joseph' were thus early very well known; but the softer quality of the Amati and the Stradivarius violin was usually preferred by amateurs until the 19th century, when Paganini's extraordinary performances on an unusually fine 'Joseph' sent them up at once threefold in the market. The value of a good 'Joseph' now varies from £150 to £600, according to size, power of tone, finish, and condition. Only extraordinary specimens fetch higher prices.

No contemporary copyist imitated Joseph Guarnerius with much success. Landolfi was the best: the productions of the Testores and of Lorenzo Storioni could never be mistaken for their original. No violoncello of Joseph Guarnerius has ever been known to exist. E. J. P.

GUDEHUS, Heinrich, born March 30, 1845, at Altenhagen, near Celle (Hanover), the son of a schoolmaster there. He was at first a schoolmaster himself, and ultimately organist in Goslar. He was taught singing, first at Brunswick by Malwina Schnorr von Carolsfeld, widow of the tenor singer, and in 1870 at Berlin by Gustav Engel. On Jan. 7, 1871, he first appeared on the stage at Berlin as Nadori in a revival of 'Jessonda,' and subsequently as Tamino, and was well received, but feeling the necessity of further study, retired for a time and studied under Fräulein Luise Ress of Berlin from 1872 to 1875. In 1875 he reappeared at Riga, and sang there during the season 1875-76, and afterwards was engaged at Lübeck, Freiburg, Bremen, and in 1880 at Dresden, where he remained till 1890. During these ten years Gudehus played in many operas of Mozart, Weber, Meyerbeer, Wagner, Auber, Méhul, Bellini, Boieldieu, Verdi, etc. On leave of absence he sang with success at Vienna, Frankfort, and Bayreuth, where he made his reputation on July 28, 1882, at the second performance of 'Parsifal,' and in 1884 at the German Opera, Covent Garden, where he made his début, June 4, as Walther ('Meistersinger'). He was very successful in this part, and subsequently as Max, Lohengrin, Tannhäuser, and Tristan. On Nov. 10 and 15 of the same year he sang at the Albert Hall at the concert performances of 'Parsifal,' then introduced into England for the first time in its entirety by the Albert Hall Choral Society, under the direction of Sir J. Barnby. He played Parsifal and Tristan at Bayreuth in 1886. In 1890 and 1891 he sang in German Opera in New York, and on his return to Europe was engaged at the Berlin opera. He retired some years ago. A. C.

GUÉDRON, Pierre, born about 1565, was a singer in King Henri IV.'s band at Paris; and in 1601 he succeeded Claude Lejeune as composer to that band. Later he was appointed Surintendant de la Musique to Louis XIII.; and in co-operation with le Bailly, Mauduit, Bataille, and Boësset composed many Ballets for the Court. This group of composers did much—by securing the favour of the King and court—to bring about the great monodic revolution, in which solo songs displaced the polyphonic compositions that had long been in vogue. Between 1605 and 1630 several collections of Guédron's *Airs de Cour* for one voice, and others for four and five voices, were published by Ballard. A selection from these *Airs de Cour*, together with others by Antoine Boësset (who married Guédron's daughter Jeanne), appeared in England under the title: 'French Court Ayres with their ditties englished, of four and five parts, collected, translated, and published by Edward Filmer, Gentl. Dedicated to the Queen' (Henrietta Maria), 1629 in fol.[1] Gabriel Bataille has included several songs by Guédron in his collection, *Airs mis en tablature de luth*, Paris, Ballard, 1608, 1613 in 4°. Guédron's melodies are both simple and graceful, and his modulations are often in advance of his epoch. The form and proportion of his songs are likewise always well balanced. Many of his songs are still extant, and have been republished in modern collections. Charming examples of his work will be found in Weckerlin's *Echos du Temps Passé*. A. H. W.

GUERRERO, Francisco, one of the chief representatives of the early Spanish school of composers, was born at Seville about 1528, and received his education first from an elder brother, and then from the great Morales. At the age of eighteen he was made Maestro de capilla at Jaen, a few years afterwards obtained a similar position at Malaga; and finally in 1554 was appointed Maestro de capilla in the cathedral at Seville. At the age of sixty he undertook a pilgrimage to Palestine, an account of which was afterwards published with the title, *El viage de Jerusalem que hiza Francisco Guerrero*, etc. (Alcala, 1611). Guerrero died Nov. 8, 1599, at the advanced age of eighty-one. His most important works were 'Sacrae Cantiones' *a* 4 and 5, 1555; Magnificats (Louvain, 1563); *Liber primus Missarum F. Guerero Hispalensis Odei phonasco autore'* (Paris, Du Chemin 1566). This contains four masses in five parts, viz. 'Sancta et immaculata'; 'In te Domine speravi'; 'Congratulamini mihi'; 'Super flumina Babylonis.' Five masses in four parts, viz. 'De B. Virgine'; 'Dormendo un giorno'; 'Inter vestibulum'; 'Beata Mater'; and 'Pro Defunctis.' Also the motets 'Ave virgo sanctissima' (five parts), 'Usquequo Domine' (six parts), and 'Pater Noster' (eight parts).

There is a copy of this book in the Imperial Library at Vienna. Sandoval, in his life of

[1] Fétis and others have erred in quoting this collection under *Boësset* as a separate work.

Charles V., tells us that Guerrero presented this volume to the Emperor, and that monarch's musical reputation chiefly rests on the fact that, after hearing one of these compositions, he called Guerrero 'a thief and a plagiarist, while his singers stood astonished, as none of them had discovered these thefts till they were pointed out by the Emperor.' But they may possibly have discovered, notwithstanding their respectful astonishment, that Guerrero was guilty of nothing more than using the ordinary mannerisms of a particular school.

Books of motets were also published in 1570 and in 1589, both at Venice ; a second volume of masses appeared at Rome in 1582, and several works in MS. are mentioned in the *Quellen-Lexikon*. Eslava has printed in his *Lira-sacro-Hispana* the Passion according to St. Matthew for four voices, for Palm Sunday, and that according to St. John (five voices) for Good Friday. Also three motets for five voices and a four-part mass, 'Simile est regnum coelorum.' [ESLAVA.] [See also Pedrell's *Hispaniae Schola Musica Sacra*, vol. v.] J. R. S.-B.

GUEST, RALPH, was born in 1742 at Broseley, Shropshire. At a very early age he became a member of the choir in the church of his native place. On attaining his majority he came to London and engaged in commercial pursuits ; but the love of music induced him to enter in addition the choir of Portland Chapel. After five years he removed to Bury St. Edmunds, and entered into business on his own account. From Ford, organist of St. James's Church, Bury, he learned organ-playing, and in 1805 was appointed choir-master at St. Mary's, and later, on the erection of an organ there, its organist. He then devoted himself entirely to the profession of music. He published 'The Psalms of David,' arranged for every day in the month, retaining many of the old psalm tunes and adding about sixty new ones. He subsequently published a supplement under the title of 'Hymns and Psalms,' with music composed and adapted by him. He also composed many songs. He resigned his appointment as organist in 1822, and died, at the advanced age of eighty-eight years, in June 1830.

His son, GEORGE, was born at Bury St. Edmunds in 1771. He was initiated in music by his father, and subsequently became a chorister of the Chapel Royal under Dr. Nares and Dr. Ayrton. On the breaking of his voice he obtained in 1787 the appointment of organist at Eye, Suffolk, but gave it up in 1789 for that at Wisbech, Cambridgeshire, which he held during the remainder of his life. His compositions include anthems, hymns, glees, duets, songs, organ pieces, and pieces for a military band. He died at Wisbech, Sept. 10, 1831. W. H. H.

GUGLIELMI, PIETRO, born (according to Baini) at Massa-Carrara in May, 1727. His father was an accomplished musician and Maestro di Capella to the Duke of Modena. At the age of eighteen he was sent to supplement his home training at the Neapolitan Conservatorio di San Loreto, where he had the advantage of the tutorship of Durante [and where he composed an opera, 'Chichibio,' in 1739, his twelfth year, if the date given by Baini is to be trusted. As he is called 'maestro di capella' on the text-book, preserved at Naples, it is probable that an earlier date of birth should be given]. Volatility of temperament rather than stupidity hindered his progress in harmony, and it only required a single incident, sufficiently exciting to induce twenty-four hours of self-concentration, to make him at once evince his superiority to all his class-fellows. As soon as he left the Conservatorio he started on a tour through the principal cities of Italy, beginning with Turin, where he brought out his earliest opera (1755). Everywhere his genius was cordially acknowledged, and his best works met with general applause. He is known, however, to have made a great number of failures, which were probably the result of that careless workmanship to which artists of his self-indulgent and pleasure-loving habits are prone. From Italy he went in 1762 to Dresden, Brunswick, and finally in 1768 to London, whither his wife appears to have accompanied him, and where his success seems to have been checked by the intrigues of a musical cabal. In 1777 he returned to Naples to find that Cimarosa and Paisiello, each in the height of his fame, had eclipsed between them a reputation which his own fifteen years of absence had allowed to wane. It is to his credit that the necessity of struggling against these two younger rivals spurred Guglielmi to unwonted effort, and that the decade during which he divided with them the favour of the Neapolitan public was the culminating epoch of his mental activity. Wearied of the stage, Guglielmi finally in 1793 accepted the post of Maestro at the Vatican, and died in harness at Rome, Nov. 19, 1804.

He was a spendthrift and a debauchee ; a bad husband, and a worse father. He abandoned a faithful wife, neglected his promising children, and squandered on a succession of worthless mistresses, most of whom were picked up in the green-room, a fortune which it was his one trait of worldly wisdom to have known how to amass. But he stands high among composers of the second order, and he had the fecundity as well as the versatility of genius. His operas were numerous and their style was varied, and he composed masses, motets, hymns, and psalms for the church, and several oratorios, besides a great deal of important chamber-music for the harpsichord, violin, and violoncello. Four oratorios are mentioned in the *Quellen-Lexikon* as still extant, many motets, etc., and the number of Guglielmi's operas is given, in an article by F. Piovano in the *Rivista Musicale Italiana*, vol. xii. p. 407, as 120. Some are of

uncertain authorship, but a careful list is given. Of these by far the greater number would be uninteresting nowadays, but his 'I due Gemelli' (1789), 'La Serva innamorata' (1790), 'La Pastorella Nobile' (1785), 'Enea e Lavinia' (1785), 'I Viaggiatori' (1772), and 'La Bella Pescatrice' (1789), will always hold a considerable place in the history of music. A bravura air of Guglielmi's, 'Gratias agimus,' for high soprano, with clarinet obbligato, was long a favourite in English concert programmes. E. H. P.

GUIDETTI, GIOVANNI, born at Bologna in 1532; according to Baini came to Rome, and was a pupil of Palestrina. Palestrina being commissioned by Gregory XIII. to revise the services of the Roman Church, associated his pupil with him in the task, as having an intimate knowledge of the MSS. both in St. Peter's and in the other principal churches of Rome. Thus the real labour of the work, which he himself styles 'opus nullius ingenii, multarum tamen vigiliarum,' fell upon him. It was begun in 1576, and occupied him till 1581. The work was published in 1582—'Directorium chori . . . Opera Joannis Guidetti Bononiensis,' etc., and Guidetti had the right of sale for ten years. His preface makes the respective shares of the labour of himself and Palestrina clear. He had the drudgery, while Palestrina had the final revision and completion of all portions requiring it. It is quite consistent with Palestrina's character that he should have thus given Guidetti his full credit. The 'Directorium' went through many subsequent editions down to 1737, and was succeeded by 'Cantus ecclesiasticus passionis,' etc. (1586); 'Cantus ecclesiasticus officii majoris,' etc. (1587); and 'Praefationes in cantu firmo,' etc. (1588), all published in Rome. The aim of these works was to revive Gregorian singing in its pristine purity, and free it from the arbitrary additions and alterations then in vogue. Guidetti was a priest, and died at Rome, Nov. 30, 1592. [See Haberl's *Kirchenmusikalisches Jahrb.* for 1894, Beilage.] F. G.

GUIDO D'AREZZO (Guido Aretinus; Fra Guittone; Guy of Arezzo). Though this name is more frequently quoted by musical historians than that of any other writer of equal antiquity, it would be difficult to point to a teacher whose method has been more commonly misrepresented, or whose claim to originality of invention has been more keenly contested. The doubts which have been expressed with regard to the true nature of his contributions to musical science, may be partly accounted for by the ambiguity of his own language and partly by the retirement of his monastic life, which afforded him but little opportunity for making his learning known to the world at large; though, after his death, his fame spread so rapidly that almost every discovery made during the next hundred and fifty years was attributed to him.

According to the account generally received, he was born at or near Arezzo, not long before the close of the 10th century; and, in due time, became a monk of the Order of S. Benedict. [He is now considered to be identical with a French monk of the Benedictine monastery of St. Maur des Fosses; see Dom Germain Morin in the *Revue de l'Art Chrétien* for 1888, III., and the *Vierteljahrsschrift für Mus. Wiss.* for 1889, p. 490.] An annotation on the back of the oldest known MS. of his *Micrologus*, which he is generally believed to have written in, or about, the year 1024, asserts that he completed the work in the thirty-fourth year of his age—thus referring us to 990 as the probable year of his birth. His talent must have been very early developed; for Pope Benedict VIII., hearing that he had invented a new method of teaching music, invited him to Rome—Baronius says, in 1022—for the purpose of questioning him about it, and treated him with marked consideration, during the short time that he remained in the city. Pope Benedict died in 1024; and his successor, John XIX., after sending three special messengers to induce Guido to return, accorded him a highly honourable reception on the occasion of his second visit, and consulted him frequently on the details of his method. Guido brought with him, on this occasion, an *Antiphonarium*, written in accordance with his new system; and the Pope was so struck with this that he refused to terminate the audience until he had himself learned to sing from it. After completely mastering the system, he desired to retain the learned Benedictine in his service; but Guido, urging his delicate health as an excuse, quitted Rome under promise of returning again during the following winter. In the meantime, he accepted an invitation to the Monastery of Pomposa, in the Duchy of Ferrara, and at the request of the abbot remained there for some considerable time, for the purpose of teaching his method to the monks and the children of the choir. Here he seems to have written the greater part of his works; among them the *Micrologus*, which he dedicated to Teobaldo, Bishop of Arezzo. Finally, we hear of him as Abbot of the Monastery of Santa Croce, at Avellano, near Arezzo; and there he is believed to have died, about the year 1050.

Guido's works consist of:—

1. The *Micrologus*; described under its own heading.
2. The *Antiphonarium*; quoted by P. Martini,[1] under the title of *Formulae Tonorum*. In some early MSS. this is preceded, by way of Prologue, by—
3. *Epistola Guidonis ad Michaelem Monachum Pomposianum*; a letter written by Guido, during his second visit to Rome, to his friend, Brother Michael, at Pomposa.[2]
4. De artificio novi Cantus.[3]
5. De Divisione Monochordi secundum Boëtium.[4]

To which may be added the less clearly authenticated works—

6. De sex motibus vocum a se invicem, et dimensione earum.
7. Quid est Musica.

[1] *Saggio di Contrappunto*, tom. i. p. 32.
[2] Printed by Gerbert in his *Script.*, ii. 2-50.
[3] *Saggio di Contrappunto*, tom. i. p. 457.
[4] *Ibid.* tom. i. p. 407; where it is called De Mensura Monochordi.

8. Guidonis Aretini de Musica Dialogus. Quid est Musica.
9. De Constitutionibus in Musica.
10. De Tonis.
11. Quid est Musica. (Different from Nos. 7 and 8.)

Early MS. copies of the *Micrologus*, the *Antiphonarium*, and the *Epistola ad Michaelem* are preserved at the Vatican, the Paris Library, the British Museum, and in some other large national collections. These three works were first printed by Gerbert von Hornau,[1] in 1784; and the *Micrologus* was reprinted, at Treves, by Hermesdorff, in 1876. The MSS. of Nos. 4 and 5 are in the Medicean Library, at Florence. Nos. 6, 7, and 8 are in the Paris Library. No. 7 is also in the library of Balliol College, Oxford, where it is bound up with a copy of the *Micrologus*. No. 8, which corresponds with the preceding, in every respect except that of its more prolix title, is also in the Vatican Library.[2] The Oxford copy of this tract was once falsely attributed to S. Odo of Cluny. Nos. 9 and 10 are in the British Museum,[3] bound up with an incomplete copy (Cap. i.-xv.) of the *Micrologus*. No. 11, in the Vatican library, is really a transcript of the 'Enchiridion' of S. Odo. [A new critical edition of the *Micrologus* was brought out in 1904 by Dom A. Arnelli, O.S.B., of Monte Cassino.]

The principal inventions and discoveries with which Guido has been credited, are: the Gamut; the Hexachords, with their several Mutations; Solmisation; the Stave, including the use of Lines, and Spaces; the Clefs; Diaphonia or Discant, Organum, and Counterpoint; the Harmonic Hand; the Monochord; and even the Spinet (Polyplectrum). Kircher gravely mentions not only this last-named invention, but also Polyphonia, and the modern Stave of five Lines and four Spaces;[4] and an Italian writer of the 17th century tells us that S. Gregory (*ob.* 604) ordained that no other gamut than that of Guido should be used in the Church![5]

If, by the 'invention of the gamut,' we are to understand the addition of the note, G, at the bottom of the scale, it is quite certain that this note was sung ages before the time of Guido. Aristides Quintilianus (*flor. circa* A.D. 110) tells us that, whenever a note was wanted before the προσλαμβανόμενος (A) of the Hypodorian Mode, it was represented by the recumbent omega (ϖ). S. Odo, writing in the 10th century, represents it, exactly as Guido did, by the Greek gamma (Γ). And Guido himself speaks of it as a modern addition—'In primis ponitur Γ Graecum a modernis adjectum.'

The reconstruction of the scale itself, on the principle of the Hexachords, is another matter; and the intimate connection of this with the process of Solmisation, renders it extremely probable that the two methods were elaborated by the same bold reformer. Now, in his epistle to Brother Michael, Guido distinctly calls attention to the use of the initial syllables of the hymn, 'Ut queant laxis,' as a convenient form of *memoria technica*, and speaks of the method in terms which clearly lead to the inference that he himself was its inventor: but he does not mention the Hexachords, in any of his known works; and, when speaking of the substitution of the B rotundum for the B durum, in his *Micrologus*, he writes in the first and third persons plural with an ambiguity which makes it impossible to determine whether he is speaking of his own inventions or not; using, in one place, the expression, 'molle *dicunt*,' and, in another, '*nos* ponimus.' Still, it is difficult to read all that he has written on the subject without arriving at the conclusion that he was familiar with the principles of both systems; in which case, the first idea of both must necessarily have originated with him, though it is quite possible that the mutations[6] by which they were perfected were invented by a later teacher.

Guido's claim to the invention of the lines and spaces of the stave, and of the clefs (*Claves signatae*) associated with the former, is supported by very strong evidence indeed. In his epistle to Brother Michael, he begins by claiming the new system of teaching as his own: 'Taliter enim Deo auxiliante hoc Antiphonarium notare disposui, ut post hac leviter aliquis sensatus et studiosus cantum discat,' etc. etc.; and then, in the clearest possible terms, explains the use of the lines and spaces: 'Quanticumque ergo soni in una linea, vel in uno spacio sunt, omnes similiter sonant. Et in omni cantu quantaecumque lineae vel spacia unam eandemque habeant literam vel eundem colorem, ita ut omnia similiter sonant, tanquam si omnes in una linea fuissent.' These words set forth a distinct claim to the invention of the red and yellow lines, and the Claves signatae, or letters indicating the F and C clefs, prefixed to them; and upon these the whole principle of the four-lined stave depends, even though it cannot be proved to have been in use in its complete form until long after Guido's time.[7]

It is impossible that Guido can have invented either Discant, Organum, or Counterpoint, since he himself proposed what he believed to be an improvement upon the form of Diaphonia in common use at the time he wrote,[8] and it was not until a much later period that the Faux Bourdon was supplanted by contrapuntal forms.

The Harmonic or Guidonian Hand is a diagram, intended to facilitate the teaching of the Hexachords, by indicating the order of the sounds upon the finger-joints of the left hand.[9]

Guido himself makes no mention of this diagram in any of his writings; but tradition has ascribed it to him from time immemorial under the name of the Guidonian Hand; and Sigebertus Gemblacensis (*ob.* 1113), writing little

9 Hullah made use of the left hand for an analogous purpose.

more than half a century after his death, tells us that 'Guido affixed six letters, or syllables, to six sounds,' and 'demonstrated these sounds by the

finger-joints of the left hand,'[1] thus confirming the tradition which credits him with the triple invention of the Harmonic Hand, Solmisation, and the Hexachords. Moreover, Guido himself writes to Brother Michael of 'things, which, though difficult to write about, are very easily explained by word of mouth'; and, possibly, these may have been among them.

The Monochord was well known in the time of Pythagoras, but Guido insisted upon its constant use; and, as Dr. Burney points out, the instrument he employed must have been a fretted one—like those sometimes used, under the name of 'Intonators,' for our modern singing-classes, since the movable bridge could not have been shifted quickly enough to answer the required purpose. It was, probably, this circumstance that led to the absurd belief that Guido invented the Spinet.

To sum up our argument. It appears certain that Guido invented the principle upon which the construction of the stave is based, and the F and C clefs; but, that he did not invent the complete four-lined stave itself.

There is strong reason to believe that he invented the Hexachord, Solmisation, and the Harmonic Hand; or, at least, first set forth the principles upon which these inventions were based.

Finally, it is certain that he was not the first to extend the scale downwards to Γ ut; that he neither invented Diaphonia, Discant, Organum, nor Counterpoint; and that to credit him with the invention of the Monochord and the Polyplectrum is absurd. W. S. R.

GUIGNON, Jean-Pierre (or Giovanni Pietri Ghignone), the last man who bore the title of 'Roi des violons.' Born at Turin, Feb. 10, 1702, he was still very young when he went to Paris and began to study the violoncello, which, however, he soon exchanged for the violin. He is said to have excelled by a fine tone and great facility of bowing, and to have been a formidable rival of Léclair. In 1733 he entered the King's service, was appointed musical instructor of the Dauphin, and in 1741 obtained the revival in his favour of the antique title of 'Roi des violons et ménétriers.' He further endeavoured to revive certain obsolete regulations by which all professional musicians in France were compelled to become members of the guild of minstrels (confrérie des ménétriers) on payment of a fee to him. This, however, raised universal opposition; and the case was brought before the *Parlement*, and decided against him. The official account of the case appeared in 1751. In 1773 Guignon dropped his unprofitable title and retired from public life. He died at Versailles, Jan. 30, 1774 (or 1775, according to Fétis). He published several books of Concertos, Sonatas, and Duos. (See Roi des Violons.) P. D.

GUILDHALL SCHOOL OF MUSIC, THE, was projected by some members of an orchestral and choral society which gave occasional concerts in the Guildhall, London, in 1879, and who were also members of the Court of Common Council. On their recommendation a deputation was appointed to inquire into the need for a music school in the City of London. In Sept. 1880, the Corporation established the Guildhall School of Music in rooms in a warehouse in Aldermanbury, with Mr. Weist-Hill as principal, and Mr. C. P. Smith as secretary. There were at the beginning 62 students, their number reaching 216 by the end of the year. There were 29 professors. In July 1885, the success of the undertaking having been abundantly proved in the great increase of pupils, the first stone of a new building was laid, in Tallis Street, close to the Thames Embankment. This building was opened in 1887, and in July 1898, a large extension of the building was made available for the students. In 1892, Mr. Weist-Hill was succeeded as principal by Sir Joseph Barnby, who held the post until his death in 1896, when he was succeeded by Dr. W. H. Cummings, F.S.A., the present principal. In 1901, the present secretary, Mr. H. Saxe Wyndham, was appointed. Among those who have held positions on the teaching staff of the school, are the following:—Sir John Stainer, Sir Julius Benedict, Sir W. G. Cusins, M. Sainton, Messrs. Sims Reeves, J. T. Carrodus, H. Lazarus, J. B. Welch, T. Wingham, G. Libotton, H. C. Banister, William Winn, F. L. Moir, Ridley Prentice, Ernst Pauer, and Mme. Viard-Louis. A very large staff of professors is at present employed in teaching the students, who number nearly 3000. Those

[1] Chron. Sigeberti, ad ann. 1028.

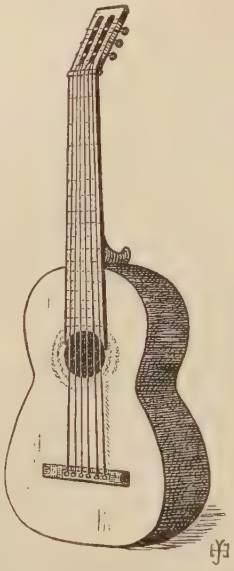
who anticipate future financial disaster for the individual performers turned out in such quantities, may be consoled by the knowledge that the teaching of amateurs has always been considered an important branch of the school's work; one of its main objects is the diffusion of musical knowledge throughout the people at large, not merely the special training of public performers. Among the chief professors at the present day (1905) are:—

Composition, etc.—Professor Prout, Dr. C. W. Pearce, Messrs. Arthur Barclay, J. F. Barnett, and Henry Gadsby.
Ear Training, etc.—Dr. F. G. Shinn.
Organ.—Dr. C. J. Frost, Dr. C. Warwick Jordan, etc.
Singing.—Mme. Bessie Cox, Mr. Ernest Ford, Mr. W. Ganz, Signor Gustave Garcia, Mr. G. Hast, Mme. Eugenie Joachim, Messrs. A. Oswald, Bantock Pierpoint, H. Sims Reeves, Arthur Thompson, and A. Visetti.
Pianoforte.—Messrs. A. Barclay, J. F. Barnett, F. Berger, J. B. Calkin, Waddington Cooke, Stanley Hawley, and W. Stevenson Hoyte.
Violin.—Miss C. Gates, Messrs. A. Gibson, B. Hollander, A. Payne, A. J. Slocombe, Henry Such, and Johannes Wolff.
Violoncello.—Mr. Hans Brousil, and Chev. E. de Munck.
Harp.—Mr. John Thomas.
Wind Instruments.—Messrs. A. Fransella, W. Malsch, C. Draper, P. Egerton, T. R. Rusby, W. Morrow, J. Matt.
Performances of operas or selections are given from time to time, under the direction of M. G. Jacobi.

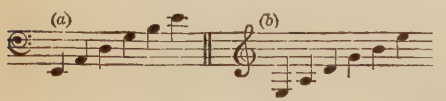
M.

GUILLAUME TELL. Rossini's thirty-seventh and last opera; in four acts, libretto by Bis and Jouy. Produced at the Académie, August 3, 1829; in London, in English, as 'Hofer the Tell of the Tyrol,' 'arranged' by Bishop, words by Planché, Drury Lane, May 1, 1830, and as 'Guillaume Tell' at the same house, Dec. 3, 1838; in Italian, as 'Guglielmo Tell' at Her Majesty's, July 11, 1839. It is usually much curtailed, but in 1856 was performed entire in Paris, and lasted from 7 till 1.

GUILMANT, Félix Alexandre, son of an organist of Boulogne, and born there March 12, 1837. He took to the organ at an early age, and before he was sixteen was made organist of S. Joseph, in 1857 Maître de Chapelle of S. Nicolas, and shortly after professor of solfeggio in the local École communale. In 1860 he became for some months a pupil of Lemmens, who heard him play and was struck by his ability. In 1871 he removed from Boulogne to Paris, and was appointed organist of the church of the Trinité, a post which he still fills. His playing made a great impression on the general public during the Paris Exhibition of 1878. He is one of the leading organ players of France, and has considerable extempore power. For his instrument he has published a 'Symphonie,' (with orchestra), seven sonatas and many concertos, etc., and arrangements—'Pièces de différents styles,' 'L'Organiste pratique,' and 'Archives des Maîtres de l'Orgue'; also a *scène lyrique*, 'Belsazar,' for soli, chorus, and orchestra; a hymn, 'Christus vincit,' etc., various masses, motets, airs, and original pieces for the harmonium. Guilmant is no stranger to England, having played at the Crystal Palace, at Sheffield, and many other places. G.



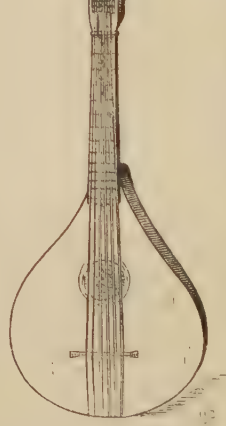
GUIMBARDE. A French name, of unknown derivation, for the Jew's-Harp. V. DE P.



GUIRAUD, Ernest, son of a French musician, was born at New Orleans, June 23, 1837, brought up amongst music, and saw his first opera, 'Roi David,' on the stage when only fifteen. He then came to Europe and entered the Conservatoire, where he obtained various distinctions, ending with the Grand Prix de Rome in 1859 for his 'Bajazet et le joueur de flûte.' His first appearance before the European public was made with a one-act opera, 'Sylvie,' which he wrote while in Rome, and which was brought out at the Opéra Comique, May 11, 1864. This was followed after a long interval by 'En Prison,' also in one act (Théâtre Lyrique, March 5, 1869), and 'Le Kobold' (July 2, 1870). Guiraud served during the war, and was in two engagements. His other operas have been 'Madame Turlupin' (1872), 'Piccolino' (1876), 'Gretna Green,' a ballet (1873). He also composed two Suites for Orchestra, the second of which was performed at the Concerts Populaires, January 28, 1872. In November 1876 Guiraud was chosen professor of harmony and accompaniment at the Conservatoire, in the room of Baptiste, deceased. In July 1878 he was decorated with the Legion of Honour, and in 1880 he was appointed professor of advanced composition at the Conservatoire, replacing Victor Massé, elected honorary professor. In 1879 his 'Piccolino' was given by Carl Rosa at Her Majesty's Theatre in London. A new opera in three acts, entitled 'Galante Aventure,' failed at the Opéra Comique (March 23, 1882); but he always retained an honourable position in concerts, where he produced selections from an unpublished opera, 'Le Feu' (Concerts du Châtelet, March 9, 1879, and Nov. 7, 1880), an overture, 'Arteveld' (do. Jan. 15, 1882), a caprice for violin and orchestra, played by Sarasate (do. April 6, 1884), an orchestral suite in four movements (do. Dec. 27, 1885), and lastly a 'Chasse Fantastique,' suggested by a passage in Victor Hugo's 'Beau Pécopin' (Concerts Lamoureux, Feb. 6, 1887). All are cleverly written for a composer who, while lacking inventive genius, yet as a professor showed an eclecticism and moderation worthy of all commendation. He died in Paris, May 6, 1892. A five-act opera, 'Frédégonde,' finished by Saint-Saëns, was produced with moderate success at the Grand Opéra, Dec. 18, 1895, and a treatise on instrumentation was left by the composer. A. J.

GUITAR (Fr. *Guitare*, obsolete *Guiterne*; Ital. *Chitarra*; Germ. *Guitarre*, obsolete *Gittern*, *Ghittern*, and *Gythorn*; Span. *Guitarra*).

The Spanish guitar is the most generally known modern representative of the numerous family which includes also the lutes and cithers. The identity of the name with the Greek κιθάρα is not to be mistaken, but the resemblance of the Spanish and ancient Greek instruments is too remote to imply derivation. The guitar is at once known by its flat back, the sides curving



inwards after the pattern of violins and other bow instruments, and suggesting its descent from some instrument with which a bow was used. The shape has, however, varied according to fashion or the fancy of the maker. The woods commonly used for the sides and back are maple, ash, service, or cherry-tree, not unfrequently adorned with inlays of rosewood or fancy woods. Old instruments of the 17th century are often highly ornamented with ivory, ebony, tortoiseshell, and mother-of-pearl. The sound-board or face is of deal and has a sound-hole, which shares in the general decoration. Hard woods, such as ebony, beech, or pear-tree, are employed for the neck and finger-board. The bridge should be of ebony, and has an ivory or metal 'nut' above the fastenings of the strings, similar to the nut of the finger-board, the open strings vibrating between. Modern guitars have six strings, three of gut and three of silk spun over with silver wire, tuned as (*a*)

The lowest is said to have been a German addition dating about 1790. The written notation is an octave higher, as (*b*). Metal screws are now used for tuning, instead of the ebony pegs of the true Spanish instrument. The intervals are marked off by metal frets upon the finger-board, and transposition to the more remote keys is effected by a capo tasto or d'astro. [See FRETS; CAPO TASTO.] Old instruments had often ten, twelve, or more strings, arranged in sets of two, tuned in unison. The Spanish guitar is always played with the fingers. The deepest strings are made to sound by the thumb, the three highest by the first, second, and third fingers, the little finger resting upon the sound-board.

The guitar and its kindred were derived from the East. In the famous Gate of Glory of Master Mateo, to the church of Santiago da Compostella in Spain, a cast of which is in the Victoria and Albert Museum, among several musical instruments may be seen one guitar-shaped, which may be assumed to represent the original Vihuela, the old Spanish viol or guitar. The sides are curved, but there is no bow held by the player; still this is no proof that a bow was not used, since the sculptor may have omitted it. The date of this masterpiece (A.D. 1188) is perhaps not more than a hundred years subsequent to the introduction of the instrument by the Moors into Spain. Carl Engel tells us (*Musical Instruments*, etc., 1874, p. 117) that a hundred years later than this date, there were several kinds of vihuela, to some of which the bow was certainly not used. There were instruments for the bow, the plectrum, and the fingers, all in use at the epoch of the outburst of romantic song in Southern Europe. At the close of the 18th century and beginning of the 19th, the Spanish guitar became a fashionable instrument on the continent. Ferdinand Sor, a Spaniard, after the Peninsular War, brought it into great notice in England, and composing for it with success banished the English guitar or Citra (Fr. *Cistre*; Ital. *Cetera*; Germ. *Zither*). This was an instrument of different shape, a wire-strung CITHER, with six open notes, two being single spun strings, and four of iron wire in pairs tuned in unison. The scale of the English Guitar thus strung was written in real pitch an octave lower.

The *technique* of the instrument was of the simplest, the thumb and first finger only being employed, if not a plectrum.

Sor's most distinguished rival was an Italian, Mauro Giuliani, who composed a concerto with band accompaniment for the 'Terz chitarra' or Third-guitar, an instrument with a shorter neck, tuned a minor third higher. This concerto, published by Diabelli, Vienna, was transcribed by Hummel for the pianoforte. Other popular composers were Legnani, Kreutzer, Nüske, Regondi, and that wayward genius Leonard Schulz. Berlioz and Paganini were both guitarists.

There is also an octave guitar, the little Portuguese MACHÊTE, with four strings, tuned  , or by guitar players often  .

In Madeira, after work in the vineyards is done for the day, the country people return

playing the Machête, perhaps twenty together, with occasionally a larger five-stringed one accompanying. A. J. H.

After the cithren had gone out of favour (it had never possessed much), long before the close of the 17th century, no instrument of the guitar type appears to have been in common use in England until the middle of the 18th century, for the various kinds of lutes supplied all needs for song accompaniments.

About 1756-58 there was introduced from the Continent the Italian form of Cetera referred to in the previous article as the English guitar. Robert Bremner, the Edinburgh and London music publisher, issued in 1758, before he left the former place (and afterwards reprinted in London) the earliest treatise known to the writer on playing the English form of the instrument. Bremner in this speaks of the guitar as 'but lately introduced into Britain.' Other early instruction books are those published by Johnson of Bow Church Yard, *circa* 1759-60; Thompson & Son, *circa* 1760; James Longman & Co., *circa* 1767, and others of later dates.

In spite of its feeble quality the English wire-strung guitar had considerable popularity, being the feminine substitute for the German Flute, then in such favour with the male amateur. The Spanish variety, introduced 1813-15, gradually displaced it, but this was not at its highest point of favour until the thirties. The wire-strung English guitars are found by several London makers, Longman & Broderip's and Preston's occurring most frequently. Those by Preston (among his later makes) have an ingenious ratchet arrangement for tuning, worked by a removable key.

As mentioned under GITTERN, instruments of the guitar type had, in the 16th and 17th centuries, no very definite nomenclature, hence much confusion in exactly identifying them from contemporary literary references. The gittern and the guitar appear to have frequently exchanged names. In one of the early dictionaries, *The English Expositor improv'd*, 10th ed., 1707, we find: 'Ghittar, an instrument like a citteron, but the strings are guts.' The gut-stringed gittern and the guitar would of course be practically identical. F. K.

GULLÌ, LUIGI, an eminent Italian pianist, was born on June 17, 1859, at Scilla, in Calabria. His early musical studies were superintended by his father, himself an amateur of some distinction. At the age of eleven he was sent to the Real Collegio di Musica in Naples, where he studied for nine years under the celebrated Beniamino Cesi. On leaving Naples he established himself in Rome as a teacher of the pianoforte. His principal success as a performer has been won in connection with the quintet of musicians whose ensemble performances have been one of the chief features of the Roman season since 1896. To this 'Società del quintetto Gullì' the founder has devoted assiduous attention with such happy results that its renderings of classical and modern chamber-music have been received with remarkable favour in Berlin, Paris, Copenhagen, Christiania, and other continental cities. Luigi Gullì's solo performances, in which a masterly technique is combined with great warmth of expression, tempered, however, with singular refinement, denote strong leanings towards the romantic school. H. A. W.

GUMPELTZHAIMER, ADAM, born about 1560 at Trostberg in Upper Bavaria, was instructed in music by Father Jodocus Enzmüller of the convent of S. Ulrich, Augsburg; in 1575 he went into the service of the Duke of Würtemberg as musician, and gained considerable reputation as composer of songs both sacred and secular. In 1581 he was appointed cantor at St. Anna, Augsburg, retaining the post till 1621. His sacred songs or hymns, generally for several voices, sometimes as many as eight, are considered almost equal to those of Lassus. He also wrote *Compendium musicae latinum-germanicum*, Augsburg, 1591, of which, up to 1675 twelve editions were published. His *Neue teutsche geistliche Lieder* for three voices, was printed at Augsburg, 1591, and a series of similar things for four voices in 1594. A *Contrapunctus* for four and five voices appeared in 1595, *Sacrorum Concentuum*, lib. 1 in 1601, lib. 2 in 1614, Ps. li. *a* 8 in 1619, and hymn-books at various dates. (See the *Quellen-Lexikon.*) He died early in Nov. 1625.

GUNG'L, JOSEPH, popular composer of dance music, born at Zsàmbèk in Hungary, Dec. 1, 1810; son of a stocking-weaver; began life as a schoolmaster. He received his first instruction in music from Semann in Buda, and having enlisted in the Austrian army, was first oboist and then bandmaster to the fourth regiment of artillery. His Hungarian March, op. 1, was the first of a long series of marches and dance music. Up to 1843 Gung'l made concert-tours with his regimental band to Munich, Augsburg, Nuremberg, Würzburg, and Frankfort, performing chiefly his own pieces, but in that year he established a band of his own at Berlin, and his publishers, Bote and Bock, are said to have made large sums by his music. On his return from America, in 1849, he was appointed musik-director to the King of Prussia; and in 1858 capellmeister to the Emperor of Austria. In the meantime he and his band had visited nearly every capital on the continent. Gung'l lived at Munich from 1864 until 1876, when he went to live at Frankfort. He died at Weimar, Jan. 31, 1889. His works are very numerous. It is stated that down to the end of 1873 he had composed 300 dances and marches, for the most part distinguished by charming melody and marked rhythm.

His daughter VIRGINIA, an opera-singer of

merit, made her first appearance at Berlin in 1871.

His nephew JOHANN, also well known as a composer of dance music, was also born at Zsàmbèk, March 5, 1828, and, like his uncle, made professional tours to every capital in Europe. He retired in 1862, and lived at Fünfkirchen in Hungary, where he died Nov. 27, 1883. F. G.

GUNN, BARNABAS, noted for his extempore playing, was organist of St. Philip's, Birmingham, which he quitted in 1730 to succeed Hine as organist of Gloucester Cathedral. A Te Deum and Jubilate in D of his composition are extant in MS. He published 'Sonatas for the Harpsichord,' and in 1736, at Gloucester, a thin 4to volume containing 'Two Cantatas and Six Songs,' the music printed on one side of the leaf only, and prefaced by a poetical address 'To all Lovers of Musick,' and a remarkable list of 464 subscribers (including Handel and most of the principal musicians of the day), subscribing for 617 copies. [Two sets of solos, one for the violoncello, the other for violin or violoncello, were published in London and at Birmingham respectively. *Quellen-Lexikon.*] He was succeeded by Martin Smith in 1740, and died in 1743. [He is said to have been born about 1680, but neither the date of birth nor of death is sufficiently authenticated. He was the subject of a bitter pamphlet-attack by William Hayes (afterwards the Oxford professor), who, himself a native of Gloucester, and an articled pupil of Hine, was no doubt galled that Gunn succeeded to the organ at the Cathedral. The pamphlet satirically accused Gunn of merely spurting ink-dots over music-paper and adding tails! Gunn good-naturedly replied with a folio music book, published by Johnson of Cheapside, 'for the author,' with the title *Twelve English Songs serious and humorous by the newly invented method of composition with the Spruzzarino* (Taphouse Library). F. K.]

BARNABY GUNN, probably a relation of the above, was organist of Chelsea Hospital from April 16, 1730, until early in 1753. W. H. H.

GUNN, JOHN, born in Edinburgh about 1765, taught the violoncello at Cambridge, and in 1790 established himself in London as professor of the violoncello and flute, and whilst there published 'Forty Scotch Airs arranged as trios for flute, violin, and violoncello'; *The Theory and Practice of Fingering the Violoncello*, 1793, with a dissertation on stringed instruments; and *The Art of Playing the German Flute on new Principles.* In 1795 he returned to Edinburgh. In 1801 he published an *Essay Theoretical and Practical, on the Application of Harmony, Thorough-bass, and Modulation to the Violoncello.* In 1807 he brought out his most important work, viz. *An Historical Inquiry respecting the Performance on the Harp in the Highlands of Scotland from the earliest Times until it was discontinued about the Year 1734*, written at the request of the National Society of Scotland. He died about 1824. His wife, ANNE, before her marriage Anne Young, was an eminent pianist. She wrote a work entitled *An Introduction to Music . . . illustrated by Musical Games and Apparatus and fully and familiarly explained* (Edinburgh, about 1803). The games and apparatus were of her invention. A second edition appeared in 1820, and a third (posthumous) in 1827. W. H. H.

GUNTRAM. Opera in three acts, by Richard Strauss; produced at Weimar, May 10, 1894.

GURA, EUGEN, born Nov. 8, 1842, at Pressern, near Saatz, Bohemia, was the son of a small schoolmaster. He received a good technical education at the Polytechnicum, Vienna, and afterwards studied art at the Vienna Academy, and at a School of Painting under Professor Anschütz (a pupil of Cornelius) at Munich. He was finally advised to adopt a musical career, and for that purpose studied singing at the Munich Conservatorium under Professor Joseph Herger, and finally, in April 1865, made his début there at the Opera as Count Liebenau in the 'Waffenschmied' (Lortzing), with such success that he obtained a two years' engagement. In 1867-70 he was engaged at Breslau, and in 1870-76 at Leipzig, where he made his reputation, both in opera and concerts, as one of the best German baritone singers of the day. He played both Donner and Gunther in the first complete performance of 'Der Ring des Nibelungen' in 1876 at Bayreuth. From 1876 to 1883 he was engaged at Hamburg. In 1882, as a member of that company, he sang in German at Drury Lane in all the operas then performed, viz. the Minister ('Fidelio'); Lysiart on revival of 'Euryanthe,' June 13; 'The Flying Dutchman,' in which he made his début, May 20; Wolfram; as Hans Sachs and King Marke on the respective productions of 'Meistersinger' and 'Tristan und Isolde,' May 30 and June 20. He made a great impression at the time, and his Hans Sachs will not readily be forgotten by those who saw it. From 1883 until his retirement from the stage in 1895, he was engaged at Munich, where on June 15, 1890, he celebrated the twenty-fifth anniversary of his first appearance on the stage, and played the title part in Cornelius's 'Barber of Bagdad.' He now sings in concerts only, being a remarkable 'lieder' singer, especially as an exponent of Loewe's ballads. On June 13 and 19, 1899, he gave vocal recitals at St. James's Hall with great effect. According to Baker, his son Hermann is also a fine baritone. A. C.

GURLITT, CORNELIUS, born at Altona, Feb. 10, 1820, was a pupil of the elder Reinecke, became organist of the principal church at Altona in 1864, and was made Kgl. Musik-Director in 1874. His compositions include two operettas and a four-act

opera, 'Scheik Hassan'; but his name is more generally known in England as the composer of endless pianoforte pieces, mostly of an educational kind, written with great facility, but possessing little individuality. He died at Altona, June 17, 1901. M.

GUSIKOW, Michael Joseph, an artist of rare musical faculty—'a true genius,' says Mendelssohn—born of poor Jewish parents and of a family which had produced musicians for more than a century, at Sklow in Poland, Sept. 2, 1806. He first played the flute and tympanon, a kind of dulcimer. At the age of seventeen he married, and a few years after discovered that weakness of the chest would not allow him to continue playing the flute. He thereupon took up the *Strohfiedel*, an instrument of the dulcimer kind, composed of strips of fir on a framework of straws, which he improved and increased in compass. (See Xylophone.) Upon this he attained extraordinary facility and power. In 1832 he and four of his relatives began a long tour, through Odessa—where he was heard by Lamartine; Kiev—where he was much encouraged by Lipinski; Moscow; and thence to south and north Germany, Paris, and Brussels. He travelled in the dress and guise of a Polish Jew—long beard, thin, pale, sad, expressive features—and excited the greatest applause by his astonishing execution and the expression which he threw into his unlikely instrument. Mendelssohn heard him at Leipzig, and called him 'a real phenomenon, a killing fellow (Mordkerl); who is inferior to no player on earth in style and execution, and delights me more on his odd instrument than many do on their pianos, just because it is so thankless. . . . I have not enjoyed a concert so much for a long time' (and see the rest—Letter, Feb. 18, 1836). But it wore him out; he was laid up at Brussels for long, and died at Aix la Chapelle, Oct. 21, 1837, adding another to the list of geniuses who have died shortly after thirty. (See Fétis, who saw much of him.) G.

GUSTAVE III., ou le Bal masqué. Opera in five acts; words by Scribe, music by Auber. Produced at the Académie, Feb. 27, 1833; in London, in an English adaptation by Planché, as 'Gustavus the Third,' at Covent Garden, Nov. 13, 1833; on April 15, 1850, at the Princess's Theatre; in Italian at Her Majesty's, March 29, 1851. The subject is identical with that of Verdi's Ballo in Maschera. G.

GUTMANN, Adolph, born at Heidelberg, Jan. 12, 1819, was a successful pianist and a prolific composer of pianoforte music of a rather ephemeral kind; the most valuable of his compositions is a set of ten Études caractéristiques. His chief claim to be remembered rests on his having been the pupil and intimate friend of Chopin. He died at Spezia, Oct. 27, 1882. M.

GUZLA. A kind of rebab, a bowed instrument with one string only, used in Illyria and Servia. The name was adopted by Prosper Mérimée as the title of a volume of Servian poems. In its primitive form, as in many savage instruments, the back is round, the belly is made of skin or parchment, and the string is of horse-hair. G.

GWENDOLINE. Opera in three acts, words by Catulle Mendès, music by A. E. Chabrier. Produced at Brussels, April 10, 1886; and at the Grand Opéra in Paris, Dec. 27, 1893. An important part is played in it by the Irish air, known in Moore's version as 'The Legacy.' M.

GYE, Frederick, born 1809, the son of a tea-merchant in the city of London. He entered upon his career as an operatic manager and impresario on the secession of Costa from Covent Garden in 1869, and remained in possession of the same theatre until 1877, when the management was handed over to his son Ernest Gye, the husband of Mme. Albani. He died Dec. 4, 1878, while staying at Dytchley, the seat of Viscount Dillon, from the effects of a gun accident, and was buried at Norwood on the 9th of the month. M.

GYMNASE DE MUSIQUE MILITAIRE. A school for educating musicians for the French military bands, founded in 1836 under the directorship of F. Berr, who died Sept. 24, 1838. Finding himself unable to carry out his views in the new school, he detailed them in a pamphlet, *De la nécessité de reconstituer sur de nouvelles bases le Gymnase de musique militaire* (Paris, 1832). Carafa succeeded Berr, and under him the Gymnase moved to the Rue Blanche, and attained to considerable dimensions, giving a complete musical education, from solfège to counterpoint, to nearly 300 pupils. It was suppressed in 1856, but it was agreed between the Ministres d'État and de la Guerre that fifty military pupils should be taught at the Conservatoire; and for these the masters of the Gymnase were retained. This arrangement has since terminated, but the examinations for conductors and sub-conductors of regimental bands are still held at the Conservatoire. G. C.

GYMNASTICS. The problem of training the hands of executive musicians, and more especially pianists, by mechanical means, attracted many inventors in the 19th century, and although none of them can hope to take the place of actual musical practice, yet some have helped players in special ways, and in the development of the muscles employed it is reasonable to suppose that gymnastics may be of great use. The earliest of the mechanical appliances seems to be the

Chiroplast, an apparatus designed to facilitate the acquirement of a correct position of the hands on the pianoforte. It was the invention of J. B. Logier, and was patented in 1814.

It consisted of a wooden framework which extended the whole length of the keyboard, and

was firmly attached to the same by means of screws. At the front of the keyboard, and therefore nearest the player, were two parallel rails, between which the hands were placed. The wrists could thus be neither raised nor lowered, but could only move from side to side. At a suitable elevation above the keys, and about six inches behind the parallel rails, was a brass rod extending the whole length of the framework, and carrying the so-called 'Finger Guides.' These were two brass frames, which could be moved along the rod to any part of the keyboard, each having five divisions, through which the thumb and four fingers were introduced. The divisions were formed of thin plates of metal, which exactly corresponded to the divisions between the keys of the instrument. They hung in a vertical position from the brass frames above mentioned to very nearly the level of the keys, and of course prevented the fingers from moving in any but a vertical direction.

To the top of each finger-guide was attached a stout brass wire with regulating screw, which pressing against the outside of the wrist, kept the hand in its proper position with regard to the arm. In addition, there was a board ruled with bass and treble staves, called the gamut board, to be placed on the music-desk, on which each note throughout the entire compass of the instrument was found written precisely above its corresponding key. This was believed to be of great service in teaching the names of the notes.

The chiroplast was designed to assist Logier in the instruction of his little daughter, seven years of age. He was then living in Ireland, and the result so fully answered his expectations that he determined to repair to Dublin (about 1814) and devote himself entirely to the propagation of his system. Here his success was so considerable, that he soon took the highest position as a pianoforte teacher.

His method included two novelties—the use of the chiroplast, and the plan of making several pupils, to the number of twelve or more, play *at the same time* on as many pianofortes. To this end he wrote a number of studies, which were published in his *First Companion to the Royal Chiroplast*, and other works, in which several studies, of various degrees of difficulty, were capable of being played simultaneously. About this part of the method great diversity of opinion existed. Many critics could perceive nothing but evil in it. Spohr, however, in a letter written from London to the *Allgemeine musikalische Zeitung*, in 1820, expresses himself favourably upon it. He was present at an examination of Logier's pupils, and writes: 'when a new study was begun in quick tempo, the less advanced pupils were unable to get in more than a note or two in each bar, but by degrees they conquered more and more of the difficulties, and in a shorter time than one could have believed possible the study went well.'

By the terms of his patent, Logier exercised the right of granting permission to other professors to make use of the chiroplast and his system, for which they paid high terms. In 1816 he succeeded in persuading so many professors of the excellences of his method, that chiroplast academies were established in the provinces, and Samuel Webbe, at that time in great vogue, commenced teaching the system in London.

So much success was not allowed to pass unchallenged, and hostile criticisms found expression in a number of pamphlets, some respectable, some merely abusive. Of these the principal were an article in the *Quarterly Musical Magazine and Review*, i. 111; *General Observations*, etc. (Edinburgh: R. Burdie, 1817); and *Strictures on Mr. Logier's System . . .*, by H. de Monti (Glasgow: W. Turnbull).

Feeling that these publications were likely to injure him, Logier determined to invite the members of the Philharmonic Society, and other musicians, to attend an examination of Webbe's pupils in London on Nov. 17, 1817. The results of this examination were published by him in a pamphlet entitled *An Authentic Account*, etc., by J. B. Logier (London: Hunter, 1818).

This was answered in a new pamphlet, *An Exposition of the New System . . .*, published by a Committee of Professors in London (London: Budd & Calkin, 1818). The committee was chosen from among those who had attended the examination on Nov. 17, and consisted of twenty-nine of the most distinguished musicians of the day—Sir George Smart, Drs. Carnaby, Crotch, and Smith, Messrs. Attwood, Ayrton, Beale, Burrows, François Cramer, Dance, Ferrari, Greatorex, Griffin, Hawes, William Horsley, Hullmandel, Knyvett, C. Knyvett, jun., Latour, Mazzinghi, Neate, Vincent Novello, Potter, Ries, Sherrington, Scheener, Walmisley, T. Welch, Williams.

Logier rejoined in a not very temperate tract —*A Refutation of the Fallacies and Misrepresentations*, etc.

For some time after this, pamphlets in abundance made their appearance. One of the most bitter was an article written by Kollmann, organist to the German Chapel, St. James's, to the *Allgemeine musikalische Zeitung* in Nov. 1821, and published at the same time in English, in which the writer is candid enough to say that he believes the principal secret of Logier's system is to rob all other professors of their pupils.

On the other side, Spohr, in the letter already quoted, says, 'There is no doubt that the chiroplast fulfils its purpose of inducing a good position of the hands and arms, and is of great service to Herr Logier, who has to look after thirty or forty children playing at once.' And in 1821 Franz Stoepel, who was sent to London by

the Prussian government to examine into Logier's system, made so favourable a report that Logier was invited to Berlin, where in 1822 he established a chiroplast school, which was so successful that the King proposed to him to instruct twenty professors in his method, with the view of spreading it over the whole of Prussia. Logier accordingly remained three years in Berlin, visiting London at intervals. Meantime the chiroplast was introduced into many of the leading towns of Germany. In Paris, Zimmerman, professor of the pianoforte at the Conservatoire, had classes on the system, but in England it gradually died out, until it may be doubted if a single professor remains who employs the method, though the apparatus is still occasionally to be met with at sales of second-hand instruments.

The chief drawback to the chiroplast, apart from the risk of the hands falling into bad positions when the support was withdrawn, was the fact that the thumb could not be passed under the fingers, nor the fingers over the thumb, as in scale-playing. Kalkbrenner, who joined Logier in the establishment of a chiroplast class in 1818, perceived this, and in consequence adopted his so-called hand-guide, which consisted simply of the lower rail or wrist-support of the chiroplast, without the finger-guides, in which simplified form it continued to be manufactured and sold. By another modification, patented by a Major Hawker in 1821, the hand was placed in a sliding wooden mould, made to fit the palm, and secured by a small strap which passed over the back of the hand, thus allowing free movement of the hand along the keyboard, and of the thumb under the fingers. (See the *Quarterly Musical Mag.* iii. p. 336.)

That Logier's proceedings were not free from charlatanism may be inferred from the fact of the establishment in Dublin of a 'Chiroplast Club,' with a special button; and that his pretensions were extravagant may be gathered from his remark to Mazzinghi, that he 'considered himself an instrument, in the hands of Providence, for changing the whole system of musical instruction.' Still, the object in view was good, and the attention drawn to the subject cannot fail to have exercised a beneficial influence on pianoforte teaching.

The next invention in order of date seems to be the DIGITORIUM, an apparatus for exercising and strengthening the fingers, intended especially for the use of pianists, but claimed by its inventor, Myer Marks, to be of great service to all who require flexible and well-trained fingers.

It consists of a small box about six inches square, provided with five keys,[1] fitted with strongly resisting springs, upon which keys such exercises as the five-finger exercises to be found in every Pianoforte School are to be practised. In addition, there are attached to the sides of the box certain appliances for stretching the fingers, and a support for the wrist.

The idea of sparing the ears of pianoforte students, and those who may be in their neighbourhood, by the use of dumb keyboards is by no means new, either in England or abroad. Great composers in boyhood, practising under difficulties, have been reduced to muffling the wires that they might practise unheard. It is difficult, however, to say when the first 'dumb piano' was manufactured. In 1847 a long article appeared in the *Allgemeine Musikalische Zeitung*, censuring the employment of the dumb piano; and Schumann in his *Musikalische Haus- und Lebensregeln* says, 'There have been invented so-called dumb keyboards; try them for a while, that you may discover them to be of no value. One cannot learn to speak from the dumb.' Though this may be incontrovertible, the question is worth consideration, whether the muscles of the fingers may not be increased in speed and endurance (two essential qualities in pianoforte playing), by a suitable course of properly regulated gymnastic exercises, just as the other muscles of the body are trained for running, rowing, etc. [From Schumann, whose piano-playing was stopped for ever by his use of an apparently home-made contrivance worn with the object of obtaining independence of the finger, one would not perhaps expect a very favourable verdict on mechanical appliances of any kind.]

That considerable muscular power was required in pianoforte playing in the latter part of the 19th century, will be seen from the following table of resistances, taken from grand pianos of various dates made by Messrs. Broadwood & Sons.[2]

	Lowest C.	Middle C.	Highest C.
1817	2⅞ oz.	2⅝ oz.	1¾ oz.
1877	4 oz.	3½ oz.	2⅝ oz.
1904	3 oz.	2½ oz.	2 oz.

The resistance offered by the Digitorium is far in excess of the above numbers; it is manufactured in three different degrees of strength, the resistance of the medium touch being no less than twelve ounces. On this account, and also because the resistance is obtained by metal springs, instead of by weights at the farther end of the lever (as in the old dumb pianos), the touch of the digitorium does not in the least resemble that of the pianoforte, but rather a heavily weighted organ-touch, and it should therefore be looked upon as a gymnastic apparatus, and by no means as a *substitute* for the pianoforte in the practice of exercises.

The question of finger gymnastics has received very full consideration from Mr. E. Ward Jackson, in a work entitled *Gymnastics for the Fingers and Wrist* (London, Metzler, & Co., 1874), in which he quotes opinions in favour of

[1] Digitoriums are occasionally made of greater compass, with black and white keys, the ordinary digitorium having only white keys.

[2] It will be seen that the amount of resistance is not equal throughout the keyboard, and that the left hand, although the weaker, has the greatest resistance to overcome.

his system of exercises not only from musicians, but from very eminent surgeons. F. T.

In the last quarter of the 19th century, an American invention obtained some considerable success, under the name of the TECHNICON. (Brotherhood's Patent.) Besides the keys, made on the pattern of the Digitorium above described, there are various appliances for strengthening the *lifting* power of the fingers, and thus helping in the acquirement of muscular control; all the springs can be regulated so as to offer different degrees of resistance. See the *Proceedings of the Mus. Association*, 1888-89, p. 1.

The invention of Christian Friedrich Seeber, called the FINGERBILDNER, is in some sort an improvement on the Chiroplast, its chief peculiarity being a small apparatus worn on each finger in order to fix its joints in the right position.

The VIRGIL PRACTICE CLAVIER is another American invention, produced in a rudimentary form in 1872, under the name of 'Techniphone.' It was patented by Almon Kincaid Virgil in 1892, as the 'Practice Clavier,' and was brought to England in 1895, when the inventor gave a practical demonstration, on May 25, in the small Queen's Hall. It is in the form of a small piano, having nearly the full compass of the keyboard. The keys are dumb (the pressure being regulated as in the digitorium), but the special property of the contrivance is that any inequality of touch in legato playing can be easily corrected. The key can be made to produce a little 'click' as it descends, and another 'click' as it ascends (both sets of clicks can be used, or caused to cease, at discretion), so that a perfect legato touch can be produced by almost mechanical means, for when the click of the rising key coincides exactly with that of the falling key it is manifest that on an ordinary piano the passage from one note to the other would be perfectly smooth. This attention to the cessation of the notes is a most important factor in the success of the appliance, the use of which is taught at the 'Virgil Clavier School,' 12 Princes Street, Hanover Square, London.

It is obvious that the aim of the modern pianist is to obtain control rather than mere brute strength, and a comparison of the resistance of the Broadwood keys at different periods will show that the player's ideal has been greatly modified since the 'seventies,' when force was everything, and fulness of tone was almost disregarded. The perfection of tone in pianoforte playing can hardly be acquired away from the instrument itself, but a certain set of gymnastic exercises invented by Mr. W. Macdonald Smith has been proved of remarkable use since the publication of his pamphlet, *From Brain to Keyboard* (see *Proceedings of the Mus. Association*, 1887-88, p. 43, and 1894-95, p. 17). Only a very few of the exercises repeat the actual movements made by the pianist during his performance, but while some of the series make the fingers independent of each other, some have for their object the development of muscles of *control* in the arms and wrists, and by others the difficulty of quickly hitting a distant note is overcome with singular success. M.

GYROWETZ, ADALBERT, prolific composer, born Feb. 19, 1763,[1] at Budweis in Bohemia. His father was a choirmaster, and taught him music at an early age; and on leaving school he studied law at Prague, though still working hard at music and composing much. A long illness left him destitute, and compelled him to take the post of private secretary to Count Franz von Fünfkirchen. The Count insisted on all his household being musical, so Gyrowetz had abundant opportunity not only of composing, but of having his compositions performed. The reception they met with induced him to visit Italy, and complete his education there. Passing through Vienna [about 1786, see Jahn's *Mozart*, iii. 306] he made the acquaintance of Mozart, who had one of his symphonies performed, and himself led Gyrowetz before the applauding audience. In Naples he studied for two years under Sala, maintaining himself by his compositions, among which were a number of concerted pieces for the lyre, written for the king, with whom it was a favourite instrument. He next went to Paris, and established his claim to the authorship of several symphonies, hitherto performed as Haydn's. In consequence the publishers bought his other compositions at high prices. The Revolution was rapidly approaching, and Gyrowetz went on to London, arriving in Oct. 1789. His reception was an honourable one; both the Prince of Wales and the Duke of Cumberland paid him marked attention; the Professional Concerts and Salomon placed his name in their programmes, and the latter engaged him as composer at the same time with Haydn. He wrote industriously and met with liberal publishers; but he was most pleased by the arrival of Haydn, whom he warmly welcomed. Gyrowetz was also engaged to write an opera, in which Mme. Mara and Pacchierotti were to have sung at the Pantheon, then recently turned into an opera-house during the rebuilding of the King's Theatre. After two or three rehearsals, however, the Pantheon was burnt down (Jan. 13, 1792) and the score of 'Semiramis' perished in the flames. On Feb. 9 he gave a benefit concert at the Hanover Square Rooms, which was brilliantly attended; but the climate disagreed with him, and he shortly after left London for Vienna. On his return, after seven years, he received an appointment in the War Department. In 1804 Baron Braun, Intendant of the two court theatres, offered him the capellmeistership,

[1] [This is the date given in his autobiography; in the *Quellen-Lexikon* Eitner gives as alternative suggestions that this must be five years too early, or that he was more than eighteen years old when he made the acquaintance of Mozart and Dittersdorf. The latter is, on the face of it, the more probable supposition, but still it must be remembered that in extreme old age people are apt to over-estimate their years.]

which he retained till 1831, producing a great number of operas, Singspiele, and operettas, besides music for melodramas and ballets. Gyrowetz was wonderfully industrious in all branches of composition, and his works, though now forgotten, were long popular. His symphonies and quartets were successful imitations of Haydn's, but still they were imitations, and were therefore bound to disappear. In 1843 his artist friends, pitying the poverty to which he was reduced—for his pension afforded him a bare subsistence—arranged a concert for his benefit, at which his 'Dorfschule' was played by Staudigl and the choristers. This really comic cantata was repeated with great success in the following year at the last concert he himself ever arranged. Shortly before his death he published his autobiography, an interesting book in many respects (Vienna, 1847).

Gyrowetz composed about thirty operas large and small [see the list in the *Quellen-Lexikon*], operettas, and Singspiele; and more than forty ballets. His first opera was 'Selico' (1804). The most successful were 'Agnes Sorel' (1806); 'Der Augenarzt' (1811); 'Robert, oder die Prüfung' (1813), approved by Beethoven himself; 'Helene' (1816), and 'Felix und Adele' (1831). Of his operettas and Singspiele, generally in one act, 'Die Junggesellen Wirthschaft' (1807), 'Der Sammtrock' (1809), 'Aladin' (1819), and 'Das Ständchen' (1823), were long favourites; of the melodramas 'Mirina' (1806) was most liked. Besides 'Semiramis,' he wrote four grand Italian operas for Vienna and Milan, of which 'Federica e Adolfo' (Vienna, 1812) was especially well received. 'Die Hochzeit der Thetis' was his most successful ballet. He composed cantatas, choruses for women's and boys' voices, Italian and German canzonets, and several songs for one and more voices. He wrote his nineteenth mass at the age of eighty-four. Of his instrumental music there are over sixty symphonies, a quantity of serenades, overtures, marches, dance-music (for the Redoutensaal); three quintets; and about sixty string-quartets, most of them published in Vienna, Augsburg, Offenbach, Paris, or London. For the pianoforte and violin he wrote about forty sonatas; thirteen books of trios, sixteen Nocturnes, for various combinations of instruments with piano, much dance-music, and many smaller pieces of different kinds. It is sad to think of so much labour, energy, and talent, and so little lasting fruit; but Gyrowetz possessed that fatal gift of facility which so often implies the want of permanence. None of his works, either for the concert-room or the stage, have survived. 'Der Augenarzt' kept the boards longer than the others. He died at Vienna, March 22, 1850, aged eighty-seven. C. F. P.

H

H (pronounced Ha) is the German name for B natural, B flat being called by the Germans B. It was originally 'B quadratum,' or ♭, a letter which would easily slip by degrees into ♮ or h. [See ACCIDENTALS, vol. i. p. 19*b*, and B, vol. i. p. 141*a*.] In solfaing it is Si.

Bach's great mass is the work which is suggested to musicians by the German name of its key 'H moll'; and in a sketch-book of 1815-16, in the margin of a passage intended for the finale of the Cello Sonata, op. 102, No. 2, Beethoven has written '*h moll schwarze Tonart.*' G.

HAAS, ALMA (*née* HOLLAENDER), was born, Jan. 31, 1847, in Ratibor, Silesia, the daughter of a schoolmaster there, who moved to Breslau when she was four years old for his children's education. At the age of ten she went to the music school of Herr Wandelt, whose system was to teach six or eight pupils simultaneously on as many pianos, and who gave public performances to bring forward his method. At fourteen years old, Frl. Hollaender appeared, with orchestra, in Mendelssohn's G minor concerto; and soon afterwards was sent to Berlin to study with Kullak, who gave her gratuitous instruction from 1862 to 1868. On Dec. 3 of the latter year she made her first appearance at a Gewandhaus concert in Leipzig, and shortly afterwards appeared with success in various German towns. In 1870 she came to London for the season, playing at one of Arditi's concerts in Hanover Square Rooms. In 1871 she again visited England, and on Jan. 1, 1872, was married to Dr. Ernst Haas, assistant in the Printed Book Department in the British Museum, and Professor of Sanskrit at University College, London. After his death in 1882, she took up her profession again, appearing at the Popular Concerts, at Franke's Chamber Concerts, and with the Heckmann Quartet; she played with the latter party in many British and foreign towns. In 1886, at the first of Henschel's London Symphony Concerts, she took part with Gompertz and Piatti in Beethoven's triple concerto. Besides many appearances in the provinces and London, with the Elderhorst and other organisations, Mme. Haas gave interesting recitals and chamber concerts in 1889 and 1890, and has more recently been associated with Mrs. Hutchinson in recitals for voice and piano. She taught at Bedford College in 1876-86; in 1887 she had an appointment at the Royal College of Music, which she shortly afterwards resigned; and in 1886 she began a most useful work at the head of the musical department in King's College, London, where she still teaches. Her playing is distinguished by very high artistic qualities; it is as an interpreter that she succeeds best, rather than in feats of virtuosity; and a certain 'intimacy' of style, which may have stood in her way with the larger and less discriminating public, has won her the admiration of cultivated musicians. M.

HABANERA. A Spanish song and dance, of an older origin than its name implies, having been introduced into Cuba from Africa by the negroes, whence it was very naturally imported into Spain. It is sometimes called 'contradanza criolla' (Creole country-dance). The rhythm, which is distinctive, has been familiarised to the rest of the world by Bizet, who wrote one in the first act of 'Carmen,' but the following bars from elsewhere will serve as a good example:—

An 'Habanera' usually consists of a short introduction and two parts of eight or sixteen bars, of which the second, should the first be in a minor key, will be in the major, and will answer the purpose of a refrain; but these rules are by no means strictly adhered to. There are many forms of the melody, a marked feature being that two triplets of semiquavers, or one such triplet and two semiquavers, are often written against the figure which occupies one whole bar in the bass of the above example. The performers opposite to each other, one of either sex, generally dance to the introduction, and accompany their singing of several 'coplas' (stanzas) with gestures, and the whole of the music is repeated for the final dance, which is slow and stately, and of a decidedly Oriental character, the feet being scarcely lifted from the ground (though an occasional pirouette is sometimes introduced), while the most voluptuous movements of the arms, hips, head, and eyes are employed to lure and fascinate each other and—the spectator. The dance, if well done, can be extremely graceful; but even in its most classic form is bound to be indecent, vividly recalling the 'Danse du Ventre' of the Algerian Café. H. V. H.

HABENECK, FRANÇOIS ANTOINE, born at Mézières, Jan. 23, 1781, eldest of three brothers (the others being named Joseph and Corentin), violinists, sons of a German musician in a French regimental band. He was a pupil of Baillot, obtained the first violin prize at the Conservatoire in 1804, and soon showed remarkable aptitude as a conductor—his real vocation. He was successively appointed assistant professor at the Conservatoire (1808-16), solo violin at the Opéra (1815), director of the Académie de Musique (1821-24), conductor of the Théâtre de l'Opéra,

conjointly with Valentino from 1824 to 1831, and alone from 1831 to 1847. In 1825 a special violin class was formed for him at the Conservatoire, which he retained till Oct. 1848. Among his pupils may be mentioned Cuvillon, Alard, Clapisson, and Léonard. Habeneck has the merit of having founded (1828) and conducted for twenty years the Société des Concerts du Conservatoire. He was also the first to introduce Beethoven's symphonies in France, steadily persevering against all opposition, and at length executing them with a force, sentiment, and delicacy, which were very remarkable. As a conductor he was exacting, and unmerciful to singers who did not keep strict time. Out of respect to Cherubini he never exercised his office of 'Inspecteur général des classes du Conservatoire,' but he was an energetic director of Louis Philippe's concerts at the Tuileries. He composed violin music (two concertos, three duos, a nocturne, caprices, and a polonaise), variations for string quartet and for orchestra, several pieces for 'Aladin' (1822), and a ballet 'Le Page inconstant' (1823). This distinguished musician and conductor died in Paris, Feb. 8, 1849. He received the Legion of Honour in 1822. For many curious anecdotes of Habeneck, see the *Mémoires* of Berlioz. G. C.

HABERBIER, Ernst, born Oct. 5, 1813, at Königsberg, was taught the pianoforte by his father, an organist, and in 1832 set up in St. Petersburg as a pianist and teacher. In 1847 he became court pianist, and in 1850 undertook extended concert-tours, playing in London with success. After perfecting a method of his own, which depended greatly on the division of passages between the two hands, he played at Copenhagen, Kiel, and Hamburg, and created a sensation in Paris in 1852. He also appeared in Russia and Germany, and settled at Bergen in Norway in 1866. He died suddenly while playing at a concert in Bergen, March 12, 1869. His compositions are mostly ephemeral works for piano, and include a set of 'Études poésies.' [Baker's *Biog. Dict. of Mus.*]

HABERL, Franz Xaver, was born April 12, 1840, at Ober Ellenbach, Bavaria, where his father was schoolmaster. He was educated at Passau, where, after his ordination (in 1862), he was appointed capellmeister of the Cathedral and Musical Director of both Seminaries. In 1867 he went to Rome, and for three years was choirmaster and organist at the church of S. Maria dell' Anima. In 1871 he was appointed successor to Joseph Schrembs as choirmaster and Inspector of the 'Dompräbends' at Ratisbon, holding both posts until 1882. In 1874 he founded at Ratisbon the well-known school of Ecclesiastical Music, of which he is still (1905) the Director. In 1879 Pius IX. appointed him Honorary Canon of the Cathedral of Palestrina. In the same year he founded a Palestrina Society to carry on the publication of the complete works of Palestrina which had been begun in 1862 by T. de Witt, J. N. Rauch, F. Espagne, and F. Commer. The completion of this work in thirty-two volumes in 1894 was mainly owing to his untiring energy, to which is due the recovery of much music by the great Roman composer that had been previously lost. Dr. Haberl has contributed much valuable matter to the *Bausteine zur Musikgeschichte*, the *Monatshefte für Musikgeschichte*, and especially to the *Cäcilien-Kalender* (published under this name from 1876 to 1885 and since carried on as the *Kirchenmusikalisches Jahrbuch*). His *Magister Choralis*, has passed through twelve editions since its first issue in 1865, and has been translated into Italian, French, Spanish, Polish, and Hungarian. After the death of Joseph Schrembs, Haberl completed the *Musica Divina*, and in 1868 he succeeded de Witt as editor of *Musica Sacra* (now the *Fliegende Blätter für Katholische Kirchenmusik*). On the completion of his great edition of Palestrina, he projected a similar issue of the works of Orlando di Lasso, the publication of which, with the assistance of Professor Sandberger, is still proceeding. He is also the editor of the Catalogues of the Cäcilien-Verein and (in conjunction with Hanisch) has published an organ accompaniment to the Ordinary of the Mass, the Gradual, and the Vesperale. Among his other publications may be mentioned *Lieder-Rosenkranz* (1866), an edition of Bertalotti's *Solfeggi* (1880), a selection of Frescobaldi's organ works (1889), the *Officium Hebdomadae Sanctae* (1887), and the *Psalterium Vespertinum* (1888). His valuable thematic Catalogue of the Archives of the Sistine Choir appeared in Eitner's *Monatshefte*, in 1888. Dr. Haberl received the Honorary degree of Dr. Theol. from the University of Würzburg in 1889. He was a member of the Papal Commission appointed by Pius IX. for the revision of the official choral-books, is a member of the Roman Academy of St. Cecilia and of the Prussian Commission for the publication of *Denkmäler Deutscher Tonkunst*, and since 1899 has been President of the Cäcilien-Verein of Germany, Austria, and Switzerland. W. B. S.

HACKBRETT. See Dulcimer.

HADDOCK, a family of Leeds musicians.

Thomas Haddock, born at Leeds in 1812; became a violoncellist of ability, and settled in Liverpool, where for a number of years he was principal violoncellist of the Philharmonic Society there. Died Sept. 22, 1893.

George Haddock, his brother, born at Killingbeck in the outskirts of Leeds, July 24, 1824. Studied under a clever violinist, Joseph Bywater of Leeds. Went to London in 1846 as pupil of Vieuxtemps and Molique. Attained skill on the instrument; was for a short time in Bradford as teacher and organiser of concerts. Established a large teaching connection in Leeds which was ultimately developed by his two sons into the Leeds College of Music, one of the most important training establishments in the north of

England. Author of *Practical School for the Violin*, 3 vols., and other technical works. He made a fine collection of old violins and violoncellos.

EDGAR A. HADDOCK, son of the above, a violinist of skill and eminence, was born at Leeds, Nov. 23, 1859, and studied under his father. In 1885 he commenced a series of 'Musical Evenings'; these, under his own and his brother's management, have grown into high-class concerts, and become the most important musical events of the district (with the exception of the Festival). To this may be added a reference to the Leeds orchestra established by the two brothers in 1898. The brothers were directors and founders of the Leeds College of Music, and the elder wrote a number of technical studies, compositions, and arrangements for the violin.

GEORGE PERCY HADDOCK, brother of the above, born at Leeds, Oct. 10, 1860. Associated with him in management of the Leeds College of Music, etc., and is a pianist, violoncellist, and organist. Has composed vocal and other music. F. K.

HADDON HALL. A romantic opera in three acts, libretto by Sydney Grundy, music by Sir A. Sullivan; produced at the Savoy Theatre, Sept. 24, 1892.

HADOW, WILLIAM HENRY, born at Ebrington, Gloucestershire, Dec. 27, 1859, was educated at Malvern College, and Worcester College, Oxford. He was a scholar of that college in 1878; gained the Barnes Scholarship in 1879, a first class in Moderations 1880, the same in Litterae Humaniores, 1882. In that year he took the degree of B.A.; that of M.A. followed in 1885, when he was appointed lecturer at Worcester College, where he was elected a fellow and tutor in 1888. In 1890 he took the Mus.B. degree, and in the same year lectured on musical form, for the professor of music, Sir John Stainer. His lectures on music were a feature of the musical life of Oxford until 1899, when Sir John Stainer was succeeded by Sir Hubert Parry. In 1897 he was appointed Proctor, and from 1899 till 1901 was University Examiner in Litt. Hum. Mr. Hadow's practical education in music began at Darmstadt in 1882, and was continued under Dr. C. H. Lloyd in 1884-85. His compositions include a cantata, 'The Soul's Pilgrimage' (published 1886); a hymn, 'Who are these?' for soli, chorus, strings, and organ; anthem, 'When I was in trouble' (1885); string quartet in E flat (played by the Heckmann Quartet at Cologne in 1887); trio, pf. and str. in G minor (played at the Musical Artists' Society in London, 1900); violin sonatas in A minor (1886) and F (the latter played by L. Straus and the composer at the Musical Artists' Society in 1892); sonata, B minor, pf. and viola (1889); andante and allegro for violin and pf. and two piano sonatas. Most of the above concerted pieces were written for, and originally performed by one or other of the Oxford Societies for chamber music. Two albums of songs show the hand of a really poetical musician, and his settings of some of them, as for example, that of Stevenson's 'Bright is the ring of words' are surpassed in beauty by very few modern English lyrics. Mr. Hadow's principal claim to fame in the musical world is chiefly based upon his writings on the art and its history, in which rare literary skill and finish are combined with thorough knowledge, the fruits of deep research, and a style that illuminates many branches of a subject generally treated too drily. The first of his literary works was a series of *Studies in Modern Music* (first series, 1892; second, 1894). *A Primer of Sonata Form* was published in 1896, and a small volume on Haydn, under the title of *A Croatian Composer*, in 1897. He is editor of the *Oxford History of Music* (see HISTORIES), and wrote the fifth volume himself, on *The Viennese Period* (1904). M.

HÄNSEL UND GRETEL. Fairy play in three tableaux, words by Adelheid Wette, music by Engelbert Humperdinck, produced at Weimar, Dec. 23, 1893; in English (translated by the late Miss Constance Bache) at Daly's Theatre, London, Dec. 26, 1894; in German at Drury Lane, June 24, 1895.

HAESER, AUGUST FERDINAND, born at Leipzig, Oct. 15, 1779; was educated at the Thomasschule, and in 1797 appointed professor and cantor at Lemgo. From 1806 to 1813 he travelled in Italy in company with his sister, a singer, then returned to Germany, and settled in 1817 at Weimar, where he was music-master in the Duke's family, and taught mathematics and Italian at the gymnasium. He was also chorus-master at the theatre, and director of music at the principal church (1829). He composed an oratorio, 'Der Glaube' [translated by W. Ball as 'The Triumph of Faith' and performed at the Birmingham Festival of 1817 (according to Riemann)]; masses, motets, and other church music; an opera, 'Die Mohren'; overtures; pf. music for two and four hands; [a capriccio for pf. with string quartet]; and eighteen songs. Two motets, in plain counterpoint throughout, melodious and finely harmonised though somewhat chromatic, are included in Hullah's Vocal Scores. He published *Versuch einer systematischen Uebersicht der Gesanglehre* (Breitkopf & Härtel, 1820); and *Chorgesangschule* (Schott, 1831), translated into French by Jelensperger; and contributed to various musical periodicals. He died at Weimar, Nov. 1, 1844. M. C. C.

HAESSLER, JOHANN WILHELM, born March 29,[1] 1747, at Erfurt, received his first musical instruction from his uncle, the organist Kittel, who had been a pupil of Sebastian Bach's. At

[1] He is stated to have died on his seventy-sixth birthday, but authorities differ as to whether the date should be March 29 (Becker, Mendel, Riemann, etc.), or 27 (Eitner).

the age of fourteen he was appointed organist of the Barfüsserkirche. His father, who was a capmaker, insisted on apprenticing him to his own trade, and on his commercial travels he became acquainted with the great musicians of his time, besides giving lessons and concerts. In 1780 he started winter concerts in Erfurt, and at the same time gave up his business. From 1790 to 1794 he spent his time in concert tours, being especially successful in London and St. Petersburg. In the former he played a concerto of Mozart's, on May 30, 1792. In 1794 he took up his residence in Moscow, where he died, March 29,[1] 1822. Many compositions for pianoforte and organ, as well as songs, are mentioned by Gerber in his *Lexicon*, and a complete list is given in the *Quellen-Lexikon*. After having published many works in Germany (sonatas for pf. 1776, 1779, 1780, 1786, 1790, etc., and pf. and vocal pieces in 1782 and 1786) he began to use opus-numbers for the works published after he lived in Moscow, and the list reaches to op. 49. The work by which his name is best known to modern pianists is a 'grande gigue' in D minor, op. 31, a piece of remarkable power and originality. The authorities for the composer's life are an autobiographical notice prefixed to the Sonata of 1786; L. Meinardus's *Aufsätze über Haessler* in the *Allgem. Mus. Ztg.* for 1865; articles in the dictionaries of Gerber, Mendel, Reimann, and Eitner. See also the *New Quarterly Musical Review*, for May 1894. M.

HÄUSER, Johann Ernst, born at Dittchenroda near Quedlinburg, 1803, deserves mention as author of a *Musikalisches Lexicon* (Meissen, 1828; second edition enlarged, 1833), a useful work in two small volumes. His other works are *Der musikalische Gesellschafter* (Meissen, 1830), a collection of anecdotes; *Neue Pianoforte Schule* (Halberstadt, 1832; second edition, Quedlinburg, 1836); *Musikalisches Jahrbüchlein* (Quedlinburg and Leipzig, 1833); and *Geschichte des . . . Kirchengesanges* (Quedlinburg and Leipzig, 1834), one vol. with examples. M. C. C.

HAFNER. A name sometimes given to Mozart's Symphony in D (Köchel, No. 385),

to distinguish it from his thirteen others in the same key. It was composed at the end of July and beginning of August 1782, for the wedding of a daughter of the Hafners at Salzburg, one of the great merchant families of Germany. On July 21, 1776, another daughter of the same house had been married, and for that occasion Mozart furnished a March and Serenade (Köchel, Nos. 249, 250) for Orchestra, also in the key of D. G.

HAGUE, Charles, Mus.Doc., was born at Tadcaster, May 4, 1769. He was taught music and the violin by an elder brother. In 1779 he removed with his brother to Cambridge, where he was placed under Manini for the violin, and Hellendaal, sen., for thorough-bass and composition. On the death of Manini in 1785, Hague removed to London and became a pupil of Salomon and Dr. Cooke. A few years afterwards he returned to Cambridge, and in 1794 took the degree of Mus. Bac., composing as his exercise an anthem with orchestral accompaniments, 'By the waters of Babylon,' which he soon afterwards published in score. In 1799, on the death of Dr. Randall, he was elected professor of music in the University. In 1801 he proceeded doctor of music. At the installation of the Duke of Gloucester as Chancellor of the University, June 29, 1811, Hague produced an ode written by Professor William Smyth, which was greatly admired. His other compositions were two collections of glees, rounds, and canons, some songs, and arrangements of Haydn's twelve grand symphonies as quintets. Dr. Hague died at Cambridge, June 18, 1821. His eldest daughter, Harriet, was an accomplished pianist, and the composer of a collection of 'Six Songs with an Accompaniment for the Pianoforte,' published in 1814. She died in 1816, aged twenty-three. W. H. H.

HAHN, Reynaldo, was born at Caracas in Venezuela on August 9, 1874, and at a very early age showed a decided taste for music. His father, a business man, entered him at the Conservatoire in Paris at the age of eleven. Here he studied solfège with Grandjouy, piano with Descombes, later, harmony with Théodore Dubois and Lavignac, and composition with Massenet, who took a particular interest in Hahn. At fourteen he published his first composition; and in March 1898 his first opera, 'L'Île de rêve,' was given at the Opéra Comique, his symphonic poem, 'Nuit d'Amour Bergamesque' having been given by Colonne's orchestra a few months before. He has published many charming songs (Chansons Grises, Chansons Latines, Chansons Espagnoles, etc.), and on Dec. 16, 1902, his opera, 'La Carmélite,' was given at the Opéra Comique. In 1905 he wrote some elaborate music for the drama, 'Esther' (Théâtre Sarah-Bernhardt). W. R. C.

HAIGH, Thomas, born in London in 1769, violinist, pianist, and composer; studied composition under Haydn in 1791 and 1792. He shortly afterwards went to reside at Manchester, but returned to London in 1801 [and died there in April 1808. (*Brit. Mus. Biog.*)]. His compositions comprise a concerto for the violin, twelve sonatas for piano and violin, sonatas and other pieces for the piano, and a few songs. His arrangements of Haydn's symphonies, and music by other composers, are very numerous. W. H. H.

HAIL COLUMBIA. One of the national patriotic songs of America. Its melody was

[1] See note on p. 270.

first composed as a march in honour of the election of Washington as President in 1789. The credit of its composition lies between a German musician named Johannes Roth and a Professor Phylo, both resident in Philadelphia at that time. Roth is stated to have the stronger claim. The piece, intended purely as an instrument one, was named 'The President's March,' and superseded a previous composition named 'General Washington's March.' In 1798 the song 'Hail Columbia' was written by Judge

The President's March
(Hail Columbia).

Joseph Hopkinson for an actor named Gilbert Fox, who sang it, adapted to the tune, 'The President's March,' at a benefit he held in that year. The song was written on political lines in favour of a party named the Federals, who, with President Adams at its head, did not favour a suggested alliance with France against England. It was spoken of by one of the papers as 'The most ridiculous bombast and adulation to the monarchical party.' Mr. Elson, in his *History of American Music*, gives a reproduction of the original music-sheet containing the song, and some further particulars of its history. F. K.

HAINL, Georges, born at Issoire, Nov. 19, 1807, died in Paris, June 2, 1873; entered the Paris Conservatoire in 1829, and gained the first violoncello prize in 1830; became in 1840 conductor of the large theatre at Lyons, where he remained till his appointment in 1863 as conductor of the Académie de Musique, Paris. From January 1864 to 1872 he also conducted the Société des Concerts at the Conservatoire. He was no great musician, but as a conductor he had fire, a firm hand and a quick eye, and possessed in an eminent degree the art of controlling large masses of performers. Hainl composed some fantasias for the violoncello. He was a generous man, and bequeathed an annual sum of 1000 francs to the winner of the first violoncello prize at the Conservatoire. He wrote *De la musique à Lyon depuis 1713 jusqu'à 1852* (published in 1852). G. C.

HAITZINGER, Anton, born March 14, 1796, at Wilfersdorf, Lichtenstein, Austria, was sent at the age of fourteen to the college of Cornenburg, whence he returned with the degree of licentiate; and soon after found a professor's place at Vienna. He continued to study music, and took lessons in harmony from Wölkert, while his tenor voice was daily developing and improving. Having received some instructions from Mozzati, the master of Mme. Schröder-Devrient, he decided to give up his profession for that of a public singer. He was first engaged at the Theatre 'an der Wien' in 1821 as *primo tenore*, and made triumphant débuts as Gianetto ('Gazza Ladra'), Don Ottavio ('Don Giovanni'), and Lindoro ('L' Italiana in Algieri'). His studies were continued under Salieri. His reputation becoming general, several new rôles were written for him, among others that of Adolar in 'Euryanthe'; and he paid successful visits to Prague, Presburg, Frankfort, Carlsruhe, etc. The last-named place became his headquarters until his retirement in 1850, when he returned to Vienna.

In 1831 and 1832 he created a deep impression at Paris with Mme. Schröder-Devrient, in 'Fidelio,' 'Oberon,' and 'Euryanthe.' In 1832 he appeared in London, with the German company conducted by M. Chelard. His voice, described by Lord Mount-Edgcumbe as 'very beautiful, and almost equal to Tramezzani's,' seemed 'throaty and disagreeable' to Chorley. The latter describes him as 'a meritorious musician with an ungainly presence; an actor whose strenuousness in representing the hunger of the imprisoned captive in the dungeon trenched closely on burlesque.' (See Moscheles' *Life*, i. 270, etc.) Haitzinger sang here again in 1833 and also in 1841, and in 1835 at St. Petersburg. He died in Vienna, Dec. 31, 1869.

Owing to the late beginning of his vocal studies, he never quite succeeded in uniting the registers of his voice; but his energy and intelligence atoned for some deficiency of this kind. There is a song by him, 'Vergiss mein nicht,' published by Fischer of Frankfort. [He published a *Lehrgang bei dem Gesang-unterricht in Musikschulen* in 1843.] He married Mme. Neumann, 'an actress of reputation,' at Carlsruhe; and established a school of dramatic singing there, from which some good pupils came forth, including his daughter. J. M.

HALE, Adam de la (*Le bossu* or *boiteux d'Arras*), one of the most prominent figures in the long line of Trouvères who contributed to the formation of the French language in the 12th and 13th centuries, was born at Arras about 1230. Tradition asserts that he owed his surname, Le Bossu, to a personal deformity; but he himself writes, 'On m'appelle bochu, mais je ne le suis mie.' His father, Maître

Henri, a well-to-do burgher, sent him to the Abbey of Vauxcelles, near Cambrai, to be educated for Holy Orders; but, falling desperately in love with a 'jeune demoiselle' named Marie, he evaded the tonsure and made her his wife. At first the lady seemed to him to unite 'all the agrémens of her sex'; but he soon regarded her with so great aversion that he effected a separation and retired, in 1263, to Douai,[1] where he appears to have resumed the ecclesiastical habit. After this, we hear little more of him, until the year 1282, when, by command of Philippe le Hardi, Robert II. Comte d'Artois, accompanied the Duc d'Alençon to Naples, to aid the Duc d'Anjou in taking revenge for the Vêpres Siciliennes. Adam de la Hale, having entered Count Robert's service, accompanied him on this expedition, and wrote some of his most important works for the entertainment of the French Court in the Two Sicilies. The story of his death at Naples, before 1288, is told by his contemporary, Jean Bodel d'Arras, in 'Le Gieus du Pelerin'; the statement in the *Dict. Hist.* of Prudhomme, that he returned to France and became a monk at Vauxcelles, is therefore incorrect.

[The first of the compositions which are held to have been the beginning of opéra-comique was 'Le jeu de la feuillée,' performed at Arras about 1262; it is a piece of considerable freedom, not to say licence, and the author had to learn a more seemly deportment before his most interesting work. This was] a Dramatic Pastoral, entitled, 'Le jeu de Robin et Marion,' written for the French Court at Naples, and first performed in 1285. Eleven personages appear in the piece, which is written in dialogue, divided into scenes, and interspersed—after the manner of an opéra-comique—with airs, couplets, and duos dialogués, or pieces in which two voices sing alternately, but never together. The work was first printed by the Société des Bibliophiles de Paris, in 1822 (thirty copies only), from a MS. in the Paris Bibliothèque Nationale; and one of the airs is given in Kiesewetter's *Schicksal und Beschaffenheit des weltlichen Gesanges* (Leipzig, 1841). [In 1872 the works of Adam de la Hale were published by Coussemaker; and in June 1896 a performance of 'Le jeu de Robin et Marion' was given at Arras in connection with the fêtes in honour of the composer. A detailed account of the performance is to be found in the *Revue du Nord* for 1895, and was also printed separately; the authentic text was edited by M. Ernest Langlois in 1896, and M. Julien Tiersot edited the complete work, adding accompaniments to the songs, and wrote an essay on it in 1897.]

Adam de la Hale was a distinguished master of the Chanson, of which he usually wrote both the words and the music. A MS. of the 14th century, in the Paris Library, contains sixteen of his Chansons *a* 3, in Rondeau form; and six Latin Motets, written on a *Canto fermo*, with florid counterpoint in the other parts. Fétis, not knowing that the Reading Rota was composed twelve or fourteen years at least before Adam de la Hale was born, erroneously describes these Chansons as the oldest known secular compositions in more than two parts. Kiesewetter printed one of them, and also one of the Motets *a* 3, in the work mentioned. [See also the *Quellen-Lexikon* under Adam.] W. S. R.

HALÉVY, Jacques François Fromental Elias, a Jew, whose real name was Lévi, born in Paris, May 27, 1799; entered the Conservatoire 1809, gained a prize in solfège 1810, and the second prize for harmony 1811. From Berton's class he passed to that of Cherubini, who put him through a severe course of counterpoint, fugue, and composition. In 1816 he competed for the Grand Prix de Rome, and gained the second prize for his cantata 'Les derniers moments du Tasse'; in the following year the second Grand Prix for 'La Mort d'Adonis,' and in 1819 his 'Herminie' carried off the Grand Prix itself. Before leaving for Rome, he composed a funeral march and 'De Profundis' in Hebrew, on the death of the Duc de Berry (Feb. 14, 1820), for three voices and orchestra, with an Italian translation; it was dedicated to Cherubini, and performed March 24, 1820, at the synagogue in the Rue St. Avoye, and published. During his stay in Italy Halévy studied hard, and in addition not only wrote an opera, and some sacred works, still in MS., but found time to learn Italian. On his return to France he encountered the usual difficulties in obtaining a hearing. 'Les Bohémiennes' and 'Pygmalion,' which he offered to the Grand Opéra, and 'Les deux Pavillons,' opéra-comique, remained on his hands in spite of all his efforts; but in 1827 'L'Artisan,' which contains some pretty couplets and an interesting chorus, was produced at the Théâtre Feydeau. This was followed in 1828 by 'Le Roi et le Bâtelier,' a little *pièce de circonstance*, composed conjointly with his friend Rifaut for the fête of Charles X. A month later, Dec. 9, 1828, he produced 'Clari,' three acts, at the Théâtre Italien, with Malibran in the principal part. It contains some remarkable music. 'Le Dilettante d'Avignon' (Nov. 7, 1829), a clever satire on the poverty of Italian librettos, was very successful, and the chorus 'Vive, vive l'Italie' speedily became popular. 'Attendre et courir,' and an unperformed ballet, 'Yelva,' date from 1830, and the ballet 'Manon Lescaut' (May 3, 1830) had a well-merited success at the Opéra, and was published for the piano. 'La Langue musicale' (1831) was less well received, owing to its poor libretto. 'La Tentation' (June 20, 1832), a ballet-opera in five acts, written conjointly with Casimir Gide (1804-1868) contains two fine choruses, which were well received. In spite of so many proofs of talent, Halévy still accepted any work

[1] Fétis says to Paris.

likely to bring him into notice; and on March 4, 1833, brought out 'Les Souvenirs de Lafleur,' a one-act comic opera written for the farewell appearances of Martin the baritone; and on May 16 of the same year 'Ludovic,' a lyric drama in two acts which had been begun by Hérold. At length, however, his opportunity arrived. To produce successfully within the space of ten months two works of such ability and in such opposite styles as 'La Juive' (Feb. 23), and 'L'Éclair' (Dec. 16, 1835), the one a grand opera in five acts, and the other a musical comedy without choruses, for two tenors and two sopranos only, was indeed a marvellous feat, and one that betokened a great master. They procured him an entrance into the Institut, where he succeeded Reicha (1836), and were followed by a large number of dramatic works, of which the following is a complete list:—

'Guido et Ginevra,' 5 acts (March 5, 1838). 'Les Treize,' 3 acts (April 15), and 'Le Shérif,' 3 acts (Sept. 2, 1839). 'Le Drapier,' 3 acts (Jan. 6, 1840). 'Le Guitarrero,' 3 acts (Jan. 21), and 'La Reine de Chypre,' 5 acts (Dec. 22, 1841). 'Charles VI.,' 5 acts (March 15, 1843). 'Le Lazzarone,' 2 acts (March 29, 1844). 'Les Mousquetaires de la Reine,' 3 acts (Feb. 3, 1846). 'Les premiers pas' (with Adam, Auber, and Carafa, 1847). 'Le Val d'Andorre,' 3 acts (Nov. 11, 1848). Incidental music for 'Prométhée enchaîné' (March 18), a translation by Léon Halévy of the tragedy of Æschylus; and 'La Fée aux Roses,' 3 acts (Oct. 1, 1849). 'La Tempesta,' 3 acts, Italian opera,[1] produced at Her Majesty's Theatre, London, June 8, 1850, and in Paris, Feb. 25, 1851. 'La Dame de Pique,' 3 acts (Dec. 28, 1850). 'Le Juif errant,' 5 acts (April 23, 1852). 'Le Nabab,' 3 acts (Sept. 1, 1853). 'Jaguarita l'Indienne,' 3 acts (May 14, 1855). 'L'Inconsolable (1855). 'Valentine d'Aubigny,' 3 acts (1856). 'La Magicienne,' 5 acts (March 17, 1858). ['Vanina d'Ornano' and 'Noé,' left unfinished at Halévy's death, were completed by Bizet.] 'Les Plages du Nil,' a cantata with orchestra and chorus; 'Italie,' 1859; many vocal pieces, and some piano music.

By devoting his life to the production of such varied and important works, Halévy proved his versatility; but the fact remains that throughout his long and meritorious career he wrote nothing finer than 'La Juive' or more charming than 'L'Éclair.' He was, unfortunately, too easily influenced, and the immense success of 'The Huguenots' (Feb. 29, 1836) had an undue effect upon him. Instead of following in the direction of Hérold, giving his imagination full play, husbanding his resources, and accepting none but interesting and poetic dramas, he over-exhausted himself, took any libretto offered him, no matter how melancholy and tedious, wrote in a hurry and carelessly, and assimilated his style to that of Meyerbeer. It must be acknowledged also that in 'Guido et Ginevra,' 'La Reine de Chypre,' and 'Charles VI.,' side by side with scenes of ideal beauty, there are passages so obscure that they seem impenetrable to light or air. His chief defects are—the abuse of the minor mode; the too frequent employment of sustained low notes in the orchestra previous to a sudden explosion on the upper registers; too constant repetition of the contrast between darkness and brilliance; vague melodic strains instead of definite rhythmical airs; and morceaux d'ensemble rendered monotonous by the same phrase being put into the mouths of characters widely opposed in sentiment. In spite, however, of such mistakes, and of much inexcusable negligence, even in his most important works, his music as a whole compels our admiration, and impresses us with a very high idea of his powers. Everywhere we see traces of a superior intellect, almost oriental in character. He excelled in stage pageantry—the entrance of a cortège, or the march of a procession; and in the midst of this stage pomp his characters are always sharply defined. We are indebted to him for a perfect gallery of portraits, drawn to the life and never to be forgotten. The man who created such a variety of such typical characters, and succeeded in giving expression to such opposite sentiments, and portraying so many shades of passion, must have been a true poet. His countrymen have never done him justice, but the many touching melodies he wrote bespeak him a man of heart, and enlist our warmest sympathies. Besides all this, he is by turns tender and persuasive, grand and solemn, graceful and refined, intellectual and witty, and invariably distinguished. We admit that his horror of vulgarity sometimes prevented his being sufficiently spontaneous, but we can pardon a few awkward or tedious phrases, a few spun-out passages, in one who possessed such a mastery of melancholy, and had equally within his grasp lofty and pathetic tragedy, and sparkling comedy thoroughly in harmony with French taste.

Not content with supplying the répertoires of three great lyric theatres, Halévy also found time to become one of the first professors at the Conservatoire. As early as 1816 he was teaching solfège, while completing his own studies; and in 1827 was appointed professor of harmony, while filling at the same time the post of Maestro al cembalo at the Italian Opéra, a post he left three years later in order to become 'chef du chant' at the Académie de Musique. In 1833 he was appointed professor of counterpoint and fugue, and in 1840, professor of composition. His lessons were learned and interesting, but he wanted method. Among his pupils may be mentioned Gounod, Victor Massé, Bazin, Deldevez, Eugène Gautier, Deffés, Henri Duvernoy, Bazille, Ch. Delioux, A. Hignard, Gastinel, Mathias, Samuel David, and Georges Bizet, who married his daughter. With Cherubini he maintained to the last an intimate and affectionate friendship which does credit to both, though sometimes put rudely to the proof. See a good story in Hiller's *Cherubini* (*Macmillan's Magazine*, July 1875). Halévy's only didactic work was an elementary book called *Leçons de lecture musicale* (Paris, Léon Escudier, 1857). This book, revised and completed after his death, is still the standard work for teaching solfège in the primary schools of Paris.

We have mentioned Halévy's entrance into the Institut in 1836; in 1854 he was elected perma-

[1] The book of this opera was adapted by Scribe from Shakespeare, originally for Mendelssohn. Its reception was extraordinarily favourable, but it is said that the melody on which Halévy was most congratulated by the artists, and which everybody was to be heard humming, was that of 'Where the bee sucks,' by Arne, which he had introduced into the part of Ariel.

JACQUES FRANÇOIS FROMENTAL ELIAS HALÉVY

nent secretary of the Académie des Beaux-Arts, and in this capacity had to pronounce eulogiums, which he published with some musical critiques in a volume entitled *Souvenirs et Portraits, études sur les beaux-arts* (1861). [A second series (*Derniers Souvenirs*, etc.) appeared in 1863.] These essays are pleasant reading; they secured Halévy reputation as a writer, which, however, he did not long enjoy, as he died of consumption at Nice, March 17, 1862. His remains were brought to Paris, and interred on the 24th of the same month. [There is an interesting notice of 'Le Val d'Andorre' in Berlioz's *Les Musiciens et la Musique*, p. 159.] G. C.

HALF-CLOSE or SEMI-CADENCE. An equivalent term for Imperfect Cadence, and the better of the two. (See CADENCE.) G.

HALIR, KARL. See JOACHIM QUARTET.

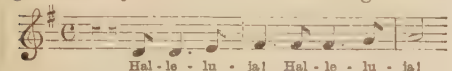
HALL, HENRY, son of Capt. Henry Hall of Windsor, where he was born about 1655, was a chorister of the Chapel Royal under Capt. Cooke. He is said to have studied under Dr. Blow, but this is doubtful. In 1674 he succeeded Theodore Coleby as organist of Exeter Cathedral, an appointment which he resigned on becoming organist and vicar choral of Hereford Cathedral in 1688. It is said that in 1698 Hall took deacon's orders to qualify himself for some preferment in the gift of the Dean and Chapter of Hereford. He composed a Te Deum in E flat, a Benedicite in C minor, and a Cantate Domino and Deus Misereatur in B flat, all which, together with five anthems, are included in the Tudway Collection (Harl. MSS. 7340 and 7342), and other anthems of considerable merit. The Te Deum has been printed with a Jubilate by William Hine, and an Evening Service by Dr. W. Hayes. Some songs and duets by Hall are included in *Thesaurus Musicus*, 1693; and *Deliciae Musicae*, 1695; and some catches in *The Monthly Masks of Vocal Music* for 1704 and 1707. Hall cultivated poetry as well as music; commendatory verses of some merit by him are prefixed to both books of Purcell's *Orpheus Britannicus*, 1698 and 1702, and to Blow's *Amphion Anglicus*, 1700. He died March 30, 1707, and was buried in the cloister of the vicars' college at Hereford.

His son, HENRY HALL, the younger, succeeded his father as organist and vicar choral of Hereford. He does not appear to have been a composer, but in poetical ability he excelled his father. Many of his poems, among them a once well-known ballad, 'All in the land of cyder,' are included in *The Grove*, 1721. He died Jan. 22, 1713, and was buried near his father. W. H. H.

HALL, MARIE, violinist, born April 8, 1884, at Newcastle-on-Tyne. Received her first lesson from her father, a harpist, then engaged in the orchestra of the Carl Rosa Opera Company. He urged her to take up the harp, but her predilection for the violin was so great, that his wishes were fortunately over-ridden, and with the further help of a local teacher, Miss Hildegarde Werner, her proficiency on the instrument of her choice was already considerable by the time she had arrived at the age of nine, when Émile Sauret heard her play, and pressed her parents to send her to the Royal Academy of Music. This was not done, but she received from time to time instruction from many professors of distinction; from Edward Elgar in Malvern in 1894, from Professor Wilhelmj in London in 1896 (for three months), from Max Mossel at the Midland Institute in Birmingham in 1898, and from Professor Kruse in 1900. The year before going to the last-mentioned teacher, she won a scholarship at the Royal Academy of Music against forty competitors, but was unable to take it up for lack of means. In 1901 she played to Kubelik, and through his influence and advice, went to Prague to study under Professor Sevcik. Her technique, which is very remarkable, and which surpasses anything hitherto achieved by a violinist of British birth, she considers to be the outcome of Sevcik's teaching, the advantage of which she enjoyed at intervals between Sept. 1901 and the summer of 1903, altogether about two years. She played for the first time at Prague in Nov. 1902, at Vienna in Jan. 1903, and at St. James's Hall, London, on Feb. 16, 1903, scoring immediate success at all these musical centres. Apparently of frail physique, she produces a powerful tone, and has given proofs of great endurance, sustaining a programme which included three great concertos, one of them the exceptionally trying one of Tchaikovsky, and by supporting the fatigues of a tour in English provincial towns, and in Bohemia. In short, Marie Hall has both talent and perseverance, and promises well for the future. W. W. C.

HALLÉ, SIR CHARLES (originally Carl Halle), was born April 11, 1819, at Hagen in Westphalia, where his father, Friedrich Halle, was organist of the principal church. His musical talents were not long in showing themselves; at the age of four he performed on the piano in public, and from that time was allowed occasionally to appear at concerts, in order that the townspeople might observe his progress; this plan, and the wisdom shown by his father in not allowing him to appear too often, no doubt did much to foster the development of his genius. In 1828, at a concert at Cassel, he attracted the notice of Spohr, and, in 1835, went to Darmstadt to study with Rinck and Gottfried Weber. In 1836 he settled in Paris, taking some lessons of Kalkbrenner, but passing most of his time in the company of such men as Chopin, Liszt, Thalberg, Berlioz, and Cherubini. In 1843 he came to England for the first time, playing at a concert given by Sivori in Hanover Square Rooms on June 16, and giving one of his own a fortnight afterwards. In 1846 he started a series of concerts in Paris with Alard and Franchomme, at which, during

the next few years, many masterpieces of chamber music were brought forward. In 1848, the disturbances caused by the Revolution of February drove him, with many other Frenchmen, to England, and within a very short time of his arrival he made Manchester his headquarters, being made conductor of the Gentlemen's Concerts in 1849, founding the St. Cecilia Society in 1850, and conducting operas in 1854-55. The Manchester Orchestra, with which his name is so closely identified, was formed in connection with the Exhibition of 1857, and gave regular concerts from January 1858 onwards. In London Hallé was always best known and most warmly appreciated as a pianist. He played the solo part of Beethoven's E flat concerto at an orchestral concert at Covent Garden, as early as May 12, 1848; and appeared in the same season at the Musical Union. His first appearance at the Philharmonic was on March 15, 1852. By that time he had established, in a very modest way, at his own house, the form of concert which afterwards became so popular as 'Hallé's Pianoforte Recitals,' such entertainments being at that time unknown in England. For several years they were carried on in this semi-private way, and in 1861 the first series was given at St. James's Hall, with a performance of Beethoven's sonatas, occupying eight recitals. The undertaking was so successful that the series of sonatas, as well as the analyses in the programmes by J. W. Davison, were repeated for two more seasons. In these early days of the Popular Concerts, and indeed throughout their career, Hallé was a frequent performer. He conducted a series of operatic performances at Her Majesty's Theatre in the winter of 1860-1861, and from 1868 onwards conducted the Reid Concert in Edinburgh. From 1873 to 1893 he was conductor of the Bristol Festival, in 1882-1885 he conducted the Sacred Harmonic Society in London, and the Liverpool Philharmonic Society. In 1880, when he received the degree of LL.D. from the University of Edinburgh, he gave the first performance in England of Berlioz's 'Faust' at Manchester. He did more than any one else in England to encourage the taste for Berlioz's music, and especially for this work, which was long in taking hold of the British public. On several occasions, he brought up the Manchester Orchestra to London, with the special object of performing important works of Berlioz. The last three series of these concerts, beginning in the autumns of 1889, 1890, and 1891, were so ill-supported that the eminent conductor was obliged to abandon them. In 1888 he had received the honour of knighthood, and in the same year married, as his second wife, Mme. Norman Neruda, the distinguished violinist, with whom he undertook two professional visits to Australia in 1890 and 1891 respectively. In 1895 they went to give concerts in South Africa. In 1893 the Royal College of Music (Manchester) having been founded mainly through Hallé's energy, he was appointed its first Principal. He died at his house, Greenheys Lane, Manchester, on Oct. 25, 1895, and was buried in the Roman Catholic cemetery at Salford.



Those who only knew him as a pianist, and only heard him in public, generally received the impression that he was a cold, not to say a dry, player; his technique was always above criticism, but it is only fair to say that in public he did not always let his individuality of temperament come out. He was often reproached with 'classical coldness' of style by those who were not aware that a really classical style is warmer than any other. In private, the humour of his nature, and the vivacity of his character, which he preserved all his life under a somewhat solemn aspect, gave to his performances a life and intellectual beauty which could not be forgotten by any who heard him then. In particular his performance of favourite things of Chopin was most remarkable for its complete sympathy with the music. As a conductor, Hallé was in the first rank; his beat was decisive, and though his manner was free from exaggeration, he imposed his own readings on his players with an amount of will-force that was unsuspected by the London public at large. He was a fine influence in musical education, and it is hardly possible to exaggerate the importance of the work he did in this way. His compilations, a *Pianoforte School* (begun 1873), and *Musical Library* (begun 1876) were carefully edited. A very interesting memoir, partly autobiographical, was published in 1896, by his son and daughter, C. E. Hallé, the well-known painter, and Marie Hallé. It contains a reproduction of the best portrait of Sir Charles Hallé, an oil-painting by Victor Mottez (1850). An excellent article appeared in the *Dict. of Nat. Biog.* (supplement, vol. ii.), from which, together with the memoir, many of the above facts are taken. M.

HALLELUJAH. A Hebrew term (*hallelu-Jah*, 'praise Jehovah') which, like Amen, Selah, Hosanna, etc., has been preserved untranslated in our Bibles. In the Latin Church the Alleluia is sung in the ordinary service, except during Lent. It is omitted from the Anglican Liturgy.

The Hallelujah Chorus in the 'Messiah' is known to every one. Handel is reported to have said that when he wrote it, 'he thought he saw Heaven opened, and the great God Himself.' The phrase 'For the Lord God omnipotent reigneth' is almost identical with that to 'I will sing . . . unto the Lord' in 'Israel in Egypt.' He has written other Hallelujahs or Allelujahs—though none to compare with this—in 'Judas Maccabæus,' the 'Occasional Oratorio,' and the Coronation Anthems—one of which was afterwards employed in 'Deborah.' For the custom

of standing during the performance of the Hallelujah Chorus, see HANDEL, p. 283.

The German accentuation of the word has led many composers, from Bach to Mendelssohn, to give it a rhythm which sounds strange to ears

accustomed to the right quantity of the Hebrew word. G.

HALLING. The most characteristic dance of Norway, deriving its origin and name from the Hallingdal, between Christiania and Bergen. It is thus described in Frederika Bremer's *Strid og Frid* ('Strife and Peace') as translated by Mary Howitt: 'Perhaps there is no dance which expresses more than the Halling the temper of the people who originated it. It begins, as it were, upon the ground, amid jogging little hops, accompanied by movements of the arms, in which, as it were, a great strength plays negligently. It is somewhat bear-like, indolent, clumsy, half-dreaming. But it wakes, it becomes earnest. Then the dancers rise up and dance, and display themselves in expressions of power, in which strength and dexterity seem to divert themselves by playing with indolence and clumsiness, or to overcome them. The same person who just before seemed fettered to the earth, springs aloft, throws himself around in the air as though he had wings. Then, after many breakneck movements and evolutions, before which the unaccustomed spectator grows dizzy, the dance suddenly assumes again its first quiet, careless, somewhat heavy character, closes as it began, sunk upon the earth.'

The Halling is generally danced by single dancers, or at most by two or three dancing in competition. It is accompanied on the Hardanger fiddle ('Hardangerfelen'), a violin strung with four stopped and four sympathetic strings. The music is generally written in 2–4 time, in a major key, and is played allegretto or allegro moderato, but a few examples are found in triple time. Many of the most popular Halling tunes were composed by Maliser-Knud, a celebrated performer on the Hardangerfelen who flourished about 1840. The following is a traditional and characteristic example :—

W. B. S.

HAMBOYS, or HANBOYS, JOHN, Mus.D.,[1] a distinguished musician, flourished about 1470. He was author of a Latin treatise, *Summa super Musicam Continuam et Discretam*, preserved in the British Museum (Add. MS. 8866), and printed in Coussemaker's *Scriptorum de Musica Medii Aevi*, i. 416. Another MS. treatise, *Quatuor principalia totius artis musicae*, contained in the same volume as the above, of which there is another MS., in the Bodleian Library, has been ascribed to Hanboys, but is believed to be the work of Simon Tunstede. W. H. H.

[1] [See C. F. A. Williams, *Degrees in Music*, pp. 15 and 16.]

The former treatise appears to be a commentary on the works of Franco, or rather the two Francos, and is chiefly interesting as giving an account of the musical notation of the time. Hanboys divides the notes into Larga, Duplex Longa, Longa, Brevis, Semibrevis, Minor, Semiminor, Minima; each of which is in its turn subdivided into perfect and imperfect notes, the former being equal in value to three of the next denomination below it, the latter to two. Considering the Larga as equivalent to the modern breve, the minim would be equal in value to our semi-demi-semiquaver. Hanboys abolishes the name crotchets used by Franco. This MS. cannot have been written much later than the middle of the 15th century, though Holinshed enumerates John Hanboys among the writers of Edward IV.'s reign, describing him as 'an excellent musician, and for his notable cunning therein made Doctor of Music.' He also appears to have written a book *Cantionum artificialium diversi generis* which has been lost. Hanboys was an ecclesiastic, if we may judge from the epithet 'reverendus,' which is given to him at the end of his treatise. A. H.-H.

HAMERIK, ASGER, born April 8, 1843, at Copenhagen, displayed in early youth great aptitude for music, and studied under Gade and Haberbier. In 1860 he was sent to Berlin to perfect himself as a pianist under Bülow, but he persisted in spending so much time on composition, that in despair of making a virtuoso of him, the great pianist advised him to let his studies take the direction he so evidently preferred. He then went to Paris and learned orchestration from Berlioz, with whom he remained nearly seven years, and whose only pupil he claims to have been. Berlioz had such confidence in him, that he often sent him to direct performances of his own works, when unable to attend personally. From 1872 to 1898 he resided in America as head of the musical Section of the Peabody Institute, as at Baltimore, where he formed an excellent orchestra, and gave a long series of symphony concerts which were remarkable for their progressiveness. His works comprise six symphonies: 1. 'poétique,' 2. 'tragique,' 3. 'lyrique,' 4. 'majestueuse,' 5. 'sérieuse,' and 6. 'spirituelle,' the last named being for strings only. Further, two choral trilogies, one on Hebrew subjects, and one on Christian, a Requiem, four operas: 'Tovelille,' 'Hjalmar and Ingeborg,' 'La Vendetta,' and

'Der Reisende'; five Northern Suites for orchestra, highly characteristic in style, and a large number of works of smaller dimensions. Hamerik shares as a composer many of the qualities and defects of his great teacher. He is not always convincing in his grander manner, and indeed ventures at times dangerously near to bombast, but he is very attractive in the lyrical vein, and possesses an unusually rich fund of that rare attribute, genuine musical humour, spontaneous and free from roughness or vulgarity. E. E.

HAMERTON, William Henry, of Irish parentage, born at Nottingham, 1795; was placed as a chorister at Christ Church Cathedral, Dublin, in 1805. In 1812 he came to London, and studied singing under Thomas Vaughan. In 1814 he returned to Dublin and established himself as a teacher. In 1815, on the resignation of John Elliott, he was appointed master of the choristers of Christ Church Cathedral, and in 1823 Gentleman of the Chapel Royal, Dublin. In 1829 he resigned his appointments and went to Calcutta, where he resided until his death. Hamerton's compositions comprise some anthems and chants; an opera, entitled 'St. Alban,' performed at Dublin in 1826, and a few songs and duets. He was also author of an elementary work published in 1824, entitled *Vocal Instructions, combined with the Theory and Practice of Pianoforte Accompaniment.* W. H. H.

HAMILTON, James Alexander, born in London in 1785, was the son of a dealer in old books, and was self-educated. Music became his particular study—the theory rather than the practice. He wrote many elementary works, including a long series of useful catechisms on musical instruments and subjects, many of which have passed through numerous editions. He also translated and edited Cherubini's *Counterpoint and Fugue*, Baillot's *Method for the Violin*, and other important treatises. He died in London, August 2, 1845. W. H. H.

HAMLET. Grand opera in five acts; words by Barbier and Carré after Shakespeare; music by Ambroise Thomas. Produced at the Académie, March 9, 1868; in London, in Italian, as 'Amleto,' at Covent Garden, June 19, 1869 (Nilsson and Santley). [Tchaikovsky's op. 67 is a 'symphonic poem' on the subject of Hamlet.] G.

HAMMER (Fr. *Marteau*; Ital. *Martello*; Germ. *Hammer*). The sound of a pianoforte is produced by hammers. In this the pianoforte resembles the dulcimer, from which we may regard it as developed by contrivance of keys and intermediate mechanism, rendering the pianoforte a sensitive instrument of touch. The pianoforte hammer consists of head and shank like any other hammer; the shank is either glued into a butt that forms its axis, or is widened out and centred or hinged with the same intention; and the blow is given and controlled by leverage more or less ingenious, and varying with the shape of the instrument and the ideas of the makers.

Both head and shank must be elastic: English makers use mahogany for the former, on which are glued thicknesses of sole or buffalo leather and specially prepared felt. Of late years single coverings of very thick felt have been successfully employed. Cedar was formerly used for the hammer shanks; the woods now employed are pear-tree, birch, or hickory. The hammers gradually diminish in size and weight from bass to treble. A. J. H.

HAMMERKLAVIER, *i.e.* Pianoforte. Beethoven's Sonata, op. 106, composed 1816-17 was superscribed by him 'Grosse Sonate für das Hammerklavier.' So is op. 101, only at that time the German fit was not so strongly on Beethoven, and he gives the Italian name as well. By op. 109 he has returned to the Italian name alone. G.

HAMMERSCHMIDT, Andreas, was born at Brüx in Bohemia in 1612. His father was a saddler in good circumstances, who, being a Protestant, was obliged in 1626, on account of the Thirty Years' War, to migrate from Brüx to Freiberg in Saxony. It was at Freiberg that Hammerschmidt received his musical education from Stephen Otto. His first appointment was that of organist in the service of the Count von Bünau, at Schloss Weesenstein, 1633, in which capacity he published his first known composition, a thanksgiving piece *a* 8 for the victory of the Saxon army at Liegnitz, 1634. In 1635 he became organist at Freiberg, and in 1639 exchanged that post for a similar one at Zittau, where he remained till his death, Oct. 29 (Nov. 8 new style), 1675. His epitaph describes him as 'that noble swan who has ceased to sing here below, but now increases the choir of angels round God's throne; the Amphion of Germany, Zittau's Orpheus.' Though his outward life was uneventful, his very numerous works made him renowned as a musician over the whole of Northern Germany, and he was on terms of intimacy with many of the most important men of his day. Of musicians he owed most to Heinrich Schütz, but he very early struck out a line of his own, which makes him of considerable importance historically, in connection with the development of the Lutheran Church Music up to Sebastian Bach. A general list of his works in chronological order, with brief notes on the more important, will serve to illustrate his position in musical history.

1. His first work, 1634, has already been mentioned.
2. In 1639, appeared two sets of dance-pieces ('Erster Fleiss, allerhand newer Paduanen, Galliarden, Balletten, Mascharaden, Arien, Concenten und Sarabanden') for viols *a* 5. Eitner remarks on the indications of tempo and expression occurring in this work unusual for the time.
3. 'Musicalische Andachten' (Musical Devotions), part i. 1638, with the sub-title 'Geistliche Concerten,' indicating their character as written in the Italian concerted style for solo voices with basso continuo. This work contains twenty-one settings of German sacred words for one to four voices.
4. 'Musicalische Andachten,' part ii. 1641, with the sub-title, 'Geistliche Madrigalien,' indicating their character as written in the choral madrigal style, in which a basso continuo is unnecessary. This work contains thirty-four pieces, 12 *a* 4, 18 *a* 5, 4 *a* 6.

5. 'Musicalische Andachten,' part iii., with the sub-title 'Geistliche Symphonien,' 1642, containing thirty-one pieces for one and two voices, with obbligato parts for two violins and viola besides basso continuo. In these works Hammerschmidt takes Schütz as his model. Winterfeld says of them, that if he is inferior to Schütz in grandeur of conception, he surpasses him in a certain elegance and grace, and in the smoothness of his part-writing.

6. 7. and 8. 'Weltliche Oden oder Liebesgesänge,' parts i. and ii., 1642-43, secular pieces for one to three voices, with instrumental accompaniment.

7. and 8. 'Dialogi oder Gespräche zwischen Gott und einer gläubigen Seele' (Dialogues between God and a faithful soul). Two parts. Dresden, 1645.

This work opened a new vein in sacred composition. Bible or chorale texts are so chosen as to give occasion to a certain dramatic contrast of the voices, thus for instance, texts of prayer or complaint, sung by one or two voices, are immediately followed or accompanied by answering texts of promise or comfort, sung by another voice. We are familiar with the later use of this device in the Church Cantatas of Sebastian Bach. It must be admitted that in Hammerschmidt there is little contrast of musical expression, and the musical development is but slight, but there is enough of quiet devotional expression. Some of the pieces are introduced by short instrumental symphonies (two violins with trombone and basso continuo). The first part of these 'Dialogues' contains twenty-two pieces, 10 *a* 2, 10 *a* 3, and 2 *a* 4; some with Latin words. It has recently been republished in modern score in the *Denkmäler der Tonkunst in Oesterreich*, Jahrgang viii. The second part consists of twelve settings of Opitz's verse translations from the Song of Solomon, for one and two voices, with accompaniment of two violins and bass, followed by three so-called arias, not arias in the later sense, but in the sense in which Bach uses the word as in his motet 'Komm, Jesu, komm.'

9. 'Musicalische Andachten,' part iv. 1646, with the sub-title, 'Geistliche Motetten und Concerten,' implying that the instruments indicated may be used for the most part *ad libitum*. This work contains forty pieces, 4 *a* 5, 8 *a* 6, 5 *a* 7, 15 *a* 8, 3 *a* 9, 2 *a* 10, 3 *a* 12.

10. In 1649 appeared a third part of Odes and Madrigals, sacred and secular, for one to five voices, with basso continuo.

11. Twenty Latin motets for one and two voices, with accompaniment. 1649.

12. 'Musicalische Andachten,' part v. 1652-53, with the sub-title 'Chor-musik,' contains thirty-one pieces *a* 5 and 6 'in Madrigalmanier.'

13. 'Musicalische Gespräche über die Sonntags- und Fest-Evangelia.' Dresden, 1655-56. This work takes up again the form of the Dialogi of 1645, and makes much use of the interweaving of Chorale and Biblical texts. It is in two parts, and contains altogether sixty-one pieces for four to seven voices, with an increased instrumental accompaniment (flutes and trumpets occasionally employed).

14. 'Fest- Buss- und Dank-Lieder,' 1658. Thirty-two hymns for five voices and five instrumental parts *ad libitum*.

From this work come most of the simple chorale-tunes by Hammerschmidt, still in use in the Lutheran Church, such as 'Meinen Jesum lass ich nicht,' 'Hosianna David's Sohn,' 'Meine Seele Gott erhebet,' etc. Besides these he had already provided thirty-eight tunes for Johann Rist's 'Katechismus-Andachten,' and ten others for Rist's 'Himmlische Lieder,' which, however, never came into general use.

15. 'Kirchen- und Tafel-Musik' (Church and Chamber-Music) 'darinnen 1, 2, 3 Vocal und 4, 5, 6 instrumental-stimmen enthalten,' Zittau, 1662. Contains twenty-two pieces, including three so-called sonatas, two of them on chorales, the third written for two alto voices in unison accompanied by two trumpets and four trombones.

16. 'xvii. Missae sacrae 5 ad 12 usque vocibus et instrumentis.' Dresden, 1663. These masses consist only of the Kyrie and Gloria, the so-called Missa Brevis of the Lutheran Church.

17. 'Sechstimmige Fest- und Zeit-Andachten.' Dresden, 1671. Contains thirty-eight settings *a* 6 in motet style, but with comparative simplicity of contrapuntal treatment. One piece from this work, 'Schaff in mir Gott ein reines Herz' (Make me a clean heart, O God), has been reprinted in Schlesinger's *Musica Sacra*, No. 41. Several others have been reprinted by F. Commer.

18. Vopelius's Gesangbuch, 1682, contains seven four-part settings of hymn-tunes by Hammerschmidt.

For many interesting remarks on Hammerschmidt, and his influence on Michael and Christoph Bach, and on the development of the later Church Cantata in Germany, see Spitta's *Bach* (English translation), vol. i. pp. 49, 55, 57-58, 60, 69, 124, 302. For MS. works and collections, see the *Quellen-Lexikon*. J. R. M.

HANCOCK, organ-builder. [See CRANG & HANCOCK.]

HAND BELLS for purposes of tune-playing or practising Change-Ringing can be obtained of all bell founders, tuned either chromatically or simply in the diatonic scale.

There are many bands of tune-players on hand bells in England, consisting of five or six men, who manipulate between them as many as sixty bells, and produce extremely pretty music. Hand bells are also used by Change-Ringers for practising the methods by which changes are produced, before performing them on the tower bells, much noise and annoyance being thus prevented; they are almost indispensable for this purpose. C. A. W. T.

HANDEL,[1] GEORGE FREDERICK, one of the greatest composers the world has ever seen, was born at Halle,[2] Lower Saxony, Feb. 23, 1685. His father, a surgeon, who was sixty-three years of age when this son was born, knew nothing of Art, and regarded it as a degrading pursuit, or, at best, as an idle amusement. Determined to raise his son in the social scale, he thought to do so by making him a lawyer, and to this end he strove in every way to stifle the alarming symptoms of musical genius which appeared almost in infancy, while he refused even to send the child to school, lest there, among other things, he should also learn his notes. In spite of this, some friendly hand contrived to convey into the house a clavichord which was concealed in a garret, where, without being discovered, the boy taught himself to play.

When he was seven years old, his father set out on a journey to visit a son by a former marriage, who was *valet-de-chambre* to the Duke of Saxe Weissenfels. George begged to be allowed to go too; his request was denied, but, with the persistence of purpose which characterised him through life, he determined to follow the carriage on foot, and actually did so for a considerable distance, a proceeding which

[1] The name is always spelt *Händel* by German writers. It was spelt at first, in England, *Hendel*, a form used, like *Hendal*, by the composer while in Italy. The family-name had been spelt *Händel*, *Hendel*, *Hendeler*, *Händeler*, and *Hendtler*, but most correctly *Händel* (Förstemann, *G. F. Haendel's Stammbaum*, fol. Leipzig, 1844, very incorrectly quoted by Fétis).

[2] A woodcut of the house, No. 4 Grosser Schlamme, from a photograph by Klingemann, Mendelssohn's friend, was given in the *Illustrated London News* for June 25, 1859, and as a frontispiece to the Book of Words of the Handel Festival, 1877. The actual house was indeed represented there, but the adjacent house was in so prominent a place in the photograph that it might easily have been mistaken for the true birthplace. More recent photographs, showing it in its right proportion, are in the special Handel number of the *Musical Times*, Dec. 14, 1893, and in C. F. Abdy Williams's *Handel*.

resulted in his getting his way. At Weissenfels he was not long in making friends among the musicians of the Duke's chapel, who gave him opportunities of trying his hand on the organ. One day, after the service, he was lifted on to the organ stool, and played in such a manner as to surprise every one, and to attract the attention of the Duke, who, on making inquiries, found out the state of the case, and sent for both father and son. He spoke kindly to the latter; to the former he represented that such genius as that of his son should be encouraged. The reluctant surgeon yielded to these arguments, and from that time the little Handel was emancipated.

He now became a pupil of Zachau, organist of the cathedral at Halle, under whom he studied composition, in the forms of canon, counterpoint, and fugue, and practised on the organ, the harpsichord, the violin, and the hautboy, for which last instrument he had a special predilection. After three years, during which time he composed a sacred motet each week as an exercise, his master confessed that the pupil knew more than himself, and Handel was sent to Berlin about 1696. Here he made the acquaintance of the two composers, Buononcini and Attilio Ariosti, whom in after years he was to meet again in London. Ariosti received him kindly, and warmly admired his talents; but Buononcini, whose disposition was sombre and harsh, treated him at first with scorn and then with jealous dislike. Handel's wonderful powers of improvisation on both organ and harpsichord caused him to be regarded here as a prodigy. The Elector wished to attach him to his Court, and to send him to Italy; but Handel's father thought this undesirable, and the boy was, therefore, brought back to Halle, where he set to work again with Zachau, 'copying and composing large quantities of music . . . , and working constantly to acquire the most solid knowledge of the science.' In 1697 he lost his father, and it became necessary for him to work for his own subsistence and the support of his mother. [He obtained the appointment of organist to the Schloss- und Domkirche, Halle, in 1702, and entered the university of his native place in the same year.] He went [in 1703] to Hamburg, where the German Opera-house, under the direction of the famous composer, Reinhard Keiser, enjoyed a great reputation. Young Handel entered the orchestra as 'violino di ripieno,' and amused himself by affecting to be an ignoramus, 'a man who could not count five.' But it happened that Keiser was involved by his partner in some unsuccessful speculations, and was forced to hide for a time from his creditors. During his absence, Handel took his place at the harpsichord in the orchestra, and, his real powers being made manifest, he remained there permanently. He made here the acquaintance of the composer Telemann, and of Mattheson, a very clever young musician, a few years older than himself, who also had been an 'infant prodigy,' and was chiefly remarkable for the versatility of his powers. It is as a writer on music and kindred subjects that he is best remembered, and especially for his valuable reminiscences of Handel. Among other anecdotes, he tells us that in 1703 he and Handel went to Lübeck to compete for the vacant post of organist. They found, however, that it was necessary that the successful candidate should marry the daughter of the retiring organist. This condition seemed to them prohibitory, and the two young men thought it best to return to Hamburg. The friendship between the two young composers was, at one time, very nearly brought to a sudden and tragical conclusion. While Handel was acting as conductor at the Opera-house, it happened that there was given Mattheson's opera of 'Cleopatra' (1704), in which the composer himself played the part of Antony. After that point in the play where the hero dies, it had been Mattheson's custom to return to the harpsichord and to conduct the remainder of the opera. To this Keiser seems not to have objected, but Handel was more obstinate, and refused to abdicate his place in favour of the resuscitated Antony. Mattheson was indignant, a dispute ensued, and a duel, in which Handel's life was only saved, and the loss to the world of this mighty master only averted, by the accidental circumstance that the point of Mattheson's sword was turned aside by coming into contact with a brass button on his antagonist's coat. At Hamburg, in Jan. 1705, was produced Handel's first opera, 'Almira,' followed in the same year by 'Nero.' These were performed in the barbarous manner universal at that time, partly in German and partly in Italian. The success of 'Almira' seems, however, to have been great enough to excite some jealousy in Keiser and other musicians. Mattheson says that, when Handel came to Hamburg, he composed 'long airs and interminable cantatas,' more scholastic than melodious or graceful; and he claims to have contributed not a little to the young composer's improvement. It is probable, at any rate, that the genius of Keiser, whose numerous compositions are full of a melody and charm till then unknown, went far to counteract the influence of the crabbed teaching of Zachau. In 'Almira' is a Sarabande, consisting of the same air which Handel afterwards used for the beautiful song in 'Rinaldo,' 'Lascia ch' io pianga.' His other works at this time were the operas 'Daphne' and 'Florinda,' and a German Cantata on the Passion.

In 1706 he set off on a journey to Italy. He went to Florence, Rome, and Venice [where he made the acquaintance of Prince Ernst August of Hanover]; his time was spent between the cities named, and Naples, and he produced both

operas and sacred music, and always with the greatest success. Among these works may be mentioned two Latin Psalms, 'Dixit Dominus' and 'Laudate Pueri'; two Operas, 'Rodrigo' and 'Agrippina'; two Oratorios, 'Resurrezione' and 'Il Trionfo del Tempo'; and the serenata 'Aci, Galatea, e Polifemo,' produced at Naples, and quite distinct from the subsequent English work of a similar name. This serenata is remarkable for an air, written for some bass singer whose name has remained unknown, but whose voice must have been extraordinary, for this song requires a compass of no less than two octaves and a sixth! [Bass.]

In 1710 Handel returned to Germany, where the Elector of Hanover (afterwards George I. of England) offered him the post of capellmeister, held till then by the Abbé Steffani, who himself designated Handel as his successor. The latter had already received pressing invitations from England, and he only accepted the capellmeistership on the condition that he should be allowed to visit this country, whither he came at the end of 1710.

Italian music had recently become the fashion in London; operas 'on the Italian model,' that is, with the dialogue in recitative, having been first given in 1705, at Drury Lane, and afterwards at the Queen's Theatre. The opera of 'Rinaldo,' written by Handel in fourteen days, was first performed on Feb. 24, 1711. It was mounted with a magnificence then quite unusual; and, among other innovations, the gardens of Armida were filled with living birds, a piece of realism hardly outdone in these days. The music was enthusiastically received, and it at once established its composer's reputation. He was obliged, at the end of six months, to return to his post in Hanover; but he had found in London a fitter field for the exercise of his genius; and in Jan. 1712 he was here again, nor had he yet made up his mind to leave England for Hanover, when the Elector of that State succeeded to the English throne. It was not to be expected that the new king should look with favourable eyes on his truant capellmeister, who, for his part, kept carefully out of the way. Peace was, however, brought about by the good offices of the Hanoverian Baron Kielmannsegge, who requested Handel to compose some music for the occasion of an aquatic fête given by the king. The result was the series of twenty-five pieces, known as the 'Water Music.' These, performed under Handel's direction by an orchestra in a barge which followed the king's boat, had the effect of softening the royal resentment, and Handel's pardon was sealed not long after by a grant to the composer of an annuity of £200.

In 1715 he accompanied the king to Hanover, where he remained till 1716, producing while there his one German oratorio, the 'Passion,' set to Brockes's words. This work contains great beauties, but it is very different in style from his subsequent compositions of a similar kind, and still strongly suggests the influence of Keiser and of Steffani.

On Handel's return to England, he accepted the post of chapel-master to the Duke of Chandos. This nobleman,—who from the magnificence of his style of living was sometimes called the *Grand Duke*, had a palace named Cannons, near Edgeware, and a chapel furnished like the churches of Italy. His first chapel-master was Dr. Pepusch, his countryman, who retired gracefully in favour of the younger master. Here Handel remained for three years, with an orchestra and singers at his disposal; and produced the two 'Chandos' Te Deums, the twelve 'Chandos' Anthems, the English serenata 'Acis and Galatea,' and 'Esther,' his first English oratorio. He also taught the daughters of the Prince of Wales, for whom he wrote his 'Suites de pièces pour le Clavecin' (vol. i.). Besides all this, he, in 1720, undertook to direct the Italian Opera for the society called the Royal Academy of Music. He engaged a company of Italian singers, including Durastanti and the celebrated sopranist, Senesino; and with these he produced 'Radamisto.' The success of this opera was complete; but a party, jealous of Handel's ascendancy, was forming in opposition to him. Buononcini and Ariosti had also been attracted to London by the Royal Academy of Music, and each of these composers had a following among the supporters of the Opera. It was, perhaps, with the object of reconciling all parties, that it was arranged to produce 'Muzio Scevola,' an opera of which the first act was written by Ariosti (or, according to Chrysander, by a certain Mattei, *alias* Pippo), the second by Buononcini, and the third by Handel. Poor Ariosti had no chance in this formidable competition. With Buononcini, a man of distinguished talent, and able in some measure to support the rivalry with Handel, the case was different. Handel's act, however, was universally declared to be the best; but his victory only excited the enmity of his opponents more than ever. His stubborn pride and independence of character were ill suited to conciliate the nobility, in those days the chief supporters of the Opera; and all those whom he had personally offended joined the Buononcini faction. This fashionable excitement about the rival claims of two composers, like that which raged in Paris when the whole of society was divided into Gluckists and Piccinnists, gave rise to many squibs and lampoons, the best of which, perhaps, has been more often incorrectly quoted and erroneously attributed than any similar *jeu d'esprit*. The epigram, usually ascribed to Dean Swift, and actually printed in some collections of his works, is undoubtedly the work of John Byrom, the Lancashire poet, and inventor of a system of shorthand. He speaks in his diary,[1] under date June 5, 1725, of 'my

[1] Printed for the Chetham Society, 1854, vol. i. p. 150.

epigram upon Handel and Buononcini being in the papers.' It runs, correctly, as published in Byrom's *Miscellaneous Poems*, as follows:—

> Some say, compar'd to Bononcini,
> That Mynheer Handel's but a Ninny;
> Others aver, that he to Handel
> Is scarcely fit to hold a Candle:
> Strange all this Difference should be,
> 'Twixt Tweedle-dum and Tweedle-dee!

Handel worked on, unmoved, amid the general strife, and in 1729 entered into partnership with Heidegger, proprietor of the King's Theatre. He produced opera after opera; but owing to the ever-increasing opposition, his later pieces met with less success than his earlier works. On the other hand, the oratorio of 'Esther,' and 'Acis and Galatea,' composed at Cannons, were now given in public for the first time [both in 1720]; they were performed on the stage, with scenic effects, but without action, and were very well received. Several of Handel's instrumental works were written at this epoch. On the occasion of the performance of 'Deborah,' an oratorio, in 1733, the raised prices of seats at the theatre added to the rancour of the composer's enemies; and, to crown all, he quarrelled with Senesino, whose engagement was, therefore, broken off. Senesino was the spoiled child of the public; his cause was hotly espoused by all the partisans of Buononcini, and even those influential personages who had remained faithful to Handel insisted that their favourite should be retained at the theatre. Handel thought this condition incompatible with his dignity; he refused, and his friends deserted him for the enemy's camp. [The incident which led to Buononcini's departure from England is referred to in vol. i. pp. 360, 361. In 1733 Handel betook himself again to Italy to seek for singers to replace those who had deserted him, and who had made Senesino their rallying-point.]

Handel's partnership with Heidegger ended in 1734, and the King's Theatre was given up to the rival company. He now became an impresario on his own account, and first took the theatre in Lincoln's-Inn-Fields, but soon left it for Covent Garden, where, besides several operas, he produced the music to Dryden's Ode 'Alexander's Feast, or the Power of Music.' [In 1735 and 1736 he went to Tunbridge for his health.] His undertaking proved, commercially, a failure; and in 1737 he became bankrupt. It speaks volumes for the low state of musical taste at the period, that at this time the rival house was also forced to close its doors for want of support; although its company included, besides Cuzzoni and Senesino, the wonderful Farinelli, who soon quitted England in disgust. Handel's health succumbed to his labours and anxieties; he had an attack of paralysis, which forced him to go to Aix la Chapelle. He returned, scarcely recovered, in November, and, between the 15th of that month and the 24th of December, wrote the opera of 'Faramondo' and the Funeral Anthem for the death of Queen Caroline. 'Faramondo' was a failure; so were also the pasticcio 'Alexander Severus' and the opera of 'Serse' performed in the spring of 1738. He had, however, a number of faithful friends who remained loyal to him in his adversity. They persuaded him to give a concert for his own benefit; and this was a complete success. It shows what, in spite of his unpopularity with the great, was the public appreciation of his genius and high character, that a statue of him, by Roubilliac, was erected in Vauxhall Gardens; the only instance on record of such an honour being paid to an artist during his lifetime. From 1739 he did little in the way of opera-composing. With the exception of 'Imeneo' in 1740, and of 'Deidamia' in 1741, he thenceforward treated only oratorio, or similar subjects. He said that 'sacred music was best suited to a man descending in the vale of years'; but it was with regret, and only after reiterated failures, that he quitted the stormy sea of operatic enterprise. The world has no reason to be sorry that he did so, for there is no doubt that in Oratorio he found his real field, for which Nature and education had equally and specially fitted him.

The series of works which have immortalised Handel's name only began now, when he was fifty-three years old. In 1738 were composed and in 1739 were performed 'Saul' and 'Israel in Egypt.' 'Saul' (says Chrysander) 'fulfils in the highest degree every condition of a perfect historical picture; reflecting, as it does, the historical object at once faithfully and in its noblest aspect.' It was successful. 'Israel,' which contains some of the most colossal choruses that Handel ever wrote, was so ill-received that, at the second performance, it was thought necessary to lighten the work by the introduction of *operatic songs* between the choruses. After the third performance, it was withdrawn. 'Israel' was followed by the music to Dryden's 'Ode on St. Cecilia's Day,' and that to 'L'Allegro' and 'Il Penseroso' of Milton, and to 'Il Moderato,' which was a third part added by Charles Jennens, of Gopsall, Leicestershire, who afterwards compiled the words of the 'Messiah.'

In 1741 Handel received from the Duke of Devonshire, then Lord Lieutenant of Ireland, a pressing invitation to visit that country. Accordingly, in the month of November he went there, and was warmly received, his principal works (not operatic) being performed in Dublin and enthusiastically applauded. On April 13, 1742, for the benefit of a charitable society, he produced the 'Messiah,' his greatest oratorio, and that which has obtained the firmest and most enduring hold on public favour. Signora Avoglio and Mrs. Cibber were the principal singers on the occasion of its first performance, the male solo parts being taken by gentlemen of the Cathedral choirs. After a sojourn in Ireland of nine months, during which he met

with worthy appreciation, and also somewhat repaired his broken fortunes, he returned to London; and the 'Messiah' was performed for the first time there on March 23, 1743. It is related that, on this occasion, the audience was exceedingly struck and affected by the music in general, but that when that part of the Hallelujah Chorus began, 'For the Lord God omnipotent reigneth,' they were so transported that they all, with the king, who was present, started at once to their feet, and remained standing till the chorus ended. The custom of rising during the performance of the Hallelujah Chorus originated with this incident.

The 'Messiah' was followed by 'Samson' (composed 1741, performed 1743) and the *Te Deum* and anthem written to celebrate the victory of Dettingen in 1743; by 'Joseph' (written 1743, performed 1744), 'Semele' (1744), 'Belshazzar,' and 'Hercules' (composed 1744, performed 1745). But the hostility of the aristocratic party which he had provoked by refusing to compose music for Senesino, was still as virulent as ever. They worked against him persistently, so that at the end of the season 1744-45 he was again bankrupt, and seems to have been, for the time, overwhelmed by his failure, for during a year and a half he wrote scarcely anything. He began again in 1746 with the 'Occasional Oratorio,' and 'Judas Maccabæus' (performed 1747); and these were followed by 'Joshua' (composed 1747, performed 1748), 'Solomon' (composed 1748, performed 1749) (which contains an unrivalled series of descriptive choruses), 'Susanna' (composed 1748, performed 1749), 'Theodora' (composed 1749, performed 1750), and the 'Choice of Hercules' (1750). His last oratorio was 'Jephtha,' composed in 1751, and performed in February 1752. It was while engaged on it that he was first attacked by the disease which finally deprived him of sight. Three times he was couched for cataract, but without success; and for the remainder of his life he was almost, if not entirely blind. He was at first profoundly depressed by his affliction; but after a time, with indomitable strength, he rose superior to it. His energy, though lessened, was not paralysed. He actually continued to preside at the organ during the performance of his own oratorios, and even to play organ-concertos. [For many years he conducted the annual performance of the 'Messiah' at the Foundling Hospital, for which he wrote an anthem in 1749, the year in which he first appeared there. See FOUNDLING HOSPITAL.] In 1757, one more work was produced at Covent Garden, the 'Triumph of Time and Truth,' an augmented version, in English, of the Italian oratorio of 1708, 'Il Trionfo del Tempo e del Disinganno.' Of the numerous additions in the later version many were new, some taken from former works. His fame and popularity steadily increased during these last years, and much of the old animosity against him died away. On April 6, 1759, he attended a performance of the 'Messiah' at Covent Garden: it was his last effort. On Saturday the 14th of April,[1] he died, at his house in Brook Street.[2] He was buried in the South Transept of Westminster Abbey, where a monument by Roubilliac was erected to his memory in 1762. His gravestone, with his coat-of-arms, his name, and the two dates 'Born y^e^ 23 February 1684,[3] Died y^e^ 14th of April 1759,' is below the monument. It was engraved as a frontispiece to the Book of Words of the Handel Festival, 1862.

Handel has left behind him in his adopted country a name and a popularity which never has been, and probably never will be, rivalled by that of any other composer. He became a naturalised British subject (in 1726); but to claim him as an Englishman is as gratuitous as it would be to deny that the whole tone of his mind and genius were singularly attuned to the best features of the English character. The stubborn independence, the fearless truth and loyalty of that character, the deep, genuine feeling which, in its horror of pretence or false sentiment, hides itself behind bluntness of expression, the practical mind which seeks to derive its ideas from facts, and not its facts from ideas,—these found their artistic expression in the works of Handel; besides which he was, beyond all doubt, intimately acquainted, as many of his choruses show, with the works of England's greatest composer, Henry Purcell. Grandeur and simplicity, the majestic scale on which his compositions are conceived, the clear definiteness of his ideas and the directness of the means employed in carrying them out, pathetic feeling expressed with a grave seriousness equally removed from the sensuous and the abstract,—these are the distinguishing qualities of Handel's music.

Handel was a man of honour and integrity, and of an uncompromising independence of character. 'In an age when artists used to live in a sort of domesticity to the rich and powerful, he refused to be the dependant of any one, and preserved his dignity with a jealous care.' This, no doubt, irritated those great people whose vanity was gratified when men of genius lived by their patronage; but, on the other hand, it must be admitted that his temper was naturally irascible and even violent, and his fits of passion, while they lasted, quite ungovernable. Even when he was conducting concerts for the

[1] This date is supported by the entry in the Westminster Abbey *Funeral Book*, by the letter of James Smyth, the perfumer, Handel's most intimate friend, by all the contemporary journals and magazines, and by the date on the tombstone. Dr. Burney is alone in stating, on quite insufficient evidence, the date as the 13th; and it is a pity that he should have altered the inscription of the tombstone in copying it for his book, so as to support his statement. [For a summary of the discussion as to the date, see Rockstro's *Life of Handel*, pp. 362-64.]

[2] Formerly No. 57, now No. 25, on the south side, four doors from New Bond Street.

[3] *I.e.* 1685, according to modern numbering of the year.

Prince of Wales, if the ladies of the Court talked instead of listening, 'his rage was uncontrollable, and sometimes carried him to the length of swearing and calling names . . . whereupon the gentle Princess would say to the offenders "Hush, hush! Handel is angry."' It is to the credit of the prince and princess that they respected the real worth of the master too much to be seriously offended by his manners.

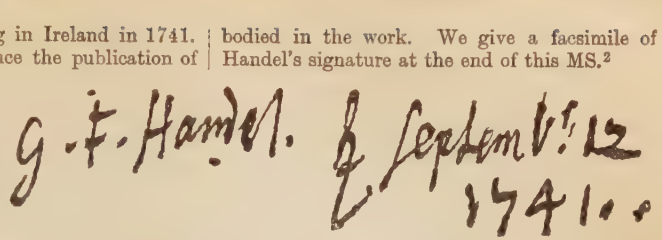
Handel never married, nor did he ever show any inclination for the cares and joys of domestic life. He was a good son and a good brother; but he lived wholly for his art, his only other taste being for pictures, of which he was a connoisseur. He seldom left his house, except to go to the theatre, or to some picture sale. His tastes were simple, though he ate enormously; having a large, if not an unhealthy, appetite to satisfy. His charitableness and liberality were unbounded; he was one of the founders of the Society for the benefit of distressed musicians, and one of the chief benefactors of the Foundling Hospital.

He was seventy-four years old when he died; but, when we contemplate the amount of work he accomplished, his life seems short in comparison. Nor did he live in seclusion, where he could command all his time. Gifted with abnormal bodily strength, and with an industry truly characteristic of that nation 'which' (as says Chrysander) 'has laboured more than any other to turn into a blessing the curse of Adam, In the sweat of thy brow thou shalt eat bread,' he excelled in every branch of his art; but, besides this, he was a teacher, a chapel-master, an opera-director, and an *impresario*. He was, with the exception of J. S. Bach, the greatest organist and harpsichord player of his age. He never devoted much time to the violin; but, when it suited him to play, his tone was such that avowed professors of the instrument might have taken him as a model. He had but little voice, yet he was an excellent singer of such songs as required an expressive delivery rather than florid execution. With his singers he was sometimes tyrannical, and amusing stories are told of his passages of arms with recalcitrant *prime donne*; but he knew how to conciliate them, and how to preserve their respect; he would take any trouble, and go any distance, to teach them their songs; and all the principal artists resident in London, whom he employed, remained permanently with him to the end of his life.

The rapidity with which he composed was as wonderful as his industry; he may be said to have improvised many of his works on paper. 'Rinaldo' was written in fourteen days; the 'Messiah' in twenty-four! From his earliest years he was remarkable for this great readiness in extemporising; he was always teeming with ideas, to which his perfect command of all the resources of counterpoint enabled him to give instantaneous and fluent expression. It was his custom to play organ concertos between the acts or the pieces of his oratorios; but these written compositions were only of service to him when he felt that he was not in the vein; otherwise, he gave himself up to the inspirations of his genius. This, indeed, was almost always the case after he became blind, when all that was given to the orchestra was a sort of *ritornel*, between the recurrences of which Handel improvised away as long as it pleased him, the band waiting until a pause or a trill gave them the signal for recommencement. His instrumental compositions have, in many respects, such as their lucid simplicity and a certain unexpectedness in the modulations and the entries of the various subjects, the character of improvisations. He seems to have regarded these works as a storehouse for his ideas, on which he often drew for his more important compositions.

It must not, however, be supposed that the speed with which he worked argues any want of care in the workmanship, nor that he was content always to leave his ideas in the form in which they first occurred to him. The shortness of time occupied in the completion of his great masterpieces is to be explained, not merely by the ever-readiness of his inspiration, but also by the laboriousness and wonderful power of concentration which enabled him actually to get through more work in a given time than is accomplished by ordinary men. Those original sketches of his works that are extant, while bearing in their penmanship the traces of impetuous speed, yet abound in erasures, corrections, and afterthoughts, showing that he brought sound judgment and stern criticism to bear on his own creations.

In gratitude for the pension allowed him by the king after Handel's death, Smith, his amanuensis, to whom Handel had left his MSS., presented them all to George III. They remain still in the Musical Library of Buckingham Palace, and are as follows:—Operas, thirty-two vols.; Oratorios, twenty-one vols.; Odes and Serenatas, seven vols.; Sacred Music, twelve vols.; Cantatas and Sketches, eleven vols.; and Instrumental Music, five vols. Besides these, there is a collection of copies by Smith (the elder), forming a continuation to the original MSS., in seventeen vols. There is also a collection of copies, partly in the hand of Smith (the elder) and partly in another hand, chiefly of the Oratorios, in twenty-four vols. large folio in the same Library.



Another, smaller collection of original MSS., is to be found in the Fitzwilliam Museum, Cambridge, consisting of seven vols. of the greatest interest, containing rough draughts, notes, and sketches for various works (carefully catalogued and analysed by Dr. A. H. Mann, in the *Catalogue of Music in the Fitzwilliam Museum*), and one of the Chandos Anthems, entire, 'O Praise the Lord with one consent.' [One of the sketches, headed 'Der arme Irische Junge' is evidently a tune

which Handel heard sung in Ireland in 1741. It has been identified, since the publication of the catalogue just mentioned, as an air known in Ireland as 'Speic Gailleanach' (communicated by Mr. W. H. Grattan Flood). The Fitzwilliam Museum has been enriched by the kindness of Francis Barrett Lennard, Esq., with a bookcase once belonging to Handel, containing sixty-seven volumes of transcripts of Handel's works, nearly all in the handwriting of Smith. This valuable collection was given to the Museum in May 1902.]

Very few compositions in Handel's writing are in private collections.

The original MS. score of the work alluded to above as achieved in twenty-four days, the 'Messiah,'—the greatest, and also the most universally known of all Handel's oratorios,—has been twice[1] facsimiled in photo-lithography, and so placed within the reach of all who may wish to become familiar with Handel's mode of working. Here it can be seen how much the work differed in its first form from what it finally became,—the work as we know it. Some alterations are of comparatively slight importance, such as the substitution of one kind of choral voice for another in the 'lead' of a fugue-subject,—the alteration of the form of a violin-figure, and so on. But, in other cases there are actually two, and sometimes even three, different settings of the same words, showing that Handel himself failed occasionally in at once grasping the true realisation of his own conceptions. Among many instances of change of purpose which might be given, it will be sufficient to quote two. In the 'Nativity music' there are two settings of the words 'And lo! the angel of the Lord came upon them,' the first of which is that now used, and the second an Andante in F major, which bears the traces of a good deal of labour, but which was finally rejected by the composer.

The second case is that of the air 'How beautiful are the feet,' and the subsequent chorus 'Their sound is gone out.' At first the air was written as it now stands, but afterwards its theme was taken as a duet in F minor for Alto voices (appendix), to which is added a chorus on the words, 'Break forth into joy,' after which the duet is resumed. As to 'Their sound is gone out,' these words were originally set as a second strophe to 'How beautiful are the feet' (in its first form as an air); they were then set as a tenor solo (appendix), which opens with the same theme as that of the chorus which afterwards took its place, and which was ultimately embodied in the work. We give a facsimile of Handel's signature at the end of this MS.[2]

His orchestration sounds, of course, scanty to modern ears. The balance of the orchestra was very different, in his time, from what it is now; some wind instruments, such as the clarinet, not being yet in use, while others were then employed in greater numbers; and some stringed instruments were included that are now obsolete. The wind instruments were certainly more prominent in the band than they now are; he used the hautboys freely, seeming to have a particular affection for them, and sometimes employed them in large numbers, as a 'wind-band,' in 'The Fireworks Music,' etc. He made, in fact, abundant use of all the materials at his command, and, in his own day, was regarded as noisy and even sensational. He was said to *sigh* for a *cannon* (worthy, this, of Berlioz in later times); and there is extant a caricature of him, by Goupy, representing him at the organ, with a boar's head and enormous tusks (alluding to his passionate temper); the room is strewn with horns, trumpets, and kettle-drums; farther off are visible a donkey braying, and a battery of artillery, which is fired by the blazing music of the organist![3] Mozart reinstrumented much of the 'Messiah,' to suit the condition of a concert-room where there was no organ; and he, as well as Mendelssohn and other musicians, wrote similar additional accompaniments to several of the other Oratorios and Cantatas. [See ADDITIONAL ACCOMPANIMENTS.]

It is as a vocal and, above all, as a choral writer, that Handel is supreme. No one ever developed the resources of the chorus as he did; and his compositions of this class remain to this day unapproachable. No one, before or since, has so well understood how to extract from a body of voices such grand results by such artfully simple means as those he used. As an example of the union of broad effect with science, the chorus 'Envy! eldest born of hell!' in 'Saul' may be mentioned. On the unskilled hearer this produces the impression of a free composition in the rondo-form, with a strongly contrasted second strain, and a very remarkable

[1] [The Sacred Harmonic Society brought out the first of these in 1868, but a comparison with the original proved, beyond doubt, that the makers of the facsimile had arbitrarily interpreted words, etc., scribbled by the composer, and that in many other details the book was unsatisfactory. Dr. Chrysander had it done again in 1892.]

[2] The figure which immediately precedes the date is the old astrological or chemical sign, for Saturn, denoting Saturday. Handel was in the frequent habit of introducing these signs into his dates.

[3] Cannons were used at the Crystal Palace, on one occasion, with no bad effect, and also at the Festival at Boston, U.S.A. On one occasion, Handel is said to have exclaimed, during the performance of one of his choruses, 'Oh that I had a cannon!' Sheridan, in an early burletta, 'Jupiter,' makes one of his characters say, when a pistol has been fired by way of effect, 'This hint I took from Handel' (Townsend).

and telling accompaniment. Each phrase seems suggested by the words that are sung; while, in fact, the voices move, in strict canonic imitation, on a ground-bass which, itself one bar in length, recurs, at the outset, sixteen times without intermission. As specimens of descriptive choral writing, the grand chains of choruses in 'Israel' and in 'Solomon' are unmatched.

Handel's songs, though conventional in form, are so varied in idea, so melodious, and so vocally expressive, that it is hard to believe Mattheson's statement, that in his early years, though unrivalled as a contrapuntist, he was deficient in melody. The vein must always have been present in him; but it is not unlikely that the influence of Keiser and, subsequently, of Steffani, gave a powerful and a happy impetus to his genius in this direction. It is nearly certain, too, that his experience of Italian music and singers, and his long career as an operatic composer, had the effect of influencing his subsequent treatment of sacred subjects, leading him to give to the words their natural dramatic expression, and to overstep the bounds of stiff conventional formality.

We have remarked that he often drew themes for his choruses from his instrumental pieces; besides this, he used portions of his earlier vocal compositions in writing his later works. Thus, four choruses in the 'Messiah' were taken from the 'Chamber Duets'; and so was the second part of the chorus 'Wretched lovers!' in 'Acis.' It is, however, an undeniable fact that, besides repeating himself, he drew largely and unhesitatingly on the resources of his predecessors and contemporaries. And yet his own powers of invention were such as must preclude the supposition that he was driven by lack of ideas to steal those of other people. In those days there were many forms of borrowing which were not regarded as thefts. When we find, for instance, that the chorus just mentioned, 'Wretched lovers,' has for its first theme the subject of a fugue of Bach's, that one of the most charming of the Chamber Duets was taken from a similar duet by Steffani, that the subject of the clavier-fugue in B♭ (afterwards used for the third movement of the second Hautbois-concerto) was borrowed note for note from a canon by Turini, that, among the subjects which form the groundwork of many of his choruses, themes are to be found, taken from the works of Leo, Carissimi, Pergolesi, Graun, Muffat, Caldara, and others,[1]—it can only be urged that in an age of conventionality, when musical training consisted solely of exercise in the contrapuntal treatment of given themes, originality of idea did not hold the place it holds now. Such themes became common property; some of them might even have been given to Handel by Zachau, in the days when his weekly exercise consisted of a sacred motet, and he would have regarded them as a preacher would regard a text,—merely as a peg on which he or any other man might hang a homily. But Handel did not stop here. He seems to have looked upon his own work as the embodiment, as well as the culmination, of all existing music, and therefore to have employed without scruple all such existing material as he thought worthy to serve his purpose. 'It is certain' (to quote a distinguished writer of our own day) 'that many of the musical forms of expression which the untechnical man *hears* and admires in a performance of one of the works of Handel, the technical man may *see* in the written scores of his predecessors; and that innumerable subjects, harmonic progressions, points of imitation, sequences, etc., which the unlearned are accustomed to admire (and with reason) in Handel, are no more the invention of that master than they are of Auber or Rossini.' In some cases, passages of considerable length, and even entire movements, were appropriated more or less unaltered by Handel. Two compositions we may quote especially, as having been largely laid under contribution for some of his best-known works. One is the *Te Deum* by Francesco Antonio Uria or Urio. No less than nine movements in the 'Dettingen Te Deum' and six in the oratorio 'Saul' are founded wholly or in part on themes, and contain long passages, taken from this work. The other is a very curious piece by Alessandro Stradella, [now published as No. 3 of the *Supplemente* to Chrysander's edition of Handel]. It is a serenade, in the dramatic form, for three voices and a double orchestra (of strings). This has been largely used by Handel for more than one of his works, but chiefly for 'Israel in Egypt,' in which instances occur of large portions (in one instance as much as twenty-seven bars) being transferred bodily to his score. 'Israel in Egypt' contains another still more flagrant appropriation, the transfer of an Organ Canzona by Johann Caspar Kerl to the Chorus 'Egypt was glad,' the only change being due to the adaptation of the syllables to the notes. The Canzona is printed by Sir John Hawkins (chap. 124), so that any reader may judge for himself. [Among the Handel MSS. preserved in the Royal Library at Buckingham Palace is a 'Magnificat,' in the great composer's own handwriting, for eight voices, disposed in a double choir, with accompaniments for two violins, viola, basso, two hautboys, and organ. The work is divided into twelve movements, disposed in the following order:—

1. 'Magnificat anima mea.' (Chorus.)
2. 'Et exultavit.' (Duet for two Trebles.)
3. 'Quia respexit.' (Chorus.)
4. 'Quia fecit mihi magna.' (Duet for two Basses.)
5. 'Fecit potentiam.' (Chorus.)
6. 'Deposuit potentes.' (Alto Solo.)
7. 'Esurientes.' (Duet, Alto and Tenor.)
8. 'Suscepit Israel.' (Chorus.)
9. 'Sicut locutus est.' (Chorus.)
10. 'Gloria Patri.' (Tenor Solo.)
11. A Ritornello, for Stringed Instruments only.
12. 'Sicut erat.' (Chorus.)

[1] See Dr. Crotch's *Lectures*, p. 122.

Unhappily the MS. is imperfect, and terminates with the duet we have indicated as No. 7. For the remaining movements, we are indebted to another MS., preserved in the Royal College of Music. The existence of this second copy—a very incorrect one, evidently scored from the separate parts by a copyist whose carelessness it would be difficult to exaggerate—has given rise to grave doubts as to the authorship of the work. It is headed 'Magnificat. Del Rd. Sigr. Erba': and, on the strength of this title, Chrysander attributes the work to a certain Don Dionigi Erba, who flourished at Milan at the close of the 17th century. M. Schœlcher, on the other hand, repudiates the superscription; and considers that, in introducing some six or seven Movements of the 'Magnificat' into the Second Part of 'Israel in Egypt,' and one, the 'Sicut locutus est,' into 'Susannah,' as 'Yet his bolt,' Handel was only making a perfectly justifiable use of his own property; and this opinion was endorsed by Sir G. A. Macfarren. The reader will find the arguments on both sides of the question stated, *in extenso*, in the Appendix to Schœlcher's *Life of Handel*, and in the first volume of that by Dr. Chrysander; and must form his own judgment as to their validity. M. Schœlcher errs in ascribing the work to the 'Italian period' on the ground that it is written on thick Italian paper. The paper is of English manufacture, bearing a water-mark which, taken in conjunction with the character of the handwriting, proves the MS. to have been written in England about 1735-40; and, as 'Israel' was written in 1736, nothing is more likely than that Handel should have transferred passages from one work to the other. W. S. R.] [The composition, whether Handel's or not, is now available for comparison, as it forms No. 1 of the *Supplemente* to Chrysander's edition. See also Rockstro's *Life of Handel*, chap. xxvii., and *The Age of Bach and Handel* (*Oxford History of Music*, pp. 84-89).]

That such wholesale pilfering as this should have been possible or even conceivable, is a fact which points to a very different standard of artistic morality from that of the present day. Might, in fact, was right. After acknowledging this, it is, at first, hard to see why so great an outcry should have been made against Buononcini for his theft. The difference seems to be that the latter thought it sufficient to copy another man's works, without even attempting to set it in any framework of his own. In Handel's case, the greater part of the music he 'adopted' was, no doubt, saved from oblivion by the fact of its inclusion in his works. The only possible justification of the proceeding is afforded by success.

Among the minor instances of appropriation by Handel of other men's themes, it has been alleged that the popular air known as 'The Harmonious Blacksmith,' which figures (with variations) in Handel's 'Suites de Pièces,' was the composition of Wagenseil [who was only five years old when Handel's suites were published!], or of some other composer. There was republished at Paris a version of it, adapted to words by Clément Marot, which was said to be its original form; but no copy of the air, in any form, is extant of an earlier date than the set of 'Suites de Pièces' in which it appears; there is, therefore, absolutely nothing to show that it is not the work of Handel. [See Harmonious Blacksmith.]

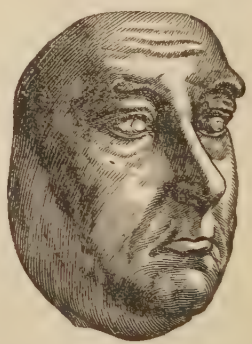
In any case, musical plagiarism is hard to define. The gamut is limited; similarity of thought is frequent, and coincidence of expression must be sometimes inevitable between composers of the same period. Justification can only be afforded by success. We are irresistibly reminded of the passage in which Heine speaks of the philosopher Schelling, who complained that Hegel had stolen his ideas: 'He was like a shoemaker accusing another shoemaker of having taken his leather *and made boots with it*. . . . Nothing is more absurd than the assumed right of property in ideas. Hegel certainly used many of Schelling's ideas in his philosophy, but Schelling himself never could have done anything with them.' [In this connection it is interesting to compare De Quincey's remarks on a similar habit in Coleridge, in Masson's edition, vol. ii. p. 142 ff.]

One man there was—J. S. Bach—whose fertility was so inexhaustible that he invented a great majority of his own fugal subjects, and rarely drew on the common stock. In this he was—with all his severe science and seeming formality—the true precursor of Beethoven and the modern romantic school of instrumental music; while Handel in spite of his breadth and flow of melody, and the picturesqueness of his grand yet simple conceptions, was the glorified apotheosis of the purely contrapuntal, vocal music.

No biographer of Bach or of Handel can refrain from drawing a parallel between these two gigantic, contemporary masters, who never met, but who, in their respective spheres, united in their own persons all the influences and tendencies of modern thought, which brought about the revolution from the art of Palestrina to the art of Beethoven.

Handel's influence over the men who were his contemporaries was great; yet he founded no school. All his works were performed as soon as they were written; and, thanks to the constant opportunity thus afforded to him of comparing his conceptions with their realisation, his growth of mind was such that he surpassed himself more rapidly than he influenced others. That which is imitable in his work is simply the result of certain forms of expression that he used because he found them ready to his hand; that which is his own is inimitable. His oratorios

are, in their own style, as unapproached now as ever; he seems to have exhausted what art can do in this direction; but he has not swayed the minds of modern composers as Bach has done.



Bach lived and wrote in retirement; a small proportion only of his works was published in his lifetime, nor did he take into account their effect on the public mind, or feel the public pulse, as Handel did. It is strange that he in his seclusion should have preserved a keen interest in the music of other men, whereas Handel's shell of artistic egotism seemed hardened by the rough contact of the world and society; music for him existed only in his own works. Bach was very anxious to make the acquaintance of his famous contemporary; and, on two occasions, when the latter visited Halle, made efforts to meet him, but without success. When Handel went thither the third time, Bach was dead.

Bach's influence began to be felt some fifty years after his death, when the treasures he had left behind him were first brought to light. He was a thinker who traced ideas to their source, an idealist who worshipped abstract truth for its own sake. His works are close chains of thought and reasoning, prompted by profound feeling, and infinitely suggestive; from the various starting-points which they offer, we go on arguing to this day; but they appeal chiefly to the reflective mind. They are no less complete as wholes than the works of Handel, but they are far more complex; and to perceive their unity requires a broad scope of judgment, not possessed by every hearer.

Handel's works appeal to all alike. He was a man of action; what he felt and what he saw he painted, but did not analyse. The difference is the same as that which lies between a great philosopher and a great epic poet,—between Plato and Homer. Who shall say whether is greater? For traces of the influence of the one we must seek deeper and look farther, but the power of the other is more consciously felt and more universally recognised.

'The figure of Handel,' says Burney, who knew him well, 'was large, and he was somewhat unwieldy in his actions; but his countenance was full of fire and dignity. His general look was somewhat heavy and sour, but when he did smile it was the sun bursting out of a black cloud. There was a sudden flash of intelligence, wit, and good humour, beaming in his countenance which I hardly ever saw in any other.' 'His smile was like heaven.' To this Hawkins adds that 'his gait was ever sauntering, with somewhat of a rocking motion.'

Of portraits of Handel there is a multitude. Several were executed in marble by Roubilliac; one, a bust, presented to George III., with the original MSS. and Handel's harpsichord, by Smith; another, also a bust (1738), bought by Bartleman at the sale of the properties at Vauxhall, and bought at his sale again by Mr. Pollock, who presented it to the Foundling Hospital; another, a bust, formerly in the collection of the late Mr. Alfred Morrison (sold at Christie's); fourthly, the Vauxhall statue (1738), formerly the property of the Sacred Harmonic Society, and now in the possession of Mr. Alfred Littleton. Roubilliac's first work, in which the association of the commonplace dress of the figure with the lyre and naked Cupid is very ludicrous; and lastly, the statue in the monument in Westminster Abbey, which, in spite of the affectation of the pose, is one of the best portraits, the head having been taken from a cast after death by Roubilliac, and said to have been afterwards touched upon by him, the eyes opened, etc. A reproduction of this occurs in *The Mirror* for July 19, 1834, from which it is here engraved.

A marble medallion is in the private chapel of Belton House, Lincolnshire. A statue, by Professor Heidel of Berlin, was unveiled at Halle in Dec. 1857.

Of pictures, the one by Denner, a very unsatisfactory portrait, was given by Lady Rivers to the Sacred Harmonic Society, and now belongs to Mr. Littleton; another by Denner is at Knowle; another, hardly more trustworthy, by G. A. Wolfgang, formerly in the collection of Mr. Snoxell, was sold to a purchaser named Clark in 1879 at Puttick and Simpson's. Two by Hudson are in the possession of the Royal Society of Musicians, while another, said to be the original, was described by Förstemann (1844) as belonging to the grand-daughters of Handel's niece, Johanna Friderica Flörchen, at Halle. It is doubtful if this latter exists. [Another by Hudson is in the Bodleian, Oxford. An oval portrait by Hudson, in the possession of Dr. W. H. Cummings, was reproduced in the special Handel number of the *Musical Times*.] There is an original by Hudson, signed 1756, at Gopsall, the seat of Earl Howe, by whom it was lent to the exhibition organised by the Musicians' Company in Fishmongers' Hall, 1904, and a small copy of it, slightly different, in Buckingham Palace. [Another version is now in the National Portrait Gallery. A half-length

portrait by Ph. Mercier, belonging to Lord Malmesbury, was exhibited at South Kensington in 1867. A copy of this portrait was put up, but not sold, at Christie's, some years since. Portraits by Reynolds, Van der Myn, and Michael Dahl, are in Dr. Cummings's collection. In Dobson and Armstrong's *William Hogarth* (1902), pp. 180, 233, is mentioned a painting of Handel by Hogarth, measuring $17\frac{1}{2} \times 21$ in., as being in 1833 in the possession of Mr. Peacock, of Marylebone. No description of the picture is given. A portrait, 'from an original painting by Hogarth,' was engraved in mezzotint (April 4, 1821) by C. Turner. It is not clear whether this is after Mr. Peacock's picture; it represents Handel as a youngish man, without a wig, but with a soft cap on his head. A portrait by Van der Bank, formerly in the possession of the Caecilian Society, was offered for sale by Mr. S. H. Nelson in 1899. A portrait, attributed to Kneller, was offered for sale by Dimmock of Norwich, in 1890, and a large painting (probably an old copy from Hudson), three-quarter length, life size, is now in the possession of Dr. H. Davan Wetton. It was formerly in possession of the Chitty family, and belonged to Sir Thomas Chitty, Lord Mayor of London in 1750. It may possibly be the original portrait presented to the Foundling Hospital by Hudson in 1750.] A capital little head by Grisoni, is in the Fitzwilliam Museum at Cambridge, to which it was presented by the Rev. A. R. Ward. A portrait by Thornhill is also in that Museum, representing Handel at the organ, said to have been painted for the Duke of Chandos. A little picture, signed 'F. Kyte, 1742,' which belonged formerly to Mr. Keith Milnes, who gave it to Mr. Rolfe, from whose heirs it passed into the possession of the writer, [it is now in that of Dr. W. H. Cummings] was the original of Houbraken's engraving, and probably also of that by Schmidt, which is very rare. It is reproduced by Hawkins, who pronounces that 'the features are too prominent.' [A portrait by Tischbein is mentioned in Forkel, ii. 63. An oval, head and shoulders, is in the Music School Collection, Oxford. A miniature by Zincke on enamel, a copy of the Gopsall portrait, was lent by Baroness Burdett-Coutts to the Guelph Exhibition of 1891. A miniature was sold at Puttick's in 1879, and one, possibly the same, belongs to H. Barrett Lennard, Esq. Two more are at Windsor Castle. A pastel caricature by Goupy is in the possession of Dr. Cummings, and is the original of one of the caricatures published in 1754. Many of the above were exhibited at the Fishmongers' Hall in 1904; an article on the portraits of Handel appeared in vol. viii. of the *Magazine of Art*, and another in the *Musical Times*, special Handel number, Dec. 14, 1893.]

The Vauxhall statue was copied by Bartolozzi for Dr. Arnold's edition of Handel's works, for which Heath engraved an apotheosis for which the portrait was taken from another picture (said to be) by Hudson in Dr. Arnold's possession. The bust was copied by Chambers for Mainwaring's *Life of Handel*; and the monument, by Delattre, for Burney's *Commemoration*. Denner's picture was engraved by E. Harding for the *Anecdotes of G. F. Handel and J. C. Smith*. Hudson's portrait at Gopsall was copied in mezzotint and very badly, for Dr. Arnold's edition, and again engraved by Thompson, and others; the picture belonging to the Royal Society of Musicians was copied in mezzotint by J. Faber in 1748, and again in 1749, the first being now very rare. This was copied by Miller (of Dublin) and Hardy, and in line by W. Bromley, Sichling, and a host of minor artists. An engraved portrait published by Breitkopf & Härtel is also scarce. The picture by G. A. Wolfgang was engraved by J. G. Wolfgang at Berlin, the name being spelled (in the first state) *HENDEL*. A good profile, not improbably from

Mr. Morrison's bust, was attached to the word-books of the Commemoration of 1784, of which the accompanying cut is a faithful copy, slightly reduced. A curious but, probably, untrustworthy lithograph was published at Vienna by Künike, representing Handel without a wig. There is an unfinished plate, supposed to be unique, which represents him holding a scroll of music, and has a likeness to the portrait by Denner; and another, almost unique, 'Etch'd by D. C. Read from a Picture by Hogarth in his possession,' which is contemptible as a portrait and as a work of art.

The best are the two prints by Faber and Houbraken.

The complete list of his works is given below, under the heading of HÄNDEL-GESELLSCHAFT. J. M.

HANDEL AND HAYDN SOCIETY. See BOSTON MUSICAL SOCIETIES.

HANDEL, COMMEMORATION OF. Early

in 1783 three musical amateurs, Viscount Fitzwilliam, Sir Watkin Williams Wynn, and Joah Bates, conceived the idea of celebrating the centenary of the birth of Handel (1684-85) by performing some of his works on a scale then unprecedented in England. The scheme being supported by the leading musical professors and the Directors of the Concert of Ancient Music (who undertook the arrangement of the performances), and warmly entered into by the King, it was determined to carry it into effect by giving two performances in Westminster Abbey (where Handel was buried), and one at the Pantheon. The first performance was given in the Abbey on Wednesday morning, May 26, 1784; it consisted of 'The Dettingen Te Deum,' one of the Coronation Anthems, one of the Chandos Anthems, part of the Funeral Anthem, and a few other fragments. The second was on Thursday evening, May 27, at the Pantheon, and comprised various songs and choruses, sacred and secular, four concertos and an overture. The third was at the Abbey on Saturday morning, May 29, when 'Messiah' was given. These performances were so attractive as to lead to a repetition of the first day's music, with some little variations, at the Abbey, on Thursday morning, June 3, and of 'Messiah,' at the same place, on Saturday morning, June 5. The orchestra (erected at the west end of the nave, and surmounted by an organ built for the occasion by Green) contained 525 performers, viz. 59 sopranos, 48 altos, 83 tenors, and 84 basses; 48 first and 47 second violins, 26 violas, 21 violoncellos, 15 double basses, 6 flutes, 26 oboes, 26 bassoons, 1 double bassoon, 12 trumpets, 12 horns, 6 trombones, 4 drums, and the conductor (at the organ), Joah Bates. The principal vocalists, who are included in the above enumeration, were Madame Mara, Miss Harwood, Miss Cantelo, Miss Abrams, Miss Theodosia Abrams, and Signor Bartolini; Rev. Mr. Clerk, Dyne, and Knyvett, altos; Harrison, Norris, and Corfe, tenors; Bellamy, Champness, Reinhold, Matthews, and Tasca, basses. The orchestra at the Pantheon consisted of 200 performers selected from those at the Abbey, and also included Signor Pacchierotti among the principal sopranos. The total receipts were £12,736 : 12 : 10, and the total expenses £5450 : 6 : 4, leaving a surplus of £7286 : 6 : 6, which, after retaining £286 : 6 : 6, to meet subsequent demands, was divided between the Royal Society of Musicians (£6000), and the Westminster Hospital (£1000). A mural tablet recording the event was placed in the Abbey above Handel's monument. In 1785 Dr. Burney published a quarto volume containing an Account of the Commemoration, with a Sketch of the Life of Handel, and plates, one of which represents his monument. In this the inscription is altered to support the assertion in the *Life* (made upon the alleged authority of Dr. Warren, who is asserted to have attended Handel in his last illness), that Handel died on Good Friday, April 13, and not on Saturday, April 14, 1759. Assuming Burney to have believed the unsupported statement of Dr. Warren, made twenty-five years after the event, in preference to the unanimous contemporary testimony to the contrary, still he could not but have been conscious that in putting forth that engraving of the monument he was circulating a misrepresentation. The matter is important, as Burney's date has been generally accepted, but it is too lengthy to be further entered upon here. The evidence proving Saturday, April 14, to be the true date is fully dealt with in the Introduction to the Word-Book of the Handel Festival, 1862, *Notes and Queries*, third series, iii. 421, and in Rockstro's *Life of Handel*, pp. 362-364. See also *ante*, p. 283.

The Commemoration of 1784 was followed by similar meetings at the Abbey, with more performers, in 1785, 1786, 1787, and 1791. In the latter year the performers are said to have numbered 1068, but that number was probably made up by inserting the names of persons who performed alternately with others, so that the numbers engaged in any one performance did not much exceed those on the former occasions. W. H. H.

HANDEL FESTIVAL. In 1856 Mr. R. K. Bowley conceived the idea of commemorating the genius of Handel on the centenary (in 1859) of his death by performing some of his works on a scale of unprecedented magnitude. On Sept. 1, 1856, he communicated his idea to the Committee of the Sacred Harmonic Society, by whom it was favourably received. No building in London being large enough to contain the necessary orchestra, the attention of the Society was directed towards the Central Transept of the Crystal Palace (of which they had already had experience in the performance of the music at the opening of the Palace, May 10, 1854) as the most likely place to answer the desired end. The Directors of the Crystal Palace Company entered warmly into the project, and it was determined to hold a preliminary festival in 1857. A large orchestra was accordingly erected, with a grand organ, built by Gray & Davison expressly for the occasion. With the chorus of the Society as a nucleus, a choir of upwards of 1200 picked singers was formed in London, which was supplemented by others from the principal towns in the United Kingdom until the whole numbered 2000. The band, similarly constituted, numbered 396. The meeting, under the title of 'The Great Handel Festival,' was held on Monday, Wednesday, and Friday, 15th, 17th, and 19th June 1857, with a public rehearsal on the preceding Saturday. The sole direction of the music was committed to the Society, the Company taking charge of the other arrangements. The oratorios of 'Messiah,' 'Judas Maccabæus,' and 'Israel in

Egypt,' were performed, the principal singers including Clara Novello, Miss Dolby, Sims Reeves, and Formes, and the conductor being Costa, as conductor of the Society.

This festival having established the fact that the Central Transept of the Palace might be made a fitting locality for the Commemoration in 1859, it took place under the same management, on the 20th, 22nd, and 24th June, 'Messiah' and 'Israel in Eygpt' again occupying the first and third days, the second being devoted to 'The Dettingen Te Deum' and a selection from various works. The band was augmented to 460, and the chorus to upwards of 2700 performers; Costa was conductor, and the principal singers included Clara Novello, Sims Reeves, and Signor Belletti. The orchestra was improved by inclosing it with wooden screens, and covering it in with an enormous awning of oiled and hardened canvas. The three performances and the public rehearsal were remarkably successful, and attracted 81,319 visitors.

This success led to the determination that similar festivals should be held periodically under the name of the Triennial Handel Festival. Fifteen have been held, viz. in 1862, 1865, 1868, 1871, 1874, 1877, 1880, 1883, 1885 (the festival of 1886 being anticipated so as to celebrate the bi-centenary of the composer's birth), 1888, 1891, 1894, 1897, 1900, and 1903. The first and third days have invariably been occupied by 'Messiah' and 'Israel,' the intermediate days being devoted to varied selections, including 'The Dettingen Te Deum' in 1871; the Coronation Anthems, 'Zadok the Priest' (1865), and 'The king shall rejoice' (1877); and the First, Fourth, and Second Organ Concertos respectively in 1871, 1874, and 1877. The singers who appeared at these festivals were the most eminent then before the public. The Sacred Harmonic Society was solely responsible for the earlier performances, which were conducted by Costa down to 1880. From 1883 to 1900 Mr. (now Sir August) Manns was the conductor, and for that of 1903, Mr. (now Dr.) F. H. Cowen was appointed. The band was augmented in 1865 to 495 performers, and the chorus in 1874 to nearly 3200. The sonority of the orchestra was increased by the erection in 1862 of a boarded roof covering in the whole space occupied by the performers, and extending 24 feet beyond the front. W. H. H.

HÄNDEL-GESELLSCHAFT. A society for the publication of a critical and uniform edition of the whole of Handel's works in full score, with pianoforte arrangement and German translation of the text. The Prospectus is dated August 15, 1856, and has thirty-five names appended to it, including those of Chrysander, Dehn, Franz, Gervinus, Hauptmann, Hiller, Jahn, Liszt, Meyerbeer, Moscheles, Neukomm, and Rietz. A second Prospectus announcing the first year's issue is dated Leipzig, June 1, 1859, and signed by the *Directorium*, viz. Rietz, Hauptmann, Chrysander, Gervinus, Breitkopf & Härtel. Dr. Friedrich Chrysander was sole active editor from the commencement, having had for some few years at the beginning the little more than nominal co-operation from Rietz, Hauptmann, and Gervinus. The editor paid frequent visits to England to consult Handel's original manuscripts, upon which the edition is based throughout; and acquired the scores written for the purpose of conducting by Handel's secretary J. C. Smith, which previously belonged to M. Schoelcher. Vols. 1-18 of this edition were issued by Breitkopf & Härtel of Leipzig; but in the year 1864 the editor terminated this arrangement, and engaged engravers and printers to work under his immediate control on his own premises at Bergedorf near Hamburg. All the volumes from vol. 19 have been thus produced; and with vol. 20 an important improvement was made in the use of zinc (as a harder metal) instead of pewter for the engraved plates.

In the following list, an asterisk is prefixed to those works which were published for the first time, at all events in complete score. Vol. 97, in a different form (the oblong shape of Handel's manuscript), contains a facsimile of 'Jephtha,' which is of especial interest as showing the composer's style of writing when blindness was rapidly coming on, and making evident the order in which he wrote—the parts of the score first written exhibiting his ordinary hand, while those which were written in later, when he was struggling with dimness of sight, can be readily distinguished by their blotched and blurred appearance.

The English Oratorios, Anthems, and other vocal works, are provided with a German version, executed by Professor Gervinus, and after his death by the editor; and the few German vocal works have an English translation added. The Italian Operas and other vocal works, and the Latin Church Music, have no translation. The Oratorios, Odes, Te Deums, 'Acis and Galatea,' 'Parnasso in Festa,' Italian duets and terzets, and Anthems, have a PF. accompaniment added to the original score; but not the Italian Operas, nor vols. 24, 38, 39. These accompaniments are partly by the editor, partly by Im. Faisst, J. Rietz, E. F. Richter, A. von Dommer, and E. Prout.

Dr. Chrysander also published the following articles on certain works of Handel's, which should be combined with the information contained in the prefaces to make the edition complete: on vol. 13 ('Saul'), in *Jahrbücher für musikalische Wissenschaft*, vol. 1; on vol. 16 ('Israel in Egypt'), *ibid.* vol. 2; on vol. 47 (Instrumental Music), in *Vierteljahrsschrift für Musikwissenschaft* for 1887. After the completion of the edition, a series of 'Supplemente' was issued, consisting of certain works from

which Handel took ideas and whole sections. A list of these supplements is given under CHRYSANDER, vol. i. p. 535.

The account of this edition would not be complete without mention of the munificence of the King of Hanover, who guaranteed its success by promising to provide funds to meet any deficiency in those received from subscribers; as well as of the liberality of the Prussian government, which took the same liability after the absorption of the territory of Hanover.

Vol.
1. Oratorio: Susanna, 1748.
2. Pièces pour le clavecin. (1. Eight suites, 1720. 2. Nine suites, first published 1733. 3. Twelve pieces, some hitherto unpublished. 4. Six fugues, about 1720.)
3. Masque: Acis and Galatea, about 1720.
4. Oratorio: Hercules, 1744.
5. Do. Athalia, 1733.
6. Do. L' Allegro, il Pensieroso, ed il Moderato, 1740.
7. Do. Semele, 1743.
8. Do. Theodora, 1749.
*9. Do. Passion according to St. John (German), 1704.
10. Do. Samson, 1741.
11. Funeral Anthem for Queen Caroline, 1737.
12. Ode: Alexander's Feast, 1736.
13. Oratorio: Saul, 1738.
14. Coronation Anthems (Zadok the Priest; The king shall rejoice; My heart is inditing; Let thy hand be strengthened), 1727.
*15. Oratorio: Passion, by Brockes (German), 1716.
16. Do. Israel in Egypt, 1738.
17. Do. Joshua, 1747.
18. Musical Interlude: Choice of Hercules, 1750.
19. Oratorio: Belshazzar, 1744.
20. Do. Triumph of Time and Truth, 1757.
21. Concertos (6 'Hautbois Concertos'; Concerto grosso in C, 1736; 4 Concertos, early works; * Sonata in B♭, about 1710).
22. Oratorio: Judas Maccabæus, 1746.
23. Ode for St. Cecilia's Day, 1739.
*24. Oratorio: Il Trionfo del Tempo e della Verità (Italian), 1708, 1737.
25. Dettingen Te Deum, 1743.
26. Oratorio: Solomon, 1748.
27. Sonate da camera (15 solo sonatas, first published about 1724; 6 sonatas for 2 oboes and bass, earliest compositions, 1696; 9 sonatas for 2 violins, etc. and bass; 6 sonatas for 2 violins, etc. and bass, 1738).
28. Twelve Organ Concertos, 1738, etc.
29. Oratorio: Deborah, 1733.
30. Twelve Grand Concertos, 1739.
31. Utrecht Te Deum and Jubilate, 1713.
32. Duetti e Terzetti (22 Italian vocal duets and 2 trios, 1707-8, 1741-45, six never before printed).
33. Oratorio: Alexander Balus, 1747.
34. Anthems, vol. 1. ('Chandos' with 3 voice-parts, with some now first published), 1716-18.
35. Do. vol. 2. ('Chandos' with 4 voice-parts.)
36. Do. vol. 3. ('O praise the Lord'; *Wedding Anthems, 1734; Wedding Anthem, 1736; *Dettingen Anthem, 1743; *Foundling Hospital Anthem, 1749.)
37. Three Te Deums (in D, about 1714; in B♭, about 1718-20: in A, perhaps 1727).
38. Latin Church Music, about 1702, 1707, 1718, 1735-45.
39. Oratorio: Resurrezione (Italian), 1708.
40. Do. Esther, 1st version ('Haman and Mordecai,' a masque), about 1720.
41. Do. Esther, 2nd version, 1732.
42. Do. Joseph, 1743.
43. Do. Occasional, 1746.
44. Do. Jephtha, 1751.
45. Do. Messiah, 1741.
46. Birthday Ode and Alceste.
47. Instrumental Music for full orchestra (*Concerto in F, about 1715; Water Music, 1715; *Concertos in F and D; Firework Music, 1749; Double Concerto in B♭, 1740-50 (?); *Double Concerto in F, 1740-50 (?)).
48. Organ and miscellaneous instrumental music.
49. German, Italian, and English songs and airs.
50. Italian Cantatas, with bass, vol. 1.
51. Do. vol. 2.
52. Italian Cantatas, with instruments, vol. 1.
53. Italian Cantatas, with instruments, vol. 2.
54. Serenata: Il Parnasso in festa, 1734.
*55. Opera: Almira (German), 1704.
*56. Do. Rodrigo, 1707.
57. Do. Agrippina, 1709.
*58. Do. Rinaldo, 1711.
*59. Do. Il Pastor Fido, 1712.
60. Do. Teseo, 1712.
*61. Do. Silla, 1714.
*62. Do. Amadigi, 1715.
*63. Do. Radamisto, 1720.
*64. Do. Muzio Scevola, Act 3, 1721.
*65. Do. Floridante, 1721.
*66. Do. Ottone, 1722.
*67. Do. Flavio, 1723.
68. Do. Giulio Cesare, 1723.
*69. Do. Tamerlano, 1724.
*70. Do. Rodelinda, 1725.
*71. Do. Scipione, 1726.
*72. Opera: Alessandro, 1726.
*73. Do. Admeto, 1726.
*74. Do. Riccardo, 1727.
*75. Do. Siroe, 1728.
*76. Do. Tolomeo, 1728.
*77. Do. Lotario, 1729.
*78. Do. Partenope, 1730.
*79. Do. Poro, 1731.
*80. Do. Ezio, 1732.
81. Do. Sosarme, 1732.
*82. Do. Orlando, 1732.
*83. Do. Arianna, 1733.
84. Do. Terpsichore and second Pastor Fido, 1734.
*85. Do. Ariodante, 1734.
*86. Do. Alcina, 1735.
*87. Do. Atalanta, 1736.
*88. Do. Giustino, 1736.
*89. Do. Arminio, 1736.
*90. Do. Berenice, 1737.
*91. Do. Faramondo, 1737.
*92. Do. Serse, 1738.
*93. Do. Imeneo, 1738-40.
94. Do. Deidamia, 1740.
95. Aci e Galatea (Italian), 1708 and 1732.
96. Miscellaneous Vocal pieces.
97. Oratorio: Jephtha, facsimile of Handel's MS. score.
98 and 99. Facsimiles of Handel's autographs.
100. Thematic Catalogue of Handel's works. R. M.

HANDEL SOCIETY, THE. (i.) A society formed in 1843 'for the production of a superior and standard edition of the works of Handel.' It was suggested by Mr. Macfarren, senior, who, however, died on April 24, immediately after the first meeting convened by him. The Prospectus was signed by George A. Macfarren as Secretary, on behalf of the Council, and was issued from his residence 73 Berners Street, June 16, 1843. The Council for the first year consisted of R. Addison, *Treasurer*; W. Sterndale Bennett; Sir H. R. Bishop; Dr. Crotch; J. W. Davison; E. J. Hopkins; G. A. Macfarren, *Secretary*; I. Moscheles; T. M. Mudie; E. F. Rimbault; Sir George Smart, and Henry Smart. The annual subscription was a guinea, and the Society commenced operations with 1000 members. The publications—in large folio, full score, each with PF. arrangement and editor's preface—were issued by Cramer, Addison, & Beale, who continued the publication of the volumes, after the dissolution of the society in Jan. 1848, until 1855, when the number of volumes reached twelve. G.

HANDEL SOCIETY, THE. (ii.) This society, consisting of an amateur chorus and orchestra, was founded in 1882 for the purposes of (1) the revival of the less well-known works of Handel, and (2) the practice of classical music, vocal and instrumental, by various composers.

Almost from the date of its foundation, the Society has enjoyed the patronage of the present King and Queen. Its first officers were: President, Sir Julius Benedict; Vice-President, the Earl of Lathom; Musical Director and Conductor, Mr. F. A. W. Docker; Honorary Secretaries, Messrs. H. F. Nicholl and P. G. L. Webb. Among other members of the first Committee were Mr. Arthur J. Balfour, Mr. W. Austen Leigh, Mrs. Ellicott, and Mrs. Marwood Tucker. Soon after the beginning Mr. Herbert J. Gladstone, the Hon. E. P. Thesiger, and Mr. E. B. Pearse joined the Committee, and Mr. E. G. Croager was appointed organist, a post he has filled ever since. Mr. Balfour has always shown a particular interest in the work of the Society,

and during its early years the practices for part of each season were held in his house.

After the death of Sir Julius Benedict in 1885, Dr. (afterwards Sir John) Stainer became President. He retained the post till his death in 1901, when he was succeeded by Sir Hubert Parry. After Mr. Docker's retirement in 1892, Mr. (now Sir) August Manns was appointed to the post of conductor, which he retained till 1895. He was succeeded by Mr. J. S. Liddle, who held office till 1904. The present musical director and conductor is Mr. S. Coleridge Taylor.

The Society has performed all the principal works of Handel except the 'Messiah' and 'Israel in Egypt.' Among the more important of the less-known works of the composer which the Society has revived are the following:—

'Alexander Balus,' 'Athaliah,' 'Belshazzar,' 'Deborah,' 'Hercules,' 'Saul,' 'Semele,' 'Susanna,' 'Theodora,' 'The Water Music.'

Most of these works have been given, as far as possible, with the original instrumentation, the *Recitativo Secco* being freely accompanied from the figured bass on either the piano or the organ. Among the accompanists have been Sir Walter Parratt, Professor Prout, Dr. A. H. Mann, and Dr. W. H. Cummings.

Subjoined is a selection from the works of other composers produced at the Society's Concerts. Some of these works had never before been performed in London, and others only rarely—

BEETHOVEN. 'Preis der Tonkunst.'
H. F. BIRCH-REYNARDSON. 'Ave Caesar.
BRAHMS. 'Gesang der Parzen.'
GOETZ. 'By the Waters of Babylon.
Do. 'Noenia.'
HUMPERDINCK. 'Das Glück von Edenhall.'
Do. 'Die Wallfahrt nach Kevlaar.'
Do. Humoreske for Orchestra.
MOZART. Kyrie in D minor.
Do. 'Litania de Venerabili Sacramento' in B flat.
Do. 'König Thamos.'
PARRY. Eton Ode.
Do. 'Song of Darkness and Light.'
Do. 'The Glories of our Blood and State.'
PURCELL. 'Dido and Æneas.'
RHEINBERGER. 'Clarice of Eberstein.'
SCHUMANN. 'Song for the New Year.'
ARTHUR SOMERVELL. 'The Forsaken Merman.'
STANFORD. 'Phaudrig Crohoore.'
WOLFRUM. 'Weihnachtsmysterium.' P. G. L. W.

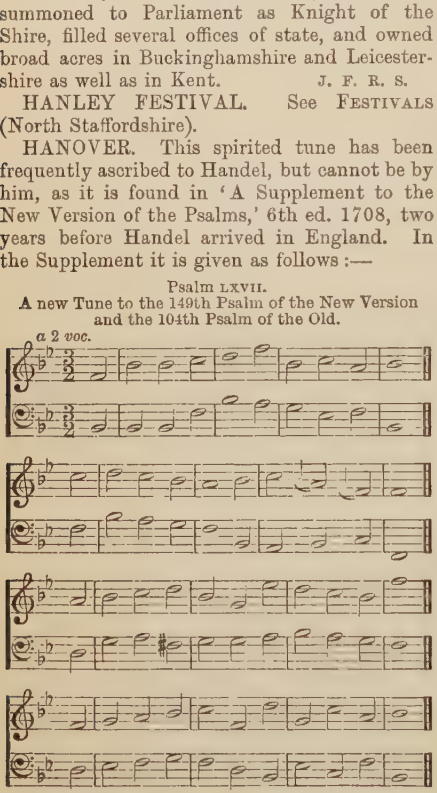
HÁNDL, JACOB, also HÄNDL and HÄHNEL, an old German master whose name, after the punning fashion of those days, was latinised into GALLUS,[1] born about 1550, a native of Krain (or Carniola); capellmeister about 1579 to Stanislas Pawlowski, Bishop of Olmütz, and afterwards cantor in the church of St. Johann am Ufer in Prague, where he died much respected and bewailed July 18, 1591. In 1580 four books of masses, sixteen in all, were published in Prague, and Gallus had a special privilege from the Emperor to publish his great work. *Händl Jac. Musici operis, harmoniarum 4, 5, 6, 8, et plurium vocum* (Prague, four vols. 1586, 1587, 1590), a collection of the greatest value. [His 'Epicedion harmonicum' appeared in 1589, and 'Moralia' in 1596.]

[1] The sobriquet of 'Gallus' is a pun on Händl, as if Hahn. Another of his name (see *ante*, p. 139) was called Le Cocq.

His well-known motet (*a* 4) 'Ecce quomodo moritur justus' (which Handel borrowed for his Funeral Anthem), is contained in the collection just named, and is also printed (with eighteen others by him for five, six, and eight voices) in Bodenschatz's *Florilegium Portense*. Proske's *Musica divina* contains eleven motets, three Responsoria, a Miserere, a Christus factus est, and a Te Deum, all by him. [See the *Denkmäler der Tonkunst in Oesterreich*, vol. vi. i. (1899) which contains many of his motets and a careful biography.] F. G.

HANDLO, ROBERT DE, the author of a treatise entitled *Regulae cum maximis Magistri Franconis, cum additionibus aliorum musicorum*, printed in the first volume of Coussemaker's *Scriptores*, and dated 1326. It is an elementary treatise, dealing only with notation, time-values and the modes of rhythm, but is of interest as showing the unsettled state of notation at this period for notes of less value than the breve. The author, following Johannes de Garlandia, describes four kinds of semibreves. The semibrevis major and minor are respectively two-thirds and one-third of a perfect breve: the semibrevis minorata and minima are respectively two-thirds and one-third of a semibrevis minor. Two signs, ◇ and ◇ serve to represent these four values, and it would seem, though the matter is not clear, that the sign ◇ was used for the minor and minima, and ◇ for the major and minorata. No note of less value than the semibrevis minima, corresponding to the modern minim, is recognised. This throws some light on the dark saying of Johannes de Garlandia that any number of semibreves from three to nine may be counted to the breve. The 'other musicians' cited in the treatise are Petrus de Cruce, Petrus le Viser, Johannes de Garlandia, Admetus de Aureliana and Jacobus de Navernia. Handlo always places the name of the author (Franco, or whoever it may be) before the passages that he quotes from others, and similarly places his own name before his own original contributions; an arrangement which has given rise to the erroneous assertion by Hawkins, recently repeated by Ambros, that the treatise is in dialogue form.

Thomas Morley includes Robert de Hanlo, misspelt 'Haulo,' among the 'late writers' in the list of authorities appended to his *Introduction to Practicall Musicke* (1597), and in his Annotations he quotes the opening maxims of the treatise itself, describing it as 'an old treatise of musicke written in vellim aboue an hundred yeares ago.' The manuscript he refers to was undoubtedly 'Tiberius B. ix.' of the Cottonian Library, which included, besides Handlo's treatise, the *Quatuor Principalia* and several other tracts on music. It was 'burnt to a crust' in the disastrous fire at Ashburnham House on Oct. 23, 1731, but fortunately a



transcript of the musical portions had previously been made for Dr. Pepusch. This afterwards came into the possession of Sir John Hawkins, by whom it was presented to the British Museum. It was from this copy (now Add. MS. 4909) that Coussemaker printed not only Handlo's treatise, but also the three valuable anonymous tracts (iv. v. and vi.) included in his first volume.

The family of De Handlo, with which our author was probably connected, produced several distinguished men in the 13th and 14th centuries. They took their name from the manor of Handlo, now Hadlow, near Tonbridge, Kent. Sir John de Handlo, who died in 1344, was twice summoned to Parliament as Knight of the Shire, filled several offices of state, and owned broad acres in Buckinghamshire and Leicestershire as well as in Kent. J. F. R. S.

HANLEY FESTIVAL. See FESTIVALS (North Staffordshire).

HANOVER. This spirited tune has been frequently ascribed to Handel, but cannot be by him, as it is found in 'A Supplement to the New Version of the Psalms,' 6th ed. 1708, two years before Handel arrived in England. In the Supplement it is given as follows :—

Psalm LXVII.
A new Tune to the 149th Psalm of the New Version and the 104th Psalm of the Old.

The tune is anonymous, but is not improbably by Dr. Croft, the reputed editor of the 6th edition of the Supplement. G. A. C.

HANOVER SQUARE ROOMS. In 1773 a piece of ground on the east side of Hanover Square at the north-west corner of Hanover Street, London, formerly part of a field called the Mill Field, *alias* Kirkham Close, and described as 'containing in breadth from north to south in the front next the Square as well as in the rear forty feet of assize, more or less, and in depth from west to east on the north side as well as on the south, 135 feet more or less,' was occupied by a house, garden, and office, then in the occupation of Lord Dillon. The freehold belonged to the Earl of Plymouth. On June 28, 1774, Lord Plymouth sold the freehold for £5000[1] to Viscount Wenman, who on the same day conveyed the whole to Giovanni Andrea Gallini,[2] John Christian Bach, and Charles Frederick Abel. Gallini owned one-half, and the others each one-fourth. They erected on the site of the garden and office, and joining on to the house, rooms for the purposes of concerts, assemblies, etc., consisting of a principal room, 95 ft. by 35, on the level of the first floor ; a small room on the north side, originally used as a tea-room ; and one on the ground floor beneath the principal room. The ceiling of the principal room was arched, and decorated with paintings by Cipriani. The orchestra stood at the east end. The rooms were opened on Feb. 1, 1775, with one of Bach and Abel's Subscription Concerts, established by them in 1763 : later in the month Subscription 'Festinos' were announced ; on May 4, 'Mr. Gallini's Annual Ball,' and on May 22, the first 'Grand Subscription Masquerade.' On Nov. 12, 1776, Gallini purchased the shares of Bach and Abel, and became sole proprietor. Bach and Abel's concerts continued to be held there until 1782, when the withdrawal by Lord Abingdon of the pecuniary aid he had theretofore given, led to their discontinuance. Thereupon some professors of music established similar concerts under the name of 'The Professional Concert,' which were given in the room from 1783 to 1793. In 1786 Salomon, the violinist, piqued at being left out of the Professional Concert, established concerts here, at which in 1791 and 1792, and again in 1794 and 1795, Haydn directed the performance of his twelve 'grand' symphonies. At the eighth concert in 1792, on May 5 'Master Hummel' played a concerto by Mozart on the pianoforte, and in 1796 John Braham was introduced to the public as a tenor singer. In 1804 the Concert of Ancient Music was removed to these rooms, the Directors having taken a lease from Gallini at a rental of £1000 per annum, and the concerts continued to be held here until 1848, the last year of their existence. The Directors made considerable alterations ; the orchestra was removed to the west end, three boxes were erected across the east end for the royal family and their attendants, and the rooms were newly fitted up in a splendid manner. On the death of Gallini (Jan. 5, 1805), the freehold passed to his two nieces, who leased the rooms to Wallace & Martin, and Martin & Son successively. In December 1832 alterations were made in the great room by the enlargement of the windows so as to render it available for morning concerts ; and many mirrors were introduced. The con-

[1] Being at the rate of very nearly £1 per square foot of ground.
[2] Gallini was a Swiss of Italian extraction, who had taught the children of George III. to dance, and amassed a fortune, became manager of the Opera-house (1776), was knighted as Sir John Gallini, and married a daughter of the Earl of Abingdon.

certs of the Vocal Society were given in these rooms from its foundation in 1832 to its dissolution in 1837. A new Vocal Society gave concerts here in 1838, but its existence was of very brief duration. In 1833 the concerts of the Philharmonic Society were removed here from the Concert Room of the King's Theatre, and continued here until their departure to St. James's Hall in 1869. Both the Misses Gallini dying in 1845, the freehold was sold by auction to Robert Cocks, the music-publisher, under whom the younger Martin held it by lease until December 1861. Extensive alterations and decorations were then made in the rooms, which were re-opened Jan. 8, 1862, by Mr. Henry Leslie's Choir; the concerts of the Royal Academy of Music were also removed there. The annual performance of Handel's 'Messiah' for the benefit of the Royal Society of Musicians was given there from 1785 to 1848. In 1874 the premises were let on lease for the purpose of being converted into a club-house. The last concert was given in the rooms on Saturday, Dec. 19, 1874, and the building, after undergoing an entire transformation, was opened early in 1876 as 'The Hanover Square Club.' [The premises are now shops, with flats ('Hanover Court') above.] It must not be forgotten that the great room was remarkable for its excellent acoustic properties. W. H. H.

HANS HEILING. Opera in three acts and a prologue; libretto by Eduard Devrient (originally intended for Mendelssohn), music by Heinrich Marschner. Produced at Hanover, May 24, 1833.

HANSLICK, Eduard, musical critic and writer on æsthetics, born at Prague, Sept. 11, 1825, son of a well-known bibliographer, studied law and philosophy in Prague and in Vienna, where he took the degree of Doctor in 1849. In 1856 he was appointed tutor of æsthetics and musical history at the university; in 1861 professor extraordinary, and in 1870 regular professor. His love of music had been fostered at home, and under Tomaschek he became an excellent pianist. In Vienna he had ample opportunities of becoming a critic of no ordinary merit, and his keen insight and cogent logic, and the elegance and versatility of his style, make his literary productions of lasting value. As a juror for the musical department of the Exhibitions of Paris (1867 and 1878) and Vienna (1873 and 1892) he did everything in his power to further the interests of the musical instrument makers of Austria. In 1876 he was appointed a member of the Imperial Council, having some time before received the order of the Iron Crown. [The title of K.K. Hofrath was conferred on him in 1886.] During the years 1859-63 he gave public lectures on the history of music in Vienna, and occasionally in Prague, Cologne, etc. He was musical critic successively to the *Wiener Zeitung*, 1848-49, the *Presse*, 1855-64, and the *Neue freie Presse*. Hanslick published the following books:—*Vom musikalisch-Schönen* (Leipzig, 1854, 9th ed. 1896), translated into French (1877), Italian (1884), and English (1891), a work which marks an epoch; *Geschichte des Concertwesens in Wien* (Vienna, 1869); *Aus dem Concertsaal* (Vienna, 1870); *Die moderne Oper* (Berlin, 1875, 2nd ed. 1876), with various continuations:—[*Musikalische Stationen*, 1880; *Aus dem Opernleben der Gegenwart* (3rd ed. 1885); *Musikalisches Skizzenbuch*, 1888; *Musikalisches und Litterarisches*, 1889; *Aus dem Tagebuche eines Musikers*, 1892 (3rd ed. 1894, as *Aus meinem Leben*); *Fünf Jahre Musik*, 1896; *Aus Ende des Jahrhunderts*, 1899; *Aus neuer und neuester Zeit*, 1900. In 1895 he edited Billroth's *Wer ist musikalisch*, and in the same year he retired from active life.] He also wrote the text for the *Galerie deutscher Tondichter* (Munich, 1873), and the *Galerie franz. und ital. Tondichter* (Berlin, 1874). In music Hanslick was a Conservative. His resistance to the Liszt-Wagner movement is well known. On the other hand he was an early supporter of Schumann, and a strong adherent of Brahms. [He died at Baden, near Vienna, August 6, 1904. An interesting article on him appeared in the *Rivista Musicale Italiana*, vol. xi. p. 819.] C. F. P.

HARE, John and Joseph, London music-publishers during the early portion of the 18th century, father and son. John Hare was established as early as 1696 in Freeman's Yard, Cornhill, and 1697 (probably also in the previous year) he had an additional place of business in St. Paul's Churchyard at the sign of the 'Golden Violin.' This sign generally stood as the 'Golden Viol' (or more frequently 'Viall'). One of his earliest publications is a reprint, dated 1697, of *Youth's Delight on the Flageolet*, a small engraved work originally issued by John Clarke, also of the 'Golden Viol,' in St. Paul's Churchyard, and to whose business and stock-in-trade Hare probably succeeded. Throughout the whole business career of Hare and of his son, they were associated with John Walsh, and a great number of Walsh's publications bear their names in conjunction with his own; indeed, beyond the flageolet book above quoted I am unable to find any separate work issued by Hare or his son. About 1720 Joseph Hare's name first appears with that of his father's on the imprints, and John Hare's name disappears in 1725, in the September of which year he died. Joseph Hare died in 1733, leaving his widow Elizabeth in possession of the business. There are indications that shortly after this date the widow retired to Islington to live, leaving her shop in the hands of John Simpson, who, in or near the year 1734, probably bought the stock-in-trade, and set up for himself in close proximity in Sweeting's Alley. The 'Golden Viol' in St. Paul's Churchyard does not appear in the imprints on any late

publications of the Hare family, and was, in all likelihood, not held after 1706-7; Richard Meares is at this sign in 1722. It has been stated, but lacks confirmation, that Walsh and Hare were the first to stamp music on pewter plates to supersede engraving on copper. The registers of St. Michael's Church, Cornhill, give the dates of burial of the Hare family who, living in Freeman's Yard, were in its parish.

Burials	1725, Sept. 9.	John Hare in the New Vault.
,,	1728, April 28.	John, son of Joseph Hare and Elizabeth his wife [apparently an infant son].
,,	1733, July 17.	Joseph Hare in the New Vault.
,,	1741, July 8.	Elizabeth Hare, widow, from Islington, in the New Vault.

ELIZABETH HARE, probably a daughter of Joseph Hare (as his wife bore the same Christian name). She had a music shop in or near Cornhill, but not on the old premises. She issued country dances for 1750 and 1751, and her shop was opposite the Mansion House. F. K.

HARINGTON, or HARRINGTON,[1] HENRY, M.D., born Sept. 29, 1727, at Kelston, Somersetshire; in 1745 entered at Queen's College, Oxford, with the view of taking orders. He used to pass his vacations with his uncle, William, vicar of Kingston, Wilts, from whom he imbibed a taste for music and poetry. He resided there during eight years, and wrote some unimportant verses and music. In 1748 he took his B.A. degree, abandoned his intention of taking orders, and commenced the study of medicine. He remained at Oxford until he took his M.A. and M.D. degrees. Whilst there he joined an amateur musical society established by Dr. W. Hayes, to which those only were admitted who were able to play and sing at sight. On leaving Oxford he established himself as a physician at Bath, devoted his leisure to composition, [and was appointed 'composer and physician' to the Harmonic Society of Bath on its foundation by Sir John Danvers in 1784. W. H. G. F. Two books, in folio, of Harington's glees were issued by Longman & Broderip before 1785; a third followed later. F. K.] In 1797 he published a volume of glees, catches, etc., and afterwards joined Edmund Broderip, organist of Wells, and Rev. William Leeves, composer of 'Auld Robin Gray,' in the publication of a similar volume. In 1800 he published 'Eloi! Eloi! or, The Death of Christ,' a sacred dirge for Passion Week. Harington was an alderman of Bath, and served the office of mayor with credit. He died at Bath Jan 15, 1816, and was buried in Bath Abbey. His compositions are 'distinguished for originality, correct harmony, and tenderness, and he was remarkably successful in some humorous productions' (*Harmonicon*). His round 'How great is the pleasure' is one of the prettiest of its kind. W. H. H.

[1] [The spelling of the name is doubtful; in works apparently issued under his own direction, the form 'Harington' is used, and is generally followed by contemporary publishers. F. K.]

HARMONIC FLUTE, an organ-stop of 4-foot pitch. The pipes of harmonic flue stops being of double speaking-length, the scale, windage, and voicing are such as to cause the pipe to overblow into the octave above.

A small hole (or sometimes two small holes opposite to each other) is (or are) pierced midway in the speaking-length of the pipe, which, by weakening the wind at that point, assists in the division of the vibrating wave or air-column into two lengths, thereby eliminating uncertainty of pitch or tone, and ensuring rapidity of speech. If the holes are temporarily covered by the fingers, and the pipe is softly blown, it gives its full speaking-length pitch.

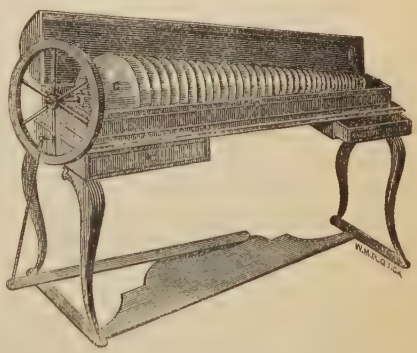
The lowest note of the harmonic (or double-length) portion of this stop is usually middle c', having a nominal length of 2 feet, but yielding the pitch of the twelve-inch c''. The tenor and bass are carried down in (true length) metal, and (half length) stopped wood pipes, a singular sequence of pipe lengths in the same stop. The Harmonic Piccolo is the corresponding stop in 2-foot pitch.

The tubes of the harmonic portions of reed stops are likewise of double length, and generally have a hole pierced midway. See HARMONIC STOPS, below. T. E.

HARMONIC INSTITUTION. See ARGYLL ROOMS.

HARMONIC MINOR is the name applied to that version of the minor scale which contains the minor sixth together with the major seventh, and in which no alteration is made in ascending and descending. Its introduction as a substitute for the old-fashioned or 'Arbitrary' minor scale was strongly advocated by Dr. Day and others [see DAY], and in the latter half of the 19th century it was very generally adopted. It is true that its use is calculated to impress the learner with a sense of the real characteristics of the minor mode, but its merits are counterbalanced by the awkwardness arising from the augmented second between the sixth and seventh notes, while it is difficult to regard it as a diatonic scale at all, in spite of its theoretical correctness. M.

HARMONIC PICCOLO. See HARMONIC FLUTE.



HARMONIC STOPS are organ-stops, the upper pipes of which do not produce the sound that would be expected, having regard to their length, but the octave to that sound. They have been known in Germany for nearly two hundred years. The 'violoncello, 8-foot pitch' on the Pedal organ at Weingarten, made in the first half of the 18th century, is in reality 16 feet in length, of tin, and 3½ inches in diameter.

Harmonic stops have in recent years come into great favour, in the first instance through the careful and successful experiments of the eminent French house of Cavaillé-Coll, of Paris. Guided by the fact that performers upon wind

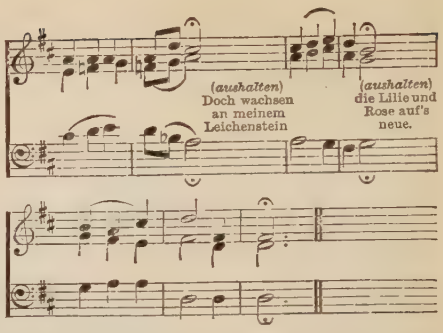
instruments exercise a greater pressure of wind for the production of the higher notes than the lower, the above ingenious builders applied the same principle to some of their organ registers, with the most excellent result. In this manner they produced the stops—most of which have been naturalised in England—called 'Flûte Harmonique, 8 pieds,' 'Flûte Octaviante, 4 pieds,' 'Trompette Harmonique, 8 pieds,' etc. At first only a few experimental pipes were made to test the soundness of the theory, for the resistance presented to the finger by the highly compressed air was so excessive as to prevent their adoption in practice; but the invention of the Pneumatic lever removed this objection, and Harmonic Stops and the Pneumatic attachment were introduced together for the first time, in Cavaillé's fine organ in the abbey church of St. Denis, near Paris, finished in 1841. Very effective Harmonic Flutes, though naturally less powerful, are frequently voiced upon a wind of the ordinary strength when there is a copious supply of it. See HARMONIC FLUTE. E. J. H.

HARMONIC UNION, THE. A society based on subscriptions, 'for the performance of sacred and secular music both of the Ancient and Modern Schools,' and particularly of living composers, with Solos, Chorus, and Orchestra. The first proposal was issued in July 1852, Benedict was chosen conductor, and Blagrove leader; the concerts took place at Exeter Hall, and the subscription was £3 : 3s. per head. The first was held on Dec. 17, 1852, the programme being Motet No. 6, J. S. Bach, and the oratorio of 'Joseph' by C. E. Horsley. Others followed at about a month's interval until Feb. 23, 1854, which appears to have been the date of the last concert. Many new works were brought forward, such as Macfarren's 'Lenora'; Pierson's 'Jerusalem'; F. Mori's 'Fridolin'; Symphony in G minor by C. E. Stephens — besides the 'Messiah,' 'Acis and Galatea' (with Mozart's accompaniments), 'Alexander's Feast,' 'Ruins of Athens,' 'Walpurgisnight,' 'Midsummer Night's Dream,' etc. G.

HARMONICA. The power of producing musical sounds from glass basins or drinking-glasses by the application of the moistened finger, and of tuning them so as to obtain concords from two at once, was known as early as the middle of the 17th century, since it is alluded to in Harsdörfer's *Mathematische und philosophische Erquickungen*, ii. 147 (Nuremberg, 1677). [In its more modern form, the credit of the invention appears to be due to an Irishman, one Richard Pockrich, who played the instrument in Dublin in 1743, and throughout England in 1744. W. H. G. F.] Gluck, when in England, played 'at the Little Theatre in the Haymarket,' April 23, 1746—'a concerto on twenty-six drinking-glasses tuned with spring water, accompanied with the whole band, being a new instrument of his own invention; upon which he performs whatever may be done on a violin or harpsichord.'[1] This or some other circumstance made the instrument fashionable, for, fifteen years later, in 1761, Goldsmith's fine ladies in the *Vicar of Wakefield*, who confined their conversation to the most fashionable topics, 'would talk of nothing but high life and high lived company . . . pictures, taste, Shakspeare, and the *musical glasses*.' That they occupied the attention of better persons is evident from the testimony of Franklin. He came to London in 1757, and writing on July 13, 1762, to Padre Beccaria at Turin, he tells him of the attempts of Mr. 'Puckeridge' (*i.e.* Pockrich) and of Mr. Delaval, F.R.S., who fixed their glasses in order on a table, tuned them by putting in more or less water, and played them by passing the finger round the brims. Franklin's practical mind saw that this might be greatly improved, and he accordingly constructed an instrument in which the bells or basins of glass were ranged or strung on an iron spindle, the largest and deepest-toned ones on the left, and gradually mounting in pitch according to the usual musical scale. The lower edge of the basins was dipped into a trough of water. The spindle was made to revolve by a treadle. It carried the basins round with it, and on applying a finger to their wet edges the sound was produced. The following cut is reduced from the engraving in Franklin's letter (Sparks's ed. vi. 245).

The essential difference between this instrument and the former ones was (1) that the pitch of the tone was produced by the size of the glasses, and not by their containing more or less water; and (2) that chords could be produced of as many notes as the fingers could reach at once. Franklin calls it the 'Armonica,' but it seems to have been generally known as 'Harmonica.' The first great player on the new instrument was Miss Marianne Davies, who had a European fame, and played music composed for her by Hasse. Another celebrated performer was Marianna Kirchgessner, a blind musician. She

[1] See *General Advertiser* of this date, and Walpole's letter to Mann, March 28.



visited Vienna in 1791, and interested Mozart so much that he wrote an Adagio and Rondo in C for harmonica, flute, oboe, viola, and violoncello, which she played at her concert on June 19 (Köchel, No. 617). Sketches of his for another Quintet in the same key are also in existence. Kirchgessner was in London in 1794, and a new harmonica is said to have been built for her by Fröschel, a German mechanician. In England the instrument appears to have been little if at all used during the 19th century. In Saxony and Thuringia, however, it was widely popular; at Dresden, Naumann played it, and wrote six sonatas for it. At Darmstadt a harmonica formed a part of the Court orchestra; the Princess Louise, afterwards Grand Duchess, was a proficient upon it, and C. F. Pohl, sen., the Princess's master, was engaged exclusively for the instrument as late as 1818.

Attempts have been made to improve or modify the harmonica by substituting a violin bow for the hand, or by reducing the peculiarly penetrating and exciting tone which is said to be so prejudicial to the nerves of players—but without success. An account of these and of much more than can be included in this short statement will be found in C. F. Pohl's *Zur Geschichte der Glasharmonica* (Vienna, 1862). One Method only exists for this instrument, that of J. C. Müller, Leipzig, 1788. A specimen of the harmonica, built by Emanuel Pohl of Kreibitz, Bohemia, is in the Victoria and Albert Museum, South Kensington.

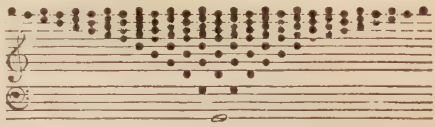
The following little piece for the Harmonica was composed by Beethoven for the 'Leonora Prohaska' of his friend Duncker in 1814 or 1815. The autograph is preserved in the Library of the Gesellschaft der Musikfreunde at Vienna, and appeared in print for the first time in the original edition of this Dictionary.[1]

[1] This 'melodram,' as it is called, after its first appearance in this Dictionary, appeared, with other numbers written for the same play, in the supplementary volume of Beethoven's works (Breitkopf & Härtel, 1888).

The name Harmonica is also used for a toy-instrument of plates of glass hung on two tapes and struck with hammers. G.

HARMONICHORD. A keyed instrument invented in 1810 by Friedrich Kaufmann, the celebrated musical instrument maker of Dresden. In its form it resembled a small square piano; but the sound was obtained not by striking the wires with hammers, but by the friction against them of a revolving cylinder (as in the ordinary hurdy-gurdy), covered with leather, and rosined. This cylinder, which in the effect it produced somewhat resembled the bow of a violin, was set in motion by a pedal worked by the foot of the player. All gradations of tone, as well as the power of swelling or diminishing the sound upon a sustained note, were produced by the pressure of the finger. For this instrument Weber composed in the year 1811 a very interesting adagio and rondo, with orchestral accompaniment, published by Peters, of Leipzig. Weber wrote concerning this composition—'It was an infernal piece of work to write for an instrument whose tone is so peculiar and strange that one has to call to one's aid the liveliest imagination to bring it suitably forward in combination with other instruments. It is a cousin of the harmonica, and has this peculiarity, that with every sustained note its octave is prominently heard.' On the printed title-page it is said to be 'for Harmonichord or *Harmonium*.' This, however, is an addition of the publisher; as not only are the two instruments totally distinct, but the physharmonica, the predecessor of the harmonium, was not invented till about fifteen years later. E. P.

HARMONICON, THE, a monthly musical periodical edited by W. Ayrton, begun January 1823, and continued until September 1833. It contained ably written memoirs of eminent musicians, some of the earlier being accompanied by engraved portraits, essays, reviews of new music, correspondence, criticisms of musical performances of all kinds, foreign musical news, information on all subjects interesting to musicians, and original and selected vocal and instrumental music. It was of quarto size, in twenty-two vols. (counting the musical supple-



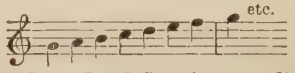
ments as separate volumes), and was one of the best musical periodicals ever published in England. W. H. H.

HARMONICS, tones of higher pitch which accompany every perfect musical sound in a regular series. As they ascend they diminish in intensity, and approximate in pitch. If the piano be opened and a bass note be struck smartly and kept down, on listening attentively a succession of faint sounds will be heard, apparently rising out of the principal sound and floating round it. These are the harmonics. They are really constituents of the main musical tone, and are produced by the concurrent vibration of the aliquot *parts* of the string. Hence Helmholtz proposes to call them 'partial tones' (*Partialtöne*). This term is no doubt more appropriate, inasmuch as above the tenth degree most of these notes form intervals dissonant from the prime note and also from each other, and thus become perceptibly *in*-harmonic. On the best musical instruments, however, these high inharmonic tones are not reached, the vibratory impulse being exhausted on the prime note and the lower harmonics, which are consonant both with the prime note and among themselves. At the same time the smaller the aliquot parts become in the ascending series, the less easily are they set in a state of separate vibration. Consequently these high dissonant harmonics are distinctly audible only on highly resonant metallic instruments, such as the cymbals, bell, and triangle, and for practical purposes the old term harmonic answers as well as the term 'partial.'

A few instruments, such as the tuning-fork and the wide stopped organ-pipe, practically yield no harmonics. The human voice, the harmonium, and all orchestral instruments, are rich in them—the human voice probably the richest of all; but nature has so admirably compounded them that it is very difficult to analyse them scientifically. Rameau distinguished harmonics in the human voice as early as the beginning of the 18th century.

Harmonics naturally reinforce the fundamental sound, in which case their extent and distribution largely influence the intensity and the quality of the sound. They may, however, in many instances, be produced singly by mechanically checking the vibration of the fundamental note. In this relation they constitute an important practical department in most orchestral instruments.

Law of Harmonics.—A sonorous body not only vibrates as a whole but in each of its several fractions or aliquot parts, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, $\frac{1}{6}$, $\frac{1}{7}$, and so on at the same time; and each of these parts gives a separate note, the $\frac{1}{2}$ yielding the octave, the $\frac{1}{3}$ the fifth, the $\frac{1}{4}$ the double octave, the $\frac{1}{5}$ the third above the double octave, and so on. The following scheme or diagram, taken from Momigny, shows the harmonics of the open string G on the violoncello up to thirteen places:—



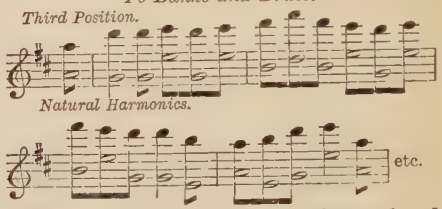
Here the bottom G is produced by the vibration of the whole string. The two G's next above are produced by the vibration of the two halves. The three D's next above by the vibration of the three thirds; and so on. Thus the diagram represents the whole of the notes produced by the vibrations of the whole string and its various sections up to its one-fourteenth part.

In this scheme the first F (counting upwards), the C a fifth above it, and the topmost notes E and F, are more or less faulty. In practically deducing the diatonic scale from this scheme, these intervals have to be corrected by the ear. By inspection of this scheme we discover the intervals of the diatonic scale in the following order:—

From this scale may obviously be deduced the chords of the third, fifth, seventh, and ninth. By combining and transposing these notes into one octave we get the following scale:—

which is the scale of C major ascending from dominant to dominant. As the same thing happens in other keys, we have thus proved the law that the intervals of each scale are generated by its dominant. The dominant, not the tonic, is therefore the true root of the whole scale.

Practical effect of Harmonics heard simultaneously with the fundamental note.—The harmonics not only determine the diatonic intervals, but to some extent the *intensity* and, as has been lately proved by Helmholtz, the *quality* of musical tones. On applying the ear to the sound-hole of a violin during a long crescendo on one note, the reinforcement of the tone by the gradual addition of the higher and more piercing harmonics is distinctly perceptible. The principle and the effect are precisely the same in a crescendo produced by the addition of the mixture stops on an organ. The loudest musical instruments, *caeteris paribus*, are those in which the highest harmonics predominate, *e.g.* the cymbals, triangle, bell, and gong.



The effect of harmonics on the quality of musical sounds is easily tested by carefully comparing the tones of an old and a new violin. In the former the strong vibrations of the fundamental note and the lower harmonics leave but

little force to be expended on the higher and noisier harmonics: in the latter the fundamental note and lower harmonics are capable of absorbing less of the force, which is transmitted to the upper harmonics, and produces a harsh quality of sound. When the fundamental note and lowest harmonics predominate in the tone, the quality is soft and flute-like; when the combination is well balanced by the addition of the intermediate harmonics up to the sixth, the quality is rich and sonorous; when the highest harmonics, above the sixth and seventh, predominate, the quality is harsh and screaming. When the high dissonant harmonics are produced in a tolerably even and continuous stream of sound, the quality is said to be 'metallic.' If an instrument is ill-strung or out of order, the harmonic scale is disturbed; and the harsh, uncertain, and irregular tones which it yields consist of harmonics out of their true place. Less varied comparisons may be obtained on the stops of an organ. Wide pipes, yielding a dull, heavy tone, have virtually no harmonics. In the tone of narrower open pipes the harmonics up to the sixth can be detected by the aid of Helmholtz's resonators. Pipes conically narrowed at the upper end, such as compose the stops called Gemshorn, Salicional, and Spitzflute, yield strong intermediate harmonics, which render the tone bright, though perceptibly thin. The Rohr-flute is so constructed as greatly to reinforce the fifth harmonic ($2\frac{1}{2}$ octaves above the prime note). The nasal quality of sound, such as is yielded by the softer reed-stops, by violins of a certain build, and by the clarinet, bassoon, etc., is produced by the predominance of the uneven harmonics ($\frac{1}{3}$, $\frac{1}{5}$, $\frac{1}{7}$, etc.). On the harmonium these uneven harmonics are stronger than the even ones. The peculiar tinkling tones of the zither arise from the high uneven harmonics yielded by its comparatively thick metal strings.

If a singer produces a low note *crescendo* against a reflecting surface, the harmonics become distinctly audible. If the note is produced partly through the nose, the uneven harmonics perceptibly predominate. The number of upper harmonics in the human voice is very great, and they are, according to Helmholtz, distinct and powerful in their whole range.

Practical use of single Harmonic tones on stringed instruments.—Harmonics may be singly produced (1) by varying the point of contact with the bow, or (2) by slightly pressing the string at the nodes, or divisions of its aliquot parts ($\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$, etc.). (1) In the first case, advancing the bow from the usual place where the fundamental note is produced, towards the bridge, the whole scale of harmonics may be produced in succession, on an old and highly resonant instrument. The employment of this means produces the effect called 'sul ponticello.' [See PONTICELLO.] (2) The production of harmonics by the slight pressure of the finger on the open string is more useful. When produced by pressing slightly on the various nodes of the open strings they are called 'Natural harmonics.' In the following example the lower notes represent the fingering, the upper ones the effect:—

Ye Banks and Braes.

Natural harmonics are occasionally employed *pizzicato* on the violin and violoncello, and are an important resource in harp music. Accurate violinists are disinclined to use them, because the player has no control over their exact intonation, which is rigidly determined by that of the open string; and the tones of the open strings, which are tuned by perfect fifths, are in certain scales slightly dissonant. In the key of G, for instance, the harmonics of the first or E string are slightly dissonant, though they are perfect in the key of A.

Artificial harmonics are produced by stopping the string with the first or second finger, and thus making an artificial 'nut,' and then slightly pressing the node with the fourth finger. By this means harmonics in perfect intonation can be produced in all scales. Example—

Carnaval de Venise.

For the entire theory of artificial harmonics in single and double scales see *L'Art de Jouer du Violon de Paganini* by Guhr. They can, however, only be produced by using thin strings, and are little employed by the best writers. In modern music they are designated by an open note of this ◇ form. (See the Andante of Joachim's Hungarian Concerto, etc.)

Practical use of single harmonic tones on wind instruments.—As in the case of stringed instruments, the harmonics of wind instruments naturally reinforce the prime note, but are separable from it by artificial means. In wind instruments this is done by varying the intensity or the direction of the air-current from the mouth, which sets in vibration the air-column in the tube, so as to throw the air-column into vibrating portions of different lengths, as in the case of the aliquot parts of a string. The falsetto voice consists of harmonic octaves of the natural voice. All the notes of the flute above the lowest

octave are harmonic octaves, twelfths, and double octaves of the lower notes. Like the corresponding harmonics on the oboe and clarinet, these tones are produced by overblowing. Brass instruments are richest in the practical employment of harmonics. Any brass instrument, such as the hunting-horn or military bugle, yielding one fundamental note, yields the familiar harmonic scale—

Violinists are well aware that the longer the string in proportion to its thickness, the greater the number of upper harmonics it can be made to yield. Similarly, the longer the tube of a brass instrument, the higher does the series of its practicable harmonic tones ascend. The old French horn consists simply of a conical tube of great length, which readily yields the scale of harmonic intervals. They are produced by gently varying the degree and direction of the current of air. The dissonant notes ($\frac{1}{4}$, $\frac{1}{11}$, $\frac{1}{13}$, $\frac{1}{14}$) in the scale are to some extent corrected, and some of the missing tones are supplied by introducing the hand into the bell. Mechanical appliances have been contrived for the same purposes. On the trumpet the tube is extended for the same purposes by means of a slide. [See Horn, Trumpet, Wind Instruments, etc.] E. J. P.

HARMONIE, the French and German word for the wind instruments of the orchestra. *Musique d'harmonie* or *Harmoniemusik* is music written for wind-band alone, such as Mendelssohn's overture in C, op. 24, Meyerbeer's Fackeltänze, etc. G.

HARMONIOUS BLACKSMITH, THE. Handel's variations on the air known in England as 'The Harmonious Blacksmith' were originally printed in No. 5 of his first set of 'Suites de Pièces pour le Clavecin,' in Nov. 1720. As no name is there given to the air, and even down to the time of the late Robert Birchall it was still published only as 'Handel's Fifth favourite Lesson from his first Suite de Pièces,' it has been generally assumed to be Handel's composition as well as the variations. Upon this point, however, doubts have arisen since Handel's death, and various claims have been put forth, of which at least one still remains undecided. The first claim was in *Anthologie Française, ou Chansons choisies depuis le treizième siècle jusqu'à présent* (Paris, three vols. 8vo, 1765). The editor of that work was J. Monnet, and, according to Fétis, 'ce recueil est estimé.' In the first volume are the following eight lines, printed to the air, and ascribed to Clement Marot:—

Plus ne suis que j'ai été,
Et plus ne saurais jamais l'être;
Mon beau printems et mon été,
Ont fait le saut par la fenêtre:
Amour! tu as été mon maître.
Je t'ai servi sur tous les dieux:
Ah! si je pouvais deux fois naître,
Combien je te servirais mieux!

Although these lines might pass for one of the extravagant love-songs of Clement Marot in his earlier years, if we allow for their being presented in a modernised form, yet no trace of them is to be found in his published works, nor of any song like them. A thorough search has been made through the long poems as well as the short pieces, lest these lines should prove to be an extract. The name of Clement Marot is therefore an assumed one. The air itself is not at all like music of the 15th century. When, therefore, Professor J. Ella informed his readers in the *Supplement to Programme of Musical Union*, June 6, 1865, that this melody 'was first published in a collection of French *Chansons* printed by Ballard in 1565 to words of Clement Marot, who died in 1545,' there was some misunderstanding between his informant, M. Weckerlin, and himself. On writing to M. Weckerlin to inquire whether there was such a book in his custody, he being Librarian to the Conservatoire de Musique, in Paris, the writer was informed that nothing was known of such a work, and that the earliest French edition known to him was in the above-named *Anthologie Française*, not of 1565, but of 1765. Professor Ella thought also that he had seen the melody in a French collection, a copy of which was sold in the library of Wm. Ayrton, F.R.S. On tracing it through the sale catalogue to its present resting-place in the British Museum, it proved to be 'Lot 38. Ballard (J. B. Chr.) *La Clef des Chansonniers, ou Recueil des Vaudevilles depuis cent ans et plus, notez et recueillis pour la première fois*' (two vols. 8vo, Paris, 1717). Here we find the name of Ballard, suggested by Professor Ella, but not the melody in question.

The next claim is for G. C. Wagenseil, an eminent clavecinist of Vienna, who was formerly supposed to have been born three years after Handel. The late Dr. Wm. Crotch, Professor of Music at the University of Oxford, informed the present writer that he had seen the air in a piece of music for the clavecin composed by Wagenseil. As the true date of Wagenseil's birth is now known to have been 1715, and Handel's Suites were published in 1720, there is no need to discuss this claim at length.

The story of Handel's having heard the air sung by a blacksmith at Edgware, while beating time to it upon his anvil, and that Handel therefore entitled it 'The Harmonious Blacksmith,' is refuted by the fact that it was never so named during Handel's life. Richard Clark was the propagator, if not also the inventor, of this fable. In Clark's edition of the lesson he has gone so far as to print an accompaniment for the anvil, as he imagined Handel to have heard the beats. He states that the blacksmith was also the parish clerk at Whitchurch. A few months after Clark's publication the writer saw J. W. Winsor, Esq., of Bath, a great admirer of Handel, and one who knew all his published

works. He told the writer that the story of the Blacksmith at Edgware was pure imagination, that the original publisher of Handel's lesson under that name was a music-seller at Bath, named Lintern, whom he knew personally from buying music at his shop, that he had asked Lintern the reason for this new name, and he had told him that it was a nickname *given to himself* because he had been brought up as a blacksmith, although he had afterwards turned to music, and that this was the piece he was constantly asked to play. He printed the movement in a detached form, because he could sell a sufficient number of copies to make a profit, and the whole set was too expensive. [It is worth mentioning that Beethoven has taken the theme, whether consciously or unconsciously, for the subject of a two-part organ fugue published in the supplementary volume of his works issued in 1888.] W. C.

HARMONIUM (French, also *Orgue expressif*). A well-known popular keyed instrument, the tones of which are produced by thin tongues of brass or steel, set in periodic motion by pressure of air, and called 'vibrators.' They are known also as 'free reeds'; reeds, because their principle is that of the shepherd's pipe; free, because they do not entirely close the openings in which they vibrate at any period of their movement, while those generally used in the organ, known as 'beating or striking reeds,' close the orifice at each pulsation. It is not, however, the vibration of the tongue itself that we hear as the tone: according to Helmholtz this is due to the escape of the air in puffs near its point, the rapidity of alternation of the puffs determining the pitch. The *timbre* of the note is conditioned in the first place by this opening, and then by the size and form of the channel above the tongue and its pallet hole, through which the air immediately passes. The Harmonium is the most modern of keyed instruments, if we include the nearly related American Organ, in which the vibrator is set in motion by reverse power, that is by drawing in the air; for if we go back to the earliest attempts to make instruments of the kind we are still within the 19th century. The usefulness and convenience of the harmonium have gone far to establish it, almost as a rival, in a commercial sense, to the pianoforte. It has been too much the practice to regard the harmonium only as a handy substitute for the organ, and this has been fostered by interested persons to the detriment of its individuality and the loss of the perception that it has reason to exist from its own merits as a musical instrument. It is true that like the organ the tones of the harmonium may be sustained at one power so long as the keys are kept down, and variety of *timbre* is obtained by using the stops; but when the Expression stop is used, by which the air reservoir is cut off and the pressure made to depend entirely upon the management of the bellows, the harmonium gains the power of increase and decrease of tone under the control of the player, who by the treadles can graduate the condensation of the wind almost as a violin player manages his tone by the bow. To use this power artistically the harmonium player must have skill; and few take to this instrument with anything like the high technical aim with which the pianoforte and violin are studied. There is, however, no reason that there should not be a school of composers and players competent to realise and develop the individual character of the instrument.

The history of the harmonium is intimately connected with that of the different wind harmonicas which, from the musical fruit and baby trumpets of Nuremberg, to accordions and concertinas, have during the past seventy years had such extensive popularity. Unlike as the whole tribe of reed organs have been to any notion of music that pertained to ancient Greece, it is not a little surprising that a large vocabulary of Greek names should have been adopted to describe them. The first name, and one still in use, that of *Orgue expressif*, was due to a Frenchman, Grenié, who, according to Fétis (*Fabrication des Instruments de Musique*, Paris, 1855), very early in the 19th century imagined the construction of a keyboard instrument, which, by tongues of metal vibrating under variable pressures of atmosphere, should give *nuances*, or varying intensities of sound. His tongues were not 'beating' but 'free' reeds having an alternative movement, the energy depending upon the density of the air-current affecting them. It was not a novel principle, for the Chinese *cheng* might have suggested the employment of it; but be this as it may, Fétis informs us that Grenié never assumed that he was the inventor of it. The experiments of Sebastian Erard with free reeds, of which Grétry thought so much, were already known. A few years later than these, about 1814 some say, and quite independently, Eschenbach of Koenigshoven in Bavaria invented a keyboard instrument with vibrators, which he named 'Organo-violine.' Then began the Greek era. In 1816 Schlimbach of Ohrdruff, improving upon Eschenbach, produced the Æoline. The next step was an apparatus for continuous wind, by Voit of Schweinfurt, who called his instrument Æolodicon. In 1818 Anton Häckel of Vienna constructed a diminutive æoline as an instrument to be used with a pianoforte, bringing it out as Physharmonica.[1] This bellows-harmonica Professor Payer took with him to Paris in 1823, and several imitations were made of it, one of which, the Aerophone of Christian Dietz, was described by him in the sixth volume of the *Revue Musicale*

[1] This name is still retained for a free-reed stop in the organ, with tremolo and swell box of its own, by Walcker of Ludwigsburg and others.

(Paris, 1829). Returning to Germany, Reich of Fürth, near Nuremberg, produced at Munich in 1820 *timbre* registers imitating the clarinet and bassoon. The 16-foot or octave-deeper register Fétis attributes to Fourneaux père of Paris, 1836. The Melophone came out at the Paris Exhibition of 1834, and was probably made by Jacquet, whom the same authority quotes as the only maker of melophones in 1855. Elsewhere we read of an Æolodicon with bent tongues, and of a Terpodion with tongues of wood; of an Æolophone, an Adelphone, an Adiaphonon, an Harmonikon, and a Harmonine; of Melodiums, Æolians, and Panorgues; of the Poikilorgue of M. Cavaillé-Coll, etc. In England keyboard harmonicas with bellows were known by the name of Seraphine, which was not a harmonium, for it had no channels for the tongues. The oldest English patent for a seraphine is that of Myers and Storer, dated July 20, 1839.

It must be remembered that nearly all these instruments had but one complete set of vibrators to a keyboard. The Organino, a tentative instrument of Alexandre Debain (born 1809, died 1877), had two notes an octave apart on each key. To this remarkable mechanician was due the gathering up the work of all his predecessors and uniting four stops on one keyboard to produce the Harmonium. His first patent for this instrument, in Paris, is dated August 9, 1840 (*Notabilités de la Facture Instrumentale*, Paris, 1857). Inventor or improver, Debain had the great merit of opening the path to contrasts in colour of free-reed tone, by means of various sized channels to the vibrators, submitted in different registers, to one keyboard. It was, however, unfortunate that in the defence of his rights he was induced to secure to himself the sole privilege of using the name Harmonium in France, thus forcing other makers to use the name Organ, and thus to add another stone to the cairn of confusion in musical instrument nomenclature. More recently, the name Reed-organ has been used to express both the harmonium and the American organ, and is, perhaps, the best way out of a difficulty. The next great invention after Debain—attributed by Fétis to the Alexandres, father and son—was the Expression, already mentioned, the creation of a new and æsthetically more valuable harmonium. Another major invention was that of Martin, who gave the harmonium, to use a technical term, 'quicker speech,' *i.e.* made the sound more quickly follow the descent of the key. The invention is known as 'percussion,' and is an adaptation of the pianoforte escapement, by which a little hammer strikes the tongue at the same moment that it receives the impact of the wind. Another invention of Martin's termed 'prolongement,' enables the player to prolong certain notes after the fingers have quitted the keys. Martin governed this by knee pedals, but it is now usually effected by a stop, and knocked off at will by a little heel movement. The 'melody-attachment' of William Dawes, patented in London, 1864, has the effect of making the melody-note, or air, when in the highest part, predominate, by a contrivance that shuts off all notes below the highest in certain registers of a combination. In the 'pedal-substitute' of Dawes and Ramsden this is reversed, and the lowest notes can be made to predominate over the other notes of a left-hand chord. An important invention, and curious as bringing the pianoforte touch to a certain extent upon the harmonium keyboard, is the 'double touch,' invented by an English musician, Augustus L. Tamplin, before 1855, and introduced systematically in the famous harmoniums of Mustel of Paris, and producing emphasised or strengthened tones by a greater depression of the key. Another important invention of the greatest delicacy is Mustel's 'pneumatic balance' (French *Double Expression*) —valves of delicate construction acting in the wind reservoir, and keeping the pressure of air in it practically equal, so that it cannot possibly be overblown.

Proceeding now to the structure of the harmonium it is sufficient to notice externally the keyboard and treadles as prominent features (see Fig. 1). The latter (*a*), moved by the feet of the player, feed the bellows (*b*); the air is by them forced up the wind-trunk (*g*) into the wind-chest (*i*), and from thence, while the expression-stop is not drawn, into the reservoir (*f*), in a continuous and equal stream, excess in which is obviated by a discharge pallet (*e*) acting as a safety valve. But when the expression-stop is drawn and the expression-hole (*h*) to the reservoir is consequently closed, the air acts directly upon the vibrators or tongues (*m*), from the feeders (*c*). The entire apparatus for the wind is covered by the bellows-board (*k*), containing the valves (*j*) that admit the wind to the different rows of vibrators or reed compartments, as the stops (*t*) may be drawn. Above the bellows-board is the 'pan' (*l*), sometimes erroneously called the sound-board, a board of graduated thickness in which are the channels (*n*)—separate chambers of air to each vibrator, determining, as said before, the different *timbres*. The proportions of the channels and size of the pallet-holes are found empirically. The air within the channels, set in vibration by the tongues, is highly compressed. Sometimes, to gain space and a different quality, the channels with their tongues are placed upright. A stop (*t*) being drawn and a key (*q*) depressed, wind is admitted by the action to the tongue or vibrator, and escapes by the pallet-hole (*o*) —at a comparatively even pressure if it comes from the reservoir, or at a varying pressure if, as already explained, the expression-stop is drawn and the wind comes from the feeders direct.

We give a cut of the percussion action already alluded to (see Fig. 2). Here *q* is the key, which

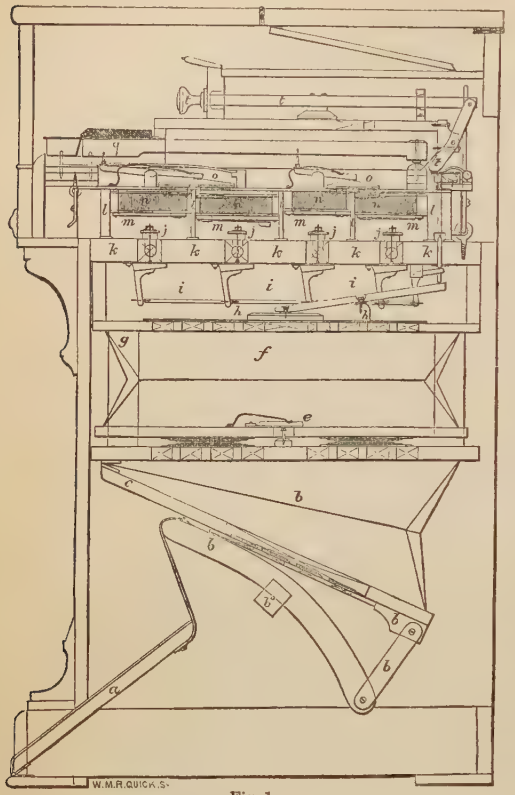


Fig. 1.

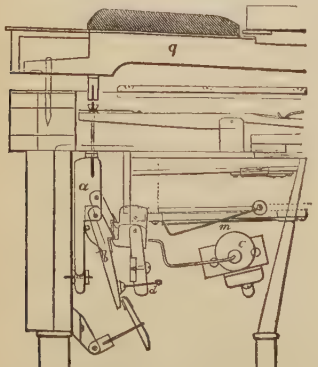
on being depressed sends down a 'plunger' (*a*), which acts upon a little escapement action, with



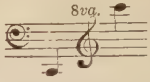


Fig. 2.

lever (*b*), hammer (*c*), and set-off (*d*); *m* is the reed, which by this arrangement is struck by the hammer and assisted to move at the moment the wind is admitted.

The harmonium has a keyboard of five octaves at 8-ft. pitch. The bass stops

range up to and include the *e'* on the first line of the treble stave; and the treble stops range from the *f'* upwards—twenty-nine and thirty-two notes respectively. In an ordinary harmonium the registers or rows of vibrators are four in number, divided, as just stated, into bass and treble, and again into front and back organs as they are technically called. The front organ has the foundation and fuller toned stops, the back organ the imitation and more reedy stops. Thus, adding the French names as they are frequently to be met with—

Front. No. 1. Diapason bass and Diapason treble—*Cor Anglais* and *Flûte*. 8-ft. pitch.

No. 2. Bourdon bass and Double Diapason treble—*Bourdon* and *Clarinette*. 16-ft. pitch.

Back. No. 3. Clarion bass and Principal treble—*Clarion* and *Fifre*. 4-ft. pitch.

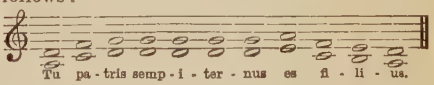
No. 4. Bassoon bass and Oboe treble—*Basson* and *Hautbois*. 8-ft. pitch.

M. Mustel retains this arrangement of the foundation stops in all harmoniums. (See MUSTEL.) In the large Mustel instruments other stops of great beauty are added, the indisputable introduction of their ingenious maker—

Harpe Eolienne. Bass. 2-ft. pitch. Two ranks of vibrators, out of tune, the one a beat sharp, the other a beat flat, producing a tremulous effect.

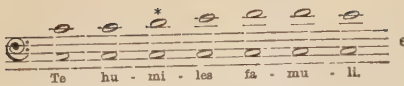
Musette. Treble. 16-ft. pitch. Nasal quality.

Voix Celeste. Treble. 16-ft. pitch. Two ranks with soft quality.



Baryton. Treble. 32-ft. pitch. Nasal quality like the *Musette*, but broader.

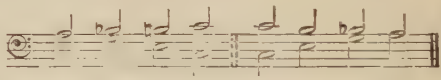
The 'full organ' (*grand jeu*) is a drawstop giving instantly the full power of the harmonium without the out-of-tune ranks. The 'percussion' has to do with the diapason only, and not with all four rows, as originally applied by Martin. Two mechanical stops—the *Tremolo*, which sets the wind in motion before it reaches the vibrators, and the *Sourdine*, which shuts off a portion of the wind that would reach them, may be regarded now as discarded in all harmoniums of good manufacture. The Swell (*récit*) is like the Venetian swell in the organ. It is usually placed over the back organ, and is controlled by the 'Pneumatic Fortes,' set in motion by knee pedals, which open the louvres by extra pressure of wind acting upon pneumatic levers. The front organ in foreign harmoniums is usually



subdued by a thin board the under surface of which is covered with swansdown or other soft material; this is replaced in England by a covering of brown sheepskin or basil, also lined with swansdown. The tongues are not made of ordinary sheet rolled brass; but of a metal prepared expressly, and with some secrecy. The best is believed to be from hammered wire reduced by continued hammering to the thickness required. A broader tongue is found to give a bolder tone, but sacrifices quickness of speech; a narrower tongue is shriller. The tongues are bent in various ways, longitudinally and laterally, to gain sweetness, but the speech suffers. Tuning is effected by scraping near the shoulder to flatten the tongue, or near the point to sharpen it. The air pressure somewhat affects the tuning of the larger vibrators, but it is a merit in the harmonium that it alters little in comparison with the pianoforte or flue-work of an organ. Double touch is produced by causing the back organ to speak first, and is divided technically into the 'upper' and 'deep' touches. The harmonium has been combined in construction with the pianoforte by Debain and other makers. The *timbres* and nature of the two instruments are so dissimilar, not to say antagonistic, that no real benefit is to be gained by yoking them together. A. J. H.

HARMONY. The practice of combining sounds of different pitch, which is called Harmony, belongs exclusively to the music of the most civilised nations of modern times. It seems to be sufficiently proved that the ancient Greeks, though they knew the combinations which we call chords, and categorised them, did not make use of them in musical performance. This reticence probably arose from the nature of their scales, which were well adapted for the development of the effective resources of melody, but were evidently inadequate for the purposes of harmony. In looking back over the history of music it becomes clear that a scale adapted for any kind of elaboration of harmony could only be arrived at by centuries of labour and thought. In the search after such a scale experiment has succeeded experiment, those which were successful serving as the basis for further experiments by fresh generations of musicians till the scale we now use was arrived at. The ecclesiastical scales, out of which our modern system was gradually developed, were the descendants of the Greek scales, and like them only adapted for melody, which in the dark ages was of a sufficiently rude description. The people's songs of various nations also indicate characteristic scales, but these were equally unfit for purposes of combination, unless it were with a drone bass, which must have been a very early discovery. In point of fact the drone bass can hardly be taken as representing any idea of harmony proper; it is very likely that it originated in the instruments of percussion or any other form of noise-making invention which served to mark the rhythms or divisions in dancing or singing; and as this would in most cases (especially in barbarous ages) be only one note, repeated at whatever pitch the melody might be, the idea of using a continuous note in place of a rhythmic one would seem naturally to follow; but this does not necessarily imply a feeling for harmony, though the principle had certain issues in the development of harmonic combinations, which will presently be noticed. It would be impossible to enter here into the question of the construction and gradual modification of the scales. It must suffice to point out that the ecclesiastical scales are tolerably well represented by the white notes of our keyed instruments, the different ones commencing upon each white note successively. In these scales there were only two which had a leading note or major seventh from the tonic. Of these the one beginning on F (the ecclesiastical Lydian) was vitiated by having an augmented fourth from the Tonic, and the one commencing on C (the ecclesiastical Ionic, or Greek Lydian) was looked upon with disfavour as the 'modus lascivus.' These circumstances affected very materially the early ideas of harmony; and it will be seen that, conversely, the gradual growth of the perception of harmonic relations modified these ecclesiastical scales by very slow degrees, by the introduction of accidentals, so that the various modes were by degrees fused into our modern major and minor scales.

The earliest attempts at harmony of which there are any examples or any description, was the Diaphony or Organum which is described by Hucbald, a Flemish monk of the 10th century, in a book called *Enchiridion Musicae*. These consist for the most part of successions of fourths or fifths, and octaves. Burney gives an example from the work, and translates it as follows:—



The practice of adding extra parts to a Canto fermo at the distance of a fourth or fifth, with an octave to make it complete, seems to have been common for some time, and was expressed by such terms as 'diatessaronare,' or in French 'quintoier.' This, however, was not the only style of combination known to Hucbald, for in another example which consists chiefly of successions of fifths and octaves the parallelism is interrupted at the close, and the last chord but one contains a major sixth. Further than this, Burney gives an example in which the influence of a drone bass or holding note is apparent, whereby the origin of passing notes is indicated, as will be observed in the use of a ninth transitionally between the combinations of the octave and the tenth in the following example at *—

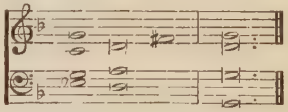
The use of tenths in this example is remarkable, and evidently unusual, for Guido of Arezzo, who lived full a century later, speaks of the 'symphonia vocum' in his Antiphonarium, and mentions only fourths, fifths, and octaves. This might be through Hucbald's notions of combination being more vague than those of Guido, and his attempts at harmony more experimental; for, as far as can be gathered from the documents, the time which elapsed between them was a period of gradual realisation of the qualities of intervals, and not of progress towards the use of fresh ones. Guido's description of the Organum is essentially the same as the succession of fourths and fifths given by Hucbald; he does not, however, consider it very satisfactory, and gives an example of what was more musical according to his notions; but as this is not in any degree superior to the second example quoted from Hucbald above, it is clear that Guido's views on the subject of Harmony do not demand lengthy consideration here. [See DIAPHONIA.] It is only necessary to point out that he seems to have more defined notions as to what is desirable and what not, and he is remarkable also for having proposed a definition of Harmony in his Antiphonarium in the following terms—'Armonia est diversarum vocum apta coadunatio.'

The Diaphony or Organum above described was succeeded, perhaps about Guido's time, by the more elaborate system called Discantus. This consisted at first of manipulation of two different tunes so as to make them tolerably endurable when sung together. Helmholtz suggests that 'such examples could scarcely have been intended for more than musical tricks to amuse social meetings. It was a new and amusing discovery that two totally independent melodies might be sung together and yet sound well.' The principle was, however, early adopted for ecclesiastical purposes, and is described under the name Discantus by Franco of Cologne, who lived but little after Guido in the 11th century. From this Discantus sprang counterpoint and that whole genus of polyphonic music, which was developed to such a high pitch of perfection between the 14th and the 17th centuries; a period in which the minds of successive generations of musicians were becoming unconsciously habituated to harmonic combinations of greater and greater complexity, ready for the final realisation of harmony in and for itself, which, as will be seen presently, appears to have been achieved about the year 1600. Franco of Cologne, who, as above stated, describes the first forms of this Discant, is also somewhat in advance of Guido in his views of harmony. He classifies concords into perfect, middle, and imperfect consonances, the first being the octaves, the second the fourths and fifths, and the third the major and minor thirds. He puts the sixths among the discords, but admits of their use in Discant as less disagreeable than flat seconds or sharp fourths, fifths, and sevenths. He is also remarkable for giving the first indication of a revulsion of feeling against the system of 'Organising' in fifths and fourths, and a tendency towards the modern dogma against consecutive fifths and octaves, as he says that it is best to mix imperfect concords with perfect concords instead of having successions of imperfect or perfect. [See DISCANT.]

It is unfortunate that there is a deficiency of examples of the secular music of these early times, as it must inevitably have been among the unsophisticated geniuses of the laity that the most daring experiments at innovation were made; and it would be very interesting to trace the process of selection which must have unconsciously played an important part in the survival of what was fit in these experiments, and the non-survival of what was unfit. An indication of this progress is given in a work by Marchetto of Padua, who lived in the 13th century, in which it appears that secular music was much cultivated in Italy in his time, and examples of the chromatic progressions which were used are given; as for instance—

Marchetto speaks also of the resolutions of Discords, among which he classes fourths, and explains that the part which offends the ear by one of these discords must make amends by passing to a concord, while the other part stands still. This classification of the fourth among discords, which here appears for the first time, marks a decided advance in refinement of feeling for harmony, and a boldness in accepting that feeling as a guide in preference to theory. As far as the ratios of the vibrational numbers of the limiting sounds are concerned, the fourth stands next to the fifth in excellence, and above the third; and theoretically this was all that the mediæval musicians had to guide them. But they were instinctively choosing those consonances which are represented in the compound tone of the lower note, that is in the series of harmonics of which it is the prime tone, or 'generator,' and among these the fourth does not occur; and they had not yet learnt to feel the significance of inversions of given intervals; and therefore the development of their perception of harmonies, dealing as yet only with combinations of two different notes at a time, would lead them to reject the fourth, and put it in the category of discordant intervals, in which it has ever since remained as far as contrapuntal music is concerned, while even in harmonic music it cannot

be said to be at all on an equality with other consonances.



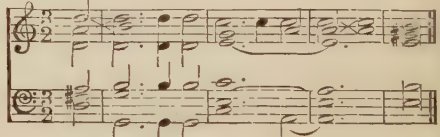
The next writer on music of any prominent importance after Marchetto was Jean de Muris, who lived in the 14th century. In his 'Ars Contrapuncti' he systematises concords, as the previous writers had done, into perfect and imperfect; but his distribution is different from Franco's, and indicates advance. He calls the octave and the fifth the perfect, and the major and minor thirds and major sixths the imperfect concords. The minor sixth he still excludes. Similarly to Franco he gives directions for intermingling the perfect and imperfect concords, and further states that parts should not ascend or descend in perfect concords, but that they may in imperfect. It is clear that individual caprice was playing a considerable part in the development of musical resources in de Muris's time, as he speaks with great bitterness of extempore descanters. He says of this new mode of descanting, in which they professed to use new consonances, 'O magnus abusus, magna ruditas, magna bestialitas, ut asinus sumatur pro homine, capra pro leone,' and so on, concluding, 'sic enim concordiae confunduntur cum discordiis ut nullatenus una distinguatur ab aliâ.' Such wildness may be aggravating to a theorist, but in early stages of art it must be looked upon with satisfaction by the student who sees therein the elements of progress. Fortunately, after de Muris's time, original examples begin to multiply, and it becomes less necessary to refer to reporters for evidence, as the facts remain to speak for themselves. Kiesewetter gives an example of four-part counterpoint by Dufay, a Netherlander, who was born before 1400. This is supposed to be the earliest example of its kind extant, and is a very considerable advance on anything of which there is any previous account or existing examples, as there appears in it a frequent use of what we call the complete common chord with the third in it, and also its first inversion; and in technical construction especially it shows great advance in comparison with previous examples, and approaches much nearer to what we should call real music. It requires to be noted, moreover, that this improvement in technical construction is the most striking feature of the progress of music in the next two centuries, rather than any large extension of the actual harmonic combinations.

The works of Okeghem, who lived in the next century to Dufay, do not seem to present much that is worthy of remark as compared with him. He occasionally uses suspended discords in chords of more than two parts, as—

from a canon quoted by Burney; but discords are of rare occurrence in his works, as they are also in those of his great pupil Josquin des Prés. For instance, in the first part of the 'Stabat Mater' by the latter (in the *Raccolta Generale delle Opere Classiche*, edited by Choron), there are only ten examples of such discords in the whole eighty-eight bars, and it is probable that this was a liberal supply for the time when it was written.

Ambros says that Josquin was the first to use accidentals to indicate the modifications of notes, which we are tolerably certain must have been modified according to fixed rules before his time without actual indication in the copies. Josquin certainly made use of them also to obtain effects which could not have been derived from the ordinary principles of rendering the music, and thus took an important step in the direction of assimilating the ecclesiastical scales in the manner which gradually resulted in the musical system we now use. A remarkable instance of this is his use more than once of a concluding chord with a major third in it, the major third being indicated by an accidental. Prior to him the concluding chord had contained only a bare fifth at most, and of this there are examples in his works also, as—

from the Benedictus of the Mass 'Faysans regrets' quoted by Burney (ii. 500)—in which progression the use of the E♭ is worthy of notice; but his use of the major third shows a remarkable advance, especially in the direction of feeling for tonality, which is one of the essential features of modern music.



This use of the major third in the final chord of a piece in a minor key (the 'Tierce de Picardie') became at a later time almost universal, the only alternative being a bare fifth, as in the last example; and the practice was continued far on into modern music; as by Bach and Handel, in the former of whose works it is very common even in instrumental music. And still later we find it in Mozart, as at the end of the 'Quam olim Abrahae' in the Requiem Mass. On the other hand, at the conclusion of the Chorus 'Dies Irae' of the same mass the final chord appears, as far as the voices are concerned, with only a fifth in it, as in the example from Josquin above. However with composers of the harmonic period such as these it has not been at all a recognised rule to avoid the minor third in the final chord, its employment or avoidance being rather the result of characteristic qualities of the piece which it concludes. But with composers of the preharmonic period it was clearly a rule; and its origin depended on the same feeling as that which caused them to put the fourth in the category of the discords; for like the fourth, the minor third does not exist as a part of the compound tone of the lower note,

there need be no hesitation in attributing to him, as he was personally blamed for it by the dogmatists of his time, was the use of the minor seventh, which we call the Dominant seventh, without preparation. There is more than one example of this in his works, but one which occurs in a madrigal, 'Cruda Amarilli,' is specially remarkable, as it is preceded by a ninth used evidently as a grace-note in a manner which for his time must have been very daring. It is as follows :—

This independent manner of using the Dominant seventh shows an appreciation of the principle of the relation of chords through a common tonic : that is to say, the connection and relative importance of chords founded on different root notes of a scale according to the modern and not the old ecclesiastical principle. It is true that the very idea of roots of chords did not suggest itself as a realisable conception till nearly a century later ; but as is usual in these cases, artistic instinct was feeling its way slowly and surely, and scientific demonstration had nothing to do with the discovery till it came in to explain the results when it was all accomplished. The development of this principle is the most important fact to trace in this period of the history of music. Under the ecclesiastical system one chord was not more important than another, and the very existence of a Dominant seventh according to the modern acceptation of the term was precluded in most scales by the absence of a leading note which would give the indispensable major third. The note immediately below the Tonic was almost invariably sharpened by an accidental in the cadence in spite of the prohibition of Pope John XXII., and musicians were thereby gradually realising the sense of the dominant harmony ; but apart from the cadence this note was extremely variable, and many chords occur, as in the example already quoted from Byrd, which could not occur in that manner in the modern scales, where the Dominant has always a major third. Even considerably later than the period at present under consideration —as in Carissimi and his contemporaries, who represent very distinctly the first definite harmonic period—the habits of the old ecclesiastical style reappear in the use of notes and chords which would not occur in the same tonal relations in modern music ; and the effect of confusion which results is all the more remarkable because they had lost the nobility and richness which characterised the last and greatest period of the polyphonic style. The deeply ingrained habits of taking the chords wherever they lay, according to the old teaching of Discant, retarded considerably the recognition of the Dominant and Tonic as the two poles of the harmonic circle of the key ; but Monteverde's use of the seventh, above quoted, shows a decided approach to it. Moreover, in works of this time the universality of the harmonic Cadence as distinguished from the cadences of the ecclesiastical modes becomes apparent. The ecclesiastical cadences were nominally defined by the progressions of the individual voices, and the fact of their collectively giving the ordinary Dominant Cadence in a large proportion of instances was not the result of principle, but in point of fact an accident. The modern Dominant Harmonic Cadence is the passage of the mass of the harmony of the Dominant into the mass of the Tonic, and defines the key absolutely by giving successively the harmonies which represent the compound tone of the two most important roots in the scale, the most important of all coming last.

The following examples will serve to illustrate the character of the transition. The conclusion of Palestrina's Motet, 'O bone Jesu,' is as follows :—

In this a modern, regarding it in the light of masses of harmony with a fundamental bass, would find difficulty in recognising any particular key which would be essential to a modern Cadence ; but the melodic progressions of the voices according with the laws of Cadence in Discant are from that point of view sufficient.

On the other hand, the following conclusion of a Canzona by Frescobaldi, which must have been written within fifty years after the death of Palestrina, fully illustrates the modern idea, marking first the Dominant with great clearness, and passing thence firmly to the chord of the Tonic F :—

It is clear that the recognition of this relation between the Dominant and Tonic harmony was indispensable to the perfect establishment of the modern system. Composers might wake to

the appreciation of the effects of various chords and of successions of full chords (as in the first chorus of Carissimi's 'Jonah'), but inasmuch as the Dominant is indispensable for the definition of a key (hence called 'der herrschende Ton'), the principle of modulation, which is the most important secondary feature of modern music, could not be systematically and clearly carried out till that means of defining the transition from one key to another had been attained. Under the old system there was practically no modulation. The impression of change of key is not unfrequently produced, and sustained for some time by the very scarceness of accidentals; since a single accidental, such as F♯ in the progress of a passage in C, is enough to give to a modern musician the impression of change to G, and the number of chords which are common to G and C would sustain the illusion. Sufficient examples have already been given to show that these impressions are illusory, and reference may be made further to the commencement of Palestrina's 'Stabat Mater' in eight parts, and his Motet 'Hodie Christus natus est,' and Gibbons's Madrigal 'Ah, dear heart,' which will also further show that even the use of accidentals was not the fruit of any idea of modulation. The frequent use of the perfect Dominant Cadence or 'full Close,' must have tended to accustom composers to this important point in modern harmony, and it is inevitable that musicians of such delicate artistic sensibility as the great composers of the latter part of the 16th century should have approached nearer and nearer to a definite feeling for tonality, otherwise it would be impossible to account for the strides which had been made in that direction by the time of Carissimi. For in his works the principle of tonality, or in other words the fact that a piece of music can be written in a certain key and can pass from that to others and back, is certainly displayed, though the succession of these keys is to modern ideas irregular and their individuality is not well sustained, owing partly no doubt to the lingering sense of a possible minor third to the Dominant.

The supporters of the new kind of music as opposed to the old polyphonic style had a great number of representative composers at this time, as may be seen from the examples in the fourth volume of Burney's *History*; and among them a revolutionary spirit was evidently powerful, which makes them more important as innovators than as great musicians. The discovery of harmony seems to have acted in their music for a time unfavourably to its quality which is immensely inferior to that of the works of the polyphonic school they were supplanting. Their harmonic successions are poor, and often disagreeable, and in a large number of cases purely tentative. The tendency was for some time in favour of the development of tunes, to which the new conceptions of harmony supplied a fresh interest. Tunes in the first instance had been homophonic—that is, absolutely devoid of any sense of relation to harmony; and the discovery that a new and varied character could be given to melody by supplying a harmonic basis naturally gave impetus to its cultivation. This also was unfavourable to the development of a high order of art, and it was only by the re-establishment of polyphony upon the basis of harmony, as we see it displayed to perfection in the works of Bach, that the art could regain a lofty standard comparable to that of Palestrina, Lasso, Byrd, Gibbons, and the many great representatives of the art at the end of the 16th and the beginning of the 17th centuries. In point of fact harmonic music cannot be considered apart from the parts or voices of which it is composed. It consists of an alternation of discord and concord, and the passage of one to the other cannot be conceived except through the progression of the parts. As has been pointed out with respect to the discovery of harmonic or tonal form in musical composition in the article FORM, the effect of the new discovery was at first to make composers lose sight of the important element of progression of parts, and to look upon harmony as pre-eminent; consequently the progressions of parts in the works of the middle of the 17th century seem to be dull and uninteresting. Many composers still went on working in the light of the old system, but they must be regarded in relation to that system, and not as representatives of the new; it was only when men strong enough to combine the principles of both schools appeared that modern music sprang into full vigour. The way was prepared for the two great masters who were to achieve this at the beginning of the 18th century by the constant labours and experiments of the composers of the 17th. It would be impossible to trace the appearance of fresh harmonic material, as the composers were so numerous, and many of their works, especially in the early period, are either lost or unattainable. But in surveying the general aspect of the works which are available, a gradual advance is to be remarked in all departments, and from the mass of experiments certain facts are established. Thus clearness of modulation is early arrived at in occasional instances; for example, in an opera called 'Orontea' by Cesti, which was performed at Venice as early as 1649, there is a sort of short Aria, quoted by Burney (iv. 67), which is as clearly defined in this respect as any work of the present day would be. It commences in E minor, and modulates in a perfectly natural and modern way to the relative major G, and makes a full close in that key. From thence it proceeds to A minor, the subdominant of the original key, and makes another full close, and then, just touching G on the way, it passes back to E minor, and closes fully in that key. This is all so clear and regular according to modern ideas that it is difficult to realise that Cesti wrote within half a century of Palestrina, and of the first

recognition of the elements of modern harmony by Caccini, Monteverde, and their fellows. The clearness of each individual modulation, and the way in which the different keys are rendered distinct from one another, both by the use of appropriate Dominant harmony, and by avoiding the obscurity which results from the introduction of foreign chords, is important to note, as it indicates so strongly the feeling for tonality which by constant attention and cultivation culminated in the definite principles which we now use. That the instance was tentative, and that Cesti was guided by feeling and not rule, is sufficiently proved by the fact that not only contemporary musicians, but successive generations up to the end of the century, and even later, frequently fell into the old habits, presenting examples of successions of harmony which are obscure and confused in key.

It is not possible to discover precisely when the use of the seventh in the Dominant Cadence came into vogue. It has been already pointed out that Monteverde hazarded experimentally the use of the Dominant seventh without preparation, but nevertheless it does not seem to have been used with any obvious frequency by musicians in the early part of the 17th century; but by the middle and latter part it is found almost as a matter of course, as in the works of the distinguished French instrumental composers Dumont, Jacques de Chambonnières, and Couperin. The following is an example from the second of these :—

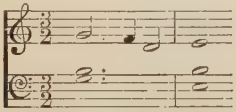
which shows how easily it might have been introduced in the first instance as a passing note between the root of the first chord and the third of the next, and its true significance have been seen afterwards.

This use of the seventh in the Dominant chord in the Cadence makes the whole effect of the Cadence softer and less vigorous, but for the purpose of defining the key it makes the Cadence as strong as possible; and this, in consideration of the great latitude of modulation and the great richness and variety of harmony in modern music, becomes of great importance. It does this in three ways. First, by simply adding another note to the positive representative notes of the key which are heard in the Cadence, in which in this form the submediant (as A in the key of C) will be the only note of the scale which will not be heard. Secondly, by giving a very complete representation of the compound tone of the root-notes as contained in the Diatonic scale; since the seventh harmonic, though not absolutely exact with the minor seventh which is used in harmony, is so near that they can hardly be distinguished from one another, as is admitted by Helmholtz. And thirdly, by presenting a kind of additional downward-tending leading note to the third in the Tonic chord, to which it thereby directs the more attention. In relation to which it is also to be noted that the combination of leading note and subdominant is decisive as regards the key, since they cannot occur in combination with the Dominant as an essential Diatonic chord in any other key than that which the Cadence indicates. The softness which characterises this form of the Cadence has led to its avoidance in a noticeable degree in many great works, notwithstanding its defining properties—as in both the first and last movements of Beethoven's C minor Symphony, the first movement of his Symphony in A, and the Scherzo of the Ninth Symphony. In such cases the definition of key is obtained by other means, as for example in the last movement of the C minor Symphony by the remarkable reiteration both of the simple concordant cadence and of the Tonic chord. In the first movement of the A Symphony and the Scherzo of the Ninth, the note which represents the seventh, although omitted in the actual harmony of the Cadence, appears elsewhere in the passage preceding. In respect of definition of key it will be apposite here to notice another form of Cadence, namely that commonly called Plagal, in which the chord of the subdominant (as F in the key of C) precedes the final Tonic chord. This Cadence is chiefly associated with ecclesiastical music, to which it was more appropriate than it is in more elaborate modern music. On the one hand it avoided the difficulty of the Dominant chord which resulted from the nature of most of the ecclesiastical scales, while its want of capacity for enforcing the key was less observable in relation to the simpler harmonies and absence of modulation of the older style. This deficiency arises from the fact that the chord of the Subdominant already contains the Tonic to which it is finally to pass, and its compound tone which also contains it does not represent a position so completely in the opposite phase to the Tonic as the Dominant does; whence the progression is not strongly characteristic. It also omits the characteristic progression of the leading note up to the Tonic, and does not represent so many positive notes of the scale as the Dominant Cadence. For these various reasons, though not totally banished from modern music, it is rare, and when used appears more as supplementary to the Dominant Cadence, and serving to enforce the Tonic *note*, than as standing on its own basis. Moreover, as supplementary to the Dominant Cadence it offers the advantage of giving the extra note in the scale which, as has been remarked, is almost inevitably omitted in the Dominant Cadence. Hence an extended type of Cadence is given by some theorists as the

most complete, which, as it were, combines the properties of the two Cadences in this form—

In this the subdominant chord of the weaker Cadence comes first, and a chord of 6–4, as it is called, is inserted to connect it with the Dominant chord (as otherwise they would have no notes in common, and the connection between them harmonically would not be ostensible), and then the Dominant chord passes into the Tonic after the usual fashion. Other methods of joining the Subdominant chord to the Dominant chord are plentifully scattered in musical works, as for instance the use of a suspended fourth in the place of the 6–4 ; but as a type the above answers very well, and it must not be taken as more than a type, since a bare theoretical fact in such a form is not music, but only lifeless theory. As an example of the theory vitalised in a modern form may be given the conclusion of Schumann's Toccata in C for pianoforte (op. 7), as follows :—

In this the weak progression of the 6–4 is happily obviated by connecting the Subdominant and Dominant chords by the minor third of the former becoming the minor ninth of the latter ; and at the same time the novelty of using this inversion of the Dominant minor ninth as the penultimate chord, and its having also a slight flavour of the old plagal Cadence, gives an additional vitality and interest to the whole. Composers of the early harmonic period also saw the necessity of putting recognised facts in some form which presented novelty and individuality, and their efforts in that direction will be shortly taken notice of. Meanwhile, it must be observed that the discovery of the harmonic Cadence as a means of taking breath or expressing a conclusion of a phrase and binding it into a definite thought, affected music for a time unfavourably in respect of its continuity and breadth. In Polyphonic times, if it was desirable to make a break in the progress of a movement, the composers had to devise their own means to that end, and consequently a great variety is observed in the devices used for that purpose, which being individual and various have most of the elements of vitality in them. But the harmonic Cadence became everybody's property ; and whenever a composer's ideas failed him or his imagination became feeble, he helped himself out by using the Cadence as a full stop and beginning again ; a proceeding which conveys to the mind of a cultivated modern musician a feeling of weakness and inconsequence, which the softness and refinement of style and a certain sense of languor in the works of the early Italian masters rather tend to aggravate. Thus in the first part of Carissimi's Cantata 'Deh contentatevi,' which is only seventy-four bars in length, there are no less than ten perfect Dominant Cadences with the chords in their first positions, besides interrupted Cadences and imperfect Cadences such as are sometimes called half-closes. This is, no doubt, rather an excessive instance, but it serves to illustrate the effect which the discovery of the Cadence had on music ; and its effect on English ecclesiastical music of a slightly later period, as for instance in the works of Rogers, will be remembered by musicians acquainted with that branch of the art as a proof that the case is not over-stated. It was, no doubt, necessary for the development of Form in musical works that this phase should be gone through, and the part it played in that development is considered under that head, and therefore must not be further dwelt upon here. The use of imperfect and interrupted Cadences, as above alluded to, appears in works early in the 17th century, being used relatively to perfect Cadences as commas and semicolons are used in literature in relation to full stops. The form of the imperfect Cadence or half-close is generally a progression towards a pause on the Dominant of the key. The two following examples from Carissimi will illustrate his method of using them :—



in which the key is C, and—

in which the key is E♭. The form of the Interrupted Cadence which is usually quoted as typical is that where the progression which seems to tend through the Dominant chord to the concluding Tonic chord is made to diverge to some other position, such as a chord on the submediant of the key, as on A in the key of C. This form also appears in Carissimi, but not with any apparent definiteness of purpose. In fact, as a predetermined effect the Interrupted Cadence belongs to a more advanced condition of ideas in music than that illustrated by Carissimi and his followers and contemporaries, and only demands a passing notice here from the fact that it does occur, though rarely. Composers in those times were more in the habit of concluding

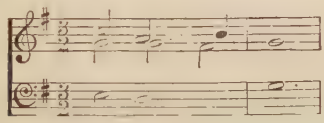
with the Cadence, and repeating part of what they had said before over again with another Cadence; which answers the same requirements of form as most of the uses of Interrupted Cadences by Bach and Handel, but in a much less refined and artistically intelligent manner.

In order to see the bearings of many of the experiments which were made by the early representatives of harmonic music it will be necessary to return for a short space to their predecessors. The basis which the old contrapuntists had worked upon—which we express, for brevity's sake, in the language which is consistently only applicable to harmonic music, as concords and their first inversions and simple discords of suspension—had been varied and enriched by them by the use of passing notes. In the use of these a great deal of ingenuity was exercised, and the devices which resulted were in some instances looked upon as everybody's property, and became quite characteristic of the particular form of art. As a type of these may be taken the following from Dufay, who lived in the 14th century, and has already been spoken of as being quoted by Kiesewetter:—

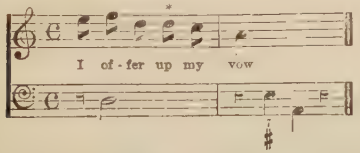
In this the F is clearly taken as a passing note between G and E, and a note on the other side of the E is interpolated before the legitimate passage of the passing note is concluded. This particular figure reappears with astonishing frequency all through the polyphonic period, as in Josquin's 'Stabat Mater,' in Palestrina's 'Missa Papae Marcelli,' in Gibbons's 'Hosanna,' and in Byrd's Mass. But what is particularly noticeable about it is that it gets so thoroughly fixed as a figure in the minds of musicians that ultimately its true significance is sometimes lost sight of, and it actually appears in a form in which the discord of the seventh made by the passing note is shorn of its resolution. As an example of this (which, however, is rare) may be taken the following passage from the Credo in Byrd's Mass:—

In this the seventh in the treble and its counterpart in the bass never arrive at the B♭ on which they should naturally resolve, and musicians were probably so accustomed to the phrase that they did not notice anything anomalous in the progression. It is probable, moreover, that the device in the first instance was not the result of intellectual calculation—such as we are forced to assume in analysing the progression—but merely of artistic feeling; and in point of fact such artistic feeling, when it is sound, is to all appearances a complex intellectual feat done instinctively at a single stroke; and we estimate its soundness or unsoundness by applying intellectual analysis to the result. The first example given above stands this test, but the latter, judged by the light of the rules of Discant, does not; hence we must regard it as an arbitrary use of a well-known figure which is justifiable only because it is well known; and the principle will be found to apply to several peculiar features which presently will be observed as making their appearance in harmonic music. The early harmonists proceeded in a similar direction in their attempt to give richness to the bare outline of the harmonic substructure by the use of grace-notes, appoggiaturas, anticipatory notes and the like, and by certain processes of condensation or prolongation which they devised to vary the monotony of uniform resolution of discords. Of these some seem as arbitrary as the use of the characteristic figure of the polyphonic times just quoted from Byrd, and others were the fruit of that kind of spontaneous generalisation which we recognise as sound. It is chiefly important to the present question to notice the principles which guided or seem to have guided them in that which seems to us sound. As an example of insertion between a discord and its resolution, the following passage from a Canzona by Frescobaldi may be taken:—

in which the seventh (*a*) is not actually resolved till (*b*); the principle of the device being the same as in the early example quoted above from Dufay. Bach carried this principle to a remarkable pitch, as for instance

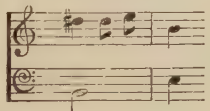


from the Fugue in B minor, No. 24 in the *Wohltemperirtes Clavier*.

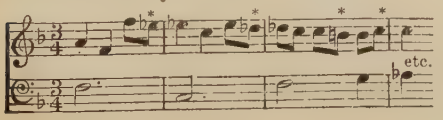


The simple form of anticipation which appears with so much frequency in Handel's works in the following form—

is found commonly in the works of the Italian composers of the early part of the 17th century. Several other forms also are of frequent occurrence, but it is likely that some of them were not actually performed as they stand on paper, since it is clear that there were accepted principles of modification by which singers and accompanists were guided in such things just as they are now in rendering old recitatives in the traditional manner, and had been previously in sharpening the leading note of the ecclesiastical modes. Hence it is difficult to estimate the real value of some of the anticipations as they appear in the works themselves, since the traditions have in many instances been lost. An anticipation relative melodically to the general composition of the tonic chord, which is also characteristic of modern music, occurs even as early as Peri, from whose 'Eurydice' the following example is taken:—



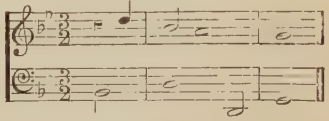
This feature has a singular counterpart in the Handelian recitative, *e.g.*—



The following examples are more characteristic of the 17th century:—

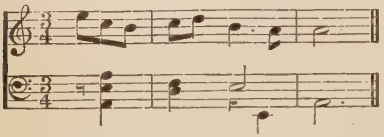
is quoted by Burney (iv. 34) from Peri. In Carissimi and Cesti are found characteristic closes of recitative in this manner—

but in this case the actual rendering is particularly doubtful, and the passage was probably modified after the manner in which recitatives are always rendered. A less doubtful instance, in which there is a string of anticipations, is from a fragment quoted also by Burney (iv. 147) from a Cantata by Carissimi as follows:—

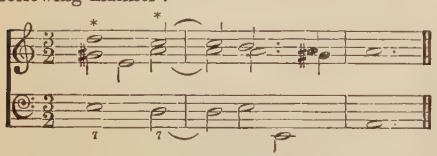


The use of combinations which result from the simultaneous occurrence of passing notes, a practice so characteristic of Bach, cannot definitely be traced at this early period. Indeed, it is not certain that the musicians had discovered the principle which is most prolific in these effects—namely, the use of preliminary notes a semitone above or below any note of an essential chord, irrespective of what precedes, and at any position relative to the rhythmic divisions of the music, as—

in which B♮, G♯, and D♭, which seem to constitute an actual chord, are merely the result of the simultaneous occurrence of chromatic preliminary passing notes before the essential notes C, A, and C of the common chord of F major. But there is a combination which is very common in the music of the 17th century, which has all the appearance of being derived from some such principle, and demands notice. It appears in Cesti's 'Orontea' (Burney, iv. 68) as follows:—

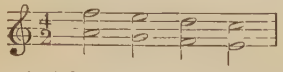


and, however preceded, it always amounts to the same idea—namely, that of using an unprepared seventh on the subdominant of the key (major or minor) preceding the Dominant chord of the Cadence. This may be explained as a passing note downwards towards the uppermost note of the succeeding concord on the Dominant, which happens to coincide with the passing note upwards between the third of the tonic chord and the root of the Dominant chord,—as C between B♭ and D in the example; in which case it would be derived from the principle above explained; or on the other hand the passage may be explained on the basis of the old theory of passing notes in a way which is highly illustrative of the methods by which novelty is arrived at in music. Composers were accustomed to the progression in which a chord of 6–4 preceded the Dominant chord, as—



and having the particular melodic progression which results from this well fixed in their minds, they inserted a passing note on the strong beat of the bar in the bass without altering the treble, as in the example quoted above from Cesti, and thereby added considerably to the vigour of the

passage. This particular feature seems to have been accepted as a musical fact by composers, and appears constantly, from Monteverde till the end of the century, among French and Italians alike; and it is invested with the more interest because it is found in Lully in an improved form, which again renewed its vitality. It stands as follows in a Sarabande by him:—



and this form was adopted by Handel, and will be easily recognised as familiar by those acquainted with his works. Corelli indicates the firm hold which this particular seventh had obtained on the minds of musicians by using it in immediate succession to a Dominant seventh, so that the two intervals succeed each other in the following manner:—

in the Sonata II. of the Opera 2nda, published in Rome, 1685. These methods of using passing notes, anticipations, and like devices, are extremely important, as it is on the lines thereby indicated that progress in the harmonic department of music is made. Many of the most prolific sources of variety of these kinds had descended from the contrapuntal school, and of these their immediate successors took chief advantage; at first with moderation, but with ever-gradually increasing complexity as more insight was gained into the opportunities they offered. Some devices do not appear till somewhat later in the century, and of this kind were the condensation of the resolution of suspensions, which became very fruitful in variety as music progressed. The old-fashioned suspensions were merely temporary retardations in the progression of the parts which, taken together in their simplicity, constituted a series of concords. Thus the succession—

is evidently only a sophisticated version of the succession of sixths—

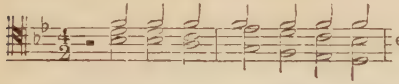
and the principle which is applied is analogous to the other devices for sophisticating the simplicity of concords which have been analysed above; and the whole showing how device is built upon device in the progress of the art.

Some time in the 17th century a composer, whose name is probably lost to posterity, hit upon the happy idea of making the concordant notes move without waiting for the resolution of the discordant note, so that the process—

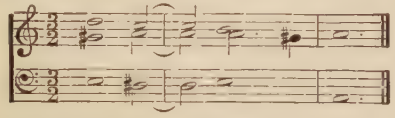
in which there are three steps, is condensed into the following (from Alessandro Scarlatti)—

in which there are only two to gain the same end. This device is very common at the end of the 17th century, as in Corelli, and it immediately bore fresh fruit, as the possibility of new successions of suspensions interlaced with one another became apparent, such as—

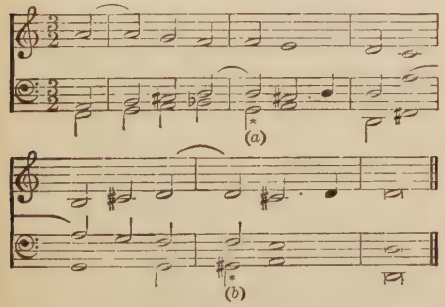
in which each shift of a note which would be considered as part of the implied concord creates a fresh suspension. And by this process a new and important element of effect was obtained, for the ultimate resolution of discord into concord could be constantly postponed although the harmonies changed; whereas under the old system each discord must be resolved into the particular concord to which it belonged, and therefore the periods of suspense caused by the discords were necessarily of short duration. In dealing with discords attempts were occasionally made to vary the recognised modes of their resolutions; for instance, there are early examples of attempts to make the minor seventh resolve upwards satisfactorily, and both Carissimi and Purcell endeavoured to make a seventh go practically without any resolution at all, in this form—



from Purcell's 'Dido and Æneas'—where the resolution is only supplied by the second violins—and from Carissimi—in which it is not supplied



at all, if Burney's transcription (iv. 147) is correct. Another experiment which illustrates a principle, and therefore demands notice, is the following from Purcell's service in B♭, in which



the analogue of a pedal in an upper part is used to obtain a new harmonic effect :—

About this time also a chord which is extremely characteristic of modern music makes its appearance, namely, the chord of the diminished seventh. This appears, for example, unprepared in Corelli's Sonata X. of the 'Opera Terza,' published in 1689, as follows:—

In this and in other instances of his use of it, it occupies so exactly analogous a position to the familiar use of the seventh on the subdominant which has already been commented upon at length, that the inference is almost unavoidable that composers first used the diminished seventh as a modification of that well-known device in a minor key, by sharpening its bass note to make it approach nearer to the dominant, and also to soften its quality. This inference has been happily verified by Mr. H. E. Wooldridge, who found the two forms of the seventh on the subdominant in a succession which strongly points to their common origin, in the following passage by Stradella :—

in which the minor seventh, arrived at in the manner usual at that time, is seen at (*a*); and the modified seventh in which the bass is sharpened so as to produce a diminished seventh appears at (*b*).

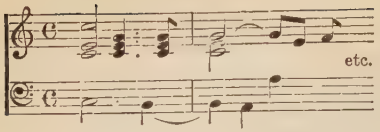
It will be necessary at this point to turn again for a short space to theorists, for it was in relation to the standard of harmony which characterises the end of the 17th century that Rameau's attempt was made to put the theory of music on some sort of philosophical basis. He called attention to the fact that a tone consists not only of the single note which everybody recognises, which he calls the principal sound, but also of harmonic sounds corresponding to notes which stand at certain definite distances from this lower note, among which are the twelfth and seventeenth, corresponding to the fifth and third ; that as there is a perfect correspondence between octave and octave these notes can be taken either as the major common chord in its first position, or its inversions ; and that judged from this point of view the lower note is the root or fundamental note of the combination. This was the basis of his theory of harmony, and it is generally considered to have been the first explicit statement of the theory of chords in connection with roots or fundamental notes. Rameau declines to accept the minor seventh as part of the compound tone of the root, and he does not take his minor third as represented by the nineteenth 'upper partial,' which is very remote, but justifies the minor chord on the principle that the minor third as well as the root note generates the fifth (as both C and E♭ would generate G), and that this community between them makes them prescribed by nature. D'Alembert took the part of expositor, and also in some slight particulars of modifier, of Rameau's principles, in his *Éléments de Musique*. It is not the place here to enter into details with respect to the particulars resulting from the theory, which was applied to explain the construction of scale, temperament, and many other subordinate matters, and to discover the proper progressions of roots, and the interconnection between chords. But a passage in D'Alembert's book deserves especial notice as illustrating modern harmonic as distinguished from the old contrapuntal ideas with respect to the nature of discords ; since it shows how completely the old idea of suspensions as retardations of the parts had been lost sight of : 'En général la dissonance étant un ouvrage de l'art, surtout dans les accords qui ne sont point de dominant, tonique, ou de sous-dominant ; le seul moyen d'empêcher qu'elle ne déplaise en paroissant trop étrangère à l'accord, c'est qu'elle soit, pour ainsi dire, annoncée à l'oreille en se trouvant dans l'accord précédent, et qu'elle serve par là à *lier* les deux accords.' The sole exception is in respect of the dominant seventh, which, apparently as a mere matter of experience, does not seem to require this preparatory announcement. Tartini published his theories about the same time as Rameau, and derived the effect of chords from the combinational tones, of which he is reputed to have been the discoverer. Helmholtz more lately showed that neither theory is complete without the other, and that together they are not complete without the theory of beats, which really affords the distinction between consonance and dissonance ; and that all of these principles taken together constitute the scientific basis of the facts of harmony. Both Rameau and Tartini were therefore working in the right direction ; but for the musical world Rameau's principles were the most valuable, and the idea of systematising chords

according to their roots or fundamental basses has been since generally adopted.

By the beginning of the 18th century the practice of grouping the harmonic elements of music or chords according to the keys to which they belong, which is called observing the laws of tonality, was tolerably universal. Composers had for the most part moved sufficiently far away from the influence of the old ecclesiastical system to be able to realise the first principles of the new secular school. These principles are essential to instrumental music, and it is chiefly in relation to that large department of the modern art that they must be considered. Under the conditions of modern harmony the harmonic basis of any passage is not intellectually appreciable unless the principle of the relations of the chords composing it to one another through a common tonic be observed. Thus if in the middle of a succession of chords in C a chord appears which cannot be referred to that key, the passage is inconsistent and obscure; but if this chord is followed by others which can with it be referred to a different key, modulation has been effected, and the succession is rendered intelligible by its relation to a fresh tonic in the place of C. The range of chords which were recognised as characteristic of any given key was at first very limited, and it was soon perceived that some notes of the scale served as the bass to a larger number and a more important class of them, the Dominant appearing as the most important, as the generator of the larger number of diatonic chords; and since it also contains in its compound tone the notes which are most remote from the chord of the tonic, the artistic sense of musicians led them to regard the Dominant and the Tonic as the opposite poles of the harmonic circle of the key, and no progression was sufficiently definable to stand in a position of tonal importance in a movement unless the two poles were somehow indicated. That is to say, if a movement is to be cast upon certain prominent successions of keys to which other keys are to be subsidiary, those which are to stand prominently forward must be defined by some sort of contrast based on the alternation of Tonic and Dominant harmony. It is probably for this reason that the key of the Subdominant is unsatisfactory as a balance or complementary key of a movement, since in progressing to its Dominant to verify the tonality, the mind of an intelligent listener recognises the original Tonic again, and thus the force of the intended contrast is weakened. This, as has been above indicated, is frequently found in works of the early harmonic period, while composers were still searching for the scale which should give them a major Dominant chord, and the effect of such movements is curiously wandering and vague. The use of the Dominant as the complementary key becomes frequent in works of the latter portion of the 17th century, as in Corelli; and early in the next, as in Bach and Handel, it is recognised as a matter of course; in the time of Haydn and Mozart so much strain was put upon it as a centre, that it began to assume the character of a conventionalism and to lose its force. Beethoven consequently began very early to enlarge the range of harmonic bases of the key by the use of chords which properly belonged to other nearly related keys, and on his lines composers have since continued to work. The Tonic and Dominant centres are still apparently inevitable, but they are supplemented by an enlarged range of harmonic roots giving chromatic combinations which are affiliated on the original Tonic through their relations to the more important notes of the scale which that Tonic represents, and can be therefore used without obscuring the tonality. As examples of this may be taken the minor seventh on the tonic, which properly belongs to the nearly allied key of the subdominant; a major concord on the supertonic, with the minor seventh superimposed, which properly belong to the Dominant key; the major chord on the mediant, which properly belongs to the key of the relative minor represented by the chord of the submediant, and so on.

Bach's use of harmony was a perfect adaptation to it of the principles of polyphony. He resumed the principle of making the harmony ostensibly the sum of the independent parts, but with this difference from the old style, that the harmonies really formed the substratum, and that their progressions were as intelligible as the melodies of which they seemed to be the result. From such a principle sprang an immense extension of the range of harmonic combinations. The essential fundamental chords are but few, and must remain so, but the combinations which can be made to represent them on the polyphonic principle are almost infinite. By the use of chromatic passing and preliminary notes, by retardations, and by simple chromatic alterations of the notes of chords according to their melodic significance, combinations are arrived at such as puzzled and do continue to puzzle theorists who regard harmony as so many unchangeable lumps of chords which cannot be admitted in music unless a fundamental bass can be found for them. Thus the chord of the augmented sixth is probably nothing more than the modification of a melodic progression of one or two parts at the point where naturally they would be either a major or minor sixth from one another, the downward tendency of the one and the upward tendency of the other causing them to be respectively flattened and sharpened to make them approach nearer to the notes to which they are moving. In the case of the augmented sixth on the flat second of the key, there is only one note to be altered; and as that note is constantly altered in this fashion in other combinations—namely

by substituting the flattened note for the natural diatonic note, as D♭ for D in the key of C, by Carissimi, Bach, Beethoven, Chopin, in all ages of harmonic music—it seems superfluous to consider whether or no it is a chord with a double root as theorists propose, in which one note is the minor ninth of one root, and the other the major third of another. The way in which ideas become fixed by constant recurrence has already been indicated in the case of a figure which was very characteristic of the polyphonic school, and in that of the subdominant seventh with the early harmonists; in like manner modifications, such as the augmented sixth, and the sharp fifth (which is merely the straining upwards of the upper note of a concord in its melodic progression to the next diatonic note), become so familiar by constant recurrence, that they are accepted as facts, or rather as representatives, by association, of the unmodified intervals, and are used to all intents as essential chords; and moreover being so recognised, they are made liable to resolutions and combinations with other notes which would not have been possible while they were in the unaltered condition; which is not really more to be wondered at than the fact that Bach and his contemporaries and immediate predecessors habitually associated tunes originally cast in the old ecclesiastical modes with harmonies which would have been impossible if those modes had not been superseded by the modern system of scales. The inversion of the above-mentioned augmented sixth as a diminished third is remarkable for two reasons. In the first place, because when used with artistic purpose it is one of the most striking chords in modern music, owing to the gradual contraction towards the resolution—as is felt in the employment of it by both Bach and Beethoven to the words 'et sepultus est' in the 'Crucifixus' of their masses in B minor and D respectively; and in the second, because a distinguished modern theorist (whose work is in many respects very valuable) having discovered that the augmented sixth is a double-rooted chord, says that it 'should not be inverted, because the upper note, being a secondary harmonic, and capable of belonging only to the secondary root, should not be beneath the lower, which can only belong to the primary root.' It must not be forgotten, however, in considering the opinions of theorists on the origin of chords such as these, that their explanations are not unfrequently given merely for the purpose of classifying the chords, and of expounding the laws of their resolutions for the benefit of composers who might not be able otherwise to employ them correctly.



The actual number of essential chords has remained the same as it was when Monteverde indicated the nature of the Dominant seventh by using it without preparation, unless a single exception be made in favour of the chord of the major ninth and its sister the minor ninth, both of which Helmholtz acknowledges may be taken as representatives of the lower note or root; and it cannot be denied that they are both used with remarkable freedom, both in their preparation and resolution, by the great masters. Haydn, for instance, who is not usually held to be guilty of harmonic extravagance, uses the major ninth on the Dominant thus in his Quartet in G, op. 76:—

and the minor ninth similarly, and with as great freedom, as follows, in a Quartet in F minor (Trautwein, No. 3):—

It is not possible to enter here into discussion of particular questions, such as the nature of the chord frequently called the 'Added Sixth,' to which theorists have proposed almost as many roots as the chord has notes; Rameau originally suggesting the Subdominant, German theorists the Supertonic as an inversion of a seventh, Alfred Day the Dominant, as an inversion of a chord of the eleventh, and Helmholtz returning to the Subdominant again in support of Rameau. Neither is it necessary to enter into particulars on the subject of the diminished seventh, which modern composers have found so useful for purposes of modulation, or into the devices of enharmonic changes, which are so fruitful in novel and beautiful effects, or into the discordance or non-discordance of the fourth. It is necessary for the sake of brevity to restrict ourselves as far as possible to things which illustrate general principles; and of these none are much more remarkable than the complicated use of suspensions and passing notes, which follow from the principles of Bach in polyphony as applied to harmony, and were remarked on above as laying the foundations of all the advance that has been made in Harmony since his time. Suspensions are now taken in any form and position which can in the first place be possibly prepared even by passing notes, or in the second place be possibly resolved even by causing a fresh discord, so long as the ultimate resolution into concord is feasible in an intelligible manner. Thus Wagner's 'Meistersinger' opens with the phrase—

in which B is a suspended passing note resolving so as to make a fresh discord with the treble, which in reality is resolved into another discord made by the appearance of a chromatic passing note, and does not find its way into an essential concord till three chords farther on; but the example is sufficient to show the application of both principles as above expressed. One of the most powerful suspensions in existence is the following from Bach's Organ Toccata in D minor :—

Of strongly accented passing notes the following are good examples :—

from the Overture to the 'Messiah'; and

from Brahms's Ballade in D, which is practically the same passing note as that in the example from Handel, but passing in the opposite direction.

A good example of a succession of combinations resulting from the principles above enumerated with regard to the modification of diatonic notes, and the use of chromatic passing notes, occurs in Bach's Cantata, 'Christ unser Herr' (p. 208)—

In the second scene of the second act of 'Tristan and Isolde' the combination given theoretically above actually occurs, and two of the preliminary chromatic notes (*) are sustained as a suspension into the next chord—

In the latter part of the last act of the same work are some extremely remarkable examples of the adaptation of the polyphonic principle to harmony, entailing very close modulations, for which there is not space here.

The principle of persistence was early recognised in the use of what were called Diatonic successions or sequences. They are defined by Prof. Macfarren as 'the repetition of a progression of harmony, upon other notes of the scale, when all the parts proceed by the same degrees in each repetition as in the original progression,' irrespective of augmented or diminished intervals, or doublings of notes which in other cases it is not desirable to double. And this may be expanded into the more general proposition that when a figure has been established, and the principle and manner of its repetition, it may be repeated analogously without any consideration of the resulting circumstances. Thus Beethoven having established the form of his accompaniment—

goes through with it in despite of the consecutive fifths which result—

Again, a single note whose stationary character has been established in harmony of which it actually forms a part, can persist through harmonies which are otherwise alien to it, and irrespective of any degree of dissonance which results. This was early seen in the use of a Pedal, and as that was its earliest form (being the immediate descendant of the Drone bass mentioned at the beginning of the Article) the singular name of an inverted Pedal was applied to it when the persistent note was in the treble, as in an often-quoted instance from the slow movement of the C minor Symphony of Beethoven, a fine example in the Fugue which stands as Finale to Brahms's set of Variations on a Theme by Handel, and in the example quoted from Purcell's Service above. Beethoven even makes more than one note persist, as in the first variation on the Diabelli Valse (op. 121)—

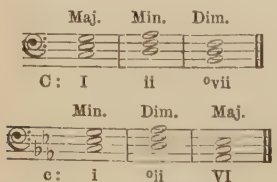
(compare with the example from 'Die Meistersinger' above). Another familiar example of persistence is persistence of direction, as it is a well-known device to make parts which are progressing in opposite directions persist in doing so irrespective of the combinations which result. For the limitations which may be put on these devices reference must be made to the regular text-books, as they are many of them principles of expediency and custom, and many of them depend on laws of melodic progression, the consideration of which it is necessary to leave to its own particular head.

It appears then, finally, that the actual basis of harmonic music is extremely limited, consisting of concords and their inversions, and at best not more than a few minor sevenths and major and minor ninths; and on this basis the art of modern music is constructed by devices and principles which are either intellectually conceived or are the fruit of highly developed musical instinct, which is, according to vulgar phrase, 'inspired,' and thereby discovers truths at a single leap which the rest of the world recognise as evidently the result of so complex a generalisation that they are unable to imagine how it was done, and therefore apply to it the useful term 'inspiration.' But in every case, if a novelty is sound, it must answer to verification, and the verification is to be obtained only by intellectual analysis, which in fact may not at first be able to cope with it. Finally, everything is admissible which is intellectually verifiable, and what is inadmissible is so relatively only. For instance, in the large majority of cases, the simultaneous occurrence of all the diatonic notes of the scale would be quite inadmissible, but composers have shown how it can be done, and there is no reason why some other composer should not show how all the chromatic notes can be added also; and if the principles by which he arrived at the combination stand the ultimate test of analysis, musicians must bow and acknowledge his right to the combination. The history of harmony is the history of ever-increasing richness of combination, from the use, first, of simple consonances, then of consonances superimposed on one another, which we call common chords, and of a few simple discords simply contrived; then of a system of classification of these concords and discords by key-relationship, which enables some of them to be used with greater freedom than formerly; then of the use of combinations which were specially familiar as analogues to essential chords; then of enlargement of the bounds of the keys, so that a greater number and variety of chords could be used in relation to one another, and finally of the recognition of the principle that harmony is the result of combined melodies, through the treatment of the progressions of which the limits of combination become practically co-extensive with the number of notes in the musical system. C. H. H. P.

HARMONY, ANALYSIS OF. For the purpose of representing in a concise manner, and apart from the signs of musical notation, the various facts about chords, both as to their special nature and derivation, and also their relationship to adjacent chords, various methods have from time to time been employed by writers upon Harmony. Such methods of analysis, even when they have been based upon the same dominant principle, have necessarily differed in detail according to the system or theory of Harmony to which they have been applied, and the derivation and classification of the several chords which is adopted by each particular author. The earliest method of indicating chords by non-musical signs was by the employment of figures (see FIGURED BASS), but figures, alone, dissociated from musical notation, can convey very little definite knowledge as to the nature of a chord. The first successful attempt to formulate non-musical signs into a complete and comprehensive system for the purpose of indicating definite facts about the nature and function of chords was made by Gottfried Weber in his *Theory of Musical Composition* (1817-21, Eng. trans. 1846). In this treatise, Weber, first of all, deals with musical intervals, the different kinds of which he indicates by means of dots placed either before or after the figure representing the numerical value of the interval, thus, a large (or major) third is indicated by 3·, and a superfluous (or augmented) third by 3··; a small (or minor) third by ·3, and a diminished third by ··3. The indication of the other intervals is on similar lines, except that his 'large fourth,' indicated by 4·, corresponds to what is now called the 'augmented fourth,' while his 'large fifth,' indicated by 5·, corresponds to what is now called a 'perfect fifth.' This system of indicating the nature of intervals, did not, however, come into general use, in the same manner as his system of indicating the nature of chords, and so far as we know it has not been employed in later treatises. The code of signs, based upon Roman numerals, which he formulated for employment in connection with chords was immediately made use of by theorists, and it has formed the basis of nearly every method of analysis which has appeared since that time. With such rapidity, in fact, did contemporary theorists proceed to make use of Weber's ideas that, in the preface to the third (and final) volume of his work he complains that immediately after the appearance of his first volume other writers adopted his methods and appropriated them to themselves, without any acknowledgment as to the source from whence they were derived.

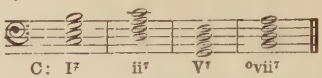
In this treatise two methods of indicating chords are shown. In the first, capital and small German letters are employed as the basis of the method, to indicate the root of the

chord, with supplementary signs to indicate its exact nature. In the English translation of this work old English black letters (capital and small) have been substituted for the German letters, but it is shown below in connection with the ordinary English letters, capitals and small. Thus



C, indicates the major triad ;
c, the minor triad ;
°c, the diminished triad ;
all having C as the root.

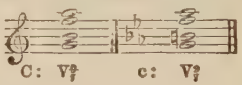
Weber supplies no special sign for the augmented triad.



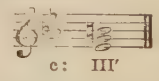
Chords of the seventh are shown by the figure ^{7} being placed after the letter indicating the root and the nature of the triad, thus—

G^7, indicates the major triad with the minor seventh ;
g^7, the minor triad with the minor seventh ;
$°g^7$, the diminished triad with the minor seventh ;
$G^{\flat 7}$ or $G^{\natural 7}$, the major triad with the major seventh,
all, of course, having G as the root.

Weber admits the limitations of this method, as it leaves undecided both the key, and the degree of the scale upon which the chord stands in its root position. It has, however, been employed by some modern theorists in connection with the harmonisation of melodies. In the second method which Weber formulates, instead of a letter to denote the name of the root of a chord, he makes use of Roman numerals, and by them indicates the degree of the scale upon which the chord in its original position is found. In this method, which, with modifications and additions, has been employed by the majority of theorists since that time, large numerals and small numerals take the place, respectively, of the capital and small letters of the previous method, the other supplementary signs being the same in both methods. An important feature of this second method is the indication of the key of a passage. This is done by prefixing either a capital letter for a major key, or a small letter for a minor key, before the numeral indicating the root of the chord. The following will illustrate Weber's method in connection with major, minor, and diminished triads :—



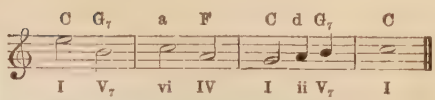
The indication of chords of the seventh followed upon exactly similar lines. To the sign for the triad was added ^{7} for a minor seventh, or $^{\natural 7}$ for a major seventh, thus—



Although Weber admits the existence of chords of the dominant ninth, yet he gives no special sign to represent them, merely indicating them as V^7.

J. C. F. Schneider, in his treatise on Harmony (1820, Eng. trans. 1828), employs the above method with some slight modifications and additions. The small cypher indicating the diminished triad he transfers to the right-hand side of the root figure thus, vii^0, while in chords of the seventh he places the 7 near the bottom of the root figure thus, V_7, instead of at the top. He also introduces the figure 9 to indicate the chord of the dominant ninth, an ordinary nine (9) when the ninth is minor, and a stroke nine (𝄩) when it is major, thus :—

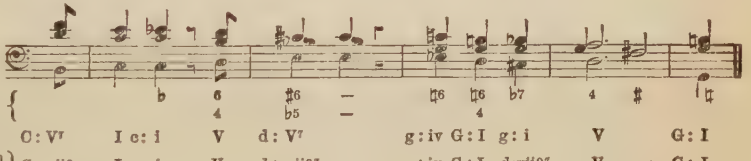
Neither Weber nor Schneider give any special sign for the augmented triad. This was supplied by E. F. E. Richter in his text-book on Harmony (1853), by adding a stroke to the large Roman figures, thus :—



Neither of the above-mentioned theorists, nor Jadassohn, who also makes use of this method, employ any signs to indicate the different positions (or inversions) of a chord, but as they always employ in addition to the above signs, figures, placed above the bass stave, further indications are unnecessary.

The first theorist who indicated the different positions of a chord by means of different letters was Alfred Day [see DAY, ALFRED]. In order that a chord, in whatever position it might be, should always be indicated by the figuring of the original position of the chord, Day proposed that each different position should be indicated by a different letter, associated with the original figuring, thus, the root position by A, the first inversion by B, the second inversion by C, and so on. By this means chords having different derivations but requiring the same figuring, would be differently indicated, as for instance the chord of the dominant seventh, by 7A, and the first inversion of the chord of the dominant ninth, by 9B.

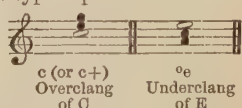
Professor Prout, in the latest edition of his *Harmony ; its Theory and Practice* (1903), has employed small alphabetical letters with the above meaning, but associated with Weber's method of analysis. He, however, does not



make use of 'a' for the root position of a chord, this being indicated by the root figure standing alone.

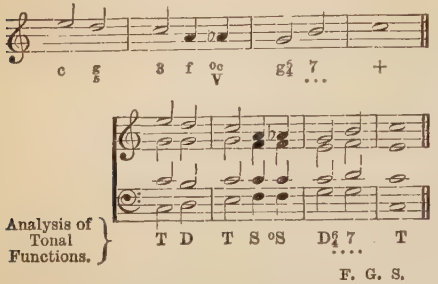
The application of Weber's method of analysis to diatonic harmony leaves little or no room for exhibiting differences of individual opinion as to the derivation of chords, and the method of analysing such. It is in its application to the analysis of chromatic harmony that these are revealed. English theorists explain chromatic harmony in a different manner from that which is adopted by the leading German theorists. Weber describes chromatic chords as 'leading chords,' and in his analysis of them refers each to the key in which it would appear as a diatonic chord. In the following passage from Mozart, which is quoted, with the analysis, from his treatise, it will be seen that he indicates nearly every chord as being in a different key. Richter and Jadassohn describe such chords as chromatically changed or altered chords, but employ a similar method of analysis. Most English theorists regard the employment of chromatic harmony as an extension of the boundaries of the key, and describe such chords as chromatic chords in the key in which they are employed; while Professor Prout in his above-mentioned treatise further explains such chords as being borrowed from other keys, and gives a double analysis of them, that is, both in the key in which they are diatonic, as well as in that in which they are chromatic. The following passage with the

A method of indicating the nature and function of chords, but which differs essentially from the above-mentioned ones, is that employed by Dr. Riemann in his *Harmony Simplified*.



Dr. Riemann bases his system of harmony (1) upon 'clangs' of two kinds, the overclang corresponding to the major triad and whose prime (or principal note) is its *lowest* note, and the underclang, corresponding to the minor triad, whose prime is its *highest* note; and (2) upon the three tonal functions, represented respectively by the Tonic, Dominant, and Subdominant. He has formulated an elaborate system of signs to indicate the different facts about these, and also for the purpose of connecting them with the signs of musical notation. The three tonal functions, when the triads are major, are represented respectively by the capital letters T, D, S, to which may be added a +, thus T+, to avoid any doubt as to the exact nature of the chord. When the triads are minor, a small cypher is prefixed to the representative letter, thus: °T, °D, °S. The overclang (or major triad) is indicated by its prime (lowest note), shown as a small letter, to which may be added a +. The underclang (or minor triad) is indicated by its prime

four different analyses shows: (1) the Figured Bass system of the past; (2) Weber's employment of his own method; (3) development of the same method as employed by modern German theorists; (4) application of this method by some English theorists; (5) elaboration and development of it by Professor Prout.



In connection with the harmonisation of melodies or of upper parts generally, in order to indicate the chords to be employed, some writers have made use of Weber's first method, that of capital and small letters placed over the melody, while others have employed Roman figures placed under the melody. Both methods are illustrated below in connection with the same melody. In such indications the *root-progression* (not the bass part) is shown:—

(highest note), also shown as a small letter, but with a cypher prefixed:—

The separate notes of an overclang are represented by the figures 1, 3, 5, placed under the prime tone of the clang, while I, III, V, similarly employed, represent the separate notes of the underclang. In this case, however, I is the highest note of the clang, while V is the lowest note. By means of these, and other signs which refer only to this special theory, the harmonisation of any part may be indicated with very considerable detail. The following

illustrates the employment of some of these signs and their interpretation in connection with a simple melody :—

'HAROLD. Opera in four acts, libretto by Sir Edward Malet, music by F. H. Cowen ; produced at Covent Garden, June 8, 1895.

HAROLD EN ITALIE. The fourth of Berlioz's five symphonies, op. 16, dedicated to Humbert Ferrand ; for full orchestra with solo viola ; in four movements—(1) 'Harold aux montagnes. Scènes de mélancolie, de bonheur et de joie.' Adagio and Allegro ; in G. (2) 'Marche de Pélerins chantant la prière du soir.' Allegretto ; in E. (3) 'Sérénade d'un Montagnard des Abbruzes à sa maîtresse.' Allegro assai ; in C. (4) 'Orgie de Brigands. Souvenirs des Scènes précédentes.' Allegro frenetico ; in G. It was composed in 1834, and originated in a request of Paganini's that Berlioz should write a solo in which he could display the qualities of his Stradivarius viola. It is needless to say that it did not fulfil that intention. The idea of the work is based on *Childe Harold*. (See Berlioz's *Mémoires*, chap. xlv.) It was first performed at the Conservatoire, Nov. 23, 1834, but was much altered afterwards. Score and parts are published by Schlesinger. It was played for the first time in England at a concert given by Berlioz in Drury Lane Theatre on Feb. 7, 1848, when the composer conducted and Hill played the viola part. It was afterwards given at the New Philharmonic Concert, July 4, 1855, when Berlioz conducted and Ernst played the viola part. G.

HARP (Fr. *Harpe* ; Ital. *Arpa* ; Germ. *Harfe*). A musical instrument of great antiquity ; in its modern development, by means of the ingenious mechanism of the double action, distinguished as the only instrument with fixed tones not formed by the ear and touch of the player, that has separate notes for sharps, flats, and naturals, thus approaching written music more nearly than any other.

The harp presents a triangular form of singular beauty, the graceful curve of the neck adding to the elegance of its appearance. Although the outline has varied at different epochs and in different countries, the relation of its proportions to the musical scale—a condition of symmetry in musical instruments—is in the harp very close ; so that whether it be Egyptian, Persian, Mediæval, or Keltic, it is always fashioned in beauty of line, and often characteristically adorned.

In looking at a harp we recognise at once the varied functions of its structure. The resonant instrument is the sound-board next the player, which forms an acute angle with the upright pillar. Both support the neck, a curved bracket between which and the sound-board the strings are stretched. In modern harps the neck includes the 'comb' containing the mechanism for raising the pitch of the strings one half tone by the single action, or two half tones by the double action. The pillar is hollow in order to contain the rods working the mechanism. The pedestal, where pillar and sound-board unite, is the frame for the pedals, levers acted upon by the feet and moving the rods in the pillar.

The wood used in a harp is chiefly sycamore, but the sound-board is of deal, and in old harps was frequently ornamented with painted devices. The dimensions of sound-board and body increase downwards. Along the centre of the sound-board is glued a strip of beech, or other hard wood, in which are inserted the pegs that hold the lower ends of the strings, the upper ends being wound round tuning-pins piercing the wrest-plank which forms the upper part of the neck. The sound-board is ribbed underneath by two narrow bars, crossing the grain of the deal, their duty being to drive the sound-board into nodes and figures of vibration. The strings are of catgut, coloured to facilitate the recognition of the notes by the player, the lowest eight being spun over, wire upon silk or wire upon wire. The compass of an Erard double-action harp is 6½ octaves.

The apparently slight resistance offered by the bridge to the tension of the strings, inadequate if their drawing power were perpendicular, is sufficient because they are placed at an angle. There is also a lateral angle in the position of the neck and strings, to allow for the strain on the side to which the strings are attached.

The origin of the harp must be put back before the earliest records of civilisation. It was possibly suggested by the stretched string of the bow. The addition of several strings would be analogous to binding several reeds or whistles together to form a syrinx, both contrivances apparently preceding the shortening to different lengths by the finger of a single vibrating string, as in a lute, or the shortening of the vibrating column of air in a pipe by means of holes perforated in it to be stopped also by the fingers. The oldest monuments of the harp are Egyptian. Those first seen by Bruce, painted on the wall of a burying-place at Thebes, are supposed to be as old as the 13th century B.C. These are very large harps, richly ornamented, and standing, to judge from the players, more than six feet high. These instruments, which have been often described, having no front pillar, could have had no great tension, and were

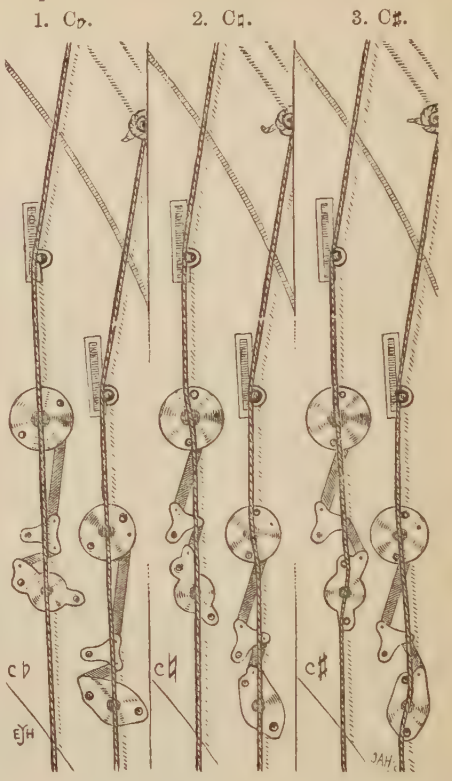
probably of a low and sweet tone. But while all Egyptian harps wanted this important member for support, they were not limited to one size. There seems to have been a great variety in dimensions, number of strings, and amount of ornament. Some, like Bruce's, were placed upon the ground ; others were upon rests or stools, to admit of the player's standing. Those held by seated players were more like the Greek trigonon, a link between the harp and lyre.

The Assyrian harps resembled the Egyptian in having no front pillar, but differed in the sound-board being uppermost, the lower angle being a simple bar for the attachment of the strings. Carl Engel (*Music of the most Ancient Nations*, London, 1864) regards the absence or presence of the front pillar as distinguishing the Eastern harp from the Western, but it may be that the distinction is rather that of ancient and modern, for the very earliest Western harp of which a representation exists, that in Bunting's *Ancient Music of Ireland*, attributed by him to an earlier date than A.D. 830, has no front pillar. The beautiful form of the more modern Irish harp is well known from its representation in the royal coat-of-arms. Two specimens are to be seen in the Victoria and Albert Museum: one is a cast of the ancient harp in Trinity College, Dublin, said to have belonged to Brian Boiroimhe, but now attributed to the King of Thomond (*cir.* 1221), who sent it as a pledge to Scotland, from whence it was removed by Edward I. to Westminster. In the reign of Henry VIII. it reverted to the then Earl of Clanrickard. In these the body is perpendicular, or nearly so, instead of slanting, as in modern harps ; the front pillar being curved to admit of this, and the neck—in the Irish harp called the Harmonic Curve—descending rather to meet it. This form gives a more acute angle to the strings, which were of brass, two to each note, the sounds being produced by the pointed finger-nails of the player. The number of strings is uncertain, but the fragments of the 'Dalway' harp, shown in the Special Exhibition at South Kensington in 1872, inscribed 'Ego sum Regina Cithararum,' and dated A.D. 1621, justify our assuming the large scale of fifty-two for this instrument. [This harp was made by Donal O'Dermody for Sir John FitzGerald of Cloyne, Co. Cork, and is still in the possession of the Dalway family at Ballahill near Carrickfergus. The sound-board is missing, but the harmonic curve and forearm are in good preservation. W. H. G. F.]

The Irish Gaelic harp must have been the Scotch Gaelic one also. According to Gunn (*Historical Inquiry*, etc., Edinburgh, 1807) a lady of the clan Lamont in Argyle took a harp with her on her marriage in 1640 to Robertson of Lude, which had for several centuries been the harp of a succession of Highland bards. Gunn described it as then existing, thirty-eight inches high and sixteen broad, with thirty-two strings. [It was lent by Mr. W. Moir Bryce to the Loan Exhibition of the Musicians' Company in Fishmongers' Hall, 1904. W. H. G. F.] Another, also then existing and in excellent preservation, he stated to have been the gift of Queen Mary of Lorraine to Miss Gardyn of Banchory. It was smaller than the Lude harp, and had originally twenty-nine strings, increased later to thirty. [It was sold by auction in Edinburgh on March 12, 1904, for 850 guineas, and purchased for the Antiquarian Museum of that city. W. H. G. F.]

The Welsh Harp has likewise a perpendicular body, but is larger than the Irish, increasing considerably downwards. The neck ascends, the front pillar being longer. The Welsh harp has three rows of gut strings, the outer rows being unisons in diatonic series, the inner the chromatic semitones.

The earliest representation of the portable mediæval harp, which so many painters loved to delineate along with lutes and viols, is perhaps that in Gerbert's *De Cantu et Musica Sacra*, copied from a MS. of the 9th century in the Monastery of St. Blaise in the Black Forest, destroyed by fire in 1768. The form of this instrument is preserved in the modern harp, the front pillar only differing in being straight instead of slightly curving, to admit of the movement of the rods for working the pedals.



That the Western harp belongs to Northern Europe in its origin there seems to be no doubt. Max Müller claims the name as Teutonic, and has contributed these historic and dialectic forms :—Old High German, *Harapha* ; Middle do., *Harpfe* ; Modern do., *Harfe* ; Old Norse, *Harpa*. From the last were derived the Spanish and Italian *Arpa*, the Portuguese *Harpa*, and the French *Harpe* —the aspirate showing the Teutonic origin. The Anglo-Saxon form was *Hearpe*. The Basque and Sclavonian, as well as the Romance, took the name with the instrument, but there is a remarkable exception in the fact of the Keltic peoples having their own names, and these again divided according to the Gaelic, and Cymric branches. Prince Louis Lucien Bonaparte has supplied the following illustration :—Irish Gaelic, *Clàirseach* ; Scotch do., *Clàrsach* ; Manx, *Claasagh* ; Welsh, *Telyn* ; Cornish, *Telein* ; Breton, *Télen*.

The Mediæval harp, a simple diatonic instrument, was sufficient in its time, but when modern instrumental music arose, its limits were found too narrow, and notwithstanding its charm of tone it would have fallen into oblivion. It had but one scale, and to obtain an accidental semitone the only resource was to shorten the string as much as was needed by firmly pressing it with the finger. But this was a poor expedient, as it robbed the harpist for the time of the use of one hand. Chromatic harps were attempted by German makers in the 18th century, but it was found impracticable, through difficulty of

execution, to give the harp thirteen strings in each octave, by which each would have been a sharp to its next lower and a flat to its next higher string. The first step towards the reconstruction of the harp was due to a Tyrolese, who came upon the idea of screwing little crooks of metal (*crotchets*) into the neck, which when turned against the string would cause the shortening necessary for a chromatic interval. Still the harpist lost the use of one hand while placing or releasing a crook, and one string only was modified, not its octaves. About the year 1720, one Hochbrucker, a native of Donauwörth in Bavaria, conceived and executed the first pedal mechanism, and rendered the harp fit for modulation, by using the foot to raise each open string, at will and instantaneously, half a tone higher, and leaving the player's hands free. This brought about a very remarkable revolution in harp-playing, giving the instrument eight major scales and five minor complete, besides three minor scales descending only. Hochbrucker's mechanism acted upon crooks which pressed the strings above nuts projecting from the neck. But there were inconveniences arising from this construction; each string acted upon by a crook was removed from the plane of the open strings, an impediment to the fingering, and frequent cause of jarring, and the stopped strings were less good in tone than the open. A fault no less serious was due to the mechanism being adjusted to the wooden neck, which was intractable for the curving required; if too much bent it was liable to break, and if not bent enough the middle strings would break when tuned up from being too long.

The first to make harps without crooks, and yet to stop half tones, were Frenchmen—the Cousineaus, father and son. They passed each string between two small pieces of metal (*béquilles*) placed beneath the bridge-pin. Then by the pedal action these metal pieces were made to grasp the string, and shorten it the distance required. The Cousineaus also introduced a slide to raise or lower the bridge-pin regulating the length of the string, and placed each system of levers belonging to strings of the same name between metal plates which were bevelled to make them lighter. Thus the neck could be curved at pleasure, and its solidity being assured, the proportions of the strings could be more accurately established. About 1782 they doubled the pedals and connected mechanism, and thus constructed the first double-action harp. The pedals were arranged in two rows, and the tuning of the open strings was changed to the scale of C♭ instead of E♭, as in the single-action harps. But it does not appear that the Cousineaus made many double-action harps; they were still too imperfect; and the Revolution must have closed their business, for we hear no more of them.

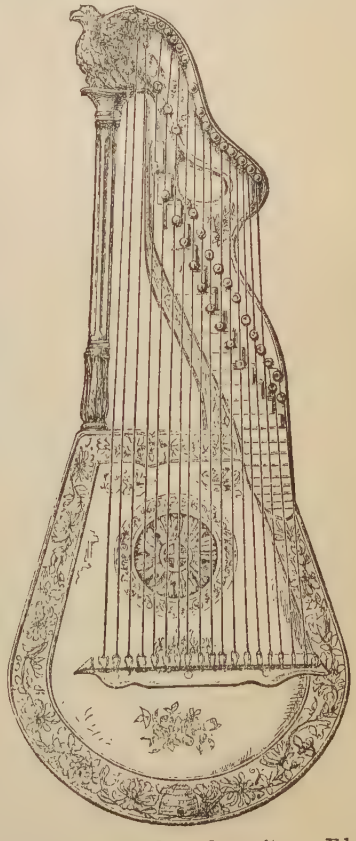
We now arrive at the perfecting of the harp by that great mechanician Sebastian Erard, whose merit it was to leave this instrument as complete as the Cremona school of luthiers left

the violin. His earliest essays to improve the harp date about 1786, and were confined to the single action. He worked upon a new principle, the fork mechanism, and in his harps which were finished about 1789, the arrangement of it was chiefly internal; the studs that shorten the strings alone performing their functions externally. He patented in London in 1794 a fork mechanism external to the plate. He made a double-action harp in 1801, patenting it in 1809 [in his early specimens the double movement only affected the notes A and D], and it was not until 1810 that he introduced the double action throughout in the culmination of his beautiful contrivance, which has since been the model for all harp-makers. In this harp, as in the single-action one, Erard maintained seven pedals only, and simply augmented the extent of movement of the cranks and tringles (or levers) acted upon by the pillar-rods, to give successively a portion of revolution to the disks from which the studs project; the first movement of the pedal serving to shorten strings of the same name, to produce the first half tone, the second movement of the pedal for the second half tone, the contrivance being

so ingenious that the position of the upper disk—the second to move but the first to act upon the strings—is not changed when the lower disk completes its movement of revolution and acts upon the strings also.

The drawing represents three sections of the neck of Erard's double-action harp, and shows the position of the forks and external levers, (1) when the strings are open, (2) when stopped for the first half tone, and (3) when stopped for the second. Two strings are shown for each pitch.

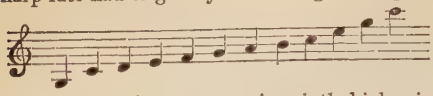
It is not necessary to keep the foot upon a pedal, as it may be fixed in a notch and set free when not required; spiral springs with two arms fixed beneath the pedestal accelerate the return of the pedals. Unlike the weighty expedient of the Cousineaus, there are but two brass plates which form the comb concealing the greater part of the action. Lastly, Erard made the convex body bearing the sound-board of one piece, doing away with the old lute-like plan of building it up with staves.



As already stated, the double-action harp is tuned in C♭. By taking successively the seven pedals for the half-tone transposition, it can be played in G♭, D♭, A♭, E♭, B♭, F, and C♯. By the next action of the pedals, completing the rise of the whole tone, the harp is set successively in G, D, A, E, B, F♯, and C♯. The minor scales can only be set in their descending form, the ascending requiring change of pedals. Changes by transposition constitute a formidable difficulty in playing keyed instruments through the altered fingering required. On the harp passages may be repeated in any key with fingering absolutely the same. The complication of scale fingering, so troublesome to pianoforte playing, is with the harp practically unknown. The difficulties attending performance on the harp, the constant tuning necessitated by the use of catgut strings, and the absence of any means of damping the sounds, have induced M. Dietz, of Brussels, to invent a harp-like instrument with a chromatic keyboard, which he has named the Claviharp. It was introduced into England through the advocacy of Dr. W. H. Cummings, but it can hardly be said to have succeeded as it was expected to do, and it has certainly not expelled the ordinary harp from our orchestras. It is sufficient to say that the action of the Claviharp is highly ingenious, the strings being excited mechanically much in the same way as the strings of the harp are excited by the player's fingers. There are two pedals—one being like the pianoforte damper pedal and the other producing the harmonics of the octave. The Claviharp is of pleasing appearance.

The harmonics of the harp are frequently used by solo-players, and the 'sonorousness of these mysterious notes when used in combination with flutes and clarinets in the medium' called forth the admiration of Berlioz (*Modern Instrumentation*, Novello, 1858).

In describing the Double-action Harp of Sebastian Erard, the writer has been much helped by a report, read before the French Institute in 1815, and lent to him by M. George Bruzaud. A. J. H.



[Quite recently, since 1897, a chromatic harp has been manufactured by the Pleyel firm. It was patented in 1894, and perfected in 1903 by M. Gustave Lyon, chief director of the firm; it has no pedals, and the strings are arranged to cross each other, so that the strings representing the white notes of the pianoforte keyboard are fastened to the left side of the console and the right of the sound-board, whilst those representing the black notes of the keyboard are fixed to the right side of the console and the left of the sound-board. There are ingenious details to facilitate tuning, and the full compass of the ordinary harp is available. It has already come into general use in many of the orchestras, theatrical and otherwise, in France, and is in great favour in the Brussels Conservatoire.]

HARP-LUTE or DITAL HARP, one of the attempts made about the beginning of the

19th century to replace the guitar. Edward

Light appears to have invented this form of stringed instrument about the year 1798. The harp-lute had originally twelve catgut strings—

but this notation was a major sixth higher in pitch than the actual sounds. In 1816 the same Edward Light took out a patent for an improvement in this instrument, which he now denominated 'The British harp-lute.' The patent was for the application of certain pieces of mechanism called 'ditals' or 'thumb-keys,' in distinction from 'pedals' or 'foot-keys'; each dital producing by pressure the depression of a stop-ring or eye to draw the string down upon a fret and thus shorten its effective length, and render the pitch more acute. The most complete instrument of this construction he named the 'Dital harp.' In this each string, as will be seen in the woodcut, has a 'dital' to raise it a semitone at pleasure. A. J. H.

HARPER, Thomas, an early London music-printer, who worked between 1631 (at least) and 1653. He printed Ravenscroft's 'Psalms' 1633, and several of the earliest publications issued by John Playford, including the first edition of *The English Dancing Master*, 1650-1651, and H. Lawes's *Ayres and Dialogues*, 1653. F. K.

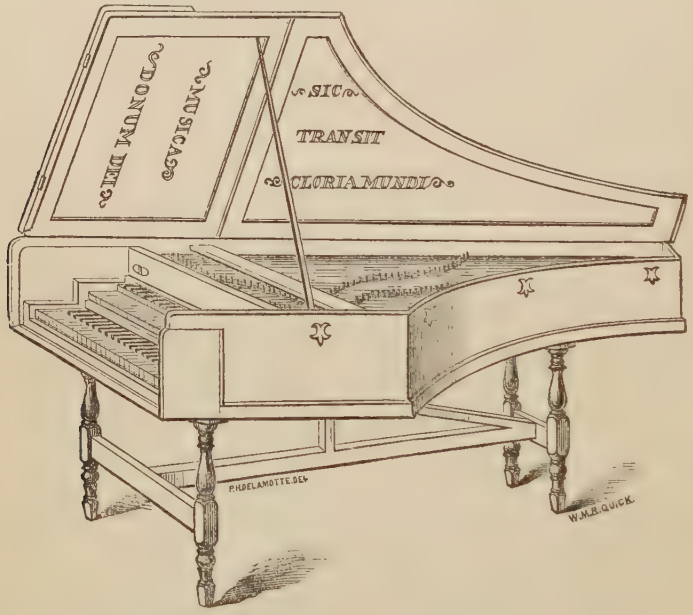
HARPER, Thomas, son of Richard Harper, of the parish of St. Nicholas, Worcester, was born at Worcester, May 3, 1787; when about ten years of age came to London and learnt the horn and trumpet under Eley, then master of the East India Brigade Band. He soon afterwards became a member of the band and a great proficient on the trumpet. He continued in the band till its dispersion in 1814; during the first years of this office, he also performed in the orchestras of some of the minor theatres. About 1806 he was appointed principal trumpet at Drury Lane, and the English Opera House, Lyceum. He was a member of the Royal Society of Musicians in 1814. In 1820 he was engaged as principal trumpeter at the Birmingham Musical Festival, and in the following year succeeded the elder Hyde at the Concert of Ancient Music, the Italian Opera, and all the principal concerts and festivals, a position which he retained for upwards of a quarter of a century. The East India Company nominated him inspector of the musical instruments supplied to their bands, an appointment which he held until his death. Harper played on the slide trumpet, and produced a pure, brilliant, and even tone, with a command of execution which enabled him to surmount the greatest difficulties on his most difficult instrument. He was stricken with mortal sickness at a rehearsal in Exeter Hall for a concert of the Harmonic Union, and died a few hours afterwards, on Jan. 20, 1853. He was author of an Instruction Book for the Trumpet. Harper left three sons, the eldest of whom, Thomas John, born in London, Oct. 4, 1816, succeeded his father in all his appointments as principal trumpet, a position he held for many years; he retired in 1885, and died August 27, 1898; the second, Charles Abraham, long filled the place of principal horn in the best orchestras; he died Jan. 5, 1893; and the youngest, Edmund, also a horn player, settled at Hillsborough, Ireland, as pianist and organist, and died there, May 18, 1869. W. H. H.

HARPSICHORD (Fr. *Clavecin*; Ital. *Clavicembalo, Gravicembalo*, not unfrequently *Cembalo* only, also *Arpicordo*; Germ. *Clavicymbel, Kielflügel, Flügel*). The most important of the group of keyed instruments that preceded the pianoforte, holding during the 16th, 17th, and 18th centuries a position analogous to that now accorded to the grand pianoforte. It had a place in the orchestra as an accompanying instrument when the first opera and the first oratorio were performed (Florence and Rome, about A. D. 1600), and during the time of Handel and Bach was the constant support to the *recitativo secco*, its weak bass notes being reinforced by large lutes and viols, and ultimately by violoncellos and double basses. Towards the end of the 18th century the instrument was withdrawn,[1] and the big fiddles were left by themselves to accompany the ordinary recitative in a fashion more peculiar than satisfactory.

The name harpsichord is the English variant of the original arpicordo, which, like clavicembalo, clavicordo, spinetta, and pianoforte, betrays its Italian origin. The spinetta was a table-shaped, five-cornered arpicordo, rectangular, like the German clavichord, but otherwise quite different from that instrument, which was made to sound by 'tangents,' or simple brass uprights from the keys. All instruments of the harpsichord, clavicembalo, or spinet family were on the plectrum principle, and therefore were incapable of dynamic modification of tone by difference of touch. The strings were set in vibration by points of quill or hard leather, elevated on wooden uprights, known as jacks, and twitching or plucking them as the depression of the keys caused the points to pass upwards. [Jack.] The Correr upright spinet or clavicythenium, which was in the Music Loan Collection of 1885, and was presented by Mr. (now Sir G.) Donaldson to the Royal College of Music, is perhaps the oldest instrument of this kind in existence. It preserves traces of brass plectra, not leather. Leather points were probably used before quills, since we learn from Scaliger, who lived 1484-1550 (*Poetices*, lib. i. cap. 48), that crowquills were introduced in keyed instruments subsequent to his boyhood, and he informs us

[1] The King's Birthday Ode was accompanied by the harpsichord until June 4, 1795, when a grand piano was substituted, a harpsichord having been used at the rehearsal.

that through them the name 'spinet' (from *spine*, a thorn or point) became applied to what had been known as the 'clavicymbal' and 'harpichord.' The Canon Paul Belisonius, of Pavia, is said to have introduced quill plectra, but whether leather, as has been said, preceded the use of quills cannot be affirmed. The plectra in harpsichords and spinets were so often renewed, that it is impossible to assert that we have direct evidence of the use of either substance in any existing instrument. The use of leather is shown in a harpsichord by Baffo, dated A.D. 1574, and presently to be referred to; and in one by the elder Andreas Ruckers of Antwerp, dated A.D. 1614, now in the possession of Col. Hopkinson.



It is the principle of the plectrum that derives the descent of the harpsichord from the psaltery, just as the pianoforte is derived, by analogy at least, from the dulcimer, and the clavichord from the movable-bridged monochord; the model for the shape of the long harpsichord being that kind of psaltery which the common people called 'istromento di porco'—from a supposed resemblance between the trapeze form and a pig's head. [See PSALTERY.] There is an interesting suggestion of this connection of the harpsichord with the psaltery preserved in the church of the Certosa of Pavia, built about A.D. 1475. King David, who in the Middle Ages always played a psaltery, is there shown holding an 'istromento di porco.' The body of the psaltery is open, and shows eight keys, lying parallel with the eight strings. David touches the keys with his right hand, and uses the left to damp the strings. All this may be the sculptor's fancy, but Dr. Ambros (*Geschichte der Musik*, 1864) regards it as a recollection of a real, though obsolete, instrument somewhere seen by him.

The earliest mention of the harpsichord is under the name of clavicymbalum, in the rules of the Minnesingers, by Eberhard Cersne, A.D. 1404. With it occur the clavichord, the monochord, and other musical instruments in use at that time. [See CLAVICHORD.] The absence of any prior mention or illustration of keyed stringed instruments is negative evidence only, but it may be assumed to prove their invention to have been shortly before that date—say in the latter half of the 14th century, especially as Jean de Muris, writing in A.D. 1323 (*Musica speculativa*), and enumerating musical instruments, makes no reference to either clavicembalo or clavichord, but describes the monochord (recommending four strings, however) as in use for measuring intervals at that time. Moreover, before this epoch, hammered music wire could not have been extensively used, if it existed before the earliest record of wire-drawing, A.D. 1351, at Augsburg. It may occur to the reader —why were hammers not sooner introduced after the natural suggestion of the Dulcimer, instead of the field being so long occupied by the less effective jack and tangent contrivances? The chasm untraversable by all forgotten Cristoforis and Schröters was the gap between wrest-plank and sound-board, for the passage of the hammers, which weakened the frame and prohibited the introduction of thicker strings strong enough to withstand the impact of hammers. It took more than three hundred years to bridge this chasm by stronger framing, and thus render hammers possible.

As pianofortes have been made in three quite different shapes, the grand, the square, and the upright, there were as many varieties of the jack instruments—to wit, the harpsichord proper (clavicembalo, clavecin, or flügel), of trapeze form; the spinetta, of oblong or pentangular form, frequently called spinet or virginal; and the upright harpsichord, or clavicytherium. It must be remembered that the long harpsichords were often described as spinet or virginal, from their plectra or their use by young ladies; but the table-shaped ones known commonly by the latter names were never called harpsichords. A few specimens of the upright harpsichords still exist; one decorated with paintings was shown in the collections of Musical Instruments at South Kensington in 1872; another was sold in the Duke of Hamilton's sale in 1883, but was unfortunately broken up for the sake of the paintings; and the Conservatoire of Brussels and the Kraus collection of Florence, contain specimens. Another splendid specimen, of Italian origin, dating *circa* 1600, has been acquired by Mrs. J. Crosby Brown of New York, and forms part of her munificent donation to the Metropolitan Museum of that city. An interesting bill-head and receipt for an upright harpsichord, dated 1753, and signed by the maker, Samuel Blumer, 'Harpsichord and Spinet Maker in Great Poultney Street, near Golden Square, London. N.B. Late foreman to Mr. Shudi,' is in the possession of Messrs. Broadwood.

We are spared the necessity of reconstructing the older harpsichords from the obscure and often inaccurate allusions of the older writers, such as Virdung and Kircher, by the valuable collection now in the Victoria and Albert (South Kensington) Museum, that includes instruments of this family dating from A.D. 1521 to Pascal Taskin, A.D. 1786. In private hands, but accessible to the inquirer, are large harpsichords by Tschudi and Kirkman, and by Tabel, to whom these makers had in turn been foremen. The oldest harpsichord in the Museum, and so far as is known, anywhere, is a Roman clavicembalo, inscribed and dated 'Hieronymus Bononiensis Faciebat. Romae, MDXXI.' It has one keyboard, and two unison strings to each note, boxwood natural keys, with an apparent compass of near four octaves, E to d''', which, with a 'short octave' in the bass, would be C to d'''. This instrument, like many

Italian harpsichords and spinets, is removable from its elaborate case. There was no change of power or pitch in this instrument by stops, nor in the later clavicembali; the Italians were always conservative in structural features. Raising the top and looking inside, we observe the harp-like disposition of the strings as in a modern grand piano, which led Galilei, the father of the astronomer Galileo, to infer the direct derivation of the harpsichord from the harp. In front, immediately over the keys, is the wrest-plank, with the tuning-pins inserted, round which are wound the nearer ends of the strings—in this instrument two to each note—the further ends being attached to hitch-pins,

driven into the sound-board itself, and following the angle of the bent side of the case to the narrow end, where the longest strings are stretched. There is a straight bridge along the edge of the wrest-plank, and a curved bridge upon the sound-board. The strings pass over these bridges, between which they vibrate, and the impulse of their vibrations is communicated by the curved bridge to the sound-board. The plectra or jacks are the same as in later instruments. [See JACK.] The raised blocks on each side the keys, by which the instrument was drawn out of the case, survived long after, when there was no outer case.

Reference to the oblong 'clavicordi,' in which the Victoria and Albert Museum is rich, will be found under SPINET. The actual workmanship of all these Italian keyed instruments was indifferent; we must turn to the Netherlands for that care in manipulation and choice of materials which united with constructive ingenuity equalling that of the best Italian artists, culminated in the Double Harpsichords of the Ruckers family of Antwerp.[1] [See RUCKERS.]

Of this family there were four members living and working between 1579 and 1651 or later, who achieved great reputation. Their instruments are known by their signatures; and by the monograms forming the ornamental rosette or sound-hole in the sound-board—a survival from the psaltery. The founder of the reputation of this family, Hans Ruckers the elder, brought the Antwerp manufacture to that importance and perfection that have become historical. But the great change of construction that was to become normal was brought about by a grandson of the elder Ruckers, Jan Couchet, a pupil of Hans or Jean Ruckers the younger. It was long believed that the elder Hans Ruckers had added the second keyboard, the octave string, and stops for the control of the registers or slides of jacks acting upon the strings analogously to the stops of the organ, but it was not so, as the octave string has been found in older Italian clavicembali. We find in the Privy Purse expenses of Henry VIII.: '1530 (April) item the vj daye paied to William Lewes for ii payres of virginalls in one coffer with iiii stoppes brought to Greenwiche iii li . . . and for ii payres of virginalls in one coffer brought to the more other iii li.' The first, evidently a double keyboard harpsichord with four stops, probably brought from Antwerp or Cologne, a still earlier

[1] The oldest trace in the Netherlands of the harpsichord or clavecin is that a house in Antwerp, in the parish of Notre Dame, bore in 1532, the name of 'de Clavizimbele.'

seat of harpsichord-making; the second, a double harpsichord, no stops being named but probably existing, landed at the more or marsh adjoining Whitehall, afterwards known as Scotland Yard. Hans Ruckers the elder was not born in 1530, hardly before 1550. His merit, and that of his sons Jean and André, was rather that of the great violin-maker Stradivari, to make perfect an existing model. The tension of harpsichords being comparatively small, they lasted longer than our modern pianos. They were sometimes expensively decorated a hundred years after they had been made. James Shudi Broadwood (*Notes*, 1838) states that many Ruckers harpsichords were in existence and good condition until nearly the end of the 18th century, and fetched high prices; one having sold in 1770 for 3000 francs (£120).

To Jan Couchet we may attribute the addition of the unison string and limitation of the octave string—the little octave, as Van Blankenberg called it—to the lower keyboard.[1] It was Couchet who, about 1640, changed the double keyboard harpsichord from a mere transposing instrument, contrived to accommodate the authentic and plagal church modes with the singer's capabilities, to a forte and piano instrument, with three strings (reducible to two and one) upon the lower keyboard, and one string always for the upper. Of Couchet's instruments, which are rare, one is in Edinburgh, and the other in Mrs. J. Crosby Brown's splendid collection.[2]

When the Ruckers family passed away we hear no more of Antwerp as the city of harpsichord makers; London and Paris took up the tale. But all these Antwerp workmen belonged of right to the Guild of St. Luke, the artists' corporation, to which they were in the first instance introduced by the practice of ornamenting their instruments with painting and carving. In 1557 ten of the Antwerp harpsichord makers petitioned the deans and masters of the guild to be admitted without submitting masterpieces, and the chiefs of the commune consenting, in the next year they were received. The responsibility of signing their work was perhaps the foundation of the great reputation afterwards enjoyed by Antwerp for harpsichords and similar musical instruments. (*Recherches*, etc., Léon de Burbure, Brussels, 1863.)

The earliest historical mention of the harpsichord in England occurs under the name of Claricymball, A.D. 1502. The late Dr. Rimbault (*The Pianoforte*, London, 1860) collected this and other references to old keyed instruments from records of Privy Purse expenses and from contemporary poets. The house-proverbs of Leckingfield, the residence of Algernon Percy in the time of Henry VII., preserved (for the house was burnt) in a MS. in the British Museum, named it 'clarisymbalis.' For a long while after this, if the instrument existed, it was known under a general name, as 'virginalls.' It was the school of Ruckers, transferred to England by a Fleming named Tabel, that was the real basis of harpsichord-making as a distinct business in this country, separating it from organ-building with which it had been, as in Flanders, often combined. A Tabel harpsichord with two keyboards is in the possession of Helena, Countess of Radnor. It is inscribed 'Hermanus Tabel Fecit Londini, 1721,' and is very like an early Kirkman. Harpsichords had, however, been made in London in the 17th century, by the spinet-makers, the Hitchcocks, Hayward, and Keene. The spinets by the first and last of these have been preserved here and there, but only one harpsichord, by John Hitchcock, is known. Tabel's pupils, Burkhard Tschudi (*anglicé*, Shudi) and Jacob Kirchmann (*anglicé*, Kirkman), became famous in the 18th century, developing the harpsichord in the direction of power and majesty of tone to the farthest limit. The difference in length between a Ruckers and a Shudi or Kirkman harpsichord,—viz. from 6 or $7\frac{1}{2}$ feet to nearly 9 feet, is in direct proportion to this increase of power. Stronger framing and thicker stringing helped in the production of their pompous, rushing-sounding instruments. Perhaps Shudi's were the longest, as he carried his later instruments down to CC in the bass, while Kirkman remained at FF; but the latter set up one row of jacks with leather instead of quills, and with due increase in the forte combination. Shudi, in his last years (A.D. 1769), patented a Venetian Swell, on the principle of the Venetian blind, but the invention was in use some years before, as it is described in the *Salzburger Zeitung* of August 6, 1765, together with his use of the machine stop, which, from a London report concerning the child Mozart's last concert there, it also attributes to him, and which was invented about 1750. Kirkman added a pedal to raise a portion of the top or cover. Both used two pedals; the one for the swell, the other by an external lever apparatus to shut off the octave and one of the unison registers leaving the player with both hands free, an invention of John Hayward's, described in Mace's *Musick's Monument*, A.D. 1676, p. 235. There is a Silbermann harpsichord in the de Wit collection at Leipzig, of wonderful tone, far finer than that of any Shudi or Kirkman, in which all the strings are overspun.

In these 18th-century harpsichords, the Flemish practice of ornamenting with painting—often the cause of an instrument being broken up when no longer efficient—was done away with; also the laudable old custom of mottoes to remind the player of the analogous brevity of life and sound, of the divine nature of the

[1] A. J. Hipkins. *History of the Pianoforte* (1897), p. 83.
[2] Catalogue, Metropolitan Museum, New York, Musical Instruments of all Nations (Mrs. J. Crosby Brown, 1903). Preface by A. J. Hipkins.

gift of music, or of dead wood reviving as living tone. But it was when the instrument went out altogether that this enrichment of picture galleries by the demolition of harpsichords was most effected. The number of Ruckers, however, known to exist has been extended by research to seventy. There was great care in artistic choice of wood and in the cabinet-work of Tschudi's beautiful instruments. One, formerly in the possession of Queen Victoria, and long preserved in Kew Palace, is quite a masterpiece in these respects. It bears Tschudi's name, spelt, as was usual, Shudi; the date 1740 and maker's number 94 are inside. The compass is, as in the South Kensington Ruckers, G_1 to f''', without the lowest G♯. Two, dated 1766, are in the New Palace at Potsdam, and were Frederick the Great's. (See SHUDI.) Messrs. Broadwood have one dated 1771, with five and a half octaves, C_1 to f''', Venetian Swell and five stops, comprising the two unisons and octave of the Ruckers, with a slide of jacks striking the strings much nearer to the bridge (also a Ruckers contrivance), and producing a more twanging quality of tone, the so-called 'lute'-stop and a 'buff'-stop of small pieces of leather, brought into contact with the strings, damping the tone and thus giving a kind of *pizzicato* effect. This fine instrument was used by Moscheles in his Historical Concerts in 1837, and by Pauer in similar performances in 1862, 1863, and 1867. There is also one in the Musik Verein at Vienna of similar construction, made by 'Burkat Shudi et Johannes Broadwood,' and dated 1775, which belonged to Joseph Haydn. The latest harpsichord by the Shudi & Broadwood firm is dated 1790. A Kirkman harpsichord dated 1798 is in the possession of the editor, and is described in Dannreuther's *Ornamentation*.

The variety of stops and combinations introduced by different makers here and abroad at last became legion, and were as worthless as they were numerous. Pascal Taskin, a native of Theux in Liège and a famous Parisian harpsichord maker, is credited with the reintroduction of leather as an alternative to quills; his clavecin 'en peau de bufle' made in 1768 was pronounced superior to the pianoforte (De la Borde, *Essai sur la musique*, 1773). Taskin's were smaller scale harpsichords than those in vogue in England, and had ebony naturals and ivory sharps, and a Japanese fashion of external ornamentation. There is one in the Victoria and Albert Museum, dated 1786. In the Liceo Communale di Musica at Bologna there is a harpsichord with four rows of keys, called an 'Archicembalo.' This instrument, according to Carl Engel, was made by a Venetian, Vito Trasuntino, after the invention of Nicolo Vicentino, who described it in his work *L'Antica Musica ridotta alla moderna prattica* (Rome, 1555). The compass comprises only four octaves, but in each octave are thirty-one keys. A 'tetracordo' was made to facilitate the tuning of these minute intervals. Thus early were attempts made to arrive at purity of intonation by multiplying the number of keys within the bounds of the octave. Another archicembalo, made by Cristofori in 1726, is in the Museo Kraus at Florence. It has a double keyboard, but is not enharmonic; it was intended to be used in an orchestra, the player standing. Another of the curiosities of harpsichord-making was the 'Transponiclavicymbel' described by Praetorius (1614-18). By shifting the keyboard the player could transpose two tones higher or lower, passing at pleasure through the intermediate half tones. Arnold Schlick, however, had achieved a similar transposition with the organ as early as 1512 (*Monatshefte für Musik-Geschichte*, Berlin, 1869). A harpsichord pedalier—Clavicymbelpedal—according to Dr. Oscar Paul, an independent instrument with two octaves of pedals, was used by J. S. Bach, notably in his Trios and the famous 'Passacaille'; and in his transcriptions of Vivaldi's Concertos. Some large German harpsichords had not only the two unison registers and an octave one equivalent to 8- and 4-foot stops, but also a bourdon, answering to 16-foot pitch. John Sebastian Bach had one of this calibre; it formed one of the interesting objects in Herr Paul de Wit's collection in Leipzig, and has been transferred to the museum attached to the Hochschule für Musik in Berlin.[1] In 1901 harpsichords came to light containing three keyboards, of Italian make and similarly contrived, the octave being on the highest bank, octava and cymbalum on the middle, and unisons on the lowest bank. A fine specimen by Sodi is in the Metropolitan Museum, New York. Lastly a 'Lautenwerke' must be noticed, a gut-strung harpsichord, an instrument not worth remembering had not Bach himself directed the making of one by Zacharias Hildebrand of Leipzig. It was shorter than the usual harpsichord, had two unisons of gut-strings, and an octave register of brass wire, and was praised as being so like the lute in tone, as to be capable, if heard concealed, of deceiving a lute-player by profession (Paul, *Gesch. des Claviers*, Leipzig, 1868). Since 1888 harpsichords have been made in Paris by the pianoforte makers, Pleyel, Wolff & Cie., and S. & P. Erard. The former firm have introduced original features, one being the substitution of pedals for hand-stops, the gradual depression of which produces a *crescendo*. Messrs. Erard have been content to reproduce a clavecin by Taskin, said to have been made for Marie Antoinette. [See CLAVICHORD, RUCKERS, SHUDI, SPINET, VIRGINAL.] A. J. H.

HARRIS, SIR AUGUSTUS HENRY GLOSSOP, was born in Paris in 1852. He was in business for a short time, and gained theatrical experience from 1873 in Liverpool, Manchester, and else-

[1] A. J. Hipkins. *Pianoforte Primer*, 1897, p. 91.

where, before becoming assistant stage-manager under Mapleson in London. He acted in various pieces in London, and in 1879 became lessee of Drury Lane, producing the annual melodramas and pantomimes which revived the vogue of that theatre. The annual visits of the Carl Rosa Company to Drury Lane, in 1883-87, gave Harris his first experience in operatic management, and in the latter year he started on his own account as an impresario, giving 'Aïda' with an amount of care in the production which surpassed everything hitherto seen on the English operatic stage. He introduced Mancinelli to English audiences, and the revivals of 'Lohengrin' and 'Les Huguenots' were among his great successes; the brothers de Reszke (Jean making his first appearance in England as a tenor) were the great attractions of the cast, and Mme. Nordica, Mlle. Minnie Hauk, Maurel, and others, were members of the company. In the following season, Harris began the enterprise at Covent Garden which brought back the fashionable world to the opera as a regular amusement. It is not necessary in this place to enumerate all the distinguished singers whom he brought forward, from Mme. Melba downwards. His qualities as a manager were very remarkable, he had all the astuteness of a keen man of business, and did not scruple to profit by the discoveries of other managers, whether in the matter of singers or of operas. He had a certain amount of musical taste, and his artistic conscience led him to present operas as far as possible in accordance with their composers' intentions. He also realised what seemed a hopelessly impracticable ideal of giving operas in different languages in the same season, presenting every opera in the tongue for which it was written. More than all this, he had the wisdom to see that it is wise to give the public, not the kind of entertainment that they are just beginning to get tired of, but that which is a little in advance of their taste. He knew what the public would like in a few weeks' time, and therefore secured its success, instead of struggling to preserve the popularity of what had begun to get unfashionable. He did much for the cause of Wagner's music in England, and the careful mounting which was characteristic of his management throughout, had something to say to the lasting popularity even of the later Wagnerian music-dramas with the fashionable audience. On occasions he managed a set of German performances at Drury Lane during the season of polyglot opera at Covent Garden. He revived the fashion of public fancy-dress balls, and the patronage of the wealthy classes was retained for the opera until his death, which took place at Folkestone on June 22, 1896. His career as a theatrical manager apart from opera does not concern a musical dictionary. He was knighted in 1891, having been sheriff of London in that year. M.

HARRIS, Joseph John, born in London in 1799, was chorister in the Chapel Royal under John Stafford Smith. In 1823 he was appointed organist of St. Olave's Church, Southwark. In 1827 he published 'A Selection of Psalm and Hymn Tunes, adapted to the psalms and hymns used in the Church of St. Olave, Southwark.' In Feb. 1828 he quitted Southwark to become organist of Blackburn, Lancashire; in 1831 was made 'lay precentor,' or choir master at the collegiate church (now the cathedral) at Manchester, deputy organist, and on March 25, 1848, organist. Harris composed some cathedral music and a few glees, songs, etc. He died at Manchester, Feb. 10, 1869. W. H. H.

HARRIS, Joseph Macdonald, was born in 1789, and at an early age became a chorister of Westminster Abbey under Richard Guise. On quitting the choir on the breaking of his voice, he became a pupil of Robert Cooke, then organist of the Abbey. Harris was employed as a teacher, and occasional conductor at minor concerts. His compositions are songs, duets, trios, and pianoforte pieces. He died insane in May 1860, aged seventy-one. W. H. H.

HARRIS, René, or Renatus, is the most celebrated member of this family of English organ-builders. His grandfather had built an organ for Magdalen College, Oxford; but his father, Thomas, appears to have emigrated to France, for Dr. Burney says that Renatus came to England with his father a few months after Father Smith's arrival (1660). To Smith, Renatus Harris became a formidable rival, especially in the competition for building an organ in the Temple Church. [Smith, Father.]

Thomas Harris of New Sarum in 1666 contracted to build an organ for Worcester Cathedral. Renatus Harris in 1690 agreed to improve and enlarge his grandfather's organ in Magdalen College, Oxford. Rimbault gives a list of thirty-nine organs built by this eminent artist. He had two sons—Renatus, jun., who built an organ for St. Dionis Backchurch, London, in 1724, and John, who built most of his organs in conjunction with his son-in-law, John Byfield.

The firm of Harris (John) & Byfield (John) carried on business in Red Lion Street, Holborn. In 1729 they built an organ for Shrewsbury, and in 1740 one for Doncaster, which cost £525, besides several others. V. de P.

HARRISON, J., a London music-publisher, originally a bookseller in Fleet Street, where he succeeded J. Wenman and published plays, novels, and essays. About the year 1779 he removed to 18 Paternoster Row and commenced the issue of musical works from engraved plates, including the ballad operas of the day and reprints of works by Handel, Arne, and Boyce, and others. In 1784 the imprints give 'Harrison & Co.,' and in 1788 they are in possession of an additional warehouse named 'Dr. Arne's Head' at 141 Cheapside. In 1796 they are issuing

an octavo publication, consisting of operas and pianoforte pieces, named *The Pianoforte Magazine*, which ultimately extended to about thirty volumes. This was issued at half-a-crown a part; and by an advertisement in the *Times* of the year quoted we find purchasers were entitled, after a number of payments, to a pianoforte. This is perhaps the earliest record of a kind of purchase now in some evidence. About 1798 the firm is styled 'Harrison, Cluse & Co.,' and it is at 78 Fleet Street. In 1802 it is at 108 Newgate Street, and probably did not exist much later than that date. Their publications are always exceedingly well engraved, and comprise many useful reprints of earlier standard works. They commenced the issue of what promised to be a very excellent dictionary of music, but it did not reach beyond a few numbers. It was printed in a rather unwieldy oblong folio. F. K.

HARRISON, SAMUEL, born at Belper, Derbyshire, Sept. 8, 1760. He received his musical education from Burton, a well-known bass chorus singer, probably the same whose nervous system was so powerfully affected by the music on the first day of the Commemoration of Handel, in 1784, as to occasion his death in the course of a few hours. On the establishment of the Concert of Ancient Music in 1776, Harrison appeared as a solo soprano singer, and continued so for two years afterwards. But in 1778, being engaged to sing at Gloucester, his voice suddenly failed him. After an interval of six years, during which he most assiduously cultivated his voice and style, George III. heard him sing at one of Queen Charlotte's musical parties, and caused him to be engaged for the Commemoration of Handel in 1784, at which he sang 'Rend' il sereno al ciglio' from 'Sosarme,' and the opening recitative and air in 'Messiah.' He was next engaged as principal tenor at the Concert of Ancient Music, and from that time took his place at the head of his profession as a concert singer. Harrison's voice had a compass of two octaves (A to a'). It was remarkably sweet, pure and even in tone, but deficient in power. His taste and judgment were of a high order, and in the cantabile style he had no equal. Compelled by the exigencies of his engagements to sing songs which demanded greater physical power than he possessed, he always sang them reluctantly. On Dec. 6, 1790, Harrison married Miss Cantelo, for some years principal second soprano at all the best concerts, etc. In 1791 he and Knyvett established the Vocal Concerts, which were carried on to the end of 1794, and revived in 1801. Harrison's last appearance in public was at his benefit concert, May 8, 1812, when he sang Pepusch's 'Alexis,' and Handel's 'Gentle airs.' On June 25 following, a sudden inflammation carried him off. He was buried in the graveyard of the old church of St. Pancras. The inscription on his tombstone includes an extract from an elegiac ode on Harrison, written by the Rev. Thomas Beaumont, and set to music by William Horsley, but the lines are so inaccurately given as completely to mar the allusion to the song, 'Gentle airs.' Mrs. Harrison survived her husband nineteen years. W. H. H.

HARRISON, WILLIAM, born in Marylebone parish, June 15, 1813. Being gifted with a tenor voice of remarkable purity and sweetness, he appeared in public as an amateur concert singer early in 1836. He then entered as a pupil at the Royal Academy of Music, and in 1837 appeared as a professional singer at the concerts of the Academy, and subsequently at the Sacred Harmonic Society. On Thursday, May 2, 1839, he made his first appearance on the stage at Covent Garden, in Rooke's opera, 'Henrique.' A few years later he was engaged at Drury Lane, where he sustained the principal tenor parts in Balfe's 'Bohemian Girl,' Wallace's 'Maritana,' and Benedict's 'Brides of Venice,' and 'Crusaders,' on their first production. In 1851 he performed at the Haymarket Theatre, in Mendelssohn's 'Son and Stranger,' and other operas. In 1856, in conjunction with Miss Louisa Pyne, he established an English Opera Company, and for several years gave performances at the Lyceum, Drury Lane, and Covent Garden Theatres. During their management the following new operas were produced:—Balfe's 'Rose of Castille' (1857), 'Satanella' (1858), 'Bianca, the Bravo's Bride' (1860), 'Puritan's Daughter' (1861), and 'Armourer of Nantes' (1863); Wallace's 'Lurline' (1860), and 'Love's Triumph' (1862); Benedict's 'Lily of Killarney,' 1862; Mellon's 'Victorine' (1859); and Howard Glover's 'Ruy Blas' (1861). In the winter of 1864 Harrison opened Her Majesty's Theatre for the performance of English operas. He translated Massé's operetta, 'Les Noces de Jeannette,' and produced it at Covent Garden Theatre in Nov. 1860, under the title of 'Georgette's Wedding.' Harrison, in addition to his vocal qualifications, was an excellent actor. He died at his residence in Kentish Town, Nov. 9, 1868. W. H. H.

HART, ANDRO, an early Edinburgh printer of note, who printed with musical notation some editions of the Scottish Psalter as *The CL. Psalmes of David in Prose and Meeter . . . Edinburgh, printed by Andro Hart, 1611*, 8vo. One by his 'heires' is dated 1635. F. K.

HART & SONS, an eminent firm of violin makers and experts, was founded at 28 Wardour Street, London (the present premises of the firm, though the name of the street has been altered), by JOHN HART about 1825. This John Hart, grandfather of the present (1905) head of the firm was an expert not only in all matters connected with the violin, but with the shot-gun also. He opened business with a collection of guns and violins, and for a considerable time it was doubtful which of these two would prove the fitter, and survive. In the end violins

prevailed. John Thomas Hart was born on Dec. 17, 1805, and died Jan. 1, 1874. He was articled in May 1820 to Samuel Gilkes, who had learnt his business under William Foster, a very famous English maker of violins and violoncellos. As an articled pupil he had many opportunities for copying, repairing, and studying the peculiarities of Cremonese and other violins of Italian make, and so laid the foundation of his extensive knowledge of instruments. He began business at a time when amateur violinists were longing for famous Italian violins, and as his reputation for unerring accuracy of judgment grew rapidly he became the channel through which most of the greatest instruments came to England. He it was who formed James Goding's collection, that of Mr. Charles Plowden, most of Mr. Joseph Gillott's collection, and of the famous Adam group. His son and successor,

GEORGE HART, was born in London, March 23, 1839. He was a violinist and writer, and studied at the Royal Academy of Music under Macfarren and Sainton. Though an excellent player on the violin, it is by his literary ability and by his wide knowledge of what may be called the literary side of the violin that he is best known. In 1875 he published his well-known book *The Violin: its famous Makers and their Imitators*, which has passed through many editions in England. Of it a French edition was issued in 1886. Next he published a description of Count Cozio de Salabue's purchase of the stock of violins remaining with Paul Stradivarius, and the tools and drawings of Antonius. In 1872 he classified the Gillott collection, a labour requiring the most accurate and certain knowledge, and in 1881 appeared his book on *The Violin and its Music*. He married a daughter of Dr. Steward, the inventor of the Euphonicon piano, now in the Victoria and Albert Museum. Hart died near Newhaven, April 25, 1891. He, again, was succeeded by his son,

GEORGE HART, junior, the present head of the firm (1905), who was born near Warwick, Jan. 4, 1860. After being educated at Hampstead and in Paris, Hart entered his father's business, and is esteemed as a fine expert in the selection of wood for violins, while his firm is particularly noted for its exact reproductions of the work of Guarnerius, Stradivarius, and others. R. H. L.

HART, CHARLES, born May 19, 1797, pupil of the Royal Academy of Music under Crotch. From 1829 to 1833 organist to St. Dunstan's, Stepney, and subsequently to the church in Tredegar Square, Mile End, and St. George's, Beckenham. In 1830 he published 'Three Anthems,' and in 1832 a 'Te Deum and Jubilate,' the latter of which had gained the Gresham Prize Medal in 1831. In April 1839 he produced an oratorio entitled 'Omnipotence.' He was author of a motet which gained a premium at Crosby Hall, 'Sacred Harmony,' and other compositions. He died in London, March 29, 1859. W. H. H.

HART, JAMES, born at York in 1647, was bass singer in York Minster until 1670, when he was appointed a Gentleman of the Chapel Royal and lay vicar of Westminster Abbey. He was the composer of several songs published in 'Choice Ayres, songs and dialogues,' 1676-84; 'The Theater of Musick,' 1685-87; 'The Banquet of Musick,' 1688-92, and other collections. He died May 8, 1718. W. H. H.

HART, JOSEPH BINNS, born in London in 1794, became in 1801 a chorister of St. Paul's under John Sale. Whilst in the choir he was taught the organ by Samuel Wesley and Matthew Cooke, and the piano by J. B. Cramer. At eleven he acted as deputy for Attwood at St. Paul's. He remained in the choir nearly nine years, and on quitting it became organist of Walthamstow, and private organist to the Earl of Uxbridge. He left Walthamstow to become organist of Tottenham. At the termination of the war in 1815, when quadrille dancing came into vogue, Hart became an arranger of dance music, and the 'Lancers' Quadrille' has continued in use ever since. Hart is credited with its invention, but there is evidence that it was danced in Dublin in 1817, two years before Hart's editions appeared. From 1818 to 1820 he was chorus master and pianist at the English Opera House, Lyceum. He composed the music for 'Amateurs and Actors' (1818), 'A Walk for a Wager,' and 'The Bull's Head' (1819), all musical farces; and 'The Vampire,' melodrama, 1820. In 1829 he removed to Hastings, commenced business as a music-seller, and was appointed organist of St. Mary's Chapel. Hart produced forty-eight sets of quadrilles, waltzes, and galopades, and *An easy Mode of teaching Thorough-bass and Composition*. He died at Hastings, Dec. 10, 1844. W. H. H.

HART, PHILIP, conjectured by Hawkins to be the son of James Hart (see above), was organist of St. Andrew Undershaft, and St. Michael, Cornhill. In 1703 he composed the music for Hughes's 'Ode in Praise of Musick,' performed at Stationer's Hall on St. Cecilia's Day, 1703. On May 28, 1724, he was appointed the first organist of St. Dionis Backchurch, at a salary of £30. In 1729 he published his music to 'The Morning Hymn from the Fifth Book of Milton's Paradise Lost.' He also published a Collection of Fugues for the Organ. Two Anthems by him are included in the Tudway Collection (Harl. MS. 7341). From Hawkins's account of him (chap. 175) he appears to have been a sound and very conservative musician, and a highly respectable man. Sir John elsewhere mentions his excessive use of the shake in his organ playing. Hart died in London at a very advanced age, in or about 1749. W. H. H.

HARTMANN. A family of German origin established in Copenhagen for some four

generations. JOHANN ERNST (1726-1793) was a violinist and composer, who, after holding several musical posts at Breslau and Rudolstadt, became capellmeister to the Duke of Ploen, and went with him to Copenhagen. Here he was leader of the royal band from 1768, and wrote much music, now completely forgotten, with the exception of the song 'Kong Christian,' which first appeared in an opera 'Die Fischer,' and has since been adopted as the Danish National Hymn. He died in 1793. His second son,

AUGUST WILHELM, born 1775, held the post of organist to the Garrison Church in Copenhagen from 1800 to 1850, and was the father of

JOHANN PETER EMILIUS, born May 14, 1805, who for many years held a high place among Danish composers. His opera 'Ravnen' (The Raven), to words by H. C. Andersen, was produced Oct. 29, 1832. It was followed by 'Die goldnen Hörner' in 1834, and 'Die Corsaren' on April 23, 1835, and 'Liden Kirsten' ('Little Christie'), on May 12, 1846. Besides these he wrote much for the theatre in the way of incidental music, etc., as well as choral works (among them a cantata on the death of Thorwaldsen, 1848), songs, a symphony in G minor, dedicated to Spohr, and performed at Cassel in 1838, and many piano pieces. See the *Sammelbände* of the *Int. Mus. Ges.* vol. ii. p. 455. He was made director of the Copenhagen Conservatorium in 1840. He died March 10, 1900. His son,

EMIL, born Feb. 21, 1836, studied with his father and with N. W. Gade, his brother-in-law, held between 1861 and 1873 various appointments as organist, but on account of weak health subsequently devoted himself almost entirely to composition. In 1891 he succeeded Gade as director of the Musical Society of Copenhagen. Among his works, which have obtained great success both in Denmark and Germany, may be mentioned the operas :—'Die Erlenmädchen' (1867), 'Die Nixe,' 'Die Korsikaner' and 'Runenzauber' (1896); a ballet 'Fjeldstuen'; 'Nordische Volkstänze' (op. 18), three symphonies, in E flat, A minor, and D, an overture 'Ein nordische Heerfahrt' (op. 25), a choral cantata 'Winter and Spring' (op. 13), concertos for violin and violoncello, a serenade for piano, clarinet, and violoncello (op. 24), and many songs. He died at Copenhagen, July 18, 1898. M.

HARTVIGSON, FRITS, born May 31, 1841, at Grenaae, Jutland, Denmark, received instruction in music and on the piano from his mother, and at Copenhagen from Gade, Gebauer, and Anton Rée. At the age of fourteen he played in concerts in Copenhagen, and made a tour through Norway in 1858, at Christiania being personally complimented by Kjerulf. By assistance from the Danish Government he studied at Berlin from 1859 to 1862 under Von Bülow, with whom he played there at a concert Liszt's A major Concerto and Hungarian Fantasia, arranged for two pianos. He next played Rubinstein's third Concerto at the Gewandhaus Concerts in 1861, and Schumann's Concerto at Copenhagen under Gade in 1863. On the death of his father in the Prusso-Danish war, he came to England and played with great success Mendelssohn's 'Serenade and Allegro giojoso' at the Philharmonic, June 27, 1864. From that time until the present Mr. Hartvigson has lived in England, with the exception of two years between 1873 and 1875, when he resided at St. Petersburg. He played at the Musical Union, and introduced there Schumann's Trio in F, April 24, 1866. He introduced Liszt's music at the Philharmonic, where he played that composer's first Concerto on June 10, 1872. At the Crystal Palace he introduced Schubert's Fantasia, op. 15 (arranged by Liszt for piano and orchestra), on Oct. 6, 1866: also Rubinstein's fourth Concerto, Nov. 16, 1872; and Bronsart's Concerto, Sept. 30, 1876. He was officially appointed Pianist to Queen Alexandra (when Princess of Wales) in 1873, and Professor of Music at the Normal College for the Blind at Norwood in 1875. In 1879, and for several years afterwards, Mr. Hartvigson was prevented from appearing in public owing to an injury to his left arm. He happily recovered its use, and appeared at W. Bache's concert, Feb. 21, 1887, playing Liszt's 'Mazeppa' and 'Hungaria,' arranged by the composer for two pianos. He also played at the London Symphony Concerts on Jan. 10, 1888 (and subsequently at a Richter concert) Liszt's 'Todtentanz,' which he had introduced to the English public in 1878 under Bülow's direction. Mr. Hartvigson has played abroad, at Copenhagen in 1872 and 1889, at Munich (under Bülow), in aid of the Bayreuth Building Fund, August 24, 1872, and in concerts at St. Petersburg, Moscow, and in Finland. In 1888 he was appointed Professor at the Royal Academy of Music, and in 1894 an honorary member of the institution. In 1895 he was an examiner for the associateship of the Royal College of Music, and in the same year the King of Denmark made him a knight of the order of the Dannebrog. In 1905 he was appointed professor at the Royal College of Music.

His brother, ANTON, born Oct. 16, 1845, at Aarhus, Jylland, received instruction in music from his mother, Tausig, and Edmund Neupert. He first played in concerts at Copenhagen, and came to England in 1873, where he finally settled in 1882, when he was appointed a Professor at the Normal College. With the exception of his yearly recitals he rarely played in public. In 1893 he settled at Copenhagen as a teacher of his instrument. He has made a speciality there of giving yearly courses of lectures in which he analyses the principal pianoforte compositions of the great masters, besides performing them in their entirety. In 1900 the King of Denmark conferred on him

the title of 'Professor' (equivalent to a decoration or order). A. C.

HARWOOD, Basil, son of Edward Harwood, Esq., J.P., born at Woodhouse, Olveston, Gloucestershire, on April 11, 1859. He was educated at Charterhouse and Trinity College, Oxford, and took the degree of Mus.B. in 1880, that of B.A. (honours in classics and modern history) in 1881, M.A. in 1884, and Mus.D. 1896. He studied the pianoforte with J. L. Roeckel at Clifton, the organ with G. Riseley at Bristol, theory with Dr. C. W. Corfe at Oxford, and composition for a short time at the Leipzig Conservatorium under Reinecke and Jadassohn. He was organist of St. Barnabas, Pimlico, from 1883 to 1887, of Ely Cathedral from 1887 to 1892, and has been organist of Christ Church Cathedral, Oxford, from 1892 to the present time. He was precentor of Keble College, Oxford, from 1892 to 1903, and conductor of the Oxford Orchestral Association from 1892 to 1898. On the foundation of the Oxford Bach Choir in 1896 he was appointed its conductor, a post he held with distinction till 1900, in which year he became choragus of the university. He conducted the 'Orpheus Society' in 1894. His works are few in number, only reaching up to op. 16; but all are marked by most careful workmanship and fastidious taste. They include a psalm, 'Inclina, Domine,' for soprano solo, chorus, and orchestra, performed with great success at the Gloucester Festival of 1898; an Agnus Dei, and O Salutaris, for choir and organ; a service in A flat, op. 6; a communion service in D, op. 14; several anthems; a vocal trio, songs, etc. Among his various pieces for organ may be mentioned a sonata in C sharp minor, op. 5; 'Dithyramb,' op. 7; 'Pæan' (played by Sir W. Parratt at the reopening of the organ in York Minster); and preludes on Old English Psalm Tunes. M.

HARWOOD, Edward, of Liverpool, was born at Hoddleson, near Blackburn, 1707. He was author of many songs, among which may be named 'Absence,' 'The Chain of Love,' 'Hapless Collin,' 'To ease my heart,'—all published at Liverpool. He also issued two sets of original hymn tunes, the first without date, the second in 1786. The first volume contains the metrical anthem, 'Vital spark of heavenly flame,' formerly so popular in country churches. The traditional account of its origin is as follows:—Harwood had been staying in London, in company with Alexander Reed, of Liverpool; but when the time for their return arrived, they found themselves without the means of discharging the reckoning at the inn. In this emergency it was resolved to compose some piece of music, and raise money upon it. What Reed attempted in that direction is not told, but Harwood, taking up a collection of poetry which lay in the coffee-room, came across Pope's Ode, which he immediately set to music, and taking it to a publisher, sold the copyright for forty pounds. This relieved the friends from their embarrassment, and brought them back to Liverpool. Some difficulties occur in connection with the story which need not be specified. Harwood died in 1787. H. P.

HASLINGER. A well-known music firm in Vienna, originally the 'Bureau des arts et d'industrie,' next S. A. Steiner & Co., and since 1826 Tobias Haslinger. Tobias, born March 1, 1787, at Zell, in Upper Austria, came to Vienna in 1810, was an energetic, intelligent man of business, on intimate terms with the best musicians of Vienna. Beethoven and he were in constant communication, and the numerous letters to him from the great composer, which have been preserved (probably only a small proportion of those which were written), each with its queer joke or nickname, show the footing they were on—Adjutant, or Adjutanterl, or Bestes kleines Kerlchen, or Tobiasserl or Tobias Peter Philipp, or Monsieur de Haslinger, Général Musicien et Général Lieutenant—such are the various queer modes in which Beethoven addresses him. In a letter to Schott (Nohl, No. 328) he sketches a comic biography of his friend, with illustrative canons. Another canon 'O Tobias Dominus Haslinger,' occurs in a letter of Sept. 10, 1821; and one of his very last notes contains a flourish on his name, added, with the signature, by the hand of the master:—

Haslinger prepared a complete copy of Beethoven's compositions in full score, beautifully written by a single copyist. This was purchased by the Archduke Rudolph, and bequeathed by him to the Gesellschaft der Musikfreunde, in whose library it now is. He was one of the thirty-six torch-bearers who surrounded the bier of his great friend, and it fell to his lot to hand the three laurel wreaths to Hummel, by whom they were placed on the coffin before the closing of the grave. He died at Vienna, June 18, 1842, and the business came into the hands of his son Karl (born June 11, 1816), a pupil of Czerny and Seyfried, a remarkable pianoforte player, and an industrious composer. His soirées were well known and much frequented, and many a young musician made his first appearance there. He died Dec. 26, 1868, leaving as many as 100 published works of all classes and dimensions. The concern was carried on by his widow till Jan. 1875, when it was bought by the firm of Schlesinger of Berlin, by whom it was maintained under the style of 'Carl Haslinger, *quondam* Tobias.' It passed in 1875 into the hands of Schlesinger. Among the works published by this establishment may be named Schubert's 'Winterreise' and 'Schwanengesang'; Beethoven's Symphonies 2, 3, 4, 7, 8, Overtures to 'Coriolan,' 'Ruins of Athens,' op. 115, 'King

Stephen,' 'Leonora No. 1,' Violin Concerto, Battle Symphony, PF. Concertos, 1, 3, 4, 5, Trio in B♭, Sonatas and Variations, Liederkreis, etc.; Spohr's Symphonies 4 (Weihe der Töne) and 5; Liszt's Concerto in E♭; Moscheles' Concertos, 2, 3, 5, 6, 7; Hummel's Concertos in C, G, A minor, and A♭, 4 Sonatas, etc. The dance music of Lanner and the Strausses forms an important part of the repertory of the firm, which under the later proprietor has received a great impulse. C. F. P.

HASSE, Faustina Bordoni, the wife of J. A. Hasse (see below), was born at Venice in 1693, of a noble family, formerly one of the governing families of the Republic. Her first instruction was derived from Gasparini, who helped her to develop a beautiful and flexible voice to the greatest advantage. In 1716 Bordoni made her début in 'Ariodante' by C. F. Pollarolo, achieved at once a reputation as a great singer, and was soon known as the 'New Syren.' In 1719 she sang again at Venice with Cuzzoni and Bernacchi, whose florid style her own resembled. In 1722 she sang at Naples, and at Florence a medal was struck in her honour. She visited Vienna in 1724, and was engaged for the Court Theatre at a salary of 15,000 florins. Here she was found by Handel, who immediately secured her for London, where she made her début May 5, 1726, in his 'Alessandro.' Her salary was fixed at £2000. 'She, in a manner,' says Burney, 'invented a new kind of singing, by running divisions with a neatness and velocity which astonished all who heard her. She had the art of sustaining a note longer, in the opinion of the public, than any other singer, by taking her breath imperceptibly. Her beats and trills were strong and rapid; her intonation perfect; and her professional perfections were enhanced by a beautiful face, a symmetric figure, though of small stature, and a countenance and gesture on the stage which indicated an entire intelligence of her part.' Apostolo Zeno, in speaking of her departure from Vienna, says: 'But, whatever good fortune she meets with, she merits it all by her courteous and polite manners, as well as talents, with which she has enchanted and gained the esteem and affection of the whole Court.'

In London she stayed but two seasons, and then returned to Venice, where she was married to Hasse in 1730. In 1731 she went to Dresden, and remained there till her dismissal in 1763, when she and her husband went to Vienna, and resided there until 1775. They then retired to Venice, where they ended their days, she in 1783 at the age of ninety, and Hasse in the same year.

Faustina has seldom been equalled in agility of voice; 'a matchless facility and rapidity in her execution; dexterity in taking breath, exquisite shake, new and brilliant passages of embellishment, and a thousand other qualities contributed to inscribe her name among the first singers in Europe' (Stef. Arteaga). In London she divided the popular favour with Cuzzoni. 'When the admirers of the one began to applaud, those of the other were sure to hiss; on which account operas ceased for some time in London' (Quantz). In a libretto of 'Admeto,' Lady Cowper, the original possessor, has written opposite to Faustina's name, 'she is the devil of a singer.'

Fétis mentions her portrait in Hawkins's *History*; but he seems not to have known the fine print engraved by L. Zucchi after S. Torelli, which is a companion to that of Hasse by the same engraver, and represents Faustina as an elderly person, handsomely dressed, and with a sweet and intelligent countenance. This portrait is uncommon. J. M.

HASSE, Johann Adolph, who for a third part of the 18th century was the most popular dramatic composer in Europe, was born on March 25, 1699, at Bergedorf, Hamburg, where his father was organist and schoolmaster. At eighteen years of age he went to Hamburg, where his musical talent and fine tenor voice attracted the notice of Ulrich König, a German poet attached to the Polish court, through whose recommendation he was engaged as tenor singer by Keiser, director of the Hamburg Opera, and the most famous dramatic composer of the day. At the end of four years König procured for Hasse a like engagement at the Brunswick theatre, where, in 1721, his first opera, 'Antigonus' (the title is given in the *Quellen-Lexikon* as 'Antiochus') was produced. This (the only opera he ever composed to a German libretto) was very well received, but as, while evincing great natural facility in composition, it also betrayed a profound ignorance of the grammar of his art, it was decided that he must go to Italy, then the musical centre of Europe, for the purpose of serious study. Accordingly, in 1724, he repaired to Naples, and became the pupil of Porpora, for whom, however, he had neither liking nor sympathy, and whom he soon deserted for the veteran Alessandro Scarlatti. In 1725 he received the commission to compose a serenade for two voices. In this work, which had the advantage of being performed by two great singers, Farinelli and Signora Tesi, Hasse acquitted himself so well that he was entrusted with the composition of the new opera for the next year. This was 'Sesostrato,' performed at Naples in 1726, and which extended its composer's fame over the whole of Italy. In 1727 he went to Venice, where he was appointed professor at the Scuola degl' Incurabili, for which he wrote a 'Miserere' for two soprani and two contralti, with accompaniment of stringed instruments, a piece which long enjoyed a great celebrity. He was now the most popular composer of the day. His fine person and agreeable manners, his beautiful voice and great proficiency on the harpsichord caused him to be

much sought after in society, and he was known throughout Italy by the name of *Il caro Sassone*. In 1728 he produced, at Naples, another opera, 'Attalo, re di Bitinia,' as successful as its predecessor. In 1729 he returned to Venice, where he met with the famous *cantatrice*, Faustina Bordoni (see above), then at the zenith of her powers and her charms, who shortly afterwards became his wife. For her he composed the operas 'Dalisa' and 'Artaserse' (No. 1), the latter of which is one of his best works.

In 1731 this celebrated couple were summoned to Dresden, where August II. reigned over a brilliant court. Hasse was appointed capellmeister and director of the Opera. His first opera produced in Dresden, 'Alessandro nell' Indie,' had an unprecedented success, owing not only to its own merits, but to the splendid performance by Faustina of the principal part. Hasse's position, however, as the husband of the most fascinating *prima donna* of the day, was, at this time, far from being an easy one. His life, too, was embittered by his enmity to his old master, Porpora, whom he found established in Dresden, and who was patronised by some members of the royal family. Up to 1740 he absented himself as much as he could from Dresden. In company with Faustina he revisited Venice, Milan, and Naples, and he also went to London, where he was pressed to undertake the direction of the opera established in opposition to Handel. His 'Artaserse' met with a brilliant reception, but he had no wish to support the rivalry with Handel; besides which he disliked England, and he soon quitted the country. It does not seem that Faustina accompanied him on this expedition. When, in 1739, he returned to Dresden, he was no longer vexed by the presence of Porpora, but he found a fresh grievance in the great success of Porpora's pupil, Regina Mingotti. This excellent singer was a formidable rival to Faustina, and Hasse's jealousy and spite were openly manifested. It is even said that in his opera of 'Demofoonte' he introduced into her part an air written entirely in what he thought the weakest part of her voice, the accompaniment being so contrived as to hamper, instead of helping her. Mingotti was obliged to sing it, but, like the great artist that she was, she acquitted herself in such a manner as to disappoint Hasse, and she made one of her greatest successes with this very air. This story has been widely repeated and generally believed, but there seems good reason for doubting its truth. If such an air was really written Hasse did not allow it to survive in the opera, but replaced it by another.

Except for a short stay in Venice in 1740 Hasse and Faustina remained at Dresden till 1763. In 1745, on the very evening of Frederick the Great's entry into Dresden after the battle of Kesselsdorf, Hasse's opera 'Arminio' was performed by command of the conqueror, who graciously commended the work and its performance, especially the part of Faustina. During Frederick's nine days' stay in the Saxon capital Hasse had to attend at court every evening and superintend the musical performances, and was rewarded by the present of a magnificent diamond ring and 1000 thalers for distribution among the musicians of the orchestra. In 1760 occurred the siege of Dresden, in which Hasse lost most of his property, and during which his collected MSS., prepared for a complete edition of his works, to be published at the expense of the King of Poland, were nearly all destroyed. At the end of the war the king was obliged, from motives of economy, to suppress both opera and chamber music. The capellmeister and his wife were dismissed, and retired to Vienna, where Hasse, in conjunction with the poet Metastasio, was soon engaged in active opposition to a more formidable rival than Porpora, viz. Christoph Gluck. Although he was seventy-four years old, he now composed several new operas. His last dramatic work, 'Ruggiero,' was produced at Milan in 1771 for the marriage of the Archduke Ferdinand. On this same occasion was performed a serenade, 'Ascanio in Alba,' by Wolfgang Mozart, then thirteen years of age. After hearing it, old Hasse is said to have exclaimed, 'This boy will throw us all into the shade,' a prediction which was verified within a few years of its utterance. The remainder of Hasse's life was passed at Venice, where he died in his eighty-fifth year, on Dec. 16, 1783.

Owing to the destruction of Hasse's works at Dresden, his autograph scores are exceedingly rare; scarcely a MS. or even a letter of his being found in any collection, public or private; though contemporary copies are common enough. The following compositions of Hasse's are the chief of those which are published, and accessible at the present day:—

1. 'Miserere' for two Soprani and two Alti (Berlin, Trautwein).
2. '113th Psalm'; for Bass solo and Chorus, with orchestra (Elberfeld, Arnold).
3. 'Alcide al Bivio,' opera, PF. score (Leipzig, Breitkopf).
4. Te Deum in D for Soli and Chorus, with Orchestra and Organ (Leipzig, Peters).
5. 'Die Pilgrimme auf Golgatha' ('Pellegrini al Sepolcro,' German translation), Oratorio, PF. score (Leipzig, Schwickert).
6. Quintet, from the above, two Soprani, two Alti, and Bass (Berlin, Damköhler; Breslau, Leuckard).
7. Air for Alto, from Oratorio 'Die Bekehrung des heiligen Augustins' (Berlin, Damköhler & Schlesinger).
8. Portions of a Te Deum and a Miserere, and two other pieces in Eochlitz's *Sammlung*, vol. iv.
9. A vocal fugue, 'Christe,' No. 19 in the *Auswahl vorzügl. Musikwerke* (Trautwein).
10. A Sonata in D, in Pauer's 'Alte Claviermusik.'

There is a fine portrait of Hasse, oval, in folio, engraved by L. Zucchi at Dresden from a picture by C. P. Rotari, representing him as a middle-aged man, with pleasing features and expression. [An interesting article on the composer appeared in the *Sammelbände* of the *Int. Mus. Ges.* vol. v. p. 230.]

Hasse's facility in composition was astonishing. He wrote more than a hundred operas, besides oratorios, masses, cantatas, psalms, symphonies, sonatas, concertos, and a host of smaller compositions. [A full catalogue of his

extant works is given in the *Monatshefte f. Musikgeschichte*, 11, 82 ff, and in the *Quellen-Lexikon.*] He set to music the whole of Metastasio's dramatic works, several of them three or four times over. His career was one long success: few composers have enjoyed during their lifetime such world-wide celebrity as he; of those few none are more completely forgotten now. Great as was his personal popularity, it is insufficient to account for the universal acceptance of his music. The secret probably lay in the receptivity of his nature, which, joined to the gift of facile expression, caused some of the most genial, though not the deepest, influences of his time to find in him a faithful echo. First among these was the spreading fascination of modern Italian melody. It is as an Italian, not a German composer that Hasse must take rank, although, innocent as he was of contrapuntal science, he has nothing in common with the majesty, profound in its simplicity, of the early Italian writers. He began life as a singer, in an age of great singers, and must be classed among the first representatives of that modern Italian school which was called into existence by the worship of vocal art for its own sake. His harmonies, though always agreeable, sound poor to ears accustomed to the richer combinations of the German composers who were his contemporaries and immediate successors. Yet even as a harmonist he is linked to modern times by his fond and frequent use of the diminished seventh and its inversion, as an interval both of melody and of harmony; while his smooth and somewhat cloying successions of thirds and sixths may have afforded delight to hearers unused to the stern severities of counterpoint. He had an inexhaustible flow of pleasing melody, which, if it is never grand or sublime, is never crabbed or ugly. Many of his best airs are charming even now, and, if in some respects they appear trite, it should be remembered that we have become familiar with the type of which they are examples through the medium of compositions which, in virtue of other qualities than his, are longer-lived than Hasse's, though written at a later date. A few have been republished in our own day, among which we may quote 'Ritornerai fra poco,' from a Cantata (to be found in the series called 'Gemme d'Antichità,' published by Lonsdale), which has real beauty. As a fair specimen of his style, exhibiting all the qualities which made him popular, we will mention the opening symphony and the first air in the oratorio 'I Pellegrini al Sepolcro,' written for the Electoral Chapel at Dresden. To appreciate the deficiencies which have caused him to be forgotten, we have only to proceed a little farther in this or any other of his works. They are inexpressibly monotonous. In the matter of form he attempted nothing new. All his airs are in two parts, with the inevitable *Da Capo*, or repetition of the first strain. All his operas consist of such airs, varied by occasional duets, more rarely a trio, or a simple chorus, all cast in the same mould. His orchestra consists merely of the string quartet, sometimes of a string trio only; if now and then he adds hautboys, flutes, bassoons, or horns, there is nothing distinctive in his writing for these wind instruments, and their part might equally well be played by the violins. Nor is there anything distinctive in his writing of Church music, which presents in all respects the same characteristics as his operas. His Symphonies are for three, or at the most four, instruments. The harmonic basis of his airs is of the very slightest, his modulations the most simple and obvious, and these are repeated with little variety in all his songs. The charm of these songs consists in the elegance of the melodic superstructure and its sympathetic adaptation to the requirements of the voice. Singers found in them the most congenial exercise for their powers, and the most perfect vehicle for expression and display. For ten years Farinelli charmed away the melancholy of Philip V. of Spain by singing to him every evening the same two airs of Hasse (from a second opera, 'Artaserse'), 'Pallido è il sole' and 'Per questo dolce amplesso.'

Hasse was no prophet, but in his works his contemporaries found fluent utterance given to their own feelings. Such men please all, while they offend none; but when the spirit and the time of which they are at once the embodiment and the reflection pass away, they and their work must also pass away and be forgotten. F. A. M.

HASSLER or HASLER, Hans Leo, eldest of the three sons of Isaac Hassler—a musician of the Joachimsthal who settled in Nuremberg—and the ablest of the three. Of his life little is known. He is said to have been born in 1564: he received his instruction from his father and from A. Gabrieli, with whom he remained in Venice for a year, after which (about 1585) he found a home in the house of the Fuggers at Augsburg. There he composed his famous 'xxiv Canzonetti a 4 voci' (Norimberga, 1590) and his 'Cantiones sacrae de festis praecipuis totius anni 4, 5, 8 et plurium vocum' (Augsburg, 1591)—twenty-eight Latin motets. These were followed by his 'Concentus ecclesiastici' (Augsburg, 1596); 'Neue teutsche Gesaeng' (1596); 'Madrigali' (*ibid.*), and 'Cantiones novae' (1597). [He was appointed musical director in Augsburg in 1600; and in Nov. 1601 became organist of the Frauenkirche in Nuremberg. *Quellen-Lexikon.*] The statement so often repeated by the Lexicons that Hassler entered the Imperial Chapel at Vienna in 1601 is inaccurate, and arises from the fact that a certain Jacob Häsler was appointed court organist at Prague on July 1, 1602. (See Köchel, *Kais. Hofkapelle*, p. 53.) On Oct. 28, 1608, Hassler entered the service of Christian II. of Saxony, and died at Frankfort on June 8, 1612.

Besides the works already named there exist eight Masses of his (1599); 'Lustgarten deutscher Gesänge,' 1601 (reprinted in the publications of the *Ges. f. Musikforschung*); 'Sacri Concentus,' for five to twelve voices (Augsburg, 1601); four-part Psalms and Gesänge (Nuremberg, 1607; republished by Breitkopf in score, 1777); and five collections of German and Latin secular songs. Many single pieces are given in Bodenschatz's 'Florilegium' and in Schadaeus's 'Promptuarium Musicum.' (See Eitner's bibliography in the *Monatshefte f. Musikgeschichte*, 1874, and list in the *Quellen-Lexikon.*) Proske (*Musica Divina*) gives three Masses and seven other pieces of his, and says of his style that 'it unites all the greatest beauty and dignity that can be found in both the Italian and German art of that day.' Rochlitz includes a Pater Noster for seven voices in his *Sammlung*, vol. iii. The well-known chorale 'Herzlich thut mich verlangen' or 'Befiehl du deine Wege,' so much used by Bach in the Passion, was originally a love song, 'Mein G'muth is mir verwirret,' in his 'Lustgarten deutscher Gesänge' (1601).

His younger brother, JACOB, a meritorious church composer, is probably the Häsler already mentioned as having joined the Chapel at Vienna: it is at least certain that he was organist to Graf Eitel Friedrich von Hohenzollern Hechingen in 1601 [and that he was appointed court organist at Prague on July 1, 1602. He probably died in 1611, as his successor was appointed in that year. Madrigals by him were published at Nuremberg in 1600, and a volume of church music in 1601.] The third brother, CASPAR, born probably 1570 [died in 1618, an organist in Nuremberg], acquired a reputation for playing the organ and clavier. Some of his vocal pieces are found in 'Symphoniae sacrae' (Nuremberg, 1598-1600). F. G.

HASTREITER, HELENE, born at Louisville, U.S.A., Nov. 14, 1858, was a pupil of Lamperti in Milan, and speedily took an important place on the Continent as a dramatic contralto of great power, both vocally and histrionically. She has sung chiefly in Italy, but has also been heard in France (never in England). She identified herself with the part of Orfeo, while Dalila and Ortrud were among her finest impersonations. She retired from public life on her marriage with Dr. Burgunzio, and now lives at Genoa. (Baker's *Dictionary.*)

HATTON, JOHN LIPTROT, born in Liverpool, Oct. 12, 1809, received in his youth a small rudimentary instruction in music, but was otherwise entirely self-taught. He settled in London in 1832, and soon became known as a composer. In 1842 he was engaged at Drury Lane Theatre, at which house, in 1844, he produced an operetta called 'The Queen of the Thames.' In the same year he went to Vienna and brought out his opera, 'Pascal Bruno.' On his return to England he published, under the pseudonym of 'Czapek,' several songs which met with considerable success. In 1848 he visited America. Hatton was for some years director of the music at the Princess's Theatre under Chas. Kean, and whilst there composed music for 'Macbeth' and 'Sardanapalus,' 1853; 'Faust and Marguerite,' overture and entr'actes, 1854; 'King Henry VIII.' 1855; 'Pizarro,' 1856; 'King Richard II.' 1857; and 'King Lear,' 'The Merchant of Venice,' and 'Much Ado about Nothing,' 1858. He also composed two Cathedral services; eight anthems and a mass; 'Rose, or, Love's Ransom,' opera, Covent Garden, 1864; 'Robin Hood,' cantata, Bradford Musical Festival, 1856; several books of part songs, and upwards of 150 songs ('Good-bye, sweetheart,' etc.). One of his latest achievements was the 'sacred drama' of 'Hezekiah,' produced at the Crystal Palace, Dec. 15, 1877. [He died at Margate, Sept. 20, 1886, and was buried in Kensal Green Cemetery.] W. H. H.

HAUK, MINNIE, born of a German father, Nov. 19, 1851 (*N. B. Musik-Zeitung*) or 1852 (Riemann), was first taught singing by M. Curto at New Orleans, and appeared there in a concert about 1865. She was then placed under the care of Signor Errani in New York, and for a short time under Signor Albites. On Oct. 13, 1866, as Amalia M. Hauck (*sic*), she made her début in Italian Opera at Brooklyn as Amina in 'Sonnambula.' 'The appearance excited much interest from the fact of her being native born . . . and exceedingly pretty. . . She gave undoubted promise of future eminence.'[1] On Nov. 30, she made her début in New York as Prascovia in 'L'Étoile du Nord.' In 1867 and 1868 she sang there and in other American cities, having received further instruction from Maurice Strakosch. Her voice is a mezzo-soprano of great force and richness. Her parts included, Nov. 15, 1867, Juliet in Gounod's opera, on its production in New York; Margaret, Norina, Inez in 'L'Africaine'; Annetta in 'Crispino,' etc. On Oct. 26, 1868, she made her début at Covent Garden with great success as Amina, later as Lucia, Zerlina, Margaret, etc. In 1869 and 1870 she sang in Italian in Paris, Moscow, and St. Petersburg. In May 1870 she made her débuts in German at Vienna with such success that she obtained a three years' engagement and became a very great favourite, in the lighter parts, viz. Blonde, Despina, Susanna, and Zerlina, Fatima in 'Abu Hassan,' Countess in Schubert's 'Häusliche Krieg,' Anna in Marschner's 'Hans Heiling,' Marie in Lortzing's 'Waffenschmied,' and in operas translated from the French and Italian, mostly from the usual opéra-comique repertory. In 1874 she was the principal singer at the first season of the new 'Komische Oper' (later the Ring-Theater), and made a great success, April 20, as Javotte in

[1] *New York Tribune*, Oct. 15, 1866.

the production in Vienna of Delibes' 'Roi l'a dit' and as Carlo Broschi in 'Part du Diable.' At Pesth, in the summer, she sang in Hungarian at the 200th performance of Erkel's 'Hunyadi Laszlo.' From 1874 to 1877 Minnie Hauk was engaged at Berlin, and was a great favourite there, making a notable appearance on Dec. 11, 1876 as Katharine in Goetz's 'Taming of the Shrew' on its production in Berlin. (See GOETZ.) She was next engaged at Brussels, where, in 1878, she played Carmen two years after its production at Brussels. Mapleson saw her in the part, and promptly engaged her to play it at Her Majesty's. She appeared there April 27, 1878, as Violetta, and after playing Rosina, Alice, etc., and singing (June 1) in a selection from Berlioz's 'Faust,' she made a great hit as Carmen on the production of the opera in England on June 22. The piece had not pleased in Paris, and her dramatic powers no doubt did much to establish its success in this country. She reappeared every season, until 1881 at the same theatre, and in the early part of 1880 made a success in English under Carl Rosa as Katharine (Goetz) and Aïda, having in the meantime reappeared in her native country. In 1881 she married Baron Ernest v. Hesse-Wartegg, the well-known traveller and author, correspondent of the *Neue Freie Presse*. With him she has made three trips round the world, everywhere well received. She fulfilled several engagements in America, making a great success as Carmen, Selika, Elsa, Manon (Massenet), and Santuzza in 'Cavalleria,' these last two on the production of the operas in America. She reappeared in this country at intervals, viz. 1885 at the Crystal Palace and Philharmonic Concerts, 1887 and 1888 in opera at Covent Garden and Drury Lane, and other years, her final appearances being in 1894-95 in the Carl Rosa Opera at Liverpool and at the Ballad Concerts. She also sang in the various cities of Germany and Italy. Her repertory was enormous, about 100 parts; Carmen alone she sang 500 times in French, English, German, and Italian. She has received various decorations — Chamber Singer to the Court of Prussia, Officer of the French Academy, the Order of St. Cecilia at Rome, etc. In 1896, on the death of her mother, Mme. von Hesse-Wartegg retired from the stage, but sings occasionally in concerts for charitable purposes. She and her husband are now living at a villa near Lucerne. A. C.

HAUPT, CARL AUGUST, a very distinguished German organist, born August 25, 1810, at Kuhnau in Silesia; pupil of A. W. Bach, Klein, and Dehn, and at a later date of the two Schneiders. In 1832 he obtained his first post at the French convent in Berlin, from which he gradually rose to the parish church of the city, where he succeeded Thiele in 1849. His reputation spread far beyond his native country, and in 1854 he was consulted by Professors Donaldson, Ouseley, and Willis, the committee appointed to draw up a scheme for a gigantic organ at the Crystal Palace. In 1869 he succeeded his old master Bach as Director of the Königliche Kirchenmusik Institut at Berlin [a post he filled until shortly before his death, which took place in Berlin, July 4, 1891]. Haupt was remarkable for his fine extempore variations in the style of J. S. Bach—close and scientific, and increasing in elaboration with each fresh treatment of the theme; and in that master's organ music he was probably unsurpassed. G.

HAUPTMANN, MORITZ, Doctor of Philosophy, German composer and eminent theorist, and Cantor of the Thomasschule at Leipzig, born at Dresden, Oct. 13, 1792. His education was conducted mainly with a view to his father's profession of architecture; but he was also well grounded in music at an early age. He studied the violin under Scholz, and harmony and composition under Grosse, and subsequently under Morlacchi. As Hauptmann grew up he determined to adopt music as a profession. To perfect himself in the violin and composition he went in 1811 to Gotha, where Spohr was concertmeister, and the two then contracted a lifelong friendship. He was for a short time violinist in the court band at Dresden (1812), and soon afterwards entered the household of Prince Repnin, Russian Governor of Dresden, with whom he went to Russia for four years in 1815. On his return to Germany he became violinist (1822) in Spohr's band at Cassel, and here gave the first indications of his remarkable faculty for teaching the theory of music. F. David, Curschmann, Burgmüller, Kufferath, and Kiel, are among the long list of his pupils at that time. In 1842, on Mendelssohn's recommendation, he was appointed Cantor and Musik-director of the Thomasschule, and professor of counterpoint and composition at the new Conservatorium at Leipzig, where he thenceforward resided. Here he became the most celebrated theorist and most valued teacher of his day. Not only are there very few of the foremost musicians in Germany at the present moment who do not look back with gratitude to his instructions, but pupils flocked to him from England, America, and Russia. Among his pupils will be found such names as Joachim, Von Bülow, Cossmann, the Baches, Sullivan, Cowen, etc. etc. (See the list at the end of his letters to Hauser.) He died at Leipzig, Jan. 3, 1868, loaded with decorations and diplomas.

In teaching, Hauptmann laid great stress on the two fundamental æsthetical requirements in all works of art, unity of idea and symmetry of form, and his compositions are admirable examples of both. With such views he naturally had little sympathy with the new destructive school, but he was always courteous to those who differed from him. His respect for classical forms never trammelled him; and this very

independence kept him free from party spirit and personal animosity. Altogether he offers a beautiful example of a life and work the value of which was acknowledged even by his bitterest controversial opponents. Nothing but a life of single devotion to the cause of art could have exacted such universal homage. His works are characterised by deep thought, philosophic treatment, imagination, and much sense of humour. His chief work is *Die Natur der Harmonik und Metrik* (1853, 2nd ed. 1873). English translation as *The Nature of Harmony and Metre* by W. E. Heathcote, London, 1888. His mathematical and philosophical studies had given a strictly logical turn to his mind, and in this book he applies Hegel's dialectic method to the study of music. Gifted with an ear of unusual delicacy, he speculated deeply on the nature of sound, applying to the subject Hegel's formulas of proposition, counter-proposition, and the ultimate unity of the two. The book is not intended for practical instruction, and is indeed placed beyond the reach of ordinary musicians by its difficult terminology. But by those who have mastered it, it is highly appreciated, and its influence on later theoretical works is undeniable. The obvious endeavour of recent authors to treat the theory of music on a really scientific basis is mainly to be attributed to the impetus given by Hauptmann. His other works are—an *Erläuterung zu der Kunst der Fuge von J. S. Bach*; various articles on acoustics in Chrysander's *Jahrbücher*; *Die Lehre von der Harmonik*, a posthumous supplement to the *Harmonik und Metrik*, edited by his pupil, Dr. Oscar Paul, in 1868; *Opuscula*, a small collection of articles musical and philosophical, edited by his son in 1874; and his *Letters*, of which two vols. (1871) are addressed to Hauser, the director of the Munich Conservatorium, and the third, edited by Hiller (1876), to Spohr and others. A large selection from these, translated by A. D. Coleridge, was published as *Letters of a Leipzig Cantor*, in 1892. Hauptmann published some sixty compositions, mainly interesting from the characteristic harmony between the whole and its parts, which pervades them. Idea and execution are alike complete; the thought is clear, the style correct; while their symmetry of form and purity of expression make them true works of art and perfect reflections of the harmonious, graceful nature of their author. In early life he wrote chiefly instrumental music—Sonatas for pf. and violin (opp. 5, 6, 23); Duos for two violins (opp. 2, 16, 17), quartets, etc., which betray the influence of Spohr. During the latter half of his life he wrote exclusively for the voice. Among his vocal compositions—more important as well as more original than the instrumental—may be named his well-known motets and psalms; a Mass (op. 18); a Mass with orch. (op. 43); Choruses for mixed voices (opp. 25, 32, 47), perfect examples of this style of writing; two-part songs (op. 46); and three-part canons (op. 50). Op. 33, six sacred songs, were published in English by Ewer & Co. Early in life he composed an opera, 'Mathilde,' which was repeatedly performed at Cassel, where it was produced in 1826. His part-songs are eminently vocal, and widely popular, and are stock-pieces with all the associations and church choirs throughout Germany. A. M.

HAUSER, Franz, born Jan. 12, 1794, at Krasowitz, near Prague, was a pupil of Tomaczek, and for many years a successful baritone singer in the operas of Prague, Cassel, Dresden, and Vienna, at the last of which he sang in 1828. In 1832 he was in the London company which included Schröder-Devrient, and in the same year sang at Leipzig, going to Berlin in 1835 and to Breslau in 1836. He retired from the stage in 1837, and settled in Vienna as a singing teacher; in 1846 he was appointed director of the Munich Conservatorium, on the re-organisation of which, in 1865, he was pensioned off and lived successively at Carlsruhe and Freiburg in Breisgau. At the latter place he died on Aug. 14, 1870. His *Gesanglehre* (published in 1886) had a wide circulation, but to modern musicians his name is best known as the recipient of the interesting series of letters from Hauptmann. (Riemann's *Lexikon.*)

HAUSER, Miska, a famous Hungarian violinist, born 1822 in Presburg, received his musical education in Vienna under Böhm and Mayseder. When only twelve years of age he made a tour through the world. In 1840 he travelled through Germany, Sweden, Norway, and Russia; he visited London in 1850, and California, South America, and Australia in 1853-58. In 1860 he was fêted by King Victor Emanuel of Italy and the Sultan of Turkey. Of his compositions, his little 'Lieder ohne Worte' for the violin will no doubt survive him for many years. [He wrote a set of letters describing his American tours, in the *Ostdeutsche Post* of Vienna, which was published as *Wanderbuch eines österreichischen Virtuosen* in 1858-59.] Hauser retired into private life about 1878 and died, practically forgotten, in Vienna on Dec. 9, 1887. E. P[1].

HAUSMANN, Robert, a distinguished violoncellist, was born August 13, 1852, at Rottleberode in the Harz, and at the age of eight went to school at Brunswick, where for some years he studied his instrument under Theodor Müller, the violoncellist of the well-known quartet of the brothers Müller. When the Hochschule for music was opened at Berlin in 1869, he entered as a pupil, and worked under Joachim's guidance with Wilhelm Müller. Being anxious to profit by the instruction of Signor Piatti, he was introduced by Joachim to that celebrated artist, who treated him with great kindness, and gave him lessons for some time both in London and Italy. He then entered upon his professional career, commencing as

violoncellist in the quartet of Graf Hochberg. This post he retained from 1872 to 1876, and was then appointed second professor of his instrument at the Hochschule. He succeeded to the principal place upon the retirement of Müller, and from 1879 he has been violoncellist of Joachim's quartet. (See JOACHIM QUARTET.) He is well known in London, where he has introduced important new works by Brahms and other composers. He has all the qualities which combine to make an accomplished artist. With great command over the technical difficulties of the instrument, he possesses an unusually powerful tone. He is a kinsman of Georg Hausmann, the violoncellist, upon whose fine Stradivarius he plays. T. P. H.

HAUSSMAN, VALENTIN, organist, and Rathsherr of Gerbstädt near Merseburg in Saxony, was one of the most industrious and prolific composers of his time. His works appeared from 1588 to 1611, and mainly consist of collections of German secular songs for four to eight voices, after the manner of Italian Canzonets and Villanelle. His Venusgarten of 1602 consists of a hundred, mostly Polish, dances *a* 5, the melodies of which he tells us he had collected during his travels in Prussia and Poland, fifty of which he had now provided with German texts written by himself ('feine höfliche amorosische Texte'), the other fifty he left without text. From 1606 to 1610 he edited with German texts fifty-one of Marenzio's Villanelle, also four volumes of Vecchi's Canzonets for three and four voices, Gastoldi's Tricinia and Morley's First Book of Ballets. His other works consist of Instrumental Dances *a* 4 and 5 (Intradas, Paduans, Galliards), —a selection occupies vol. xvi. of the *Denkmäler deutscher Tonkunst*,—and a few sacred compositions. J. R. M.

HAUTBOY. The English transference of the French *Haut-bois*, *i.e.* a *wooden* instrument with a *high* tone. The word is used by Shakespeare. In Handel's time it was phoneticised into Hoboy. The Italians spell it Oboe, which form (occasionally, as by Schumann, Hoboe) is now adopted in Germany and England. Under that head the instrument is described. [OBOE.] G.

HAVERGAL, REV. WILLIAM HENRY, was born Jan. 18, 1793, at High Wycombe, Buckinghamshire. He was educated at Merchant Taylors' School and St. Edmund Hall, Oxford, where he graduated B.A. in 1815, and M.A. in 1819. He was ordained by Bishop Ryder, and in 1829 was presented to the Rectory of Astley, near Bewdley. Having met with a severe accident he was obliged to relinquish his clerical duties for several years, during which time he devoted himself to the study of music. His first published composition was a setting of Heber's hymn, 'From Greenland's icy mountains,' as an anthem, the profits of which, as of many other of his compositions, he devoted to charitable objects. In 1836 he published an Evening Service in E, and 100 antiphonal chants (op. 35), obtaining the Gresham Prize Medal in 1837 for his Evening Service in A (op. 37). Other anthems and services followed, and in 1844 he commenced his labours towards the improvement of Psalmody by the publication of a reprint of Ravenscroft's Psalter (published 1847). In 1845 he was presented to the Rectory of St. Nicholas, Worcester, and to an Honorary Canonry in the Cathedral. In 1849 he published *The Old Church Psalmody* (op. 43), and in 1854 an excellent *History of the Old Hundredth Tune*. In 1859 he brought out *A Hundred Psalm and Hymn Tunes* (op. 48), of his own composition. From 1860 to 1868 he was rector of Shareshill, near Wolverhampton. Besides the works enumerated above, Mr. Havergal wrote a number of songs and rounds for the young, besides many hymns, sacred songs, and carols for the periodical entitled *Our Own Fireside*. These were afterwards collected and published as *Fireside Music*. As the pioneer of a movement to improve the musical portions of the Anglican Services, Mr. Havergal's labours deserve more general recognition than they have hitherto met with. At the time when church music was at its lowest ebb, the publication of his *Old Church Psalmody* drew attention to the classical school of English ecclesiastical music, and paved the way for the numerous excellent collections of hymns and chants which the Anglican Church now possesses. Mr. Havergal died at Leamington on April 19, 1870. After his death his works were edited by his youngest daughter, Miss Frances Ridley Havergal (1836-1879), whose religious poetry was remarkably popular. W. B. S.

HAWDON, MATTHIAS, a popular organist and composer of the late 18th century, was organist of Beverley Minster, and of St. Nicholas, Newcastle, being appointed to the latter post in 1776. He died in 1787, and was buried on March 22, in St. Nicholas' Church. He wrote an Ode on the King of Prussia, and some songs; two organ concertos, in B flat and F; 'The Opening of an Organ, a Choice Set of Voluntaries;' and 'First Sett of six sonatas spirituale or voluntarys, for the harpsichord, organ or pfte.' One of his 'Six Conversation Sonatas' for the harpsichord or pianoforte, with accompaniment for two violins and violoncello (published 1785), was played at a concert of old chamber music in 1904, and pleased by its artless if rather insipid tunefulness. M.

HAWES, WILLIAM, born in London, June 21, 1785, was from 1793 to 1801 a chorister of the Chapel Royal. In 1802 he was engaged as a violinist in the band of Covent Garden, and about the same time began to teach singing. In 1803 he officiated as deputy lay vicar at Westminster Abbey. On July 15, 1805, he was appointed gentleman of the Chapel Royal, and on the formation of the Philharmonic Society in 1813 was

elected an associate. In 1812 he was appointed almoner, master of the choristers and vicar-choral of St. Paul's, and in 1817 master of the children and lutenist of the Chapel Royal. In the same year he became lay vicar of Westminster Abbey, but resigned his appointment in 1820. He was the first promoter of the Harmonic Institution [see ARGYLL ROOMS], and after the breaking up of that establishment carried on for some years the business of a music-publisher in the Strand. He was for several years director of the music at the English Opera, Lyceum; and it was at his instance that Weber's 'Der Freischütz' was first performed in England, July 23, 1824, an event which forms an era in the history of the opera in this country. Hawes did not at first venture to perform the entire work, the finale being omitted and ballads for the soprano and tenor interpolated, but he had soon the satisfaction of discovering that the opera would be accepted without curtailment. The great success of the work induced him subsequently to adapt the following operas to the English stage:—Salieri's 'Tarare,' 1825; Winter's 'Das Unterbrochene Opferfest' ('The Oracle, or, The Interrupted Sacrifice'), 1826; Paër's 'I Fuorusciti' ('The Freebooters'), 1827; Mozart's 'Così fan tutte' ('Tit for Tat'), 1828; Ries's 'Die Räuberbraut' ('The Robber's Bride'), and Marschner's 'Der Vampyr,' 1829. Hawes composed or compiled music for the following pieces:—'Broken Promises' (compiled), 1825; 'The Sister of Charity,' 1829; 'The Irish Girl,' 1830; 'Comfortable Lodgings,' 'The Dilsk Gatherer,' and 'The Climbing Boy,' 1832; 'The Mummy,' 'The Quartette,' 'The Yeoman's Daughter,' and 'Convent Belles' (with J. A. Wade), 1833; and 'The Muleteer's Vow' (partly selected), 1835. He was the composer of 'A Collection of five Glees and one Madrigal,' and 'Six Glees for three and four voices'; and the arranger of 'Six Scotch Songs, harmonised as Glees.' His glee, 'The bee, the golden daughter of the spring,' gained the prize given by the Glee Club on its 50th anniversary in April 1836. He edited the publication in score of 'The Triumphs of Oriana'; of a collection of madrigals by composers of the 16th and 17th centuries; a collection of the then unpublished glees of Reginald Spofforth; and a collection of Chants, Sanctuses, and Responses to the Commandments. In 1830 he gave oratorio performances in Lent at both the patent theatres, but with heavy loss. He was for many years conductor of the Madrigal Society, and organist of the German Lutheran Church in the Savoy. Hawes died in London, Feb. 18, 1846. His daughter, MARIA BILLINGTON HAWES, born in London, April 1816, afterwards Mrs. Merest, for some years occupied a high position as a contralto singer, and was the composer of several pleasing ballads. [She died at Ryde, Isle of Wight, April 24, 1886.] W. H. H.

HAWKINS, JAMES, Mus. Bac., born at Cambridge, was a chorister of St. John's College, Cambridge, and afterwards organist of Ely Cathedral from 1682 until his death in 1729. He was a voluminous composer of church music, and seventeen services and seventy-five anthems by him are preserved (more or less complete) in MS. in the library of Ely Cathedral. Two services and nine anthems (part of those) are also included in the Tudway collection (Harl. MSS. 7341, 7342). Hawkins transcribed and presented to the library of Ely Cathedral many volumes of cathedral music. He took his degree at Cambridge in 1719. He was a nonjuror, as appears by an autograph copy of one of his anthems in the library of the Royal College of Music, the words of which are applicable to party purposes, and which has a manuscript dedication 'to the very Rev^nd^ Mr. Tomkinson and the rest of the Great, Good, and Just Nonjurers of St. John's College in Cambridge.'

JAMES HAWKINS, his son, was organist of Peterborough Cathedral from 1714 (when he was appointed at a salary of £20 per annum) to 1759. He composed some church music. One of his anthems is included in the Tudway collection (Harl. MSS. 7342). W. H. H.

HAWKINS, SIR JOHN, Knight, born in London, March 30, 1719, originally intended for the profession of his father, an architect and surveyor, but eventually articled to an attorney. He was duly admitted to the practice of his profession, devoting his leisure hours to the cultivation of literature and music. About 1740 he became a member of the Academy of Antient Music. He wrote the words of Six Cantatas, which were set to music for a voice and instruments by John Stanley, and published at their joint risk in 1742. These succeeded so well that the authors were induced to publish, a few months afterwards, a similar set, which met with equal success. Hawkins was also a frequent contributor to the *Gentleman's Magazine* and other periodicals. In 1749 he was invited by Samuel Johnson to be one of the nine members who formed his Thursday evening club in Ivy Lane. [In 1752 he was elected a member of the Madrigal Society.] In 1753 he married Miss Sidney Storer, with whom he received a considerable fortune, which was greatly increased on the death of her brother in 1759. Hawkins then purchased a house at Twickenham, to which he retired. In 1760 he published an edition of Walton and Cotton's *Compleat Angler*, with a life of Walton and notes by himself, and a life of Cotton by William Oldys. The publication involved him in a dispute with Moses Browne, who had shortly before put forth an edition of the book. Hawkins's edition was thrice reproduced by him in his lifetime, and again by his son, John Sidney Hawkins, after his death. He was an active magistrate, and in 1765 became Chairman of the Middlesex Quarter Sessions. In 1770, with a view of assisting the Academy,

he wrote and published anonymously a pamphlet entitled, *An Account of the Institution and Progress of the Academy of Ancient Music.* In 1772, on Oct. 23, he was knighted. In 1776 he gave to the world the work on which his fame rests—his *General History of the Science and Practice of Music,* in 5 vols. 4to, on which he had been engaged for sixteen years. In the same year Dr. Burney published the first volume of his *General History of Music* ; the other three appearing at intervals between that date and 1789. Contemporary judgment awarded the palm of superiority to Burney and neglected Hawkins. Evidence of the feeling is found in a catch which was formerly better known than it is now :—

> Have you Sir John Hawkins' History?
> Some folks think it quite a mystery.
> Musick fill'd his wondrous brain.
> How d'ye like him? is it plain?
> Both I've read and must agree,
> That Burney's history pleases me.

Which in performance is made to sound :—

> Sir John Hawkins!
> Burn his history!
> How d'ye like him?
> Burn his history!
> Burney's history pleases me.

Posterity, however, has reversed the decision of the wits ; Hawkins's *History* has been reprinted (Novello, 1853, 2 vols. 8vo), but Burney's never reached a second edition. The truth lies between the extremes. Burney, possessed of far greater musical knowledge than Hawkins, better judgment, and a better style, frequently wrote about things which he had not sufficiently examined ; Hawkins, on the other hand, more industrious and painstaking than Burney, was deficient in technical skill, and often inaccurate. In 1784 Dr. Johnson appointed Sir John Hawkins one of his executors, and left to him the care of his fame. Sir John fulfilled this trust by writing a life of Johnson, and publishing an edition of his works in 11 vols. 8vo in 1787. Whilst he was engaged on the work, his library, in Queen Square, Westminster, was destroyed by fire. Fortunately he had, soon after the publication of his *History,* presented the fine collection of theoretical treatises and other works formed by Dr. Pepusch, and acquired from him, to the British Museum, so that the loss, although severe, was much less than it might have been. On May 14, 1789, Hawkins was attacked by paralysis, from the effects of which he died on the 21st of the same month. He was buried in the north cloister of Westminster Abbey, under a stone on which was inscribed, pursuant to his own wish, only the initials of his name, the date of his death, and his age. His portrait is in the Music School collection at Oxford.

The following pieces are printed by Hawkins in his *History.* The reference is to the chapter, in the Appendix to the Number.

Allwoode. A Voluntary, App. 11.
Aretinus, Guido. Cantilena, 55.
Bach, J. S. Aria, 182.
Baltzar. Allemande, 142.
Banister, J. 'Hedge lane,' App. 26.
Bateson. 'Your shining eyes,' 103.
'Bellamira,' App. 23.
Bell tune, 160.
Bennet, J. 'Ye restless thoughts,' 105.
Bevin. Canon, 103.
'Black Sanctus,' App. 2.
Blitheman. A Meane, App. 9.
Bononcini. 'In vain is delay,' 172.
Do. 'Deh lascia.' 186.
Bradley, R. Smoking catch, 159.
Bull. Canons, 67.
Byrd, W. Canon, 'O Lux,' 66.
Do. Miserere, 66.
Do. Canon, 67.
Do. 'Venite,' 96.
Do. 'Diliges,' 96.
Do. The eagle's force, App. 3.
Birds, songs of, 1.
Canon, 5 in 2, 103.
Canons, various, 119.
Canto figurato, 51.
Carissimi. 'Dite o cieli,' 154.
Cebell, the old. App. 22.
Cesti, M. A. 'Cara, cara,' 124.
Clayton, Thos. Overture to Rosamond, 171.
Clemens non Papa. Canon, 66.
'Cock Lorrel.' App. 30.
'Cold and raw.' App. 20.
'Come follow me.' Canon, 67.
'Conditor alme.' 57.
Contrapunctus, 'Simplex and Diminutus,' 51.
Corelli. Solo in A, 196.
Cornyshe, W. 'Ah beshrew you,' 78.
Do. 'Hoyday,' 78.
Couperin. Les Goûts réunis,' 162.
Croft, Dr. 'My time, O ye muses,' 167.
Dorian, motet in, 70.
Draghi. The old Cebell, App. 22.
Drum, voluntary and march, 51.
Dunstable. 'Nesciens virgo,' 61.
Dygon, J. 'Ad lapidis,' 76.
Eccles, J. 'A soldier and a sailor,' 164.
Eccles, J. A rope dance, App. 34.
Eccles, Sol. 'Bellamira,' App. 23.
Edwards, R. 'Where griping grief,' App. 4.
Edwards, R. 'By painted words,' App. 5.
Do. 'In going to.' App. 7.
'Exaudi,' canon, 119.
Fa-burden, 57.
Fandango, App. 33.
Farinel's ground, App. 24.
Farmer. 'You pretty flowers,' 105.
Fayrfax, Dr. 'Ave summe,' 75.
Frescobaldi. Canzona, 130.
Galliard. 'Ye that in waters,' 177.
Geminiani. Solo, 181.
Gibbons, D. a. 'Ne laeteris,' 71.
'Green sleeves.' App. 21.
Greene, Dr. 'By the streams,' 191.
Gregorian Tones, 27, 28.
Harrington. 'Black Sanctus,' App. 2.
Haym. 'Too lonely,' 174.
'Hedge Lane,' App. 26.
Henry VIII. 'Quam pulcra,' 77.
'Hey boys,' App. 31.
'Hold thy peace,' canon, 67.
'How should we sing?' canon, 67.
Humfrey, P. 'I pass all my hours,' App. 32.
'In te,' canon, 119.
Isaac, H. Conceptio,' 70.
Isham, J. 'Bury delights,' 168.
'John, come kiss me,' App. 18.
'John Dory,' App. 28.
'Johnny, cock thy beaver,' App. 25.
Johnson. 'Defyled is my name,' App. 1.
Josquin. King's Canon, 70.
Do. 'O Jesu fili,' 72.
Kerl, J. C. Organ canzona, 124.
Lasso, O. 'O d'amaris sime,' 74.
Do. 'Quand mon mary,' 88.
Lawes, H. 'Sweet echo,' 121.
Louis XIII. 'Tu crois,' 133.
Lully. 'Roland,' 136.
Mace, Lesson, 151.
Marbeck. 'A virgine and mother,' 94.
Do. Our Father, etc., 112. 113.
Marcello. 'Dal Tribunal,' 180.
Marenzio, L. 'Dissi a l'amata,' 89.
Milton. 'O had I wings,' 102.
Miserere, canon, 119.
'Miserere nostri,' Tallis, 95.
Monte, F. de. 'Da bei rami,' 74.
Monteverde. 'Perch' a' (Orfeo), 108.
Do. Moresca (do.) 108.
Morley, T. 'Beside a fountain,' 100.
Mouton. 'Salve mater,' 74.
Musica ficta, 68.
Okeghem. Fuga in Epidiapente, 73.
'Old Simon the king,' App. 16.
'O my fearful dreams,' canon, 67.
'Ora et labora,' canon, 119.
Palestrina. 'Sicut cervus,' 88.
Do. 'Credo gentil,' 88.
'Parthenia,' 152.
'Paul's steeple,' App. 15.
Phillips, Peter. 'Voi volete,' 98.
Porta, Const., 8.
Purcell, H. 'Æolus,' 155.
Do. 'Golden sonata,' 156.
'Quicquid,' canon, 119.
Ravenscroft. Hornpipe, 194.
Redford. 'Rejoice,' App. 8.
'Roger of Coverley,' App. 19.
Rogers, B. 'Te Deum patrem,' App. 12.
Rore, Cipriano. 'Ancor che col,' 74.
Rossi, Emilio. Canon, 67.
Scacchi. 'Vobis datum est,' 123.
'Sellenger's Round,' 96.
'Shaking of the sheets,' App. 13.
Shephard, J. 'Stey'n first,' 76.
Do. A point, App. 10.
Sloth, cry of the, 1.
Steffani. 'Forma un mare,' 140.
Sternhold & Hopkins. 5 Psalms, 117.
Striggio, A. 'All' acqua,' 64.
Subligny's minuet, App. 27.
Sumer is icumen in, 45.
Sympson, Chr. Division, 149.
Tallis. 'Absterge,' 95.
Do. 'Miserere,' 95.
Do. 'Like as the doleful,' App. 6.
Taverner, J. 'O splendor,' 75.
Theobald of Navarre. Song, 41.
'There lies a pudding,' 119.
Thorne, J. 'Stella coeli,' 77.
'Toilet's ground,' App. 17.
Tye. 'It chanced in Iconium,' 95.
'Uxor mea,' App. 29.
Valentini. Canon, 67.
Venosa, Prince of. 'Baci soavi,' 90.
Vicentino. 'Allelula,' Madrigals, etc., 8.
'We be soldiers three,' 119.
Weelkes. 'Aye me!' 102.
Weldon. 'From grave lessons,' 144.
Whitelocke. Coranto, 121.
Wilbye. 'Lady, when I behold,' 104.
Willaert, A. Quem dicunt, 73.

W. H. H.

HAYDÉE, OU LE SECRET. Opéra-comique in three acts ; words by Scribe, music by Auber. Produced at the Opéra Comique, Dec. 28, 1847. It was produced in English (same title) at the Strand Theatre, April 3, 1848, and at Covent Garden (Bunn), Nov. 4, 1848 (first appearance of Miss Lucombe). G.

HAYDEN, GEORGE, organist of St. Mary Magdalen, Bermondsey, in the earlier part of the 18th century. About 1723 he published three Cantatas, which displayed considerable ability. He also composed a song called 'New Mad Tom,' commencing 'In my triumphant chariot hurl'd,'

which was afterwards tacked on to the former part of the older song 'Forth from my dark and dismal cell,' instead of the latter verses beginning 'Last night I heard the dog-star bark,' and was often sung with it. His two-part song, 'As I saw fair Clora walk alone,' was long a favourite. W. H. H.

HAYDN, JOHANN MICHAEL, born, like his brother Joseph, at Rohrau, Sept. 14, 1737; was grounded in music by the village schoolmaster, and from 1745 to 1755 was a chorister at St. Stephen's, Vienna. His voice was a pure soprano of great compass, and his style so good that, as soon as Joseph's voice began to change, Michael took all the principal parts. He played the violin and organ, and was soon able to act as deputy organist at St. Stephen's. He was fond of history, geography, and the classics. In music he aimed at originality from the first, and formed a sort of society among his schoolfellows for detecting plagiarisms. Like his brother he had no regular instruction in composition, but taught himself from Fux's *Gradus*, which he copied[1] entire in 1757. His first known mass is dated Temesvar, 1754; other works were composed at Warasdin and Belenyes; but how he came to be in Hungary is not known. In 1757 he was capellmeister at Grosswardein to the bishop Count Firmian, whose uncle Archbishop Sigismund of Salzburg appointed him, in 1762, his director and concertmeister. In 1777 he also became organist at the churches of Holy Trinity and St. Peter. On August 17, 1768, he married Maria Magdalena Lipp, daughter of the cathedral organist, and a singer at the archbishop's court, who took the principal parts in several of Mozart's juvenile operas, and is mentioned by him as leading a peculiarly strict life. Their one child, a daughter, born 1770, died the following year. The wife lived to be eighty-two, and died in June 1827. Michael's salary, at first 300 florins (£24) with board and lodging, was afterwards doubled; and this modest pittance was sufficient to retain him for the whole of his life at Salzburg. His attachment to the place was extraordinary, one attraction being the proximity of his great friend, a clergyman named Rettensteiner. In 1783 the then archbishop, Hieronymus Count Colloredo, commissioned him to compose some vocal pieces to be used instead of the instrumental music between the Gloria and Credo at high mass. Michael selected words from the Roman Missal, and his first Gradual—first of 114—was performed on Dec. 24. In 1798 he visited Vienna, and was cordially received by his brother, and by Eybler, Süssmayer, Henneberg, Hummel, and von Reich the amateur, who pressed him to settle among them, but in vain. In Dec. 1800 he lost his property through the taking of Salzburg by the French, but his brother and friends came liberally to his assistance. The Empress Maria Theresa[2] hearing of his losses commissioned him to compose a mass, which he presented to her in person. The performance took place at Laxenburg, Oct. 4, 1801, under his own direction; the Empress sang the soprano solos, rewarded him munificently, and commanded another mass for the Emperor and a requiem. Accompanied by his friend Rettensteiner he visited Eisenstadt, where for the first and only time in their lives the three Haydns spent some happy days together. Michael much enjoyed the canons which decorated the walls of Joseph's study in Vienna, and asked leave to copy some of them, but Joseph replied, 'Get away with your copies; you can compose much better for yourself.' Michael, however, carried his point, and even added a fourth part to 'Die Mutter an ihr Kind.' Prince Esterhazy commissioned Michael to compose a mass and vespers, and offered him the vice-capellmeistership of his chapel, but he twice refused, in the hope that the chapel at Salzburg would be reorganised and his salary raised. His hopes were deceived, but meantime the post at Eisenstadt had been filled up, and he wrote to his brother complaining bitterly of the disappointment.[3] Joseph thought Michael too straightforward for Eisenstadt: 'Ours is a court life,' said he, 'but a very different one from yours at Salzburg; it is uncommonly hard to do what you want.' At this time Michael was elected a member of the Academy at Stockholm, and sent in exchange for his diploma a Missa Hispanica for two choirs (comp. 1786), and other church works. In Dec. 1805 he finished his last mass, for two sopranos and alto, written for his choristers. He made some progress with the requiem for the Empress, but was unable to finish it. While on his deathbed his beautiful 'Lauda Sion' was sung at his request in the next room, and soon after, on August 10, 1806, he expired. The requiem was completed by portions from his earlier one in C minor, and performed at his funeral. He lies in a side chapel of St. Peter's Church. A well-designed monument was erected in 1821, and over it is an urn containing his skull. In the tavern of St. Peter's monastery is still shown the 'Haydn-Stübchen,' his almost daily resort. His widow received from the Empress 600 florins for the score of the requiem; from Prince Esterhazy thirty ducats for the opera 'Andromeda and Perseus,' and an annuity of thirty-six gold ducats for all his MS. compositions. His brother several times sent him money, and in his first will (1801) left 4000 florins to him, and in his second (1809) 1000 to the widow. His likeness, with regular, steady features, exists in many oil-portraits, engravings, lithographs, and drawings.

[1] His MS. copy, like the autograph of his first mass, 1754, is in the Hofbibliothek at Vienna.

[2] Second wife of Francis II.

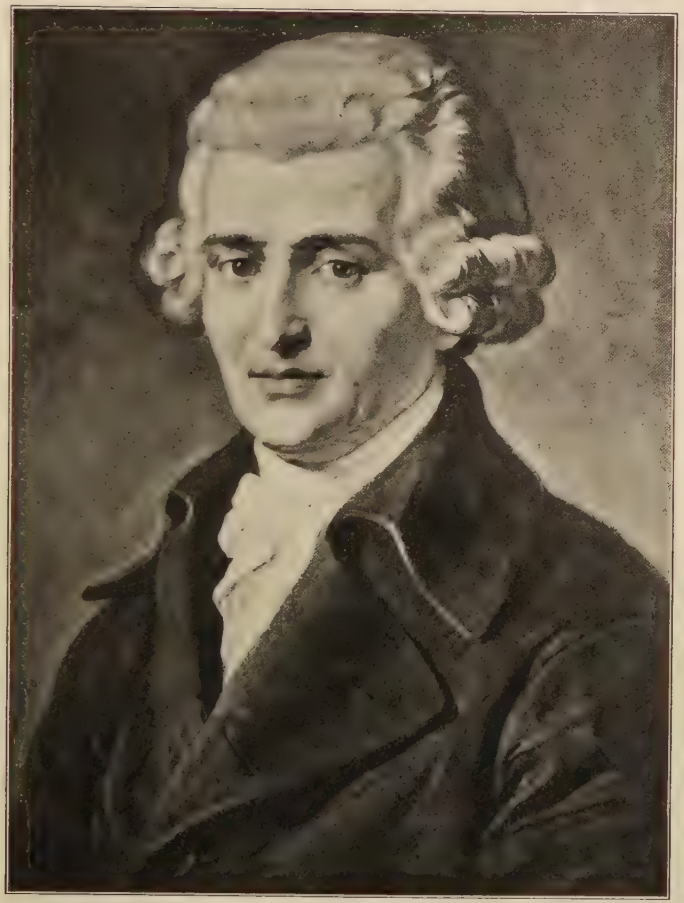
[3] The vice-capellmeistership was bestowed on Johann Fuchs, violinist in the chapel, and afterwards Haydn's successor. He died Oct. 29, 1839.

In character Michael was upright, good-tempered, and modest; a little rough in manners, and in later life given to drink. His letters show him to have been a warm-hearted friend, and that he was devout may be inferred from his habit of initialling all his MSS. with 'O. a. M. D. Gl.' (*Omnia ad Majorem Dei Gloriam*). As a composer he was overshadowed by the fame of his brother. His own words, 'Give me good librettos, and the same patronage as my brother, and I should not be behind him,' could scarcely have been fulfilled, since he failed in the very qualities which ensured his brother's success. On the other hand, Joseph professed that Michael's church compositions were superior to his own in earnestness, severity of style, and sustained power. They are, however, unequal; many are antiquated from the monotony of the accompaniment, while others—the Mass in D minor, the Gradual 'Tres sunt,' the 'Lauda Sion,' the well-known 'Tenebrae' in E♭, etc.—are still highly esteemed. Leopold Mozart, a man who disliked his manners, wrote to his son, 'Herr Haydn is a man whose merit you will be forced to acknowledge.' This refers to his sacred works, several of which Wolfgang scored for practice; he also sent for them to Vienna, and endeavoured to make them better known, especially introducing them to Van Swieten. In 1783, when Michael was laid aside by illness, Mozart composed two string duets for him.[1] Franz Schubert visited Michael's grave in 1825, and thus records his impressions: 'The good Haydn! It almost seemed as if his clear calm spirit were hovering over me. I may be neither calm nor clear, but no man living reverences him more than I do. My eyes filled with tears as we came away.' Ferdinand Schubert composed a striking chorus to words in praise of Michael Haydn. Among his numerous pupils we may mention C. M. von Weber, Neukomm, Woelfl, and Reicha. There exists a 'Biographische Skizze,' a very warm-hearted pamphlet written by Schinn and Otter (Salzburg, 1808).

Of his compositions comparatively few have been printed. His modesty was excessive, and prevented his ever availing himself of the offers of Breitkopf & Härtel. The following list of his works is complete. [In the Hof- and Staatsbibl. at Munich is a thematic catalogue; and a detailed list is in the *Quellen-Lexikon*.]

Instrumental—50 short organ pieces for beginners, consisting of preludes, etc. in all the 8 Church tones (published at Linz); 30 symphonies, and Partiten,[2] 1 sextet, 3 quintets,[3] serenades, marches, 12 minuets for full orchestra (Augsburg, Gombart), 1 violin concerto, etc.

Vocal—about 360 compositions for the Church, including 2 requiems,[4] 24 masses, 4 German masses,[5] 114 graduales,[6] 67 offertoires, 8 litanies,[7] 11 vespers, 5 Salve Regina, 8 Responsorien, 3 Tenebrae, Regina Coeli, etc. etc.; and several German sacred songs. A great many oratorios,[8] cantatas, operas (including 'Andromeda e Perseo,' 1776), mythological operettas, a pastoral[9] 'Die Hochzeit auf der Alm,' 2 collections of 4-part songs (Vienna, Eder, 1799; Salzburg, Hacker, 1800); several single ones, 'Karl der Held, Erzherzog von Oesterreich,' etc.; 6 canons in 4 and 5 parts (Salzburg, Meyer, 1800).



Theoretical—'Partitur-Fundament,' edited by Martin Bischofsreiter.[10] In the Imperial Library is an Antiphonarium romanum with figured bass, finished in 1792.

C. F. P.

HAYDN, Franz Joseph, was born in the night between March 31 and April 1, 1732, at Rohrau, a small Austrian village on the Leitha, which there divides Lower Austria and Hungary. He was the second child of Mathias Haydn, a master wheelwright, by his marriage (Nov. 24, 1728) with Maria Koller, daughter of the 'Marktrichter' and cook in Count Harrach's household. Haydn's ancestors came originally from Hainburg, a town close to the Danube, about four leagues from Rohrau. His great-grandfather Kaspar was a servant in the hill-castle there, one of the few who escaped massacre when it was stormed by the Turks on July 11, 1683. Kaspar's son Thomas, a master wheelwright and member of the town council, had seven sons, of whom Mathias, the father of our Haydn, born Jan. 31, 1699, was youngest but one. Thomas's widow married a journeyman wheelwright, Mathias Seefranz (died May 2, 1762, aged eighty-nine), who thus became Haydn's step-grandfather; and one of their children, Julie Rosine, married a schoolmaster named Frankh, afterwards Haydn's first teacher. The sons nearly all learnt the wheelwright's trade, and then set out on their travels; after which Mathias settled in Rohrau, and built himself the little house at the end of the market-place, where Haydn was born, and which, though twice rebuilt, is still standing in its original form. Maria Haydn (born Nov. 10, 1707) bore her husband twelve children, of whom the sixth was Johann Michael, the church composer; and the eleventh Johann Evangelist, an unimportant tenor singer, who was admitted to the chapel of Prince Esterhazy on his brother Joseph's recommendation. After Maria's death (Feb. 23, 1754) Mathias married again, and had five more children, who died young. He himself departed Sept. 12, 1763.

[The researches of Dr. Kuhač have gathered a large amount of cumulative evidence in support of the contention that Haydn was by race not a Teuton but a Slav, not a German but a Croatian. His name, of which the original form appears to have been Hajden, is a well-known Croatian patronymic, and has no precise parallel among Teutonic forms. His native village was originally called Trstnik (of which Rohrau is the official German translation), and is situated in the heart of a colony of Croatian immigrants who, in the 15th and 16th centuries, occupied the country from Pressburg to the Neusiedler See. Even at the present day the

[1] Afterwards published in Mozart's name (Köchel's Catalogue, Nos. 423 and 424).
[2] Artaria published three.
[3] One in C was printed under Joseph's name as op. 88.
[4] The second, in B♭, is unfinished. (Kühnel.)
[5] His first High Mass (German), 'Hier liegt vor deiner Majestät,' in C (Haslinger), is very popular.
[6] Forty-two in score (1-20 and 41-62) in the 'Ecclesiasticon.' (Spina.)
[7] 'Litaniae de venerabili sacramento.' (Breitkopf & Härtel.)
[8] The oratorios performed in Lent were generally joint-compositions by various authors; for instance, 'Die Schuldigkeit des ersten Gebotes' (1766) of which Mozart (aged ten) wrote the first part, Michael Haydn the second, and Adlgasser, Court-organist, the third.
[9] Vocal score, Falter & Son, Munich, 1862; often ascribed to Joseph.

FRANZ JOSEPH HAYDN

village contains a large number of Croatian names, and in the 18th century, so far as we have record, the Slav population appears to have been in a considerable majority. All of Haydn's ancestors who can be traced were born and lived in this district; and the name of his mother's family, which is a *vox nihili* in German, is most probably explained as a phonetic variant of the Croatian 'Kolar' (wheelwright). Again, not only is the general impression of Haydn's music Slavonic rather than Teutonic in character, but many of his mature compositions are saturated with Croatian folk-songs, to which his own most distinctive melodies bear, both in curve and in rhythm, a very noticeable resemblance. Examples of folk-songs which have been actually identified may be quoted from the Cassation in G major (1765), the quartets in D, op. 17, No. 6; E♭, op. 20, No. 1; C, op. 33, No. 3; B♭, op. 50, No. 1; F, op. 74, No. 2; and G, op. 77, No. 1; from the Salomon symphonies in D, E♭, and B♭, from the Rondo of the Pianoforte concerto in D, from the Mass 'Hier liegt vor deiner Majestät' and from the Austrian National Anthem. To the same source may be referred his fondness for metres of five, seven, or nine bars, and many among his most characteristic turns of melody and cadence. It is hardly too much to say that he stood to the folk-music of Croatia as Burns to the peasant-songs of Scotland; and it may be remembered that from his appointment at Eisenstadt in 1760 to his journey to England in 1791, he never (except for short visits to Vienna) travelled outside the limits of his native district.[1]]

Haydn's parents were honest, industrious people, who instilled into their children a love for work, method, cleanliness, and, above all, religion. In his old age Haydn gratefully acknowledged his obligations to their care. Both were fond of music, and both sang. The father had a fair tenor voice, and accompanied himself on the harp, though without knowing a note. The child soon began to sing their simple songs, astonishing them by the correctness of his ear and the beauty of his voice. But he did not stop there. Having seen the schoolmaster play the violin, he would sit on the stove-bench and accompany his parents as they sang, precisely imitating the schoolmaster's handling of the bow, and keeping strict time, with two pieces of wood as his instrument. He was one day surprised, when thus engaged, by his relation Frankh, from Hainburg. Thinking that he saw in him the making of a musician, Frankh persuaded the parents to commit their little boy to his care. The mother would have preferred his entering the priesthood, or becoming a schoolmaster, and it required all the father's authority to make her consent; but he felt that he had himself been capable of better things, and looked forward to seeing his son a chor-regent or capellmeister, as a compensation for his own lot. At the age of six, then, the little Joseph—in the Austrian dialect 'Sepperl'—was taken by his father to school at Hainburg.

Johann Mathias Frankh, Haydn's distant relative (he called him simply 'cousin'), was an excellent teacher, very strict, and eminently practical. Haydn not only became a first-rate singer, but also learned something of the instruments most in use, and spent nearly all his time in church or in school. Learning came easily to him, and if he had any difficulty, his master's severity soon overcame it. In his old age he spoke with thankfulness of this hard probation, and of his cousin's discipline. 'I shall be grateful to that man as long as I live,' said he to Griesinger, 'for keeping me so hard at work, though I used to get more flogging than food.' On another occasion, when speaking in his modest way of his own talents and industry, he added, 'Almighty God, to whom I render thanks for all His unnumbered mercies, gave me such facility in music, that by the time I was six I stood up like a man and sang masses in the church choir, and could play a little on the clavier and the violin.' But the lad sadly missed his mother's care. He was neglected both in clothes and person (he already wore a wig, 'for the sake of cleanliness'), and the results of this neglect distressed him long and sorely. When quite an old man he said to Dies the painter—who, like Griesinger, visited him frequently with a view to his biography—'I could not help perceiving, much to my distress, that I was gradually getting very dirty, and though I thought a good deal of my little person, was not always able to avoid spots of dirt on my clothes, of which I was dreadfully ashamed—in fact, I was a regular little urchin.' Dies has preserved another anecdote of this period, in which Haydn figures. A drummer was wanted for a procession, and his master thrust him into the vacant office, first showing him how to make the stroke. The effect must have been comical, as he was so small that the instrument had to be carried before him on the back of a colleague of equal height, who happened to be a hunchback. Haydn retained his liking for the drum, and prided himself on his skill, with which indeed he once astonished Salomon's orchestra during his stay in London. The drums on which he performed at Hainburg on the occasion just named are still preserved in the choir of the church.

At the end of two years a decisive change took place in his life. George Reutter, hof-compositor and capellmeister at St. Stephen's, Vienna, was on a visit to his friend Anton Johann Palmb, pastor of Hainburg, and having heard Haydn's 'weak, sweet voice' (as he himself called it), put him through an examination, and offered him a place as chorister at St. Stephen's. To go to Vienna seemed to the boy an almost

[1] See Dr. Kuhač's monograph, *Josip Haydn i Hravatske Narodn Pepterke*, Agram, 1880.

incredible piece of good fortune. His parents gave their consent; and with a joyful heart he bade farewell to Hainburg. His grandmother had died just before—May 17, 1739; Frankh lived to be seventy-five, and died May 10, 1783, his wife Julie Rosine (who did not do her duty by Haydn) having preceded him in Jan. 1760. Of their two daughters, Anna Rosalia, born 1752, married Philipp Schimpel, usher of the school, and afterwards chor-regent. Haydn showed his gratitude to the family by leaving the latter couple a sum of money and his portrait of Frankh, 'my first instructor in music.' They both, however, died before him, in 1805, and the portrait has disappeared.

It was in 1740 that Haydn entered the Cantorei of St. Stephen's, where he was to pass his remaining years of study. The house was one of a row which came close up to the principal entrance of the cathedral, and from his window he looked straight on the glorious spire. He tells us that, 'besides the regular studies, he learned singing, the clavier, and the violin from good masters.' The 'regular studies' included religion, a little Latin, writing, and ciphering. His singing-masters are said to have been Gegenbauer and Finsterbusch; the former, subcantor and violinist at St. Stephen's, probably taught him the violin as well; the latter was a tenor in the court chapel. No instruction seems to have been given in harmony and composition at the Cantorei; but this did not trouble Von Reutter (ennobled in 1740). Haydn could only remember having had two lessons from him all the time he was there. But the instinct for composition made him cover every blank sheet of music-paper on which he could lay his hands—'it must be all right if the paper was nice and full.' Reutter surprised him once sketching a 'Salve Regina' for twelve voices, and told him sharply he had better try it first in two parts—*how*, he did not take the pains to show—and further advised him to write variations on the motets and vespers he heard in church. In this way he was thrown back upon himself. 'I certainly had the gift,' he says, 'and by dint of hard work I managed to get on.' An anecdote of this time shows that as a boy he was not behind his comrades in fun and mischief. The choristers were frequently required to sing with the imperial chapel—which explains Haydn's statement that he had sung with great success both at court and in St. Stephen's. This generally happened when the court was at Schönbrunn. The palace had only just been completed, and the scaffolding was still standing—an irresistible temptation to boys. The Empress Maria Theresa had caught them climbing it many a time, but her threats and prohibitions had no effect. One day when Haydn was balancing himself aloft, far above his schoolfellows, the Empress saw him from the windows, and requested her hofcompositor to take care that 'that fair-haired blockhead' (blonder Dickkopf), the ringleader of them all, got 'einen recenten Schilling' (slang for a 'good hiding'). When he was capellmeister to Prince Esterhazy, 'the fair-haired blockhead' had an opportunity, at Esterház, of thanking the Empress for this mark of imperial favour.

In the autumn of 1745 Haydn had the pleasure of welcoming his brother Michael as a fellow-chorister at the Cantorei, and of helping him in his work. Michael made rapid progress, but a cloud came over poor Joseph's prospects. His voice began to break, and the Empress, who had before taken particular pleasure in his singing, remarked jocosely to her vice-capellmeister[1] that young Haydn's singing was more like the crowing of a cock than anything else. Reutter took the hint, and on the festival of St. Leopold (Nov. 15), 1748, celebrated at the monastery of Klosterneuburg, near Vienna, gave the 'Salve Regina' to Michael, who sang it so beautifully as to charm both Emperor and Empress, from whom he received twenty-four ducats in gold.

Joseph was thus completely supplanted by his brother. His voice had lost all its power, and he was oppressed with grief and anxiety. In the midst of his trouble Reutter suggested a means by which his voice might be preserved, and even improved; and referred him to the court chapel, which contained at least a dozen 'castrati.' Haydn's father, however, having probably heard of the proposal, came in all haste to Vienna, and saved his son.

His days at the Cantorei were now numbered. He was of no use as a singer, and it does not seem to have occurred to any one that he might be employed as a violinist. Reutter did not consider himself in the least bound to look after his future, and was only waiting for an opportunity to get rid of him. This occurred soon enough, and Haydn himself furnished the pretext. Always full of fun, and inclined to practical jokes, he one day tried a new pair of scissors on the pigtail of a schoolfellow. The pigtail fell, but the culprit was condemned to a caning on the hand. In vain he begged to be let off, declaring he would rather leave than submit to the indignity. That he might do, Reutter said, but he must first be caned and then dismissed.

Haydn was thus thrown upon the world, with an empty purse, a keen appetite, and no friends. The first person to help him was Spangler, a chorister of St. Michael's. He offered him shelter; a few pupils presented themselves, and a good Viennese lent him 150 florins, which enabled him to rent an attic in the old Michaelerhaus, attached to the college of St. Barnabas, in the Kohlmarkt. Here he abandoned himself to the study of composition, and made acquaintance with the master who

[1] Von Reutter was advanced to this post in 1746.

more than any other became his model—Emanuel Bach. Having acquired his first six Clavier-Sonatas, he pored over them at his little worm-eaten clavier—and how thoroughly he mastered their style his compositions show. Indeed Bach afterwards sent him word, that he alone fully understood his writings, and knew how to use them. Besides the clavier, he diligently practised the violin, so that 'although,' as he said, 'no conjuror on any instrument, he was able to play a concerto.' About this time (1751-52, not 1741 as is always said) he composed his first Mass, in F (No. 11 in Novello's edition). It bears unmistakable evidences of undeveloped and unaided talent. Haydn had forgotten its very existence when, to his great delight, he discovered it in his old age, and inserted additional wind parts.

Having accidentally become acquainted with Felix Kurz, a favourite comic actor at the Stadttheater, Haydn was asked to set his comic opera, 'Der neue krumme Teufel,' a kind of magic farce, interspersed with songs and a few instrumental pieces; and received for it the sum of 25 ducats. It was produced at the Stadttheater in the spring of 1752, and frequently repeated in Vienna, Prague, Berlin, Saxony, and the Breisgau. The libretto has been preserved, but the music is lost. Metastasio was then living in the same house with Haydn. He shared the apartments of a Spanish family to whom he was much attached, and superintended the education of the two daughters. The musical training of the elder, Marianne de Martines, was confided to Haydn, who in this way became acquainted with Porpora, then teaching singing to the mistress of Correr, the Venetian ambassador. Porpora proposed that Haydn should act as his accompanist, thus giving him an opportunity of learning his method. He took him to the baths of Mannersdorf, on the confines of Hungary, where they remained for some months, and, in return indeed for various menial offices, gave him instruction in composition. At Mannersdorf, at the soirées of Prince Hildburghausen, Haydn met Bonno, Wagenseil, Gluck, and Dittersdorf, to the last of whom he became much attached. Gluck advised his going to Italy. One by one he procured all the known theoretical works, and thoroughly mastered their contents, especially Fux's *Gradus*, which he afterwards used as the foundation of his own teaching. He had had, as we have seen, no regular musical training; but by industry, careful observation, and reiterated attempts, he gradually attained that independence which gave the impress of originality to all his works.

[It happened that at this time a certain Karl Joseph Edlen von Fürnberg (son of an eminent physician, ennobled by Charles VI.) was accustomed to invite parties of musicians to his country-house at Weinzirl, near Melk, for the practice and performance of such concerted compositions as were accessible. Through some Viennese friend he heard of Haydn's reputation and, in 1755, invited him down on a long visit. Haydn, on arrival, found the usual 'country-house' orchestra of the time—a few strings, a couple each of oboes and horns, and proceeded to compose for them a series of works which he called by the title of Divertimenti, Nocturnes, or Cassations. There is no evidence that he had any intention of creating a new form; he rather adapted to the larger medium the structural lessons which he had learned from the sonatas of C. P. E. Bach. Some of these works he wrote for strings and wind, some for the four strings alone, his choice being probably determined in some measure by the bare chance of occasion or opportunity. In this quiet and unpretentious manner there came into existence his first quartet and his first symphony; the latter now erroneously included among his quartets as op. 1, No. 5.[1] It must be remembered that the whole nomenclature of instrumental forms was still in a very fluid and indeterminate condition. Any work for three or more instruments might technically be called a 'symphony'; the forces of orchestral and chamber music were not yet separated; and these works of Haydn differ from those of his predecessor, not in the combination of their instruments but in the greater vitality and organisation of their structure. The fact that the majority of them were written for strings alone may be due partly to his want of experience in orchestration, partly to the suitability of the string tone to his nervous and transparent style.

During his stay at Weinzirl he wrote eighteen of these compositions, all of which are now published as string quartets (opp. 1-3: Trautwein 58-75). In the first two collections all except the symphony in B♭ have five movements apiece, two of these being minuets; in op. 3, he began to establish the four-movement scheme, which since his day has been the usual tradition of chamber music. It is noticeable that from the first he added his favourite 'minuet' to the customary 'Allegro, Adagio, and Finale' of C. P. E. Bach's sonata. The character of the lyric form was specially suited to his genius, and throughout his life he treated it with an astonishing range of variety and invention.

On his return to Vienna in 1756 his fortune began to amend: he found himself in request both as performer and as teacher, and was even able to raise his fee from two to five florins a month. Among his pupils at this period was the Countess Thun, an enthusiastic and generous patron of music, who first heard of him through one of his MS. sonatas, and who took

[1] This work, like the symphonies of C. P. E. Bach, is written in three movements, and scored for strings, oboes, and horns. It was published by Breitkopf with the wind-parts; it is not included among the quartets in Haydn's catalogue, and its first appearance for strings alone is in the collection of 'six symphonies on quatuors dialogués' printed by La Chevardière at Paris in 1764.

lessons from him in singing and on the harpsichord. In 1759, on von Fürnberg's recommendation, he was appointed 'Musikdirector und Kammercompositor' to Count Ferdinand Maximilian Morzin, who maintained a small private orchestra (probably from twelve to sixteen players) at Lukavec near Pilsen. Here Haydn composed a further set of concerted works, among which are recorded a 'Divertimento a sei' for two violins, two horns, English horn and bassoon, and a symphony in D major, the form of which is precisely similar to that of the Weinzirl symphony in B♭ (op. 1, No. 5), though the treatment is more genial and more mature. It has commonly been described as Haydn's first symphony: but for this designation it will be seen that there is no sufficient reason.]

His salary now amounted to 200 florins (say £20), with board and lodging. Small as this was, it induced him to think of taking a companion for life, although the Count never kept a married man in his employ. His choice fell on the daughter of Keller, a wig-maker, to whose house he had been introduced by her brother, who was violinist at St. Stephen's when Haydn was a chorister. He gave music-lessons to the two daughters, and fell in love with the youngest. She, however, took the veil, and the father, anxious to keep him in the family, persuaded him to marry the other, Maria Anna, three years his senior. The wedding took place at St. Stephen's, Nov. 26, 1760—a bad day for Haydn, and the foundation of unutterable domestic misery. His wife was a regular Xantippe—heartless, unsociable, quarrelsome, extravagant, and bigoted, who, as her husband said, cared not a straw whether he was an artist or a shoemaker. They had no children, and it can scarcely be wondered at if in time Haydn sought elsewhere the consolations which were denied him at home, or even showed himself susceptible to the attractions of other women. His wife spent the last years of her life at Baden, near Vienna, and died March 20, 1800.

Soon after the marriage, Count Morzin was compelled to dismiss his band and its director; but Haydn was not long unemployed. Paul Anton Esterhazy, the then reigning Prince, who had heard his symphonies when visiting Morzin, hastened to secure the young composer as his second capellmeister, under Werner, who was growing old. He was appointed May 1, 1761, and immediately set out for Eisenstadt in Hungary, the country seat of the new master in whose service he was destined to remain to the end of his life. The Esterhazy family had been musical amateurs and performers since the days of Paul, first Prince of the name (1635-1713), who established a private chapel, small at first but gradually increasing. The orchestra, chorus, and solo singers took part both in the church service and in concerts, and in time even performed operas. When Haydn entered upon his duties there were only sixteen members in all, but the excellence of their playing acted as a powerful stimulus to his invention. His arrival gave a great impulse to the concerts, Werner, a first-rate master of counterpoint, having concentrated all his energies on the Church service. [See Werner.] To a man with Werner's notions of music Haydn must have been a constant vexation; and he always spoke of him as 'a mere fop,' and a 'scribbler of songs.' Haydn, on the contrary, had a high respect for Werner, as he proved late in life by arranging six of his fugues as string quartets, and publishing them, through Artaria, 'out of sincere esteem for that celebrated master.'

Prince Paul Anton died March 18, 1762, and was succeeded by his brother Nicolaus, who was passionately fond of art and science, generous, and truly kind-hearted. The love of pomp and display, of which his well-known diamond-covered uniform was an example, earned him the sobriquet of 'der Prächtige,' or the Magnificent. He loved music, and played well on the baryton, or viola di bordone, for which instrument Haydn was constantly required to furnish him with new pieces. In the hope of pleasing his master Haydn himself learned the instrument; but on making his début was disappointed to find that the Prince did not approve of such rivalry; on which he at once relinquished it for ever. The relations between the Prince and his new capellmeister, who found his time fully occupied, were genial and hearty. Haydn's salary was raised from 400 florins a year to 600, and then to 782 (£78), new musicians were engaged, and rehearsals—orchestral chamber and dramatic—took place every day. The principal members of the chapel at the time were, Luigi Tomasini (violin); Joseph Weigl (cello); two excellent French horn-players, Thaddäus Steinmüller and Karl Franz (the latter also playing the baryton); Anna Maria Scheffstos (soprano), who afterwards married Weigl; and Karl Friberth (tenor). The wind music, formerly played by the band of the regiment, was now given to good players (including the two just named) regularly appointed. On March 5, 1766, Werner died, and Haydn became sole capellmeister. His compositions were already known far outside of Austria; in Leipzig, Paris, Amsterdam, and London his symphonies and cassations, trios, and quartets, were to be had in print or MS. Even the official gazette, *Wiener Diarium*, for 1766, speaks of him as 'our national favourite' ('der Liebling unserer Nation'), and draws a parallel between him and the poet Gellert, at that time the highest possible compliment.

His works composed up to this time at Eisenstadt comprise about thirty symphonies (including 'Le Midi,' 'Le Soir,' and 'Le Matin,'[1] 1761) and cassations; a few divertimenti in five parts;

[1] See the themes, p. 368

six string-trios ; a piece for four violins and two celli, called 'Echo' ; a concerto for the French horn (1762) ; twelve minuets for orchestra ; concertos, trios, sonatas, and variations for clavier. In vocal music—a Salve Regina for soprano and alto, two violins, and organ ; a Te Deum (1764) ; four Italian Operettas (1762) ; a pastoral, 'Acide e Galatea' (the action identical with that of Handel's cantata), performed Jan. 11, 1763, on the marriage of Count Anton, eldest son of Prince Nicolaus ; and a grand cantata, in honour of the Prince's return from the coronation of the Archduke Joseph as King of the Romans (1764).

[In 1765 he wrote the charming little string quartet in D minor, afterwards published as op. 42, and between this year and 1776 increased the number of his symphonies to about fifty, and added to his quartets those which are printed in the Paris and London editions as op. 9, op. 17, and op. 20.]

Soon after Werner's death an event took place, which greatly affected the music, viz. the establishment of a new palace near Süttör, at the southern end of the Neusiedler-See, where the Prince rebuilt an old hunting-place, turned it into a splendid summer residence, and gave it the name of Esterház. Here the chapel (except a small portion left to carry on the church service at Eisenstadt) were located for the greater part of the year, during which they were expected to redouble their exertions.

Esterház—described by a French traveller as 'having no place but Versailles to compare to it for magnificence'—stands in the middle of an unhealthy marsh, quite out of the world. The erection of such a building in such a neighbourhood, at a cost amounting, it is said, to 11,000,000 gulden, was one of the caprices of Prince Nicolaus. The canals and dykes he constructed were, however, substantial improvements to the neighbourhood. The dense wood behind the castle was turned into a delightful grove, containing a deer-park, flower-gardens, and hot-houses, elaborately furnished summer-houses, grottoes, hermitages, and temples. Near the castle stood an elegant theatre, for operas, dramas, and comedies ; also a second theatre, brilliantly ornamented, and furnished with large artistic marionettes, excellent scenery and appliances. The orchestra of the opera was formed of members of the chapel, under Haydn's direction ; the singers were Italian for the most part, engaged for one, two, or more years, and the books of the words were printed. Numerous strolling companies were engaged for shorter terms ; travelling virtuosi often played with the members of the band ; special days and hours were fixed for chamber-music and for orchestral works ; and in the intervals the singers, musicians, and actors met at the café, and formed, so to speak, one family. The castle itself was fitted up in exquisite taste, and stored with numerous and costly collections of works of art. Royal and noble personages, home and foreign, formed a constant stream of guests ; at whose disposal the Prince placed his beautiful carriages, and to whom he proved the most attentive and charming of hosts. He became so much attached to this place of his own creation, as often to stay there till quite the end of autumn, and return with the first days of spring. Eisenstadt he visited very rarely, and Vienna he disliked more and more, often cutting short his visits in the most abrupt manner. Hence his singers and musicians were increasingly tied to this one spot—a fate all the harder, since very few were allowed to bring their wives and families. Here Haydn composed nearly all his operas, most of his arias and songs, the music for the marionette theatre—of which he was particularly fond—and the greater part of his orchestral and chamber works. He was satisfied with his position, and though he sometimes complained of the disadvantages of such a seclusion, and often expressed his wish to visit Italy, he also acknowledged its compensating advantages. In his own words : 'My Prince was always satisfied with my works ; I not only had the encouragement of constant approval, but as conductor of an orchestra I could make experiments, observe what produced an effect and what weakened it, and was thus in a position to improve, alter, make additions or omissions, and be as bold as I pleased ; I was cut off from the world, there was no one to confuse or torment me, and I was forced to become *original*.'

With the band and singers Haydn was on the best of terms. They vied with each other in carrying out his intentions, simply to show their gratitude and affection for him. He was constantly endeavouring to improve their lot, was invariably a warm advocate with the Prince on their behalf, and they all loved him like a father. The Prince gave unusually high salaries, and several of the musicians played two instruments—generally the violin and a wind instrument. A good many of them afterwards entered the Imperial chapel.

The principal and best-paid members of the chapel during the period spoken of (1767-90) were :—female singers, Weigl, Cellini, Jermoli, Rippamonti,[1] Valdesturla, Tavecchia, Maria and Matilda Bolognia, Raimondi, Nencini, Benvenuti ; male singers—Friberth, Bianchi, Gherardi, Jermoli, Moratti, Morelli, Totti (2), Peschi ; violins—Tomasini, Rosetti, Rippamonti, Mestrino, Mraw ; violoncellists—Weigl, Küffel, Marteau, Kraft ; flute—Hirsch ; clarinets—Griesbacher (2) ; oboi—Columbazzo (2), Poschwa, Czerwenka ; bassoons—Schiringer, Peczival ; horns—Steinmüller, Karl Franz (also played the baryton), Stamitz, Oliva, Pauer, Lendway. Besides Franz there was another performer on the Prince's own instrument, the baryton—Andreas

[1] Afterwards married to Schicht, Cantor of the Thomasschule at Leipzig.

Lidl (1769-1774) who played in London soon after leaving the band. J. B. Krumpholtz the harpist was engaged from 1773 to 1776.

In March 1769, the whole musical establishment visited Vienna for the first time; and, under Haydn's direction, gave a performance of his opera, 'Lo Speziale' (comp. 1768), at the house of Freiherr von Sommerau; and a repetition in the form of a concert. On their second visit, in the summer of 1777, they performed at Schönbrunn an opera and a marionette-opera of Haydn's, and also played during the Empress's dinner. The Prince would often take them to Pressburg during the sitting of the Hungarian diet, or for the festival of Count Grassalcovich, and in 1772 Haydn conducted the Count's own orchestra even at a ball.

In 1771 Haydn composed a 'Stabat Mater' and a 'Salve Regina.' In 1775 followed his first oratorio, 'Il Ritorno di Tobia,' which was performed in Vienna by the Tonkünstler Societät, with solo-singers from Esterház, and repeated in 1784 with two additional choruses.[1] To this period belong four Masses (two small ones of an early date have been lost)—in G (1772); in C, 'Cäcilienmesse'; in E♭, with organ obbligato; and in B♭, with organ solo (Nos. 7, 5, 12, and 8 in Novello's edition). The last is a small but particularly charming work, and, like the first, is still often heard; but that in E♭ is old-fashioned. The 'Cäcilienmesse' has many fugues, and is seldom performed on account of its length. (Novello's edition is taken from Breitkopf's curtailed score.)

In 1773 the Empress Maria Theresa visited Esterház from Sept. 1 to 3, and was entertained with performances of a new symphony of Haydn's —now known by her name (list, No. 12)—his opera 'L' Infedeltà delusa,' and 'Philemon und Baucis,' a marionette piece (see MARIONETTE). One song and the overture—or 'symphony'—in two movements have survived. Similar festivities took place on various occasions—a visit from one of the Imperial family, or an event in the Prince's own circle. Even Eisenstadt gave a glimpse of its old splendour when the Prince de Rohan, French Ambassador, stayed there in 1772.

In 1776 Haydn composed 'La vera Costanza,' for the court theatre of Vienna. The intrigues against it were, however, too strong, and eventually Anfossi's opera of the same name was preferred. Haydn withdrew his score, and produced it at Esterház. It was revived in 1790 at the theatre then in the Landstrasse suburb of Vienna, and Artaria engraved six of the airs and a duet. In 1778 the Tonkünstler Societät offered Haydn a strange affront. He wished to join the society, and had already paid his deposit, when he was asked to sign an agreement binding him to furnish compositions of importance whenever so required. He naturally declined, and withdrew his money. No reparation was made for this indignity till after his return from London in 1797, when he was introduced at a special meeting by Counts Kufstein and Johann Esterhazy, and, amid general acclamation, appointed 'Assessor senior' for life. This compliment he acknowledged by presenting the society with the 'Creation' and the 'Seasons,' to which gifts its prosperity is mainly owing. 'L' Isola disabitata,' one of his best operas, composed in 1779 to a libretto by Metastasio, procured Haydn's nomination as a member of the Accademia Filarmonica at Modena. He sent the score to the King of Spain, and received in return a gold snuff-box set in brilliants. The opera was performed at the court theatre in Vienna, at a concert given by Willmann the violoncellist in 1785.

On Nov. 18, 1779, the theatre at Esterház was burnt down, and during the rebuilding the Prince went to Paris. This interval will enable us to mention the origin of the famous 'Farewell Symphony.' It has been often asserted that Haydn intended it as an appeal to the Prince against the dismissal of the chapel, but this is incorrect; the real object was to persuade him to shorten his stay at Esterház, and so enable the musicians to rejoin their wives and families. As one after another stopped playing and left the orchestra, until only two violins were left (Tomasini, the Prince's favourite, being one), the hint was unmistakable. 'If all go,' said the Prince, 'we may as well go too'; and Haydn knew that his object was attained.[2]

This seems also the place to speak of a subject closely affecting Haydn's private life. In 1779 a couple named Polzelli were admitted into the chapel—the husband, Anton, being an indifferent violinist, and the wife, Luigia, by birth a Roman of the name of Moreschi, a second-rate singer. For the latter Haydn conceived a violent affection, which she returned by shamefully abusing his kindness and continually importuning him for money, and even extracting from him a written promise that if his wife died he would marry no one but her. This paper he afterwards repudiated, but he left her a small annuity in his will. Before his death she had been married a second time, to an Italian singer, and died at Kaschau in 1832.[3] Mme. Polzelli had two sons, of whom the elder died in 1796, while the younger entered the chapel, and eventually became its music-director. He was a pupil of Haydn's, and was popularly supposed to be his son, but the fact is doubtful. Haydn was certainly very fond of him; but he left him only a small sum in his first will, and revoked it in the second.

On Oct. 15, 1780, the beautiful new theatre

[1] 'Tobia' was rearranged by Neukomm in 1808, and performed at the Tonkünstler Societät concerts.

[2] The Symphony was published in parts by Sieber (No. 16); a new edition by Simrock (37); in score by Le Duc (9); and for four hands Trautwein (28). André's edition is the Finale only, transposed into E minor. See list, p. 368, No. 8.

[3] Fétis says that her death, 1790, induced Haydn particularly to go to London!

at Esterház was opened with 'La Fedeltà premiata.' This opera was twice represented in Vienna in 1784, once in the presence of the Emperor Joseph, Haydn himself conducting. From 1780 dates his acquaintance with Artaria—the commencement of a business connection of many years' duration. The first works which Artaria published for him were six Clavier sonatas (op. 30), his first twelve lieder, six Quartets ('die Russischen'), six Divertissements in eight parts (op. 31), and six symphonies (opp. 51 and 52). In 1781-82 the Emperor Joseph received two visits from the Grand Duke Paul and his wife. Great entertainments were given in their honour, consisting chiefly of musical performances, for which the Grand Duchess had a great taste.[1] Gluck's operas were given at the theatre, and some of Haydn's quartets played at her own house, so much to her satisfaction, that she gave him a diamond snuff-box, and took lessons from him. Haydn seems to have retained a pleasant recollection of her, for twenty years later—in 1802, when she was Dowager-Empress—he sent her his fine part-songs for three and four voices. He also dedicated the six 'Russian' quartets just mentioned to the Grand Duke. The Duke and Duchess had intended accompanying the Emperor to Eisenstadt, and Haydn was hastily composing an opera, but their departure was hurried, and the visit did not take place.

About this time Haydn entered into correspondence with William Forster, the well-known violin-maker in London, to whom he sold the English copyright of a series of compositions. From first to last (the first receipt is dated August 22, 1781) Forster & Son published 129 of his works, including eighty-two symphonies. Almost simultaneously he received a letter from Le Gros, conductor of the Concerts Spirituels, saying that his 'Stabat Mater' had been performed four times with the greatest success, and, in the name of the members, asking permission to print it. They also invited him to come to Paris, and proposed to have all his future compositions engraved there for his own benefit. Cherubini's veneration for Haydn is said to have dated from his hearing one of the six symphonies (opp. 51 and 52) which he composed for the Concerts de la Loge Olympique. Besides the publishers already named, he had satisfactory dealings with Nadermann, Willmann, Imbault, Le Duc, and especially with Sieber.

The opera which he composed for the expected visit of the Grand Duke and Duchess was 'Orlando Paladino' (given at Esterház in the autumn of 1782), which in its German form as 'Ritter Roland' has been more frequently performed than any of his other operas. It was followed by 'Armida' (composed in 1783, performed in 1784, and again in 1797 at Schikaneder's theatre in Vienna), the autograph score of which he sent to London,[2] in compensation for the non-completion of 'Orfeo.' In judging of his operas we may be guided by an expression of his own when refusing an invitation to produce one in Prague: 'My operas are calculated exclusively for our own company, and would not produce their effect elsewhere.' The overtures to six of them were published by Artaria as 'symphonies,' though under protest from Haydn. To 1782 also belongs the well-known 'Mariazeller-Messe' (in C, Novello, No. 15), so called from the place of that name in Styria. It was bespoken by a certain Herr Liebe de Kreutzner, and Haydn is said to have taken particular pleasure in its composition, not impossibly because it reminded him of a visit to Mariazell when a young man without experience, friends, or means of any kind. This was his eighth Mass, and he wrote no more till 1796, between which year and 1802 his best and most important works of the kind were composed.

Between 1780 and 1790 he met a number of artists in Vienna whom he was destined to meet again in London, such as Mara, Banti, Storace, and her brother Stephen, Attwood, Janiewicz, and Jarnowick. In 1784 he met Paisiello, Sarti, and Signora Strinasacchi, the violinist, at Michael Kelly's lodgings; the latter paid him a visit at Esterház with Brida, an enthusiastic amateur.[3]

[But by far the most important of his Viennese friendships was with Mozart, whom he probably met for the first time in the winter of 1781-82; on the occasion of the court-festivities given in honour of the Grand Duke Paul.[4] There was no close tie of comradeship between the two men; Mozart seems never to have visited Eisenstadt, Haydn only came to Vienna for a brief annual visit; but they maintained, unbroken, the highest respect and affection for one another, and it is more than a coincidence that the finest works of both were written after the beginning of their acquaintance. Each contributed something to the alliance; Haydn was the more audacious in musical structure, Mozart richer in tone and far more masterly in orchestration; for the next ten years they interacted on one another, and after Mozart's death in 1791, his influence is still abundantly apparent in Haydn's Salomon symphonies, in his later quartets, and in the scoring of the 'Creation' and the 'Seasons.']

The chief event of 1785 was the composition of the 'Seven Words of our Saviour on the Cross' for the cathedral of Cadiz, in compliance with a request from the chapter for appropriate instrumental music for Good Friday.

[1] She was present at the well-known competition between Clementi and Mozart.

[2] In the library of the Royal College of Music.

[3] Kelly, *Reminiscences*, i. 221, calls it Eisenstadt by mistake.

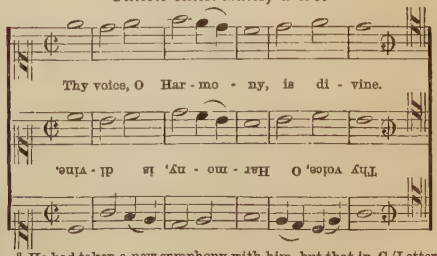
[4] We have no record of the actual meeting. But ever since 1774 Mozart had been studying Haydn's work, and we know that in the festivities of 1781-82 both artists took part.

The work was published simultaneously by Artaria and Forster, and in this form Haydn produced it as 'Passione instrumentale' in London.[1] He afterwards added choruses and solos, and divided it into two parts by the introduction of a Largo for wind instruments. In this new form it was produced for the first time at Eisenstadt in Oct. 1797, and published by Breitkopf & Härtel (1801), with a preface by the composer. It may seem surprising that the chapter of Cadiz should have applied to Haydn; but in fact he was well known in Spain to others besides the king, who had been in communication with him long before, as we have seen. Thus Boccherini wrote to him from Madrid expressing the pleasure he received from his works, and Yriarte celebrated him with enthusiasm in his poem of 'La Musica' (Madrid, 1779). In Jan. 1785 Haydn acquired two interesting pupils—Fritz and Edmund von Weber. They were brought to him by their father Franz Anton, who had just remarried in Vienna. His desire to see one of his children develop into a great musician, afterwards so gloriously fulfilled in the composer of the 'Freischütz,' was, to a certain extent, granted in Edmund. In the same year Mozart dedicated the well-known six quartets to Haydn, in terms of almost filial affection. It was after listening to a performance of one of these that Haydn said to Mozart's father, in his open-hearted way, 'I declare to you on my honour that I consider your son the greatest composer I have ever heard; he has taste, and possesses the most consummate knowledge of the art of composition.' He spoke of him still more warmly in a letter to Prague in 1787. The relation in which these two great men stood to each other does credit to them both, and leads us to form a high estimate of their characters. It would be difficult to find a parallel instance.

In 1787 Haydn received a pressing invitation to London, from W. Cramer, the violinist, who wrote offering to engage him at any cost for the Professional Concerts. Gallini also wrote asking his terms for an opera. Nothing came of either at the time, but Salomon determined to try what personal influence would do, and despatched Bland, the music-publisher, to Vienna, where he arrived in November, and finding Haydn still at Esterház, followed him there. He did not attain his main object, but Haydn gave him the copyright of several of his compositions, among others 'Ariadne,' a cantata for a single voice (composed in 1782). An anecdote of Bland's visit is often told. When he was admitted, Haydn was in the act of shaving, and grumbling over the bluntness of his razor. Bland caught the exclamation, 'I would give my best quartet for a good razor,' and, rushing off to his lodging, fetched his own pair, which he presented to Haydn, and received in exchange his newest quartet, which is often called the 'Rasirmesser' (razor) quartet (Trautwein, No. 2).

[Meantime he was making further advance in symphonic and chamber music. The 'Russian' quartets (op. 33) were followed in 1787 by the six dedicated to the King of Prussia (op. 50), and in 1789-90 he added the collections known as op. 54, op. 55, and op. 64. During these same years he wrote (evidently under the influence of Mozart) fifteen clavier trios, the most important of his clavier-concertos, and the twelve symphonies commissioned for the Concerts Spirituels at Paris. One of the second set of them was the so-called 'Oxford' symphony performed in the Sheldonian Theatre when, in 1791, the degree of D.Mus. was conferred upon him by the University. See list, p. 369, No. 27.]

On Sept. 28, 1790, Prince Nicolaus died—a great loss for Haydn, who really loved him. He left his capellmeister, on condition of his retaining the title, an annual pension of 1000 florins, as a mark of esteem and affection. To this sum his successor, Prince Anton, added another 400 florins, but deprived Haydn of his occupation by dismissing the whole chapel, except the few members necessary to keep up the services in church. Haydn now fixed his abode in Vienna, but had hardly done so before Salomon appeared on the scene. He had heard of the Prince's death at Cologne, on his way to England, and immediately returned, hoping, now that Haydn was free, to persuade him to visit London. Haydn could no longer plead the old excuse of unwillingness to leave his master, so he gave way, and began to make preparations for the journey. While thus occupied he was informed that Ferdinand IV., King of Naples, then in Vienna for the marriage of his two daughters, wished to see him. Haydn had thought of visiting Naples in 1787, and the King was well acquainted with his music. He had even commissioned him to compose several concerted pieces for his favourite instrument, the lyre. Nevertheless the audience was put off several times, and when it did take place, and Haydn presented his compositions, the King said: 'The day after to-morrow we will try them.' Haydn replied that he was to start for England on that day. 'What!' exclaimed the King, 'and you promised to come to Naples!' He then indignantly left the room, but returned in an hour, and, having recovered his temper, made Haydn promise to visit Naples on his return from London, gave him a letter of recommendation to his ambassador, Prince Castelcicala, and sent after him a valuable snuff-box. And thus Haydn got over a period which was a great turning-point in his life. Among those of whom he took leave was his old and dear friend Madame Genzinger. [See KARAJAN.] His last hours in Vienna were enlivened by the company of Mozart, who had



[1] Though often included among his quartets, it has nothing to do with them. It was first published alone by Artaria, but was afterwards omitted from his authorised series of Haydn's quartets.

come to see him off. He, too, had been invited to London in 1786, and had only declined in deference to his father's wishes. His father was now dead, and Salomon promised him a speedy opportunity of making up for lost time. Too late again—in less than a year Mozart's eyes were closed in death.

Leaving Vienna on Wednesday, Dec. 15, 1790, Haydn and Salomon travelled by Munich, Bonn, and Brussels to Calais, crossed the Channel in nine hours on New Year's Day, 1791, and from Dover proceeded straight to London. Haydn first put up at the house of Bland, the music-seller, 45 Holborn, but soon removed to rooms prepared for him at Salomon's, 18 Great Pulteney Street. Here he found himself the object of every species of attention; ambassadors and noblemen called on him, invitations poured in from all quarters, and he was surrounded by a circle of the most distinguished artists, conspicuous among whom were his young countryman Gyrowetz, and Dr. Burney, who had been for some time in correspondence with him, and now welcomed him with a poetical effusion.[1] The Anacreontic Society, the Ladies' Concerts, the New Musical Fund, the Professional Concerts, and all the other musical societies eagerly desired his presence at their meetings. His quartets and symphonies were performed, Pacchierotti sang his cantata 'Ariadne a Naxos,' and he was enthusiastically noticed in all the newspapers. Before leaving Vienna Salomon had announced his subscription concerts in the *Morning Chronicle*, for which Haydn was engaged to compose six symphonies, and conduct them at the pianoforte. The first of the series took place on March 11, 1791, in the Hanover Square Rooms. The orchestra, led by Salomon, consisted of thirty-five or forty performers, and was placed at the end opposite to that which it occupied latterly. The Symphony (Salomon, No. 2) was the first piece in the second part, the position stipulated for by Haydn, and the Adagio was encored—'a very rare occurrence.' The *Morning Chronicle* gives an animated description of the concert, the success of which was most brilliant, and ensured that of the whole series. Haydn's benefit was on May 16; £200 was guaranteed, but the receipts amounted to £350. Meantime Gallini, manager of the King's Theatre, was trying in vain to obtain a licence for the performance of operas. Two parties were at issue on the question. The Prince of Wales espoused the cause of the King's Theatre, while the King publicly declared his adhesion to the Pantheon, and pronounced two Italian opera-houses undesirable. At length Gallini was clever enough to obtain a licence for 'Entertainments of Music and Dancing,' with which he opened the theatre on March 26, with David as tenor, Vestris as ballet-master, Haydn as composer, Federici as composer and conductor, and Salomon as leader—and with these he performed various works of Haydn's, including symphonies and quartets, his chorus 'The Storm' (the words by Peter Pindar, 'Hark the wild uproar of the waves'), an Italian catch for seven voices, and a cantata composed for David. His opera 'Orfeo ed Euridice,' though paid for and nearly completed, was not performed, owing to the failure of the undertaking. During the time he was composing it, Haydn lived in Lisson Grove—then absolutely in the country—where one of his most frequent visitors was J. B. Cramer, then twenty years old. His second benefit was on May 30, at the request of some amateurs of high position. Haydn gave a concert at the Hanover Square Rooms, where he conducted two of his symphonies, and, for the first time, the 'Seven Words' ('La Passione instrumentale'), afterwards repeated at the concert of Clement, the boy-violinist, and elsewhere. About this time he was invited to the annual dinner of the Royal Society of Musicians, and composed for the occasion a march for orchestra, the autograph of which is still preserved by the society. He also attended the Handel Commemoration in Westminster Abbey. He had a good place near the King's box, and never having heard any performance on so grand a scale, was immensely impressed. When the Hallelujah Chorus rang through the nave, and the whole audience rose to their feet, he wept like a child, exclaiming, 'He is the master of us all.'

In the first week of July he went to the Oxford Commemoration, for the honorary degree of Doctor of Music, conferred at Dr. Burney's suggestion. Three grand concerts formed an important feature of the entertainments; at the second of these the 'Oxford' symphony[2] was performed, Haydn giving the tempi at the organ; and at the third he appeared in his Doctor's gown, amid enthusiastic applause. The 'Catalogue of all Graduates' contains the entry, 'Haydn, Joseph, Composer to His Serene Highness the Prince of Esterhazy, cr. Doctor of Music, July 8, 1791.' He sent the University as his 'exercise' the following composition—afterwards used for the first of the 'Ten Commandments,' the whole of which he set to canons during his stay in London.[3]

Canon cancrizans, a tre.

[1] 'Verses on the arrival of the Great Musician Haydn in England.'

[2] He had taken a new symphony with him, but that in G (Letter Q, 1787 or 1788) was substituted, owing to the time being too short for rehearsals.

[3] The autograph, the gift of Griesinger, is preserved in the Museum of the Gesellschaft der Musikfreunde in Vienna.

On his return he made several excursions in the neighbourhood of London, and stayed five weeks with Mr. Brassey (of 71 Lombard Street)[1] at his country house 12 miles from town, where he gave lessons to Miss Brassey, and enjoyed the repose of country life in the midst of a family circle all cordially attached to him. Meantime a new contract was entered into with Salomon, which prevented his obeying a pressing summons from Prince Esterhazy to a great fête for the Emperor. In November he was a guest at two Guildhall banquets—that of the outgoing Lord Mayor (Sir John Boydell) on the 5th, and that of the new one (John Hopkins) on the 9th. Of these entertainments he left a curious account in his diary.[2] In the same month he visited the marionettes at the Fantoccini theatre in Savile Row, in which he took a great interest from old associations with Esterház. On the 25th, on an invitation from the Prince of Wales, he went to Oatlands, to visit the Duke of York, who had married the Princess of Prussia two days before. 'Die liebe kleine'—she was but seventeen—quite won Haydn's heart; she sang, played the piano, sat by his side during his symphony (one she had often heard at home), and hummed all the airs as it went on. The Prince of Wales played the violoncello, and all the music was of Haydn's composition. They even made him sing his own songs. During the visit, which lasted three days, Hoppner painted his portrait, by the Prince's command; it was engraved in 1807 by Facius, and is now at Hampton Court (Anteroom, No. 920). Engravings were also published in London by Schiavonetti and Bartolozzi from portraits by Guttenbrunn and Ott, and by Hardy from his own oil-painting. Haydn next went to Cambridge to see the University, thence to Sir Patrick Blake's at Langham, and afterwards to the house of a Mr. Shaw, where he was received with every possible mark of respect and attention. He says in his diary, 'Mrs. Shaw is the most beautiful woman I ever saw'; and when quite an old man still preserved a ribbon which she had worn during his visit, and on which his name was embroidered in gold.

The directors of the Professional Concerts had been for some time endeavouring to make Haydn break his engagements with Salomon and Gallini. Not succeeding, they invited his pupil Ignaz Pleyel, from Strasburg, to conduct their concerts; but far from showing any symptoms of rivalry or hostility, master and pupil continued the best of friends, and took every opportunity of displaying their attachment. The Professionals were first in the field, as their opening concert took place on Feb. 15, 1792, while Salomon's series did not begin till the 17th. Gyrowetz was associated with Haydn as composer for the year, and his works were as much appreciated here as in Paris. At these concerts Haydn produced symphonies, divertimenti for concerted instruments, a notturno for the same, string quartets, a clavier trio, airs, a cantata, and the 'Storm' chorus already mentioned. He was also in great request at concerts, and conducted those of Barthélemon (with whom he formed a close friendship), Haesler the pianist, Mme. Mara (who sang at his benefit), and many others. Besides his own annual benefit Salomon gave 'by desire' an extra concert on June 6, when he played several violin solos, and when Haydn's favourite compositions were 'received with an extasy of admiration.' 'Thus,' to quote the *Morning Chronicle*, 'Salomon finished his season on Wednesday night with the greatest éclat.' The concerts over, he made excursions to Windsor Castle, Ascot Races, and Slough, where he stayed with Herschel, of whose domestic life he gives a particular description in his diary. The only son, afterwards Sir John Herschel, was then a few months old. He went also to the meeting of the Charity Children in St. Paul's Cathedral, and was deeply moved by the singing. 'I was more touched,' says he in his diary, 'by this innocent and reverent music than by any I ever heard in my life.' The somewhat commonplace double chant by Jones the organist, is quoted in his diary. [See JONES, JOHN.]

Amongst Haydn's intimate associates in this year were Bartolozzi the engraver, to whose wife he dedicated three Clavier trios and a sonata[3] in C, and John Hunter the surgeon (who begged in vain to be allowed to remove a polypus in his nose which he had inherited from his mother), and whose wife wrote the words for most of his twelve English canzonets—the first set dedicated to her; the second to Lady Charlotte Bertie. But the dearest of all his friends was Mrs. Schroeter, a lady of good birth, and widow of the Queen's music-master, John Samuel Schroeter, who died Nov. 1, 1788. She took lessons from him on the pianoforte, and a warm feeling of esteem and respect sprang up between them, which on her side ripened into a passionate attachment. Haydn's affections must also have been involved, for in his old age he said once, pointing to a packet of her letters, 'Those are from an English widow who fell in love with me. She was a very attractive woman and still handsome, though over sixty; and had I been free I should certainly have married her.' Haydn dedicated to Mrs. Schroeter three Clavier-Trios (Breitkopf & Härtel, Nos. 1, 2, 6). In the second (F♯ minor) he adapted the Adagio from the Salomon-symphony, No. 9 (B♭) (see list, No. 37), probably a favourite of the lady's. A second of his London admirers deserves mention.

[1] An ancestor of the present Lord Brassey.
[2] See Pohl's *Haydn in London*, p. 167.
[3] This sonata, published by H. Caulfield, has never been printed in Germany. Haydn's remark on it was, 'Not yet to be printed.' The Adagio only, in F, is often reprinted separately, by Holle, Peters, etc. It is given entire by Sterndale Bennett in his 'Classical Practice.'

Among his papers is a short piece with a note saying that it was 'by Mrs. Hodges, the loveliest woman I ever saw, and a great pianoforte player. Both words and music are hers,' and then follows a P.S. in the trembling hand of his latest life, 'Requiescat in pace! J. Haydn.'[1]
